GENERAL

BIOGRAPHICAL DICTIONARY.

BY

JOHN GORTON,

AUTHOR OF THE "GENERAL TOPOGRAPHICAL DICTIONARY," &c., &c.

A NEW EDITION.

TO WHICH IS ADDED A SUPPLEMENTARY VOLUME COMPLETING THE WORK TO THE
PRESENT TIME.

~~~~~  
IN FOUR VOLUMES.

VOL. II.  
~~~~~

LONDON:

HENRY G. BOHN, YORK STREET, COVENT GARDEN.

1851.

GENERAL

BIOGRAPHICAL DICTIONARY.

VOLUME II.

F A B

FABBRONI (GIOVANNI) an eminent Italian philosopher, who distinguished himself by his attention to political economy, agriculture, and physical science. He was secretary to the *Accademia dei Georgofili*, director of the Museum and Cabinet of Natural History at Florence, one of the forty members of the *Società Italiana delle Scienze*, Tuscan deputy for the new system of weights and measures, member of the deputation of finance under the government of the queen regent of Etruria, one of the deputies to the corps législatif in France, director of bridges and highways (under the imperial government) for the department beyond the Alps, director of the mint at Florence, royal commissary of the iron works and mines, and one of the commissioners of taxes for the states of Tuscany. In all these posts he displayed activity, zeal, intelligence, and integrity. His writings, which attracted much notice at the time of their publication, are remarkable not only for the striking facts, the sound maxims, and the extensive views in which they abound, but also for the impressive manner in which the opinions of the author are enforced. The best known of his works are his—*Provedimenti Annonarj*; his *Discourses on National Prosperity*; on the *Equilibrium of Commerce*, and the *Establishment of Custom-houses*; on the *Effects of the Free Traffic of Raw Material*; on *Rewards for the Encouragement of*

F A B

Trade; on the *Chemical Action of Metals*; on the *Value and Reciprocal Proportion of Coins*; on the *Scales and Steelyards of the Chinese*; on the *Palaces of Spain*; and on the ancient *Hebrew People*. He left behind him many learned memoirs, and a number of very valuable manuscripts. He died at Florence in 1823, aged upwards of seventy.—*New Monthly Mag.*

FABELL (PETER) a native of Edmonton, who lived and died there in the reign of Henry VII. Norden, the topographer, in his account of Edmonton, says—"There is a fable of one Peter Fabell, that lieth in this church, who is said to have beguiled the devell by policie for money; but the devell is deceit itself, and hardly deceived." Weever, with great probability, supposes Fabell to have been an ingenious man, who amused himself and astonished his neighbours by sleight-of-hand tricks; and perhaps also by chemical experiments. There is a very scarce pamphlet, entitled—"The Life and Death of the Merry Devil of Edmonton; with the pleasant Franks of Smug the Smith," &c. In this book Fabell is styled "an excellent scholar, and well scenc in the arte of magicke." A play also called "The Merry Devil of Edmonton" is extant, which has been erroneously ascribed to Shakspeare; but it is now generally supposed to have been written by Michael Drayton.—*Fuller's Worthies*. *Lyson's Environs of Lond.*

FABER (BASIL) a German critic of the sixteenth century. He was a native of Sorau in Lusatia, and after studying at Wittemberg and other German universities, he was about 1550 appointed rector of the seminary of Nordhausen. He subsequently presided over other institutions of the same kind, and died rector of the Augustinian college at Erfurth in 1576. He was one of the protestant ecclesiastical historians, termed the Centuriators of Magdeburgh; and he wrote on the opinions of Luther, of whom he was a zealous follower. But Faber's literary reputation is founded on his "Thesaurus Eruditionis Scholastica," 1571, folio, of which improved editions were published in 17. 1749.—*Moreri. Saxii. Onom.*

FABER (JOHN) a German catholic divine and writer on polemical theology, termed Malleus Hæreticorum, or the Crusher of Heretics. He was born in Suabia in 1479, and having pursued his studies at different universities, he took the degree of DD. His active opposition to Luther, Carolstadt, Zuinglius, and other reformers, procured him the archbishopric of Vienna, to which he was raised in 1531. He died in 1542. His numerous works were collected and published after his death at Cologne, in 3 vols. folio. Among them is a treatise, entitled "Malleus Hæreticorum," once held in high esteem by the catholics.—*Moreri. Aikin's G Biog.*

FABERT (ABRAHAM DE) a French military commander of great reputation in the seventeenth century. He was a native of Metz, and was designed for a learned profession; but at school he manifested such an aversion for study, that his father procured him a commission in the army when he was but thirteen years old. He entered with ardour into the duties of the camp, and rose to the first rank in his profession. One of his most famous exploits was the retreat of Mayence, by which he saved the French army from being attacked by a vastly superior force; a manœuvre which has been compared to the retreat of the Greeks under Xenophon. Being badly wounded in the thigh at the siege of Turin, he refused to suffer amputation, which his surgeon recommended, saying—"No; I will not die piecemeal." He afterwards distinguished himself by the fortification of Sedan, of which he was governor; and by the taking of Stenay. In 1658 he was rewarded with the baton of marshal; and in 1661 he refused the cordon bleu, as an honour to which none but nobles of ancient descent were entitled. The feeling of proud humility which dictated this rejection of proffered dignity, must have been highly flattered by a letter which Louis XIV wrote with his own hand to the marshal, approving his conduct, and expressing the highest opinion of his worth and services. He died May 17th, 1662, aged sixty-three.—*Perrault. Barre Vie de M. Fabert.*

FABIAN or FABIYAN (ROBERT) an English chronicler, who lived in the fifteenth and sixteenth centuries. He was a native of Essex, and being bred to commerce, became a

member of the company of drapers, and at length an alderman of the city of London. He resigned his gown in 1502 to avoid serving the office of lord mayor; and dying in 1511 or 1512, was interred in the church of St Michael, Cornhill. His "Chronicle, or Concordance of Histories," is a mere compilation, made with little judgment. It is his usual practice at the division of the books to insert metrical prologues and other pieces, in verse. The best of his metres is the complaint of King Edward the Second, who is dramatically introduced reciting his own misfortunes. But this monologue is only a translation of an indifferent Latin poem ascribed to that monarch, but probably written by William of Worcester, which is preserved in manuscript in the library of the herald's college. In the first edition of Fabian's Chronicle, (printed in 1516,) he has given, as epilogues to his seven books, "The Seven Joys of the Blessed Virgin, in English Rime." And under the year 1325 there is a poem to the Virgin; and another on one Baddy, a Lollard, under the year 1409. These are suppressed in the later editions. He has left a panegyric on the city of London; but despairs of doing justice to his theme, even if he had the eloquence of Tully, the morality of Seneca, and the harmony of that faire ladie Calliope. Bishop Tanner says of this city bard, that he was "Poeta haud infelicis ingenii," an eulogium which does no credit to the judgment of the critic. Fabian's History was reprinted in 1811, 4to.—*Nicholson's Hist. Lib. Biog. Brit. Warton's Hist. of English Poetry.*

FABIUS MAXIMUS (QUINTUS) a distinguished Roman commander, the second of the name, who was five times consul. He was employed against Hannibal, in opposition to whom he adopted a harassing and procrastinated mode of warfare, peculiarly adapted to counteract the plans of that able general. From this policy the Romans entitled him "the shield of the commonwealth;" and the Fabian manner of conducting a campaign has become an adage. The greatest exploit of Fabius was his recovery of Tarentum, which had been betrayed to Hannibal; he was assisted in this by the treachery of the Brutian commander of the garrison, who admitted the Romans into the place. Hannibal however still kept his footing in Italy, and it was reserved for Scipio to conquer him. Fabius, although generally of a high and honourable character, became jealous of the rising fame of the young general, and opposed him in every way; he did not however live to witness the triumphant close of the invasion of Africa, dying BC. 203.—*Plutarch. Vit. Fabii. Livy Univ. Hist.*

FABIUS PICTOR, the earliest of the Roman prose historians, is supposed to have been the grandson of that Fabius who acquired the surname of Pictor from his really exercising the art of painting. He flourished during the second Punic war, and after the battle of Cannæ, BC. 216, was deputed to the oracle of Delphos to learn the proper means of ap-

raising the gods. He composed annals of his own times, and is thought to have written in Latin and Greek, and is quoted by Livy and other writers. Cicero speaks of his style as being rough and unfinished. A work, published under his name by the imposter Annius of Viterbo, is a forgery, and there is nothing of his remaining.—*Vossius de Hist. Lat.*

FABRE D'ÉGLANTINE (PHILIP FRANCIS NAZARIUS) a native of Carcassone in France, who distinguished himself as a poet and dramatic writer previously to the Revolution, in the atrocities consequent to which he deeply participated, and at length perished by the hand of the executioner. When young he gained the poetical prize, a golden eglantine or wild rose, at the floral games of Toulouse, whence the adjunct to his name. He was the author of several comedies, two of which, "Le Philinte," and "L'Intrigue épistolaire," display much dramatic talent. At the beginning of the revolutionary commotions, the prospect of obtaining political eminence seduced him from his literary pursuits, or rather led him to make them subservient to his purpose. The insurrection of the 10th of August, 1792, which he had promoted by his writings, first brought him into notice. He was then a member of the municipality of Paris, and immediately after he obtained the post of secretary to the minister of justice, Danton. Under that political leader he joined in the schemes of the Hebertists, assisted in the ruin of the Gironde party or Brissotins, and then joined Robespierre to accomplish the destruction of his former associate Hebert and his followers. This last event was but the prelude to the fall of Danton and those who acted with him. The fate of Fabre is said to have been hastened and insured by the cruel policy of Billaud Varennes, to whom he had confided the manuscript of a comedy which he had composed, and which the latter wished to appropriate to himself. He was guillotined in April, 1794. Besides his dramatic productions he published, "Les Fables du Parnasse," a periodical work: a poem, entitled, "Chalons sur Marne," and to him is ascribed the adoption of the new French calendar.—*Nouv. Dict. Hist. Litt. des H. M. du 18me. S. Biog. Univ.*

FABRETTI (RAPHAEL) an eminent writer on archaeology in the seventeenth century. He was a native of Urbino in Italy, and after studying jurisprudence at his native place, he went to Rome, and was employed by pope Alexander VI, who sent him into Spain, where he was assessor to the nuncio. On his return to Italy, after thirteen years' absence, he held several offices, among which was that of archivist of the castle of St Angelo. His leisure was devoted to antiquarian researches, for which he was well qualified by his acquaintance with Greek and Latin literature. In 1680 he published "De Aquis et Aquæductibus veteris Romæ, Dissertationes tres," reprinted in the *Thesaurus of Grævius*. His learned treatise, "De Columna Trajana," appeared in 1683; and his "Inscriptionum Antiquarum Explicatio," in 1699. He died at Rome in 1700, aged eighty.

Fabretti is said to have meditated a description of ancient Rome, which his death prevented him from completing.—*Fabricii Bibl. Antig. Tiraboschi. Biog. Univ.*

FABRICE (FREDERIC ERNEST) a German nobleman, gentleman of the chamber to prince Charles Augustus of Holstein, administrator of the duchy in the minority of duke Frederic, nephew of Charles XII of Sweden. He was sent by the prince on an embassy to the Swedish king while he was detained at Bender, after his unfortunate Russian campaign; and he became a great favourite with the eccentric monarch, with whom he resided several years. He wrote "Anecdotes du Sejour du Roi de Suède à Bender, ou Lettres du Baron Fabrice," published in 1760, 8vo, and translated into English and German. Fabrice was travelling in Germany with George I at the time of his majesty's decease, who died in his arms in June 1727. His own death, which took place in Germany, was preceded by mental insanity.—*Biog. Univ.*

FABRICIUS LUSCINUS (CAIUS) a Roman statesman and warrior under the republic, celebrated for his military talents and disinterested patriotism. He was consul in 282, BC. when he triumphed over the Samnites and other enemies of Rome, and brought an immense treasure to the coffers of the state. In the subsequent war with Pyrrhus and the Tarentines, he displayed his disinterestedness and magnanimity. Being sent to treat about an exchange of prisoners, he rejected with contempt the splendid presents with which Pyrrhus sought to purchase his friendship; and when brought suddenly in contact with an elephant, he manifested not the slightest trepidation. During his second consulship, 278 C. the war being continued, Fabricius received a proposal from the king's physician to rid the Romans of their powerful adversary by poison, on condition of a suitable reward. The consul immediately sent notice to Pyrrhus of the treacherous purpose of his domestic, expressing his abhorrence of so mean a species of hostility. In the year 275 BC. Fabricius held the office of censor, when he expelled from the senate Cornelius Rufinus, who had been dictator and twice consul, because he had in his house more than ten pounds weight of silver plate. The stern patriot himself had only a single article of the kind, a small silver salt-cellar; and when he died he left so little property, that his daughter had a marriage portion from the public treasury. He was incarcerated at the expence of the state within the walls of Rome, notwithstanding a prohibitory law, which was dispensed with out of respect to his memory.—*Plutarch in Pyrrho. Moreri. Univ. Hist.*

FABRICIUS (GEORGE) a writer of Latin poetry in the sixteenth century, who was a native of Chemnitz in Germany. He published two volumes of Sacred Poems, at Basil, in 1567. In the composition of these pieces the author has made it a rule to employ no term referring to Pagan mythology, notwithstanding which he has displayed copiousness of style and

facility of expression. He was also the author of an Art of Poetry, several times reprinted; besides a Description of Rome, works on Saxon history and antiquities, and on the history of Misnia, in Latin prose. He was rector of the school of Meissen, where he died in 1571, aged fifty-four.—*Baillet. Moreri. Teister.*

FABRICIUS AB AQUAPENDENTE (JEROME) a celebrated Italian physician and anatomist of the sixteenth century. He was born of a noble but reduced family about 1537, and was educated at Padua under Gabriel Fallopius, on whose death he became anatomical demonstrator. In 1565 he was appointed professor of surgery; and in 1571 he obtained the chair of anatomy, with an augmented salary. Various honours and emoluments were bestowed on him by the Venetian government, to which Padua was subject; and he continued to enjoy a high reputation in his profession for a long series of years, dying in 1619. Fabricius, besides works on surgery, was the author of treatises “*De Venarum Ostioliis*,” “*De formato Foetu*,” “*De Motu locali secundum totum*,” and several other pieces relating to anatomy and physiology. He first accurately examined and described the valves of the veins, though he did not originally discover them.—*Aikin's G. Biog.*

FABRICIUS. (JAMES) There were two bearing this christian name, the elder a physician of Rostock, born 1577, held the joint professorships of mathematics and physic in that place, and was afterwards chief physician to the court of Denmark. He is the author of several medical tracts, entitled “*Institutio Medici practicam aggredientis*,” “*Periculum Medicum, seu Juvenilium Fœturæ priores*,” “*De Cephalalgia Autumnali*,” “*De novo et antiquo capitis morbo et dolore*,” and “*Uroscopia*.” Most of these treatises are intended to assist the tyro in medicine. He died at Copenhagen in 1652.—*Biog. Univ.*—The other, a Pomeranian clergyman of the reformed church, born in 1593, at Coslin; was chaplain to the great Gustavus Adolphus. On the death of that prince he accepted the divinity chair at Stettin, and published an account of the life of his late patron, written in Latin, a polemical treatise on the book of Genesis, and the epistle to the Romans, and two others, entitled “*Probatio Visionum*,” and “*Invictæ visionum probationes*.” His death took place in 1654.—*Ibid.*

FABRICIUS (JOHN) a native of Osterla, in East Friesland, who made a voyage to Holland, where he learnt to construct refracting telescopes. Besides other observations which he made with these instruments, he noticed the spots on the disc of the sun, which led him to publish his work, entitled “*Joh. Fabricii Phrysii de Maculis in Sole observatio, et apparente eorum cum Sole conversione Narratio*,” Witteb. 1611, 4to. From this treatise it appears that he preceded Galileo in the discovery of the Solar Macule. The period of his death is uncertain; but he was living in 1619.—**DAVID FABRICIUS**, the father of the preced-

ing, also distinguished himself by some astronomical discoveries; and he made an abortive attempt to reconcile the Ptolemaic system with the observation of Kepler on the elliptic forms of the planetary orbits. He was the author of a chronicle of East Friesland, and exercised the functions of minister at Osterla, where he was killed, in 1617, by a peasant, whom he had accused of robbery in his public discourses.—*Biog. Univ.*

FABRICIUS (JOHN ALBERT) a celebrated classical scholar and critic, who was the son of an organist at Leipsic, where he was born in 1668. He was sent to school at Quedlinburg, where his peculiar taste for learning was excited by an accidental perusal of the *Adversaria* of Barthius. Returning to Leipsic in 1686 he became a student of theology at the university. He was subsequently admitted a preacher, and held public disputations on divinity. In 1693 he went to Hamburg, and was made librarian to J. Frederic Meyer, a gentleman of that city. In 1699 he succeeded Vincent Placcius as professor of rhetoric at Hamburg; and the same year he took the degree of doctor in theology at Kiel. He died in 1736. Fabricius was a most erudite and industrious scholar, to whose researches the learned world is highly indebted. Such was his acquaintance with books, that he well deserved the title bestowed on him by another scholar, of Librarian of the Republic of Letters. The following are the titles of his most valuable publications: “*Bibliotheca Græca*,” 14 vols. 4to, containing notices of the lives, and abstracts of the works of Greek authors; “*Bibliotheca Latina*,” 3 vols. 8vo, a similar but less extensive work relating to Latin literature; “*Bibliotheca Latina Ecclesiastica*,” folio; “*Bibliotheca mediæ et infimæ Latinitatis*,” 5 vols. 8vo; “*Bibliographia Antiquaria*,” 4to; “*Codex Apocryphus Novi Testamenti*,” 3 vols. 8vo, a curious collection of spurious gospels, &c.; “*Codex Pseudepigraphus Veteris Testamenti*,” 2 vols. 8vo; “*Salutaris Lux Evangelii toto orbe exoriens*,” 4to; “*Memoria Hamburgenses*,” 7 vols. 8vo. He also distinguished himself as an editor of the works of other authors, and published many less important treatises of his own composition.—*Chaujpié. Aikin's Gen. Biog.*

FABRICIUS (JOHN CHRISTIAN) a celebrated modern entomologist, born in the duchy of Sleswick in 1742. After completing his studies he went to Upsal at the age of twenty to hear the lectures of Linnæus. He profited greatly by the instructions of such a master, and having conceived the idea of forming an arrangement of insects according to the structure of the mouth, he proposed employing it in the classification of those animals in a new edition of the *Systema Naturæ*, which Linnæus was about to publish. The great naturalist approved of the plan, though he declined introducing it into his own work. Fabricius adopted the profession of medicine, and took his doctor's degree in that faculty. Being afterwards appointed professor of natural history at Kiel, he devoted himself entirely to his favourite science,

and in 1775 he published his *System of Entomology*. This work produced a complete reform in that branch of zoology. Two years after he pointed out the classic and generic characters of insects, in a second treatise; and in 1778 he published his "*Philosophia Entomologica*," on the model of the *Philosophia Botanica* of Linnæus. From that period to his death Fabricius industriously employed himself in extending his system, and displaying it under a variety of forms, in different works which he published. Like most other theorists, he was too exclusively attached to his peculiar method of classification; but in spite of his errors he must be regarded as a naturalist of the first rank. His knowledge of all the branches of natural history was very extensive. He was counsellor of state to the king of Denmark, and professor of rural and political economy, on which subjects he wrote many useful works in the German and Danish languages. He died in 1807.—*Biog. Univ.*

FABRICIUS (JOHN LEWIS) a learned Swiss divine of the reformed church, in the seventeenth century. He was educated partly under his father, who was rector of the college of Schaffhausen, and afterwards studied at Cologne and Heidelberg. In 1650 he was employed as a tutor at Utrecht, and in 1656 he took the degree of MA. at Heidelberg, and became Greek professor extraordinary. He then travelled with a young nobleman, and on his return he was appointed professor of theology at Heidelberg, superintendent of the College of Wisdom, a professor of philosophy, and director of the studies of the electoral prince Palatine. In 1664 he was nominated ecclesiastical counsellor to the elector Charles Lewis, who, as well as his son and successor, employed Fabricius in foreign embassies and other affairs of church and state. He died in February 1696-7, aged 64. His works, which are chiefly theological, were collected and published at Zurich in 1698, 4to, with a prefixed account of his life, by J. Hen. Heidegger.—*Moreri.*

FABRICIUS HILDANUS (WILLIAM) an eminent surgeon in the sixteenth and seventeenth centuries, who was a native of Hilden, near Cologne. He settled first as a practitioner at Lausanne in Switzerland, where he also gave lectures on anatomy. He was afterwards surgeon to the margrave of Baden; and in 1615 he removed to Berne, where he practised physic till his death in 1634, at the age of 74. His works, relating to practical surgery, contain many useful facts, and display much ingenuity, whence they are still esteemed by professional men.—*Huller. Bibl. Anat. et Chir. Manget. Bibl. Script. Med.*

FABRICIUS (VINCENT) a German poet, born in 1613 at Hamburg. He was celebrated for his eloquence as well as his writings, and cultivated with great success the sciences of medicine and jurisprudence. He became counsellor to the bishop of Lubeck, and syndic and burgomaster of Dantzic, from which city he was on thirteen occasions deputed to the diet at Warsaw, where at length he died in 1667.

His friend Heinsius superintended an edition of his Latin poems in 1632; a better was however printed afterwards at Leipsic, and edited by his son, FREDERICK FABRICIUS, in 1685.—*Biog. Univ.*

FABRIS (NICHOLOS) an ingenious Italian mechanician, who was a priest of the Oratory. He was born at Chioggia in 1739, and was made counsellor to the bishop of that city, where he died, August 13th, 1801. He first employed himself, in conjunction with his brother, the abbé FRANCIS FABRIS, in analyzing and arranging the marine productions of the Adriatic. Afterwards, studying mathematics and music, he applied his knowledge to the construction of curious machinery. He made a piano-forte which wrote down the music when played on; a wooden hand for beating all kinds of time; a time-piece which marked the hours according to the French and Italian methods, with the minutes and seconds, the periods of the equinoxes and solstices, besides various other instruments. He was also occupied in researches after the perpetual motion; and conceived the plan of a self-moving machine, acting by means of a magnet.—*Biog. Univ.*

FABRONI (ANGIOLO) a learned and ingenious Italian, born at Marradi in Tuscany, in 1732. He received at Fienza the rudiments of an education which he afterwards completed at Rome. At the age of 35, the grand duke of Florence preferred him to the priory of the church of San Lorenzo in that capital, and placed his children under his tuition. Under his auspices Fabroni wrote the lives of Lorenzo the magnificent, and of the grand duke Cosmo de Medicis, as also of popes Leo X and Clement XII, the poet Petrarch, and other distinguished personages; in addition to which he published a biographical account of the principal Italian scholars, who flourished during the seventeenth and eighteenth centuries. Of this latter work, which he had intended to finish in twenty volumes, only eighteen were printed, the nineteenth being left incomplete. His other works are—"Istoria dell' arte del disegno;" "Istoria Lycei Pisani," 4to, 3 vols.; "Elogi illustri Italiani," 4to; "Elogi di Dante Alighieri, di Poliziano, di Ariosto, e di Torquato Tasso;" "Vita Pallantis Stroctii," 4to; and some autobiographical memoirs, besides various devotional and other tracts. Towards the close of life he retired to Pisa, became curator of the university there, and died in 1802.—*Nour. Dict. Hist.*

FABROT (CHARLES ANNIBAL) a learned jurist, born at Aix in Provence, in 1581. After completing his studies, he took the degree of doctor of laws in 1606, and became a counsellor of the parliament of Provence. He was afterwards made professor of jurisprudence at Aix. In 1638 he printed at Paris his *Notes on the Greek Paraphrase of Theophilus on the Institutes of Justinian*, which gained him great reputation, and occasioned his being employed by the chancellor Seguier to translate the basilics or laws of

the eastern empire, published under the title of "Basilicon;" Paris, 1647, 7 vols. folio. Fabrot edited several of the Byzantine historians, and the works of Cujas, and wrote many exertations on professional topics. He died in 1659.—*Moreri. Biog. Univ.*

FACCARDINE or FAKR-EDDIN, emir or prince of the Druzes, a people inhabiting the environs of Mount Libanus in Syria. He was master of Barut, Seide, and other places, when the sultan Amurath IV determined to destroy a power whose independence had long excited his jealousy. He sent an army against him under the pachas of Tripoli, Damascus, and other chiefs, whom Fakr-eddin encountered with twenty-five thousand men, commanded by his two sons. Ali, the elder, attacked the Turks, and killed eight thousand of their troops; but overpowered by numbers, he surrendered on promise of having his life spared. He was however immediately put to death; which so disheartened the old emir, that, abandoning Seide and Barut, he fled to the mountains with his remaining forces, consisting of Maronites and Druzes. Pursued by the Turks from one fortress to another, Fakr-eddin at length submitted to the mercy of the victor; by whom he was at first well received, but the fears of Amurath having been alarmed by his intriguing courtiers, he had his captive executed, March 14th, 1635.—*Baron de Tott's Memoirs. Biog. Univ.*

FACINI (PETER) a native of Bologna, who attained eminence as an historical painter. He studied under Annibal Caracci, whose jealousy being excited by the proficiency of his scholar, a quarrel took place, and Facini opened an academy in opposition to that of Caracci, which was much frequented. He was extensively employed in ornamenting churches and mansions; but his works being painted in fresco, few of them are preserved. He died in 1602, aged 41.—*Abecedario Pilkington.*

FADLALLA or CHODSA RASCHID ADDIN FADLALLAH, an oriental historian, was the son of a physician of Hamadan in Persia. He was visier to the sultan Cazan who reigned at Tauris, by whom he was commanded to draw up a history of the moguls, collected by an officer named Poulad. This was finished in 1294, with the title of "Tarickh Monbarec Cazani," or "The August History of Cazani." After the death of the sultan, Fadlalla was commanded by his successor, Mahommed Khodobendi, to continue the work, and add to it a civil and geographical description of all the territories and people of the Moguls and Tartars. The first volume was translated from the Persian into French, by M. Petis de la Croix, jun. and was contained in the library of the king of France.—*Moreri.*

FALCANDUS (HUCH) a Sicilian historian of the twelfth century, is by some thought to have been a Norman by birth. He published the "History of Sicily" in 1189 or 1190. It is written in a free, bold, and elegant style, and has been several times printed, the last by

Muratori in his collection of Italian historians.—*Moreri. Tiraboschi.*

FAERNO (GABRIEL) a Latin poet and eminent scholar of the fifteenth century. He was a native of Cremona, and was employed as corrector and revisor of books in the Vatican library at Rome. He died in 1561. Faerno is best known as the author of "Fabulæ centum ex antiquis auctoribus delectæ," published at Rome in 1564. These compositions, which are in Latin verse, brought on the author the imputation of having borrowed from Phædrus, whose Fables, subsequently discovered and published by Pithou, he was supposed to have met with and concealed the MS. But the charge seems unfounded. He also edited the comedies of Terence, and the Philippics of Cicero.—*Tiraboschi. Biog. Univ.*

FAGE (RAIMOND DE LA) a French artist in the seventeenth century, distinguished for the extraordinary facility and beauty with which he executed pen-and-ink drawings. He was at Rome three years, during the pontificate of Innocent XI, where he astonished every one by the excellency of his works and the eccentricity of his behaviour. He was excessively fond of drinking, and when he had run up a score at a tavern, and the account was brought him, he would make a drawing on the back of the bill, and give it to his creditor in lieu of money, and these designs were often sold at a great price. Returning to Paris, he was killed by an accidental blow on the head, as he was entering an archway on horseback at night in 1690. Some of his works have been engraved and published.—*Abecedar. Pitt. Pilkington.*

FAGIUS (PAUL) or BUCHLEIN, a native of Rheinzabern in Germany, born 1504. One of the most learned among the early protestant reformers. Having studied at Heidelberg and Strasburgh, where he made great proficiency in the Hebrew and other oriental languages, he married, and conducted a school for a while with great reputation at Isna, but afterwards took orders, and distinguished himself much by his exertions while the plague raged in that neighbourhood, in 1541. Obtaining a professorship at Heidelberg he published there several treatises, the object of which was to facilitate the study of Hebrew, but the persecution of the protestants commencing, he thought it advisable to accept an invitation made him by Cranmer, and in company with his friend Bucer, came over to England in 1549. Under the auspices of the archbishop these two indefatigable scholars commenced a task for which few were better qualified, that of making an entirely new translation of the scriptures, the version of the Old Testament being consigned to Fagius, and that of the New to his colleague. Long however before their undertaking was completed, a fever which broke out at Cambridge, the scene of their operations, carried off Fagius in November 1550, and Bucer followed within the year. On the accession of Mary to the throne, the bodies of both were disinterred and burnt under the gallows, as those of two arch-heretics. The works of

Fagius on different subjects, but principally of a polemical nature, are numerous, his commentaries on the Targums have been held in much esteem.—*Melchior. Adam. Morevi.*

FAGEL (GASPAR) an eminent Dutch statesman, who was grand pensionary of Holland in the latter part of the seventeenth century. He signalized himself by his firmness and activity during the invasion of his native country by the French in 1672; he assisted with sir William Temple in concluding the peace of Nimegueu in 1678; and displayed his talents on other occasions. But his most splendid political achievement was the elevation of the prince of Orange to the throne of England; in the measures preparatory to which he was deeply engaged, and drew up the manifesto published by his master. He was born at Haerlem in 1629, and died December 15th, 1688, before the official news of the success of William III reached Holland.—FRANCIS NICHOLAS FAGEL, grand-nephew of Gaspar, was a military officer of distinction under William III, in many of whose victories he participated, as he did also in the battles of Ramillies and Malplaquet, and other actions in the wars of queen Anne. After the peace of Utrecht he retired to the fortress of Sluys in Flanders, of which he was governor, and died there in 1718.—*Nouv. Dict. Hist. Biog. Univ.*

FAHRENHEIT (GABRIEL DANIEL) a native of Hamburg, noted for the invention of a thermometer, which has obtained general adoption among experimental philosophers. He was a native of Dantzic, and was engaged in commerce at Hamburg, but devoted much of his time to the cultivation of physical science. About 1720 he constructed the mercurial thermometer, still known by his name; and in 1724 he published a "Dissertation on Thermometers." He died in 1736.—*Nouv. Dict. Hist. Biog. Univ.*

FAIRFAX (EDWARD) a poet of the seventeenth century, who is regarded as one of the great improvers of English versification. He was the son of sir Thomas Fairfax of Denton in Yorkshire, and he appears to have received a liberal education. He engaged in no profession, but settling at Newhall, in the parish of Fuyistone, in Knaresborough forest, led the life of a retired country gentleman, devoted to literary pursuits. He died about 1632. Fairfax's reputation rests on his version of Tasso's "Godfrey of Bouillon," first published in 1600, with a dedication to queen Elizabeth. This poem, which is written in the same stanza with the original, combines fidelity to the sense of the author, with harmony of versification. After being for awhile superseded in the estimation of the reading public, by the inferior translation of Hoole, it has been more justly appreciated, and recent editions of the work have issued from the press. Fairfax wrote Eclogues and other poems not known to be extant, except one of the former inserted in Mrs Cooper's Muses' Library. He also wrote in prose on Demonology, in which he was, it seems, a believer.—*Bog. Brit.*

FAIRFAX (THOMAS) lord, a distinguished

commander and leading character in the civil wars which distracted England in the seventeenth century. He was born in 1611, at Denton in Yorkshire, being son and heir of Ferdinando, lord Fairfax, to whose title and estates he succeeded in 1647. A strong predilection for a military life induced him to quit St John's college, Cambridge, where he had been placed by his father, and at an early age to volunteer with the lord Vere, under whom he served a campaign in the Netherlands with some reputation, and afterwards married the daughter of his commander. When the disputes between Charles I and the parliament terminated in open rupture, and both parties appealed to arms, Fairfax, then in England, openly and warmly espoused the cause of the latter, and joined his father in making active preparations for the approaching contest. In the earlier part of his career he was however far from fortunate, suffering various checks from the royalist forces, especially one of a more serious character in 1643 at Adderton Moor. At the battle of Marston Moor he redeemed his credit, and the earl of Essex resigning the command of the parliamentary army, Fairfax was made general-in-chief in his room. After the victory at Naseby, to the gaining of which his courage and conduct mainly contributed, he marched into the western counties, quelling every thing in the shape of opposition as he advanced; and in 1648, having reduced Colchester, ordered Lisle and Lucas, who had defended the place for the king, to military execution in violation, it is said, of the terms of capitulation. When the king fell into the power of the prevailing party, considerable jealousy appears to have been entertained by Oliver Cromwell and his adherents of Fairfax, who seems to have been far from wishing to push matters to the extremity to which they afterwards went; and it is even said that, in order to prevent his expected interference with the execution of Charles, Harrison, at Cromwell's instigation, detained him under the pretext of worship, at a distance from Whitehall until the blow was struck. Nevertheless he still adhered to the party with which he had hitherto acted, and continued in employment, though more than suspected of disaffection, till being ordered to march against the revolted Scotch presbyterians, he positively declined the command, and retired for awhile from public life. At the Restoration he crossed over to Holland for the purpose of congratulating Charles II on his accession, and was formally reconciled to that monarch. The little leisure which the bustling period in which he lived allowed him, he dedicated to the encouragement and cultivation of letters, especially as regarded the study of antiquities; and left behind him a few poetical and miscellaneous pieces, among the latter of which is an interesting sketch of his own public life, printed in one 12mo vol. 1699. Lord Fairfax died at his family seat in 1671.—*Biog. Brit. Hume's Hist. of England.*

FAITHORNE (WILLIAM) an English engraver and painter of some eminence in the

seventeenth century. He was a native of London; and during the civil war, having served as a private in the royal army, he was made prisoner at the taking of Basing house, and being sent to the metropolis, he there supported himself by engraving. He subsequently went to France, and improved his skill by studying under Nanteuil. Returning to England about 1650, he opened a print-shop near Temple Bar, for the sale of his own works. He retired from business some years before his death, which took place in 1691. Faithorne was a popular artist in his day, having executed a vast number of portraits in a style of mediocrity, for which he is thus celebrated in the congenial strains of his friend Flatman:

“So long as brass, so long as books endure,
So long as neat-wrought pieces thou’rt secure:

A ‘*Faithorne sculptis*’ is a charm can save
From dull oblivion and a gaping grave.”

He also painted portraits in miniature; and he was the author of a book on the arts of drawing, engraving, and etching.—*Walpole’s Anecd. of Painting.*

FALCONER (THOMAS) an ingenious scholar, who was a native of Chester, where he died in 1792, aged fifty-six. A severe malady under which he long laboured did not prevent him from attending to literature; and the fruits of his researches appeared in his “Chronological Tables, beginning with the reign of Solomon, and ending with the death of Alexander the Great; with a prefatory Discourse,” Oxford, 1796, 4to; and in the edition of Strabo, published by his nephew, the rev. T. Falconer, he also wrote some observations on Pliny’s account of the Temple at Ephesus.—*Chalmers’ Biog. Diet.*

FALCONER (WILLIAM) an English poet and writer on naval affairs. His father was a barber at Edinburgh, where he was born about 1730. He went quite young to sea in the merchant-service, in which he rose to the situation of second-mate, when the vessel to which he belonged was cast away, and he was thus it is said, furnished with the incidents of the production on which his poetical fame is founded, “The Shipwreck,” which was published in 1762. Previously to this, appeared his poem on the death of Frederick prince of Wales, in 1751. The Shipwreck was dedicated to Edward duke of York, whose patronage was extended towards the author, and he was appointed a midshipman on board the Royal George in 1763. He then addressed to his royal highness, “An Ode on his Second Departure from England as Rear-Admiral;” and he was soon after made purser of the Glory. His next literary effort was “The Demagogue;” a satirical poem, in which Wilkes and his partisans were attacked with acrimony. He also enlarged and improved his Shipwreck; and in 1769 he published “An Universal Marine Dictionary.” The same year he sailed for Bengal in the Aurora frigate, of which he was purser: and which was never heard of after she quitted

the Cape of Good Hope, in December 1769, and was therefore supposed to have foundered at sea, and all her crew to have perished. The subject of the Shipwreck is a voyage from Alexandria in Egypt, for Venice, cut short by the catastrophe whence the poem derives its title, and which is represented as having happened near cape Colonna on the coast of Greece. The versification of the piece is varied and harmonious; the descriptions are obviously drawn from nature; and though the incidents are common-place, they are well told, and calculated to excite the sympathy of the reader. Falconer is said to have been the author of the song of “The Storm;” his other poems have little merit.—*Aikin’s Gen. Biog. Memoir prefixed to Dr Clarke’s Edit. of the Shipwreck.*

FALCONER (WILLIAM) MD. FRs. a skilful physician, a resident of Bath, grandson of the author of “Cryptomeynsis Patefacta,” who died in exile with James II. Dr Falconer was an able writer, principally on professional subjects. His “Essay on the Influence of the Passions,” gained the first Fothergillian medal given by the London Medical Society in 1784, and his “Observations on the Gout,” in answer to Dr Cadogan, 8vo, 1772, is also considered a very able treatise. The discovery of the acid properties of fixed air, (carbonic acid gas,) improperly attributed to Dr Priestley, was made public by him some time before it had attracted the notice of that learned chemist. A work “On the Influence of Climate,” from his pen; and his “Miscellaneous Tracts,” have also attracted much attention. The latter especially, containing a Greek and Roman calendar, was published at the expence of the university of Cambridge, who presented the author with the copies. Among his other writings are—“Dissertatio de Nephritide vera,” Edin. 1766; three essays “On the Bath Waters,” 1770, 1775, and 1790; “Observations on the Poison of Copper,” 8vo, 1774; “Experiments and Observations,” 1777; “On the Diet of Valetudinarians,” 8vo, 1778; “Account of the Epidemic Catarrhal Fever, called the Influenza, 8vo, 1782; “Dobson on fixed Air, with an Appendix,” 1785, 4th edit., 1792; “On the Preservation of Health in Agriculturists,” 8vo, 1789; “On the Pulse,” 8vo, 1796; “An Examination of Dr Heberden’s Treatise on the Plague,” 8vo, 1802; “An Account of the Influenza as it appeared at Bath in the Spring of 1803;” “On Ischias,” 1805; and a translation of “Arrian’s Voyage round the Euxine,” 4to, 1805. Dr Falconer died at Bath of apoplexy in his eighty-first year, in 1824.—*Ann. Reg.*

FALCONETTO (JOHN MARIA) an Italian architect, who was born at Verona in 1458, and died in 1534. He erected the Dominican church, della Madonna delle Grazie, at Padua; and a music-hall, much praised by Serlio, who called it “La Rotonda di Padova.” This last building is said to have suggested to Palladio the idea of the famous villa Capra, which served as the model of lord Burlington’s villa at Chiswick. Falconetto built palaces and

other edifices; and he has the merit of having contributed much to improve the style of architecture in the Venetian states.—*Eimes's Dict. of Fine Arts.*

FALCONIA (PROBA) a Christian poetess, who was a native of Etruria, and flourished in the reign of the emperor Honorius, towards the end of the fourth century. She displayed her ingenuity by composing a cento from the works of Virgil, comprising the history of the Old Testament, and that of Jesus Christ, from the Gospels. The best edition of this poetical compilation is that of Wolfius, 1724, 4to.—*Mores.*

FALCONNET (STEPHEN MAURICE) a celebrated French sculptor of the eighteenth century. He was born in humble life, and displaying a natural taste for the fine arts, he was assisted in his studies by Lemoine, Catharine II of Russia, patronised him, and he was employed by her to execute the colossal statue of Peter the Great, erected at Petersburg. He wrote notes on the 34th and 35th books of Pliny's Natural History; Observations on the Statue of Marcus Aurelius; and other works relating to the arts, printed together in 6 vols. 8vo, Paris, 1781. Falconnet died at Paris in 1791.—*Biog. Univ.*

FALK or FALCK (JOHN PETER) a Swedish naturalist and traveller, who was a disciple of Linnæus. After finishing his studies at Upsal, he endeavoured to obtain leave to join the scientific travellers sent into Arabia by the Danish government in 1761, but he was unsuccessful. He afterwards went to St. Petersburg, and was appointed director of a cabinet of natural history, and also a professor of botany in the garden of the apothecaries in that metropolis. In 1768 the Imperial Academy of Sciences engaged Falk to assist in exploring the Russian dominions; and he accordingly travelled for that purpose as far as Kasan, when he was recalled in 1773. Being dreadfully afflicted with hypochondria he went to use the baths of Kisliar, and returned to Kasan much relieved. His complaint recurring with violence, he put an end to his life by shooting himself through the head with a pistol, March 31, 1774. The Russian Travels of Falk were published from his papers, by professor Laxman, in 3 vols. 4to, Petersburg, 1785.—*Aikin's Gen. Biog.*

FALLOPIUS (GABRIEL) a celebrated Italian anatomist, who was descended of a noble family, and was born at Modena towards the close of the fifteenth century. He studied at Ferrara and at Padua, at which last place he is said to have attended the lectures of Vesalius. His first destination appears to have been to the church, as he held for a short time a canonry at Modena. Afterwards devoting himself to medical pursuits, he became professor at Ferrara, whence in 1548 he removed to Pisa. He continued there three years, and was then made professor of surgery, anatomy, and the materia medica at Padua, where he remained till his death in 1563. The principal work of Fallopius is his "Observationes Anatomicæ," Venet. 1561, 8vo; which, as well as his other

writings, has been several times reprinted. He was the first anatomist who accurately described the vessels and bones of the fetus; and his account of the Fallopiian tubes in females has perpetuated his name.—*Haller. Tiraboschi. Aikin's G. Biog.*

FALSTER (CHRISTIAN) a native of Flensburg in Denmark, who flourished about the commencement of the last century. He was an acute critic and a learned man, but little is known of the circumstances of his life, condition, the time of his birth, or that of his decease, further than may be inferred from the dates of his writings, which consist of "Supplementum Linguae Latinæ;" "Animadversiones Epistolicae," both in 1717; "Questiones Romanae," 1718; "Cogitationes Philologicae," 1719; "Sermo Panegyricus de variorum gentium bibliothecis," 1720; "Vigilia prima noctium Ripensium," 1721; a translation into the Danish language of the 14th Satire of Juvenal, 1731; and "Amœnitates Philologicae," 1732.—*Saxii. Onom.*

FANCOURT (SAMUEL) a dissenting minister and theological writer of the last century. He was born about 1678, but the place of his birth and also of his education are not known. He is said to have been a schoolmaster and pastor of a congregation at Salisbury, whence he removed to London, in consequence of the dissatisfaction of his hearers at his opposition to the Calvinistic doctrine of reprobation. In the metropolis he distinguished himself by becoming the first establisher of a circulating library, a scheme however which did not contribute to his own emolument, as he was reduced to dependance on the charity of his professional brethren previously to his death, which took place in 1768. He was the author of a pamphlet entitled "The Greatness of the Divine Love vindicated," 1727, 8vo; and he wrote against Dr Morgan, the author of the *Morai Philosophæ*.—*Gent. Mag. for 1784.*

FANSHAWE (sir RICHARD) an eminent diplomatist and poet under the two Charleses, born in 1607 at Ware Park, Herts, the seat of his father, sir Henry Fanshawe, of whom he was the tenth and youngest son. Having studied the usual time at Jesus college, Cambridge, he made the grand tour, an essential part of a gentleman's education at that period, and on his return entered himself of the Inner Temple. The reputation he had acquired by his learning and abilities, aided by family interest, shortly afterwards procured him the notice of the court, and he was dispatched in 1635 by Charles I, in the capacity of resident minister, to Madrid. On the breaking out of the civil wars in 1641 he was recalled, and engaged actively in the royal cause, attending the king to Oxford, where in 1644 he received the honorary degree of LL.D. and soon after being appointed secretary to the prince of Wales, followed the fortunes of his master through all the troubles of the period till the battle of Worcester, when he was taken prisoner. A severe fit of illness shortened the term of his imprisonment, and he was permitted to go at large on bail. On the death of

Cromwell, he passed over the channel in 1659 to the king at Breda, by whom he was graciously received and knighted. After the Restoration he obtained the mastership of the requests, a lucrative as well as honourable appointment, and was made Latin secretary. In 1661 and 1662 he was employed on two several missions to the court of Lisbon; the object of the latter being to negotiate a marriage between his sovereign and the infanta Catharine, and on his return the year following he was advanced to a seat in the privy council. In 1664 he was sent ambassador to Madrid, and succeeded in negotiating a peace between England, Spain, and Portugal. Having brought his mission to so happy a termination, he prepared to set out on his return, but falling suddenly ill of a fever, died before he could put his purpose in execution at Madrid, June 16, 1666. His body was brought home, and having been temporarily deposited in All Saints' church, Hertford, was finally interred at Ware. His poetical abilities, if not of the first order, were yet above mediocrity, as is evinced by his translations of the *Lusiad* of Camoens, the *Pastor Fido* of Guarini, the *Odes* of Horace, and the fourth book of the *Aeneid* into English verse, and Fletcher's *Faithful Shepherdess* into Latin. Among his posthumous writings, printed in 1701, is his correspondence during his embassies to the courts of Lisbon and Madrid, and some occasional poems, with a life of the author prefixed.—LADY FANSHAWE, the daughter of sir John Harrison, who bore him several children, left behind her a memoir of her husband's family, which has however never been printed.—*Biog. Brit.*

FANTONI (JOHN) an Italian physician and anatomist of the eighteenth century. He was a native of Turin, where he became a professor of anatomy, and physician to the prince of Piedmont. His works consist of treatises on Mineral Waters; "*Dissertationes Anatomicæ*;" "*Anatomia Corporis Humani ad usum Theatri Medici accommodata*;" "*Dissertationes duæ de Structura et Usu Duræ Matris et Lymphaticorum Vasorum*;" "*Dissertationes Anatomicæ de Abdomine*." He published some tracts written by his father, who was physician to the duke of Savoy, and who died in 1692. Fantoni was born in 1675 and died in 1750.—*Rees's Cyclopadia*.

FARE (CHARLES AUGUSTUS, marquis de la) count de Laguerre, a French poet, who was captain of the guards to the duke of Orleans, afterwards regent. He was born at Valgorge in Vivarais in 1644, and closed his long career as a courtier and a man of pleasure in 1712. Voltaire, in his *Age of Lewis XIV*, says, that M. de la Fare did not display his talent for poetry till he was near sixty, when he wrote his address to madame de Caylus. He was intimate with the abbé de Chaulieu, whose light and voluptuous style he imitated, and whose productions have frequently been printed together with his own. He also wrote "*Mémoires sur le Règne de Louis XIV*," containing satirical reflections on contemporary characters.—*Nouv. Dict. Hist. Bog. Univ.*

FAREL (WILLIAM) a Protestant divine, who was one of the associates of Calvin in the reformation of the church. He was a native of Gap in Dauphiné, and studied at the university of Paris, where he distinguished himself by his proficiency in philosophy and classical literature. In 1521 he was invited by the bishop of Meaux to preach in that city, where he propagated the principles of the Huguenots which he had embraced, and which drew on him the persecution of the Franciscans; and in 1523 he consulted his safety by quitting France. He found an asylum at Strasburgh, whence he removed to other parts of Germany, exercising his talents as a preacher. On several occasions he displayed an illiberal opposition to the principles and practices of the catholics, and by his intemperate zeal and violence injured the cause of which he was the advocate. He insulted the Romish priests in his public harangues, and once on a procession-day he had the boldness to snatch from the hands of an ecclesiastic an image of St Anthony, and cast it over a bridge into a river. These acts of imprudence laid him open to the reproaches of Erasmus, whom he had offended by his writings, and who has left on record a very unfavourable portrait of Farel. In 1529 he went to Neufchatel, and afterwards visited Geneva, whither he was invited in 1534; but in 1538 he was banished, together with Calvin, for refusing to submit to the decrees of the synod of Berne. He resided afterwards principally at Neufchatel, occasionally removing to other places in the prosecution of his labours as a reformer. In 1553 he was obliged to appear at Geneva, owing to a prosecution (which his friend Calvin represents to have been a malicious one) commenced against him for a capital offence. Whatever may have been the result of this affair, Farel fixed an indelible stain on his own character at this period by assisting at the execution of the unitarian martyr Servetus. In 1558, at the age of sixty-nine, Farel again laid himself open to some animadversion by taking a wife. He survived his marriage about seven years, dying at Neufchatel in 1565, a few months after his return from a journey to Metz, whither he had gone to strengthen the faith of the German protestants. He was the author of a treatise on the sacrament and other religious tracts; but he promoted the cause of reformation more by his preaching than by his writings.—*Bayle. Aikin's G. Biog.*

FARIA Y SOUSA (MANUELL DE) a Portuguese historian and poet of the seventeenth century. He was born in 1590 in the province of Entre Minho y Douro, and devoted the early part of his life to the art of painting, but afterwards attracted by literature, he studied the Roman and Greek writers under the bishop of Oporto, who made him his secretary. Not choosing to become an ecclesiastic, he left the service of that prelate and went to Madrid, and obtained the patronage of Pereira, secretary of state to the king of Spain, who procured him admission into the Portuguese order of the knights of Christ. In 1631 he went to Rome as secretary to the ambassador,

the marquis del Castel Rodrigo, who made so unfavourable a representation of his conduct, that on his return to Spain in 1634, he was arrested and closely confined at Barcelona. After a few months he was removed to Madrid, where he was obliged to remain as a kind of prisoner at large till his death in 1649. Faria was the author of an epitome of the History of Portugal, which has been often printed; a political and geographical survey of the territories belonging to the crown of Portugal in the various quarters of the globe, entitled "Asia Portuguesa," 3 vols. folio; "Enropa Portuguesa," 2 vols. folio; "Africa Portuguesa," folio; and "America Portuguesa," of which the first is reckoned the most exact and valuable; Commentaries on the *Luzia* of Camoens, Poems, and other works.—*Moreri. Niceron. Biog. Univ.*

FARINATO (PAUL) an eminent Italian painter, who was a native of Verona. His works display freedom of design, boldness of colouring, and great facility of execution, to which he added an acquaintance with civil and military architecture. Indefatigable in his profession, he did not lay aside his pencil till near the close of his life, protracted to the unusual length of eighty-four years. He died in 1606. His mother is said to have died in childbed previous to his birth, which was effected by means of the Caesarian operation. A somewhat romantic story is told also of his last moments. When on his death-bed he said to his wife, who was lying near him dangerously ill, "Oh, my wife, I am going!" "And I will go with thee!" replied she; and it is added that they died almost at the same moment.—*Abcedar. Pittor. Pilkington.*

FARINGTON (GEORGE) an historical painter, who was the son of a clergyman in Lancashire. He studied first under his brother, and afterwards became a pupil of West. Alderman Boydell employed him to make drawings from the pictures in the Houghton collection. He long pursued his studies at the Royal Academy, and in 1779 obtained a prize medal. In 1780 his painting of the incantation scene in Macbeth was rewarded with a gold medal. He left England in 1782 for the East Indies, where he continued the exercise of his profession. His principal production was a large picture, representing the durbar or court of the nabob of Arcot at Mershoodabad. While engaged on this work he imprudently exposed himself to the night air, to observe some national ceremonies of the Hindoos, in order to complete a series of drawings, when he was suddenly seized with a complaint which in a few days terminated his life in 1788, at the age of thirty-four.—*Edwards's Anec. of Paint.*

FARINGTON (Joseph) brother of the preceding, eminent as a landscape painter. He was a scholar of Wilson, and resided long among the lakes of Cumberland. He is more distinguished for adherence to nature in her more obvious features, than for bold or original delineations of her most striking peculiarities. But though his composition is poor, his colouring is often clear, brilliant, and transparent,

and sometimes accompanied with a breadth of chiaro-scuro; his pencilling is free and firm, but at times carried to excess, so much so as to produce a hardness that effectually destroys repose. He made many drawings for the "Britannia Depicta," to accompany Lysons's *Magna Britannia*. His death took place in 1818.—*Davey's Sketches of Modern Artists.*

FARMER (HUGH) a dissenting clergyman, a native of Shropshire, born 1714. He studied at Northampton under Dr Doddridge; and was afterwards pastor to a congregation at Walthamstow. He was the author of several theological and polemical tracts, the principal of which are dissertations "On Miracles," 8vo; "On the Temptation in the Wilderness," 8vo; "On the Demoniacs," 8vo; and "On the Worship of Human Spirits by the Heathen World," 8vo. These two last treatises involved him in controversy with Dr Worthington and Mr Fell, to the latter of whom he replied with considerable acerbity. He died in 1787.—*Biog. Brit.*

FARMER (RICHARD) DD. a learned and elegant scholar, born in 1735 at Leicester, for the history of which, his native town, he collected ample materials, which came afterwards into the possession of his friend, Mr Nichols. In 1760 he took his degree of AM. at Emanuel college, Cambridge, of which society he was a fellow, and six years afterwards established his reputation as a critic and antiquary, by his *Essay on the long disputed point of the learning of Shakspeare*, in which he maintains that the poet's acquaintance with the ancients was solely acquired through translations. In 1775 he was elected to the headship of his college, and in 1778 to the office of university librarian. From a stall and chancellorship in Litchfield cathedral he was removed in 1782 to another in that of Canterbury, which he again resigned for the more valuable situation of a canon residentiary of St Pauls, which he obtained in 1788. His curious library, containing a large collection of English black-letter authors, was sold by auction after his death, which took place in 1797.—*Nichols's Lit. Anec.*

FARNABY or FARNABIE (THOMAS) an English grammarian of the seventeenth century, the son of a carpenter in London, born 1575. From Merton college, Oxford, where he had entered as a servitor, he was seduced to Spain by a Jesuit, but disliking the discipline of that society, made his escape and experienced many vicissitudes. Having joined the fleet under Drake and Hawkins in 1595, he sailed on their last voyage with those commanders, and afterwards served as a common soldier in the Netherlands; but returning to England in great distress, at length succeeded in establishing a school at Martock in Somersetshire, under the name of *Bainrafe*, the anagram of Farnabie. Hence he removed to London, where he continued his employment on a more extended scale, and conducted with great reputation a seminary of more than three hundred scholars. He now thought it advisable to graduate, which he did at Cambridge in 1616, and afterwards was admitted *ad eandem* at Oxford. In 1635,

London being at that period exceedingly unhealthy, he carried most of his pupils, among whom were the sons of many of the first nobility, with him to Sevenoaks, Kent; in the neighbourhood of which town he purchased an estate, still in the possession of his family, which has since been raised to the baronetage. During the parliamentary ascendancy, an unguarded speech of his, "that one king was better than five hundred," caused his incarceration; and it was even in contemplation to transport him to the plantations: his friends however saved him, and he got off with an imprisonment in Ely-house. In 1646 he regained his liberty, but died on the 12th of June the following year. His annotations on the Satires of Juvenal and Persius, 1612, on Seneca's Tragedies, 1613, on Martial's Epigrams, 1615, on Lucan's Pharsalia, 1618, and on Virgil, 1634, are at once brief, erudite, clear, and comprehensive, and have been highly commended, especially by Bayle. His other works are—"Index Rhetoricus," 1625; "Systema Grammaticum," 1641; and "Phraseologia Anglo Latina."—*Biog. Brit.*

FARNESE. The name of a family of the first rank in Italy. **PETER LOUIS FARNESE** was the son of Alexander, afterwards pope Paul III, by a secret marriage previously to his assumption of the cowl. He was created grand duke of Parma and Placentia in 1545, but becoming odious to his subjects by his tyranny and debauchery, fell by the hands of an assassin in the latter city in 1547.—His eldest son, **ALEXANDER**, born 1520, was raised by pope Clement VII to the see of Parma, and created a cardinal by his grandfather, Paul III, soon after his accession to the popedom. He was dean of the sacred college, and distinguished himself highly in that capacity, both by his learning and his virtues. His talents as a statesman also were much above mediocrity, and he was repeatedly employed as nuncio to the courts of Vienna and Paris. His death took place in 1589 at Rome.—A nephew of his, also named **ALEXANDER**, was the third duke of Parma, and highly distinguished as a military commander under Philip II of Spain, whose armies he commanded against Henry IV of France. He succeeded Don John of Austria in the government of the Low Countries in 1578, and had the Spanish armada cleared the seas, he was to have commanded the army destined for the conquest of England. He died in 1592 at Arras, at the age of forty-six.—*Moreri. Grotii Annal. Belg.*

FARNEWORTH (ELLS) an English clergyman, rector of Carsington, Derbyshire, of which county he was a native, his father holding the rectory of Bonteshall. He was brought up at Chesterfield and Eton, whence he removed to Jesus college, Cambridge, and graduated there in 1738. Dean Yorke in 1762 presented him to his preferment, but he enjoyed the benefice little more than a twelvemonth, dying March 25, 1763. He published translations of Leti's Life of Sixtus V, 1754, folio; Davila's History of France, 1757, 4to, 2 vols.; F'eury's History of the Jews, 12mo, and

Machiavelli's works complete, 1761, 2 vols. 4to; 1775, 4 vols. 8vo.—*Biog. Brit.*

FARQUHAR (GEORGE) a comic writer of eminence in the beginning of the eighteenth century. He was the son of a clergyman, and was born at Londonderry in Ireland in 1678. He is said to have manifested an early taste for poetry, and in 1694 he was sent to Trinity college, Dublin, whence however he either eloped or was expelled, in consequence of irregular conduct. His partiality for the drama induced him to make his appearance on the stage at Dublin, but he displayed little ability as an actor; and having had the misfortune to wound a brother performer in a tragedy-scene, through the mistake of having used a sword instead of a foil, he relinquished the profession he had so hastily chosen. About 1696 he accompanied his friend Wilks the player to London, where he commenced writer for the stage. His first production was "Love in a Bottle," performed at Drury-lane theatre with great success in 1698. About this time he attracted the favour of lord Orrery, who procured him a lieutenantancy in his own regiment. In 1700 he added to his reputation by his comedy of "The Constant Couple, or the Trip to the Jubilee," in which, under the character of sir Harry Wildair, he exhibited a lively picture of the foppish fine gentleman of the end of the seventeenth century. In 1701 appeared "Sir Harry Wildair," a sequel to the former comedy; and the following year he published a volume of "Miscellanies," consisting of poems, letters, essays, &c. "The Inconstant, or the Way to Win Him," was the next effort of his pen, and it is amongst those which have kept possession of the stage. It has great merit; but much of it is borrowed from the "Wildgoose Chase" of Beaumont and Fletcher. About 1703 he married a lady, who having fallen in love with him, had got herself represented as the heiress of a large fortune, and Farquhar is said to have pardoned the deception and treated her with kindness. He wrote in conjunction with Motteux a farce entitled "The Stage Coach," performed in 1704 and he afterwards produced a comedy called "The Twin Rivals." In 1706 appeared "The Recruiting Officer," one of his most popular plays; and this was succeeded by "The Beaux Stratagem," which closed his dramatic career, and which is reckoned his master-piece, though finished within the short space of six weeks, while labouring under serious indisposition. He died during the run of this play in April, 1707. It is no mean testimony of the dramatic talents of Farquhar that three of his plays are still favourites with the public. His wit is less obtrusive than Congreve's, but it is genuine and spontaneous; and though his characters are less strongly marked, they are admirably supported and obviously drawn from nature. His plots are not so artfully constructed as those of Wycherly and Mrs Centlivre, but he far excels those writers in the arrangement of his incidents, and in that unity of action which is one of the chief beauties of dramatic composition. The libertinism of language and sentiment which his works exhibit cannot be de-

feuded; but it was the vice of the age rather than of the writer, who is much less culpable than Dryden or Wycherly, whose grossness of expression has deservedly consigned their comedies to comparative oblivion.—*Biog. Brit. Biog. Dram.*

FARR (SAMUEL) a native of Taunton, Somerset, born 1741. From Warrington grammar-school he proceeded to complete his studies in the universities of Edinburgh and Leyden, in which latter he graduated as MD. and afterwards practised in his native town. He was the author of several professional tracts of merit, among others, of an "Inquiry into the propriety of Phlebotomy in cases of Consumption," 8vo; "An Essay on Acids;" "The History of Epidemics," translated from the Greek of Hippocrates, 4to; "The Elements of Medical Jurisprudence," 8vo; and "Aphorismi de Marasmo, ex summis medicis collecti," 12mo. He died in 1795.—*Chalmers's Biog. Dict.*

FARRANT (RICHARD) an excellent English musician and composer of the old school. He held situations in the Chapel Royal and St George's chapel at Windsor, from 1564 to 1580, and is remarkable for the devout and solemn style of his church music, much of which is to be found in the collections of Boyce and Barnard. His celebrated full anthem, "Lord, for thy tender mercy's sake," now in frequent use in most of our cathedrals, is as beautiful as the nature of plain counterpoint will admit, and always produces a fine and singularly solemn effect.—*Biog. Dict. of Mus.*

FASTOLF (sir JOHN) an English gentleman, who obtained some reputation as a military officer during the war with France in the fifteenth century, but is chiefly memorable as the supposed prototype of Shakspeare's Falstaff. He was a native of Norfolk, and adopting the profession of a soldier, he served with some distinction in Ireland, under sir Stephen Scrope, deputy to the lord-lieutenant of that kingdom. That officer dying in 1408, Fastolf married his widow, an heiress of the Tibbot family, whose rich estates in Gloucestershire and Wiltshire he seized and kept in his own possession, to the prejudice of his step son, who in vain endeavoured to recover them after the death of his mother. Exalted by this acquisition of property, Fastolf not only obtained the honour of knighthood, but also the order of the garter. He is said to have been wounded at the battle of Agincourt, and to have been rewarded for his bravery on that occasion, by the grant of territorial property in Normandy. In 1429 he defeated a body of six thousand Frenchmen, at the head of only one thousand five hundred, and brought relief to the English army before Orleans. But the same year he shamefully tarnished his laurels at the battle of Patay, by fleeing panic stricken from the celebrated Joan of Arc. The regent duke of Bedford deprived him of the garter for this misbehaviour, but soon restored it to him in consideration of his former services. His death took place in 1469, and he left in

the hands of his confessor, Thomas Howes, a Franciscan friar, the sum of four thousand pounds to be expended in the repair of churches, religious houses, &c. The preceding narrative shows that the private character of sir John Fastolf was not irreproachable; and though it affords no positive evidence that Shakspeare had him in view in his delineation of Falstaff, it at least renders the supposition not improbable.—*Biog. Brit. Sir John Fenn's Paston Letters. Britton's Beauties of Wiltshire, vol. iii.*

FAUCHET (CLAUDE) a French writer on history and archæology, in the sixteenth century. He was a native of Paris, and became president of the Cour des Monnaies; which office he was obliged to dispose of, in order to satisfy the claims of his creditors. Henry IV bestowed on him a pension, with the title of historiographer. He died in 1601, aged seventy-two. Fauchet wrote on the liberties of the Gallican church; on the orders of knighthood; and on official dignities; but his "Antiquités et Histoires Gauloises et Françaises," 1611, 4to, comprise all his works which possess any permanent value.—*Moreri.*

FAUCHET (CLAUDE) a native of Dorne, in the diocese of Nevers, in France, who became a priest, and was made grand-vicar to the archbishop of Bourges. Having acquired reputation as a pulpit orator, he was appointed preacher to the king. Some time before the Revolution he exhibited symptoms of derangement; and many of his discourses, particularly his funeral oration for the archbishop of Bourges, were sufficiently extravagant. He now belonged to the sect of the Illuminati, and figured as one of their chiefs. In 1789 he took an active part in the popular commotions which then occurred, and at the taking of the Bastille he appeared sword in hand at the head of the mob. In May 1791 he was elected constitutional bishop of the department of Calvados, and he was afterwards chosen member of the Legislative Assembly. He is said to have promoted the massacres which were perpetrated in the prisons of Paris, in September 1792; and he continued to distinguish himself by the general violence of his conduct till he entered into the National Convention, in which he behaved with more calmness and moderation. On the trial of Lewis XVI he voted not for his death but his imprisonment; and having joined the Girondists, he was persecuted by the opposite party. In February 1793 Lecointre denounced him for having addressed to the priests of his diocese a mandate forbidding them to marry; and shortly after the assassination of Marat by Charlotte Corday, he was accused of being connected with her, which absurd charge proved his destruction. He was arrested, tried, and condemned to death, October 31, 1793, and he suffered by the guillotine. Fauchet was the author of "L'Oraison Funèbre du Duc d'Orleans;" "Panegyrique de S. Louis;" "Discours sur les Mœurs Rurales;" &c.—*Nouv. Dict. Hist. Dict. B. et H. des H. M. du 18me S.*

FAUCHEUR (MICHAEL LE) a French pro-

stant minister of the seventeenth century, celebrated for his eloquence. He was first settled at Montpellier, and afterwards at Charenton, in both which situations he attracted great admiration as a preacher. As an instance of the influence of his oratorical powers, it has been stated, that the marshal de la Force, after having heard him preach against duelling, exclaimed—"If a challenge were sent me, I would not accept it." He wrote a treatise on the Eucharist, in answer to a work of cardinal du Perron; Sermons on different Texts of Scripture; a Treatise on Oratorical Action; and Prayers and Meditations. He died at Paris in 1657.—*Moreri. Nouv. Dict. Hist.*

FAULHABER (JOHN) a mathematician of the seventeenth century, who was a native of Ulm, in Suabia. Descartes, while serving as a volunteer in the French army in Germany, accidentally discovered the ability of Faulhaber, who was a teacher of mathematics. A friendship took place between the parties, much to the advantage of the latter. He published a considerable number of works relating to algebraical calculations and other subjects, which, being written in German, are less known than they deserve to be. He seems also to have united with his mathematical pursuits a good deal of mysticism, which has doubtless contributed to the neglect of his speculations. This ingenious man died at Ulm in 1635, aged 55.—*Biog. Univ.*

FAUST or FUST (JOHN) a goldsmith of Mentz, one of the three artists to whom the invention of printing is generally ascribed. It is however doubtful if he did more than advance money to Guttemberg, who had previously made some attempts with carved blocks at Strasburgh. The third person concerned was Schæffer, who married the daughter of Faust, and who is allowed the honour of having invented punches and matrices, by means of which this grand art was carried to perfection. The first fruits of the new process was "Durandi Rationale Divinorum Officiorum," published by Faust and Schæffer in 1459; which was followed some years after by the "Catholicon Johannis Jannensis;" after which, in 1462, succeeded "The Bible," so much sought for by those fond of early specimens of typography. These works were however preceded by a Bible, Psalter, and other books executed with characters engraved on wood, and by a mechanism which Faust and Schæffer possessed in common with Guttemberg. It has been pretended that when Faust went to Paris to sell a second edition of his bible of 1462, he was taken up on the supposition that he effected the printing of them by magic; but this story appears to be mere fable. There is reason to believe that he died of the plague in 1466, as the name of Schæffer alone is found in the books printed after that time at Mentz. According to certain German writers, the celebrated romance of Dr Faustus, the subject of so much traditionary horror and admiration, and which has been since immortalized by the genius of Goethe, originated in the malice of the monks towards Faust, whose employment

of printing deprived them of their gain as copiers, that occupation being almost exclusively in their hands. There seems however so little connexion between the birth-place, profession, &c. of the real and supposititious Faustus, that the conjecture is possibly founded only on the similarity of the name accidentally given to one of the legendary characters of the period.—*Nouv. Dict. Hist. Marchand Dict. Hist.*

FAVIER, (—) an eminent French statesman, born at Toulouse the beginning of the eighteenth century. At the age of twenty he succeeded his father as secretary general to the states of Languedoc, but he was obliged in consequence of youthful extravagance to sell the office. He then applied himself to the study of history and politics; and he was nominated secretary to M. de la Chatardie, ambassador to Turin, after whose death he was patronised by M. d'Argenson. Under the direction of that nobleman he wrote "Réflexions contre le Traité de 1756," (between France and Austria,) one of the best diplomatic treatises which had then appeared. Favier was employed on several secret missions in Spain and Russia, under the ministry of the duke de Choiseuil. He engaged in other covert transactions of the French government at the instigation of the count de Broglio, which involved him in difficulties, and obliged him to leave France. After passing some time in England and Holland, he was arrested at Hamburgh and taken to Paris. M. de Broglio procured his liberation in 1773; and on the accession of Lewis XVI, he obtained a pension, but was not afterwards employed. He died in 1784. M. de Segur has collected a part of the works of Favier in his "Politique de tous les Cabinets de l'Europe pendant les Règnes de Louis XV et de Louis XVI," 1793, 2 vols. 8vo. Favier also published several pieces himself; and he was engaged with Freron, J. J. Rousseau, the abbé Arnaud, Suard, and others, in conducting the "Journal Etranger."—*Biog. Univ.*

FAVORINUS, a platonian philosopher and rhetorician of the second century, who was a native of Arles in Gaul. He taught at Athens; and was at Rome in the reign of Adrian, who respected and esteemed him for his learning and eloquence. Being once reproached with having meanly submitted to the emperor, in a dispute on some literary topic, he exclaimed, with more wit than principle, "Would you have me pretend to be wiser than the commander of thirty legions?" He wrote much, but none of his works are extant.—*Moreri. Enfield's Hist. of Philos.*

FAWCETT (sir WILLIAM) a distinguished military officer and writer of the last century. He was a native of Yorkshire, and entering young into the army, he served with reputation in the German wars of George II, when he was made aid-de-camp to the marquis of Granby. He was raised to the brevet rank of colonel in 1772, and to that of major-general in 1777; he was next adjutant-general, and in 1782 lieutenant-general. The order of the

bath was afterwards conferred on him; and he received the appointment of general in the army in 1796. He died, governor of Chelsea college, in 1804, aged seventy-six. Sir William Fawcett was the author of "Rules and Regulations for the formation, field exercise, and movements of his Majesty's Forces;" and he translated "The Reveries of Marshal Saxe;" "Regulations for the Prussian Cavalry and Infantry," &c.—*Gent. Mag.*

FAWKES (FRANCIS) a clergyman of the church of England, whose compositions have secured him a respectable station among our minor poets. He was born in Yorkshire about 1731, and was educated at Jesus college, Cambridge, where he took the degree of MA. After being ordained he became curate of Bramham, in Yorkshire; and while there settled, he wrote a descriptive poem, entitled "Bramham Park." He afterwards obtained the notice of archbishop Herring, who collated him to the vicarage of Orpington, with St Mary Cray, in Kent. The poet displayed his gratitude by an elegy on the death of his patron, which took place in 1757. In 1761 he published by subscription a volume of poems; and he afterwards edited "The Poetical Calendar," and "The Poetical Magazine," in conjunction with Woty. But he is chiefly known at present as the translator of the Idylls of Theocritus, Bion and Moschus, the Odes of Anacreon, and the Argonautics of Apollonius Rhodius, with the remains of Sappho, Menander, and Musæus. These poetical versions have been repeatedly published. In 1774 he exchanged his vicarage for the rectory of Hayes in the same county, where he died in 1777.—*Aikin's G. Biog. Nichols's Lit. Anec.*

FAY (CHARLES FRANCIS DE CISTERNAI DU) the son of an officer in the French guards, who also served in the army in the early part of his life, but quitted it to devote himself to the study of chemistry and botany. He was admitted a member of the Academy of Sciences, and had the superintendance of the royal garden, which had been previously much neglected, but under his care became one of the finest in Europe. As a chemist and natural philosopher, he distinguished himself by his researches concerning the phosphoric light in the mercurial vacuum of the barometer, concerning the salts of lime, the magnet, and the nature of electricity, which he divided into two kinds, the vitrious and the resinous, answering to the positive and negative electricities of Franklin. His works consist of memoirs in the transactions of the Academy of Sciences. He was born at Paris in 1698, and died in 1739.—*Nouv. Dict. Hist. Biog. Univ.*

FAYDIT (ANSELM) a troubadour or Provençal bard of the thirteenth century. He was patronised by Richard Cœur de Lion, king of England, whose praises he celebrated in a funeral elegy, which has been published by Dr Burney, with music said to have been composed by the poet himself. He was licentious and extravagant; and after the death of his royal master, having married a beautiful woman

as thoughtless as himself, he became involved in distress. His wife dying, he went to the court of the marquis of Montserrat, and subsequently to that of another chief, where he died about 1220.—*Moreri. St Palaye.*

FAYETTE (MARIE MADELEINE PICHÉ DE LA VERGE, countess of) a celebrated literary lady, wife to the count de la Fayette, in the reign of Louis XIV. She was intimately acquainted with the men of literature of the period, who assembled at her house, and many of whom experienced her benevolence and generosity. When Segrais quitted his residence with mademoiselle Montpensier, he domesticated with madame de la Fayette, and was the chief director of her pursuits. It was in his name that her two celebrated romances of "Zaide" and the "Princess of Cleves" were published, but he has himself testified that, with the exception of a little assistance in the plan or outline, the merits of them were due to the countess. Voltaire describes them as the first romances in which the manners of persons of condition were truly painted, and natural adventures described with ease and grace. Superseding as they did the tedious and voluminous productions of Scudery and others, they still retain a spice of the chivalric and ceremonious gallantry of the court of Anne of Austria, which, being united to much delicacy of sentiment, and lively and graceful description, is not without its attraction. It was on the appearance of *Zaide* that Huet wrote his "Origin of Romances," and exposed himself to some censure by the importance which he attached to them. Madame de la Fayette, who was esteemed as much for the solidity as the brilliancy of her parts, died in 1693. Besides the works already mentioned, she wrote "The Princess of Montpensier;" "Memoirs of the Court of France in the years 1688 and 1689;" "The History of Henriette of England;" and "Divers Portraits of Persons about the Court." *Moreri. Nouv. Dict. Hist.*

FAZIO (BARTHOLOMEW) historian and biographer of the fifteenth century, was a native of Spezia on the coast of Genoa. He was much patronised by Alphonso, king of Naples, at whose instance he translated Arrian's History of Alexander into Latin, and likewise wrote the history of that prince in ten books, first printed in 1560. He also composed a history of the war between the Genoese and Venetians in 1377, and was a benefactor to literary history by his work, "De Viris Illustribus," containing brief accounts of the most famous of his contemporaries, with a critical analysis of their principal works. This production, after long remaining in MS, was published by the abbé Melus, who added some MS. letters of Fazio relating to the history of his own times.—*Tiraboschi.*

FAZZELLO (THOMAS) a native of Palermo in Sicily, of which country he wrote the history in Latin, a work esteemed of considerable authority. He was born in 1498, and entering the church, became prior of the Dominican convent in his native city. His history of Sicily has been translated into Italian, and has

gone through several editions. His death took place in 1570.—*Morevi.*

FEARNE (CHARLES) an ingenious writer on jurisprudence and metaphysical philosophy. He was a native of London, and was educated at Westminster school. He afterwards became a student of the Inner Temple, but without any intention of adopting the law as a profession. Circumstances however induced him to commence practice as a chamber counsel and conveyancer, in which branches of legal business he attained the reputation of great skill and learning. His strong taste for speculation and project however interfered with his professional pursuits, and prevented him from deriving that emolument which might otherwise have accrued from the exercise of his abilities. He died January 21, 1794, aged forty-five. Mr Fearne was the author of "An Essay on contingent Remainders and executory Devises;" "A Legigraphical Chart of Landed Property;" "Observations on the Statute of inrollment of Bargains and Sales;" and "An Essay on Conscientiousness, or a Series of Evidences of a distinct Mind."—*Europ. Mag.*

FEATLEY (DANIEL) an episcopal divine of considerable note in the seventeenth century. He was born at Charlton Kings in Oxfordshire in 1582, and after some previous classical instruction, was admitted a scholar of Corpus Christi college, Oxford, in 1594. He applied himself closely to the study of the fathers and schoolmen, and after having taken his degrees in arts, he obtained a fellowship. He at length quitted the university to go to Paris as chaplain to the English ambassador, sir Thomas Edmondson. He returned to England after staying abroad three years; and in 1613 he proceeded B.D. at Oxford. Archbishop Abbot gave him the living of Lambeth, and he then took the degree of D.D. About this time he distinguished himself by maintaining a public dispute with two Jesuits, afterwards published by the direction of the archbishop, who rewarded Featley with the livings of All-hallows, Bread-street, and Acton, Middlesex. He was subsequently made provost of Chelsea college. On the trial of archbishop Laud he appeared as a witness against him; and in 1643 he was one of the Westminster assembly of divines: but his general attachment to the doctrines of the church of England afterwards subjected him to persecution from the ruling powers; and being deprived of his preferments, he died in 1644-45. Dr Featley was the author of "Clavis Mystica, a Key opening divers difficult Texts of Scripture," 1636, folio; and many other works now forgotten. Among his controversial tracts is one with the odd title of "The Dipper dipt, or the Anabaptist plunged over Head and Ears and shrunk in the Washing," 4to.—*Aikin's G. Biog.*—**FEATLEY** (John) nephew of the preceding, was also a clergyman. He left England, and resided in the West Indies during the government of Oliver Cromwell; and returning at the Restoration, he obtained a prebend in Lincoln cathedral, and a living in Nottinghamshire. He was the author of a treatise, entitled "A Fountaine of

Tears emptying itself into three Rivulets, viz. Compunction, Compassion, Devotion, or Sobs of Nature sanctified by Grace," Amsterdam, 1646, 12mo.—*Biog. Brit.*

FECKENHAM (JOHN DE) an English catholic divine of the sixteenth century, was born near the forest of Feckenham in Worcestershire, from which place he derived his surname, that of his family being Howman. He was educated in the monastery of Evesham, which institution placed him at Gloucester college, Oxford. He subsequently returned to his abbey, at the dissolution of which in 1536 he received a yearly pension of a hundred florins, and returned to Oxford and took orders. In 1543 he became chaplain to Bonner, bishop of London, and when that prelate was deprived by the Reformers, Feckenham was committed prisoner to the Tower of London. On the accession of Mary he again became chaplain to Bonner, now returned to his diocese. He however in no respect resembled that brutal and intolerant prelate in temper, but on the contrary was honourably distinguished during the whole of that gloomy reign, by his good offices to the afflicted protestants of every rank. Two days before the execution of lady Jane Grey, he held a conference with that unfortunate lady, who remained as much unmoved by his arguments as Cranmer, Ridley, and Latimer, against whom he disputed at Oxford. In the year 1556 queen Mary, who had restored the monastic foundation of Westminster, appointed him mitred abbot of the same, in which capacity he sat in the house of Peers, and was the last of that rank who did so. On the accession of Elizabeth, in whose behalf he had always earnestly interfered with her sister, he might have looked to the highest preferment in the church, could he have reconciled his conscience to the intended settlement; but on the contrary, he spoke with great determination, both in and out of parliament, against the bills abolishing the papal jurisdiction. It is no honour to his opponents that they imprisoned him for his sincerity; and that after being released once or twice, he was finally committed prisoner to the castle of Wisbeach, where he died in 1585. He is spoken of with great respect by Camden, Fuller, Burnet, and the more candid protestant writers. A list of his writings may be seen in the *Biographica Britannica*.—*Biog. Brit. Wood Athen. Oxon.*

FEITHIUS (EVERARD) a philological writer of the sixteenth century. He was a native of Elbourg in Gueldres, and having fled from the Netherlands to France to escape the persecution of the Spanish government on account of religion, he is supposed to have been assassinated at Rochelle, about 1590. He was well skilled in Greek and Hebrew literature, and was the author of a useful work intitled "Antiquitates Homericae," in which he has described the sacred and profane rites and customs of the Greeks and neighbouring nations in the heroic ages, from the works of Homer and other ancient writers. Nicholas Heinsius says that Feithius also wrote "Attic

Antiquities," which have never been published.—*Moreri. Fabricii Bibliogr. Antiq.*

FELIBIEN (ANDREW) sieur des Avaux et de Javerci, a native of Chartres in France, eminent as an historian of the fine arts. He studied at Paris, after which he went to Rome as secretary to the marquis de Fontenai, the French ambassador. He there formed an intimacy with the celebrated painter, Nicholas Poussin, whose conversation helped to inspire him with that predilection for the arts of design which influenced his future pursuits. On his return home he was employed by the minister of state, Fouquet, and afterwards by Colbert, the latter of whom appointed him intendant of the royal edifices, and of arts and manufactures. He was also made secretary of the academy of architecture, and keeper of the royal cabinet of antiquities; and he was a member of the Academy of Inscriptions and Belles Lettres. He died in 1695, aged seventy-six. His works, which are much esteemed, are—"Entretiens sur les Vies et les Ouvrages des plus excellens Peintres, anciens et modernes;" "Les Principes de l'Architecture, de la Sculpture, de la Peinture; avec un Dictionnaire des termes propres de ces Artes;" "De l'Origine de la Peinture;" "Conférences de l'Académie Royale de la Peinture," &c.—FELIBIEN (JOHN FRANCIS) his son, succeeded to the offices held by his father, and died in 1733. He was the author of "Recueil Historique de la Vie et les Ouvrages des plus célèbres Architectes," 1687, 4to, which is a work of authority in the history of the arts, and forms a proper companion to the Historical Dialogues of the elder Felibien.

—FELIBIEN (MICHAEL) another son of Andrew, was a member of the Benedictine congregation of St Maur. He wrote "The History of the Royal Abbey of St Denis," folio; and began the History of Paris, completed by Donn Lorraine. He died in 1719.—*Nour. Dict. Hist. Le Cerf. Bibl. des Auteurs de S. Maur.*

FELL (SAMUEL) dean of Christchurch, born 1594, in the parish of St Clement Danes, London. He was educated on the foundation of Westminster school, whence he proceeded to Christchurch, Oxford, in 1601. His progress in clerical preferment was rapid, as he rose successively from the living of Freshwater in the Isle of Wight, which he obtained in 1615, to a prebendal stall at Worcester, with a chaplaincy to king James the First, thence to a canonry of Christchurch in 1619, the Margaret professorship of divinity, 1626, the deanery of Iitchfield, 1637, and finally to that of Christchurch in 1638. During the civil wars he was a staunch adherent of monarchy, which occasioned his ejection from the office of vice-chancellor of the university in 1647. Of his writings only two at present remain—"Primitive," 1626; and "Concio ad Baccalaureos," 1627. The news of the execution of Charles the First is said to have broken his heart. His death took place February 1, 1648-9.—*Wood's Athen. Oxon.*

FELL (JOHN) DD. bishop of Oxford, was the son of the preceding, and born at Long-

worth, Berks, June 23, 1625. From the grammar-school at Thame he was removed to Christchurch on a studentship in 1636, when only eleven years of age, and graduated as AM. in 1643; but the same visitation which deprived his father of the vice-chancellorship, effected his expulsion from his college in 1648, on account of his having been in arms for the king. During the protectorate he continued in obscurity, but on the Restoration obtained a stall at Chichester, whence he was preferred to a more valuable one at Christchurch, and soon after became dean of that society. In 1666 he served the office of vice-chancellor of the university, and ten years afterwards was raised to the see of Oxford, retaining his deanery. As a prelate he was distinguished equally by his learning and munificence, a considerable portion of his income was dedicated by him to the rebuilding of the episcopal palace at Cuddesden, and to the same source his college is indebted for the magnificent tower commonly known by the name of the "Tom Gate," into which he caused the large bell (said to have originally belonged to the abbey of Osney) to be removed in 1683. Several valuable works from his pen are extant, among others, a Latin translation of Wood's "History and Antiquities of Oxford," in 2 folio vols.; "In Laudem Musices Carmen Sapphicum;" "Alcinoi in Platoniam Philosophiam Introductio;" a "Life of Dr Hammond," published in 1660; another of Dr Allestree; an edition of Cyprian's works: St Clement's two epistles to the Corinthians, in Greek and Latin; "Artis Logicae compendium;" a "Paraphrase on St Paul's Epistles;" a new edition of the Greek Testament with notes, and a collection of the various readings; and several Sermons. His death took place in 1686.—*Biog. Brit.*

FELL (JOHN) a native of Cockermouth in Cumberland, born 1735. He was apprenticed to a tailor by his friends, who were in poor circumstances, but evincing a considerable share of talent, and an eager turn for literary pursuits, he found others whose liberality rescued him from the line of life he had embraced, and gave him such opportunities as he lost no time in improving. A dissenting congregation at Beccles, Suffolk, elected him their minister. He afterwards removed in the same capacity to Thaxted. The situation of tutor at an academy in the same connexion, becoming vacant at Homerton, he was induced to accept it, but was eventually dismissed, it is said, for having been found reading a newspaper on a Sunday. He was afterwards engaged to preach a course of lectures at the Scots' church, London Wall, on the evidences of Christianity, and a subscription amounting to a hundred guineas was raised for that purpose; but an attack of the dropsy carried him off before he had gone through more than four of the proposed discourses, on the 13th of September, 1797. Dr Hunter, who succeeded him in the appointment, published the course of lectures complete. His other works consist of—Replies to Dr Farmer's Treatises on the Mythology of Greece and Rome, and the

"Demoniacs of the New Testament;" both in 8vo; "A Letter to Burke on the Penal Laws," 8vo; "An Essay on English Grammar," 12mo; "Genuine Protestantism," 8vo; "An Essay on the Love of our Country;" and "Remarks on the Poems of Rowley."—*Prot. Dissenters' Mag. Aikin's G. Biog.*

FELLER (FRANCIS XAVIER) otherwise Flexier de Reval, a name which he assumed on the suppression of the society of Jesuits, to which he belonged, and which he again quitted for that of Feller, by which he is most generally known. He was a native of Brussels, born 1735, and enjoyed a reputation for some learning, although his principal work, an "Historical Dictionary," printed at Liege in eight octavo volumes, has been attacked on the score of piracy by the proprietors of the "Nouveau Dictionnaire Historique." His other writings are—"A Reply to Buffon's Epochs of Nature;" "Remarks on the Newtonian Philosophy;" a "Geographical Dictionary;" and a literary and historical journal, entitled "Clef des Cabinets," published at Luxemburgh from 1774 to 1794. His death took place in 1802 at Ratisbon.—*Moreri.*

FELLER (JOACHIM) a German poet, born at Zwickhau, 1638, chosen professor of poetry at Leipsic in 1661. The precocity of his talents developed itself at the early age of thirteen, when he wrote a poem on the passions. His compositions, principally in the Latin language, gained him much reputation: among them are—"Flores Philosophici;" "Notæ in Lotichii eclogam, &c.;" "Cygni quasimodo geniti sanctæ virorum celebrium Cygnæ (Zwickhau) veterum;" and some annotations on the works of Horace. He became librarian to the university of Leipsic in 1676, which situation he held fifteen years. Having contracted a habit of walking in his sleep, he fell at length from a window during one of his fits of somnambulism, and died from the effects of his fall in 1691.—He left a son, JOACHIM FREDERICK, born in 1673 at Leipsic, where he graduated in philosophy. The grand-duke of Weimar appointed him his secretary in 1706, a situation he filled during twenty years; travelling, a considerable part of the time, under his patron's auspices, for the purpose of examining the principal libraries of Europe. He published a valuable work, entitled "Monumenta varia inedita," in 12 quarto numbers, printed in 1714 at Jena; a "Genealogy of the House of Brunswick Lunenburgh," 8vo; "Otium Hanoverianum," and "Miscellanea Leibnitiana." His death took place in 1726.—*Moreri.*

FELTHAM (OWEN) an English author, born about the middle of the seventeenth century, descended of a respectable family in Suffolk. Little more is known of him than that he resided many years in the family of the earl of Thomond, during which period he published a work of great merit, entitled "Resolves Divine, Political, and Moral." This book went through twelve editions before the year 1709. A thirteenth has lately appeared under the superintendance of Mr Cumming, of the Board of Control. His death is supposed

to have taken place about the year 1678.—*Chalmers's Biog. Diet.*

FENELON (FRANCIS DE SALIGNAC DE LA MOTTE) archbishop of Cambray, and one of the most excellent and distinguished persons of his day, was born of an ancient family at the castle of Fenelon in Perigord, on the 6th August, 1651. He studied at Cahors and Paris, and at the age of twenty-four entered into orders, and commenced his ministerial functions in the parish of St Sulpice. Three years afterwards the archbishop of Paris made him superior to a society of female converts, named the new catholics, where his mildness and manner of instructing were so effective, that the king appointed him chief of a mission for the conversion of heretics in Saintonge and Aunis. It is to the honour of Fenelon that he would not accept this post, but upon condition that no other means should be employed than those of charity and argument. On his return to Paris he became known to the public as a writer, by a work "Sur le Ministère des Pasteurs," and a treatise "De l'Education des Filles." In 1689 the duke de Beauvilliers, governor of the royal children, impressed with a high esteem for his talents and character, appointed him preceptor to the duke of Burgundy, heir-presumptive, and to his younger brothers. His influence on the character of the former was strikingly beneficial, and in 1695 he was rewarded with the archbishopric of Cambray which includes a dukedom. He performed the duties of a prelate in a most exemplary manner; which did not however prevent a storm arising, which long agitated his mind and endangered his reputation. He had early been led into an admiration of the devotional mysticism of the celebrated madame Guyon, whose quietism (in consequence of meeting with many admirers of high rank) attracted the notice of orthodoxy, and a solemn inquest was instituted into her conduct and opinions. On this occasion Fenelon, who, together with Bossuet and others was appointed an examinant, absolutely refused to condemn her person and morals. Not only so, he soon after published a work entitled "Maximes des Saints sur la Vie interieure," which was held to contain principles similar to those of madame Guyon. On the publication of this work he was attacked with great fierceness by the inflexible Bossuet, and notwithstanding his vigorous defence, the result was an order of banishment to his diocese. In the mean time, the condemnation of the book was urged with great warmth at the court of Rome, and in 1699 Innocent XI issued a brief of censure against the work, to which Fenelon paid a submission so implicit, reading his own condemnation from the pulpit, that a celebrated wit entitled his conduct "the coquetry of humility." Besides this delinquency in point of orthodoxy, he had highly offended Louis XIV by his "Telemachus," which work he deemed an indirect satire on his own government. He had never thoroughly approved of the appointment of Fenelon to the preceptorship of the princes, regarding him rather as a *bel esprit* than a man of the world, and the

maxims in Telemachus confirmed him in this opinion. He in consequence stopped the printing of the work, and the archbishop could never recover his favour, notwithstanding his writings against the Jesuits, and munificent patriotism in the distribution of corn to the army in a season of scarcity. It must be observed however, that, in addition to other causes of dissatisfaction, he had given unpardonable offence by his honest advice to Louis not to marry the artful and bigotted madame Maintenon. Although Fenelon acted in his diocese with such apostolic simplicity, paternity, and benevolence, as to inspire universal respect and reverence, it is thought that he always nourished a secret hope of being recalled, and of acting a great part in public life. The deaths of the dukes of Burgundy and of Beauvilliers however, gave a great blow to his expectations, although still in some degree supported by the declining health of the king, and the favourable sentiments entertained of him by the duke of Orleans. The injury which he received from the accidental overturning of his carriage being succeeded by a fever, soon after however terminated both his life and his hopes in January 1715, to the universal regret of all the inhabitants of the Low Countries, and more especially of the people committed to his charge. Both in person and manners Fenelon was one of the most engaging of men, joining to an insinuating but noble and distinguishing politeness, a natural and flowing elocution, and the power of making himself understood upon the most abstruse subjects. No man inspired stronger attachments on the part of friends; and such was the respect borne to his character by foreigners, that the duke of Marlborough and the other generals of the allies, expressly excepted the archiepiscopal lauds of Cambrai from pillage when in possession of that part of Flanders. His principal works, besides those already mentioned, are—"Dialogues of the Dead," 2 vols. 12mo; "Dialogues on Eloquence," 12mo; "Philosophical Letters, a Demonstration of the Existence of a God," 12mo; "Letters on different Religions and Metaphysical Subjects," 12mo; "Spiritual Works," 4 vols. 12mo; "Sermons," and controversial pieces. Of all his writings Telemachus is probably the only one now generally read. This political romance or epic poem in prose is properly the institute of a prince, and more pure and elevated maxims were never bestowed upon one. With much merit as a work of invention, it is equally to be admired for the elegance of its invention and the beauty of its style.—*Eloges Acad. par D'Alembert. Nouv. Dict. Hist.*

FENESIELLA (LUCIUS) a historian, who flourished at Rome under Augustus and Tiberius. All of his writings which are extant were printed at Cambridge in 1710, annexed to Wasse's edition of Sallust. They consist of fragments of his "Archaici;" "Annales;" &c. A work on the magistrates of Rome attributed to him, is the forgery of a Florentine author of the fifteenth century. His death is

supposed to have taken place about the twentieth year of the Christian era.—*Fabricius ae Bibl. Lat.*

FENN (JOHN) a catholic divine, author of several devotional tracts in the latter end of the sixteenth century, was born at Montacute, Somerset. From Winchester school he proceeded to New college, Oxford, on the foundation. He was afterwards head-master of the grammar-school at St Edmundsbury. His principal writings are—"The Lives of the English Martyrs;" that of "St Catherine of Sienna," translated from the Italian; and translations of Osorius's work against Haddon, and of the Catechism of the Council of Trent. On the restoration of protestantism under Elizabeth, Fenn retired to Louvain, and died there in 1615.—*Wood's Athen. Oxon.*

FENN (sir JOHN, knt.) an English antiquary of deep reading and great research, was born in 1739 in the city of Norwich. He was a member of Caius college, Cambridge, where he took his degree of master of arts, and was a fellow of the Antiquarian Society. Two volumes, edited by him, consisting of letters written during the wars of the Roses, by various members of the Paston family, and printed in 1787 with a dedication to king George III, procured him the honour of knighthood from that monarch. He was proceeding with this interesting work, and had completed two more volumes, with part of a third, when his death, which took place in 1794, put a stop to the undertaking.—*Gent. Mag.*

FENTON (ELIJAH) an English author and poet of considerable talent, as well as learning, was born in 1683 at Shelt n, near Newcastle in Staffordshire. He was of an ancient and respectable family, the head of which, his elder brother, enjoyed an estate of upwards of 1000*l.* per annum; but he being the youngest of twelve children was of course more slenderly provided for. After going through the usual course of education at Jesus college, Cambridge, he took his bachelor's degree with the intention of entering the church; this design was however rendered abortive by his political principles, and he accepted an engagement with a Mr Bonwick, the superintendent of a classical seminary at Headley in Sussex, in the capacity of usher, whence he removed to the grammar-school at Sevenoaks, Kent. The earl of Orrery afterwards, through the recommendation of his friends, was induced to make him his private secretary, and to place his eldest son under his care. In this situation he became acquainted with most of the wits of what it has been the fashion to call the Augustan age of England; and Pope, whom he assisted in his *Odyssey*, (translating the whole of the first, fourth, nineteenth, and twentieth books of that poem,) in particular, was much attached to him. Although the remuneration he afforded him for his services was but scanty in a pecuniary point of view, the poet's interest was exerted in his favour, both with Craggs the secretary, and after his death, with lady Trumbull, to whose son he was appointed tutor. Besides the translations alluded to, he

published in 1709, "Oxford and Cambridge Verses;" an octavo volume of original poems, 1717; "Mariamne," a tragedy, 1723; and the lives of Milton and Waller, with an edition of the poems of the latter. His death took place July 15th, 1730, at the house of his patroness, East Hampstead, Berks. As a poet Fenton displayed much harmony and poetic diction; and as a translator, considerable sweetness and facility of versification. His tragedy of "Mariamne," also maintains a respectable rank among similar dramatic productions. His life of Milton is written at once with elegance and candour.—*Johnson's Lives, Biog. Brit.*

FENTON (RICHARD) a Welch barrister, the friend of Goldsmith, Glover, Garrick, and other wits of that age, author of an "Historical Tour through Pembrokeshire," printed in 4to in 1811, with a dedication to his friend, sir Richard Colt Hoare. He also published early in life several occasional pieces both in prose and verse, some of them anonymously, among which are—"A Tour in search of a Genealogy," and the "Memoirs of an Old Wig," both full of humour and anecdote, and possessing considerable, though temporary interest. He likewise translated the works of Athenæus from the Greek, the manuscript of which (for it has never been published) remains in the possession of the baronet above named. Mr Fenton died at an advanced age in November 1821.—*Gent. Mag.*

FEO (FRANCESCO) the founder of a school of singing at Naples, and a pupil of the celebrated Gizzi, born about the close of the seventeenth century. His church music is distinguished for its grandeur, science, and energy; while his operas, especially his "Ariana" and "Arsace," (from the latter of which Gluck borrowed his famous overture to "Iphigenia,") were highly popular. Fco is also known as having put the finishing hand to the musical education of Jomelli. The time of his decease is uncertain.—*Biog. Dict. of Mus.*

FERBER (JOHN JAMES) an eminent Swedish mineralogist, was born at Carlsrona in 1743. He received a good education under his father, who was assessor of the royal college of physicians. He was brought up a physician, but early became distinguished as a natural philosopher. In 1765 he set out on a mineralogical tour to inspect the mines of Germany, France, Holland, England, and Italy; and on his return accepted an invitation to become professor of natural history at Mittau. In 1783 he removed to St Petersburg to be professor of the natural sciences in that capital, whence he removed in 1786 into the service of Prussia. He died in 1790 at Berne in Switzerland, while travelling in that country. His principal works are—"Letters from Italy, respecting the most remarkable Natural Productions in that Country," 1773, 8vo; "Collections towards a History of the Mines of Bohemia," Berlin, 1774, 8vo; "A Description of the Quicksilver Mines at Idria," Berlin, 1774, 8vo; "An Account of Mines in the Cantons of Devx Ponts, the Palatinate and

Nassau," Berlin, 1776, 8vo; "An Attempt towards an Oryctography of Derbyshire," Mittau, 1776, &c. &c.; all of which are written in the German language. His letters from Italy are much esteemed.—*Hirsching's Manual of Eminent Persons in the 13th Cent.*

FERDINAND V. (the catholic) son of John II of Arragon. His marriage with Isabella of Castile in 1469, united those two powerful Spanish kingdoms, and enabled him to carry on with success a war against Alphonso of Portugal, whom he overcame at the battle of Toro in 1476. This enterprising monarch afterwards completed what the utmost endeavours of his ancestors had for so many centuries been unable to effect—the total subjugation of the Moorish power in Spain; which he utterly destroyed by the conquest of Grenada, after a struggle of eight years' duration. His favourite general, Gonsalvo de Cordova known in Spanish history by the name of the Great Captain, afterwards brought under his rule a large proportion of the Neapolitan dominions; but the most remarkable feature in his reign is the discovery of America by Columbus, which opened to him and his successors the sovereignty of a new hemisphere. The death of this prince, whose subtle and sinister policy became proverbial, took place in 1516.—*Mod. Univ. Hist.*

FERDINAND of Cordova, a learned scholar and accomplished cavalier of the fifteenth century, a marvellous account of whose perfections has been handed down to posterity. He is said to have been the best singer, dancer, painter, and artist of his age, besides excelling in all manly and martial exercises. As a man of science he is reported to have had all the works of Aristotle, Hippocrates, Galen, Bonaventure, Scotus, Nicholas Lyra, Avicenna, and D'Ales by heart, and to have been an excellent biblical scholar. Among those accomplishments, with regard to which later ages have become more sceptical, was that of judicial astrology, in which he is reported to have made a proficiency sufficient at least to enable him to foretell with accuracy the death of Charles Le Temeraire, duke of Burgundy, at the siege of Nancy. He was the author of three treatises—one on the Almagest of Ptolemy, another on the Old Testament, and a third bearing the comprehensive title "De omni Scibile."—*Moreri.*

FERDINANDI (EPIPHANIUS) a physician of Otranto, born 1569, author of several professional treatises, the principal of which are entitled—"De vitâ propagandâ;" "De Peste;" "Theoremata Medica;" "Observationes et Casus Medici." His death took place in 1638.—*Ibid.*

FERDUSI or FERDOUSI (HASSAN BEN SCHARF) a Persian peasant, a native of Thous. His literary and poetical talents attracted the notice of Mahmud the reigning Sultan, who attached him to his court, and employed him in the composition of a metrical history of the empire. This work, which was at length completed in sixty thousand stanzas, and is called the Schahnameh, occupied him thirty years,

and was at length most inadequately rewarded by the grant of one of the smallest coins of Persia for every verse. The indignant poet afterwards sought a more liberal patron in the caliph of Bagdad, in which city he died AD. 1020.—*Jones's Life of Nadir Shah.*

FERGUSON (ADAMS) an eminent writer, was born in 1724, at Logierait, in Scotland, of which parish his father was minister. He was educated at Perth and St Andrews, whence, after graduating MA. he removed to Edinburgh to study for the ministry. He served in the first instance as chaplain in the 42nd regiment of foot, but on the peace of Aix-la-Chapelle returned to Edinburgh, where, in 1759, he was made professor of natural philosophy, which chair he afterwards resigned for that of moral philosophy. In 1767 appeared his "Essay on Civil Society," which was very favourably received, and procured him the degree of LL.D. He soon after married, and in 1773 accompanied the earl of Chesterfield on his travels. In 1776 he replied to Dr Price on Civil Liberty, and was rewarded by the appointment of secretary to the mission sent to America in 1778, to effect a reconciliation between the two countries. On his return he resumed the duties of his professorship, and composed his "History of the Roman Republic," which was published in 1783, in 3 vols. 4to. In 1793 he published his lectures in the form of a "Treatise on Moral and Political Science," 2 vols. 4to. He subsequently went abroad, and returning settled at St Andrews, where he died February 16, 1816.—*Ann. Biog.*

FERGUSON (JAMES) an eminent experimental philosopher, mechanist, and astronomer, was born of poor parents at Keith in Banffshire, in 1710. His extraordinary genius quickly displayed itself, as he learned to read by hearing his father teach his elder brother, and very early discovered a peculiar taste for mechanics, by making a wooden clock, after being once shown the inside of one. As soon as his age would permit he went to service, and was employed by a farmer to tend his sheep, in which situation he contrived to acquire a knowledge of the stars, and to construct a celestial globe. This extraordinary ingenuity becoming known to the neighbouring gentry, they enabled him to obtain instructions in mathematics and drawing, in which latter art his improvement was so rapid that he repaired to Edinburgh, and drew portraits in miniature, by which employment he supported himself for many years. At length, in 1743, he repaired to London, where he was introduced to the Royal Society, and published astronomical tables and lectures. He also gave lectures in experimental philosophy, and among his hearers was George III, then prince of Wales, who afterwards settled on him a pension of 50*l.* a year. In 1763 he was chosen a member of the Royal Society without the usual fees; and such was his frugality and the presents privately made him, that he died worth 6000*l.* He was of a plain, unassuming character, and possessed an uncommon genius for mechanical

contrivance. He was also well acquainted with astronomy, and experimental and natural philosophy; but his mathematical knowledge was very limited, and of algebra he knew little beyond the notation. His death took place in 1776. His works are—"Astronomical Tables and Precepts," 8vo; "Astronomy Explained;" "Introduction to Astronomy;" "Tables and Tracts;" "Lectures in Mechanics, Hydrostatics, Pneumatics, and Optics;" "Select Mechanical Exercises;" "The Art of Drawing in Perspective;" "An Introduction to Electricity;" "Three Letters to the rev John Kennedy;" and several papers in the Philosophical Transactions.—*Hutton's Math. Dict. Life by himself.*

FERGUSON (ROBERT) a Scottish poet, born at Edinburgh, September 5, 1751. His parents had it in their power to procure him the advantage of a liberal education; a circumstance, however, which in Scotland implies no very elevated rank in society. It appears that he spent six years at the schools of Edinburgh and Dundee, and afterwards studied at the metropolitan university and at St Andrews. He was at one time destined for the kirk of Scotland; but he relinquished his prospects of ecclesiastical preferment, and became clerk to a writer to the signet, a title which designates a peculiar order of Caledonian attorneys. He wrote poems, both in pure English and in the Scottish dialect. The former, in which he often follows classical models, do not surpass mediocrity; but in those in which he has employed the vernacular dialect of his country, he has been very successful. His poems indeed are entitled to indulgence as the careless effusions of an irregular, though amiable young man, who wrote for the periodical papers of the day, and who died in early youth. He seems, like his successor Burns, to have possessed conversational talents, which rendered his society highly attractive; an accomplishment which proved detrimental to the poet. The excesses into which he was led having impaired his feeble constitution, and brought on disease which terminated his existence, October 16, 1774. He was buried in the Canongate churchyard, Edinburgh, where Burns erected a monument to the memory of this kindred genius. His poems have been often printed; and an edition published at Glasgow, has a prefixed account of his life by D. Irvine.—*Dr Currie's Life of Burns.—Ed.*

FERMAT (PETER DE) counsellor of the parliament of Toulouse in France, and a profound mathematician, was born in 1590, and died in 1664. He was also a good classical scholar, and wrote poetry in the Latin, French, and Spanish languages. He was the intimate acquaintance of most of the philosophers of his day, among whom were Torricelli, Descartes, Mersenne, Pascal, Huygens, &c. His works were collected and published under the title of "Opera Varia Mathematica." M. de Fermat was equally distinguished by his impartiality and integrity as a magistrate, the duties of which he performed with honour.—*Hutton's Math. Dict. Moreri.*

FERNE (sir JOHN) an antiquary, was born in Lincolnshire, and died about 1610. He was educated at Oxford, whence he proceeded to the Inner Temple. He was knighted by James I, and made keeper of the king's signet of the council for the north. He was the author of "The Blazon of Gentry."—HENRY, son of the preceding, was born at York in 1602. He first became commoner at St Mary hall, Oxford, and then fellow of Trinity college, Cambridge. On entering into orders he was presented to the livings of Masham in Yorkshire, and Medborn in Leicestershire, and was made archdeacon of Leicester. In 1642 he took his doctor's degree, and wrote a piece in defence of the king, with whom he was in great favour. On the Restoration he was made bishop of Chester, dean of Ely, and master of Trinity college, and died in 1661. His works are—"Episcopacy and Presbytery considered;" "The Case of Conscience touching Rebellion;" "Sermons and Tracts."—Wood, *Athen Oton*.

FERRACINO (BARTHOLOMEW) an Italian mechanic and engineer, was born in 1692 at Bassano in the *Vincentia*, and was originally a sawyer. While very young he invented a saw to be worked by the wind; and conceived the idea of making wine-casks without hoops, in both of which he succeeded. He then proceeded to construct iron clocks and hydraulic machines. An hydraulic engine made by him for the procurator Belegno, has been much admired; it is formed on the principle of Archimedes's screw, and raises the water to the height of thirty-five feet, according to the measure of that country. He also built the noble bridge over the Brenta at Bassano, which is equally admired for its boldness and solidity. He died about 1750. An account of his life and inventions was published in 1764 at Venice, by M. Francis Memo.—*Nouv. Dict. Hist.*

FERRANDUS, surnamed Fulgentius, a deacon of the church of Carthage, was an African by birth, and flourished in the sixth century. When St Fulgentius, bishop of Ruspa, was banished by the Arian party to Sardinia, Ferrandus accompanied him, but returning afterwards to Carthage, was made deacon of the church there. In 533 arose the extraordinary question—"Whether it could be said with propriety, that one of the persons of the Trinity suffered on the cross?" Those who maintained the affirmative accused their opponents of Nestorianism, while they themselves were charged with supporting the Eutychian heresy. Ferrandus wrote two "Letters" upon the subject. He died before the year 551. His principal works are—"A Collection of Ecclesiastical Canons;" "An Exhortation to Count Reginus," respecting the duties of a Christian captive; "Life of St Fulgentius, Bishop of Ruspa," generally ascribed to Ferrandus; two "Letters" to St Fulgentius, and other remains, collected by father Chifflet, and published at Dijon in 1649, quarto.—*Cave's Hist. Lit. Dupin. Moreri*.

FERRAR (ROBERT) an English prelate of

the 16th century, was born at Halifax in Yorkshire. He studied at Oxford and Cambridge, and became a canon regular of the order of St Augustine, and was chosen prior of the monastery of St Oswald, which dignity he surrendered on the dissolution in 1540, and received a pension of 100*l.* per annum. Early embracing the principles of the Reformation, he was made bishop of St David's by Edward VI. In consequence of incautiously issuing out his commission to his chancellor to visit his chapter, and inspect into some dilapidations, in an exploded form, not sufficiently admmissive of the king's supremacy, his enemies found occasion to accuse him of a *præmunire*, and so great were the expences of the prosecution, that he became unable to pay his first fruits and tenths, and was imprisoned for the same as a debtor to the crown. On the accession of Mary, while still in prison, he was brought, in company with Hooper, Bradford, and others, before Gardiner, bishop of Winchester, who, after treating him with brutal contempt, delivered him up for trial to his successor, Morgan, by whom he was declared guilty of heresy, and being turned over to the secular arm, he was burnt upon this sentence at Caermarthen on the 30th of March, 1555. The character of this prelate has been variously represented, even by protestant writers, some of whom accuse him of venality and rude and rigorous deportment; but although he appears to have been headstrong and imprudent, the early prosecution against him was clearly the result of the revenge and personal ill-will of powerful enemies.—*Fox's Acts and Monuments. Harleian M.S.*

FERRARI, the name of a Milanese family, which gave birth to several distinguished scholars during the sixteenth and seventeenth centuries. Of these, OCTAVIAN FERRARI, born in 1518, was professor of politics and ethics at his native city, Milan, whence he afterwards removed in the same capacity to Padua. He translated the works of Athenæus into the Latin language, and is the author of two treatises on those of Aristotle, the one entitled "De Disciplinâ Encyclicâ, seu clavis Philosophiæ peripateticæ Aristotelicæ," the other, "De sermonibus Exotericis." He also wrote on the origin of the Romans. He returned to Milan before his decease, which took place in that city in 1586.—FRANCISCO BERNARDINO FERRARI, born in 1577, was a doctor of the Ambrosian college at Milan, and so celebrated for his intimate acquaintance with books and literature in general, that Frederick Borromeo, archbishop of that city, employed him in collecting rare books and manuscripts, for which purpose he visited most parts of the European continent, and the fruits of his researches formed the foundation of the celebrated Ambrosian library. Several of his works, which are yet extant, display great industry and erudition. He wrote three books, "De antiquo ecclesiasticarum Epistolarum genere," 1613; three, "De ritu Sacrarum ecclesiæ Catholicæ Concionum," 1620; and seven, "De Veterum Acclamationibus et Plausu," 1627,

His death took place in 1669.—OCTAVIO FERRARI was born in the same capital in 1607, and entered at an early age the Ambrosian college, where his learning and talents promoted him, at the age of twenty-one, to the chair of professor of rhetoric. On the death of Ripamonte he was chosen to succeed him as historiographer, and appointed to write the annals of Milan, of which work he actually composed eight books, but difficulties being thrown in his way with respect to his access to the state archives and other necessary sources of information, he not only desisted from his undertaking in disgust, but by his will forbade his heirs to publish any part of what he had written on the subject. It was probably this circumstance which induced him in 1634 to accept an invitation, given him by the Venetian senate, to settle at Padua, where the fame of his learning brought him numerous scholars in the several departments of Greek, rhetoric, and politics. His reputation for amiableness of disposition and snavity of manners was not inferior to that which he had acquired by his erudition, and procured him the title of Pacificator. Several crowned heads distinguished him by their favours, especially Christina of Sweden and Lewis XIV, from the latter of whom he enjoyed a pension of 500 crowns. Besides several valuable treatises on the manners, customs, &c. of the ancients, "De re vestiaria," "De Lucernis," &c. he followed Scaliger in an able work, entitled "Origines Linguae Italicae," 1676, folio. His death took place in 1682.—BARTHOLOMEW FERRARI, in conjunction with James Morigia, founded in 1520 the order of Barnabites at Milan, which Paul III confirmed in 1535. He was the first prior of his order, and died while filling that situation in 1544.—There were also two Italian painters of this name, GAUDENZIO, a native of Valdrgia, born in 1484, excelled in his colouring as well as in design, and assisted Raffaello d'Urbino in ornamenting the Vatican. He died in 1550.—The other, GIOVANNI ANDREA, was born in 1599 at Genoa, and was eminent as well for his delineation of fruit and flowers, as for landscapes and historical painting. He died in 1669.—*Moreri.*

FERRARI (JEAN BAPTISTE) a learned Jesuit, a native of Sienna, eminent for his skill in Oriental literature. He published in 1622 a Syriac Dictionary, and was the author also of a Latin treatise on the management of orchards and flowers, first printed in 1633 and again in 1646. His death took place in 1655.—*Ibid.*

FERRARI (LEWIS) an Italian mathematician, distinguished by the discovery of the first method of resolving biquadratic equations. He was born at Bologna about 1521, and he studied under the celebrated Jerome Cardan, who in his treatise on Algebra has recorded the invention of his pupil. Ferrari was employed in making financial calculations for the Milanese government; and afterwards he removed from Milan to Bologna, where he became professor of mathematics. He died in 1565. He is said to have been skilled in

architecture, and acquainted with science and classical literature; but he left no published works, and he is indebted for his reputation to the notice taken of him by Cardan.—*Montucla, Histoire de Mathematique. Aikin's G. Biog.*

FERRARS (GEORGE) a lawyer and poet of some note in the sixteenth century; but more memorable for the connexion of his personal history with the recognition of an important parliamentary privilege. He was of an ancient family, and was born near St Alban's about 1510. After studying at Oxford, he entered at Lincoln's Inn, and was afterwards called to the bar. Cromwell, earl of Essex, recommended him to the king, by whom he was employed both in a civil and a military capacity; and who rewarded his services with the grant of an estate in his native county. This however did not preserve him from becoming involved in debt; and in 1542, when attending his duty as a member of the house of commons, he was taken in execution by a sheriff's officer, for a debt of two hundred marks, and committed to the Compter. The commons no sooner heard of his confinement, than they dispatched their serjeant to require his release. This was refused, and an affray took place between the clerks of the Compter and that officer, who had his mace broken, which he was obliged to use in his own defence. On his returning, and making a report to the house of what had happened, the members in a body repaired to the bar of the house of lords to complain of the breach of privilege. The lords judged the contempt to be very great, and referred the punishment of the offenders to an order of the house of commons. The members returned to their seats, and resolved that the serjeant should repair once more to the sheriffs of London, (who in the preceding affray had supported the clerks of the Compter,) and demand their prisoner without writ or warrant, his mace being a sufficient badge of his authority. The city magistrates no longer resisted, but delivered up the insolvent senator to the parliamentary officer. This tardy obedience did not exempt the parties from punishment, for the sheriffs and the plaintiff at whose suit Ferrars was arrested, were committed to the Tower, and the clerks to Newgate; and an act of parliament was passed, discharging Ferrars from liability for the debt. It is not the least extraordinary circumstance in this transaction, that the proceedings of the Commons obtained the entire approbation of king Henry. Mr Ferrars retained the favour of his majesty, and was appointed to a situation about the person of prince Edward. In the expedition of the protector Somerset to Scotland, in 1548, he attended as an army commissioner. He subsequently held the office of lord of misrule, or master of the revels to Edward VI; and presided in that capacity in Christmas sports at Greenwich. This appointment he probably owed to his poetical talents, of which some estimate may be formed from his contributions to the "Mirror for Magistrates," in which

he wrote the stories of judge Tresilian; Thomas of Woodstock; Richard II; Eleanor Cobham, duchess of Gloucester, and her husband duke Humphry; and of Edmund duke of Somerset. (See BALDWIN, W.) Mr Ferrars was likewise the author of the account of the reign of queen Mary in Grafton's "Chronicle;" and of translations of Magna Charta, and the Laws of Henry III and Edward I. He died at Flamstead in 1579; and was interred in the parish church.—*Biog. Brit. Holinshed's Chron. Cibber's Lives of the Poets.*

FERRERAS (don JOHN DE) a learned Spanish ecclesiastic, was born at Labaneza in 1652. After studying at Salamanca he took orders, and obtained the cure of St James of Talavera, whence he was removed to Madrid, where he became a member of the academy, and assisted in the compilation of the great Spanish Dictionary. He was the author of several works in philosophy, theology, and history, the most considerable of which is a general "History of Spain," in 10 vols. 4to, which is esteemed more faithful than that of Mariana, although less elegantly written.—*Nouv. Dict. Hist.*

FERRETO, an historian and poet of Vicenza, was born about 1296, and contributed greatly to the restoration of polite literature in Italy. He wrote in Latin a history of Italian affairs from 1250 to 1318, which is compiled in a polished and elegant style. He was also the author of some Latin poems, one of which relates the origin of the Scaligers and the actions of the great Cane della Scala.—*Moreri. Tiraboschi.*

FERRIAR (JOHN) an ingenious physician and writer on polite literature. He was a native of Chester, and pursued his medical studies at the university of Edinburgh, where he took the degree of MD. Engaging in practice, he settled at Manchester, where he was chosen physician to the Infirmary and the Lunatic Asylum. He was an active member of the Literary and Philosophical Society of Manchester, in whose memoirs many of his contributions may be found. Some of these afterwards made their appearance in a separate form. His professional tracts were most of them published collectively, under the title of "Medical Histories and Reflections," 3 vols. 8vo. His "Illustrations of Sterne," 1798, 8vo, exhibited abundant proofs of industrious research, which enabled him to trace the obligations of that eccentric writer to Burton, bishop Hall, and other satirical moralists of a preceding age. This essay was republished in 1802, 2 vols. 8vo, with some other pieces in prose and verse. Dr Ferriar was also the author of "An Essay towards a Theory of Apparitions," 8vo, which, without exhibiting any claims to absolute novelty of opinion, displays some acute and ingenious speculation on the probable origin of spectral appearances in mental hallucination, and contains several curious narratives adapted to illustrate the arguments of the essayist. He died in 1815, aged fifty-one.—*Gent. Mag.*

FERRON (ARNAULD DU) a French lawyer

and counsellor of the parliament of Bourdeaux was born in 1515. He was a writer in Latin, much admired by Scaliger, and honoured by him with the name of Atticus. He continued Paulus Æmilius's History of France to the reign of Francis I. It is copious, and abounds in curious anecdotes. He was also the author of "Observations sur la Contume de Bourdeaux," Lyons. He died in 1563.—*Teissier.*

FEUILLEE (LEWIS) an eminent French naturalist and mathematician, who belonged to the religious order of Minims. He was a native of Provence, and having made his profession in 1680, he applied himself to the study of science with so much ardour and success as to attract the notice of his superiors. Lewis XIV sent him to South America to make researches in natural history and philosophy, the result of which appeared in his "Journal des Observations Physiques, Mathematiques, et Botaniques, faites sur les Côtes Orientales de l'Amérique Meridionale, et dans les Indes Occidentales," 1714, 2 vol. 4to. In 1724 he was employed (on the recommendation of the Academy of Sciences, to which he belonged) in an expedition to the Canary Islands, to ascertain the relative position of the meridian of Ferro, which the French geographers had adopted as the point whence to reckon degrees of longitude. This task he performed in a most satisfactory manner; and he was rewarded with the post of botanist to the king, and a pension. He died in 1732, at Marseilles, where an astronomical observatory had been built for him. In the Royal library at Paris are preserved, in MS., a Journal of his Voyage to the Canaries, and a collection of drawings relating to natural history.—*Nouv. Dict. Hist. Haller. Bibl. Bot.*

FEUQUIERES (MANASSES DE PAS, marquis de.) a French military officer, who was a native of Saumur, and was killed at the siege of Thionville in 1640. He was also employed in the service of his country as a diplomatist, and his "Negociations" were published in 1753, 3 vols. 12mo.—FEUQUIERES (ANTHONY DE PAS, marquis de.) grandson of the former, was also an officer in the army. He was born in 1648, and entered young into the service. Having distinguished himself in a campaign in Germany in 1688, he was made marischalde-camp, and in 1693 he rose to the rank of lieutenant-general, after having been employed in Piedmont. Being disappointed of further promotion, he vented his spleen in his "Memoirs," which contain a review of the military transactions of his time, accompanied with severe criticisms on his professional contemporaries. He died in 1711.—*Voltaire, Siècle de Louis XIV. Biog. Univ.*

FEVRE (GUY LE) sieur de la Boderie, a French poet, born in 1541, at la Boderie, in Lower Normandy. He is supposed to have embraced the ecclesiastical profession, from his having been employed in the compilation of the Polyglott Bible of Arias Montanus, for which he composed a Syro-Chaldaic Lexicon. He was afterwards secretary and linguist to the duke of Alençon; but not reaping the ad-

vantage he expected from the patronage of that prince, he retired in disgust to his estate of la Boderie, and died in 1598. He was the author of several works relating to oriental literature; and he also published much poetry in his native language, which procured him considerable reputation among his contemporaries.—His brother, NICHOLAS LE FEVRE, was also an oriental scholar, and assisted in the Polyglot Bible of Montanus. He died in 1605.—ANTHONY LE FEVRE, another brother of Guy, was eminent as a statesman. He was resident at Rome for Henry IV, and ambassador at Brussels in 1597, when he discovered the conspiracy of marshal Biron against his master. In 1606 he went ambassador extraordinary to England, and was there again in 1610. He died in 1615. His correspondence with his government was published at Paris in 1750, 5 vols. 12mo, under the title of "Ambassades de M. de la Boderie en Angleterre sous le Regne de Henri IV, et la Minorité de Louis XIII."—*Moreri. Nouv. Dict. Hist.*

FEVRE (NICHOLAS LE) an eminent French scholar in the sixteenth and seventeenth centuries. He was born at Paris in 1543, and was educated at the college of La Marche, where his studies were for a time interrupted by an unfortunate accident. While mending a pen, a cutting of the quill flew into his eye, and the sudden pain prompting him hastily to lift his hand towards it with the penknife, he wounded it with the point so badly as to render it useless. After leaving the college he travelled in Italy in 1571, and visited the universities of Pavia and Bologna. Returning home he devoted himself to the cultivation of literature. He edited the writings of Seneca, and furnished contributions to the Annals of Baronius, and other works. His reputation occasioned him to be appointed preceptor to Henry of Bourbon, prince of Conde, and afterwards to Lewis XIII, which last employment he did not long retain, dying November 4, 1612.—*Perrault. Biog. Univ.*

FEVRE (TANNEGUI LE) or TANAQUIL FABER, a classical scholar of great eminence in the seventeenth century. He was born at Caen in Normandy in 1615, and was educated at the college of La Flèche, at Paris, where he distinguished himself by his literary acquirements. Cardinal Richelieu procured him a pension of two thousand livres, with the office of inspector of works printed at the Louvre. After the death of that minister, being neglected by his successor, cardinal Mazarine, he gave up his employment and went to Langres, where he professed himself a protestant. He subsequently removed to Saumur, and was made professor of classical literature. After residing there some years, he was invited by the prince palatine to Heidelberg, and was about to quit Saumur for that place when he died in 1672. His works, which are numerous, consist of commentaries on several of the Greek and Latin classics; translations from Xenophon, Plato, Diogenes Laertius, Plutarch, Lucian, &c.; Letters; Lives of the Greek Poets, in French; and

Greek and Latin poems. Voltaire, in his *Siècle de Louis XIV*, expresses doubts of the sincerity of Le Fevre in his change of religion; and says that he despised those of his sect, and lived among them more as a philosopher than a huguenot. And Camusat, on the authority of a bookseller of Saumur, asserts that Le Fevre, when he attended public worship, during the sermon, or the celebration of the Eucharist, used to take from his pocket Terence or Anacreon, and amuse himself in reading, while the rest of the congregation perused the *Voyage de Bethel*, a protestant book of devotion. He had two daughters, one of whom was the celebrated Mad. Dacier; and the other was married to Paul Bauldri, professor of ecclesiastical history at Utrecht. His son, after having been a Calvinist minister, returned to the religion of his ancestors.—*Moreri. Camusat Hist. Crit. des Journ.*

FESTUS (POMPEIUS) a grammarian of note in the fourth century. He published an abridgment of a treatise by Verrius Flaccus, "De significatione verborum," with critical annotations, which Gerard Vossius blames for their severity. Scaliger however speaks highly of his acumen, and recommends his writings to every Latin student. An edition of them, epitomised by Paulus Diaconus, was published in 1470, and a much more complete one by Dacier in 1631, 4to, in usum Delphinii.—*Moreri.*

FEYJOO Y MONTENEGRO (BENEDICT JEROME) a Spanish Benedictine monk and writer of the last century. He published his speculations on a vast variety of topics, in the form of essays designed for popular use, whence he has been sometimes styled the *Spanish Addison*. His "Teatro Crítico Universal," 14 vols. 4to, Madrid 1733; and his "Cartas eruditas y curiosas," are both works of merit, and are devoted to a common object—the refutation of vulgar errors and the abolition of prejudices. Divinity, law, medicine, and philosophy, successively occupy his attention; and some of the superstitions of his church and nation are animadverted on with freedom and good sense. He died in 1765. A new edition of his works was published in 1778, 15 vols. 4to: and a selection from his *Essays and Discourses*, appeared in an English translation, 1780, 4 vols. 8vo.—*Nouv. Dict. Hist. Biog. Univ.*

FICHARD (JOHN) a native of Frankfort-on-the-Maine, born 1512. He devoted himself to the study of jurisprudence, and became syndic of the city in which he was born. He wrote "The Lives of illustrious Men, distinguished for their talents and erudition during the fifteenth and sixteenth Centuries," in Latin, printed in 4to, 1556; "The Lives of celebrated Lawyers," 1563, 4to; a work, entitled "Onomasticon Philosophico-Medico Synonymum," 1574; "De Cautelis," 1577; and "Concilium Matrimoniale," 1580. He died in 1581.—*Moreri.*

FICHET (ALEXANDER) a jesuit, who was professor of rhetoric and classical literature, at Lyons in the seventeenth century. He was the author of a tract entitled "Arcana Studiorum

cæcæ methodus, et Bibliotheca Sœientiarum," 8vo; republished by J. Albert Fabricius, with the "Prodrômus Historiæ Literariæ of Lambicius," 1710, folio. Fichet also published "Chorus Poetarum;" "Musæum, rhetoricum et poeticum;" and "Favus Mellis ex variis sanctis, Patribus collectis," Lyon, 1615, 1617, 2 vols.—*Biog. Univ.*

FICINUS (MARSILIUS) an eminent scholar and critic of the fifteenth century, and one of the revivers of a taste for platonic philosophy in western Europe. He was born at Florence in 1433. His father, who was physician to Cosmo de Medicis, intended him for the same profession, and sent him to study medicine at Bologna. There he contracted an attachment to Platonism by reading the works of Cicero, and he is said at the age of thirteen to have attended the lectures of Gemistus Pletho, on Platonic philosophy. Cosmo de Medicis, to whom he was introduced by his father, encouraged him in his studies, and formed an academy at Florence for the cultivation of Greek philosophical literature, of which Ficinus became president. The first fruits of his application to learning were translations of some pieces attributed to Hermes Trismegistus, and Orpheus; but he afterwards made a Latin version of the entire works of Plato, printed in Gothic characters, at Florence, without date. He also translated the writings of Plotinus, at the request of John Picus, prince of Mirandola; and several of the productions of the earlier and later Platonic philosophers. After the death of Cosmo de Medicis, Ficinus was equally patronised by his son Peter, and his grandson Lorenzo the Magnificent. On his entering into the ecclesiastical state, the latter procured for him a canonry in the cathedral of Florence, besides other preferment. He was very assiduous in the discharge of his clerical duties, till ill health obliged him to seek a retreat in the country, where he died in 1499. His works were collected and published at Basil, and elsewhere, in 2 vols. folio.—*Morevi. Stollii Introduct. in Histor. Literar. Aikin's G. Biog.*

FICORONI (FRANCIS) a writer on archæology and numismatics, born at Lugano in Italy in 1664. He published "Notices of Ancient Medals;" "Observations on the Antiquities of Rome, described in the Diarium Italicum of Father Montfaucon," a critique which was answered by the Apologia del Diario Italicò of F. Ricobaldi; "The Vestiges and Curiosities of ancient Rome explored and surveyed;" besides treatises on the Bulla worn by the Roman youth, on the Games and Theatrical Masks of the ancient Romans, and on Egyptian Hieroglyphics. He died in 1747.—*Rées's Cycloped.*

FIDDES (RICHARD) a divine of the church of England and author of several works, was born at Hunmanby in Yorkshire, in 1671. He received his academical education at University college, Oxford, where he took his degree of B.A. in 1693. In 1694 he took orders and obtained a presentation to the rectory of Hailsbam in Yorkshire; but in consequence of the

bad air of that marshy place, he contracted an illness which deprived him ever after of the power of distinct utterance. In this dilemma he determined to remove to London and devote himself to literature, and being introduced by dean Swift to the earl of Oxford, he obtained for him the appointment of chaplain to the garrison of Hull. He was now closely leagued with the Tory party, but all his hopes were frustrated by the removal of the earl of Oxford from power, on which occasion he also lost his chaplaincy. In 1718 he published his "Theologia Speculativa," the first of his works which attracted much attention; on which occasion the University of Oxford honoured him with the degree of DD. In 1720 appeared his "Theologia Practica," to which the same body again liberally subscribed, and also extended similar patronage to his volume of "Practical Discourses." In 1724 he produced his "Life of Cardinal Wolsey," which exhibited a spirit of ecclesiastical pretension, bearing so great an affinity to that of the church of Rome, that he was accused of popery, and much warm controversy followed. He not only, indeed, palliated some of the most censurable actions of Wolsey, but vindicated the persecution of the followers of Wickliffe, and otherwise stigmatized the instruments of the Reformation. The object of this work was clearly to favour the views of the pretender, and it was consequently much exalted by the Jacobite party, who encouraged him to undertake the lives of sir Thomas More and bishop Fisher, which however he never completed. He died at Putney in 1725. Dr Fiddes was a man of more ingenuity than learning, very facile in composition, but tediously diffuse and verbose in style and language, and exceedingly deficient in judgment. Besides the works already mentioned, he wrote—"A Prefatory Epistle concerning Remarks to be published in Homer's Iliad;" "Remarks on the State Anatomy of Great Britain;" "A General Treatise of Morality," in answer to two essays by the earl of Shaftesbury; "A Preparation to the Lord's Supper;" "A Letter in answer to a Freethinker;" and several controversial pieces in defence of his Life of Wolsey.—*Biog. Brit.*

FIELD (RICHARD) a learned divine, was born in 1561, at Hempsted, in Hertfordshire, and was educated at Magdalen college, Oxford. In 1594, on taking his degree of bachelor of divinity, he was chosen divinity reader to the society of Lincoln's Inn, one of the members of which presented him with the living of Burrowclere in Hampshire. In 1598, being then doctor of divinity, he was made chaplain in ordinary to queen Elizabeth, and soon after prebendary of Windsor. He assisted at the Hampton Court conference, and in 1605, when king James I, was to be entertained at Oxford with scholastic exercises, he was sent for to bear a part in the divinity act, and acquitted himself with great learning and acuteness. In 1610 James bestowed upon him the deanery of Gloucester, where however he never resided, passing most of his

time at Burrowclere. He often preached before the king, with whom he was a great favourite, and who proposed sending him into Germany to compose the differences between the Lutherans and Calvinists, but for some reason this appointment did not take place. At another time he expressed his wish to bestow on Dr Field the bishopric of Salisbury, and sent him a promise of the see of Oxford on a vacancy, but before the opportunity offered for keeping his word, the dean was suddenly carried off by a stroke of apoplexy in 1616. Dr Field was the author of a work entitled "Of the Church," which gained him among his contemporaries the highest reputation for extensive learning and nice casuistical knowledge. He also commenced "A View of the Controversies in Religion, which in these last times have caused the lamentable Divisions of the Christian World," but did not live to finish it.—*Life by Le Neve.*

FIELDING (HENRY) a writer eminently distinguished for humour and knowledge of the world, was born at Sharpham-park, in Somersetshire, April 22, 1707. His father, a descendant from the noble family of Fielding, died a lieutenant-general in the army, and Henry was his eldest son by his first wife, a daughter of sir Henry Gould, a justice of the court of King's Bench. He was educated at Eton, whence he removed to Leyden, but the straitened circumstances and numerous family of his father shortened his academical studies, and the same cause, added to a dissipated disposition, diverted him from the choice of a profession, and turned his attention to the stage. His first dramatic piece was entitled, "Love in several Masks," which met with a favourable reception, as did likewise his second, called "The Temple Beau." He did not, however, generally succeed as a dramatist; for although no man possessed a stronger feeling of the ridiculous, or executed detached scenes with greater humour, he took too little time to construct his dramas, with a view to plot and effective developement. Many of his plays are indeed little more than free translations from the French, as, for example, "The Miser." In some of these pieces he touched upon politics, and was one of the principal of the writers who gave sir Robert Walpole an excuse for his act to limit the number of theatres, and submit dramatic performances to the licence of the lord-chamberlain. In his twenty-seventh year he married Miss Craddock of Salisbury, a young lady of great beauty and some fortune, and at the same time, by the death of his mother, became possessed of a small estate in Dorsetshire. Wholly destitute of prudence, he immediately commenced country gentleman, on a scale which in three years reduced him to greater indigence than ever, with the addition of a young family to support. He then for the first time dedicated himself to the bar as a profession, and for immediate subsistence employed his pen on various miscellaneous subjects; and "The Champion," a periodical paper; "An Essay on Conversation;" "An Essay on the Know-

ledge and Characters of Men;" "A Journey from this World to the next;" and "The History of Jonathan Wild;" were among the early fruits of his literary industry. In 1742 appeared his first proper novel of "Joseph Andrews," in which the Cervantic style of humour is admirably imitated. It immediately received the attention to which it was entitled, but success as a novel-writer was not very likely to advance his practice at the bar; nor was the emolument attached to it sufficient for a manner of life never sufficiently regulated by the rules of prudence. Soon after the appearance of Joseph Andrews, he was farther impeded in his profession by repeated attacks of the gout, added to which, his domestic affliction was greatly increased by the illness and death of a beloved wife, whose loss for a time he felt most acutely, as no man possessed a kinder heart however occasionally erroneous in conduct. As soon as he recovered his spirits he renewed his literary exertions, and in 1745 published a periodical paper, entitled "The True Patriot," which was followed by "The Jacobite Journal." These labours on the side of the existing government, were rewarded with the then not altogether reputable office of a Middlesex justice. To the credit of Fielding however, he did much to render it more respectable, by attention to the prevention of crimes, and to the regulation of the police. He published more than one tract upon the subject, and the principal of them, his "Enquiry into the Cause of the late Increase of Robbers, &c." made a great impression at the period. It was in the intervals of those serious occupations that he wrote his celebrated "Tom Jones," which was followed in 1751 by "Amelia." The publication of those extraordinary works, in the midst of the avocations of a busy and perplexing office, and while impaired and enfeebled by severe attacks of the gout, testify strongly to the mental vigour of Fielding. At length however his constitution began to yield to the repeated attacks upon it, and he was recommended by the faculty to take a voyage to Lisbon. He followed their advice, and the last gleams of his wit and humour are to be found in his "Journal" on that occasion. He reached Lisbon in August 1754, and about two months after expired, his death taking place on the 8th October following, in his forty-eighth year. He was attended on this melancholy occasion by his second wife, by whom he left four children. The merit of Fielding as a novelist is disputed by no school of criticism, in respect to wit, humour, correct delineation of character, and knowledge of the human heart. That he is somewhat over fond of the manners and scenery of vulgar life may be granted; and he is possibly at the same time too prone to excuse gross deviations from propriety and good conduct, under the vague qualification of "goodness of heart." With all this abatement however, perhaps no novel in any language exceeds "Tom Jones," in the exhibition of character and manners, and for the consummate skill displayed in the developement of the story and management of

the catastrophe. "Amelia," with less variety and invention, is, in regard to portraiture and knowledge of life, almost equally felicitous; while as to pure raciness of humour, "Joseph Andrews" is often deemed before both. Even "Jonathan Wild," coarse as are the persons and doings described, is irresistible in the way of humorous caricature, and we forgive the subject for the original mode of the handling. In the eyes of foreigners, Fielding ranks far below Richardson, which is not wonderful, for while no one more largely deals in the general elements of human character, like Hogarth he has rendered all his personages so unmixedly English, they are scarcely to be recognised in any other dress. The great impulse given by popular encouragement to works of fiction, of a kindred class to these celebrated novels, has certainly led to many very imposing and splendid productions of late years; but it may be doubted if, in reference to verisimilitude and real nature as modified by the habits and institutions of modern society, Fielding does not yet stand at the head of the English school of genuine comic romance.—*Biog. Brit.*

FIELDING (sir JOHN) half-brother to the subject of the preceding article, and his successor in the office of justice for Westminster, in which, although blind from his youth, he acted with great activity and sagacity for many years. He was knighted in 1761, and died at Brompton in 1780. He published various tracts on the penal code, and a miscellaneous publication, entitled "The Universal Mentor." He was also an active and benevolent promoter of the Magdalen Hospital, the Asylum, and the Marine Society.—*Gent. Mag.*

FIELDING (SARAH) third sister of Henry Fielding. She was born in 1714, lived unmarried, and died at Bath, where she long resided, in April 1768. She was the author of the novel of "David Simple;" a less popular production of a kindred class, called "The Cry, a dramatic Fable;" "Xenophon's Memoirs of Socrates," translated from the Greek, (for which she was favoured with some valuable notes by Mr Harris of Salisbury;) "The Countess of Delwyn;" "The History of Ophelia;" "The Lives of Cleopatra and Octavia;" and one or two more of a minor class.—*Nichols's Lit. Anec.*

FIENNES (WILLIAM) lord Say and Sele, the son and heir of sir Richard Fiennes, to whom the title had been granted by James I. He received his education at Winchester school, and New college, Oxford, where he held a fellowship. Though he was raised to the rank of a viscount in 1624, yet, like many other persons of distinction who had experienced the favour of the court, he joined the parliament in the contest for power with Charles I, and became an active opponent of that unfortunate prince during the civil war. He however concurred in the restoration of Charles II, and was subsequently promoted to the posts of lord-privy-seal and lord-chamberlain. He wrote some tracts against the quakers, which have been published, as well as his speeches in parliament. His death took place

in 1662.—NATHANIEL, younger son of the preceding, was, as well as his father, attached to the puritan party in the church; and was employed as an officer in the parliamentary army during the civil war. He commanded at Bristol when that city was taken by prince Rupert, in consequence of which he was tried for supposed treachery, and being found guilty, received sentence of death; but the influence of lord Say and Sele prevented him from suffering. He subsequently obtained the confidence of the protector, whom, it is said, he persuaded to adopt the regal title. He survived the Restoration, dying in 1669.—*Biograph. Peerage. Lord Clarendon. Wood.*

FIENUS (THOMAS) a medical and surgical writer of the seventeenth century. He was a native of Autwerp, and studied at Bologna in Italy, under Mercurialis and Aldrovandus. On his return to the Netherlands he was made professor of medicine at Louvain; and he afterwards became physician to the duke of Bavaria. He died at Louvain in 1631, aged 64. Fienus was the author of a general Treatise on Surgery, and other professional works, which have long since become obsolete. His tracts, "De Viribus Imaginationis;" and "De Vi formatrice Fœtus," afford some curious examples of the popular and medical prejudices of his age. In his Epistle to Libertus Fromond "De Cometa Anni 1618," he displays a more philosophical spirit, and argues very sensibly against the notions which were formerly current relative to the nature of comets and the prognostications deduced from their appearance.—*Hutchinson's Biog. Med. Edit.*

FIESCO (JOHN LEWIS) count of Lavagna, a distinguished victim of unsuccessful ambition in the sixteenth century, was the head of one of the noblest houses in Genoa. He became master of a large patrimony at the age of eighteen, and being surrounded with dependents and flatterers, and really possessing considerable talents and eloquence, he was readily urged to aim at that power and distinction in the state which was then possessed by the family of Doria, headed by the famous Andrew Doria. The latter, whose patriotism and great qualities had justly raised him to the distinction of first citizen, being too intent upon the elevation of his nephew Giannettino, a youth of a brutal and insolent character, a great degree of discontent was engendered among the nobles of Genoa, who, forming a party against Doria, willingly accepted a leader of the wealth and talents of Fiesco. The court of France, anxious to detach Genoa from the interest of the emperor, was easily induced to favour this enterprise, to which the concurrence of Pope Paul III, who furnished some gallees, was also afforded. Although Andrew Doria received some intimation of the design in agitation, Fiesco conducted himself with so much circumspection and apparent tranquillity, he could not be induced to believe aught to his prejudice. After several meetings, the plan of the conspiracy was fixed, and the destruction of the Doria family formed an essential part of it. On the evening of January 1 1547, Fiesco,

who had prepared a galley under pretence of a cruise against the corsairs, waited upon Andrew Doria, to request permission to depart from the harbour early in the morning, and took his leave with strong demonstrations of respect and affection. The same evening however he assembled a large body of his partizans at his house, on the pretence of an entertainment, to whom he made a warm and eloquent address; and their concurrence being unanimous, he hastened to the apartment of his wife, and acquainted her with his intention. She earnestly, and in vain, entreated him to abandon his desperate undertaking. He took leave of her, saying, "Madam, you shall never see me again, or you shall see every thing in Genoa beneath you." While the city was buried in sleep he sallied forth, preceded by 500 armed men, and dispatching parties to different quarters, himself proceeded to secure the darsena, or dock, in which the galleys lay. He went on board one of these, from which he was proceeding across a plank to the captain galley, when the board gave way, and falling into the water, incumbered with his armour, he sank to rise no more. Thus terminated the life of this young and able votary of ambition, at the early age of twenty-two. His confederates failed in their attempt on Andrew Doria, but Giannetino fell beneath their swords. The loss of their leader however proved fatal to the conspiracy; his brother Jerome was deserted, and the whole family paid the penalty of the ambition of their head, by ruin and proscription.—*Nouv. Dict. Hist. Mod. Univ. Hist.*

FILANGIERI (GAETANO) a Neapolitan writer on political economy and legislation. He was born in 1752, and being a younger son was destined for the army, but guided by inclination, he devoted himself to study. In 1771 he formed the plan of a work on public and private education, and he afterwards purposed writing a book to be called "Morality for Princes," but neither was ever completed. He then, at the desire of his relations, applied to the law, and in 1774 produced a tract, in which he ingeniously defended a new enactment against the arbitrary decision of a judge. Soon after he withdrew from public life, intending to compose a general system of legislation; but in 1777 the advice of his uncle, the archbishop of Naples, induced him to enter into the service of the court, and he was appointed gentleman of the bed-chamber and an officer in the royal corps of volunteers in the marine service. These appointments probably interfered but little with his literary occupations, and in 1780 he published the first part of his great work on "The Science of Legislation," the whole of which was to be completed in seven books. In the first he proposed to expound the general rules of legislation; in the second, civil and economical laws; in the third, criminal laws; in the fourth, legislation as applied to education and morals; in the fifth, ecclesiastical laws; in the sixth, laws respecting property; and in the seventh, laws relative to paternal authority and domestic economy. Of this work the first four books

only appeared during the life of the author. In 1783, having married a Hungarian lady, who was governess to one of the Neapolitan princesses, he resigned his employments and resided for some time in the country; but in March, 1787, he was appointed to a place in the royal college of finance, and he was engaged in some extensive plans of improvement in the resources of the state, when his career of usefulness was cut short by the hand of death in July 1788. A part of the fifth book of the Science of Legislation was published in 1791 and it appears that no more of the work was completed by the author, so that it was left imperfect. It notwithstanding attracted great public attention, from the bold and original views which it develops, and the general liberality of sentiment by which it is characterised. Several editions of the original appeared in Italy, and it was translated into the French, German, English, and Spanish languages.—*Aikin's G. Biog.*

FILICIA (VINCENT DE) an Italian poet, distinguished for the elegance of his compositions. He was born at Florence of a noble family in 1642. He studied in the university of Pisa, where he took the degree of LL.D. and returning to Florence, lived some time in retirement, occupied in the cultivation of literature. His "Canzoni," on the raising of the siege of Vienna, laid the foundation of his fame. He received complimentary letters from the emperor Leopold and other princes; and the grand duke of Tuscany gave him the title of senator, and appointed him to the government of Volterra and Pisa; in which, as well as in other employments, he conducted himself so as to gain the esteem of his sovereign and of the people. He died at Florence in 1707. Beside his poetical pieces, he was the author of orations and epistles in his native language, as well as some elegant productions in Latin verse.—*Tiraboschi. Cardella.*

FILIPPI (BASTIANO) an artist, was born at Ferrara in 1532. He acquired the nickname of Gratella from his introducing the method of squaring pictures to reduce them. He was one of the dearest pupils and most indefatigable copyists of Michael Angelo, and distinguished himself particularly in his grand picture of Universal Judgment, a work which approaches nearer to that great master than any ever produced by the whole of the Florentine school. Want of patience in invention and practice made him repeat himself. He was at first a painter of grotesques, but he afterwards left that branch entirely to his younger brother, CESARE FILIPPI, who was very eminent in the ornamental style. Filippi died in 1602.—*Pilkington.*

FILMER (sir ROBERT) son of sir Edward Filmer of East Sutton in Kent, was born towards the close of the sixteenth century. He was educated at Trinity college, Cambridge, and as a writer distinguished himself by his endeavours to prove the superior advantages of absolute monarchy. His works are—"The Anarchy of limited and mixed Monarchy," 1646; "Patriarcha," in which he endeavoured to prove that all governments were originall

monarchical, and that all legal titles are derived from heads of families. This work was completely answered by Locke, in his "Two Treatises on Government." Filmer died in 1647.—EDWARD FILMER, son of sir Robert, who took his degree of LL.D. at Oxford, was author of a tragedy called the "Unnatural Brother," and defended the stage against Jeremy Collier.—*Burnet's Own Times. Athen. Oxon.*

FINÆUS (ORONTIUS) or FINE, a French mathematician of some note in the first half of the sixteenth century. He was a native of Briançon in Dauphiné, born 1494. His reputation procured him the patronage of Francis I, which was not however conferred on him to such an extent as to rescue him from the pressure of his indigent circumstances; and although he obtained the professorship of his favourite science in the Royal college at Paris, yet at his death he left a widow and young family totally unprovided for. He was the author of several ingenious mechanical inventions, and even went so far as to lay claim to the discovery of the quadrature of the circle. A description of a curious clock constructed by him was published in 1533. Like many other of the astronomers and geometers of the age in which he lived, he is said to have also dabbled in judicial astrology. Of his works three editions are extant, two published during his life in 1532 and 1542, each in 3 vols. folio. The other in 1556, the year subsequent to that of his decease.—*Biog. Univ.*

FINCH. The name of a noble English family, in different branches of which the earldoms of Winchelsea and Nottingham have been long vested. HENEAGE FINCH, first earl of Nottingham, was the son of Heneage Finch, recorder of the city of London, a descendant of the Winchelsea family. He was born in 1621, and was educated at Westminster school, and Christchurch, Oxford, whence he removed to the Inner Temple. At the Restoration of Charles II his reputation as a lawyer raised him to the post of solicitor-general, in which capacity he signalized his zeal in the prosecution of the regicides. In 1661 he was elected member for the university of Oxford, and obtained a baronetcy, and six years afterwards took a prominent part in the impeachment of the earl of Clarendon. In 1670 he became attorney-general, and in 1673 succeeded the earl of Shaftesbury as lord-keeper. This latter appointment was only a step towards the chancellorship, which he attained in two years afterwards. In 1681 his services were rewarded with the earldom of Nottingham; he survived his elevation however little more than a year. His powers as an orator were highly rated, and Dryden has handed down to posterity his portrait in Absalom and Achitophel, under the character of Amri. Several of his speeches on the trials of the judges of Charles I have been published, as have also some of his parliamentary orations, but some valuable Chancery reports of his remain in manuscript.—His son, DANIEL, born in 1647, was a member of the privy-council which caused James II to be proclaimed; he never

however sat at that board, or visited the court during the reign of that monarch, but on his abdication exerted himself strongly in favour of a regency. This did not prevent his afterwards acting as secretary of state under William and Mary, though he declined the chancellorship. In 1704 he went out of office, and continued so till the accession of George I, when he acted as one of the lords justices, in whom the administration of affairs was vested till the King's arrival. In 1716 he retired from public life, and died in 1730, having devoted the interval to the enjoyment of retirement and literary leisure, the fruits of which appeared in an eloquent reply to Whiston on the subject of the Trinity.—Of the elder branch, HENRY, son of Thomas Finch of Eastwell Park, Kent, was educated at Oriel college, Oxford, and was afterwards made a knight and a serjeant-at-law by James I. He was the author of "Nomotechnia," a Latin treatise on the common law, printed in folio, 1613, of which he afterwards published a translation. He died in 1625, leaving a son, JOHN, afterwards lord keeper, and created baron Fordwich.—ANNE FINCH, countess of Winchelsea in the reign of James II, was the daughter of sir William Kingsmill, a Hampshire baronet, and previously to her marriage one of the maids of honour to that monarch's queen. She had a taste for poetry, and published a poem "On the Spleen," and some other pieces printed together in 1713 in one octavo volume. Her death took place in 1720.—*Biog. Brit.*

FINCK (THOMAS) a Danish mathematician, who was a native of Flensburg in South Jutland. He received part of his education at Strasburgh, and after visiting other universities he went to Basil, and there published a geometrical treatise which procured him much reputation. He afterwards studied at Padua and Pisa, and returning to Basil took the degree of MD. in 1587. Having travelled in Germany and the north of Europe, he settled at Gottorp as physician to the duke of Sleswick. In 1591 he was appointed professor of mathematics in the university of Copenhagen; in 1602 he was made professor of rhetoric; and in 1603 professor of medicine. He was likewise president and administrator of the Royal Economical School and Corporation. He died in 1656, at the great age of ninety-five. He wrote on astronomy and medicine as well as mathematics.—*Aikin's G. Biog.*

FINET (sir JOHN) descended from an ancient family of Italy, was born near Dover in 1571. He was brought up at court, where by his wit and companionship he made himself a favourite with James I. In 1614 he was sent into France upon public business, and the next year was knighted. In 1626 he was made assistant-master of the ceremonies. He was the author of "Fineti Philoxenus," some choice observations touching the reception and precedence, &c. of foreign ambassadors in England, published by James Howell in 1656. He also translated from the French, "The Beginning, Continuance, and Decay of Estates," 1606. *Wood Athen. Oxon.*

FINKENSTEIN (CHARLES WILLIAM FINCK, count de) born in 1714 of one of the first families in Prussia. He prosecuted his studies under the direction of the celebrated M. Forney at Berlin. In 1735 he was sent to Stockholm as minister plenipotentiary from the Prussian king, Frederick William. He paid particular attention to the state of parties in Sweden, and drew up in French an account of the diet of 1738, which was much admired, and has been often printed. Being recalled in 1740, he went on a mission to Russia, and remained there till 1748. Frederick II in 1749 appointed him minister of foreign affairs in the room of count Podewils. He retained this situation till the close of his life, which lasted more than half a century from the period of his appointment. Count Hertzberg assisted in attending to the duties of the office during the later years of Finkenstein, who in January 1799, after celebrating the jubilee, or fiftieth year of his ministry, demanded permission to resign; but he died January 3d, 1800, not half an-hour after he had signed an official despatch. He not only possessed a high reputation as a statesman, but was also distinguished as the patron and protector of literature and the arts.—*Biog. Univ.*

FINLAY (JOHN) a modern Scotch poet. He was a native of Glasgow, where he studied with success the history and popular literature of Scotland. He published among other works, "Wallace, or the Vale of Ellerslie;" and Scottish ballads, historical and romantic, principally ancient, with notes and a glossary, to which are prefixed Remarks on Scottish Romance. These productions display much acquaintance with the antiquities of the middle ages. He died December 8th, 1810, aged twenty-eight.—*Biog. Univ.*

FIRENZUOLA (ANGELO) a dramatic poet of Italy, born in 1493 at Florence. He was originally bred to the bar, and practised for some time as an advocate in his native city, but becoming disgusted with the profession, he took orders and devoted himself to literary pursuits. Pope Clement VII distinguished him with his favour, and promoted him to a valuable benefice in Rome. In 1548 an 8vo. volume of his prose compositions appeared, which, in the course of the succeeding year, was followed by a collection of comedies and other miscellaneous pieces in verse. These later were reprinted in 1763, in 3 vols.; and an edition of his works complete was published at Florence in 1765, in 4 vols. His death took place at his abbey in 1545.—*Tiraboschi.*

FIRMIAN (CHARLES, count de) administrator of the Austrian government of Lombardy in the latter part of the eighteenth century. He was born of a noble family in 1718; and after having laid the basis of a good education by study, he travelled in France and Holland. The emperor Charles VI appointed him a member of the aulic council at Vienna; but on the death of that prince, soon after, count Firmian went to Rome, to study more particularly jurisprudence and the fine arts. On the ac-

cession of Francis I, he was recalled to Vienna, to resume the functions of his office. The empress-queen, Maria Theresa, sent him ambassador to Naples, and subsequently nominated him governor of Austrian Lombardy during the minority of the archduke Ferdinand. He entered on the exercise of his functions in June 1759, and through the whole of his presidency distinguished himself by his love of justice and his zeal for the happiness of the people. The court of Vienna rewarded his merits with extraordinary honours. He was decorated with the order of the Golden Fleece, and appointed lieutenant-vice-governor of the duchies of Mantua, Sabionetta, and the principality of Bozolo; with the title of imperial minister plenipotentiary to the government of Austrian Lombardy, then under the archduke. He employed his wealth and influence in forming valuable collections of books, medals, paintings, and engravings; and distinguished himself by his enlightened encouragement of arts and letters, which he cultivated himself, though without ostentation. The university of Pavia flourished under his care, and was indebted to him for a valuable library, a botanical garden, a laboratory, and a cabinet of natural history and anatomy. He died at Milan, June 20, 1782. A catalogue of his library, entitled "Bibliotheca Firmiana," was published at Milan in 1783, in 10 parts 4to.—*Biog. Univ.*

FIRMICUS (JULIUS MATERNUS) an early Christian author, of whom little more is known than that he flourished under the immediate successors of Constantine the Great. A work on astronomy, or rather astrology, in eight books, printed in 1497 by Aldus Manutius at Venice, and attributed to him, is supposed to be spurious; or if the very doubtful evidence which is adduced to the contrary be admitted, it must evidently have been composed by him previously to his conversion. Another treatise ascribed to him on better authority, and entitled "De Errore Profanarum Religionum," has gone through several editions.—*Fabricii. Bibl. Lat.*

FIRMIN (THOMAS) an eminent philanthropist and writer on pauperism in the seventeenth century. He was a native of Ipswich, and was apprenticed to a linen-draper in London, where he himself afterwards carried on the same business. An acquaintance which he formed with the persecuted Socinian divine, John Biddle, whose misfortunes he relieved by his active benevolence, led him to adopt anti-trinitarian sentiments; notwithstanding which, his virtues extorted the respect and esteem of the prelates, Wilkies, Tillotson, Compton, and other orthodox divines. In 1676 he established a linen-manufactory for the purpose of furnishing employment to those who would otherwise have been vagrants; and in 1678 he published an account of his institution, under the title of "Some Proposals for the employing of the Poor, especially in and about the city of London, and for the Prevention of Begging, &c. in a Letter to a Friend." His charity was extended to all sects and parties, and was experienced alike by the French pro-

tes'ants expatriated by the revocation of the edict of Nantes, and by the nonjurors after the Revolution. This truly amiable and liberal-minded man terminated his useful life in 1697, at the age of sixty-five.—*Cornish's Life of Firmin. Aikin's G. Biog.*

FIROUZABADI, a Persian doctor of high repute in the eleventh century. He was invited by Nezam Molk, grand vizir of Malek Schah, to undertake the direction of the college which had been just founded at his expense, and which has since become so famous. He discharged this duty very honourably until his death. He was author of a work much esteemed by Mahometans, entitled "Al Tanbih, or General Information," in which he treats on the principles, rites, and observances of the Mussulman law.—Another Persian doctor of the same name lived in the fourteenth century; he was author of a celebrated and excellent dictionary of the Arabic language, entitled "Camus," or the "Ocean;" as also of "Ahasan al Lathaif," a collection of pleasantries and witty sayings; and of another work entitled "Assaad bel Assaad," or the means of being happy. He died in the year 1414.—*D'Herbelot, Bibl. Orient.*

FISCHER (JOHN BERNARD) an eminent German architect of the last century. He was born at Vienna about 1650, and pursued the study of his profession at Rome. He erected the palace of Schoenbrunn, which is however more famous on account of the gardens and menagerie attached to it, than for its architectural merit. The emperor Joseph I appointed Fischer his chief architect, and created him baron d'Erlach. He built a multitude of fine edifices at Vienna; but his works display too great a predilection for ornament. The church of St Charles Borromeo, in the suburbs of Vienna, is reckoned his masterpiece. He died in 1724, leaving a work on Historical Architecture, or a collection of ancient buildings, with explanations in French and German, Vienna, 1721, folio.—His son, **EMANUEL**, baron de Fischer, applied himself to the study of mechanics with great success, and assisted in several of the works conducted by his father. He constructed steam-engines for the mines of the Hartz, and other hydraulic machines; and he corresponded with Desaguliers and S'Gravesande. He died in 1758.—*Biog. Univ.*

FISCHER (JOHN FREDERIC) a German scholar and classical editor, born at Cobourg in 1726. He studied in the gymnasium at Cobourg, and afterwards at the university of Leipsic. His first publication was a Dissertation on the Altar of Peace. In 1751 he was chosen co-rector of the school of St Thomas at Leipsic, of which he subsequently became rector. He died October 11, 1799. His labours as an author and an editor were very considerable, including Remarks on the Greek Grammar of Weller; editions of the Dictionary of the New Testament by Pasor, the Lexicons of Moeris and Timæus, the works of Anacreon, Theophrastus, the Dialogues of Plato, and several other Greek and Latin authors.—*Biog. Univ.*

FISH (SIMON) a Kentish lawyer in the sixteenth century, who, after receiving his education at Oxford, went about 1525 to study law at Gray's Inn. He was obliged to flee to the continent for acting a part in a play, written with a view of ridiculing cardinal Wolsey, who issued orders against him the same night. He however escaped into Germany, where he wrote a smart satire upon the popish clergy, entitled "The Supplication of the Beggars," which was answered by sir Thomas More in his "Supplication of Souls." After it had been printed, a copy was conveyed to the king by Anne Boleyn, and Henry not being displeased at it, Fish was called home, and granted the king's protection. He died of the plague soon after his recall in 1531.—*Fox's Acts and Monuments.*

FISHACRE or FIZACRE (RICHARD) a dominican of the thirteenth century, was born in Devonshire and educated at Oxford. He was esteemed one of the most learned men of his time, both in philosophy and divinity. He was the intimate friend of Robert Bacon, with whom he is paired by Leland, Matthew Paris, &c. They both died in one year, 1248, and were buried among the dominicans at Oxford. His works were numerous.—*Prince's Worthies. Wood. Leland.*

FISHER (JOHN) bishop of Rochester, a learned catholic divine in the reign of Henry VIII. He was born in 1459 at Beverley in Yorkshire, and received his education at Michael-house, now incorporated in Trinity college, Cambridge, where he graduated and obtained a fellowship. He was one of the proctors of the university in 1493, and the same year he was chosen master of Michael-house, and entered into holy orders. Soon after he was made vice-chancellor, and his great reputation for learning and piety induced Margaret, countess of Richmond, to choose him for her confessor; and it was through his influence she determined on the noble academical foundations which have perpetuated her memory. In 1501 he was admitted DD, and the next year he became the first Margaret professor of divinity at Cambridge. In 1504 he was unexpectedly promoted to the see of Rochester, on the recommendation of Fox, bishop of Winchester. He subsequently declined translation to a more valuable bishopric; and he was accustomed to style his church his wife, declaring that he would never exchange her for one that was richer. The same year in which he was raised to the bench, the office of chancellor of the university of Cambridge was conferred on him. He took up his residence there, and was for some time engaged in superintending the establishment of St John's college, founded by the countess of Richmond. Deeply prepossessed in favour of the ancient faith of the nation, he opposed with zeal and perseverance the principles of Luther and his followers. He published a "Defence of the King of England's Assertion of the Catholic Faith against Mr Luther's Book of the Captivity of Babylon," and a "Defence of the Holy Order of Priesthood against Martin Luther."

But the same conscientious motives which induced bishop Fisher to become the champion of Henry VIII, against the redoubtable German polemic, impelled him to oppose the king's measures for procuring a divorce from his wife, and declaring himself head of the church. When the former affair was agitated in 1527 he gave a decided opinion in favour of the validity of the marriage; and in 1529 he acted as one of the queen's council in the trial before the legates, Wolsey and Campeggio. His imprudence and weakness in listening to the pretended prophecies of Elizabeth Barton, or the Maid of Kent, subsequently furnished the court with an opportunity of punishing his opposition to the royal designs. In 1534 an act of attainder was passed against Barton and her accomplices, among whom bishop Fisher was included; and being adjudged guilty of misprision of treason, he was condemned to the forfeiture of his property and imprisonment during the king's pleasure. It does not however appear that this sentence was executed, a fine of 300*l.* it is said having only been exacted. He was subsequently sent to the Tower for refusing to submit to the provisions of an act of parliament, which annulled the king's marriage with Catharine of Arragon, and confirmed his subsequent union with Anne Boleyn. He was attainted and deprived in 1534, and would probably have been suffered to close his life peaceably in prison but for the ill-timed compliment paid him by pope Paul III, who thought proper to reward his zealous adherent by creating him a cardinal. The king, on learning that Fisher would not refuse the proffered dignity, exclaimed, in a passion, "Yea! is he so lusty? Well, let the pope send him a hat when he will, Mother of God! he shall wear it on his shoulders, for I will leave him never a head to set it on." His destruction was immediately resolved on; and as no evidence against him existed sufficiently strong to affect his life, the tyrant Henry employed his infamous solicitor-general, Rich, to entrap Fisher into a positive declaration of his denial of the king's supremacy. The plot succeeded, and the bishop being tried before a special commission, was convicted of high treason on the evidence of Rich, and on the 22d of June 1535 he was, in pursuance of the sentence passed on him, beheaded on Tower-hill. Bishop Fisher was a zealous promoter and cultivator of literature, and a patron of learned men. Besides the tracts already noticed, he was the author of a "Commentary on the Seven Penitential Psalms;" of "Sermons;" controversial and devotional treatises, &c.—*Biog. Brit. Aikin's G. Biog.*

FISHER (JOHN) DD. a learned English prelate, born at Hampton in Middlesex in 1748, his father, the rev John Fisher, being at that period curate of the village. The latter becoming afterwards chaplain to bishop Thomas, was by him presented to the vicarage of Peterborough, in the grammar-school of which city his eldest of ten sons, the subject of the present memoir, received the rudiments of his education. He was afterwards removed to

St Paul's school under Dr Thicknesse, and thence proceeded to Peterhouse, Cambridge, in 1766. In 1770 he took his degree of AB. with great credit; and two years afterwards succeeded to an appropriated fellowship at St John's, of which college he became also a tutor. While in this situation, prince Czartorinski Poniatowski, and several other distinguished personages, were placed under his care; but it was to the inflexible integrity displayed by him in the election of Dr Chevalier to the vacant headship of his college, that all his future success in life is mainly to be attributed. His conduct on this occasion, when a sense of duty prevailed over all the entreaties, threats, and promises of those in power, and the utmost exertion of ministerial influence, seemed at first calculated to impede his advancement. It had however, fortunately, a contrary effect, as it induced bishop Hurd to recommend him to George III, in the capacity of tutor to prince Edward, afterwards duke of Kent. In 1787 he married the daughter of Mr Scrivener of Sibton abbey, Suffolk, and two years afterwards proceeded to his doctor's degree. In 1803 he was raised to the bishoprick of Exeter, on the death of Dr Courtenay; and towards the conclusion of the same year appointed to superintend the education of the late princess Charlotte of Wales, an arduous task, which he discharged with equal ability and success. On the death of Dr Douglas in 1807, Dr Fisher was translated to the diocese of Salisbury. He closed an active but unostentatious life (one great characteristic of which was his general mildness and the perfect command he ever maintained over his temper) on the 8th of May, 1825, and was interred in St George's chapel, Windsor.—*Gent. Mag*

FISHER (PAYNE) or, in Latin, Paganus Piscator, a poet of the seventeenth century, chiefly memorable for having held the office of laureate under the protectorate of Cromwell. He was a native of Dorsetshire, and was educated at Hart-hall, Oxford, and afterwards at Magdalen college, Cambridge, where he took the degree of BA. He served for a time in the royal army, during the civil war; but on the ruin of the king's affairs, he joined the triumphant party, whose success he celebrated in several celebrated Latin poems; among which are—"Marston Moor, sive de Obsidione prælioque Eboracensi Carmen," 4to; and "Inauguratio Olivariano, sive Protectoris Olivari Carmen votivum," 1654, 4to. His muse was also employed to lament the death of Cromwell, and sing the praises of Louis XIV, as well as on several other occasions. He was the author of a "Synopsis of Heraldry," 1682, 8vo. His death occurred in 1693.—*Wood, Athen. Oxon.*

FITZGEFFREY (CHARLES) a poet and divine, was born in Cornwall in 1575. He became a commoner of Broadgate-hall, Oxford, where he took the degrees in arts. He entered into orders, and obtained the rectory of St. Dominic in Cornwall, where he died in 1636. His works are, "Affianæ sive epigrammata et Cenotaphi;" "The Life and Death

of Sir Francis Drake ;" "A Curse for Cornehoarders ;" "The Blessed Birthday ;" "Sermons."—*Cens. Literaria.*

FITZHERBERT (sir ANTHONY) a learned English lawyer and writer on jurisprudence and rural economy in the sixteenth century. He was a native of Norbury in Derbyshire, and was descended from the ancient family of the Herberts, earls of Huntingdon and Pembroke. He studied at Oxford, and afterwards at one of the inns of court. Having been previously called to the bar, he was made a serjeant-at-law in 1511, and in 1516 he obtained the honour of knighthood. In the following year he was appointed a king's serjeant, and in 1519 he published "La grande Abridgement," &c. a collection of law cases, which has been often printed, and is much esteemed. He was made a judge of the court of commonpleas in 1523, and he died in 1533 and was interred in the church of Norbury. Besides his principal work, just noticed, he was the author of treatises on the office of justice of the peace ; on those of sheriffs, bailiffs, constables, &c. ; on the courts of law ; on writs ; and on law terms. "The Book of Husbandry," 1534, 8vo ; and a work, "Of the Surveying of Lands," 1539, 8vo, are supposed to have been written by sir A. Fitzherbert, though some have ascribed them to his brother, John Fitzherbert.—*Biog. Brit. Berkenhout's Biog. Lit.*

FITZHERBERT (sir WILLIAM) a descendant from the same family with the preceding, the branch to which he belonged being settled at Tissington in Derbyshire. He was born in 1748, and received his education at St John's college, Cambridge, where he proceeded M.A. He studied the law and was called to the bar, but did not practice as a counsellor ; though he employed his pen on professional subjects in "A Dialogue on the Revenue Laws," and a tract entitled "Maxims." He was also said to be the author of a satirical pamphlet on the knights of the garter, created in 1778. A baronetcy was bestowed on him in 1784 ; and he held the office of gentleman-usher to the king. His death took place in 1791.—*Gent. Mag.*

FITZSIMONS (HENRY) a native of Dublin, born in 1569. He was of protestant parentage, and entered himself of Christchurch, Oxford. Becoming a convert to the Romish church he quitted the university and went to the continent, where he became a member of the Jesuits' college at Louvain. He was afterwards selected by his order to go as a missionary to his native country, where his attempts at disseminating his doctrines caused his imprisonment. Regaining his liberty, after a confinement of some years' duration, he proceeded to Rome. Hence he was again dispatched on a similar mission to Ireland, where he perished in the rebellion of 1644. He was a man of considerable learning as well as zeal, and published, among other tracts, a history of those persons of his nation who had obtained the honours of canonization, in octavo ; "A Treatise on the Mass," in 4to ; a "Refutation of Rider's Claim of Antiquities," 8vo ;

Biog. Dict.—No. XLIX.

and a work entitled "Britannomachia ministrorum in plerisque et fidei fundamentis et fidei articulis dissidentium," 4to.—*Ware's Ireland.*

FITZSTEPHEN (WILLIAM) a learned English monk in the twelfth century, was descended from a noble Norman family, and born in London. After studying closely at home he went for further improvement to France, and on his return entered into the monastic state at Canterbury. He acquired the patronage and friendship of Thomas Becket, archbishop of Canterbury, to whose fortunes he steadily adhered on all occasions, and of whose death he was an eye-witness. Fitzstephen, who appears to have been a man of great probity and moderation, showed his regard for his patron by drawing up a well-written life of him in the Latin language, which appeared in 1174. The introductory part of it is an object of great curiosity, as it contains a "Description of the City of London, and of the Manners and Customs of its Inhabitants." It is the earliest account of London extant, and may be met with at the end of Stowe's "Survey of London and Westminster." He died in 1191.—*Leland. Com. de Scrip. Brit. Cave's Hist. Lit.*

FIXLMILLNER (PLACIDUS) an ingenious German astronomer and mathematician, born near Linz in Austria in 1721. Having commenced his studies in the science in which he afterwards distinguished himself at the university of Strasburgh, he took orders in 1745 partly through the persuasion of his uncle, the abbot of the monastery of Kremsmunster, of which society he entered himself, and continued a member upwards of forty years, becoming professor of theology and astronomy, and filling also several monastical appointments. In his first capacity he published several tracts on the canon law, &c. and in the second a variety of treatises connected with the economy of the heavens, and the result of his observations, to one of which especially, entitled "Decennium Astronomicum," Lalande has been much indebted in the composition of his tables respecting the planet Mercury. He also published "Meridianus Speculæ astron. Cremsianensis," and "Reipublicæ Sacræ Origines Divinæ." His death took place in 1791. Fixlmillner was among the first observers of the newly-discovered planet, known to astronomers by the name of Uranus.—*Philosoph. Mag.*

FLACCUS (CAIUS VALERIUS) a Latin poet, a native of Padua, the contemporary and friend of Martial, who addresses him in one of his epigrams. He was the author of an unfinished poem, in eight books, on the subject of the Argonautic expedition, of which Quintilian speaks highly. John Baptista Pius, an Italian author, completed the eighth book, and furnished two more from the fourth of Apollonius, the whole of which supplement is to be found in the edition of 1523, published by Aldus. Another and a better edition has since been published by Burmann in 1724.—*Vossii, Poet. Lat.*

FLAMEL (BARTOLET) or BERTHOLET FLEMAEL an eminent Flemish painter, born at Liege in 1614. After studying at home he went to Italy, and improved his taste by examining the works of ancient art, and the productions of the great painters at Rome, Florence, and elsewhere. He returned to Liege in 1647; and was afterwards employed by the king of France, for whom he painted the ceiling of the great audience-chamber at the Tuilleries. He became a member of the Academy of Painting at Paris; and died a canon of the church of Liege in 1675. He was skilled in architecture as well as painting, and his pictures are frequently ornamented with colonnades, porticos, &c. extremely well executed.—*Felibien. Abecedur. Pittor.*

FLAMEL (NICHOLAS) an adept of the fourteenth century, whose history is the more remarkable, inasmuch as of all the pretenders to alchemy, he alone left behind him solid proofs of having actually acquired, by some means or other, property to an enormous extent. He was born of poor parents, at Pontoise, whence he removed to Paris, and there practised in the double capacity of a scrivener or notary, and a miniature painter, residing at a house which, at the period of the French Revolution, was still standing, and which formed the angle of the Rue Marivaux, with that of the Rue des Ecrivains. Here he was generally reported to have amassed a fortune of 1,500,000 crowns, (an immense sum in those days;) and by his great wealth attracted the notice of Charles VI, who commissioned his master of requests, the Sieur de Cramoisi, to enquire into the means by which he had become so opulent. Flamel's account was, that having accidentally made a purchase of "an old thick book, gilt on the edges, and written on tree-bark, in fair Latin characters, with a cover of thin copper, on which were sculptured many unknown and singular devices," he studied it in vain for a period of twenty-one years, without being able to discover farther than that it was a treatise on the philosopher's stone. In the course of a pilgrimage however which he took to the shrine of St James of Compostella, he met at Leon with a converted Jew, a physician named Sanchez, who being shown copies of some of the paintings, taught him to decypher them, and accompanied him back to France, with a view of translating the whole work. Sanchez fell sick on the road, and died at Orleans, but not before his pupil had so well profited by his instructions, as to be able in time to decypher the whole contents of the volume; on which he immediately went to work, and, as he declares, "on Monday the 17th of January, 1382, about noon, turned half a pound of quicksilver into pure silver; and on the 25th of April, in the same year, in the presence of his wife, at about five o'clock in the afternoon, converted the same quantity of quicksilver into pure gold." Flamel hereupon founded fourteen hospitals, (that of the Quinze Vingts among others;) built at his own expense three new churches, (including those of St Jaques, de la Boucherie, and that of S.S.

Innocens, in the latter of which he and his wife Peronelle were buried;) and endowed with considerable revenues seven old ones at Paris. This narrative, together with a copy of the book, was returned to the king, and the volume deposited in the royal library, where, says our authority, it is still preserved. In 1413 Peronelle died, and Flamel himself, although the art of prolonging human life to a period of a thousand years was one of the secrets of his Hermetic treatise, followed her in a few months, each having nearly attained the age of one hundred. Paul Lucas, a French physician, who was employed about the commencement of the last century by Louis XIV, in travelling to collect rare coins and antiquities in the Levant, furnishes an amusing sequel to this extraordinary story. He tells us in his account of his second voyage, that on the 9th of July, 1705, at Burnas Baschi, near Brussa, in Natolia, he fell in with an Usbec dervise, who spoke a variety of languages, and who was not only perfectly well acquainted with the story of Flamel as related above, but who affirmed that both he and his wife were yet alive, having gained over their physician and the curate of S.S. Innocens to report their death, and to bury two logs of wood in their stead. They were now, he added, about four hundred years old each, and belonged to a society, consisting in all of seven adepts, who travelled about the world, meeting at some appointed spot every twenty years, and that Brussa was their next rendezvous. This story of Flamel has given rise to no little controversy among writers on the subject to which it more immediately relates. Gabriel Naudé, an intelligent author of the early part of the last century, admitting, (what seems to be unquestionable,) the great wealth of Flamel, asserts that he grew rich by pillaging the Jews, several of whom, on the breaking out of the persecutions directed against them in France, confided large sums to his care, which he appropriated to his own use, inventing the story of the philosopher's stone to account for their possession. But Langlet du Fresnoy, an acute and critical historian, has thrown some chronological difficulties in the way of this solution, apparently insurmountable, the persecution of the Jews, under Philip Augustus, having taken place in 1181, two hundred years before the birth of Flamel, and their second expulsion not happening till 1406, a period when the church of St Jacques de la Boucherie had been some time built, and only seven years before the death of Flamel. Meusel however speaks of a violent storm which arose at Paris in 1393, against the Jews, then the favourites of the court, but abominated by the populace, who broke into the houses of several, opened their coffers, and threw their money into the streets, no fewer than forty-two houses being plundered in one street. Others have accounted for his riches, by attributing them to the success of his commercial adventures and speculations, at that period comparatively but little understood, it being on all hands agreed that his two professions, although that of a miniature painter

was then a lucrative one, were unequal to their production. It is needless to add, that the most improbable of these solutions possesses far stronger claims to belief than his own absurd story, with all its concomitant evidences; and with respect to his disposal of part of his property to pious uses, Mr Tooke shrewdly remarks, that Nicholas Flamel is not the first "who, having stolen a quantity of leather, gave away a pair of shoes for God's sake." Several treatises on alchymy have been ascribed to him; they are however generally considered as spurious. Among them are, "Sommaire Philosophique;" "A Treatise on the Transmutation of Metals," printed in 1561; and "Le Desir désiré."—*Tooke's Varieties of Lit. Le livre de Nicolas Flamel. Du Fresnoy's Hist. de la Philosophie. Hermippus Redivivus. Voyage de sieur Paul Lucas.*

FLAMINIO. There were two learned Italians of this name, father and son. **GIOVANNI ANTONIO**, the elder, whose family name was Zarrabini, was a native of Imola, born 1464. He distinguished himself as a poet, historian, and rhetorician, and taught the belles lettres in the university of Bologna. Besides a variety of letters, poems, &c. in the Latin language, he wrote the lives of Albertus Magnus and St Dominic, and died in 1536.—His son, **MARC ANTONIO FLAMINIO**, was born in 1498, at Servalle, and was educated by his father. He was distinguished for the extent and variety of his erudition, and particularly for the purity and elegance with which he wrote the Latin language. Cardinals Pole, Farnese, and other prelates, esteemed him highly, and the two former especially made him their secretary at the council of Trent. His increasing infirmities however prevented him from being very effective in the office. Of his writings there are extant—"In Librum Psalmorum brevis Explanatio," 1545; "A Paraphrase on Thirty of the Psalms," 1558; "A Collection of Letters and Epigrams," 1561; and "Carmina Sacra," 1578. His death took place at Rome in 1550.—*Nouv. Dict. Hist. Tiraboschi.*

FLAMSTEED (JOHN) an eminent English astronomer, was born at Denby in Derbyshire, in the year 1646. He was educated at the free-school of Derby, but owing to his precarious state of health he was not sent to the university. He was early led into astronomical studies by a perusal of Sacrobosco's book, "De Sphæra," and prosecuted them with so much ardour and success, that in 1669 he calculated an eclipse of the sun that was omitted in the Ephemerides, for the following year, and sent the result, with other calculations, to the Royal Society. In 1671 he visited London, where he was introduced to some of the most eminent mathematicians of the age, and on his journey homewards passed through Cambridge, where he visited Dr Barrow and sir Isaac Newton, and entered himself of Jesus college. In 1673 he wrote a treatise "On the true and apparent Diameters of all the Planets," of which Newton made some use in his "Principia." In 1674 he composed his "Ephemerides" to show the utility of astro-

logy. He also made a pair of barometers which sir Jonas Moore presented to the king, who appointed him to the new office of astronomer royal, with a salary of 100*l.* a year. About this time, having graduated MA., he took orders, and obtained the living of Burstow in Surrey. The royal observatory at Greenwich was soon after erected, where he resided for the remainder of his life, assiduously employed in the cultivation of his favourite science. He died in 1719, when he had printed a great part, and with a slight exception, prepared for the press, the whole of his great work—"Historia Cœlestis Britannica," 3 vols. folio, which was published in 1725.—*Biog. Brit.*

FLATMAN (THOMAS) an English poet of the seventeenth century. He was a native of London, and was educated at Winchester school and New college, Oxford; after which he studied law at the Inner Temple, and was called to the bar, but never practised as a counsellor. He appears to have led the life of a man of wit and pleasure in the metropolis, and he was the author of a volume of poems, published in 1682. He died in 1688. In the hey-day of youth Flatman wrote a song in praise of a single life, in which he endeavoured to display his wit at the expence of married folks. It began with the following couplet—

"Like a dog with a bottle tied close to his tail,

Like a Tory in a bog, or a thief in a jail."

Wood says that the bard being afterwards smitten by the charms of a fair virgin, and still more by those of her fortune, espoused her in 1672; on which his acquaintance displayed their malicious ingenuity by serenading the new-married pair with the composition of the unlucky despiser of wedlock.—*Athen Oxon.*

FLAVEL (JOHN) a celebrated nonconformist divine, was born in Worcestershire in 1627, and educated at University college, Oxford. In 1650 he settled as assistant minister to the rector of Dijford in Devonshire, and subsequently became minister of a very populous parish in Dartmouth. In 1662 he was ejected with the other nonconformists, but occasionally preached and administered the sacrament, until the passing of the Oxford act in 1665. He then retired to Slapton, a neighbouring village, where he often ventured to preach in the face of the danger of doing so. In 1685, the populace being excited against him, he came to London, but returned to Dartmouth upon James II granting liberty of conscience to nonconformists, where his congregation procured for him an extensive place to preach in. The Revolution of 1686 restored him to complete liberty, and he continued in the diligent exercise of his ministerial functions until 1691, when he died at Exeter. He was a man of exemplary piety and conduct, and his works, which are highly esteemed by all who hold Calvinistic sentiments, are published in 2 vols folio, and 6 vols. 8vo.—*Culamy. Athen Oxon.*

FLECHIER (ESPRIT) a French divine of

the catholic church, highly celebrated as a pulpit orator. He was born of obscure parents at Pernes, in the county of Avignon in 1632. The care of his education was undertaken by his uncle, father Audiffret, superior of the congregation of the Christian doctrine, of which young Flechier became a member. He made a great proficiency in literature, and was appointed professor of rhetoric in the college of his order at Narbonne. While in this situation he delivered a funeral oration for the archbishop of Narbonne, which was greatly admired. On the death of his uncle he quitted the congregation, owing to a difference with the new superior, and went to Paris. Here he published some Latin verses on the famous caïoual given by Louis XIV; and he afterwards wrote poetical pieces in French, but neither were productive of fame or enrolment. At length he devoted his talents to the study of eloquence, in which he became so eminent as to be reckoned the rival of the celebrated Bossuet. In 1673 Flechier was elected a member of the French Academy. In 1679 he published his "History of the Emperor Theodosius the Great," which was followed by his "Life of Cardinal Ximenes." Louis XIV in 1685 raised him to the bishopric of Lavaur, on which occasion that prince said to him—"I have made you wait some time for a place which you have long deserved, but I was unwilling sooner to deprive myself of the pleasure of hearing you preach." He was translated from the diocese of Lavaur to that of Nismes in 1687. The latter bishopric abounded in protestants, and the edict of Nantes having just been revoked, the talents of Flechier were successfully employed in converting them to the established faith. It is to his credit that he acted with great moderation in the discharge of his pastoral duty, endeavouring to recal the people from what he conceived to be the path of error by reasoning and eloquence, rather than by force and terror. Though free from pride and vanity, the bishop knew how to support his dignity when insulted: a person of noble descent having once sarcastically alluded to his parentage, he replied—"Had you been born of such parents as mine, you would never have been any thing but a maker of candles." He seems to have been superstitious; for some time before his death he had a dream, which he conceived to be a presage of his approaching end. He immediately directed a sculptor to make him a sepulchral monument, and two designs for it being shown him, he chose the simplest. "Begin upon it immediately; there is no time to be lost," said he to the artist; and soon after he died, his life probably having been shortened by the influence of mental prepossession. His decease took place February 16th, 1710; "wept," says D'Alembert, "by the catholics, regretted by the protestants, and leaving to his brethren a worthy model of zeal and charity, simplicity and eloquence." Of his funeral orations, the finest was that which he delivered on the death of marshal Turenne.

—*Aikin's G. Biog.*

FLECHIERE (JOHN WILLIAM de la) Swiss divine, was born at Nyon, in the *Helvetia* de Vaud. He was educated at Geneva, the ministry, but went into the military service in Portugal, which profession he quitted and became a tutor in the Hill family. In March 1757 he took orders, and three years afterwards was made vicar of Madeley in Shropshire. In 1770 he took charge of lady Huntingdon's school for educating young men for the ministry, at Trevecka in Wales, but, possibly in consequence of his anti-calvinistic principles, did not long remain there. He then with more consistency laboured among the Wesleyan methodists, his attachment to whom exposed him to much annoyance on the part of the clergy and gentry around Madeley. He died in 1786, leaving behind him a very amiable character, and ten volumes of works, chiefly controversial, against Calvinism.—*J. J. by Gilpin.*

FLECKNOE (RICHARD) an English poet and dramatic writer, contemporary with Dryden, and chiefly memorable for having had his name gibbeted by that satirist, in the title of his invective against Shadwell. Flecknoe was a catholic, and in some of his compositions he appears as the eulogist of Dryden, so that the conduct of that writer towards him seems to be illiberal and extraordinary. His works are far from being contemptible. They include—"Heroick Portraits, with other Miscellaneous Pieces," 1660, 8vo; and "Sixty-nine enigmatical Characters, all very exactly drawn to the Life, from several Persons, humours, and dispositions, Pleasant and Full of Delight," 1665, 12mo. It is certainly no proof of excellence, that the latter work, which is reckoned among scarce books, has prefixed to it several copies of laudatory verses. Among them is one by the famous duke of Newcastle, in which are the following lines—

"Flecknoe, thy characters are so full of wit,
And fancy, as each word is thronged with
it;

Each line's a volume, and who reads would
swear

Whole libraries were in each character."

He was also the author of "Love's Kingdom," a pastoral tragi-comedy, with a treatise of the English stage annexed, 1674. His death took place in 1678.—*Cibber's Lives of the Poets. Southey's Omniana.*

FLEETWOOD (CHARLES) a parliamentary general in the civil wars, was the son of sir William Fleetwood, knt. of the household under James I and Charles I, and ranger of Woodstock park. He early entered the army, and on the breaking out of the civil wars declared against the king, in opposition to whom he commanded a regiment of cavalry in 1644, and afterwards held Bristol for the parliament. At the battle of Worcester he bore the rank of lieutenant-general, and becoming allied to the family of the protector, by marrying his daughter, after the decease of her first husband, Ireton, was by him sent as lord deputy to Ireland. Notwithstanding this connexion, on the death of Cromwell he joined in inducing his son,

Richard, to abdicate, and thus hastened the restoration of the exiled family. His death took place shortly after the re-establishment of the monarchy, at Stoke Newington.—*Biog. Brit. Birch's Lives.*

FLEETWOOD (WILLIAM) an eminent lawyer, was the illegitimate son of a member of an ancient and respectable family in Lancashire of the same name, then resident at Hesketh in that county. He was recorder of London in the reign of queen Elizabeth, being appointed to that office in 1569. Wood speaks of him as an eloquent and learned man, and "a good antiquary, but of a marvellous merry and pleasant conceit." These good qualities appear to have been a little tarnished by the eagerness which led him to take so active a part in the suppression of popery, that forgetting the privileges of an ambassador, he rushed on one occasion into a house belonging to the Portuguese minister, during the celebration of mass, and disturbed the ceremony. For this excess of zeal he was committed to the Fleet prison; but his detention was not of any long duration, and he subsequently attained to the rank of queen's serjeant in 1592. As a lawyer his opinions were considered to be entitled to much respect, and his professional writings are well esteemed. They consist of a Treatise on the Office of Justice of the Peace; the Annals of Edward V, Richard III, and Henries VII and VIII, 1579 and 1597; "Notes on the Archaion of Lambarde;" a Table to Plowden's Reports; an Oration spoken at Guildhall; "Repub. Anglorum instauranda;" and various MSS. He was a great favourite of of Dudley, earl of Leicester, and died at an estate which he had purchased at Great Missenden in Buckinghamshire in 1593.—*Biog. Brit.*

FLEETWOOD (WILLIAM) a descendant of the same family, was born January 1st, 1656, at his father's apartments in the Tower of London. He proceeded from Eton on the foundation to King's college, Cambridge, and taking orders was made by William III, to whom he was chaplain, a canon residentiary of St Paul's, in which capacity he presented himself to the rectory of St Austin's, Watlingstreet. A stall at Windsor becoming vacant, the grant of it was made out for him, but before it could pass the great seal the death of the king took place. The queen however confirmed the appointment, and he was installed in 1702. Four years afterwards he was raised to the episcopal bench, succeeding bishop Beveridge in the see of St Asaph, whence he was translated in 1714 to that of Ely. He was a learned man and an eloquent preacher. In king William's time he published—"Inscriptionum Antiquarum Sylloge," a work of much erudition and research, and an "Essay on Miracles. His other works are—"Chronicon Pretiosum," printed anonymously in 1707; "A Vindication of the 15th Chapter of Romans from the abusive senses put upon it;" 1710; "The Life of St Winifred;" and a volume of Sermons. The whole were collected and published in 1737 in one folio volume.

He died in 1723, and lies buried in Ely cathedral.—*Biog. Brit.*

FLEMING (ABRAHAM) a poetical writer and translator of the Elizabethan age. He was a very voluminous author, but of his personal history scarcely any thing is known. Among his original works are—"A Grove of Graces, supplied with Plentie of Plants, applicable to Pleasure and Profit; the Schoole of Skill; the Footepath to Felicitie; a Swarme of Bees, with their Honie and Honicombs," printed together in 1602, 12mo; "The Diamond of Devotion," 12mo; "The Cundy of Comfort," 12mo; and "A Memorial of the Almshouses of William Lamb, Citizen of London." Fleming translated into verse the Bucolics and Georgics of Virgil; and some of Cicero's Orations, and Ælian's various Histories into prose; and he was the editor of Hollinshed's Chronicle.—*Warton's Hist. of Engl. Poetry.*

FLETCHER (ANDREW) a Scottish political writer and patriot, was the son of sir Robert Fletcher of Saltoun. He was born in 1653, and placed while a child under the tuition of Dr Gilbert Burnet, from whom he acquired the attachment to free principles of government, by which that prelate was so eminently distinguished. He spent some years in foreign travel, and first appeared as a public character in the Scottish parliament, as commissioner for East Lothian, where he so spiritedly distinguished himself in opposition to the arbitrary measures of the court, that he deemed it prudent to retire to Holland; and on his non-appearance to a summons from the lords in council, he was outlawed. In 1683 he came over to England to concert with the friends of liberty against the obvious designs of James II; and in 1685 he joined the enterprise of the duke of Monmouth. While on this expedition however, having killed in quarrel another partizan in the same cause, who had violently insulted him, the duke was obliged to dismiss him. He then repaired to Spain, and afterwards to Hungary, where he highly distinguished himself in a war against the Turks. He subsequently joined the Scottish refugees in Holland, and when the Revolution took place, resumed possession of his estate, and became a member of the convention for settling the new government in Scotland. In 1698 he printed "A Discourse on Government, in relation to Militias;" and also "Two Discourses concerning the Affairs of Scotland." The first of these is a sound and excellent piece, but the second of his discourses on Scotland contains a plan of providing for the poor by domestic slavery, a scheme which probably originated in his too classical notions of freedom, as exhibited in the ancient republics, which admitted of this gross anomaly. In 1703 he opposed a vote of supply until "the house should consider what was necessary to secure the religion and liberties of the nation on the death of the queen," (Anne,) and carried various limitations of the prerogative, forming part of the "Act of Security," rendered nugatory by the Scottish Union, which he vehemently

opposed. He died in London in 1716. Fletcher showed himself throughout his life a zealous defender of the liberties of the people, without regard to party. As a writer he possessed great powers, his mind being stored with political knowledge, while his style was at once perspicuous, elegant, and energetic. His tracts, and some of his speeches, are published in one volume octavo, entitled "The Political Works of Andrew Fletcher, Esq."—*Life by the Earl of Buchan. Living's Hist. of Scotland.*

FLETCHER (GILES) brother of Richard Fletcher, bishop of London in the reign of Elizabeth, was a native of Kent. He received his education at Eton, whence in 1565 he was elected to King's college, Cambridge. He acquired the character, while at the university, of a good poet, and obtained the degree of LL.D. in 1581. He was employed by Elizabeth as a commissioner in Scotland, Germany, and the Low Countries, and in 1588 was sent Ambassador to Russia, in order to re-establish the commercial concerns of the Russian company, which he happily effected. On his return he published in 1591 an "Account of the Russe Commonwealth," a very curious and authentic production, which was very soon after suppressed, lest some strictures on the brutal tyranny of Ivan Basilovitch should offend the reigning prince. It is however published, with a few omissions, in Hackluyt's collection. Dr Fletcher was afterwards made secretary to the city of London, master of requests, and treasurer of St Paul's. He died in 1610.—*Biog. Brit.*

FLETCHER (GILES) son of the above-mentioned, was born in 1583, and educated at Trinity college, Cambridge, where he took the degree of bachelor of divinity, and died at his living of Alderton in Suffolk, in 1623. His only production is a poem, in stanzas of eight lines, entitled "Christ's Victory and Triumph in Heaven and Earth, over and after Death," pronounced by Heady to be a rich and picturesque production, and one to which Milton was not entirely destitute of obligation.—*Ibid.*

FLETCHER (JOHN) son to the bishop of London, and cousin to the above, an eminent dramatic writer, is said to have been born in 1576 in Northamptonshire, where his father was dean of Peterborough; although others suppose that he was a native of London. He received his education at Cambridge, but it is not known that he ever looked forward to any profession, except that of a poet, in which capacity he was the inseparable partner of Francis Beaumont, [See his article.] After the death of Beaumont, he is said to have consulted Shirley in the formation of his dramas. He survived his coadjutor some years, but died of the plague in 1625, and was interred in the church of St Mary Overy, Southwark. Of the plays of Beaumont and Fletcher it may in general be observed, that they consist of comedies, tragedies, and mixed pieces, which possess many poetical beauties, and striking incidents and characters. Their display of passion however is usually more artificial than genuine; and in

knowledge of the human heart they bear no comparison with Shakspeare. The province of the drama of Beaumont and Fletcher, is rather the display of manners than of the primary elements of character, a tendency that gives great sprightliness to much of their comedy, which excels in airy gallantry and chivalrous sentiment and humour. In respect to this dramatic partnership, it is a tradition that Beaumont excelled in the judgment requisite to plot and construction, and Fletcher in fancy and poetical feeling. This is very probable, if we may judge by "The Faithful Shepherdess," a dramatic pastoral, undoubtedly the sole composition of the latter. This beautiful production, which evidently suggested the *Comus* of Milton, exactly wants the judgment given by Beaumont in respect to plan, and as obviously displays the fancy and feeling of Fletcher. The plays of this dramatic pair, according to Dryden, were, in his early days, acted two for one with those of Jonson and Shakspeare; but with regard to the latter, the case is now very strikingly the reverse. The licence assumed in the major part of these dramas, has done much to aid in their comparative exclusion of late years, during which only one or two of them occasionally appear. In speaking of Fletcher, Edward Phillips, the nephew of Milton, observes, that "he was one of the happy triumvirates of the chief dramatic poets of our nation in the last foregoing age, among which there might be said to be a symmetry of perfection, while each excelled in his peculiar way—Ben Jonson in his elaborate poems, and knowledge of authors; Shakspeare in his pure vein of wit, and natural poetic height; and Fletcher in courtly elegance and a genteel familiarity of style, with an overflowing wit and invention." The editions of Beaumont and Fletcher are numerous, and too well known to require particular mention.—*Lives prefixed to edition of 1778.*

FLETCHER (PHINEAS) another son of Dr Giles Fletcher, and the brother of the author of "Christ's Victory," was educated at Eton school, whence he was removed to King's college, Cambridge, in 1600. After a due progress in academical honours, he took orders, although not until 1621, when he obtained the living of Elgay in Norfolk, which he retained nearly twenty-nine years, and where he probably died. Such is all that is now known of the history of a poet of no common power. The principal works of Fletcher are his "Purple Island," and "Piscatory Eclogues." The former is an allegorical description of man, founded upon an allegory in the ninth canto of the second book of the Faery Queen. It is composed in the Spenserian manner, and is not without passages of strong fancy and beauty of description, clothed in smooth and elegant verse. In the first five cantos however the reader loses the poet in the anatomist, a character but little adapted to the handling of poetry: when however he steps from the physical to the intellectual man, he not only attracts, but secures attraction, by a profusion of images, many of which are distinguished by much

boldness of conception and brilliancy of colouring. His "Piscatory Eclogues," which are an imitation of the pastoral allegories then so much in vogue, possess, with the languor almost inseparable from that species of composition, considerable sweetness of versification and much descriptive elegance. It ought to be known that these productions, of which Milton certainly availed himself, were written very early in life, being, as the author himself asserts, "raw essays of his very unripe years, and almost childhood." Besides these poems, which appear both in Anderson's and Chalmers's collections, Phineas Fletcher wrote a dramatic piece entitled "Sicelides," intended to be performed at Cambridge before king James I, and printed in 1611; and a work in prose, entitled "De Literatis Antiquæ Britannia:."—*Biog. Brit. Headley's Beauties.*

FLEURIEU (CHARLES PETER CLARET DE) a French naval officer, and writer on maritime geography. He was born at Lyons, in 1738. Entering into the sea service, he rose to the rank of captain, and previously to the Revolution he was director of the ports and arsenals. In 1790 the king appointed him minister of the marine department, which post he filled with integrity; and though he leaved towards the popular party, yet he was so persecuted by the demagogues of the day, that he was induced to give in his resignation in April 1791. Louis XVI so highly esteemed his talents, that he drew him from his retirement in 1792, and engaged him to take charge of the education of the Dauphin. In September 1793 he was arrested and committed to prison; but he survived the reign of terror, and in March 1797 he was elected a deputy from the department of the Seine to the council of ancients; though subsequent events annulled the election. Buonaparte, in 1799, nominated him a member of the council of state, in the section of the marine; and he was also made intendant of cavalry and governor of the Tuileries, which offices he resigned in 1805. He died in 1810. Fleurieu was the author of "Voyage fait par ordre du Roi en 1768-9, pour éprouver en Mer les Horloges Marines de Berthoud," 2 vols. 4to; "Découvertes des Françaises en 1768 et 1769, dans le Sud-est de la Nouvelle Guinée," 4to, which has been translated into English; and "Observations sur la Division hydrographique du Globe," 4to.—*Nouv. Dict. Hist. Dict. des H. M. du 18me S. Biog. Univ.*

FLEURY (ANDREW HERCULES DE) cardinal and prime minister of France, under Louis XV. He was born at Louvre in Languedoc, in 1653. He was educated at Paris, in the Jesuits' college, and became canon of Montpellier and doctor of the Sorbonne. He afterwards was appointed royal almoner; and in 1698 the king gave him the bishopric of Frejus. His interest with madame Maintenon was the means of his being nominated in the testament of Louis XIV, preceptor to his successor, Louis XV. He ingratiated himself with his pupil, and was in favour with the regent duke of Orleans, who offered him the

archbishopric of Rheims, which he refused, probably from the apprehension that it would prevent him from retaining his situation about the young king. On the death of the regent, the duke of Bourbon was made prime minister on the recommendation of Fleury, who retained the real power in his own hands, through his influence over his pupil. He was created a cardinal in 1726; and though then nearly seventy, he exerted himself with spirit in the management of public affairs. His endeavours were directed to the preservation of peace with foreign powers, and economy in the financial departments. In the former object he was but partially successful; and in the latter he was thwarted by the extravagance of the court; but in spite of these difficulties his administration may be considered as fortunate for his country. Parsimony seems to have been his greatest fault. Though he was a member of the French Academy and other literary societies, he was by no means distinguished as the patron of men of learning or genius. He died in January 1743, and was interred under a magnificent tomb, in the church of the Louvre.—*Nouv. Dict. Hist. Biog. Univ.*

FLEURY (CLAUDE) an eminent catholic divine and ecclesiastical historian, born at Paris in 1640. His father was an advocate, and he was educated for the same profession, and became a counsellor of the parliament of Paris in 1658. At length his inclination led him to enter into the ecclesiastical state. He was admitted to the conferences held at the house of the famous Bossuet, and was made secretary to those meetings. He soon acquired a great reputation for learning and abilities; and in 1672 he was appointed preceptor to the princes of Conti, and in 1680 to the count de Vermandois, the natural son of Louis XIV. After the death of that prince, in 1683, the king gave him the Cistercian abbey of Loc-Dieu; and in 1689 he was associated with Fenelon in the task of educating the young dukes of Burgundy, Anjou, and Berri. In 1696 he was admitted into the French Academy. On the completion of the duke of Burgundy's education in 1706, he retired from court; and shortly after obtaining the priory of Argenteuil, he resided there till 1716, when the regent duke of Orleans drew him from his retreat to become confessor to the young king. But the intrigues of the jesuits obliged him to resign this office in 1722; and he died June 14th the following year. His works are numerous and valuable. In 1691 he published the first volume of his Ecclesiastical History, the twentieth of which appeared in 1720, and additions were afterwards made to it by father Fabre of the oratory. Among the most popular of his productions are his treatises on the "Manners of the Israelites," and the "Manners of the Christians," both which, as well as the preceding, have been translated into English.—*Aikin's G. Biog.*

FLINDERS (MATTHEW) an English navigator, distinguished by his talents and his misfortunes. He was a native of Lincolnshire, and went to sea in the merchant-service. In 1795 he sailed as midshipman with captain Hunter

to New Holland, destined to be the scene of his valuable researches. In the early part of the year 1801 an expedition of discovery was fitted out by the British government, consisting of a schooner of 420 tons burden, provided with an astronomer, botanist, draftsman, and proper assistants. The command of the vessel was given to lieutenant Flinders, who had previously distinguished himself by the discovery of Bass's Straights, (between New Holland and Van Diemen's land,) in conjunction with the person whose name they bear. After surveying the western coast of New Holland, and examining several parts of that vast country, previously unknown, in the summer of 1802 lieutenant Flinders was obliged to return to Port Jackson in August 1803, his little vessel having been wrecked on a coral reef. His crew and officers however were saved, and Mr Flinders embarked in the *Cumberland*, a boat of nineteen tons burden, in December 1803, for the purpose of conveying an account of his discoveries to England. On his arrival at the island of Mauritius, notwithstanding he had passports from the French government and other powers at war with this country, he was detained, together with his books and papers, and his most valuable collection of charts of the coasts he had explored, by general Decaen, the governor of Mauritius. After a captivity of more than three years he was liberated, through the intercession of the Royal Society of London and the National Institute of France. On the 11th of March 1806 the council of state decided on giving captain Flinders his liberty, and restoring his vessel, the *Cumberland*; but this was not done till he had experienced a sort of confinement and rigorous treatment disgraceful to those through whose influence it was inflicted; nor did he ever recover the journal of his discoveries. On his return to England he drew up an interesting account of his researches, published after his death in 1814, under the title of "A Voyage to the Terra Australis, undertaken for the purpose of completing the discovery of that vast country, in 1801, 2, and 3." 2 vols. 4to, with a folio atlas.—*Month. Mag.*

FLODOARD or FRODOARD, an ecclesiastical historian, was born at Epernai in Champagne in 894. He was educated at Rheims, and appointed keeper of the archives in the cathedral there, and afterwards canon. In 966 he was deputed to pope Leo VII, by whom he was graciously received. He at length retired to a monastery in the diocese of Rheims, of which he became abbot, and died in 966. His works are—"A Collection of Histories in Verse," containing the triumphs of Jesus Christ, his disciples, and the abridged histories of the popes down to Leo VII; "A History of the Church of Rheims;" and "A Chronicle," comprising the history of the times from 919 to 966; this latter is much esteemed by the learned, and is published in the collections of Andrews du Chesne and Peter Pithou.—*Moreri*.

FLOGEL (CHARLES FREDERIC) a German writer on the belles lettres, who was a profes-

sor in the university of Liegnitz. He was the author of a "History of the Human Understanding," 8vo; "History of Comic Literature," 1784—1787, 4 vols. 8vo; "History of the Grotesque Drama," 1788, 8vo; "History of the Burlesque," 1794, 8vo, &c. He died in 1788.—*Biog Univ.*

FLOREZ (HENRY) a learned Spanish Augustine of the eighteenth century, died at Madrid about 1772. He was the author of a most elaborate collection of ecclesiastical history, entitled "L'España Sagrada, teatro geographico-historico de la Iglesia de España." In 1743 he published a "Clave Historial," a production answering to the French "Art de vérifier les Dates;" he was also the author of a valuable treatise on the ancient coins of Spain, entitled "Medallas de las Colonias Municipios y Pueblos Antiguos de España," in 3 vols. 4to. This work procured him an admission to the French academy, as an associate correspondent.—*Nouv. Dict. Hist.*

FLORIAN (JOHN PETER CLARIS DE) a very popular French writer, was born at the chateau de Florian, in Languedoc, in 1755. His father was a gentleman of small fortune, who however spared no expence on his education; and being related to Voltaire he sent his son to that celebrated person, who placed him in the rank of page to the duke of Penthièvre. The duke soon distinguished his talents, and at first gave him a commission in the army, but on observing the success of his first literary efforts, judiciously confined him to literature, and furnished him with a library. His first production was his "Galathea," which was followed by two volumes of his Theatre, the sacred Drama of "Ruth," and a succession of dramas and novels which placed him in the first rank of popularity as a sentimental writer. Under the tyranny of Robespierre he was arrested and dragged to prison for having affixed to his Numa some verses in praise of the queen, and while in this melancholy situation he composed the first book of his "Guillaume Tell," and a poem called "Ebrahim." He was released on the overthrow of Robespierre, but soon after fell into a decline, which terminated his life on the 13th September, 1794. The pastoral romances of "Estelle" and "Galathea" are the most honourable specimens of the genius of Florian, and in France his fables are deemed the best since those of La Fontaine. All his works are replete with the same spirit of benevolence and moral feeling by which the conduct of the author was always honourably distinguished.—*Lije by Rosny and by Jauffret, prefixed to Translation of Guillaume Tell.*

FLORIDA BLANCA (FRANCIS ANTHONY MONINO, count de) grand cross of the order of Charles III, and principal minister of Spain. He distinguished himself as an opponent of the French Revolution: and his enemies, who accused him also of some abuse of his authority, availed themselves of his unpopularity to procure his dismissal from the king's service in the beginning of 1792. At the moment of his disgrace he was arrested, and his papers were seized; but he was shortly after permit-

ted to retire to his estates in the province of Murcia, and to retain his titles and dignities. He was arrested again in July the same year, and committed to the castle of Pampeluna, but was soon released. After several years of seclusion, he was in 1808 chosen president of the cortes, and died November 20th the same year, aged near eighty.—*Biog. Univ.*

FLORIO (JOHN) a native of London, born in the reign of Henry VIII, was descended from an Italian family, who being Waldenses, took refuge in England until the reign of queen Mary obliged them to repair to Germany. On the re-establishment of protestantism by Elizabeth they returned, and Florio resided for some time at Oxford, and became teacher of French and Italian at Magdalen college. On the accession of James I he was appointed tutor to prince Henry, and clerk of the closet to the queen, to whom he was also preceptor. He died at Fulham, whither he had retired to avoid the plague in 1625. His works are—“First Fruits which yield familiar Speech, Proverbs, Sentences, and Sayings;” “Perfect Introduction to the Italian and English Tongues;” “Second Fruits to be gathered of Twelve Trees of divers but delightsome Tastes to the Tongues of Italian and English Men;” “Garden of Recreation yielding Six Thousand Proverbs;” “Dictionary, Italian and English.” He also translated Montaigne's Essays.—*Athen. Oxon.*

FLORIS (FRANCIS) a painter, was born at Antwerp in 1520. He practised the art of sculpture until he was twenty years of age; he then changed his profession, and studied painting under Lambert Lombard. He travelled into Italy and attached himself particularly to the study of the works of Michael Angelo, from which he caught a bold and strong manner, so that on his return to his native place he acquired the title of the Raphael of Flanders. His talents were not confined to painting alone; he wrote poetry, and was well versed in literature. He rose to great reputation; but his mode of living and intemperance at length reduced him to indigence and neglect. He died at Antwerp in 1570. The principal of his works are—“The Fall of Lucifer, in a chapel of the cathedral at Antwerp; a Nativity, in another chapel; an Assumption of the Virgin at the Grand Altar; a Last Judgment, at Brussels; and some church pieces at Ghent.—*D'Argenville Vies des Peint.*

FLORUS (LUCIUS ANNEUS) a Latin historian of the second century, of the same Annæan family with Lucan and Seneca. Of his personal history little is known, except that from his own account it appears that he lived under Trajan. He is the author of a “Compendium of Roman History,” from the foundation of the city to the reign of Augustus, which is the work rather of a rhetorician than historian. It has however been sufficiently esteemed to employ the erudition of several critical editors. The best editions are that of Duker, 2 vols. 8vo, 1722; and that of Fischer, Lips. 1760.—*Vossii Hist. Lat. Tiraboschi. Harwood's Classics.*

FLOYER (sir JOHN) an eminent physician was born at Hunters in Staffordshire in 1649, and was educated at Oxford where he received the degree of doctor of physic. He then settled at Lichfield, where he rose to such eminence that he received the honour of knighthood. He died in 1734. His works are—“An Inquiry into the Use of Baths;” “History of Cold Bathing;” “Essay to restore the Dipping of Infants in Baptism;” “The Touchstone of Medicines,” 2 vols. 8vo; “The Physician's Pulse Watch,” 2 vols. 8vo; “A Treatise on the Asthma;” “The Preternatural State of the Animal Humours;” “The Galenic Art of preserving Old Men's Health,” &c. &c.—*Athen. Oxon.*

FLUDD (ROBERT) Latin, DE FLUCTIBUS, a physician and philosopher, was the son of sir Thomas Fludd, treasurer of war to queen Elizabeth, and was born at Milgate in Kent in 1574. He was educated at St John's college, Oxford, where he took his degrees in arts and then went abroad. On his return he took his degree of doctor of physic, and settling in London rose to much eminence in his profession. He was much attached to the Rosycrusian philosophy, and from the dreams of the cabalists and Paracelsians he formed a new system. He imagined two universal principles—the northern or condensing power, and the southern or rarefying. Over these he placed innumerable intelligences and geniuses, and he called together troops of spirits from the four winds, to whom he committed the charge of diseases. He conceived a harmony between the macrocosm and the microcosm, or the world of nature and of man. He was refuted by Kepler, Mersennus, and Gassendi. His works are very numerous.—*Wood. Brucker, Hist. Philos.*

FOGLIETTA (UBERTO) a learned historian and orator, was born at Genoa in 1518. He appears to have resided at Rome, and from two Latin orations held in the conclaves at the elections of popes Marcellus II and Paul IV, it is conjectured that he must have been in priest's orders, but of this there is no other proof. In 1559 he published two books, “Della Repubblica di Genova,” in which he censured with so much freedom the excess of power and the abuses of it among the nobles, that he was banished from Genoa and his property confiscated; he however found a warm friend in cardinal Hippolito d'Este. To divert the chagrin inspired by his exile, he devoted himself to literature and produced the following works—“De Lingua Latina præstantia et usu;” “Eulogies of illustrious Ligurians;” “Historia Genuensium,” lib. xii; with several Latin treatises and orations. His style is pure, and he ranks among the best writers of his day. He died in 1581. His brother, Paul, was a good Italian poet.—*Tiraboschi.*

FOIX (GASTON DE) born in 1489, was the son of John de Foix, viscount of Narbonne, and nephew of Louis XII of France. In 1512 he succeeded the duke of Longueville in the command of the French army in Italy, and on

account of his daring exploits he was denominated the Thunderbolt of Italy. He forced Peter Navairo, the Spanish general, to raise the siege of Bologna, relieved Brescia, and laid siege to Ravenna. This brilliant career was however productive of no permanent advantage; and at the battle of Ravenna, in which he defeated the Spaniards on Easter Sunday in 1512, after performing prodigies of valour, he lost his life. Louis XII, on hearing of his death, exclaimed, "I would surrender almost every inch of ground I possess in Italy to restore to life my nephew, and his brave comrades who have perished. God preserve us from gaining many such victories!"—*Biog. Univ.*

FOIX (LOUIS DE) a French architect, who was in the service of Philip II of Spain. He was employed in the erection of the palace and monastery of the Escorial near Madrid; but it is uncertain what part of the structure he built. He is said to have been in the confidence of don Carlos, by betraying which, he contributed to the destruction of that unfortunate victim of paternal jealousy. He seems to have been disappointed in his expectations of advantage from his treachery; for he left Spain and returned to France soon after the death of the prince. In 1579 he was employed on works in the port of Bayonne, and he constructed the canal of the Adour. De Foix was also the architect of the tower of Cordouan at the mouth of the Garonne, finished in 1610.—*Moreri. Biog. Univ.*

FOIX (ODET DE) lord of Lautrec, a distinguished French general in the sixteenth century. He was employed by Francis I in his Italian wars with Charles V. Having recovered from a wound he had received at Ravenna, he was made governor of Milan; and he afterwards took Brescia and Verona, and raised the siege of Parma, invested by the imperialists. But he was defeated at the battle of Bicoque in 1522; and being disappointed of remittances from France, through the intrigues of the queen-mother, Louisa of Savoy, his troops perished by famine and disease, and he lost all the Milanese. In 1527 he made himself master of Pavia, and treated it with all the circumstances of military violence which the people of Rome had previously experienced from the army of the constable of Bourbon. He subsequently harassed that army in its retreat to Naples, but the plague and famine proved fatal to himself and his troops, and he died before that city in 1528. Brantome styles De Foix "Un des vieux routiers, et capitaines renommez de ce tems." He possessed considerable military talents, but was harsh and cruel.—*Robertson's Hist. of Charles V.*

FOIX (PAUL DE) archbishop of Toulouse, and one of the most celebrated men of his time, was born in 1528. He was destined for the church, and studied at Paris, whence he removed to Toulouse, and acquired a knowledge of jurisprudence, on which subject he gave lectures himself at a very early age. He was employed on embassies in Scotland, England, at

Venice, and above all, at Rome, in the pontificate of Gregory XIII. Cujas, James Charpentier, and other learned men, dedicated their works to this prelate, who was a distinguished patron of literature. De Thou, who accompanied him in his embassy to Rome, said that he never left the society of this great man without perceiving that it had rendered him better. He opposed the persecution of the protestants, and for his liberality narrowly escaped being included in the massacre of St Bartholomew's day. He died at Rome in 1584, and was buried in the church of St Lewis, when Muretus pronounced a funeral eulogy for him. Auger de Mauleon in 1628 published "Les Lettres de Mésire Paul de Foix, Archevêque de Toulouse, et Ambassadeur pour le Roi auprès du Pape Gregoire XIII au Roi Henri III," 4to. These letters have, but without probability, been attributed to M. d'Ossat, the secretary of the archbishop.—*Teissier. Biog. Univ.*

FOLARD (CHARLES) an eminent French tactician, born in 1669 at Avignon. He was intended for the church, but his eagerness to embrace a military life induced him to elope at the age of sixteen, and to enter the army. In 1702 the duke of Vendome, who had discernment enough to discover his talents, made him his aid-de-camp during his Italian campaign, and he lost the use of his left hand by a wound received at the battle of Cassano in 1705. On this occasion he received a pension of four hundred livres, with the cross of St Louis, and the year following held out at the head of the garrison of Modena, against prince Eugene. Soon after the battle of Blenheim he became prisoner to this general, but was exchanged, and appointed to the government of Bourbourg. In 1714 he assisted in the defence of Malta against the Ottoman forces, and fought for awhile under Charles XII of Sweden, till the death of that prince at Frederickskiall in 1718 again restored him to the French service. Here he obtained the command of a regiment in the army under the marshal duke of Berwick, with whom he served his last campaign. Folard was a fellow of the Royal Society of London, and his professional works were considered as highly scientific in the then state of the art of war, with which they evince an intimate acquaintance. They consist of "Discoveries in War;" "A Treatise on the Defence of Places;" and six quarto volumes of Commentaries on Polybius. He died in his native city in 1752.—*Moreri. Nouv. Dict. Hist.*

FOLENGO (THEOPHILUS) celebrated as a writer of the species of poetry termed Macaronic, was born of an ancient family at Cipada, near Mantua, in 1491. He received a learned education, and in 1507 entered into the order of St Benedict, for which his lively disposition rendered him so unfit, that an amorous passion caused him to quit his habit, and lead a wandering life for eleven years. During this period he took to writing Macaronic verses, of which the first edition appeared at Venice in 1519. This whimsical kind of composition, the name of which is derived from the Italian dish called Macaroni, consists in interweaving with Latin

verse a number of words and phrases in the vernacular tongue, and consequently can only be made applicable to drollery and burlesque. If not the inventor of this sort of verse, the liveliness of Folengo brought it into vogue. He also wrote a burlesque poem in Italian, entitled "Orlandino," which was fanciful and pleasant, but soiled with too much licence. In 1526 he returned to a religious life, and the next year published a Macaronic poem, entitled "Chaos del Triperuno," giving an account of the incidents of his unsettled experience, and terminating with his conversion. He also composed, by way of atonement for his first errors, some religious poems and tragedies, which as usual met with little comparative attention. He died in 1544, in a monastery of his order at Padua.—*Morevi. Tiraboschi.*

FOLCZ (*Joinx*) a barber of Nuremberg, born at Ulm about the middle of the fifteenth century, was one of the most celebrated of the German poets belonging to the class called Mastersingers. German literature had its golden age under the emperors of the house of Hohenstaufen, who reigned in Swabia and Alsace from 1080, and occupied the imperial throne between 1138 and 1234. At this period flourished the series of poets called Minnesingers, or Swabian bards. Some of these survived the fall of the house of Hohenstaufen, and existed till the commencement of the fourteenth century; but the German muses were silent under the emperors of the Luxemburg family, when a strange language, the Bohemian dialect, became that of the court. Poetry, which had been the delight of princes and nobles, became the occupation of the lower classes of society, among whom clubs or societies were established for the cultivation of this branch of literature. Those who excelled in it were termed Masterpoets. To attain that rank it was necessary to understand the whole body of rythmical laws which had been instituted to fetter the noble art of verse, and also to invent some new species of metre, the merit of which was estimated by the difficulties it presented to the composer, and the oddity of the name bestowed on it. Strasburgh and Nuremberg were the cities in which were found the most famous societies of Mastersingers; but they also existed at Menningen, Ulm, Augsburg, and other places. Taverns were their usual places of meeting, and the members of these irregular societies were chiefly weavers, bakers, shoemakers, and other artisans. The epoch of these bards lasted from 1350 to 1519, when Luther produced a reform in the German language; but these societies continued long after, and that of Strasburgh till the latter part of the eighteenth century. John Folcz, who has furnished occasion for this sketch of literary history, distinguished himself by the invention of a multitude of new metres. He printed at Nuremberg, where he probably had a press, a great number of his poems, bearing titles too peculiar to be translated. The earliest of his pieces, finished in 1470, was imprinted, or engraved on wood, in 1474, and reprinted in a collection which ap-

peared in 1534 at Nuremberg, in 3 vols. 4to. This includes "Ein teutsch worhaftig poetisch ystori;" an abridged history of the German Empire, in rhyme; and "Vitæ Patrum, vel Liber Colacionum." Of these productions, Fischer, in his "Typographical Rarities," Mentz, 1800, 8vo, has given a detailed description.—*Biog. Univ.*

FOLIGNO (*Federigo Frezzi da*) an Italian prelate and poet, was a native of Foligno, and flourished in the fourteenth century. He was a Dominican, and after various referments was in 1403 appointed bishop of Foligno. He was likewise one of the fathers of the grand council of Constance, and died there in 1416. He was the author of a poem entitled "Quadrircgio," in which he describes the four reigns of Love, Satan, Vice, and Virtue, and not unsuccessfully imitates Dante. It was printed at Perugia in 1481, folio, and at Foligno in 2 vols. 4to, 1726.—*Ginguenne. Nicéron, vol. vii.*

FOLIOT (*Gilbert*) a learned divine of the twelfth century, who became bishop of London, and died in 1187. The historian, Matthew Paris, celebrates this prelate for a rhyming contest with the Devil. One night, while bishop Foliot was revolving in his mind matters rather political than ecclesiastical, his Satanic majesty roared in his ears the following verses—

"O Gilberte Foliot!

Dum revolvis tot et tot,
Deus tuus est Astarot."

"O Gilbert, Gilbert Foliot,

Your carnal thoughts betray you, sot;
Your God is none but Astarot."

To this unceremonious address the intrepid priest replied, with more truth than civility—

"Mentis Dæmon! Qui est Deus
Sabbaoth, est ille meus."

"Lying Demon! Know I serve

The God of Hosts; nor from him swerve."

The reader may decide as he pleases whether the sarcasm of Satan, as well as the reply, was the composition of the bishop; or whether both are not rather to be ascribed to the historian.—*Andrews's Hist. of Great Brit.*

FOLKES (*Martin*) an eminent English antiquary and philosopher, the son of a barrister, born in 1690 at his father's residence in Great Queen-street, Lincoln's-inn-fields. He received his education at Clare hall, Cambridge, and became a fellow of the Royal Society in 1714. On the resignation of sir Hans Sloane in 1740, Mr Folkes was called to the president's chair of this learned body, a situation which he retained till his death. He was also a member of the Antiquarian Society and of the French Academy, and many of his contributions are to be found among the Transactions of the two former associations. He also published a quarto volume on the subject of the silver coin of England, in which he displayed considerable numismatical knowledge. In 1746 the university of Oxford admitted him to the honorary degree of LL D. His death took place in 1754, *Nichols's Lit. Anec.*

FONSECA (*Eleanor*, marchioness de,

born at Naples, of one of the most illustrious families in that city, in 1768. Though possessed of extraordinary beauty, yet she devoted her youth rather to the cultivation of her mind than the improvement of her personal charms. She attended particularly to the study of natural history and anatomy. In 1784 she was married to the marquis de Fonseca, of an ancient Spanish family, long settled at Naples. Being presented at court, she became an attendant on the queen; but having given offence to her majesty, and the minister Acton, she was dismissed, and forbidden to appear again the precincts of royalty, a circumstance which doubtless influenced her future conduct. She now engaged anew in her studies, and assisted in his scientific researches her friend the celebrated abbé Spallanzani. On the breaking out of the French Revolution the marchioness Fonseca became one of its warmest partizans: and when the French invaded Italy she engaged in intrigues against the Neapolitan court. In 1799 the king and royal family being obliged to quit Naples, the Lazaroni, displeased at their departure, rose and threatened the lives of those who were suspected to be in the French interest. The marchioness de Fonseca narrowly escaped their fury, and owed her safety to her own firmness, as she traversed the city to take refuge in the castle of St Elmo. When the triumph of her party had taken place, she commenced a journal entitled "The Neapolitan Monitor," in which she constantly attacked the royal family, and especially the queen and the ministers. This journal produced a great effect in forwarding the views of the anti-royalists; and madame Fonseca was in the zenith of her fame, when the measures of cardinal Ruffo obliged the French to quit Naples. She was persuaded to seek for safety in flight; but she refused, and became the victim of her imprudence. The cardinal caused her to be arrested, and notwithstanding the solicitations of her family, she was hanged on the 20th of July, 1799.—*Biog. Univ.*

FONSECA (PETER DE) a Portuguese jesuit, born about 1528. He was professor of philosophy in the university of Coimbra, and afterwards professor of theology at Evora, where he took the degree of doctor in 1570. He subsequently became rector of the college of Coimbra, and held several authoritative situations in the society of Jesus. He was also in high favour with Philip II of Spain and Pope Gregory XIII, by both of whom he was employed in important negotiations. Father Fonseca is however chiefly memorable as having been the first who publicly inculcated that doctrine relative to the divine prescience, which, being adopted by Lewis Molina, another jesuit, gave rise to the violent controversy between the Molinists and Jansenists, which divided the French clergy in the seventeenth century. He died at Lisbon in 1599. His works, relating to metaphysical philosophy and divinity, have been published in 3 vols. folio.—*Moreri. Stollii Introd. in Hist. Lit.*—CHRISTOPHER DE FONSECA, another Spanish divine, was the au-

thor of a "Discourse of Holy Love, done into English, from the Spanish, by Sir George Strode," 1652, 12mo. Hedied in 1512.—*Ed.*

FONTAINE (JOHN DE LA) one of the most original men of genius of the age of Louis XIV, was born at Chateau Thierry, in 1621. His father was overseer of the waters and forests, and it is supposed that he received his early education at Rheims. At the age of nineteen he placed himself under the fathers of the oratory, with whom he remained however only eighteen months. He appears not to have attempted poetry until his twenty-second year, when he was much impressed by the recital of an ode of Malherbe's. His first essays in verse were confided to a relative, who directed him in his choice of reading; such being his simplicity and docility, that he was in character a child when in appearance a man. At the persuasion of his family he married, and appears to have esteemed his wife, but his disposition was incompatible with strong attachment, so that he made little difficulty of quitting her when invited to the capital by the duchess of Bouillon, who first put him upon writing his Tales. At Paris he was protected by the superintendent, Foucquet, who allowed him a pension, for which he gave quarterly receipts in verse. On the fall of Foucquet he entered into the service of Henrietta of England, wife of Monsieur, and at her death found protection from other persons of distinction, until his best friend, madame Sabliere, took him into her house, and freed him from the domestic cares to which he was so ill suited. He was in habits of intimacy with Moliere, Boileau, Racine, and all the first wits of Paris, by whom he was much beloved for the candour and simplicity of his character, which acquired for him the title of *le bon homme*. The literary society of Paris fixed him to the capital, although he paid a yearly visit to his wife; on which occasions he seldom failed to get rid of a part of his estate, which in consequence fell into great disorder, especially as his wife was as careless in pecuniary matters as himself. He had but one son, whom at the age of fourteen he placed in the hands of Harlai, archbishop of Paris, who promised to provide for him. After a long absence La Fontaine met this youth at the house of a friend, and being pleased with his conversation, was told that it was his own son. "Ah," said he, calmly, "I am very glad of it." La Fontaine, probably on account of this very simplicity, was no favourite with Louis XIV, and was the only writer of merit of the time who did not share in the royal bounty. The king even hesitated some time to confirm his nomination to the French Academy. After the death of madame Sabliere, in whose house he lived twenty years, he was invited by madame Mazarine and St Evremont, to take up his abode in England; but the difficulty of the language, and his attachment to the circles of Paris, prevented him from going there. In 1692 he was seized with a dangerous illness, and on being waited upon by a priest, who addressed him on the subject of religion, (on which he had been as careless as on

other matters,) La Fontaine observed, with the most unconscious naïveté—"I have lately taken to read the New Testament, which I assure you is a very excellent book; but there is one article to which I cannot accede—it is that of eternity of punishment. I cannot comprehend how this eternity is compatible with the goodness of God." The priest found him however very docile, being not only induced to throw a completed theatrical piece into the fire at his request, but to renounce all the profit of a new edition of his Tales, then printing in Holland. La Fontaine survived this illness, and passed two years in the house of madame D'Hervart. During this time he undertook to translate some pious hymns, but did not succeed in this new species of composition; nor indeed did he altogether refrain from some levities in the old way, although of no great moment. He died at Paris in 1695, at the age of seventy-four; and when he was undressed for interment, a hair-cloth was found next his skin! The rank occupied by Fontaine among the poets of his country is due to him chiefly as a story-teller and fabulist, in both which kindred walks the peculiarity of his genius rendered him inimitable. His verses, although negligent, have all the freshness and nature which no study can bestow, and abound with grace and delicacy. His narrative is enlivened with all the incidenta touches which render description animating and interesting; and his reflections form perfect specimens of that lurking archness, under the guise of simplicity, which is lively and amusing. His capacity of making extremely severe and shrewd observations on human life, was indeed very extraordinary, considering that in conduct he was simple almost to stupidity. He was with difficulty prevented from dedicating one of his most equivocal tales to his friend the archbishop of Paris, and another to the celebrated Arnauld. The junction of such qualities in the same individual, almost amounts to a metaphysical paradox. According to D'Alembert, "if not the greatest, he is the most singularly original of all the writers of the age of Louis XIV, the most an object of despair to imitators, and the writer whom it would cost nature most pains to reproduce." Both the "Tales" and the "Fables of La Fontaine" have been most superbly printed. Of the former, (the licence of which keeps them out of many libraries,) the best edition is that of Paris, 1762, with Eisen's designs and vignettes, by Choffat. Of his Fables innumerable editions have been printed, but the most magnificent is that in 4 vols. folio, 1755, 1759, in which each fable is decorated with a plate executed with zoological precision. Of the small editions, one by Costi is preferred. La Fontaine is also the author of "Les Amours de Psyche," a romance; "Le Florentin," and "L'Eunuque," comedies; "Anacreontiques," &c. &c. all of which are printed in the "Œuvres Diverses," Paris, 1758, 4 vols. 12mo.—*Vie de la Fontaine.* Moreri. *Nouv. Dict. Hist.*

FONTAINE (NICHOLAS) a voluminous

French writer in the Jansenist connexion, was born at Paris in 1625, being the son of a scrivener in that capital. At the age of twenty he was received among the solitaries of Port Royal, and obtained the chief superintendance of the young men who were sent there for education. He followed Arnauld and Nicole, to whom he acted as secretary, into the different retreats to which they were driven after the expulsion of the former from the Sorbonne in 1656. He was also the intimate friend of Sacy, the disciple and nephew of Arnauld, with whom in 1664 he was shut up in the Bastille, where they remained until 1668. After the death of Sacy in 1684, he finally settled at Melun, where he died in 1709, in his eighty-fourth year. His principal works are—"Lives of the Saints of the Old Testament," 4 vols. 8vo; "Lives of the Saints in general," folio; "Les Figures de la Bible," commonly called the "Bible de Royaumont;" Memoirs of the Solitaries of Port Royal;" "Translation of St Chrysostom's Homilies, &c.—*Moreri. Nouv. Dict. Hist.*

FONTANA (FELIX) a learned Italian naturalist and philosopher, born at Pomarolo, in the Tyrol in 1730. He studied at Roveredo, and afterwards at Padua and Bologna, whence he removed to Rome and Florence. The emperor Francis I, then grand duke of Tuscany, appointed him professor of philosophy at Pisa; and duke Peter Leopold, afterwards Leopold II, invited him to Florence, made him his physician, and employed him to form a cabinet of natural history. This collection, besides philosophical and astronomical instruments, and a variety of objects from the three kingdoms of nature, contains an immense quantity of anatomical figures in coloured wax, admirably executed under the direction of Fontana. Joseph II, when he passed through Florence, was so much struck with these models that he knighted the artist, and ordered him to prepare a similar series for the Academy of Surgery at Vienna; and Buonaparte gave instructions for a suit to be sent to France. Fontana, towards the close of his life, projected the construction of a gigantic anatomical statue in wood, susceptible of being taken in pieces; but various difficulties arising from the nature of the substance employed, obliged him to abandon the undertaking. Fontana produced several important works on chemistry, physics, and physiology. Of these the best known is his "Researches concerning the Poison of the Viper," which has been translated into French, English, and German. Though he took no part in political affairs during the occupation of Tuscany by the French in 1799, yet the deference paid him by their generals occasioned him some inconvenience on the return of the Austrians; and he was even thrown into prison, but was speedily restored to liberty. He died January 11th, 1805, and was interred in the church of Santa Croce at Florence, near the tombs of Galileo and Viviani.—*Biog. Univ. Elmes's Dict. of the Fine Arts.*

FONTANA (GREGORY) a celebrated Ita-

lian mathematician, brother of the preceding. He was born in 1735, and was educated at Roveredo and at Rome, where he entered the order of the Pia Schola, and distinguished himself by his talents. He was employed as public professor at Sinigaglia; and he formed an intimacy with the marquis Julio Fagnani, who inspired him with a taste for mathematical pursuits. He attracted the notice of count de Firmian, and after having occupied other situations, that nobleman in 1763 appointed him professor of logic and metaphysics at Pavia, and director of the library at that university. Five years after he was promoted to the chair of mathematics, vacant by the death of father Boscovich, and he filled the office with great reputation during nearly thirty years. The numerous works which he published in the course of that period, extended his fame over all the enlightened part of Europe; but though his zeal for science induced him to translate a variety of tracts from foreign languages, and communicate to the world many original dissertations on interesting topics, he did not produce any extensive systematic work. In 1796 Fontana was appointed a member of the legislative body of the infant Cisalpine republic. After the victory of Marengo, having become professor emeritus of the university, he sought repose at Milan. On the new organization of the republic of Italy he became a member of the electoral college De' Dotti; but in the midst of his literary labours he was seized by a violent fever, which caused his death, August 24th, 1803. He bequeathed his manuscripts to his brother, Felix, who, dying not long after, constituted their sister his heir of the little property which he left. This was not sufficient to preserve the unfortunate relative of two celebrated philosophers, whose works had done honour to Italy, from such penury and distress as occasioned her to put an end to her life, by drowning herself in a canal which runs through the city of Milan.—*Biog. Univ.*

FONTANA (DOMINIC) a celebrated Italian architect of the sixteenth century. He was born in 1543 at Mili, on the lake of Como. Having been instructed in geometry he went to Rome, where his elder brother, John, was studying architecture. He applied himself to the same art with such success as to obtain the patronage of cardinal Montalto, afterwards pope Sixtus V, by whom he was employed to construct the grand chapel of the Manger, in the church of St Maria Maggiore. When Montalto was raised to the pontificate, Fontana was made papal architect; and he exercised his talents in many important undertakings, the most remarkable of which was the erection of the Egyptian obelisk in front of St Peter's, of which the artist published an account entitled "Trasporto dell' Obelisco Vaticano, sotto il Pontificato di Sisto V, fatto da D. Fontana," Roma, 1590, folio. For this he was raised to the rank of nobility, made a knight of the golden spur, and farther rewarded with a handsome pension and gratuity. He also decorated the front of St John Lateran, built the Vatican Library, restored the columns of

Trajan and Antoninus, and built a grand aqueduct and fountain. Clement VIII also employed Fontana, but being afterwards prejudiced against him, deprived him of his office of papal architect. He was then engaged by the viceroy of Naples as architect to the king, and first architect to the two kingdoms of Naples and Sicily. He went to Naples in 1592, and after perfecting several works of consequence, died there in 1607, leaving a plan for the formation of a new harbour at Naples, which was executed after his decease.—His brother, JOHN FONTANO, distinguished chiefly as an hydraulic architect, died in 1614.—*Beliori. Abeced. Pittor. Biog. Univ.*

FONTANA (CHARLES) an eminent Roman architect and writer on archeology. He published in Italian, a Description of the Vatican; a Description and Delineation of the Amphitheatre of Vespasian; the Antiquities of Actium, &c. He died in 1714. *Nouv. Dict. Hist.*

FONTANA (FRANCIS) a Neapolitan astronomer of the seventeenth century. He first studied jurisprudence, and received the degree of doctor of laws; but afterwards devoted his talents to mathematical researches, and particularly such as relate to astronomy. Uniting practice to theory, he employed himself in grinding optical glasses and improving mathematical instruments, and he is said to have invented the telescope in 1608; but Montucla considers the evidence for this assertion as of little value. He died of the plague in 1656, after having had several wives, and a great number of children. He published "Novæ cælestium et terrestrium Observations," Neapol. 1646, 1667, 4to; and left a Treatise of Fortification in manuscript.—*Biog. Univ.*

FONTANA (GAETANO) an astronomer of an illustrious family of Modena. He adopted the ecclesiastical profession, and at the age of twenty took the habit of a regular clerk among the Theatins. His superiors employed him as a public teacher in their seminaries at Rome, Padua, Verona, and Modena. Astronomy was the science to which he was the most partial; and he studied it without ostentation, taking as much pains to avoid celebrity as others do to acquire it. His reputation however became extended, and he carried on a correspondence with his scientific contemporaries, and particularly with J. Dominic Cassini, who has stated that of all the astronomical observations communicated to him, those of Fontana were ever the most exact. He died in 1719, aged seventy-four, having published "Institutio physico-astronomica, cum Appendice geographicæ," Mutui. 1695, 4to; "Animadversiones in Historiam Sacro-politicam," 1718; Papers in the Memoirs of the Academy of Sciences at Paris; and a Geographical Chart of the Country of Modena; besides which he left many other charts in manuscript.—*Biog. Univ.*

FONTANES (M. DE) a distinguished member of the French Institute, born of a noble family at Mort in 1761. In the commencement of the French Revolution, he edited a journal,

entitled "The Moderator," and after the fall of Robespierre joined La Harpe and others in the publication of a paper, called "Le Memorial," which was, together with about forty more of the same description, suppressed by the National Convention on the 6th September, 1797, the several proprietors, editors, &c. being all included in one common sentence of banishment and confiscation of property. M. de Fontaines escaped to England, where he contracted an intimacy with M. de Chateaubriand, in company with whom he returned to his native country, taking advantage of the amnesty granted on the elevation of Buonaparte to the consulship, and joined Messrs Ronald and La Harpe in conducting the "Mercure de France." Shortly after he obtained a seat in the corps legislatif, of which body he eventually became the president. In 1808 he was appointed grand-master of the university of Paris, and in 1810 attained to the dignity of a senator. In this capacity he on the 1st of April, 1814, made a strong speech in favour of the Restoration of the Bourbon dynasty, and being subsequently placed on the committee for drawing up the constitutional charter, was for his services raised to the peerage on the re-establishment of that body. In 1817 he was one of the supporters of the election law introduced by Decaze, but afterwards changed his opinion and voted for its repeal. M. de Fontaines died at Paris, March 17th, 1821.—*Ann. Biog.*

FONTANIEU (PETER ELIZABETH) chevalier de St Louis, keeper of the wardrobe of the crown, and member of the Academies of Science and Architecture at Paris, and of the Royal Academy of Stockholm. He was the son of Gaspar Moses Fontanieu, intendant of Grenoble, who died in 1767, and who distinguished himself by his researches relative to territorial antiquities. The son attached himself to the study of chemistry, and published in 1778, "L'Art de faire les cristaux colorés imitant les pierres précieuses," 8vo. He also left in manuscript a treatise on the colours of enamel. The recent discoveries in chemistry have persided in a great measure the information contained in these works. Fontanieu died May 30th, 1784.—*Nouv. Dict. Hist. Biog. Univ.*

FONTANINI (GIUSTO) an Italian prelate, was born in 1666 at San Daniello, in the duchy of Friuli. He studied at the Jesuits' college at Gorizia, and was ordained priest at Venice in 1690. In 1697 he was invited to Rome as librarian to cardinal Imperiali. He was much in favour with pope Clement XI, who made him his chamberlain of honour, and gave him a handsome pension and an abbacy. He was also titular bishop of Ancyra. Of his works, which are numerous, the following are the principal—"Dell' Eloquenza Italiana." Fontanini gave great offence to the literati of Italy in this work, maintaining that the Italians wrote in the French language (which he supposed to be nearly the same with the Provençal) before they used the Italian; "A Collection of Bulis of Caronization;" "A Literary

History of Aquileia;" a posthumous work replete with curious erudition. He died in 1736.—*Moreri. Tiraboschi.*

FONTE-MODERATA, the assumed name of a celebrated poetess, whose real name was Modesta Pozzo, and who was born at Venice in 1555. At an early age she was placed in a nunnery, which she afterwards quitted and married. After living for twenty years with her husband in the greatest happiness, she died in childbed in 1592. She was the author of a poem entitled "Il Floridoro," and of another on the "Passion and Resurrection of Jesus Christ." She also published a prose work, "Dei Meriti delle Donne," in which she maintains that women are not inferior in understanding and merit to men. She has been eulogized by father Ribera, in his "Theatre of Learned Women," and Dogliani wrote her life in Italian in 1593.—*Gen. Dict. Moreri.*

FONTENAY (PETER CLAUDE) a French Jesuit, was born at Paris in 1683. After completing his classical education he went through a course of theology, and was selected by his superiors as a proper person to be well grounded in ecclesiastical knowledge and antiquities. He notwithstanding devoted part of his time to the belles lettres, and published several small poems. He was at length appointed rector of the Jesuits' college at Orleans, where he continued until 1735, when, on the death of father Longueval, he was recalled to Paris, to continue that author's "History of the Gallican church." The incessant attention which he paid to the work affected his health; and before the eleventh volume was quite finished he was seized with a paralytic stroke, which prevented him from all farther exertion. After lingering for more than a twelvemonth he died in 1742, at the college of La Flèche. His productions are not remarkable either for their style or precision, but he displays a most accurate knowledge of all the subjects which he discusses.—*Moreri. Nouv. Dict. Hist.*

FONTENELLE (BERNARD LE BOVIER DE) called by Voltaire the most universal genius of the reign of Louis XIV, was born at Rouen in 1657. His father was an advocate, and his mother a sister of the great Corneille. He received his education at the Jesuits' college at Rouen, and became early distinguished for the quickness of his parts. At his father's desire he studied the law, and was admitted an advocate; but losing his first cause he renounced the bar, and devoted himself exclusively to philosophy and literature. He first visited Paris in 1674, when he made himself known by some ingenious verses in the *Mercure Galant*. In 1681 he produced a tragedy called "Aspar," which not succeeding, he wisely gave up that species of composition. In 1683 he published his "Dialogues of the Dead," which were well received, and gave a favourable specimen of his ability to unite morality and literature with elegant and ingenious disquisition. In 1686 appeared his "Entretiens sur la Pluralité des Mondes," in which science and philosophy are united with vivacity and gallantry; although it retains too much

of the numerical theory of Descartes to maintain its station as a philosophical work. In 1687 he published his "History of Oracles," the basis of which was the elaborate work of Van Dale on the same subject. The art and elegance of Fontenelle formed a popular book out of the materials so industriously collected by the learned Hollander; but as the principle supported by both authors was the imposition and fraud of the heathen oracles, it opposed no small portion of orthodoxy collected from the fathers. Many of the latter had maintained that these oracles were the supernatural operations of demons, which had been silenced by the coming of Christ; and Bathus, a jesuit, warmly attacked Fontenelle on this score, who prudently made no reply, but proceeded to lighter studies, and in 1688 he produced his "Pastoral Poems, with a Discourse on Eclogue," which work exhibits much delicacy of feeling and sentiment, but little of poetry or genuine nature. Two operas soon followed, and in 1691 he was admitted a member of the French Academy, from which he had been previously excluded by a party headed by Boileau and Racine, principally because he had sided with Perrault in the famous controversy concerning the comparative merits of the ancients and moderns. In 1699 he was made secretary to the Academy of Sciences, which post he retained forty-two years. He rendered the office equally honourable to the academy and to himself, by an excellent history of the proceedings of that body, of which he published a volume annually: his general preface to this work is peculiarly admired. Of his other productions, the principal are, "L'Histoire du Théâtre François, jusqu'à Corneille;" "Réflexions sur la Poétique du Théâtre;" "Elémens de Géométrie de l'Infini;" a tragedy in prose, and six comedies, ingenious and pleasing, but better adapted to the closet than to the stage. A book of his extant, upon the vortices of Descartes, shows the strength of prepossessions formed in youth, upon the mature judgment even of philosophical minds. Fontenelle seems to have mingled the opposing characters of the poet and the man of wit and sentiment, with that of the votary of science, with great felicity; and his conduct in life partook of the same happy admixture of prudence and self-enjoyment which insures tranquillity, without the sacrifice of the duties of a man of honour and virtue. With a constitution originally delicate, he reached his ninetieth year with no other infirmity than a little deafness. His sight then began to fail him, but his frame held out until he had nearly completed a century, his death taking place on the 9th of January, 1757. A short time before he expired, being asked if he felt any pain: "I only feel," he replied, "a difficulty of existing." All the works of Fontenelle, except those on geometry and physics, have been collected in 11 vols. 2mo, under the title of "Œuvres Diverses."—*Siècle de Louis XIV. Eloges Acad. par D'Alembert.*

FOOTE (SAMUEL) a comic writer and imitative actor, was born about 1721 at Truro in

Cornwall. His father was a commissioner of the Prize Office, and a member of parliament for Tiverton, and his mother, a descendant of the families of Dinely and Goodere. He was academically educated at Worcester college, Oxford, and entered the Temple in order to study the law; but after a course of fashionable dissipation, to which his small fortune fell a sacrifice, he turned his attention to the stage. He appeared first in Othello, but made little way as a tragedian, and soon struck out a new and untrodden path for himself in his double character of author and performer. In 1747 he opened the little theatre in the Haymarket with a dramatic piece, which he entitled the "Divisions of the Morning." It consisted of some very humorous imitations of well known characters in detached scenes, written by Foote, who always took the leading parts himself. It succeeded so well, that in order to avoid the act for limiting the number of theatres, he repeated it under the title of "Mr Foote's giving Tea to his Friends." "The Auction of Pictures," a similar device, proved equally successful, and thus having discovered where his strength lay, he wrote several two-act farces, which appeared from 1751 to 1757, under the titles of "Taste," "The Englishman in Paris," "The Knights," "The Englishman returned from Paris," and "The Author." From 1752 to 1761 he continued to perform at one of the winter theatres every season, generally for a stated number of nights, and usually to bring out some pieces of his own composition. He proceeded thus until a pressing embarrassment compelled him in 1760 to bring out his "Minor" at the Haymarket, with such a company as he could hastily get together. This piece, in consequence of its coarse and broad ridicule of the Methodists and Dr Whitfield, gratified many and offended as many more, but as the latter body were not in general play-goers, Foote profited by the controversy excited, and was not of a disposition to care for any thing else. Henceforward he pursued the scheme of constantly occupying the Haymarket theatre when the others were shut up, and from 1762 to the season before his death he regularly performed there. In 1763 he brought out his "Mayor of Garratt," the subject of which, although taken from vulgar life, was very genuine in its drollery. It was succeeded by "The Patron" and "The Commissary," both abounding in general and personal ridicule. In 1766 he was thrown from his horse, and fractured his leg in such a manner, that amputation was rendered necessary. He soon however recovered his health and spirits, and even improved the incident to the suggestion of characters for his own acting. This accident also proved of service to his fortune, as it induced the late duke of York to procure for him a patent for life of the Haymarket theatre. In 1775 his unwarrantable licence of ridicule received a check of no common kind. The duchess of Kingston having made herself the topic of public conversation, Foote, who thought that she would afford a happy subject for the stage, wrote a part for

her under the character of Lady Kitty Crocodile, in a new piece which he was composing, called "The Trip to Calais." Taking care that his intention should reach her ears, a negotiation was set on foot to prevent its execution for a pecuniary consideration. So much however was demanded, that the duchess exerted her influence with the lord-chamberlain, and after several insulting letters on both sides, Foote was obliged to expunge the character from his drama. He was soon after assailed by a charge of an infamous nature, brought by a discarded man-servant, according to some accounts, instigated by female revenge. He was however acquitted in full accordance with the sentiments of the judge; but he so felt the disgrace that his health declined, and a few months afterwards he was seized on the stage with a paralytic fit, which obliged him to retire and spend the summer at Brighton. As winter approached it was his intention to repair to the south of France, but he was taken suddenly ill at Dover, and died there in October 1777. The character of Foote may be sufficiently gathered from the foregoing sketch. Of delicacy or feeling he was wholly destitute; for whatever may be said in defence of lavishing ridicule upon obvious quackery, or vicious or offensive peculiarity, the habit of exercising upon, and holding up harmless oddities or involuntary defects to public laughter with a view to gain, is very despicable. Nor is it to the honour of Foote that, as in the case of Dr Johnson, and the duchess of Kingston, and a few more, he could be induced by fear or bribery to abstain. As a humorist, and for mirth-exciting talent, if we are to believe Johnson, he was irresistible, which made him a constantly welcome guest at the table of the gay and great. As a dramatic writer, although too sketchy and extravagant for finished composition, he possessed the *vis comica* in a superlative degree, and there is a force and a nature in some of his comic delineations which would not have discredited Moliere. He freely borrowed from other writers, but always made what he selected his own, by his peculiar handling. He has been named the English Aristophanes, on account of the freedom taken with living characters, it is presumed, as there is little other resemblance. He is however original in the comic drama of his country; although, with the exception of "The Mayor of Garrat," none of his pieces, twenty in number, at present keep the stage. His works have been published in 4 vols. 12mo.—*Biog. Dram. Life by Cooke.*

FOPPENS (JOHN FRANCIS) a learned Flemish divine and critic, who flourished in the eighteenth century. He was born about 1689, and having embraced the ecclesiastical profession, he became professor of theology at Louvain, and canon of Malines. He died in 1761. He was the author of "Bibliotheca Belgica," 1739, 2 vols. 4to, containing an account of Flemish writers, and comprising the previous works of Miræus, Swertius, and Valerius Andreas. He also published an improved edition of the "Opera Historica et Diplomatica"

of Miræus; "Historia Episcopatus Antverpiensis," 1717, 4to; "Historia Episcopatus Sylvæducensis," 1721, 4to; and "Chronologia Sacra Episcoporum Belgii ab anno 1561 ad annum 1761," 12mo, a treatise in verse, with historical notes in prose.—*Nouv. Dict. Hist.*

FORBES. There were two learned Scottish prelates of this name, father and son, both bishops of Aberdeen. PATRICK, the elder, descended of a noble family, was born in 1564 in Aberdeenshire. Although he enjoyed the baronies of Corse and O'Neil, his strong inclination for the studies and pursuits of an ecclesiastical life induced him to take orders at the age of twenty-eight. In 1618 James VI raised him to the episcopal bench, and the university of Aberdeen found him a munificent patron, as well as an active chancellor. The dormant professorships of theology, medicine, and civil law, owe their revival to his interference. He was the author of an erudite and elaborate Commentary on the Apocalypse, printed at London in 1613. He died in 1635, leaving a son, JOHN, who succeeded him in his estates and see. He was born in 1593, and far exceeded his father in his literary attainments, becoming, in fact, one of the first scholars of the age in which he lived. Returning from Heidelberg, where he had been pursuing his studies with much success, he obtained the divinity professorship in the university of Aberdeen, but was expelled from all his church preferment by the covenanters. On this occasion he fled to the Netherlands, where he continued upwards of two years. Circumstances at length permitting his return, he settled at his paternal estate, where he died in 1648. His "Historical and Theological Institutes" are written with great vigour, elegance, and deep erudition. He superintended the publication of his father's Commentaries, and a complete edition of his own works, with a biographical sketch of the author, was printed at Amsterdam in 2 vols. folio, 1703, by the Wetsteins.—There was also another prelate of this name, WILLIAM FORBES, first bishop of Edinburgh, to which see he was raised on its foundation, by Charles I in 1633. He was born at Aberdeen in 1585, and after studying at various German universities, became principal of the Marischal college in his native city, whence he was raised to the mitre. He enjoyed his new dignity however little more than three months, dying in the spring of 1634. The only work extant from his pen is a treatise written "to pacify controversies," printed at London in 1658, and again in 1707 at Frankfort.—*Biog. Brit.*

FORBES (DUNCAN) a learned Scottish judge, president of the court of session. He was born in 1685 at Culloden, and studied at Paris and Utrecht, as well as in the university of Edinburgh. In the year 1745 he sacrificed much of his property in supporting the Hanoverian succession, for which the government afterwards refused to compensate him; a piece of ingratitude which is said to have accelerated his death in 1747. He was the author of

"Thoughts on Religion;" "Reflexions on Incredulity in Religion," 1750; and a treatise on the opinions of Hutcheson.—*Encyclop. Brit.*

FORBES (JAMES) an accomplished gentleman and pleasing writer, was born in London in 1749. He was early sent out by the East-India Company to Bombay as a writer, and while in India he traversed various parts of that vast country, making observations and forming drawings of every thing which he deemed worthy of notice. He returned to England with an ample fortune in 1784. Being in France at the rupture of the peace of Amiens, he was detained with the other English visitors, but obtained his release after a stay of a few months, at the request of the National Institute. He died at Aix-la-Chapelle, August 1st, 1819. Mr Forbes was the author of "Letters from France," 2 vols. 8vo; "Reflexions on the Character of the Hindoos," 8vo; and "Oriental Memoirs," 4 vols. 4to; which last work is splendidly illustrated with nearly one hundred plates from his own drawings.—*Mercur de France.*

FORBES (sir WILLIAM) bart., of Pitsligo in Scotland. Born to the inheritance of an ample fortune, he early devoted his time and talents to the promotion of the commercial prosperity of his country; and he was the founder, in conjunction with sir James Hunter Blair, of one of the first banking establishments in Edinburgh. In his mercantile transactions he was even profuse in his liberality, where he was satisfied that the objects of it were worthy of his confidence. Among many to whom he extended his beneficent assistance was Smellie, the printer of Edinburgh, as appears from Kerr's life of that individual. Sir W. Forbes having, during his youth, bestowed great attention on literary studies, he always retained his relish for them, and displayed their effects in the dignity of his sentiments, and the graces of his conversation. He was one of the earliest members of that celebrated literary club in London, which boasted the names of Johnson, Burke, Reynolds, Garrick, and other distinguished characters. He dedicated the leisure of his latter days to the commemoration of his intimate friend, Dr James Beattie; and his "Memoirs of the Life and Writings" of that popular author, were published in 1806, 2 vols. 4to, forming the only monument of his own literary fame. He died at his seat near Edinburgh in 1807, aged sixty-eight.—*Aikin's Athenæum.*

FORBIN (CLAUDE chevalier de) a distinguished French naval commander, was born in 1656. He accompanied the French ambassador De Chaumont to Siam, and in 1686 was left there as admiral to the king of that country. On his return he distinguished himself in the Mediterranean, and in 1708 was entrusted with conveying the pretender to Scotland, but through the vigilance of admiral Byng, could not effect a landing. In 1710 he retired on a pension, and taking up his residence near Marseilles, died there in 1738. He was generous and disinterested, and once

going to court to return thanks, when Louis XIV had bestowed some reward upon him he took occasion to speak of the great services of John Bart, the famous Dunkirk captain, whom he thought neglected. The king was much pleased by his generosity, and turning to Louvois observed, that he saw few such instances at court. He wrote his "Memoirs" in 2 vols. 12mo, containing much curious information.—*Moreri. Nouv. Dict. Hist.*

FORBONNOIS (FRANCIS VERON de) a French writer on commerce and political economy. He was born at Mans in 1722, and received a commercial education, after which he engaged in trade at Nantes. Thence he removed to Paris, and obtained the office of inspector-general of the mint, and a post in the department of finance. He was also a counsellor of the parliament of Mentz; and on the overthrow of existing institutions at the Revolution he retired from public life, and settled on his own estate. His death occurred in 1800. He was the author of "Recherches et Considerations sur les Finances de France, depuis 1595 jusqu'à 1721," Basle, 1758, 2 vols. 4to; "Elemens du Commerce," 2 vols. 12mo; "Principes et Observations économiques;" and other works.—*Nouv. Dict. Hist. Biog. Univ.*

FORCELLINI (GILES) an eminent critic and lexicographer, who was a native of Treviso, in the territories of Venice. He studied at Padua, and having adopted the ecclesiastical profession, he became director of a religious seminary at that place, where he continued till 1765. He then retired to Treviso, and died in 1768, aged eighty. Forcellini in his literary labours was associated with the learned Facciolati; and their most important production is "Lexicon totius Latinitatis," of which the latest edition is that of Padua, 1805-1816, 5 vols. folio. They also published an edition of Calepin's Dictionary; and *Ortographia Italiana.*—*Biog. Univ.*

FORD (JOHN) an early English dramatic author, was the second son of a gentleman in the commission of the peace in Devonshire, where he was born in 1586. It is not known where he was educated, but he entered in the Middle Temple in 1602, for the purpose of studying law. While there he published in 1606 a piece entitled "Fame's Memorialis," a species of monody on the earl of Devonshire, which poem, considered as the production of a youth, exhibits great freedom of thought and command of language. In his twenty-first year, having suffered much from an ill-fated attachment, and being also disappointed by the death of lord Mountjoy, an expected patron, he resolved to travel, but whether he did so is doubtful, as nothing more is known of him until he printed his first tragedy of the "Lover's Melancholy" in 1629. This however was not his first play, as a piece of his entitled "A bad Beginning makes a good Ending," was previously acted at court. He wrote, or assisted to write, at least eleven dramas; and such as were printed appeared from 1629 to 1634. Most of these were his

own composition, but some of them were written in conjunction with Decker, Drayton, Hathereway, and others. The date of his death is uncertain; but it is thought that he did not long survive 1639. As a dramatic writer he is often elegant and elevated, but never sublime or exuberant; and although he possessed neither the majestic march of verse of Massinger, nor the playful gaiety of Fletcher, he is nevertheless uniformly easy and harmonious. His genius was most inclined to tragedy, and he seems to have been too fond of an accumulation of terrific incident, which overlays the more natural pathos, in which he was by no means deficient. Besides the works already mentioned, a writer in the *Censura Literaria* has attributed to him an able little manual, entitled "A Line of Life pointing to the Immortality of a vertuous Name," 1620, 12mo.—*Quarterly Review*, No XII. *Censura Literaria*, vol. vi, p. 5.

FORD (SIR JOHN) an ingenious gentleman of the seventeenth century, was the son of sir John Ford of Harting, Sussex, where he was born in 1605. He was educated at Trinity college, Oxford, and was knighted by Charles I, after serving the office of high-sheriff of Sussex. He commanded a regiment of horse in the civil wars, and suffered much in the royal cause, being imprisoned on suspicion of aiding the escape of the king from Hampton-court. He was however soon released, probably by the interest of Ireton, whose sister he had married, and in 1656 he employed himself in certain mechanical inventions of considerable importance. With Cromwell's encouragement, and at the request of the citizens of London, he contrived machinery for raising the Thames water into all the high streets, which machinery was afterwards employed in other parts of the country, to drain mines and lands. He also invented a new mode of coinage to prevent counterfeits, and acquired a patent to try it in Ireland, but died there before he could put it into execution, September 3d, 1670. He published a "Design for bringing up a river from Rickmansworth, Herts, to St Giles' in the Fields, London," 1641, 4to; "Experimental Proposals to pay the Fleet, rebuild London, establish the Fishing Trade," &c. 1666, 4to. To this last production was added "A Defence of Bill Credit," and in 1663 he printed a proposal for raising money by bills of exchange, which should pass current instead of money, to prevent robbery. Wood speaks of him as a man who might have effected much with adequate encouragement.—*Athen. Oxon. Clarendon's Hist.*

FORDUN (JOHN DE) a Scotch ecclesiastic of the fourteenth century, who was the author of a work entitled "Scoto-chronicon." He appears to have been possessed of the benefice of Fordun in 1377, as in that year he dedicated his history to the bishop of Glasgow. In 1722 Hearne published, at Oxford, "Joannis de Fordun Scoto-chronicon genuinum, una cum ejusdem Supplemento ac Continuatione," 3 vols. 8vo. Part of the work had previously appeared in the "Quindecim Scriptores;" and

it was again published by Walter Goodall, in 2 vols. folio, Edinburgh, 1759.—*Mackenzie.*

FORDYCE (DAVID) a Scotch divine and writer on the belles lettres in the last century. He was born at Aberdeen in 1711, and after previous education at the public grammar school in that place, he became a student at the Marischal college in 1724, and was admitted to the degree of MA, when he was but little more than seventeen years old. Having been licensed as a public preacher, he officiated for some time as domestic chaplain to John Hopkins, esq. of Bretton, near Romford in Essex; but he never was settled as the pastor of any congregation. In 1742 he was made professor of moral philosophy at the college in which he was educated. He published anonymously, in 1745, a volume of "Dialogues concerning Education," which was followed by a second in 1748. He also wrote a treatise on Moral Philosophy, which first appeared in Dodsley's "Preceptor," and was several times reprinted separately. In 1750 he set out on a tour through France, Italy, and several other parts of Europe, with a particular view to the examination of the relics of ancient art. Returning home the following year, he was shipwrecked on the coast of Holland, and lost his life. He left prepared for the press, "Theodorus, a Dialogue on the Art of Preaching," published in 1752, 12mo.—FORDYCE (JAMES) brother of the preceding, was also a presbyterian divine, and was celebrated for his eloquence as a preacher. He was born in 1720, and was educated at the Marischal college of Aberdeen. After obtaining a license to preach, according to the forms of the Scotch church, he became second minister in the collegiate church of Brechru, and was subsequently presented to the living of Alloa. While in this situation he published some single sermons, one of which, "On the Folly, Infamy, and Misery of Unlawful Pleasure," printed in 1760, gained him great credit; and soon after it appeared, the degree of DD. was conferred on the author by the university of Glasgow. About 1762 he accepted an invitation to become assistant to Dr Lawrence, minister of a Scotch church in London; and on the death of that gentleman, a few months after, Dr Fordyce succeeded him. For some years he was one of the most popular dissenting preachers in the metropolis; but a difference with his coadjutor, Mr Toller, which divided the congregation, in 1775, contributed, with other circumstances, to lessen his celebrity, and in 1782 he resigned the pastoral office, and retired into Hampshire. He there resided in the neighbourhood of the earl of Bute, with whom he was on terms of intimacy, and to whose valuable library he had access. At length he removed to Bath, and there died, October 1st, 1796. Besides the sermons already noticed, he was the author of "Sermons to Young Women," 2 vols. 12mo; "Addresses to Young Men," 2 vols. 12mo; "Addresses to the Deity," 12mo; a volume of "Poems," &c.—*Aikin's Gen. Biog.*—FORDYCE (SIR WILLIAM) brother of the two former, eminent as a medical practitioner. He was born in 1724,

and studied at the Marischal college of Aberdeen, of which he subsequently became lord rector. After completing his education he served as a surgeon in the army, and then commenced practice as a physician in London, where he acquired considerable reputation. He received the honour of knighthood in 1787; and died December 4th, 1792. He was the author of "A Treatise on Ulcerated Sore Throat," and other professional tracts.—*Gent. Mag.*—**FORDYCE (ALEXANDER)** another brother of the same family, was a banker, whose commercial speculations proved highly disastrous to himself and others. The following notice of this gentleman occurs in a sermon published by Mr. Toller in 1775—"He had a mind not ill-formed for commerce; and from his early success in it, was enabled, though of an obscure original, to live respectably. If his views had extended no farther it would have been well; but his ambition was unbounded. The revenue of a kingdom would hardly have sufficed to have executed his schemes. He seemed bent on engrossing the trade of the whole world. Large sums were borrowed of one and of another. His friends advanced liberally; and so high was his reputation, that they had no doubt of their effects being secure. But the event proved that they were wretchedly deceived. His affairs were embarrassed; his difficulties increased, and at length grew inextricable; a total stoppage ensued; the issue of a commission of bankruptcy, by some chicanery, was prevented; and but a small part of his enormous debts hath been paid to this very hour. I shall not pretend to enumerate the many families which by his means sunk into distress. His fall was like the fall of a towering structure, which overwhelms numbers with its ruins. It deserves however particular mention, that the news of his failure dispatched one brother to the regions of the dead, and, which is yet more lamentable, drove another into a state of insanity."—*Toller's Sermons to Tradesmen, 1775.*—**FORDYCE (GEORGE)** a distinguished metropolitan physician and public lecturer, was the posthumous son of the elder brother of the subjects of the foregoing articles. His father resided on a small estate of his own, near Aberdeen, where the son was born in 1736. He was sent young to the Marischal college, and was made M.A. at the age of fourteen. Soon after he was placed as a pupil with his uncle John, a surgeon at Uppingham in Rutlandshire. Thence he removed to Edinburgh, and took the degree of M.D. in 1758, after which he spent a winter at Leyden. In the following year he settled in London, and began the novel plan of giving lectures on Chemistry, to which he subsequently added lectures on the *Materia Medica*, and on the Practice of Physic. His reputation as a public teacher, especially in the latter branch of professional science, gradually became established; and his "Elements of the practice of Physic," published as a textbook, in 1768, is deservedly esteemed. He obtained a respectable share of private practice, and in 1770 he was elected physician

to St Thomas's hospital. His merit as a man of science procured him admission into the Royal Society, in whose transactions he published some curious observations and experiments tending to show the power of the human body to resist the effects of a very high temperature; as well as other valuable papers. He also became a member of the famous Literary Club to which Dr Johnson belonged. In 1787 he was elected, *speciali gratia*, a fellow of the college of physicians. His death took place May 25th, 1802. His published works include "Elements of Agriculture and Vegetation," 8vo; "A Treatise on Digestion," 8vo; originally read before the college of Physicians in 1791, as the Gulstonian lecture; and a series of "Dissertations on Fever."—*Aikin's G. Biog.*

FORMEY (JOHN HENRY SAMUEL) a divine and philological writer of eminence, who was born at Berlin, of a French protestant family, in 1711. He was educated at the Royal French college, and having been ordained, became pastor of a church at Brandenburg, whence he was invited to be minister of a French congregation at Berlin. In 1737 he was appointed professor of rhetoric at the French college, and on the death of La Croze in 1739 he succeeded to the philosophical chair. He then resigned the pastoral office, but continued to preach occasionally. In 1744 he was made secretary to the philosophical class of the Royal Academy of Sciences and Belles Lettres at Berlin, and in 1748 perpetual secretary. His acquaintance with literature was very extensive, a circumstance which qualified him for the office of a journalist; and in 1753 he commenced conductor of the "Bibliothèque Germanique," in conjunction with Messrs De Beausobre and De Mauclerc. In 1750 he began alone the "Bibliothèque Impartiale," and also joined in the "Nouveau Bibliothèque Germanique." His other works are very numerous, including "Conseils pour former une Bibliothèque peu nombreuse, mais choisie," 8vo, repeatedly printed; "Histoire abrégée de la Philosophie," 12mo; and "Principes Élémentaires des Belles Lettres," 12mo; both which have been translated into English; "Lettres sur l'Etat present des Sciences et des Mœurs;" "Abrégé de toutes les Sciences, à l'Usage des Adolescents," 2 vols. 8vo; "Eloges des Academiciens de Berlin;" and "Mélanges Philosophiques," 2 vols. 12mo. M. Formey died at Berlin in 1797.—*Aikin's G. Biog.*

FORSTER (JOHN REINHOLD) an eminent writer on natural history and geography, was born in 1729 at Dirschau, in Polish Prussia, where his father was a burgomaster. After previous studies at other places he entered the university of Halle in 1748, where he attended to theology and the oriental languages. In 1751 he became a minister at Dantzic, whence in 1753 he removed to Nassenhuben. Here he devoted his leisure to the acquirement of a knowledge of philosophy, geometry, and mathematical science, which were his favourite pursuits. Having married his cousin Elizabeth

Nikolai, and finding his income too small for his family, he accepted an offer of going to Russia to superintend the new colonies at Saratow. He was however disappointed of the situation, and after having refused advantageous offers made him by the Academy of Sciences at Petersburg, and by that of Moscow, he removed to England. Here he became teacher of French, German, and natural history at the dissenting academy at Warrington. This place however he soon left, and went to London, where he resided in very confused circumstances till 1772, when he accompanied captain Cook in his second voyage round the world, as naturalist to the expedition. His son, a youth of seventeen, was his companion. On his return to England in 1775 the degree of LL.D. was conferred on him by the university of Oxford; and he might probably have experienced the beneficial patronage of the English government, if he had not given offence by publishing an account of the voyage under the name of his son, in evasion of an express agreement which he had made previously to the undertaking. This work also abounded with observations unfavourable to the government by which the writers had been employed, and to the naval officers and others concerned in the expedition. These circumstances rendered Forster's situation unpleasant in this country, and after struggling with poverty and distress for some time in London, he fortunately received an invitation to become professor of natural history at Halle in 1780. He was also appointed inspector of the botanical garden at that place, where he continued till his death, December 9, 1798. He translated a great number of books of travels into the German language, and published "Characteres Generum Plantarum, quas in Itinere ad Insulas Australes collegit," 4to; a "History of Voyages and Discoveries in the North," 4to; and other original works.—*Aikin's G. Biog. Biog. Univ.*

FORSTER (JOHN GEORGE ADAM) son of the preceding, was born at Dantzic in 1754, and came to England with his father in 1766. He studied some time at Warrington academy, and soon acquired a perfect acquaintance with the English language, as well as a knowledge of general science. He accompanied his father in the voyage with captain Cook, as mentioned in the preceding article, and after the disappointment of their joint prospects in England, he went to Paris, with the view of settling there; but in 1779 he was appointed professor of natural history in the university of Hesse Cassel. He removed thence to a similar situation in the university of Wilna in Poland. He afterwards entered into a negotiation with the Russian government relative to the project of a new voyage of discovery round the world; but the war between Russia and Turkey disappointed his expectations. He then settled as a bookseller at Mentz, where he was made president of the university. He appears to have entered warmly into the proceedings which took place in that city consequent to the French Revolution, and on the 1st of March

1793 he was nominated a deputy to the Rhenish convention, and sent to Paris to solicit a confederation with the French Republic. The National Convention, by a decree of the 28th of June, assigned him an equality of privileges with the members of that assembly. Mentz however was besieged and taken by the Prussians; in consequence of which Forster remained at Paris, where he is said to have been engaged in preparing for a journey to Tibet and Hindostan, when he died, February 13, 1794. His works are—"A Voyage round the World in His Britannic Majesty's Sloop Resolution, in 1772—1775," London, 1777, 2 vols. 4to, written in conjunction with his father, who made a German translation of the work, published at Berlin, 1778—1780, 2 vols. 4to; "A Reply to Mr Wales's Remarks on Mr Forster's Account of Captain Cook's last Voyage," 1773, 4to; "Letter to the Right Hon. the Earl of Sandwich," 1779, 4to. He also wrote a "Journey along the Banks of the Rhine," 2 vols. 8vo, translated into French by M. Pougens, and composed several works relating to geography, natural history, philosophy, and politics, in German, published together in 6 vols. 8vo; besides which he translated many volumes of voyages and travels into German.—*Life by Pougens. Aikin's G. Biog. Recs's Cyclop.*

FORSTER (GEORGE) an English traveller, who has been confounded with the subject of the last article, and of whose personal history, unconnected with his travels, very little information can be obtained. He was in 1782 engaged in the civil service of the East India Company. He is said to have been endowed with an inquisitive mind, and a good, though not a highly cultivated understanding; he was one of the few servants of the Company on the Madras establishment, at that period, who studied the Oriental languages. He spoke Hindavi with uncommon correctness and fluency; Persic was familiar to him; in Sanscrit he had made some progress; and in that dialect of it spoken by the Mahrattas he was much more conversant. Thus qualified, in August 1782 he commenced a journey from Bengal to Persia, and thence through Russia to England. Some account of Mr. Forster's expedition appeared in 1790; but a fuller narrative was published in 1798, under the title of "A Journey from Bengal to England, through the northern part of India, Kashmir, Afghanistan, and Persia, and into Russia, by the Caspian Sea," 2 vols. 4to; which work was translated into French. The author travelled chiefly in the character of a Mahometan merchant, which his knowledge of the Asiatic languages and customs enabled him to support. His information was derived rather from inquiry and observation than from books; and when he relates what he had seen, his veracity may be trusted; but his historical disquisitions are frequently inaccurate. He returned to India, and was preparing for farther researches in that part of the world, when his death took place at Allahabad, in 1792.—*Monthly Rev. Vol. XXVII. N. S. Biog. Univ.*

FORSTER (NATHANIEL) a learned divine

and critic of the last century. He was born in 1717 in Plymstock in Devonshire, of which parish his father was minister. His education, after having been at school at Plymouth and Eton, was completed at Oxford, where he took the degree of MA. in 1738, and was in 1739 chosen a fellow of Corpus Christi college. Having entered into orders he had the rectory of Hethe in Oxfordshire given him in 1749, by the lord-chancellor Hardwicke, on the recommendation of his friend Dr Secker, then bishop of Oxford. In 1750 he became domestic chaplain to bishop Butler, at which period he quitted the university, after having taken his doctor's degree in divinity. In 1752 he was made one of the chaplains of Dr Herring, archbishop of Canterbury, and in 1754 he obtained a prebend in Bristol cathedral, and the same year was presented to the valuable vicarage of Rochdale. He was elected FRS. in 1755, made one of the royal chaplains in 1756, and chosen preacher of the Rolls' chapel in 1757. He died before the end of that year, at his house in Craig's Court, Westminster. Among the literary productions of Dr Forster the most important are an edition of the Hebrew Bible, divested of the Masoretic Points, 2 vols. 4to; and "A Dissertation upon the Account supposed to have been given of Jesus Christ by Josephus, being an Attempt to show that this celebrated Passage, some slight corrections only excepted, may reasonably be esteemed genuine," 1749, 8vo.—*Aikin's G. Biog.*

FORSYTH (WILLIAM) an able horticulturist, was born at Old Meldrum in the county of Aberdeen, in 1737. He was a pupil of the celebrated Philip Miller, gardener to the company of apothecaries, at their physic-garden at Chelsea, and succeeded him in that situation in 1771. In 1784 he was appointed superintendent of the royal gardens at Kensington and at St James's. Mr Forsyth was a member of the Linnæan and other learned societies. He died in 1804. His works are—"Observations on the Diseases, Defects, and Injuries of Fruit and Forest Trees," and "A Treatise on the Culture and Management of Fruit Trees." He also discovered a composition to remedy the diseases of trees, for which he received a grant from parliament.—*Gent. Mag.*

FORT (FRANCIS LE) a Russian commander, was descended from an ancient and noble family of Geneva, where he was born in 1656. At the age of fourteen he entered as a cadet in the French service; but in hopes of preferment he joined a German colonel who was enlisting a body of men for the czar Alexis. He returned with him to Russia, and going to Moscow, became secretary to the Danish resident. His manners and appearance being prepossessing, he finally attracted the notice of the young czar, Peter, who immediately made him a captain of foot and his confidant. Though not a learned man, Le Fort had seen sufficient of the policy of Europe to enable him to suggest to his master many plans for the improvement of his country. He was employed to raise a body of 12,000 men intended to awe the Strelitzes, and he was made their general. He was soon after

created an Admiral, and though previously unacquainted with maritime affairs, he was very useful in forming the commencement of that marine, which was the favourite object of the czar's life. In 1696 the conduct of the siege of Asoph was committed to him, in which he acquitted himself so well, that the czar gave him the chief command of his troops both by land and sea. He was also appointed to the government of Novogorod, and to the first place in the ministry. On the czar's determination to travel for his own improvement, he created La Fort his ambassador to the courts he intended to visit, and travelled in his train like a private person. He retained his consequence until his death, which happened at Moscow in 1699.—*Mod. Univ. Hist. Moreri.*

FORTECUE (sir JOHN) a learned English judge and juridical writer in the fifteenth century. He was the third son of sir Henry Fortescue, lord-chief-justice of Ireland; but his birth-place is uncertain. He appears to have studied at Lincoln's-inn; and having been called to the bar, was made a serjeant-at-law in 1430, and chief-justice of the King's bench in 1442. He was a principal counsellor in the court of Henry VI, to whose interests he faithfully adhered, and by whom he was made chancellor of England, but did not exercise the functions of that office, as the government was in the hands of Edward IV. In 1461 he was attainted of high treason by the parliament, for his devotion to the house of Lancaster. In 1463 he fled with queen Margaret, prince Edward, and their followers, to Flanders, and remained in exile several years, during which he composed his celebrated treatise, "De Laudibus Legum Angliæ." Returning to England, he was taken prisoner after the battle of Tewkesbury, which ruined the cause of the Lancastrians in 1471. He obtained a pardon from Edward IV, which he is said to have purchased by a retraction of a paper he had written against the title of the house of York. He was permitted to retire to his seat at Ebrington in Gloucestershire, where he died at a very advanced age. His work in praise of the laws of England was commented on by Selden, and has been several times printed, both in Latin and English. He also wrote a tract on "The Difference between an absolute and a limited Monarchy," published in 1714, 8vo. Several of his productions are likewise still existing in manuscript.—*Biog. Brit.*

FORTIGUERRA (NICHOLAS) an Italian prelate, was born in 1674. He had great expectation of a cardinal's hat from Clement XII, but his promotion was so long delayed that he fell ill through vexation, and after lingering some time died in 1735. He was the author of a burlesque poem, entitled "Ricciardetto," written to prove the ease with which Ariosto might be imitated. It is fanciful and pleasant, and composed with great ease and elegance. He also wrote a translation in verse of the comedies of Terence, printed at Urbino in 1736 with the Latin text.—*Nov. Diet. Hist.*

FOSCARINI (MICHAEL) a Venetian sena-

tor, was born in 1628, and was employed by the republic to continue the history of Venice by Nani, but is not considered equal to his predecessor. He also wrote two novels, printed among those of the academy of Incogniti. He died in 1692.—*Tiraboschi. Nouv. Dict. Hist.*

FOSSE (CHARLES DE LA) an eminent painter, was born at Paris in 1640. He was a pupil of Le Brun. After visiting Italy he was admitted into the Academy of Painting in 1673, of which he became successively professor, rector, director, and chancellor. In 1690 he was invited to England by the duke of Montague to paint his house, now the British Museum, and after painting two ceilings he returned to Paris, and was employed in several of the royal palaces. His style of painting is considered rather heavy, and his drawing is incorrect, but his touch is soft and colouring good. He died at Paris in 1716.—*D'Argenville Vies des Peint.*

FOSSE (ANTHONY DE LA) sieur d'Aubigny, nephew of the preceding, was born at Paris in 1653. He was secretary to the marquis de Crequi in the war in Italy, and afterwards to the duke d'Aumont in his government of the Boulonnois, but he was more inclined to literary pursuits than to the uninteresting life of a secretary, and wrote several successful tragedies, of which the best is entitled "Manlius Capitolinus." He wrote Italian so well, that for an ode which he composed in that language he was received into the Academy degli Apatisti at Florence. He died in 1708.—*Moreri. Nouv. Dict. Hist.*

FOSTER (JAMES) DD., a dissenting minister of the sect calling themselves independents, which he forsook for that of the baptists, being converted by Dr Gale, a minister whom he afterwards succeeded in his chapel in Barbican. Dr Foster was born at Exeter in 1697, where he began to preach in 1718, but the clamour raised against him there on account of his opinions respecting the Trinity, drove him after one or two removals to London. In Barbican he acted as pastor nearly twenty years, and also as lecturer in a meeting-house in the Old Jewry. He was an eloquent preacher, and popular among many who differed from him in their tenets, and who filled all ranks and conditions in life. Pope has made honourable mention of him in his satires, the effect of which a commentator has endeavoured to weaken in a note. In 1746 he attended lord Kilmarnock to the scaffold, and afterwards published an account of the execution of that nobleman, which is said to have made so strong an impression upon his own spirits as to have afflicted him with a deep melancholy never after dissipated, although he survived the event till 1753, when an apoplexy deprived him of life. His other writings are four octavo volumes of sermons—"Tracts on Heresy," written against Stebbing; two 4to volumes of sermons "On Natural Religion and Social Virtue;" "a volume of Funeral Sermons, and a Reply to Tindal, in Defence of Christianity." Bolingbroke describes him as the original author of the declaration, since often

quoted by persons of various opinions that "where mystery begins religion ends."—*Biog. Brit.*

FOSTER (JOHN) an english clergyman distinguished for talent and erudition, though, like many other able scholars, comparatively little versed in knowledge of the world. He was born in 1731 at Windsor, in which town his father had filled the office of mayor. He was educated under Plumtree and Burton at the neighbouring college of Eton. After going through the usual course of study at King's college, Cambridge, he returned to Eton in the capacity of an assistant, and eventually succeeded Dr Barnard in 1765 in the head-mastership. The deficiency at which we have hinted, together with a warmth of temper which he could not always restrain, rendered him unpopular, and he resigned: his worth and learning were however generally acknowledged, and in 1772 he was appointed to a stall at Windsor. His death took place at the German Spa in 1773. A curious and valuable treatise of his "On Accent and Quantity" was published in 1762 in 8vo, and is well worth the attention of every Greek student.—*Harwood's Alumni Etonenses.*

FOSTER (sir MICHAEL, knt.) an eminent English lawyer, recorder of Bristol, and afterwards a judge in the court of King's Bench, born in 1689, and educated at Marlborough, the place of his nativity. In 1707 quitting Exeter college, Oxford, in which he was a commoner, without graduating he entered at the Middle Temple, was raised to the bench in 1745, and died in 1763. He was the author of a tract against the Codex of bishop Gibson, printed in 1735, and a report of the trial of the rebels, which took place in 1746, folio, 1763, reprinted in 8vo, 1776.—*Life by Dodson.*

FOSTER. There were three eminent mathematicians of this name in the seventeenth century. SAMUEL, a native of Northamptonshire, was educated at Emanuel college, Cambridge, and filled the chair of astronomical professor in Gresham college in 1636, and again in 1641. He retained the situation till his decease in 1652, which prevented his becoming a fellow of the Royal Society, the original members of which were composed of those friends with whom he had long been associated for literary purposes. Among his works are—"The Art of Dialling," 1638, 4to; Four Essays on the same subject, printed in one quarto volume, 1654; "Mathematical Lucubrations;" "The Sector altered;" and "Description of the portable Quadrant."—WILLIAM FOSTER studied at London under Mr Oughtred, and published in 1633 a tract "On the Circles of Proportion and the Horizontal Instrument," in 4to.—MARK FOSTER, who was posterior in point of time to the other two, is known as the author of a Treatise on Trigonometry.—*Ward's Gresham Professors. Hutton's Math. Dict.*

FOTHERGILL (GEORGE) DD., principal of St Edmund Hall, Oxford, was born in 1705 at Lockholme in Ravenstonedale in Westmorland. He was educated at Kendal school, whence he removed to Queen's college,

Oxford, where he became fellow. In 1751 he was appointed principal of St Edmund-hall, and obtained the vicarage of Bramley in Hampshire. He died in 1760. He was the author of two volumes of sermons in octavo, which obtained considerable reputation.—*Aikin's G. Biog.*

FOTHERGILL (JOHN) an eminent physician, was born at Carr-end in Yorkshire in 1712, where his father, who was a quaker, resided upon a family estate. About 1728 he was put apprentice to an apothecary at Bradford, and thence proceeded to the university of Edinburgh. He took his degree of MD. in 1736, and then came to London and entered as a pupil in St Thomas's hospital. In 1740 he made a tour to the continent, and on his return devoted himself to his profession. In 1748 he greatly distinguished himself by a publication entitled "An Account of the Sore Throat attended with Ulcers," which passed through several editions, and was translated into the French. He also supplied a monthly account of the weather, and diseases of London, to the Gentleman's Magazine, which is considered the parent of all statements of the kind. In 1754 he was nominated an honorary member of the Edinburgh college of physicians, and in 1763 was admitted into the Royal Society of London. In 1762 he purchased an estate at Upton in Essex, and formed an excellent botanic garden, with hot-houses and green-houses to the extent of two hundred and sixty feet. He acquired a large fortune, of which he made a most liberal use. On his own society he conferred great benefits, projecting and carrying into effect the institution of a large public school at Ackworth in Yorkshire. He was also the associate of Mr Howard, in his attempt to alleviate the condition of poor prisoners. Dr Fothergill was likewise zealous for the political interests of the country, and interfered to prevent that fatal breach with the American colonies which produced their final separation from the parent country. He died in 1780, in the sixty-ninth year of his age. His moral character is thus summed up by his friend, Dr Franklin, in a letter to Dr Lett-om: "If, we may estimate the goodness of a man by his disposition to do good, and his constant endeavours and success in doing it, I can hardly conceive that a better man has ever existed." His works, consisting of medical pieces and pamphlets, of two elegant pieces of biographical eulogy on Dr Alexander Russel and Peter Collinson, and of some political and miscellaneous essays and letters, were published, with memoirs of his life by Dr Lettson, in 3 vols. 8vo, 1781.—*Thompson's Mem. of Dr. Fothergill. Lettson's Account of his Life.*

FOUCHE, duke of Otranto, (see Appendix.)

FOUCQUET (NICHOLAS, marquis of Bellisle) a celebrated superintendent of the French finances during the minority of Louis XIV. He was the son of Francis Foucquet, viscount de Vaux, and was born in the year 1615. He was early brought forward in the departments of law, and at the age of thirty-five became procureur-general of the parliament of Paris,

He was made superintendent of the finances by cardinal Mazarine, and shared largely in the rapacity of that covetous minister. He is said to have expended eighteen millions of livres upon his estate at Vaux, where he gave entertainments with royal splendour. On the death of Mazarine, who had for some time before been secretly undermining him, the storm burst upon his head, and he was arrested in September 1661, at Nantes. He was committed to close custody, and a commission was immediately appointed to try him upon various charges. He defended himself so ably, that it was three years before the sentence was pronounced, which condemned him to banishment; which sentence was changed by the king to imprisonment for life in the fortress of Pignerol. Of the crowds who had profited by his liberality few friends remained to him except his literary pensioners, among whom was Mademoiselle Scuderi, La Fontaine, and Pellisson. He died in 1680, after an imprisonment of nineteen years, which he bore with firmness and composure.—*Siècle de Louis XIV. Nouv. Dict. Hist.*

FOUGEROUX DE BONDARROY (AUGUSTUS DENNIS) a member of the Academy of Sciences, was born at Paris in 1732. He travelled into Brittany and Anjou to observe the nature of the slate-quarries, and to Naples to view the alum-mines and other natural productions. He was nephew of the celebrated Duhamel, to whose estate he succeeded. He died in 1789. He was the author of the following works: "Recherches sur les Ruines d'Herculanum;" "L'Art de travailler les Cuirs dorés;" "L'Art de Tonnelier;" "Mémoires sur la Formation des Os;" "Observations faites sur les Cotés de Normandie."—*Nouv. Dict. Hist.*

FOULIS (ROBERT and ANDREW) two learned printers, were natives of Glasgow. Their early history is unknown, but Robert Foulis began printing about 1740: one of his first trials was an edition of Demetrius Phalereus, 1734, 4to. In 1744 he produced his celebrated edition of Horace, of which the sheets as they were printed were hung up in the college of Glasgow, and a reward was offered to those who should discover an inaccuracy. He then went into partnership with his brother Andrew, and they continued for thirty years to produce a series of correctly printed and elegant books, particularly the Latin and Greek classics. The liberality of the brothers proved their ruin; having engaged in the establishment of an academy for the instruction of youth in painting and sculpture, the enormous expence occasioned the decline of the printing business. Andrew died in 1774, and in 1776 Robert exhibited and sold the remainder of his paintings; when, after all expences were defrayed, there remained in his favour a balance of fifteen shillings. He died the same year.—*Nichols's Lit. Anec. Lemoine's Hist. of Printing.*

FOULON (JOHN ERARD) a jesuit of Liege, born 1609. He was the author of a work in three volumes folio, entitled "Historia Leodiensis," and a Commentary on the Books of

Maccabees. He died in 1663 at Tournay, being then rector of the college of his order in that city.—*Moreri*.

FOULON (WILLIAM) or GNAPHILÆUS, a Dutch pedagogue, burgomaster, and poet of the sixteenth century, born at the Hague in 1483, died at Horden in Friesland in 1558. His works are—"Hypocrisis;" "Martyrium Johannis Pistorii;" and "Acolastus, de Filio Prodigio;" three Latin comedies, of which the last is the best, and was printed with notes at Paris in 1554 by Prateolus.—*Moreri*.

FOUNTAIN (SIR ANDREW) an English gentleman, who made collections of pictures, medals, and antiquities, and wrote on Numismatics. He was a native of Narford in Norfolk, and received his education at Christchurch college, Oxford, where he drew up a list of Anglo-Saxon and Anglo-Danish coins, published in 1705, in Hickee's *Thesaurus Septentrionalis*. William III conferred on him the honour of knighthood. On the death of sir Isaac Newton in 1727, he succeeded him in the office of warden of the mint. He died in 1753, leaving behind him a fine collection of pictures, statues, &c. which he had found during his travels on the continent, in the early part of his life. He was practically acquainted with the fine arts, and made some designs for Swift's Tale of a Tub.—*Nichols's Lit. Anec.*

FOUQUIERES (JAMES) a Flemish painter, was born at Antwerp in 1580. He arrived at so great excellence in painting landscapes, that Rubens sometimes employed him to paint the back-grounds of his pictures. He visited Italy, and on his return was employed by the elector palatine at Heidelberg. In 1621 he went to Paris, and was employed by Louis XIII. His pictures were so much admired by the king, that he conferred on him the honour of knighthood; the distinction which he met with rendered him so insolent and overbearing, that by his presuming conduct to Nicholas Poussin he deprived France of the talents of that great painter, who quitted Paris in disgust. He died at Paris in 1659.—*D'Argenville Vies des Peintres*.

FOURCROY (ANTHONY FRANCIS DE) a celebrated French chemist and natural philosopher, who was a native of Paris, and educated at the college of Harcourt. Having adopted the profession of medicine, he applied himself closely to the study of the sciences connected with it, and especially to chemistry. He published in 1776 a translation of Ramazzini's treatise on the Diseases of Artisans. In 1780 he took the degree of MD.; in 1784 he was made professor of chemistry at the Jardin du Roi; and the next year he was chosen a member of the Academy of Sciences. At this period he became associated with Lavoisier, Guyton Morveau, and Berthollet, in the researches which led to the vast improvements and discoveries in chemistry, which have immortalized their names; and in conjunction with those gentlemen he drew up the "Méthode de Nomenclature Chimique," Paris, 1787, 8vo. He distinguished himself less by the discovery of unknown bodies than by the systematic arrange-

ment of the principles of the science, and by popular expositions of theory and experiment in his lectures and publications. When the Revolution took place he engaged in politics, and he was chosen a deputy from Paris to the National Convention. He did not however take his seat in that assembly till after the fall of Robespierre. In September 1794 he became a member of the Committee of Public Safety. His attention in this post was chiefly directed to the formation of public schools, and the establishment of institutions for the education of youth. In September 1795 he passed into the Council of Ancients; and he was nominated professor of chemistry, and a member of the national institute. He vacated his seat in the Council in May 1797, and in December 1799 Buonaparte gave him a place in the Council of State, in the Section of the Interior. He died December 16, 1809, aged 55. His works are numerous, among which the following are the most important: "Leçons Elementaires d'Histtoire Naturelle et de Chimie," 5 vols. 8vo; "Système des Connoissances Chimiques, et de leurs Applications aux Phénomènes de la Nature et de l'Art," 5 vols. 4to; "Philosophie Chimique," 8vo; all which have been translated into English; and "La Médecine éclairée par les Sciences physiques," 4 vols. 8vo. He also published many papers in the Memoirs of the Academy of Sciences, and in the Annals of Chemistry.—*Biog. Univ. Dict. des H. M. du 13me. S.*

FOURCROY (CHARLES RENE DE) a French military officer, who was a native of Paris. He distinguished himself as an engineer, and served in that capacity in the seven years' war in Germany, and also in Portugal and in Corsica. He was honoured with the grand cross of the order of St Louis, and attained the rank of *marchal de camp*. To his skill as a military engineer he added a general knowledge of natural history and an acquaintance with the arts. He was the author of a Treatise on the Art of making Bricks, and other works. He died in 1791, aged seventy-five.—*Nouv. Dict. Hist. Biog. Univ.*

FOURMONT (STEPHEN) a scholar, distinguished for his knowledge of languages, was born in 1683 at Herbelai, near Paris. Losing his father while young, he was placed by an uncle at the Mazarine college in Paris, where he acquired a thorough knowledge of the Greek and Latin languages, and while yet a scholar he published "The Roots of the Latin Language put into French Verse." He next commenced the study of the oriental languages, and so advanced in credit as a man of learning, as to be invited by the count of Toledo, minister of Spain, to settle in that country. He declined the proposal, but received a pension from the Spanish court. In 1715 he succeeded M. Galland to the Arabic chair in the Royal college. The same year he was admitted a member of the Academy of Inscriptions, of the Royal Society of London in 1738, and of that of Berlin in 1741. He was often consulted by the duke of Orleans, who made him one of his secretaries. He died at Paris in

1743. His principal works are—"The Roots of the Latin Tongue, in Verse;" "Critical Reflections upon Ancient History to the time of Cyrus;" "Meditationes Sinicæ;" "A Chinese Grammar in Latin;" "Several Dissertations printed in the Memoirs of the Academy of Inscriptions," &c.—His younger brother, MICHAEL FOURMONT, was in 1720 made professor of Syriac to the Royal College. He was a member of the Academy of Belles Lettres, and several of his dissertations are published in their memoirs. He died at Paris in 1746.—*Moreri. Nouv. Dict. Hist.*

FOURNIER (PIERRE SIMON) a Parisian typographer and engraver, born 1712. He was the author of several ingenious treatises on the art of letter-founding, especially of a table to determine the proportions of the types. His "Manuel Typographique" is a larger work on the same subject in two 8vo volumes. His death took place in 1768.—*Nouv. Dict. Hist.*

FOWLER (EDWARD) a learned English prelate, the son of a clergyman who held the living of Westerleigh, Gloucestershire, where he was born in 1632. From the free-school at Gloucester he removed to Corpus Christi college, where he graduated, but was afterwards admitted *ad eundem* at Cambridge, and in that university proceeded to the degree of MA. Although at first a nonconformist, he was afterwards distinguished for his attachment to the church of England; and after enjoying successively the livings of Northhill, Bedfordshire; All-hallows, Bread-street; St Giles, Cripplegate; and a stall in the cathedral of Gloucester, was made bishop of that diocese in 1691, in reward for his refusal to read the famous declaration of James II, in 1688, and his subsequent exertions in favour of the Revolution. Of his theological tracts, one on the "Design of Christianity," first printed in 1671, 8vo, has gone through several editions. The remainder consist of a treatise "On Christian Liberty," and a defence of the "Principles of certain Divines abusively called Latitudinarians," 8vo, 1670. He died at Chelsea in 1714.—*Biog. Brit. Athen. Oxon.*

FOWLER (JOHN) a printer of Bristol, educated in the tenets of the Romish church. He was a man of some learning, having received a liberal education at Winchester school, whence he removed, on the foundation, to New college, Oxford, in 1555. Four years afterwards he resigned his fellowship, and left England for Antwerp, in which city, and at Louvain, he set up a press, whence issued, from the pens of himself and others, various controversial treatises levelled against protestantism. His death took place in 1579, at Nieumark.—*Athen. Oxon.*

FOWLER (THOMAS) a native of York, born 1736. He at first practised as an apothecary; but having graduated at Edinburgh in 1778, obtained the situation of physician to the Stafford infirmary. He was the author of several professional treatises, among which is one "On the Effects of Tobacco," 1785; another "On Rheumatism," and a third on the "Effects of

Arsenic." He died at York in 1801.—*Rees's Cyclopædia.*

FOX (EDWARD) an eminent English prelate and statesman in the sixteenth century. He was born at Dursley in Gloucestershire, and educated at Eton, whence he was admitted of King's college, Cambridge. In 1528 he was elected provost of his college; and being recommended to cardinal Wolsey as admirably adapted for diplomacy, was taken into the service of that prelate, who employed him, in conjunction with Stephen Gardiner, on a mission to Rome, to procure the divorce of Henry VIII from Catherine of Arragon. He was subsequently engaged in embassies, both to France and Germany. In 1535 he was promoted to the see of Hereford; and in the same year attended the meeting of the protestant princes at Smalcalde, and had repeated conferences with the German divines to settle various articles of religion, but without effect. This able prelate died in London in 1536. Bishop Fox was a secret but wary friend to the Reformation, but acted the part rather of a politician than a divine. He was the author of a treatise "De vera Differentia Regiæ potestatis et Ecclesiasticæ, &c." 1534, which was translated into English by lord Stafford. He also wrote "Annotations upon Mantuan the Poet," &c.—*Biog. Brit.*

FOX (GEORGE) the founder of the Society of Friends, or Quakers, was born at Drayton in Leicestershire, in 1624. His father, who was a weaver, educated him very religiously, and being apprenticed to a grazier, he was much employed in the keeping of sheep; and it is thought that so solitary an employment, confirmed that tendency to enthusiasm which he displayed from his infancy. At the age of nineteen he persuaded himself that he had received a divine command to forsake every thing else, and devote himself solely to religion. He accordingly forsook his relations, equipped himself in a leathern doublet, and wandered from place to place, supporting himself as he could. Being discovered in the metropolis, his friends induced him to return; he however remained with them a very short time, resuming a life of itinerancy, in which he fasted much, walked abroad in retired places, studying the Bible, and sometimes sat in a hollow tree for a day together. In 1648 he began to propagate his opinions, and commenced public preacher at Manchester, whence he soon after made excursions through the neighbouring counties, where he preached to the people in the market-places. About this time he began to adopt the peculiar language and manners of quakerism, and to experience some of the persecutions to which all active novelty in the way of religious opinion, was in those days exposed. At Lerby the followers of Fox were first denominated quakers, in consequence of their trembling mode of delivery, and calls on the magistracy to tremble before the Lord. In 1655 he was sent a prisoner to Cromwell, who having ascertained the pacific tendency of his doctrines, had him set at liberty. He was however treated with great severity, from time

to time, by the country magistracy, in consequence of his frequent interruption of ministers during divine service, and exclamations in the churches, and was more than once obliged to the interference of the Protector for his freedom. On the occasion of a fast appointed on account of the persecution of the protestants abroad, he addressed a paper to the heads and governors of the nation, in which he forcibly described the inconsistency of similar severity at home. In 1666 he was liberated from prison by order of Charles II, and immediately set about forming the people who had followed his doctrines, into a formal and united society. In 1669 he married the widow of judge Fell, in the same simple manner which still distinguishes the marriages of his followers, and soon after went to America, where he remained two years, which he employed in making prose-lytes. On his return he was thrown into Worcester gaol, but was quickly released, and went to Holland. He soon after returned, and was cast in a suit for tithes, which he deemed it unlawful to pay; and in 1684 again visited the continent, where he did not long remain; and his health becoming impaired by incessant toil, imprisonment, and suffering, he lived more retired until his death, in 1690, in the sixty-seventh year of his age. Exclusive of a few separate pieces, the writings of Fox are collected into 3 vols. folio; the first of which contains his "Journal," the second his "Epistles;" and the third his "Doctrinal Pieces." He was undoubtedly a man of strong natural parts; and William Penn speaks in high terms of his meekness, humility, and temperance.—*Sewel's Hist. of Quakers. Life by Clarkson.*

FOX (JOHN) a learned English divine and celebrated church historian, was born of respectable parents, at Boston in Lincolnshire, in 1517. At the age of sixteen he was entered at Brazen-nose college, Oxford, and in 1543 was elected a fellow of Magdalen college, in the same university. In his youth he discovered a predilection for poetry, and wrote several Latin comedies on scriptural subjects, one of which, "De Christo Triumphante," was translated by Richard Day, son of the famous printer, John Day, and published in 1579. The real bent of his mind however leaned to divinity; and applying himself to theology with great assiduity, he secretly became a convert to the principles of the Reformation. This tendency being at length suspected, a charge of heresy followed, and by the judgment of his college he was in 1545 expelled. By this event he not only lost the countenance of his friends, but his father-in-law took advantage of it to withhold his paternal estate. He was thus reduced to great distress, until taken as a tutor into the family of sir Thomas Lucy, in Warwickshire. A few years before the death of Henry VIII he resorted to London for employment, and after experiencing much disappointment and suffering, became a tutor in the family of the duchess of Richmond, to educate the children of her imprisoned brother, the earl of Surrey. In the reign of Edward VI he

was restored to his fellowship; but although protected by the Norfolk family in the reign of Mary, understanding that Gardiner was devising means to seize him in his asylum, he went abroad, and gained a livelihood by correcting the press for an eminent printer at Basle, where he laid the first plan of his "Acts and Monuments of the Church." On the accession of Elizabeth he returned to his native country, where he was received in the most friendly manner by his former pupil, the duke of Norfolk, who maintained him as long as he lived, and settled a pension on him at his death. Secretary Cecil also obtained for him a prebend in the church of Salisbury; and he might have received much higher preferment if he would have subscribed to the articles enforced by the ecclesiastical commissioners. He was summoned to do so by archbishop Parker, but declined; and such was the respect entertained for him by the bishops, who had most of them been his fellow exiles, that he was left unmolested; and being allowed to retain his prebend until his death, was a frequent and zealous preacher. In 1575 a cruel persecution took place of the German anabaptists, who refused to join the Dutch or English churches, when Fox, although narrow in his notions of toleration, much to his honour sought an audience of Elizabeth, and endeavoured to convince her of the cruelty and injustice of condemning them to the flames, which however, to the great disgrace of that reign, they endured. Fox died greatly esteemed and lamented, in 1587, in his seventieth year. A list of his controversial and other works may be found in the *Biographia Britannica*; but his "History of the Acts and Monuments of the Church," commonly called "Fox's Book of Martyrs," is the only one which at present obtains perusal. It was first printed in 1553, in 1 vol. folio; but was reprinted in 1632 and 1641, in 3 vols. folio; and in 1684 had reached the 9th edition. In queen Elizabeth's time an order was made that it should be placed in the common halls of the dignified clergy, and the protestants in general encouraged its circulation with great zeal. The catholics, on the other hand, have done their best to decry it, under the name of "Fox's Golden Legend," and represent it as a collection of errors and falsehoods. The real faults of occasional heat and intemperance of invective, and of a small portion of the venial errors to which all wide repositories of matter of fact are liable, form no adequate justification of these aspersions. Some protestant writers however, and among others Collier, in his *Ecclesiastical History*, have much depreciated the labours of Fox, which, on the other hand, have been as highly praised by Strype, Burnet, and many later writers.—*Biog. Brit. Preface to Wordsworth's Ecel. Biog.*

FOX (RICHARD) an English prelate and statesman, was born at Ropesley near Grantham, about the latter end of the reign of Henry VI. He studied for some time at Magdalen college, Oxford, but the plague breaking out there, he finished his education at *l'embroke-hall*, Cambridge. He then went to

Faris, where he became intimate with Dr Morton, bishop of Ely, who introduced him to Henry VII, then earl of Richmond, who was meditating a descent upon England to dethrone the usurper, Richard III. Dr Fox soon acquired the earl's favour, and was admitted into his most secret councils; and in 1485, when, by the victory of Bosworth field, Henry became king of England, he appointed him one of his privy-counsellors. In 1486-7 he was created bishop of Exeter and keeper of the privy-seal, also principal secretary of state, and master of St Cross near Winchester. He was subsequently employed on various embassies, and in 1492 was translated to the bishopric of Bath and Wells, whence in 1494 he was again translated to the see of Durham. Dr Fox was employed to negotiate a treaty of marriage between Henry's daughter, Margaret, and the king of Scotland, which alliance was concluded in 1501-2. In 1508 he was finally removed to the see of Winchester, where he passed the rest of his life. Bishop Fox was engaged in matters of importance, and possessed of the greatest weight and influence in public affairs during the whole of the reign of Henry VII, who made him one of his executors, and recommended him to his successor, Henry VIII. Henceforward his influence greatly declined. Howard, earl of Surrey and lord-treasurer, by accommodating himself to the passions of his master, became the favourite; and Wolsey, whom Fox introduced to counteract his influence, quickly grew more powerful than either. Disgusted at seeing himself completely supplanted by the man whom he had been the means of raising to power, and at receiving from him many insults and mortifications, he retired in 1515 to his diocese, and passed the rest of his days in acts of charity and munificence. He was the founder of Corpus Christi college, Oxford, and of the free-schools of Taunton and Grantham. Bishop Fox died in 1528 at a very advanced age. He is said to have been a generous patron of literature, though he never published any thing himself.—*Biog. Brit.*

FOX (STEPHEN) a statesman, was born at Farley in Wiltshire in 1627. He entered into the service of the earl of Northumberland and of lord Percy, and became attached to the fortunes of the exiled king. At the Restoration he was made clerk of the green cloth, paymaster of the forces, and received the honour of knighthood. In the next reign he was dismissed, but was restored after the Revolution. By opposing the bill for a standing army, he lost the favour of king William; but on the reign of Anne was again replaced. He built a new church at Farley, founded several alms-houses, and first projected Chelsea college as a military asylum. He died at Farley in 1716. Sir Stephen Fox married twice; the second time when near eighty, and had issue by both wives, being father, by his first wife, to the first earl of Ilchester, and by his second, to the first lord Holland.—*Life by Pitts.*

FOX (CHARLES JAMES) This eminent

statesman was the second son of Henry, first lord Holland, so long the rival and opponent of Mr Pitt, afterwards earl of Chatham, and whose political life and conduct as paymaster-general of the forces was at one time the subject of much animadversion. His son, Charles James, was born January 13, 1748, and early became a peculiar favourite with his father; who, perceiving indications of great capacity, mingled exceeding indulgence with the most careful attention to his education. He was sent in the first instance to Eton, whence he removed to Hertford college, Oxford, and his classical acquirements, according to the testimony of Dr Warton, and as shown by his correspondence with Gilbert Wakefield, were very considerable. As his father intended him to rise in the political world, he procured him a seat for the borough of Milhurst in 1768, before he was of legal age, and in 1770 the same interest procured him the office of one of the lords of the Admiralty, which situation he resigned the next year, and was appointed a commissioner of the Treasury. Acting at this period under the influence of his father, who might be deemed a Tory, the parliamentary conduct of Mr Fox led to little anticipation of his future career. He spoke and voted against Wilkes, and otherwise yielded to the fetters of party, but not so far as to preclude the natural ingenuousness of his disposition from displaying itself. Thus he warmly supported sir William Meredith's bill, to give relief from subscription to the thirty-nine articles, and in several other respects asserted his independence. Whether this conduct rankled in the mind of lord North, or that, as alleged, a coldness between them was simply produced by a difference of opinion in regard to the committal of Woodfall, the printer, for breach of privilege, it may now be difficult to determine; but after being a supporter of administration for six years, Mr Fox was ejected in so cavalier a manner, that he was very naturally thrown into the foremost ranks of opposition. Happily for his consistency the adoption of the disastrous measures which terminated in the independence of the American colonies, enabled him to take this part without opposing any of the proceedings or policy which he had previously supported. During the whole of this eventful contest he spoke and voted in direct opposition to the ministerial system, and in conjunction with Burke, Barré, Dunning, and other eminent leaders, displayed the highest talents both as a statesman and orator. At the general election in 1780 he became a candidate for the representation of the city of Westminster, and succeeded, although opposed by the whole influence of the crown, a circumstance that necessarily much increased his political importance. On the final defeat of the weak and calamitous administration of lord North, and the accession of that of the marquis of Rockingham, Mr Fox obtained the office of secretary of state for foreign affairs, and the nation was led to hope that a strong and effective cabinet was at length formed. The measures adopted in the first instance were

of a nature to justify these expectations; contractors were excluded from seats in the house of Commons; custom and excise officers were disqualified from voting at elections; the unconstitutional proceedings in relation to the Middlesex election were rescinded; a reform bill abolished a number of useless places; and a more liberal policy was adopted in regard to Ireland. The death of the marquis of Rockingham in the midst of these promising appearances, suddenly divided the party, and on the earl of Shelburne becoming first lord of the Treasury, in preference to the duke of Portland, Mr Fox retired in disgust, and soon after a union took place between his friends and those of lord North, which, under the name of "The Coalition," was very justly deemed odious by the great mass of the people. Although this erroneous measure appears to have originated rather with Mr Burke than Mr Fox, the formal defence of it by the latter was not less earnest and ingenious. The spontaneous feelings of mankind are not however to be blunted by factitious theories and abstract arguments. That "measures and not men" are to be opposed, is very true as a maxim, but when ministers have been denounced as unfit for government for years together, and have actually proved themselves so, it is not for those who have been the foremost to drive them out of office to accompany them in again. The temporary success of this ill-judged party movement served only to render popular disgust the more general; and when on occasion of the famous India bill the dissatisfaction of the sovereign became apparent, the dismissal of the Coalition from office excited very general satisfaction. Indeed, the tide of popularity set at this time so strongly against Mr Fox, that at the ensuing election nearly seventy of his friends lost their seats, and he had himself to enter into a strong and expensive contest for the representation of Westminster. Still, although in the new parliament Mr Pitt had a decided majority, Mr Fox headed a very strong opposition; and political questions were for some years contested with a display of talent on both sides, which the house of Commons had seldom previously exhibited. In 1788 Mr Fox repaired to the continent, and was proceeding to Italy, when he was recalled by the king's illness, and the necessity of constituting a regency. The contest for the unrestricted right of the heir-apparent, which he warmly espoused, was marked by a great display of oratorical and logical talent on the part of the opposition, but both in and out of parliament the majority on this occasion was with Mr Pitt. In 1790 and 1791 Mr Fox regained a share of popularity by his opposition to wars with Spain and Russia, and also by his libel bill, regulating the rights of juries in criminal cases, and rendering them judges both of the law and the fact. On the breaking out of the French Revolution, he, like many other friends to liberty, was disposed to regard it as likely to prove extremely beneficial. The contrary views of Mr Burke and other of his friends, and the extraordinary manner in which that warm and

intolerant politician on that account publicly renounced his friendship, is one of the most striking incidents in parliamentary history. Possibly in regard to that great event they were both right and both wrong. It would be difficult to maintain at this time of day that the French nation has not been benefited by the Revolution, and equally so to dispute the magnitude of its temporary sufferings and sacrifices. Mr Burke was right as to immediate consequences, and Mr Fox as to remote. The policy of the war that followed belongs to history; suffice it to say, that Mr Fox firmly opposed the principle on which it commenced, and strenuously argued for peace on every occasion; and at the treaty of Amiens in 1801, gave Mr Addington, who concluded it, his support. When hostilities were renewed he also doubted of their necessity; but on becoming secretary of state for foreign affairs, in conjunction with the Grenville party, he acquiesced in its propriety. Coalitions were uniformly the wreck of this great man's popularity; and certain arrangements which it rendered necessary on the present occasion, and more especially that of making lord-chief-justice Ellenborough a cabinet minister, were very unpalatable to the public. His political career was now however drawing towards the close; his health began rapidly to decline; symptoms of dropsy appeared; and in a few months after the death of Mr Pitt, his great rival was laid in an almost contiguous grave. Mr Fox died September 15, 1806, without pain, and almost without a struggle, in the fifty-eighth year of his age. The opinions formed of this eminent leader as a practical and theoretical statesman, it is unnecessary to say have been as various as the shades of party difference in the country. That he was a sincere friend to all the broad and generous principles, on the due development of which rests the freedom and best interests of mankind, is not to be doubted; and that they were alloyed by great latitude on the subject of party and political expediency, is equally clear. As a powerful and purely argumentative orator he was of the very first class; although as to mere eloquence and occasional brilliancy, he possibly yielded to Messrs Pitt, Burke, and Sheridan; nor was his voice and manner prepossessing, although highly forcible. On his amiability in private life, allowing for a somewhat too dissipated youth, all accounts agree; friends and foes equally testify to the ingenuous and benign features of his character. The result of this happy temperament was, that no man was ever more idolized by a wide and extensive connexion, a fact rendered conspicuous by more than one striking circumstance. As an author, besides some Latin poetry and a Greek dialogue, by which he highly distinguished himself at Eton, and a few numbers of a paper entitled "The Englishman," he published nothing during his lifetime, but "A Letter to the Electors of Westminster," 1793, which was read with great avidity. To his nephew, Lord Holland, the world is indebted for his posthumous publication entitled "The History of the early part of the Reign

of James II, with an introductory chapter," which was intended to form a commencement of the History of the Revolution of 1688. It is written with the most unpretending simplicity, the ambitious style of Gibbon and others being deemed by Mr Fox unfavourable to the philosophical conveyance of matter of fact. The view which he takes of times which he describes, are necessarily those of a broadly constitutional Whig. With some appearance of having been commenced in the decline of mental vigour, enough remains to show that had he earlier applied his talents in this direction, he would have proved a sound and philosophical historian.—*Character of C. J. Fox by Dr. Parr. Rees's Cyclopædia.*

FOX DE MORZILLO (SEBASTIAN) known by the name of Sebastianus Foxus Morgillus, a Spanish philosopher, was born at Seville in 1528. At the age of twenty he gained such reputation by his works, that Philip III made him preceptor to the infant don Carlos. At the time of his appointment he resided at Louvain, but on his voyage to Spain he was wrecked and lost his life. He was the author of several works, the principal of which are—"De Usu et Exercitatione Dialecticæ;" "De Honore;" "De Studiis Philosophicæ Ratione;" "In Topica Ciceronis Paraphrasis;" "De Juventute;" "De Conscribenda Historia;" "De Regno et Regis Institutione, lib. III.;" "De Natura Philosophorum seu de Platonis et Aristotelis Consensione, lib. V.;" &c. &c.—*Moreri.*

FRACASTORIUS (JEROME) an ingenious poet of the sixteenth century, born at Verona in Italy. It is said that he came into the world without a mouth, having in the place of it a small aperture, which was enlarged by a surgical operation. One day, when his mother was carrying him in her arms, and walking in a garden, she was scorched by lightning, and the child was uninjured. He was patronised by cardinal Bembo, to whom he addressed the most celebrated of his works, a Latin poem entitled "Syphillis." In the latter part of his life he wrote a poem on the adventures of the patriarch Joseph; but his poetic fire seems then to have been exhausted, and the virtues of the hero were less happily celebrated than the horrors of the disease. He died at Padua, of apoplexy, in 1553, aged seventy-one. Among the moderns who have exercised their talents in the composition of Latin verse, few have obtained higher reputation than Fracastor. The elder Scaliger ranks him as a poet next to Virgil; and his merit has been generally acknowledged. Besides the poems already noticed, he wrote another entitled "Alcon, sive de Cura Canum venaticorum." Among his prose works on professional topics, are treatises "De Sympathia et Antipathia;" "De Contagione et Morbis contagiosis;" &c.—*Tiraboschi. Hutchinson's Biog. Med. Aikin's G. Biog.*

FRAGONARD (HONORE) a French artist, was born in 1732 at Grasse, and was a pupil of Boucher. He was admitted into the French Academy in 1765, when he presented his picture of Callirhoe. He was very fond of painting female figures, and always introduced them

in his landscapes when he could do so to advantage. He died at Paris in 1807.—*Galerie des Peintres célèbres.*

FRANCIS I, king of France, frequently surnamed "The Great," and "The Restorer of Learning," succeeded his father-in-law, Louis XII, in 1515. He was the only son of Charles, duke of Orleans, constable of Angouleme. Immediately on his accession he assumed the title of the duke of Milan, and put himself at the head of a powerful army to assert his right to that duchy. He gained a sanguinary victory over the Swiss, who defended it; and it was on this occasion that he desired to be knighted by the celebrated chevalier Bayard. By this victory Francis became master of the Milanese, and Pope Leo X, alarmed at his conquests, held a conference with the king at Bologna, and settled the concordat, according to which, from that time the kings of France appointed to all consistorial benefices, and the pope received one year's income upon every change. On the death of Maximilian I, Charles V being elected emperor in opposition to Francis, the jealousy which had long subsisted between those princes immediately broke out, and a war ensued, which proved fatal to all Europe. The eventful struggle which followed, until the capture of Francis at the famous battle of Pavia, forms a subject for history rather than biography. Conducted a prisoner to Madrid, a treaty was concluded in that capital in 1526, which restored Francis to liberty, but so hard were the conditions that it was never fulfilled. The cession of Burgundy was one of them; but when possession was demanded by the ambassador of Charles, he was introduced to the assembled states of that duchy, who formally declared that the king had no power to give up any province of his kingdom. On this refusal the war recommenced, until the treaty of Cambray, which in its turn was interrupted by a second war for the Milanese, in the course of which Barbarossa and Gustavus Vasa, king of Sweden, espoused the cause of Francis, and Henry VIII of England, that of the emperor. At length a peace took place with Charles in 1544, and with Henry in 1546; but Francis did not long enjoy the tranquillity which followed, dying in March 1547, at the age of fifty-three. This prince possessed many shining personal qualities, being magnanimous, humane, generous, and witty. The revival of polite literature in Europe was very mainly indebted to his encouragement, and he patronised learned men, founded the Royal College of Paris, and furnished a library at Fontainebleau at a great expence; besides building several places, which he ornamented with pictures, statues, and costly furniture, to the great encouragement of the fine arts. The death of Leonardo da Vinci in his arms, forms another affecting proof of this sovereign's attachment to men of genius. He also invited Erasmus to Paris; and indeed appears to have possessed that real love for letters which his imitator, Louis XIV, may be suspected of regarding as merely becoming a powerful ruler. When dying, Francis particularly requested his son to ease the burdens of the people, exhausted

by so much war, and by previous economy left him the means of doing so. It was this sovereign who ordered all public acts in future to be written in the French language; and to him the French court is indebted for that free intermixture of the sexes, which has been followed by most of the other courts of Europe, and which, with some indifferent consequences, has indisputably contributed to their lustre and amenity. Upon the whole, although possibly not possessed of sufficient political capacity to duly claim the name of *great*, or of purity of conduct to merit that of *good*, Francis I may certainly be deemed one of the most distinguished sovereigns of the country over which he ruled.—*Hist. of France, by Mezeray. Robertson's Hist. of Charles V.*

FRANCIS OF ASSISI, a celebrated saint of the Roman church, and founder of the famous order of mendicant friars, called Franciscans, was born at Assisi in Umbria in 1182. He was the son of a merchant, and was a young man of dissolute manners; but in consequence of a dangerous illness, he became so enthusiastically religious, that he adopted the resolution of retiring from the world. He accordingly devoted himself so much to solitude, and mortified himself so severely, that he was thought distracted, and his father, angry at his refusal to follow his profession, had him thrown into prison. This severity proving of no avail, he was taken before the bishop of Assisi, in order formally to resign all claim to his paternal estate, which he not only agreed to, but stripped himself of all his clothes, even to his shirt. Such is the catching nature of enthusiasm, he soon prevailed with great numbers to join him in his vow of poverty, and drew up an institute or rules for their use, which was sanctioned by Innocent III in 1210. His adherents increased so fast, that in 1219 he held a chapter which was attended by five thousand friars. He soon after obtained a bull confirmatory of his order, from pope Honorius III; some time after which he made a voyage to Palestine, and fruitlessly endeavoured to convert the sultan Meledin. Returning to his native country he died at Assisi in 1226, in his forty-fifth year, a victim to incessant toil and unremitting self-mortification. He was canonized by pope Gregory IX in 1230, and the 4th of October, the day of his death, was assigned for his festival. A curious account of the conduct, penances, and mortifications of this singular enthusiast, will be found under his article in Bayle. His order rose rapidly to great splendour. Before the Reformation it had eighty convents in England alone, and a great number of distinguished prelates, writers, and even popes had been Franciscans. The operation of the mendicant orders was doubtless in the first instance highly favourable to the domination of the Roman see; but it may be doubted if in the long-run their consummate reliance on the simplicity of the people, (on whom they practised every sort of pious fraud with unblushing effrontery,) did not hasten the Reformation. A complete history of St Francis and his order will be found in the "Annales

Ordinis Minorum" of Wadding, the best edition of which is that of Rome, 1731. St Francis was the author of "Epistolæ," "Orationes," "Regulæ Monachis præscriptæ," "Collectiones," "Sermones," &c. which were collected together and published in Paris in 1640, one vol. folio.—*Cave's Hist. Lit. Bayle. Butler's Lives of the Saints.*

FRANCIS OF PAULO, another Romish saint, who in order to exceed his predecessor in humility, founded the order of Minims, (least,) as the other had done that of Minors, (inferiors.) He was born in 1416 at Paulo in Calabria, and began his career of saintship by retiring to a cell on the desert part of the coast. He soon obtained followers, and ere long constructed a monastery round his cell, and thus commenced his order. He next formed a rule for it, which was approved by Alexander VI and confirmed by Julius II. It was extremely rigorous, enjoining perpetual abstinence from wine, fish, and flesh, besides which his disciples were always to go barefoot, and never sleep on a bed. He died in France, whither he had repaired at the earnest solicitation of Louis XI, who hoped to be cured of a dangerous malady by his presence. This event took place in 1508, when he had reached the age of ninety-one. This perfectly illiterate enthusiast was canonized by Leo X.—*Butler's Lives of the Saints. Moreri.*

FRANCIS DE SALES, another saint of the Roman calendar, of a noble family of Savoy, was born at the castle of Sales in the diocese of Geneva, in 1567. Having taken orders he became provost of the church of Annecy near Geneva, and being dispatched as a missionary into the vallies of his diocese, distinguished himself by the ability and success with which he recalled stray votaries to the church of Rome. He subsequently undertook the reform of the whole diocese of Geneva, and instituted the order of the visitation in 1610, which was confirmed in 1618 by pope Paul V, and he also established a congregation of hermits in Chablais. Being chosen almoner to the princess of Piedmont he would accept the office only on the condition that it should not withdraw him from his diocese, where he performed all the episcopal functions with exemplary diligence, humanity, and benevolence, until his death in 1622, at the age of fifty-four. He was the author of several religious works, which are collected in two volumes folio. Of these the best known is his "Introduction to a devout Life," which is much esteemed by pious catholics. He was canonized in 1665.—*Moreri. Butler's Lives of the Saints.*

FRANCIS XAVIER, (see XAVIER.)

FRANCIS (PHILIP) an English poet and dramatic writer, more distinguished for his translations of classical authors than for his original compositions. His father was dean of Lismore and rector of St Mary's, Dublin, whence he is said to have been ejected for his tory principles at the Revolution. The son was educated at Dublin for the church, and after taking orders came to England and settled at Esher in Surrey, where he kept a

school, and had among his pupils Gibbon, afterwards so celebrated as an historian. He obtained the degree of LL.D., and through the influence of lord Holland he was presented to the rectory of Barrow in Suffolk, and made chaplain of Chelsea hospital. He was the author of two tragedies—"Eugenia," 1752; and "Constantia," 1754; neither of which met with a very favourable reception from the public. His poetical translation of the works of Horace, with notes, was much more successful, and has been repeatedly printed. He published in 1757 a translation from the Greek of the Orations of Demosthenes and Æschines, 2 vols. 4to. Dr Francis also employed his pen a good deal in political controversy. He died in 1773.—*Chalmers's Biog. Dict. Biog. Dram.*

FRANCIS (sir PHILIP) a celebrated politician, who was the son of the last mentioned, and was born in Ireland in 1740. He was educated partly under his father, and afterwards at St Paul's school; on leaving which he became a clerk in the secretary of states' office. In 1760 he went out to Portugal with the British envoy; and on his return he obtained the situation of clerk in the war-office under lord Barrington. He was dismissed, or relinquished the post, in consequence of a quarrel with that nobleman; and in 1773 he went to the East-Indies, where he became a member of the council of Bengal. He now distinguished himself by his opposition to the measures of governor Hastings, in which he seems to have been influenced by personal animosity, the violence of which at length occasioned a duel, in which Mr Hastings was wounded. In 1781 Mr Francis returned to England, and shortly after was chosen MP. for the borough of Yarmouth in the Isle of Wight. In the house of Commons he joined the ranks of opposition; and on the impeachment of Mr Hastings, though his name did not appear as a manager of the proceedings against that gentleman, yet he actively supported them on every occasion. He came into office with the Whig administration; and he was honoured with the order of the bath; but the remainder of his life was undistinguished by any circumstances of importance. He died in 1818. He published several political pamphlets, and to him has been assigned the credit of having written the famous "Letters of Junius."—*Monthly Mirror. Ann. Reg.*

FRANCK DE FRANCKENAU (GEORGE) a German poet and medical writer, who was a native of Nuremberg in Upper Saxony. After completing his studies he was chosen professor of physic at Heidelberg, whence he removed to Wittemberg, and subsequently became physician to Christiern V, king of Denmark. He died at Copenhagen in 1704, aged fifty-eight. Among his works are—"Lexicon Vegetabilium usualium," of which there are several editions; "Parva Bibliotheca Zootomica;" "De Calumniis in Medicos et Medicinam;" "De Medicis Philologis;" "Palin-genesia, sive resuscitatione artificiali Plautarum, Hominum, et Animalium e suis cineri-

bus;" "Satyræ Medicæ viginti."—His son, GEORGE FREDERICK FRANCK, was a teacher of medicine at Wittemberg, and the author of several works on botany and physic.—*Moreri.*

FRANCKE (AUGUSTUS HERMAN) a German Lutheran divine, signalized by his philanthropy, was born of respectable parents at Lubeck in 1663. He was educated at the universities of Erfurt, Kiel, and Leipsic, at the latter of which he graduated and lectured on divinity, but a party rising up against him on account of an imputed fanatical tendency in his lectures, he left Leipsic in 1690, and finally became professor of divinity at Halle. Here, by indefatigable exhortation and exertion, he was enabled to complete the establishment of the house of Orphans, an institution which has been of essential service to the interests of humanity and good morals in Germany. Before he died, the benevolent projector lived to see provision made by this charity and its branches for the education of 2196 children. Mr Francke died in 1727, regretted by all ranks. Besides the History of his Orphan House, translated into English by Dr Woodward, under the title of "Pietas Hallensis," he was the author of several Latin treatises, all connected with the study of theology and biblical criticism.—*Moreri.*

FRANCKLIN (THOMAS) DD., a miscellaneous writer, was the son of a printer and bookseller of Covent-garden. He was born in 1721, and by the advice of his political friends, his father, who was printer of the celebrated anti-ministerial paper, the Craftsman, devoted him to the church. He was educated at Westminster school, whence he was elected to Trinity college, Cambridge. He was afterwards an usher in the school in which he was educated, and in 1750 was chosen Greek professor at Cambridge. He first appeared as an author in a translation of "The Epistles of Phalaris," 1749, and of Cicero's tract "De Natura Deorum." About the same time he is said to have published "An Inquiry into the Astronomy and Anatomy of the Ancients," reprinted in 1775, 8vo. In 1759 appeared his translation of "Sophocles," 2 vols. 4to, which is allowed to be a fair and forcible version of that great tragic poet. This work was followed by a "Dissertation on Ancient Tragedy;" and he is also supposed to have aided Smollet in the Critical Review, and in the translation of the works of Voltaire. In 1757 he received from Trinity college the livings of Ware and Thundridge in Hertfordshire, and in 1765 published a volume of "Sermons on the relative Duties," which met with considerable attention. The next year he produced at Drury-lane theatre the tragedy of the "Earl of Warwick," borrowed without acknowledgment from the French of La Harpe; and although in 1767 he was made one of the king's chaplains, and in 1770 DD., he still paid a somewhat inconsistent attention to the stage, by the occasional production of dramas, (chiefly adapted translations from the French,) and none occasion descended even to farce. In 1776 he was

presented to the living of Brasted in Surrey, which he held to his death. In 1780 appeared his excellent translation of Lucian, in 2 vols. 4to. He died March 15th, 1784, leaving behind him the character of a learned, able, but jealous and peculiar man. Besides the works already mentioned, or alluded to, he was the author of a piece of humour, entitled "A Letter on Lectureships;" "An Ode on the Institution of the Royal Academy," and three volumes of posthumous sermons.—*Biog. Dram.*

FRANCO or FRANCHI (NICHOLAS) an Italian poet of the infamous class which disgraced the sixteenth century, was born at Benevento in 1510. In his youth he became acquainted with Peter Aretino, and from his assistant became his rival in the composition of obscenity and virulent personal satire. His first publication of the kind was entitled "Pistole Vulgari," which he followed up with several similar works, among which the "Priapeia Italiana," united to the grossest licentiousness the most unbounded abuse and satire against princes, popes, and the fathers of the council of Trent. This discreditable employment of his talents did not however prevent him from acquiring great reputation, or from following the occupation of a schoolmaster. Under Pius IV he was even openly protected by a member of the sacred college, but a Latin epigram on Pius V suddenly terminated his career, being taken from his study in his furred robe, and hanged at the common gallows without trial or ceremony. He was author of several other works besides those alluded to, and left behind him a MS. translation of the Iliad.—*Tiraboschi. Roscoe's Life of Leo X.*

FRANCOIS (LAWRENCE) a French abbé, was born at Arinthod in Franche Comté in 1698. He was for some time one of the chevaliers of St Lazarus, but on quitting that society he came to Paris and engaged in teaching. He died there in 1782. His works are—"Géographie," 12mo, often reprinted and known by the name of "Crozat," the lady for whom he composed it; "Défence de la Religion," 4 vols. 12mo; "Examen des faits qui servent de Fondement à la Religion Chrétienne," 3 vols. 12mo; "Examen du Catéchisme de l'honnête homme," 12mo; "Preuves de la Religion de Jesus Christ," 4 vols. 12mo; "Observations sur la Philosophie de l'Histoire," 8vo. He also left some manuscripts in refutation of the Philosophical Dictionary, System of Nature, &c.—*Nouv. Dict. Hist.*

FRANKLAND (THOMAS) a physician and historian, was born in Lancashire in 1653, and was educated at Brasenose college, Oxford. He took a degree in arts, and in 1654 he obtained a fellowship. He became a preacher according to the form of ordination during the usurpation; but having in 1662 served the office of proctor, the following year he entered into orders regularly. He next studied physic and settled in London, where by producing a forged diploma he was admitted fel-

low, and afterwards censor of the College of Physicians. The fraud was however discovered, his credit and practice fell off, and he was finally imprisoned in the Fleet, where he died in 1690. He was the author of "The Annals of King James and King Charles I, containing a faithful History and impartial Account of the great Affairs of State and Transactions of Parliament in England, from the Tenth of King James, 1612, to the Eighteenth of King Charles, 1642." He was also supposed to be the author of a pamphlet, entitled "The Honours of the Lords Spiritual asserted, and their Privileges to Vote in capital Cases in Parliament maintained by reason and precedents."—*Athen. Oxon. vol. ii.*

FRANKLIN (BENJAMIN) an American philosopher and statesman of great celebrity, was born at Boston in New England in 1705. His family was originally from Ecton in Northamptonshire, where his ancestors had for several years possessed a small freehold. His father removed to New England to avoid the persecution against nonconformists under Charles II, and followed the occupation of soap-boiler and tallow-chandler at Boston. The mother of Benjamin, a second wife, was a descendant of one of the first colonists of the province. The early indications which he gave of a love of literature and reading, induced his father, in the first instance, to destine him for the church; but rendered unable, by the burden of a large family, to supply sufficient funds, he was early taken from school and employed in the servile offices of the family trade. By this change he was severely mortified, and wished to go to sea, which his father opposed. Although in humble life, the latter possessed considerable information, with great solidity of understanding; and took great pains to form the minds of his children on the principles of good sense and moral rectitude. He also possessed books, although his library was scanty; and Franklin read many accounts of voyages and travels, and early went through a course of polemical divinity, which seems to have done any thing but settle his faith. He attributes however to a careful perusal of Defoe's Essay upon Projects, the bias which influenced the complexion of his future career. While thus unconsciously forming the outline of future character, an elder brother having set up a printing office at Boston, he was attired to him as an apprentice; and he could not have been placed to a business better suited to his aptitude and disposition. He quickly rendered himself a proficient in the mechanical part of the profession, and eagerly seizing every opportunity to get at new books, was soon inspired with the ambition of authorship. He began by writing ballads and printing them; but a little wholesome ridicule on the part of his father, soon convinced him that his talent was not poetry. With characteristic assiduity he then studied the composition of prose, and to the success of his efforts in this direction he attributes much of his subsequent elevation to stations of importance. In the mean time he be-

came a very dogmatical polemic, from which, by the perusal of a translation of Xenophon's Memorabilia, he was softened into a Socratic; and finally he argued himself into the scepticism which he seems to have retained, more or less, all the rest of his life. He however early obtained that dominion over his appetites which is so important a step in moral discipline, and to this power of self-denial much of his future prosperity may be attributed. His brother at length set up a newspaper, to which he ventured to send some pieces anonymously for insertion, which being accepted and much admired, he began to feel his abilities and to become impatient under treatment which exhibited more of the master than relation. The result of these disagreements was a determination to clandestinely quit Boston, and seek his fortune in New York or Philadelphia. This event accordingly took place in his seventeenth year, and arriving in the latter place with scarcely a shilling in his pocket, and a penny roll in his hand, he obtained employment from a printer named Keimer, whose deranged affairs he soon put into better order. In Philadelphia he obtained the notice of sir William Keith, the governor of the province, who urged him to set up for himself, and after an ineffectual application to his parents to assist him, the governor himself offered to supply the means, and proposed to him to make a voyage to England to acquire proper materials. Franklin gladly embraced this proposal, and arrived in England with his intimate friend, Ralph, subsequently a political writer of some eminence. Upon his reaching London he found himself entirely deceived in his promised letters of credit and recommendation from governor Keith, and was therefore obliged to engage himself at a printing-house of eminence in Bartholomew Close. The conduct of Franklin in England seems to have been marked with his usual prudent economy; but both he and Ralph appear to have acted with some licence in other respects, the one forgetting a wife and child whom he had left in America, and the other his engagement to a Miss Read, whom he was to marry on his return. Franklin remained in England eighteen months, during which time he wrote a "Dissertation on Liberty and Necessity, Pleasure and Pain," in answer to Wollaston's Religion of Nature. This work attracted some notice, and introduced him to Dr Mandeville, author of the celebrated Fable of the Bees. In 1726 he returned to Philadelphia in the capacity of clerk to Mr Denham, a liberal-minded merchant, by whose death the connexion was dissolved in less than a year, and he became superintendent in the printing-office of his old employer, Keimer. In this situation he acquired general esteem, and was enabled to set up for himself, in partnership with one Meredith, a young man whose friends could advance a little money. Their success was immediate, although gradual, and was much ensured by a new paper, which the talents of Franklin, both as writer and printer, rendered

immediately successful. In process of time Meredith, who disliked business, voluntarily withdrew, and Franklin was enabled by his friends to go on by himself, and unite the trade of a stationer. The remainder of his career as a tradesman was thriving and prosperous in a high degree; and in 1730 he ventured to marry Miss Read, then however a widow, or rather the nominal wife of a man from whom she had separated on discovering that he was previously the husband of another living wife. The subsequent history of Franklin relates no longer to the humble tradesman, but to the influential politician and natural philosopher. Becoming in point of circumstances one of the leading persons in Philadelphia, the vigour of his capacity soon displayed itself in schemes for the advancement of the community of which he formed a part. The establishment of a public library was one of these useful projects; and in 1732 he published his "Poor Richard's Almanack," which became remarkable for a number of concise, pointed, prudential maxims, that were admirably calculated for the meridian in which it circulated. His political career commenced in 1736, when he was appointed clerk to the General Assembly of Pennsylvania; and the next year he obtained the valuable office of post-master-general of Philadelphia. In the French war in 1744, when it became necessary to secure the province against the enemy, Franklin proposed a plan of volunteer association, which was immediately signed by 1200 persons, and being circulated through the provinces, obtained 10,000 subscriptions, a circumstance meriting notice, as it first served to unfold to America the secret of her own strength. It was also about this time that he commenced those electrical experiments which have rendered his name so celebrated. His discoveries were communicated in three publications, entitled "New Experiments and Observations in Electricity, made at Philadelphia in America." They are conveyed in the form of letters to Mr Collinson, the dates of which are from 1747 to 1757. A full account of his discoveries in reference to negative and positive electricity; his manner of charging the Leyden phial; and, above all, his brilliant demonstration of the identity of electric fire with that of lightning, will be found detailed at length in the "History of Electricity" by Dr Priestley. As practical utility was, in the mind of Franklin, the ultimate object of all philosophical investigation, he immediately applied his discovery, by the invention of iron conductors, to the protection of buildings from lightning; and such was the reliance on his sagacity, they were immediately adopted by his countrymen generally. In 1747 he was elected representative for Philadelphia, to the general assembly of the province, and distinguished himself on the popular side, against the claims of the proprietary to an exemption from taxation. In 1750 his plan of an academy in Philadelphia was adopted, and he was also greatly instrumental in the formation of an hospital. In 1753 he was appointed to the important office of

deputy postmaster-general of the British colonies; and in 1757 he sailed for London as agent for Pennsylvania, the assembly of which was engaged in warm disputes with the proprietary. Having carried his point against the latter, his success and reputation produced him similar appointments from other American provinces, and a forcible pamphlet written by him is thought to have led to the determination of acquiring Canada. In 1762 he returned to America, and received the thanks of the assembly of Pennsylvania for his services, and a handsome pecuniary recompence. In 1764, being defeated in his re-election by the influence of the proprietary, he again visited England as agent for Pennsylvania; and this being the period when the stamp-act produced so much commotion in America, he was heard at the bar of the house of Commons in respect to the disposition of his countrymen in regard to it. In 1766 and 1767 he visited Holland, Germany, and France, and met with a distinguished reception. The interception by Dr Franklin of some letters from the governor and others of Massachusetts bay, to the British ministers, containing most unfavourable accounts of the conduct and intentions of the colonists, and recommending coercion, being published by the legislature of that state, produced a great sensation. On his attending the privy-council to present a petition for a change of governors, he was treated with so much virulence in relation to these letters by the then solicitor-general, Wedderburne, since chancellor and earl of Rosslyn, that he appears never to have forgotten it; nor was the loss of his place of deputy postmaster-general of a nature to allay his resentment. Soon after the commencement of hostilities in 1775, he returned to America, and when the question of a declaration of independence was started, was decidedly in its favour. He afterwards sat as president of the convention for settling a new government for Pennsylvania; and was soon after deputed to the court of France, where he brought about the treaty of alliance defensive and offensive in 1778, which produced an immediate war between France and England. He was also one of the commissioners who, on the part of the United States, signed the provisional treaty of peace in 1782, and the definitive treaty in 1783. In 1785 he was recalled from the high station which he had so well filled, and was chosen president of the supreme executive council. The high regard in which he was held by his fellow-citizens appeared in his being from time to time chosen president of various philanthropic societies; among which one for the abolition of slavery, and another for the improvement of prisons, claimed much of his attention. In 1788 his increasing infirmities induced him to withdraw from public business altogether; and on the 17th April 1790 he closed his eventful life in the eighty-fifth year of his age. Dr Franklin has possibly never been surpassed in the solid practical wisdom which consists in duly adapting means to ends. His cool temper and sound judgment uniformly secured him from false views and

erroneous expectations, and he generally saw things so correctly, that he predicted consequences with almost prophetic accuracy. Although by no means inattentive to his own interest, he united with it a zealous solicitude for the advancement of that of mankind in general, and if a political career of so marked a description cannot but have exposed him to much censure and obloquy, his general character is sanctioned by the general esteem of those who can most fairly judge of it, and his country has ranked him among the best and most valued of her citizens. Of his private life we hear little after the termination of his own early biography; but it is remarkable that his son, who became governor of New Jersey, was a zealous American loyalist, and acted diametrically in opposition to the views of his father. As a natural philosopher the fame of Franklin rests principally on his electrical discoveries; although he has displayed much ingenuity in regard to meteorology and mechanics. As a political writer he is distinguished by force and simplicity; while his miscellaneous pieces are marked with a cast of humour which renders them equally entertaining and impressive. A complete edition of his works and correspondence, with his life written by himself, was published in London, in 3 vols. 4to, 1818.—*Life prefixed to his Works. Priestley's Hist. of Electricity. Monthly Review, &c.*

FRANKLIN (ELEANOR ANNE) better known, as an authoress, by her maiden name, Porden. She was the youngest daughter to Mr Porden, a well-known architect, who acted for more than forty years as agent and surveyor in the Grosvenor family, and built Eton Hall. Miss Porden was born in July 1795, and exhibited in her youth no small promise of talent, together with a most retentive memory, and a strong bias towards literature, which led her, through the assistance of a friend, to make considerable progress in the acquirement of the Greek and other languages at an early age. A knot of literary friends, who occasionally met at her father's house, fostered this natural bent of her genius, and their habit of furnishing contributions to a kind of album kept by the party under the name of the "Salt Box," (selections from which have been printed,) did much towards confirming in her a passionate fondness for poetry. In her seventeenth year she wrote, as her share towards this domestic miscellany, her first poem, "The Veils, or the Triumph of Constancy," which was published in 1815, with a dedication to countess Spencer. Three years afterwards appeared a small "Poetical Tribute," under the name of "The Arctic Expedition," suggested by a visit to the Isabella and Alexander discovery ships, which visit led to an acquaintance with captain Franklin, one of the gallant adventurers, that ended in marriage after his return from the expedition, in the month of August 1823. The year previously appeared Miss Porden's principal work, an epic poem on the subject of the third crusade, entitled "Cœur de Lion," dedicated by permission to the king. In June 1824 the

birth of a daughter encouraged hopes in her friends that a strong tendency to a pulmonary complaint increased by the bursting of a blood-vessel in 1822, might be counteracted, but these flattering expectations were soon destroyed, and she died February 22d, 1825, a few days after her husband had sailed from England on his second expedition to the north.—*Ann. Biog.*

FRANSHAM (JOHN) a native of Norwich, was born in 1730. He received a common education, and was apprenticed to a cooper. At the end of two years he left his master and applied himself to the study of mathematics; he then became clerk to an attorney, but did not long remain in his situation, but rambling about the country enlisted at Newcastle as a common soldier. He was soon discharged as unfit for service, and returning to Norwich became amanuensis to Mr Bourne, the dissenting minister, and gave instructions in mathematics. He next renounced the Christian religion and professed paganism, writing several treatises in favour of his belief. He then resumed his rambles, and coming to London taught there for some years. In 1772 he again visited Norwich, where he died in 1810. He was esteemed an able instructor, but was by many deemed insane.—*Memoir by Saint.*

FRAUNCE (ABRAHAM) an English poet of the Elizabethan age, the protégé of sir Philip Sidney, who placed him at St John's college, Cambridge, where he graduated, and afterwards followed the law as a profession. His works are—"The Lamentation of Amintas for the Death of Phillis," 4to, 1567; "The Lawyer's Logic;" and "The Countess of Pembroke's Ivy-Church and Emanuel," 1591. He also translated the "Theagenes and Chariclea" of Heliodorus.—The time of his death is uncertain.—*Philips's Theatrum.*

FREDERICK I, surnamed BARBAROSSA, emperor of Germany, born in 1121, was the son of Frederick, duke of Swabia. He succeeded his uncle Conrad on the imperial throne in 1152. This warlike prince mastered Italy, and made use of the newly-discovered pandects to colour his pretensions to be absolute master of the lives and properties of his subjects. Able as he was however, the papal influence was still so strong, that being weakened by some reverses, he was obliged to seek an accommodation with pope Alexander III, and in an interview at Venice in 1177 behaved with great submission. This reconciliation was followed by the treaty of Constance, in which he confirmed the freedom of four-and-twenty Italian cities, reserving his rights as sovereign. He refused however to grant succeeding popes the sovereignty of the countess Matilda's estates, usually called St Peter's patrimony, and so strengthened his interest by the marriage of his son Henry with the heiress of the king of Sicily that the pope, with many causes of complaint, dared not to proceed to extremities. At length the capture of Jerusalem by Saladin suspended domestic quarrels among the Christian princes, and Frederick as the first sovereign in Christendom, took the

cross in 1188, with his son Frederick, a number of the principal nobles in Germany, and an army of 160,000 men. The fears or peridy of the Greek emperor, Isaac Angelus, obliged him to make his way by force, and at length, with a greatly reduced army, he reached the Turkish frontier, took the city of Iconium, crossed mount Taurus, and was proceeding in a career of victory, when he was accidentally drowned, being carried away by the current in a river of Cilicia, generally represented as the Cydnus, in which he was bathing. This event took place in 1190, in the sixty-ninth year of his age. Besides the political vigour and capacity displayed by this powerful prince, he possessed some literary talents, and drew up memoirs of his own life, which he gave to the historian Otho, bishop of Frisingen.—*Mod. Univ. Hist. Gibbon.*

FREDERICK II, emperor, and grandson of the preceding, was born in 1194, and created king of the Romans in his cradle. He was educated with great care, and became exceedingly learned for the age. He was solemnly crowned in 1215 and in 1220 crossed the Alps in order to receive the crown from the hands of the pope, then Honorius III. At his coronation he swore to defend the rights of the holy see, and also to pass over into Asia with an army of crusaders, but soon found himself involved in disputes by the papal claims on Naples.—These differences, and other disturbances in the imperial towns of Germany, supplied him with excuses to retard his expedition to Palestine, but at length he embarked in 1228: leaving however the duke of Spoleto his lieutenant in Italy, who so exasperated the pope, that his indignation pursued the emperor to Jerusalem, and at his instigation the military orders refused to obey him. Thus embarrassed, he made a truce for ten years with Meledin, sultan of Egypt, on condition that the Christians should retain Jerusalem, in which city he was crowned. Upon his return to Italy his treaty was disavowed by the pope, but a reconciliation being effected in 1230, he turned his attention to the reduction of the revolted cities of Lombardy. Having quashed a conspiracy in Germany on the part of his own son Henry, he invaded the dominions of the duke of Austria, his accomplice, took Vienna, and founded the university still subsisting there. Again becoming all-powerful in Italy, the pope openly took part against him, and he was excommunicated, and as usual in many similar contests, papal influence at length so far prevailed, that being totally defeated before Parma, his affairs in the north of Italy became exceedingly disordered, and retiring into his kingdom of Naples, he died at Firenzuola in 1250, at the age of fifty-six. Some historians pretend that he was stifled with a pillow by his natural son Mainfroy. Frederick II was a prince of many splendid qualities, which were however tarnished by ambition, violence, and inordinate fondness for the other sex. He was a great patron of learning, and caused the works of Aristotle and other ancients to be translated from the Greek and Ara

bic into Latin. He himself composed poems and other works, and has been charged with a share in the famous imaginary treatise "De Tribus Impostoribus." He was also addicted to the follies of judicial astrology; and is said to have been very free in his religious opinions, but his quarrels with the pope may have proved the chief source of that accusation. He married six wives, the last of whom was the daughter of King John of England.—*Moreri. Univ. Hist.*

FREDERICK II, or Charles Frederick, sometimes erroneously styled Frederick III, the most celebrated of the Prussian monarchs, succeeded his father in 1740. He was born Jan. 24, 1712, and during his earlier years experienced in no slight degree the effects of that despotic power which in after life he was himself by no means slow to exercise. His father, a prince of austere disposition, and holding the belles lettres in utter contempt, as beneath the dignity of a sovereign, and tending to incapacitate him for the duties of government, did all in his power to check the strong inclination which he perceived in the heir-apparent to cherish those arts which he himself so much despised. Harshness, rather than conciliatory measures, was the means adopted by him to counteract the propensity he fancied he had discovered; but, as is not unfrequently the case, force failed to produce either conviction or obedience. A serious rupture between the parties was the consequence, which proceeded to such a height that in 1750 the prince, then in his eighteenth year, made an attempt to extricate himself from his trammels by secretly quitting the Prussian dominions. The attempt was frustrated, and a young officer named Kat, the friend and confidant of the intended fugitive, was arrested with him, and executed on the spot in his presence, while he himself was consigned to close custody in the fortress of Custrin. A reconciliation between the father and son, rather apparent than sincere, was at length effected, the marriage of the latter with a princess of the house of Wolfenbuttel being one of the conditions. These nuptials, which, concluded under such auspices, augured no great promise of felicity, took place in 1733, but it is said were never consummated, a report which the fact of the queen's never presenting her august spouse with an heir, tends to strengthen. Soon after his accession to the throne in May 1740, the long-repressed ambition of Frederick II developed itself in the demand which he at once made of the province of Silesia from the empress queen, and in the immediate recourse to arms which followed its refusal. In less than a twelvemonth the whole of Lower Silesia was in his possession, and France backing his pretensions, the treaty of Breslau in 1743 confirmed him in its acquirement, with the addition of the adjoining territory and fortress of Glatz. A suspicion however, real or pretended, that the stipulations of this treaty would not be observed, induced him in recompence hostilities the following year, when he took the field at the head of 100,000 men, in support of the title of Charles VII, whose claim to the imperial throne Maria The-

resa refused to acknowledge. Prague, with its garrison of 16,000 men, surrendered to his arms, the victory of Friedburg followed, and on Christmas-day 1745 his successes were confirmed by a peace signed at Dresden, the articles of which ceded to him in perpetuity the whole of his former acquisitions, on condition of his acknowledging Francis of Lorraine as emperor. During the ten years of comparative tranquillity which followed, the king of Prussia employed himself in bringing his troops into a state of discipline never perhaps equalled in any age or country, and when, in 1755, the disputes between England and France involved most of the continental powers in the quarrel, the high perfection of his army, together with his own great military talents, then, perhaps, for the first time fully developed, enabled him to contend single-handed against the united force of Russia, Saxony, Sweden, France, Austria, and the great majority of the other German states. While his dominions were overrun by this formidable confederacy, his activity and courage enabled him to meet them in every quarter, and numerous battles were fought with various success till a complete victory obtained over the French and Austrians at Rosbach, Nov. 5, 1757, repaired most of his losses; while another gained in the following month, over the Austrian army, near Breslau, restored him all Silesia, with 16,000 prisoners. These successes, a plentiful supply of the sinews of war from England, and an auxiliary force of Hanoverians, enabled him to continue his career; and although the talents of his opponent, Marshal Daun, for a while retarded his operations, and even threw his capital itself into the hands of his adversaries, these temporary disasters appeared only to inspire him with fresh energy, till the decisive victory of Torgau not only compelled his enemies to evacuate his territories, but detached Russia and Sweden from the coalition. The year following, France and the empire also thought it time to put an end to so unprofitable a contest, and the peace of 1763 left the undaunted monarch in the peaceful possession of all his paternal and acquired dominions. The league now entered into with his former enemies was, in 1772, further cemented by the partition of Poland, an act which all posterity has agreed to stigmatize with merited obloquy. The remainder of his life, with the exception of a short demonstration of hostility towards Austria on the decease of the Duke of Bavaria, in 1777, was passed in the tranquillity of literary leisure, and the enjoyment of the society of the principal *scatans* of the age, many of whom were attracted to his court by his fame as a philosopher and a patron of learning; all who had any pretensions to literary distinction met with a favourable reception, and many were the objects of his bounty, not however always unattended by caprice. Among these the principal objects of his regard were Maupertuis and Voltaire; the latter particularly (whose principles on religious subjects were in strict accordance with his own) was held

him in great esteem, and admitted for a while to his most familiar intimacy; the eventual dissolution of their friendship may however, perhaps, be attributed to the same circumstance which originally cemented it—the regard which Frederick entertained for his own literary reputation. This first led him to court the wit, whose satire he dreaded as much as he admired his talents. From the effects of this formidable weapon, however, his condescension failed to secure him, and an epigram of Voltaire's is yet extant which so disturbed the equanimity of the "Philosophe de Sans Souci," as Frederick was in the habit of styling himself, that the monarch got the better of the sage, and induced him to commission an officer to punish the wit by a sound beating, for which, it is added, he compelled him to sign a receipt. Although an avowed sceptic in matters of religion, it formed a striking trait in the character of this prince, that he encouraged the observance of it among his subjects, manifestly with the view of giving himself an additional hold upon their allegiance. His habits were singularly simple and unostentatious; he rose constantly at five, when he employed himself in reading dispatches and reports, all of which were addressed to himself in person, and to each of which he marked an answer on the margin in a single word; at eleven he reviewed his regiment, and dined at twelve; the remainder of the day was passed in literary pursuits, and the enjoyment of musical performances, in which he took a personal share till ten, when he invariably retired to rest. Possessed of an even temper, great self-possession, and presence of mind, undaunted courage, with a sound and vigorous understanding, which he exercised in promoting the prosperity of his dominions, few princes have, perhaps, a better title to the epithet of "The Great," which posterity has unanimously accorded to him. Ambition, the vice of sovereigns, and the more degrading and scarcely less injurious passion of avarice were his principal faults; his laws were equally, if sometimes severely administered, and though dreaded, Frederick was yet not a little beloved by those over whom he reigned. As an author he appears to scarcely less advantage than as a king. His works on various subjects fill twenty-five octavo volumes, four of which were published during his life-time. They embrace subjects of history, poetry, and philosophy; in all which branches of literature, his attainments appear to have been far above mediocrity. The compositions on which his fame as an author is principally founded, are his "History of his own Times;" "The History of the Seven Years' War;" "The Art of War;" a poem of great merit; "An Essay on Forts of Government, and on the Duties of Sovereigns;" "Considerations on the state of Europe;" and "Memoirs of the House of Brandenburg." This latter work especially, is distinguished for the accuracy of its relations, the spirited portraits which it exhibits, and the strength and purity of the style in which it is written. As a legislator his name will be advantageously handed down

by the "Frederician Code," in the compilation of which he has adapted, with great skill and judgment, many of the principles and enactments of the old Roman law to the particular circumstances of the age and country in which he lived. After a protracted life of seventy-five years, commenced in hardships, carried on amidst dangers, and concluded in honour and tranquillity, Frederick died, with much apparent resignation, August 17, 1786. Of his writings many editions have been published. Of these the best are, the Berlin edition of 1788, in 15 vols. and another with his life prefixed, in 25 vols. 1790. A variety of authors have written on his life and character, topics which have in particular been ably handled by M. de Segur.—*Ann. Reg. Mem. by Dr Towers. Mod. Univ. Hist.*

FREEBAIRN (ROBERT) a landscape painter, was born in London, and studied under Richard Wilson: on whose death he repaired to Italy, where he remained ten years. His pictures are rather pleasing than striking, being representations of nature in her sweetest and most placid moods. He wrote an outline of his travels and observations, a part of which was inserted in the British Magazine in 1800. He died in 1808.—*Gent. Mag.*

FREGOSO. The name of a noble Genoese family, two of whom, father and son, in the fifteenth century, filled successively the office of chief magistrate of the republic. **BATTISTA**, the younger, was raised to the ducal chair in 1478, but retained his dignity little more than four years, when his own haughtiness, and the intrigues of his uncle, the archbishop of Genoa, caused his deposition and exile. He was the author of a "Life of Pope Martin V;" "Anteros," a satire against the indulgence of the passion of love, Milan, 1469; a treatise on women distinguished for their learning, written in Latin; and another in nine books, being a collection of remarkable sayings and actions. In the introduction to this latter work he writes his name Fulgoso, by which appellation he is sometimes mentioned.—*Moreri.*

FREHER. There were two of this name, **MARQUARD**, a native of Augsburg, born 1565, was a pupil of Cujacius, under whom he studied jurisprudence, and in 1588 was appointed counsellor to the prince palatine, Casimir. He was afterwards in the service of the elector, Frederic IV, and obtained the professor's chair in civil law at Heidelberg. His writings are numerous on legal, historical, and critical subjects, and evince much talent and general information. Among the principal are—A History of France; an Account of the Historians of Germany; another of those of Bohemia; a Treatise on Roman Coins; a History of the Rise and Progress of the Inquisition; and another of the Palatinate. His death took place in 1614.—**PAUL FREHER**, a descendant of the same family, was born in 1611, and practised physic at Nuremberg. A work by him, entitled "Theatrum virorum eruditione singulari clarorum," in 2 vols. folio, was printed in 1688, six years after the decease of the author.—*Ibid.*

FREIND (JOHN) a learned and ingenious physician and writer on medical history and science in the last century. He was born in 1675 at Croton in Northamptonshire, of which place his father was rector. After having been under the tuition of Dr Busby at Westminster school, he was elected in 1690 a scholar of Christ's college, Oxford. Here he soon distinguished himself for his classical knowledge by publishing, in conjunction with Mr Foulkes, the Greek oration of Æschines against Ctesiphon, and that of Demosthenes in reply to it: and he also revised, for a new publication, the Delphin edition of Ovid's *Metamorphoses*. In the mean time he did not neglect such studies as were appropriate to the medical profession; and in 1699 he addressed to sir Hans Sloane a Letter concerning Hydrocephalus, or Dropsy of the Brain, which, as well as another written soon after, appeared in the *Philosophical Transactions*. In 1701 he took the degree of MA.; and in 1703 he published a treatise on disorders peculiar to females, which raised him to eminence as a physician and physiologist, and was a very ingenious performance, though the principles on which the reasonings it develops are founded, have been since exploded. In 1704 he was chosen professor of chemistry at Oxford; and the following year he went to Spain as physician to the army under the earl of Peterborough. After having visited Italy he returned to England in 1707; and published that year a defence of the conduct of lord Peterborough, which had been the subject of much animadversion. About this time he was created MD. by diploma. In 1709 he published his *Lectures on Chemistry*, which having been criticized by some German philosophers in the *Acta Lipsiensia*, he wrote a reply to their observations. He was chosen a Fellow of the Royal Society in 1712; and after having attended the duke of Ormond to Flanders as his physician, he returned to London in 1714, and engaged in medical practice. In 1716 he became a fellow of the College of Physicians, and he read the Gulstonian lecture before that learned body in 1717; and in 1720 delivered the Harveian oration. In the mean time he published a treatise of Hippocrates, to which was appended "A Commentary on Fevers," which involved him in a controversy with Dr John Woodward, relative to the treatment of small-pox. In 1722 he was chosen MP. for the borough of Launceston in Cornwall, and he ranged himself among the opponents of sir Robert Walpole, then prime-minister. On the impeachment of bishop Atterbury he gave so much offence by the warmth with which he advocated his cause, that during a suspension of the Habeas Corpus act he was arrested on suspicion of treasonable designs, and committed to the Tower, March 15th, 1722-3. He remained a prisoner however only till the month of June, when he was bailed by Dr Mead and three other friends; and in November following he was discharged from his recognizance. It has been reported that the prisoner owed his liberation to Dr Mead's influence,

rather oddly exerted, over the premier, who being ill, sent for the physician, when he was told that the release of Dr Freind from his captivity was the sole condition on which Dr Mead would prescribe for sir Robert's complaint. Whether through fear or favour, the patient complied with the demand of his physician, and Dr Freind was admitted to bail. While in the Tower he wrote an epistle to Dr Mead, "De quibusdam Variolarum generibus," 1723. He also formed the plan of his greatest literary undertaking, the history of medical science. In 1725 he published the first part of it, under the title of "The History of Physic, from the time of Galen to the beginning of the Sixteenth Century, chiefly with regard to Practice, in a Discourse written to Dr Mead, by J. Freind." The second and last part appeared in 1726. This learned work was designed as a continuation of the *History of Physic*, by Daniel le Clerc; and it is still held in high estimation by the faculty. Soon after his liberation from the Tower, Dr Freind was appointed physician to the prince of Wales, on whose accession to the crown in 1727, he was made physician to the queen. But he did not long enjoy this honourable post, dying of a fever July 26th, 1728. He was interred at Hitcham in Buckinghamshire, near which he had a seat; and a cenotaph was erected for him, with an elegant Latin inscription, in Westminster Abbey. A collection of the works of Dr Freind, in Latin, was published, with an account of his life prefixed, by Dr J. Wigan, London, 1733, folio; reprinted at Paris in 1735, 4to.—*Biog. Brit. Martin's Biog. Philos. Hutchinson's Biog. Med.*

FREIND (ROBERT) an English clergyman and eminent classical scholar, who was elder brother of the foregoing. He received his education at Westminster school, and Christchurch college, Oxford, where he proceeded MA. in 1693, and DD. in 1709. Taking orders in the church, he obtained the rectory of Witney in Oxfordshire; and afterwards became head-master of Westminster school. He became a canon of Windsor in 1729, and prebend of Westminster in 1731, but resigned the latter preferment in 1744. He had quitted the mastership of Westminster school in 1733, and he died in 1751 at the age of eighty-three. Dr Robert Freind, though distinguished for his classical attainments, published no original work of importance; but he printed an edition of Cicero's treatise "De Oratore;" and he was one of the knot of wits and critics engaged in the famous controversy between Bentley and Boyle, relative to the authenticity of the Epistles of Phalaris.—*Nichols's Lit. Anec.*

FREINSHEMIUS (JOHN) a Swabian author, born in 1608 at Ulm. After studying jurisprudence at several of the German universities, he at length obtained at Upsal the chair of the professor of rhetoric. Christina of Sweden induced him to settle for a while at Stockholm in the capacity of royal librarian, but his health declining he returned to Germany, and died in 1660 at Heidelberg. He published

supplement to the historical works of Livy and Quintus Curtius; an edition of Florus; and was the author of some learned annotations upon Tacitus.—*Moreri*.

FREIRE DE ANDRADA (HYACINTHE) a Portuguese writer, was born in 1597 at Beja in Portugal, and was abbé of St Mary de Chans. His attachment to the house of Braganza prevented his advancement. His character was too light and careless for him to be employed on diplomatic affairs, and though John IV would have made him bishop of Viseu, he refused this dignity, knowing that the pope, who did not acknowledge his master, would not confirm his appointment. He was the author of the "Life of Don Juan de Castro," considered one of the best-written books in the Portuguese language. He also wrote a number of small, elegant poems, which are contained in a collection published at Lisbon, under the title of "Fenix Renacida." He died at Lisbon in 1657.—*Nouv. Dict. Hist. Moreri*.

FRENICLE DE BESSY (BERNARD) a French mathematician of the seventeenth century. He excelled particularly in the science of arithmetic, and frequently surprised Descartes, who was his intimate friend, by his quickness in solving the most difficult problems without the aid of algebra. He was chosen a member of the French Academy of Sciences in 1666. Several of his pieces are contained in the fifth volume of the Ancient Memoirs of the Academy, among which are the following—"A Method of resolving Problems by Exclusions;" "A Treatise of Rightangled Triangles, in Numbers;" "A Short Treatise on Combinations;" "Tables of Magic Squares," &c. Several of his letters in Latin may be found in the "Commercium Epistolicum de Questionibus quibusdam Mathematicis," printed at Oxford in 1658. He died in 1675.—His brother, **NICHOLAS FRENICLE**, a poet, was born at Paris in 1600. He was counsellor to the court of the mint, and died dean of the same court in 1661. He was the author of—"Palemon," a pastoral; "Niobe," 8vo; "L'Entretien des Bergers," 8vo; a pastoral contained in "Les Illustres Bergers," 8vo: "Jesus Crucifié;" a "Paraphrase on the Psalms," in verse.—*Moreri. Dict. Hist. Hutton's Dict.*

FRERET (NICHOLAS) a native of Paris, where his father was a solicitor of the parliament. He was educated for the bar, and assumed the advocate's gown, but did not engage in practice as a counsellor. In 1713 he was admitted a member of the Academy of Inscriptions and Belles Lettres, when he distinguished himself by a "Discourse on the Origin of the French," a learned performance, in which he displayed so little respect for generally-received opinions, that it occasioned his being committed a prisoner to the Bastille. The perusal of the writings of Bayle, while detained in confinement, is said to have rendered him an absolute sceptic; and the influence of the principles he had imbibed appeared in his subsequent works, particularly "Letters from Thrasylbulus to Leucippus;" and an "Exami-

nation of the Apologists for Christianity." After his liberation he again devoted himself to literary pursuits, and especially to the study of history and antiquities, on which subjects he published, in the Memoirs of the Academy of Inscriptions, many papers replete with profound erudition and ingenious discussion; though these, as well as his other writings, exhibit a fondness for paradoxical opinions. Freret is said to have possessed a most extraordinary memory; so that he was able to recollect the plots of almost all the dramatic pieces of the different European theatres. He died in 1749, aged sixty-one.—*Nouv. Dict. Hist. Biog. Univ.*

FRERON (ELIAS CATHERINE) a native of Quimper in Brittany, eminent as a literary journalist in the eighteenth century. He entered young into the society of the Jesuits, and studied under fathers Brumoy and Bougeant. In 1739 he quitted the order, and became a coadjutor with the abbé des Fontaines in his periodical journal. Afterwards he set up as a critic on his own account, publishing a kind of review, under the title of "Lettres de Madame la Comtesse," which in 1749 he changed for that of "Lettres sur quelques Ecrits de ce Temps." Stanislaus, the ex-king of Poland, then duke of Lorraine, afforded his protection to Freron, whose criticisms procured him some powerful enemies, and among them the celebrated Voltaire. After publishing thirteen volumes of his Letters, he commenced a new journal, entitled "Année Littéraire," of which eight volumes were printed annually as long as he lived. His other works are—"Les Vrais Plaisirs, ou les Amours de Venus et Adonis," translated from the Italian of Marino; "Opuscules," 3 vols. 12mo; &c. He died in 1776.—*Aikin's G. Biog. Nouv. Dict. Hist.*—**STANISLAUS FRERON**, the son of Voltaire's antagonist, distinguished himself, unfavourably, during the scenes of anarchy which succeeded the French Revolution. In 1789 he commenced an incendiary journal—"L'Orateur du Peuple," and associated himself with Marat. He is charged with having been deeply concerned in the cruelties committed at Toulon and elsewhere. He assisted in the destruction of Robespierre; and having narrowly escaped suffering the fate of that tyrant, he was employed under the directory, as commissary to the Antilles.—*Dict. des H. M. du 13me. S.*

FRESCHI (GIOVANNI DOMENICO) a monk of Vicenza, excellent as a musician and composer. His publications bear date between 1660 and 1685. In 1680 was printed at Padua, his splendid opera of "Berenice," in the processions and choruses of which were employed above 450 persons, besides lions, elephants, horses, &c. a performance considered altogether unique in magnificence at that period.—*Biog. Dict. of Mus.*

FRESCOBALDI (GIROLAMO) a Ferrarese musician and composer, born in 1601, appointed organist at St Peter's in Rome in 1624. He was the first Italian who composed in fugue for the organ, an invention of the Germa-

school; and is considered as the father of that species of organ playing, known in England by the name of "Voluntaries," and in Italy as "Stoccatas." A work of his entitled "In partitura il primo Libro delle Canzoni à une, tre, e quatro Voci, per sonare co nongni Sorti di Stromenti," was printed in 1628, by Bartolomeo Grassi at Rome.—*Biog. Dict. of Mus.*

FRESNAYE (JOHN VAUQUELIN DE LA) a poet in France, father of the celebrated Ivetaux, was born of a noble family at Fresnaye, near Falaise in 1534. He became the king's advocate for the bailiage of Caen, and lieutenant-general and president of that city. He was the author of satires, which, though not so strong as those of Regnier, or so witty as those of Boileau, possess truth and nature, and are written in a pleasing manner. "The Art of Poetry," possessing considerable merit, two books of Idyllia, and three of epigrams, epitaphs, and sonnets, and "a Poem on the Monarchy," these were all collected by himself in an edition of poems published at Caen in 1605.—*Nouv. Dict. Hist. Moreri. Biog. Univ.*

FRESNOY (CHARLES ALPHONSO DU) a native of Paris, eminent in the sister arts of painting and poesy, born 1611. He was intended by his family for the legal profession, and was for a time discarded by them in consequence of his determination to follow the bent of his genius, which led him to put himself under the tuition of Vouet and Perrier, who instructed him in the rudiments of his favourite art. In 1634 he accompanied his friend Mignard, to Italy, and was at this period of his life mainly indebted to his liberality for support. He returned to France in 1656, having during his stay in Italy completed his well-known poem, "De Arte Graphica," which did not however appear till three years after his decease, when his friend De Piles published it in 1668, with his own annotations. This work has been three times translated into English, first by Dryden in 1694, then by Graham, and lastly by Mason in 1782, to which latter edition are affixed some notes from the pen of Sir Joshua Reynolds. Du Fresnoy's pictures do not exceed fifty in number. Titian and the Caracci appear to have been his principal models; the tints of the one and the design of the others being the manifest objects of his study and imitation. They are much admired, and though they brought in but little to the painter, are now of considerable value. He died in 1665, of a pulmonary complaint, at the age of fifty-four.—*D'Argenville, Vies de Peint. Mason.*

FREYTAG (FREDERIC GOTTHELF) burgo-master of the city of Nuremberg, was born at Schulpforten in 1723, and died in 1776. He was profoundly acquainted with the history of literature, of which he gave striking proofs in his works. He was the author of "Rhinceros veterum scriptorum monumentis descriptus," Lip. 1747, 8vo; "Analecta literaria de Libris rarioribus," *ibid.* 1751, 8vo; "Oratorum et Rhetorum Græcorum quibus Statuæ honoris Causa positæ," Decas Lip. 1752, 8vo;

"Apparatus literarius ubi Libri partim antiqui partim rari recensentur;" this is a continuation of the *Analecta literaria*; "Specimen historiæ literatæ quo virorum feminarumque, &c." 8vo. Besides these, he was author of several translations from the French, and of essays and miscellaneous pieces, published in various periodical publications.—*Hirsching's Manual of Eminent Persons who died in the 18th Century.*

FREZIER (AMADEUS FRANCIS) a French officer of Scottish descent, was born at Chamberri in 1682. He entered the corps of Engineers in 1707; and was sent, in 1711, to examine the Spanish colonies in Peru and Chili, and was employed in the fortifications of St Malo and Landau. He died in 1772. His works are, "Traite des feux d'Artifices," 8vo; "Voyage de la Mer du Sud," 8vo, translated into English; "Theorie et Pratique de la coupe des Pierres et des Bois," 3 vols. An abridgment of this latter work was published at Paris in 1759, under the title of "Elémens de Stéréotomie," 2 vols. 8vo.—*Nouv. Dict. Hist.*

FRISCH (JOHN LEONARD) an eminent writer on natural history, was born at Sulzbach in the Upper Palatinate in 1666. He travelled through France and Switzerland, and then succeeded the evangelical preacher, Elias Breithorn, at Neusol, in Hungary; but being greatly persecuted he left the place, and during the Turkish war he became an interpreter. After wandering over various parts of Europe, he at length settled at Berlin, where he was appointed sub-rector and afterwards rector of the Grey Convent gymnasium, in 1726. He was also, through the recommendation of Leibnitz, chosen a member of the Royal Academy of Sciences, and of the Imperial Academy of the Searches into Nature. He died at Berlin in 1743. Frisch was the first person who cultivated mulberry-trees in the neighbourhood of Berlin; he was also the founder of the silk manufactory in the march of Brandenburg. His principal works are, "a German and Latin Dictionary," "Dictionnaire nouveau des Passages Françaises, Allemand et Allemand Française;" "Descriptions of all the German Insects, with Observations, and the necessary Figures, &c." In this he has followed no systematic order, wishing only to describe what he himself observed; the work has however been of great value to subsequent entomologists, who have made good use of it.—*Hirsching's Manual of Eminent Persons who died in the 18th Century.*

FRISCHLIN (NICODEMUS) a learned German, was born at Balingen in the duchy of Wirtemberg, in 1547. His father educated him with great care, and sent him to the university of Tubingen, where he made such progress that he became a versifier in Greek and Latin at the age of thirteen. At twenty years old he obtained a professorship in the same university, and employed a new method of instructing his scholars in grammar. He also wrote a work against all former grammarians, entitled "Strigil Grammatica," which involved him in much angry controversy. In 1580 he published an oration in praise of a country lig-

with a paraphrase upon Virgil's Eclogues and Georgius. in which he indulged in such acrimony in comparing the innocence of a country life and the corrupt manners of the great, that he was obliged to quit his native country, and wander through the towns of Germany. He composed sixteen books of elegies, seven comedies, two tragedies, odes, anagrams, and an abundance of heroic verses. His comedy of "Rebecca" obtained for him the golden laurel and title of crowned poet from the emperor Rodolph. Having at length made a pecuniary application to the duke of Wirtemberg, it was refused, and he wrote back an answer so full of abuse, that he was arrested and imprisoned in the prison of Aurach, in the duchy. Attempting to escape from here by ropes not strong enough to support him, he fell down a prodigious precipice, and was dashed to pieces: this happened in 1590. Besides the foregoing works he left commentaries upon the epistles of Horace and the Satires of Persius, and translations of Aristophanes, Callinachus, Heliodorus and Oppian.—*Bailliet. Moreri.*

FRISI (PAUL) a Milanese philosopher and mathematician, born 1727. He obtained a professorship of philosophy at Lodi, and again at Casel, but quarrelling with his superiors, removed to Novara. In 1755 he settled at Pisa as professor of ethics in that university, and held the situation till 1764, when he accepted the mathematical chair in his native city. His restless and irritable disposition involved him in fresh disputes. He accepted an invitation from the Venetian States to superintend the erection of some of their public buildings, which being completed, he finally returned to Milan, and was placed by the government at the head of the architectural department in their university. He was the author of several useful treatises on subjects connected with hydraulics, electricity, mechanics, &c. and died in 1784.—*Chalmers's G. Biog. Dict.*

FRITH (JOHN) whose name is sometimes spelled Fryth, a native of Sevenoaks, Kent, educated at King's college, Cambridge, whence he removed to Oxford, on obtaining a canonry in Wolsey's newly-founded college of Christchurch. Having contracted a friendship with Tyndale, he became a convert to his opinions, and published several treatises against the errors of the church of Rome. These are to be found in a folio volume with those of Barnes and Tyndale collectively, printed in London in 1573. Continuing to advocate the cause of the protestants, as well in his sermons as in his writings, he attracted the notice of the catholic commission, and refusing to abjure his heresy, was brought to the stake in Smithfield, where he perished with much constancy and fortitude, July 4, 1533.—*Fox's Acts and Monuments.*

FRIZON (PETER) a French ecclesiastic, flourished in the seventeenth century. He was penitentiary of Rheims, and afterwards grand master of the college of Navarre at Paris, which office he resigned in 1635, intending to retire and pass the rest of his life in literary occupations. He was admitted to the degree

of doctor by the faculty of the Sorbonne, and died in 1651. He published a history of the French cardinals, entitled "Gallia Purpurata," which was much esteemed until M. Baluze exposed its numerous incorrectnesses in his *Anti-Frizonius* and his "History of the Popes of Avignon." He also published an edition of the Bible of Louvain, with a method of distinguishing the catholic French translation of the Bible from the protestant. M. de Launoi states that he carried on Henry de Sponde's Continuation of the Annals of Baronius from 1622 to 1630. He was also the author of the "Life of Henry de Sponde," prefixed to his Continuation of the Ecclesiastical Annals, published at Paris in 1659.—*Moreri.*

FROBENIUS (JOHN) an eminent printer, was a native of Hammelburg in Franconia. He acquired considerable reputation at the university of Basil, and set up a press in that city. He met with great success, printing only such works as were devoted to sound and useful learning; and such was his reputation, that Erasmus took up his residence at Basil in order to have his works printed by Frobenius. Among the books which he printed were the works of Erasmus, in nine volumes folio, and those of St Jerome and St Augustine, which he revised. He also intended printing the Greek fathers, but was prevented by his death, which happened in 1527. Erasmus composed a Greek and a Latin epitaph to his memory.—*Erasm's Epistol. Moreri.*

FROBISHER (sir MARTIN) an eminent navigator, was born near Doncaster in Yorkshire, but of what parentage is not known. He was brought up to the sea, and acquiring great skill in navigation, the discovery of a north-west passage to the Indies excited his ambition, and after many fruitless attempts to induce merchants to favour his project, he was enabled by the ministers and courtiers of queen Elizabeth to fit out a private adventure, consisting only of two barks of twenty-five tons burden each, and a pinnacle of ten tons. In this enterprise he entered the strait which has ever since been called by his name, and returned to England with some black ore, which being supposed to contain gold, induced queen Elizabeth to patronise a second voyage, and lend a ship of the royal navy of 200 tons for the purpose. The delusion was even kept up to a third expedition, but all of them proved fruitless. In 1585 Frobisher accompanied sir Francis Drake to the West Indies; and at the defeat of the Spanish armada, he commanded one of the largest ships in the fleet, and was honoured with knighthood for his services. In the years 1590 and 1592 he commanded squadrons against the Spaniards, and took many rich prizes. In 1594 he was sent with four ships of war to the assistance of Henry IV of France against the Spaniards and Leaguers, when, in an attack on a fort near Brest, he received a wound, of which he died in his return home. There is a fine portrait of this able and intrepid, but boisterous commander, in the picture-gallery at Oxford.—*Biog. Brit. Pennant's Introd. to Arctic Zoology.*

FROELICH (ERASMUS) a learned jesuit, was born in 1700 at Gratz in Styria, and entered the society in 1716. He became professor of mathematics and belles lettres at Vienna, and took advantage of his situation to devote himself to the study of medals, to which he was much attached. His works are—"Annales Rerum et Regum Syriae," folio, 1751; "De Figura Telluris," 4to, 1757; "Quatuor Tentamina in Re Nummaria," 4to, 1757 and 1750; with other dissertations on particular medals.—*Nouv. Dict. Hist.*

FROISSART (JOHN) an early French historian and poet, was born at Valenciennes in 1337. It is supposed that his father was a painter of armories, a circumstance which might naturally engender that attachment to heraldry and the manners of chivalry by which he was so much distinguished. He is said to have commenced writing history at the age of twenty, and it is not to be doubted that his poetical talent displayed itself as early. In order to divert his chagrin from an amorous disappointment, he paid a visit to England, where he was kindly patronised by Philippa of Hainault, queen to Edward III. She presented him with the means of appearing before his mistress to more advantage, but being again repulsed, he returned to England in 1361, and held the post of secretary to the queen for five years. During that time he also visited Scotland, and was entertained by William, earl of Douglas. In 1366 he repaired to Gascony with Edward the Black Prince, and in 1369, having lost his kind patroness Philippa, he returned home, and obtained the benefice of Lestines in the diocese of Cambrai. The cure of souls was however little suited to Froissart, and he entered into the service of the duke of Brabant, who was a poet as well as himself, and from the compositions of his patron and himself, he formed a romance of love and chivalry, entitled "Meliador." On the death of the duke of Brabant in 1384 he acquired the patronage of the earl of Blois, and subsequently visited, and was kindly entertained, at the brilliant court of Gaston, earl of Foix. In 1395 he paid another visit to England, and was introduced to Richard II, to whom he presented a splendid copy of the Meliador. In England he obtained much information for his history, and many favours; and returning to his own country, he fixed his residence at Chimay, where he possessed the benefices of canon and treasurer of the collegiate church. The year of his death is unknown, but he must have lived beyond 1400, as his chronicle extends to that date. Although the author of many thousand verses, he is now only known as a historian, and in the latter capacity, with all the artlessness and minuteness of narrative belonging to his age, he is highly valued by those who like to study ancient manners at the fountain-head. His chronicle, divided into four books, comprehends the period from 1326 to 1400; and it relates not only the events which took place in France, but in Flanders, England, Scotland, and Ireland, with many details respecting the papal courts of Rome and

Avignon, with the collateral transactions in the rest of Europe, including even Turkey. The best edition of his Chronicle is that of Lyons, 4 vols. folio. It was translated by Lord Berners in the reign of Henry VIII, and latterly by Mr Johnes of Hafod.—*Life by St Palaye, edited by Mr Johnes.*

FRONTEAU (JOHN) a learned French ecclesiastic, born at Angers in 1614. He obtained a professorship at the abbey of St Genevieve, which he resigned on being elevated to the chancellorship of the university of Paris in 1648. While in this situation, his enemies accused him of favouring the opinions of the Jansenists, and he was induced to retire to the priory of Benay in his native city, whence he finally removed to the convent of St Magdalen at Montargis, and died superior of that community in 1662. Among his works are a treatise, "De Diebus Festivis," "Kalendarium Romanum," A vindication of the claim of Thomas a Kempis to be author of the work "De imitatione Christi," the Philosophy of Alamandus, and "Antitheses Augustini et Calvini."—*Moreri.*

FRONTINUS (SEXTUS JULIUS) a Roman author of consular dignity, under Vespasian and his four immediate successors in the empire. He held a distinguished command in Britain; was afterwards prætor, and appointed by Nerva curator of the aqueducts, a circumstance which occasioned him to write a treatise "De Aquæductibus urbis Romanæ." He was also the author of three books on the art of war, and two treatises, "De Limitibus" and "De re Agrariâ." These have appeared separately, but in 1651 Robert Keuchenius collected and printed them together in a very neat edition at Amsterdam. Frontinus died in the reign of Trajan, soon after the commencement of the second century.—*Fabricii de Bib. Lat.*

FROWDE (PHILIP) an English dramatic poet of the reign of Anne, born in Devonshire. His father, who held a situation in the post-office, placed him at Magdalen College, Oxford, where he contracted an acquaintance with Addison, at that time a member of the same society. Besides two tragedies, entitled, "Philotas," and "The Fall of Saguntum," he composed a variety of poems, written in very elegant Latin, and published in the "Musæ Anglicanæ." His death took place in 1738 in Cecil Street in the Strand.—*Biog. Dram.*

FRUGONI (CARLO INNOCENZO) an eminent Italian poet, was born of a noble family at Genoa in 1692. At the age of sixteen he was persuaded, much against his inclination, to enter the order of the regular clerks of Somasquo, but that life being very contrary to his gay temper, he obtained from the pope leave to quit the order, and remain a secular priest. He then settled at Parma, and when the duke established there an academy of the fine arts, Frugoni was employed to draw up its statutes, and was made its perpetual secretary. He was also appointed court poet and inspector of theatrical exhibitions. He died

at Parma in 1768. His works consist of sonnets, odes, canzoni, elegies, satires, eclogues, and epistles. He ranked high among the poets of his age: his style was energetic but easy, and he is called by one of his panegyrist "il principe dello stile fantastico." He made some dramatic attempts, in which he did not succeed; though he translated very well the Rhadamistus and Zenobia of Crebillon. His collected works were published at Parma in nine volumes, 8vo, 1779.—*Elogio dell' Abate Frugoni dal Ant. Cerati. Nouv. Dict. Hist.*

FRUMENTIUS (ST) a Romish saint, usually called the Apostle of Ethiopia; was a native of Tyre, and flourished in the fourth century. He was educated by a Christian philosopher named Merossius, who, with Frumentius, and another of his scholars named Ædesius, set out on a voyage to India. In the course of their voyage, the vessel touching at a certain part of Ethiopia, the philosopher was murdered by the natives; but the two boys were spared and presented to the emperor of the country, who was so pleased with them that he had them educated, and made Ædesius his cup-bearer, and Frumentius his treasurer and secretary of state. After the death of the king, the queen, who was regent during her son's minority, showed them equal favour. Frumentius meeting with some Roman merchants residing in the parts of Ethiopia, who were Christians, obtained for them liberty to assemble for religious purposes, and they made many converts among the courtiers. On the young king's accession they obtained leave to return to their native country, and accordingly Ædesius went to Tyre, but Frumentius repaired to Alexandria and acquainted Athanasius, then bishop, of the probability of converting the Ethiopians to Christianity if missionaries were sent among them. Athanasius immediately proposed that he should himself return, and therefore, in 331, consecrated him a bishop, and Frumentius entered on his mission at Axuma the capital of the country. He is said to have converted the emperor and most of the people, and he established numerous churches throughout the empire. The time of his death is uncertain, but he was still living in 356.—*Butler's Saints. Milner's Ch. Hist.*

FRY (JOHN) a bookseller of Bristol, whose perfect acquaintance with early English literature entitled him to no mean rank among the bibliographers of his day. In 1814 he published two quarto volumes, entitled "Bibliographical Memoranda," and had made considerable progress in a more extensive work of a similar description, to be called "Bibliophilia," which he did not live to complete. His other publications are "A Selection from the Poetical Works of Thomas Carew, with a Life of the Author," 8vo, 1810; and the "Legends of Mary Queen of Scots, and other Ancient Poems, from the MSS. of the sixteenth Century," 8vo and 4to, 1810. He died, after a lingering illness, at Bristol in his thirtieth year, June 28, 1822.—*Ann. Biog.*

FRYE (THOMAS) an artist. was born in

Ireland in 1710. He practised portrait painting in London, and is said to have been the first manufacturer of porcelain in England, but his constitution being impaired by constantly working in furnaces, he retired into Wales with little hope of recovery. His health however was perfectly re-established, and he returned to London; and resuming his profession, to which he added the art of mezzotinto engraving, had much employment and success. He died in 1762. Of his mezzotinto productions there are six heads as large as life, one of them the portrait of the artist himself, and two of their late majesties.—*Europ. Mag. vol. xiv.*

FUCHS or FUCHSIUS (LEONARD) a German physician, distinguished for his botanical researches in the sixteenth century. He was a native of Bavaria, and was educated at Ingoldstadt, where he took the degree of MD. in 1521. After practising at other places, he settled at Tubingen in 1535, where he became professor of medicine and anatomy. He died in 1565. He was ennobled by the emperor Charles V; and Cosmo, grand duke of Tuscany, invited him to settle at Pisa, with a large salary, as medical professor, but he declined the offer. Besides works on medicine, he was the author of a treatise on anatomy, and "Historia Plantarum;" the latter of which has been translated into several languages. His name has been perpetuated by being applied to a genus of plants, of which the Scarlet Fuchsia is a well-known beautiful species.—*Aikin's G. Biog.*

FUESSL (JOHN GASPARD) a Swiss artist, born in 1706, at Zurich. He was a scholar of Sedelmeier's, and was patronised by the court of Wirtemberg. His principal work is a History of the Artists of Switzerland, in five volumes. He also wrote the Lives of Rugendas and Rupeski, and published new editions of Raphael Mengs' Works on Beauty, and the Letters of the abbé Winkelmann; a Catalogue of Engravers is also ascribed to him. He died in 1781, leaving three sons—Rodolph, afterwards librarian to the emperor of Germany; Henry, better known by the name of Fuseli, the eminent painter, who forms the subject of a subsequent memoir; and Caspar, a skilful entomologist, who settled as a bookseller in his native place, Zurich, and published several treatises on his favourite science. The latter died young, in the year following his father's decease.—*Pilkington. Hirsching's Manual of Eminent Persons who died in the eighteenth Century.*

FULBECK (WILLIAM) an English lawyer, was born at Lincoln, in 1550, and was educated at Oxford. After taking his degree of MA. he came to London, and applied himself to the study of the municipal law. His works are—"The Paucts of the Laws of Nations or the Discourses of the matters in Law wherein the nations of the world do agree," 1602, 4to; "A Direction or Preparative to the Study of the Law," 1600, 8vo; afterwards published with a new title-page, as "A Parallel or Conference of the civil, the canon, and the common Law," 1613; "Chris-

tian Ethics," Lond. 1587, 8vo; "An historical Collection of the continual factions, tumults, and massacres of the Romans before the peaceable empire of Augustus Cæsar," 1600, 8vo.—*Athen. Oron.*

FULDA (CHARLES FRENDRICK) an ecclesiastic of the Reformed Church born at Wimpfen, in 1722. He possessed considerable learning, as well as some skill in mechanics, and was the author of several treatises which exhibit proofs of great industry and research. The principal of these are, "On the Goths;" "On the Cimbri;" "On the ancient German Mythology;" "A Chart of History;" and a Dictionary of the German Roots." He died in 1798, at Einzingen.—*Chalmers's G. Biog.*

FULGENTIUS, (see FERRANDUS.)

FULLER (ANDREW) a distinguished dissenting divinity, and secretary to the Baptist Missionary Society, was born at Wicken, in Cambridgeshire, in 1754. His father was a small farmer, who gave his son the rudiments of education at the free-school of Soham. In 1775, in consequence of an invitation to become the pastor of a congregation at Soham, he entered into the ministry and married; and after a few years' residence at Soham, he accepted a similar charge at Kettering, where he wrote and published his "Treatise on Faith." In the establishment of the Baptist Missionary Society in that town, by Dr Carey, Mr Fuller exerted himself with great energy, and the whole of his future life was identified with its labours. He also acquired considerable distinction as an able controversialist, and his treatise "On the Calvinistic and Socinian Systems compared as to their moral tendency," attracted considerable attention. His other works, besides numerous published sermons, are "Socinianism Indefensible;" "The Gospel its own Witness;" "Memoirs of Samuel Pearce;" "An Inquiry into the nature of Religious Declension;" "Discourses on the Book of Genesis;" "Dialogues, Letters, and Essays," 12mo; "Apology for the Christian Missions to India," &c. &c. He died at Kettering, in 1815.—*Wilks's Christ. Biog. Dict.*

FULLER (THOMAS) an eminent historian and divine of the church of England in the seventeenth century. He was born at Aldwinkle in Northamptonshire, of which parish his father was minister. After some previous instruction at home, he was sent to Queen's college, Cambridge, of which his maternal uncle, Dr Davenant, afterwards bishop of Salisbury, was master. He took the degree of B.A. in 1624, and that of M.A. in 1628, after having greatly signalized himself by his application to study. He removed to Sidney college in the same university; and being chosen minister of St Bennet's parish, Cambridge, he became very popular as a pulpit orator. In 1631 he obtained a fellowship at Sidney; and he was collated to a prebend in the cathedral of Salisbury. The same year he published a poem, entitled "David's famous Sin, hearty Repentance, and heavy Punishment," which

was his first production, and is now little known. He soon after took priest's orders, and was instituted to the rectory of Broad Winsor in Dorsetshire. In 1635 he proceeded B.D. His "History of the Holy War" first appeared in 1640; soon after the publication of which he removed to London, and was chosen lecturer at the Savoy church in the Strand. He was a member of the convocation which met in 1640; and was one of the select committee appointed to draw up new canons for the better government of the church. On the departure of the king from London, previously to the commencement of hostilities against the parliament, Mr Fuller, on the anniversary of his majesty's inauguration in 1642, delivered a sermon at Westminster abbey, from the text—"Yea, let them take all, so that my lord the king return in peace." 2 Samuel xix. 30. This discourse was published, and it offended the popular leaders of the day, and endangered the safety of the preacher. At this period he published his "Holy State," folio. In 1643 he went to Oxford and joined the king, by whom he was well received. Being prevented from the exercise of his talents, as a beneficed clergyman, by the state of public affairs, he became chaplain to sir Ralph Hopton, and employed his leisure in making collections relative to English history and antiquities. After the loss of the battle of Cheriton Down, in 1644, he went with his patron, then lord Hopton, to Basing-house, where he was left with the garrison, and continued there during the siege which followed; and he contributed not a little, by his example and exhortations, to the gallant and successful defence of the fortress. He then retired to Exeter and resumed his studies; and during his residence there he was appointed chaplain to the infant princess, Henrietta Maria, born in that city in 1643. After the surrender of Exeter, in 1646, he was permitted, by sir T. Fairfax, the parliament-general, to go to London, where he was chosen lecturer of St Clement's church, near Lombard-street, and afterwards of St Bride's, Fleet street. About 1643 he was presented by the earl of Carlisle to the rectory of Waltham Abbey, Essex. Two years after he published "A Pisgah Sight of Palestine, and the Confines thereof; with the History of the Old and New Testament acted thereon," folio, with maps and views; and in 1650 appeared his "Abel Redivivus," consisting of lives of religious reformers, martyrs, divines, &c. In 1656 he published the "Church History of Britain, from the Birth of Jesus Christ to the year 1648;" to which was subjoined "The History of the University of Cambridge, since the Conquest;" and "The History of Waltham Abbey." In 1658 the living of Cranford in Middlesex was bestowed on him, and he removed thither. The restoration taking place in 1660, he was reinstated in his prebend of Salisbury; and was soon after created D.D. at Cambridge, by royal mandamus, appointed chaplain to his majesty, and destined for the episcopal bench. This last preferment was prevented by his death.

which took place August 15th, 1661. The year after his death was published his principal literary work, "The Worthies of England," folio; a production valuable alike for the solid information it affords relative to the provincial history of the country, and for the profusion of biographical anecdote and acute observation on men and manners. The great fault of this, as well as of the former compositions of Dr Fuller, is an elaborate display of quaint conceit, owing perhaps more to the natural disposition of the author than to the taste of the age in which he wrote, when however that species of wit was much admired. Dr Fuller was remarkable for the strength of his memory. In the recently published Memoirs of Mr Pepys, that writer says—"Jan. 22, 1661. I met with Dr Th. Fuller. He tells me of his last and great book that is coming out; that is, the History of all the Families in England; and could tell me more of my owne than I knew myself. And also to what perfection he hath now brought the art of memory; that he did lately, to four eminently great scholars, dictate together in the Latin upon different subjects of their proposing, faster than they were able to write, till they were tired; and that the best way of beginning a sentence, if a man should be out and forget his last sentence, (which he never was,) that then his last refuge is to begin with an *utcuque*." Among the many marvellous stories told of Dr Fuller's powers of memory, it is said that he could repeat five hundred strange and unconnected words after twice hearing them; and recite a sermon verbatim, after he had heard it once. His "Worthies" appeared in a new edition, with his life prefixed, in 1810, 2 vols. 4to.—*Biog. Brit. Aikin's G. Biog.*

FULLER (THOMAS) an English physician of considerable reputation in the early part of the last century. He studied at Queen's college, Cambridge, where he took the degree of M.D. in 1681; after which he engaged in the practice of his profession at Sevenoaks, in Kent, and died there in 1734. Dr Fuller was the author of a medical tract and several pharmaceutical publications, formerly held in much esteem, though now become obsolete: but his "Introductio ad Prudentiam; or, Directions, Counsels, and Cautions, tending to prudent Management of Affairs of Common Life," 2 vols. 12mo; and his "Gnomologia; a Collection of Adages and Proverbs," 12mo, are works of more permanent utility, and were re-published a few years since.—*Nichols's Lit. Anec.*

FULMAN (WILLIAM) an antiquary, was born at Penshurst, in Kent, in 1632. His capacity being observed by the celebrated Dr Hammond, he took him with him to Oxford, where he remained until they were both ejected by the parliamentary visitors. He afterwards became tutor in a private family, but upon the restoration he returned to college, was created M.A. and obtained a fellowship; some years after he was presented to the rectory of Meysey-Hampton, near Fairford, in Gloucestershire. He died in 1688 according to some, but others

say in 1697. Wood says that he made large collections of history, but published little. We have however, "Appendix to the Life of Edmund Stanton, D.D." wherein some passages are farther cleared which were not fully held forth by the former authors; "Corrections and Observations on the First Part of Burnet's History of the Reformation," published at the end of Burnet's second volume; "Academia Oxoniensis Notitia," with additions and corrections from Wood's Latin History. He also edited the Works of Charles I, and of Dr Hammond.—*Athen. Oxon.*

FUNCH (JOHN) a native of Werden, near Nuremberg, born 1518. He took holy orders in the reformed church, and was son-in-law to Osiander. Albert of Prussia made him his chaplain, but being suspected of inculcating seditious doctrines, he at length suffered decapitation in 1566. As an author he is known chiefly by a Chronology that was very favourably received by the learned world, the third edition of which, revised and corrected, was brought down to the year 1560. He also composed the Lives of Osiander and Theodorus, and wrote Commentaries upon the Apocalypse and the seventy weeks of Daniel.—*Bayle. Melchior Adam, Vit. Germ. Theol.*

FURETIERE (ANTHONY) a French philosophical writer, who was a native of Paris. He first engaged in the study of the law, and was a counsellor of parliament; but he subsequently adopted the ecclesiastical profession, and became abbot of Chalvoix and Cluines. He distinguished himself by various literary productions in prose and verse; and being elected a member of the French academy, he attended with assiduity the meetings of that learned body; but having engaged in the compilation of a Dictionary of the French Language, when the academicians collectively were employed on a similar undertaking, his conduct was considered as disrespectful to his colleagues, and a specimen of his work having been published in 1684, he was in the following year expelled from the academy. He published a "Factum" in his own defence, which was so replete with personal satire and invective, that it only served to widen the breach, and render his exclusion permanent. He died in 1688. His Dictionary appeared in 1690, in 2 vols. folio. Basnage de Beauval re-published it with improvements in 3 vols. 1701; and it was afterwards farther enlarged, and served as the basis of the "Dictionnaire de Trevoux," of which an edition appeared in 1771, in 8 vols. folio. Furetierre's other works were "Five Satires," in verse; "Gospel Parables," in prose; "Le Roman Bourgeois," &c. There is also a collection of anecdotes, entitled "Furetieriana."—*Moreri. Biog. Univ.*

FURIETTI (JOSEPH ALEXANDER) a cardinal, was born at Bergamo in 1685. He studied at Milan and Pavia, and then went to Rome, where he received several preferments. On account of some disputes between them, pope Benedict XIV, though aware of his merit, avoided raising him to the purple; but in 1759, a year after his accession, Clement XIII

sent the cardinal's hat to him. He died in 1764. Furietti published at Rome the works of the celebrated Gaspar Barziza of Bergamo, and of his son Guineforte, with a life; also, an edition of the poems of Fontana; but his principal production was his treatise on the Mosaic art of painting, entitled "De Musivis, vel Pictoria Mosaicæ artis origine, progressu, &c." 1752.—*Diet. Hist.*

FURIUS BIBACULUS (M.) a Latin poet, was born at Cremona BC. 102 or 103, and wrote a poem on the Gallic war, which perhaps contained those contumelious verses against Cæsar, referred to by Tacitus and Suetonius, Horace calls him "pingui tentus omaso," whence it is concluded that he was fat and gross in his food; and has preserved a line which is little to Furius's credit either as being delicate or select:

Furius (Jupiter) hibernas cana nive conspuit Alpes.—*Sat. lib. xxii. 8.*

He was intimate with the grammarian, Valerius Cato; and in some lines quoted by Suetonius praises his learning while he laments his indigence. His fragments are to be found in the *Corpus Poetarum*, Latin.—*Fossii Poet. Lat. Moreri.*

FURIUS (FREDERICK) sur-named Ceriolanus, was a native of Valencia in Spain, and flourished in the sixteenth century. He studied at Paris under Talæus, Turnebus, and Ranus, and coming afterwards to Louvain published a treatise "On Rhetoric," and another entitled "Bononia, sive de Libris sacris in vernaculam Linguam convertendis, &c." which being too liberal for the council of Trent, was inserted in their "Index Expurgatorius." The emperor Charles V being informed of his learning, candour, and piety, sent him into the Netherlands, and placed him with his son Philip, who made him his historian, and with whom he remained during his life. He was the author of another work much esteemed, entitled "Del Consejo y Conseiro." He died at Valladolid in 1592. *Gen. Dict. Moreri.*

FURNEAUX (PHILIP) a nonconformist divine in the eighteenth century, was born at Totnes in Devonshire, in 1726. Being designed for the ministry, he was sent to London for academical studies among the dissenters. On his becoming a public preacher, he was chosen assistant to Mr Henry Read, pastor of a presbyterian congregation in St Thomas's, Southwark, and afterwards became one of the Sunday-evening lecturers at Salter's-hall. In 1753 he succeeded the rev Moses Lowman, as pastor of the congregation of Clapham, which became one of the most considerable among the protestant dissenters. He continued a favourite preacher for upwards of twenty-three years, but in 1777 he was attacked by a malady which ended in mental derangement, from which he never recovered, but died in 1783. Dr Furneaux published but little besides a few sermons; his principal work is entitled, "Letters to the honourable Mr Justice Blackstone, concerning his Exposition of the Act of Toleration, and some Positions relating to Religious Liberty in his celebrated Commentaries on the Laws

of England." In the second edition of these "Letters" he added the eloquent speech of lord Mansfield, in the cause between the dissenters and the city of London, in the house of Lords in 1767. Another work of Dr Furneaux' was an "An Essay on Toleration," 8vo. 1778. Both these works possess great merit, and display knowledge, acuteness, and liberality. Mr Furneaux received the diploma of doctor of divinity from one of the Scottish universities.—*Prot. Dissenters' Mag. Gent. Mag.*

FURSTEMBERG (FERDINAND DE) an eminent prelate, the descendant of a noble family in Westphalia, was born at Bilstern in 1626. He studied at Cologne, where he became the friend of the nuncio Chigi, who, when raised to the papacy under the name of Alexander VII, procured his election to the bishopric of Paderborn in 1661. He attracted the notice of Van Galen, bishop of Munster, who appointed him his coadjutor, and whom he succeeded in 1678, when the pope declared him apostolical vicar of all the north of Europe. He collected a number of MSS. and other monuments of antiquity, and published a valuable work relative to them, entitled "Monumenta Paderbornensia," Amsterdam, 1672, 4to. He also published a collection of Latin poems, under the title of "Septem Voreum illustrium Poemata." He died in 1683, and the same year a magnificent edition of his Latin poems was printed at the Louve, at the expence of the king of France.—*Bailet. Moreri.*

FURSTENAU (JOHN HERMAN) an eminent physician, was born at Herforden in Westphalia, in 1688. After studying in the schools of Wittenberg, Jena, and Halle, he became a licentiate in medicine in the latter place. In 1711 he visited the Low Countries in order to profit by the instructions of the great masters of his art who flourished at Amsterdam, Leyden, Utrecht, &c. On his return, he practiced for a short time at Halle, but in 1716 he took a second journey. In 1720 he became a professor at Rinteln, where he died in 1756. His works are, "Desiderata Medica," including also "Desiderata Anatomica-Physiologica; Desiderata circa morbos et eorum signa; Quæ desiderantur in Praxi Medica; Desiderata Chirurgica." "Programmata nonnulla tempore Magistratus Academicæ impressa;" "De Fatis Medicorum Oratio Inauguralis, 1720;" "De Dysenteria alba in puerpera Dissertatio," 1723, "De Morbis Jurisconsultorum Epistola," 1721.—*Rees's Cyclopaedia. Dict. Hist.*

FURTADO (ABRAHAM) a French Jew, born in 1759, was one of the leading members of the Sanhedrin, convoked by Buonaparte in 1808, at Paris. He is said to have possessed great eloquence. He died in 1817. He published "Moral and Political Reflections," in 1 vol.; "A Poetical Version of the Book of Job;" "Political Harmonies," in four vols., "Translation of Lucretius."—*Edge per Michel Berr.*

FUSELI (HENRY) second son of John Gaspard Fuessli, (see his Article,) which is the more correct way of spelling the family

name. The precise year of his birth is not known, it is however generally supposed to have been 1739. The place of his nativity is better ascertained to have been Zurich, where his father at that period resided. An extensive collection of prints to which he had access in his youth, first inspired him with a strong inclination to practice painting as a profession, contrary to the wishes of his father, who was anxious to see him in the church. Many of these were copies from the works of Michael Angelo, with whose peculiar merits and style the young artist became more especially struck, and made that great master ever after his principal model. Being placed, in pursuance of the views which his father entertained for him, at the Humanity College, he there contracted a friendship with the celebrated Lavater, which terminated only with the life of the latter, when it was transferred with unabating fervour to his son. At this period the two friends distinguished themselves by the zeal and ability which they displayed in bringing to justice a leading magistrate in one of the bailiwicks of Zurich, who had committed an act of glaring oppression, relying on his wealth and connexions to secure him impunity. A pamphlet which appeared from the pens of Fuseli and Lavater, compelled the superior authorities to take the matter up, and the culprit absconded rather than face the consequent investigation. But although thus far triumphant, the secret enmity which this affair produced against the authors proved so annoying, that in the end Fuseli, after taking his degree of AM. in the college, accompanied his friend to Vienna and Berlin, in which latter capital they prosecuted their studies for some time, under the learned Sulzer. Here too Fuseli obtained an intimate acquaintance with the English language, and was at length induced by our ambassador at that court, sir Robert Smith, who was much pleased with his genius, to visit this country. In 1762 he arrived in London, and through the introduction of his patron's letters, obtained the situation of tutor to a nobleman's son, whom he accompanied to Paris. On his return, in 1765, appeared his first literary production, "Reflections on the Painting and Sculpture of the Creeks;" and soon after, an essay in defence of Rousseau, against the attacks of Voltaire. Some of his early sketches being about this time shown to sir Joshua Reynolds, the warm encouragement bestowed on him by that distinguished artist decided young Fuseli's fate, at a moment when he was vacillating between the palette and the pulpit, and he determined to devote himself to painting. His first picture was "Joseph interpreting the dreams of the chief Baker and Butler," which was purchased by Mr Johnson the bookseller. In the pursuit of his profession, Mr Fuseli, in 1770, visited Italy in company with his friend Armstrong, and while in that country transmitted to England several pictures, especially two

taken from the works of Shakspeare, "The Death of Beaufort," and "a Scene from Macbeth." He left Italy in 1778, and after paying a short visit to his native place, returned to England, where he is believed to have suggested to the late Alderman Boydell the idea of forming the Shakspeare Gallery, for which institution he painted eight of his best pictures. In 1790 he became a Royal Academician, and in the course of the next nine years painted a series of forty-seven pictures from Milton, afterwards exhibited as the "Milton Gallery." In 1799 he succeeded Mr Barry as professor of painting to the Royal Academy, and in 1804 Mr Wilson as keeper to that association. In 1805 he gave to the world an improved edition of Pilkington's Dictionary of Painters, and in 1817 received the diploma of the first class of the Academy of St Luke at Rome. Mr. Fuseli continued to paint till within a week of his death, which took place while he was on a visit to the countess of Guildford at Putney Hill.—*Ann. Biog.*

FUX (JOHANN JOSEPH) a native of Styria, a province of Germany, Maestro di Capella to the emperor Charles VI. He wrote several operas, one of which, entitled "Eliza," composed on the birth of the empress Elizabeth Christiana, was printed at Amsterdam. He is however principally known as the author of a Musical Gradus, printed at Vienna in 1725, under the patronage and at the expence of the emperor his master. This treatise has been translated into Italian, and is yet a standard book in all the musical academies in that country. His death took place in 1750.—*Biog. Dict. of Mus.*

FUZELIER (LEWIS) a poet, was born at Paris in 1672, and wrote for the French and Italian theatres, the royal musical academy, and the comic opera. He was joint editor of the "Mercury" with M. de Bruere in 1744, and died at Paris in 1752. He left a great number of theatrical pieces, the most admired of which are his comedy of one act, entitled "Momus Fabuliste," and his operas of "Les Ages," "Les Amours des Dieux," "Les Juges Galantes," and "Le Carnaval des Parnasse."—*Nouv. Dict. Hist.*

FYOT DE LA MARCHE (CLAUDE) count de Bosjan, a French ecclesiastic, was born at Dijon in 1630. In 1662 he was named by Louis XIV abbot of the collegiate church of St Stephen at Dijon; he also made him his almoner, and prior of Notre Dame at Pontarlier, on the Seine. The king likewise created him an honorary counsellor of the parliament of Dijon, and gave him a brevet of counsellor of state. He died in 1721. He was the author of several devotional pieces, and of "A History of the Abbey of St Stephen," fol. 1696, which is much esteemed for the profound and curious researches which it contains. Fyot founded and endowed a seminary for the education of young ecclesiastics in his abbey.—*Moreri.*

GABBIANI (ANTONY DOMENIC) an Italian artist, was born at Florence in 1652, and studied under Ciro Ferri at Rome. He excels most in minor subjects, as gambols of genii, children, &c. His most famous work in fresco is the large cupola of Costello, which he did not live to finish, falling from a scaffold in 1726 while employed on it. His colouring, though sometimes feeble, is generally good, but he fails most in the execution of his draperies.—*Pilkington*.

GABIA (JOHN BAPTIST) one of the revivers of literature, was born at Verona, and flourished in the sixteenth century. He was professor of Greek at Rome, and is said to have distinguished himself by his knowledge of the learned languages, of mathematics, and philosophy, and even of theology. His works are—A translation from Greek into Latin of the Commentaries of Theodoret, bishop of Cyrus, on Daniel and Ezekiel, printed at Rome, 1563; A translation of the history of Scylitzes Curopalates, 1570; and a Latin translation of Sophocles. It is affirmed by Maffei that he also translated Zosimus and the Hebrew Psalms, and translated into Greek the Gregorian Kalendar with Santi's tables, with an introductory epistle in Greek by himself.—*Moreri. Maffei Verona Illustrata*.

GABRIEL (JAMES) an eminent French architect, built the palace at Choisy. He also undertook the Pont Royal at Paris, but died before it was finished in 1686, leaving the completion of it to his son James, and Frere Romain.—**JAMES**, the younger, was born at Paris in 1667, and became overseer-general of buildings, gardens, arts and manufactures, first architect and engineer of bridges and banks through the kingdom, and knight of St Michael. He died at Paris in 1742, leaving a son also first architect to the king, who died in 1782.—*Nouv. Dict. Hist.*

GABRIEL SIONITA a learned Maronite, was professor of the Arabic and Syriac languages at Rome, and flourished in the seventeenth century. He was invited to Paris to assist in M Le Jay's Polyglott, and carried with him some Syriac and Arabic versions of the Bible, transcribed by himself from MSS. at Rome, to which he added the vowel points, which were not in the original. The Latin translations of these versions were also furnished by Sionita; but in consequence of some misunderstandings between himself and his employers, he did not fulfil the department assigned to him in the Polyglott, but was succeeded by Echellensis. Sionita was also the translator of other Arabic works, and among the rest, of the "Geographia Nubiensis" of Scherif al Edrissi. He was appointed professor royal of the Syriac and Arabic languages at Paris, where he died in 1648. Walton has copied his versions into the English Polyglott.—*Moreri. Nouv. Dict. Hist.*

GABRIELLI (CATERINA) one of the most celebrated singers of the last century, born at Rome in 1730, not more remarkable for the

beauty of her person, the richness of her voice and the possession of great musical talent, than for the unbounded caprice that governed her in the exercise of the latter. She was a pupil of Porpora and Metastasio, under whose instructions she attained to such excellence that even Pachierotti was with great difficulty prevailed on to appear in the same opera with her, lest her superiority should prove the ruin of his own fame. From the circumstance of her father having been in the service of a Roman cardinal in the capacity of cook, she in her earlier years acquired the soubriquet of "La Cuochetina;" neither her countenance nor deportment however gave any indication of a vulgar origin. After exciting the greatest enthusiasm by her singing at most of the European capitals, she went to Russia, where she remained three years, and ranked high in court favour. In 1775 she visited England, and appeared at the King's theatre during that and the following season. While in this country, she exhibited fewer of those freaks which abroad tended much to interfere with her popularity, from a sense, it is said, of fear, lest an English audience should "break her bones." Of her whims Brydone gives a curious instance which occurred during her stay at the Sicilian court. The viceroy, it seems, had honoured her with an invitation to a party, composed of the elite of the nobility of Palermo, which she accepted, but not arriving at the appointed hour, the dinner was actually put back, and a messenger dispatched, who found her reading in bed. She rose and accompanied him, apologizing to the company on the ground that she had really forgotten the engagement. The viceroy was offended, and still more so when, on coming to the opera, no persuasion could induce her to sing a note above her breath. He threatened her with punishment, which only made her more obstinate, and she returned for answer, that his excellency "might indeed make her cry, but he never should force her to sing." The consequence of this contumacy was immediate incarceration. She remained in confinement twelve days, during which time she gave magnificent entertainments, and paid the debts of the poorer prisoners, till the viceroy, who was a good-tempered man, gave up the contest, and set her at liberty without carrying his point. The most successful expedient to ensure her singing was found to be the prevailing on her favourite admirer to place himself in a conspicuous part of the theatre, when she would generally address her airs to him, and exert herself to the utmost. She amassed great wealth, although by no means of a mercenary disposition; the principal source of her riches being the bounty of the emperor of Germany, who was much attached to her, but at length banished her from Vienna, on account of the continual broils, occasioned as much by her intriguing spirit, as by the influence of her personal charms. The time of her decease is uncertain.—*Biog. Dict. of Mus.*

GABRINI (see RIENZI.)

GADBURY (JOHN) a writer of considerable notoriety on the fanciful science of astrology, in the latter part of the seventeenth century. He was a native of Oxfordshire, and probably of low origin, as he served an apprenticeship to a tailor. He afterwards became the pupil or assistant of William Lilly the fortune-teller, the Sidrophel of Butler; and in imitation of his master, he published astrological almanacks and other works relating to similar subjects, one of which is entitled "A Discourse of the Natures and Effects of Comets, as they are philosophically, historically, and astrologically considered," London, 1665. Being a Roman catholic, he was arrested during the commotions excited by Titus Oates and his accomplices, in the reign of Charles II, on account of some observations in his almanacks. The period of his death is uncertain; but he is said to have perished by shipwreck, in a voyage to Jamaica. Partridge, a brother astrologer, published in 1693, a work entitled "The Black Life of John Gadbury.—*Granger's Biog. Hist. of Eng.*

GADDESSEN or GATESDEN (JOHN OF) an English physician, in high repute in the beginning of the fourteenth century. He was an ecclesiastic, and was physician to king Edward II. His treatise on medicine, entitled "Rosa Anglica," is curious for the information it affords relative to the state of science and practice at the period when it was written. Gaddesden says that he cured one of the royal children of the small-pox, by wrapping him in scarlet cloth, and hanging scarlet curtains round the bed. As a remedy for epilepsy, he advises the patient to be carried to church to hear mass four times during the ember weeks, and afterwards to suspend round his neck a scroll inscribed with a verse from the gospel of the day. Yet it appears that this superstitious practitioner was acquainted with the method of rendering salt water fresh by distillation; a process supposed to have been a modern discovery.—*Hutchinson's Biog. Med. Clutterbuck's Hist. of Hertfordshire*, vol. i.

GAFFARELL (JAMES) a learned rabbinical writer, was born at Mannes in Provence about 1601, and was educated at the university of Apt. He applied himself to studying the Hebrew language and rabbinical learning, and being much pleased with the mysterious doctrines of the Cabala, at the age of twenty-two he wrote a volume in their defence, entitled "Abdita divinæ Cabalæ mysteria," &c. He was appointed by cardinal Richelieu his librarian, and sent into Italy to collect the best printed books and manuscripts that could be found. In 1633 he was at Venice, being at that time doctor of divinity and canon law, prothonotary of the apostolic see, and commendatory prior of St Giles's. On his return home, he was employed by the cardinal in his project for bringing back all the protestants to the Romish church, and to that end was authorized to preach in Dauphiné against the doctrine of purgatory. He died at Sigonce, of which place he was then abbot, in 1681. His works are very numerous, and show him to

have been a man of great reading and subtle genius, but very credulous. The following are the principal:—"Unheard-of Curiosities," translated into English by Chilmead; "Rabbi Elea de fine mundi, Latine versus, cum notis;" "Un traité de la Poudre de Sympathies et des Talismans;" "De musica Hebreorum studenda libellus," &c. &c.—*Moreri*.

GAFORY or GAFFURIUS (FRANCHINUS) an eminent Italian composer and writer on the science of music, who flourished in the fifteenth century. He was born at Lodi in the Milanese, about the year 1451, and became professor of music successively at Verona, Genoa, Naples, and Milan, in which latter capital especially he was held in high esteem. He published in 1480 an abridgment of Boethius, under the title of "Theorum Opus Musicæ Disciplinæ," printed at Naples; a treatise on the management of the voice, called "Practica Musici utriusque Cantus," Milan, 1496; a series of lectures read by him at Cremona, Lodi, and other Italian towns, under the title of "Angelicum et Divinum Opus Musicæ," Milan, 1508; and "De Harmonia Musicorum Instrumentorum," Milan, 1518, in which latter work he gives a synopsis of the doctrines of such of the Greek musical writers as had come to his hands. His works made their way over the whole of Europe, and most of the compositions of the sixteenth century are formed according to the rules therein laid down. His death took place about the year 1521.—*Burney's Hist. of Mus.*

GAGE (THOMAS) an ecclesiastic, said by some to have been a native of Ireland, while by others the county of Surrey has been assigned as the place of his nativity. Travelling into Spain, he assumed the tonsure in a convent of Dominican monks, whence he was sent in the capacity of a missionary to the Philippines in 1625. He however went to Mexico, and remained in that country till 1637, when he came to England, and settled in this country in the enjoyment of considerable property which he had acquired in his travels. Having abjured the Romish church, he obtained the living of Deal in Kent, and in 1642 published his recantation sermon. He was also the author of a controversial tract, entitled "A Duel between a Jesuit and a Dominican," 4to; and "A Survey of the West Indies." This last work, which was first printed in 1651, was in 1676 translated into the French language by order of Colbert. The time of Gage's death is uncertain.—*Aikin's G. Biog. Dict.*

GAGER (WILLIAM) a dramatist of the sixteenth century, author of two Latin tragedies, entitled "Ulysses redux," and "Meleager," and a comedy, called "Rivales." He was educated at Westminster, whence he removed to Christchurch, Oxford, on the foundation, in 1574. Here he applied himself to the study of the civil law, in which he graduated, and afterwards obtained the vicar-generalship to the diocese of Ely. A curious controversy was carried on between him and a writer named Heale, on the subject of the right of husbands

to beat their wives. He also wrote against Dr Reynolds, respecting the lawfulness of theatrical amusements.—*Biog. Dram.*

GAGNIER (JOHN) an eminent orientalist, who was a native of Paris, where he was educated, and entering into holy orders, became a canon in the church of St. Genevieve. Entertaining doubts relative to the Roman catholic doctrines, he emigrated to England, where his learning procured him the countenance of archbishop Sharp, the lord chancellor Macclesfield, and others. He was admitted MA. at Cambridge, and subsequently at Oxford, in which latter university he took up his abode, supporting himself chiefly by teaching Hebrew. In 1706 he published Joseph Ben Gorion's History of the Jews, in Hebrew, with a Latin translation and notes, 4to. In 1717 he began to give lectures on the Arabic language, and he published a treatise on the small-pox, translated from the works of Rhazes, an Arabian physician. He also produced two valuable works relative to the early history of Mahometism, "Ismael Abulfeda de Vita et Rebus gestis Mohammedis, &c. Latine vertit, Prefatione et Notis illustravit Joh. Gagnier," Oxon. 1723, folio; and "La Vie de Mahomet, traduite et compilée de l'Alcoran, des Traditions authentiques de la Sonna, et des meilleurs Auteurs Arabes," 1735, three volumes, 12mo. Gagnier died in 1740.—*Chalmers's Biog. Dict. Aikin's Gen. Biog. Nouv. Dict. Hist.*

GAGUIN (ROBERT) a native of Colines, near Amiens, eminent as a diplomatist under Charles VIII and Louis XII; both which monarchs employed him on various missions to different European courts. He received the principal part of his education at Paris, where he was appointed keeper of the Royal Library, and published a history, "De Gestis Francorum," in eleven books, printed at Lyons in 1524, folio. This work contains the history of affairs from the commencement of the thirteenth to the close of the fifteenth century. His death took place in 1501 at an advanced age.—*Nouv. Dict. Hist.*

GAILLARD (GABRIEL HENRY) a French historian, member of the old French academy, of that of inscriptions, and belles-lettres, and of the third class of the institute, was born at Ostel near Soissons, in 1728, and died at St Firmin near Chantilly in 1806. He was the author of "Poétique Française," 2 vols.; Histoire de François I, 7 vols, 12mo; "Histoire de Marie de Bourgogne," 12mo; "Histoire des Rivalités de la France et de l'Angleterre;" "Histoire de Charlemagne;" "Rhétorique Française;" "Parallele des quatre Electre de Sophocle, d'Euripide, de Crebillon, et de Voltaire;" "Eloge historique sur M. Mallesherbes;" "Observations sur l'Histoire de France, de Messrs. Velly, Villaret, et Garnier," 4 vols. 12mo.—*Dict. Hist.*

GAILLARD (JOHN ERNEST) the son of a barber of Zell, born in 1687. He was a pupil first of Marichal and afterwards of the celebrated Farinelli. Entering the service of George Prince of Denmark, on the marriage of

his royal patron with queen Anne, he followed in his suite to England, where he succeeded Battista Draghi as chapel-master to the queen dowager Catherine. The whole musical world being at this time occupied with the rivalry between Handel and Buononcini, the merits of Gaillard, though great, were comparatively unnoticed. He therefore entered into an engagement with Rich, then manager of the theatre in Lincoln's-inn Fields, and composed the music to most of those mixed pieces, half opera half pantomime, with which he entertained the town. Among these, the greatest notice was attracted by the "Necromancer, or Harlequin Faustus," and "The Royal Chace, or Merlin's Cave;" in which Beard first recommended himself to the public by singing, for some hundred nights, a favourite song by Gaillard, commencing "With early horn." This, which was the most popular, was also one of the latest of his compositions, as he died early in the year 1749, leaving behind him an unfinished opera on the story of Orestes and Pylades, and a valuable collection of scores, &c. in his own hand-writing. His music to the tragedy of Edipus (which had before been set by Purcel) was never printed, but is now in the library of the Academy of Ancient Music.—*Biog. Dict. of Mus.*

GAIMAR or GAIMARD (GEOFFREY) an Anglo-Norman troubadour or minstrel, of the twelfth century. He is supposed to have been a native of Lower Normandy; and between the years 1142 and 1145, he composed in octo-syllabic verse, a romantic chronicle of the Anglo-Saxon kings, founded on Saxon and Welsh documents. This curious poem is still extant among the MSS. in the British Museum. M. de la Rue, professor of history at Caen, has published an interesting extract from this piece, describing the feats of dexterity, by the exhibition of which, before the two armies at the battle of Hastings, Taillefer, the bard or jongleur of William the Norman, astonished and perhaps daunted the English soldiers, who, as the poet informs us, ascribed the juggler's skill to enchantment.—*Archæologia*, vol. xii.

GAINSBOROUGH (THOMAS) a celebrated English landscape painter. He was born in 1737, at Sudbury in Suffolk, where his father was a clothier, but in such circumstances as prevented him from bestowing on his son the advantages of education. He consequently owed to native genius and spontaneous study that great eminence which he attained in his art. He used to ramble in the woods, and employ himself in sketching the scenery around him. At length his talents having attracted observation, he was sent to London for improvement. There he is said to have practised modelling figures of animals with great success. He also made ornamental drawings for an engraver, and painted small landscapes for sale. Prudence however, rather than inclination, induced him to engage in portrait painting, by which means he supported himself for some time in the metropolis, and then married and removed to Ipswich. Thence he went to Bath, where he attained high reputation; and at

length, in 1774, he settled in London, and supported till his death the character of almost unrivalled excellence in the department of his profession, which he chiefly cultivated. He was also much employed as a painter of portraits; and those of the king and others of the royal family were among the works which he executed. He died of a cancer in the neck, August 2, 1788, and was interred in the churchyard of Kew. The landscapes of Gainsborough are distinguished for "a portrait-like representation of nature," uniting the brilliancy of Claude with the precision and simplicity of Ruysdael and others of the Flemish school. This artist was much esteemed by sir Joshua Reynolds, who thus notices him in one of his *Academical Discourses*: "If ever this nation should produce genius sufficient to acquire to us the honourable distinction of the English school, the name of Gainsborough will be transmitted to posterity, in the history of the art, among the very first of that rising name." He had also extraordinary talents for music, though accompanied by a capricious love of change in the instruments on which he practised: and he displayed, both in his letters and conversation, considerable taste and ability, though uncultivated.—One of his brothers, a dissenting minister at Henley-upon-Thames, was an ingenious mechanic; and his nephew, GAINSBOROUGH DUPONT, distinguished himself as an artist, but died in 1797, at the early age of thirty.—*Ann. Reg. Life of Gainsborough by Thickness.*

GALATEO (ANTHONY) an Italian physician and miscellaneous writer of the fifteenth and sixteenth centuries. He was a native of the territory of Otranto, and studied medicine at Ferrara, where he took his doctor's degree in that faculty. He settled at Naples, and was appointed physician to the king. The air of that city proving prejudicial to his health, he removed to Gallipoli, and afterwards to Lecce, at which place he founded an academy, on the model of that of Naples, to which he belonged. He died in 1516, aged seventy-two. His principal work is a treatise, "De Situ Japygiæ," to which is added a description of the city of Gallipoli, containing much curious information relating to geography and civil and natural history. Among his other productions are "De Situ Elementorum;" "De Situ Terrarum;" "De Mari et Aquis;" and a tract on the Expedition of the Turks against Otranto in 1480.—*Moreri. Tiraboschi.*

GALE (JOHN) an eminent nonconformist divine of the anti-pædobaptist persuasion, in the eighteenth century. He was born in London, and pursued his studies at Leyden, where he took the degrees of master of arts and doctor of philosophy at the age of nineteen. He then went to Amsterdam, and formed an acquaintance with Limborch and Le Clerc. Returning to London, he distinguished himself by writing: "Reflections on Wall's History of Infant Baptism, in several Letters to a Friend," which, after being circulated for some time in manuscript, were at length published in 1711, 8vo. About 1715 he became pastor of a bap-

tist congregation in the metropolis, in which situation he continued till his death in 1721. Dr Gale was preparing an answer to Wall's Defence of his History of Infant Baptism at the time of his decease; and he is also said to have contemplated the publication of an English Translation of the Septuagint, according to the edition of Dr. Græbe and other literary labours; for which he appears to have been well qualified by his talents and acquirements. Four volumes of his sermons likewise appeared in a posthumous publication.—*Biog. Brit. Aikin's G. Biog.*

GALE (THIOPHILUS) a learned divine, who was a native of King's Teignton in Devonshire, of which place his father was vicar. In 1647 he became a student of Magdalen college, Oxford, where he took the degree of M.A. in 1652, having previously been chosen to a fellowship. While at the university he formed the plan of his work, entitled "The Court of the Gentiles," intended to demonstrate that not only the theology, but also the philosophy and philology of the Pagans were derived from the Bible. In 1657 he became a preacher at Winchester, among the independents; from which situation he was ejected in consequence of the Act of Uniformity in 1661. He was then received into the family of lord Wharton, as tutor to his two sons, whom he accompanied to Caen in Normandy, where he became intimate with Bochart and other learned foreigners. In 1665 he returned with his pupils to England, and soon after removed to London, where he narrowly escaped suffering an irreparable loss, through the great fire in the city, which destroyed the house of a friend, in whose custody he had left his manuscript collections, previously to his journey to France. These however were accidentally preserved from the conflagration; and in 1659 he published the first part of his "Court of the Gentiles;" the second appeared in 1671, and the third and fourth in 1677. The whole was speedily translated into Latin, and the work became known and valued, not only in England but on the continent. Mr Gale became minister of a dissenting congregation in Holborn; but he resided chiefly at Newington, where he conducted a seminary for the education of youth. He died in 1678, in the fiftieth year of his age. Besides his great work, he was the author of "Philosophia Generalis, in duas partes disterniata," 8vo; "Idea Theologiæ tam contemplatiuæ quam activæ, ad formam S. Scripturæ delineata," 8vo; "The Anatomy of Infidelity," 8vo; &c.—*Ibid.*

GALE (THOMAS) an English divine, critic, and antiquary of distinguished erudition in the seventeenth century. He was born at Scruton in Yorkshire, in 1636, and received his education at Westminster school and King's college, Cambridge. He took the degree of B.A. in 1658, and that of M.A. in 1662. His reputation as a classical scholar procured him the regius professorship of the Greek language in the university in 1666; and in 1671 he published a collection of the ancient mythological

writers, entitled "Opuscula Mythologica, Ethica et Physica, Græcè et Latinè," 8vo. He was chosen head-master of St Paul's school in London, in 1672; and in 1676 he obtained a prebend in the cathedral of the metropolis, having the preceding year accumulated the degrees of BD. and DD. at Cambridge. In 1677 he was elected FRS. and afterwards became one of the council, and in 1685 was chosen honorary secretary. About 1697 he presented to the library of Trinity college, Cambridge, a number of curious Arabic manuscripts; and the same year he was preferred to the deanery of York. He died in that city in 1702. Among his publications are editions of the works of Herodotus, Cicero, and several other ancient writers; of some of the English monastic historians; and the Psalter, in Greek and Latin, from the Alexandrine MS. A volume of his Sermons was published by his son, after his death; and also an edition of the British Itinerary of Antoninus, with a Commentary. Dr Gale carried on a literary correspondence with Mabillon, Baluze, Grævius, Huet, and other eminent scholars abroad, by whom his learning and abilities were highly estimated. He contributed to the Philosophical Transactions some papers on archæology.—GALE (ROGER) a learned antiquary, eldest son of the preceding. He was born in 1672, and studied at Trinity college, Cambridge; of which he was chosen a fellow in 1697. He had an estate at Scruton in Yorkshire, and served in three parliaments as member for the borough of North Allerton; and he was also a commissioner of stamps, and subsequently a commissioner of excise, which latter situation he lost in 1735. He belonged to the Royal Society and the Society of Antiquaries, and was a vice-president and treasurer of the last-mentioned learned association. He died in 1744. He published "The Knowledge of Medals," 8vo, a translation from the French of Joubert; "Registrum Honoris de Richmond," 1722, folio; "A Discourse on the four Roman Ways in Britain," printed in the sixth volume of Leland's History; papers in the Archæologia, &c. His manuscripts, and a cabinet of Roman coins which he collected, are preserved at Trinity college, Cambridge, to which he left them at his death.—GALE (SAMUEL) brother of the foregoing, was born in London in 1682, and educated at St Paul's school, under his father. He held a situation in the Custom-house; and having a taste for archæological researches, he became one of the fellows of the Society of Antiquaries on its incorporation. Besides essays in the Archæologia and Bibliotheca Topographica Britannica, he published "A History of Winchester Cathedral," begun by Henry earl of Clarendon. He died in 1754.—*Biog. Brit. Nichols's Lit. Anec.*

GALEN or CLAUDIUS GALENUS, one of the most celebrated physicians of antiquity. He was born at Pergamus in Asia, AD. 131, and was the son of Nicon, an architect, who was possessed of an ample fortune. The education of Galen was liberal and extensive.

After studying philosophy, astronomy, geometry, and general literature, he turned his attention particularly to medicine and surgery. In pursuit of knowledge, he visited Smyrna, Corinth, Alexandria, and in his thirty-eighth year returned to Pergamus, where he undertook the care of the public gladiators; an occupation which furnished him with opportunities for making many surgical experiments, and adding to the stock of his professional knowledge. He first went to Rome about his thirty-third year, and obtained great reputation. A pestilence induced him to return to his native country, whence he was recalled by an especial mandate of the emperors Marcus Aurelius and Lucius Verus; the former of whom, on quitting Rome to make war on the Germans, confided to Galen the care of the health of his son Commodus. Of the remaining part of the life of this famous practitioner nothing certain is known; but it is probable that he died at Rome, in the reign of Severus. The writings of Galen were exceedingly numerous, and though many are lost, those which are extant compose a voluminous body of practical and theoretical medicine. Though he attended more to anatomy than most of his predecessors, it does not appear that he ever dissected human bodies, his anatomical descriptions being often obviously drawn from the inspection of brute animals. One of his best works is his "De Usu Partium," in seventeen books. Several editions of his works have appeared in a Latin translation; but the only complete collection in the original language is that of Char-tier, Greek and Latin, Paris, 1660.—*Moreri. Aikin's G. Biog. Hutchinson's Biog. Med.*

GALESINI (PETER) in Latin Galesinius, apostolical protonotary under popes Gregory XIII and Sixtus V, was a native of Milan. He took great pains in illustrating and correcting the Roman Martyrology, which was published in 1577, under the patronage of St Charles Borromeo, with this title, "A Martyrology adapted to the use of the Church of Rome, for all the Days in the Year." The work however was not approved by the Roman censors, who thought it too long to be recited in the canonical office. He was also the author of "The Lives of the Saints that are mentioned in the Church of Milan," 1582; "A Commentary upon the Pentateuch," 1587; "Theatrum Pontificale," or a history of the popes; "Notes upon the Greek Text of the LXX," 1567; translations from the Greek into Latin of some "Discourses of St Gregory Nyssen," and "Theodoret;" the histories of "Sulpitius Severus," and of "Aimon of Halberstadt," &c. &c.—*Dupin. Moreri.*

GALIANI (FERDINAND) an Italian abbé, celebrated for his wit and writings, was born in the year 1728, at Chieti in the kingdom of Naples, where his father, a nobleman, was assessor of the royal court of justice. He was educated under the care of his uncle, the archbishop of Tarento, and applied to the study of the law. A humorous collection of verses on the death of the public executioner, in ridicule of the custom of thus celebrating the death.

eminent persons by the academy Degli Emuli, first made him known as a writer. This was not long after followed by his celebrated work, "Trattata della Moneta," which was published in the year 1750. He soon after, by the desire of pope Benedict XIV, undertook a collection of specimens of the various matter thrown up by Mount Vesuvius; a catalogue of which was published in 1772. This collection he sent to the pope, and on one of the boxes was inscribed, "Beatissime Pater fac ut lapides isti panes fiant."—"Holy father, command that these stones be made bread;" which the pope virtually attended to, by giving him a living of 400 ducats per annum. In 1759 he was appointed secretary to the French embassy, and soon took a lead among the wits and eminent men of Paris. During his residence in France, he composed—"Annotations upon Horace," and "Dialogues on the Corn Trade," written in opposition to the policy of the free exportation of corn, then recently adopted with a view to encourage agriculture. On his return to Naples in 1779, he kept up a correspondence with the most distinguished men of France; and their manuscript letters form nine thick volumes in 4to. He died, loaded with honours and offices, and possessed of very general esteem, on the 30th Oct. 1787, in his fifty-ninth year. Besides the works already mentioned, he is the author of treatises "On the innate propensities or inclinations of men; or, the principles of the Laws of Nature and Nations, deduced from the Poems of Horace;" "On the Duties of Princes to other belligerent powers," and "On the Neapolitan dialect."—*Nouv. Dict. Hist.*

GALILEI (GALILEO) a celebrated philosopher, mathematician, and astronomer, was the son of Vincenzo Galilei, a Florentine noble and a man of letters, not unskilled in the mathematics, but better known by his writings on music. Galileo was born at Pisa in 1564, and was intended by his father, whose fortune was small, to be brought up to physic, but exhibiting a great dislike to that profession, he betook himself to the study of mathematics with such unwearied diligence, that, in 1689, he was chosen mathematical professor in the university of Pisa. Having heard of the invention of the telescope by Jansen, he made one for himself, and in consequence was led to the discovery of the satellites of Jupiter and many other astronomical phenomena; which exciting the jealousy and annoyance of the violent Aristotelians, he resigned the chair of Pisa in disgust, and accepted that of Padua, where he remained for eighteen years. In 1611 his countrymen becoming more sensible of his great merit, the grand duke of Tuscany, Cosmo, recalled him to Pisa, and reappointed him professor, with a considerable stipend. He afterwards invited him to Florence, where he fell under the censure of the inquisitors, for asserting the motion of the earth round the sun. It will prove an eternal satire both on this tribunal, and the principles on which it was instituted, that Galileo was imprisoned until he abjured his opinion. In 1632 he however ventured to publish his "Dialogues on

the two greatest Systems of the world, the Ptolemaic and Copernican." In this work he adduces the best arguments in favour of each system, without deciding the superiority, not so cautiously however, but that his opinion in favour of that of Copernicus was very obvious. Scarcely had this work appeared when the cry of heresy was again loudly raised, and in 1633 he was once more cited before the inquisitors at Rome, and committed into custody. Being subsequently brought to trial, he was ordered to take an oath no longer to teach or support his system; to remain in prison during the pleasure of the cardinal inquisitors; and to repeat the penitential psalms once a week for three years; his dialogues were also censured, prohibited, and ordered to be burnt. Pope Urban VIII mitigated this sentence, by confining him only in the palace of the Medici at Rome, and finally to his own country-house in the vicinity of Florence, where he spent the remainder of his days, visited and esteemed by the most distinguished of his countrymen. He survived eight years in this retreat, devoting himself to the perfecting of his telescope; but by continual application, and the effects of the night air, he became blind three years before his death, which took place in Jan. 1642, in the seventy-eighth year of his age. To Galilei the world is indebted for the discovery of the rotation of the sun upon its axis. He also, by ascertaining the changing of the spots upon the disk of that orb, and the hills and cavities in the moon, showed that there was not so great a difference between celestial and sub-lunary bodies as had been imagined. He rendered no less a service to science by his investigation of the theory of motion; and in geometry he invented the trochoid, and in mechanics the pendulum, the application of which to clocks was reserved for his ingenious natural son, Vicenzio. He also invented a machine by means of which the Venetians rendered their Laguna fluid and navigable: and the principles which he laid down in regard to gravitation, produced the barometer. The works of Galilei were published after his death, in 2 vols. 4to; to which is to be added a quarto volume of his letters, subsequently published at Bologna in 1674; and a tract on the fifth book of Euclid, 4to, published by his disciple, Viviani, at Florence. It is to be lamented, that many of the papers left behind him were burnt, owing to the superstition of an ignorant nephew, who deemed them heretical because their illustrious author died a prisoner to the inquisition, although allowed to reside in his own house.—*Fabroni, Vitæ Italarum. Hutton's Math. Dict.*

GALLAND. There were two French authors of this name in the seventeenth century. AUGUSTUS, the elder, was a counsellor of state and proctor-general, for the kingdom of Navarre. He collected materials for a history of France and Navarre, which were published in one folio volume. He also wrote a history of Rochelle; a work on the standards and ensigns used by the French monarchs from the earliest ages; and a legal treatise on

the privilege of exemption from taxes, &c. He died in 1644.—ANTHONY GALLAND, an able oriental scholar, was born of humble parentage, at Rollo in Picardy, in 1646. Colbert employed him to travel on the account of government, and his zeal and industry are evinced by several treatises published by him on his return, illustrative of the manners and customs of the Mahometan empire and religion. He was well versed in antiquarian research, and published a learned treatise on medals and coins; but the work by which he is principally known is his curious collection of Arabic Romances, published by him under the title of "The Arabian Nights' Entertainments," a work which has gone through a variety of editions in every language of Europe. His other writings are—"An Account of the Death of Sultan Osman, and the Coronation of his Successor;" "A Treatise on Coffee; and a selection of the most approved Aphorisms and Jeux d'Esprit to be found in the works of Oriental authors. M. Galland was elected professor of Arabic in the university of Paris, and a member of the Academy of Inscriptions. His death took place in 1715, while he was engaged on a translation of the Koran, which he did not live to complete.—*Moreri. Nouv. Dict. Hist.*

GALLOIS (JOHN) a French critic of the seventeenth century, who acquired great reputation as a general scholar, but is chiefly remarkable for having projected, with M. de Sallo, the "Journal des Sçavans," the first number of which appeared in 1665. He was a member of the Academy of Sciences and of the French Academy, librarian to the king, and professor of Greek in the royal college. He died in 1707.—*Moreri.*

GALLOIS (JULIAN JEAN CÉSAR LE) a recent French physiologist. He was the son of a farmer, and was educated at Caen, where, at the commencement of the French Revolution, he distinguished himself as a federalist, for which he was obliged to fly from Normandy. He subsequently studied in one of the medical schools of Paris, and graduated as MD. He distinguished himself by his physiological researches, which he detailed in a publication, entitled "Experiments on the Principle of Life, particularly on that of the Motion of the Heart, and the Seat of this Principle." Much was expected from his farther research, when he fell a sacrifice to a fever in 1818.—*Med. Journal.*

GALLUS (CORNELIUS) a Roman poet of the Augustan age. He was born about 69 B.C. at Forum Julii, but whether in Gaul or Italy is uncertain, as there were places in both countries anciently thus designated. He was intimate with Virgil, who has inscribed to him his tenth Eclogue. Augustus employed him in his war against Anthony, and rewarded his services with the government of Egypt. This elevation proved unfortunate; for being charged with peculation and conspiracy, his property was confiscated, and he was condemned to exile; in consequence of which he put an end to his life in his forty-third year. He wrote four books of Elegies in honour of his mistress,

Lycoris, which were highly praised by Ovid, but are no longer extant.—*Vossius de Poet. Lat.*

GALLY (HENRY) an English divine, was born at Beckenham in Kent, in 1696. He was educated at Cambridge, where he took his degree of MA. in 1721, and the same year was chosen lecturer of St Paul's, Covent Garden, and instituted to the rectory of Warenden in Buckinghamshire. In 1728 he was preferred to a prebend in Gloucester cathedral, and two years after to one in the cathedral of Norwich. In 1732 Dr Gally was presented to the rectory of St Giles-in-the-Fields, and in 1735 was nominated chaplain in ordinary to the king. He died in 1769. He was the author of "Two Sermons on the Misery of Man," 1728; "A Sermon preached before the House of Commons upon the Accession;" a translation of "The Morals of Theophrastus, with Notes, and a Critical Essay on Characteristic Writing;" "The Reasonableness of Church and College Fines asserted, &c.;" "Some Considerations upon Clandestine Marriages;" "A Dissertation against pronouncing the Greek Language according to Accents," &c. &c.—*Nichols's Lit. Anec.*

GALVANI (LEWIS) an Italian physiologist, celebrated as the discoverer of animal electricity or Galvanism. He was born at Bologna in 1737, and in his youth he was destined for a monastic life, but being persuaded to relinquish his views of the cloister, he adopted the medical profession. Professor Galeazzi, under whom he studied anatomy, gave him his daughter in marriage; and he was created public lecturer in the university of Bologna, and nominated reader in anatomy to the institute in that city. He employed himself much in researches concerning comparative anatomy, and published in the Memoirs of the Institute curious observations on the auditory organs of birds and other subjects. His reputation as an experimental philosopher was already established, when accident led him to the discovery which has perpetuated his name. His wife labouring under constitutional debility, some frogs had been skinned to compose a restorative soup for her use; they happened to be placed in the laboratory of the professor, on the same table with an electrical machine, when one of the assistants by chance touching with a scalpel the nerves of the leg of a frog lying not far from the conductor, the muscles of the limb were observed to be immediately agitated with strong convulsions. Madame Galvani, who was present, went and informed her husband of this singular phenomenon. He repeated the experiment, and ascertained that the convulsion occurred only when a spark was drawn from the conductor while the scalpel touched the nerve. His subsequent enquiries induced him to ascribe the convulsive motion to the influence of a peculiar fluid or principle, which he supposed to be secreted by the brain, and distributed by the nerves through different parts of the body. To this principle he gave the appellation of animal electricity, and considered it as the cause of muscular motion. His ideas were developed in a publication,

entitled "Aloysii Galvani de Viribus Electricitatis in Motu Musculari Commentarius," 1791, 4to. The singularity of these phenomena excited the attention of the cultivators of science, not only in Italy, but also in England, France, Germany, and other parts of Europe. Subsequent researches have led to conclusions inconsistent with the hypothesis of Galvani; and animal electricity or Galvanism (as it has been denominated in honour of the discoverer) is now considered as depending on the operation of the same cause which produces other electric phenomena. Galvani continued his enquiries, and made experiments on the electricity of the torpedo, and on the electro-motive effects of the contact of different metals; but he did not materially extend the limits of his original discovery. On the foundation of the Cisalpine republic, he refused to take the civic oath required by the new constitution, in consequence of which he was deprived of his official situation. A decree was afterwards passed for his restoration to the professorial chair; but this testimony to his merit preceded but a short time his decease, which occurred towards the close of the year 1798.—*Aikin's G. Biog.*

GAMA (VASCO DE) a celebrated navigator and naval commander, was born at Sines, a maritime town in Portugal. He was appointed by king Emanuel to command an expedition intended to follow up the discoveries on the eastern coasts of Africa, and the interjacent seas to the East Indies. He set sail accordingly in July, 1497, and was four months contending with contrary winds before he doubled the Cape of Good Hope. Reaching Melinda, he obtained a Mahometan pilot, and in May, 1498, arrived at Calicut, and was at first received in a friendly manner by the zamorin or prince, but discovering that a plot was laid for his destruction, he returned to Europe, and entered the port of Lisbon in September, 1499. He was created a count, and made admiral of the Persian, Indian, and Arabian seas; in which capacity he commanded another expedition, consisting of a fleet of twenty ships. He was attacked by an opposing fleet on the part of the zamorin, which was defeated, and two prizes captured of great value. His success led to the extensive settlements of the Portuguese in India, of which Gama, sent out a third time, was made viceroy in 1524. He died at Cochin in 1525. The *Lusiad* of Camoens, who accompanied Gama, is founded on the adventures of his last voyage.—*Moreri. Mod. Univ. Hist.*

GAMACHES (STEPHEN SIMON) a French ecclesiastic, was born at Meulan about 1672. He was one of the canons of the Holy Cross of de la Bretonniere, and was chosen member of the French Academy of Sciences. His works are—"Physical Astronomy, &c.;" 2 vols. 4to; "The System of a Christian Philosopher;" "The System of the Heart," published under the assumed name of Clairgny;" "Literary and Philosophical Dissertations;" "The Elegancies of Language reduced to their Principles," 1757, 12mo. This last has ac-

quired much reputation, and is styled by a tasteful writer, "A Dictionary of fine Thoughts." He died in 1756.—There was also another GAMACHES, PHILIP, a doctor of the Sorbonne, who was born in 1658. He was appointed professor of theology in the university of Paris in 1599, and after discharging the duties of his office with great credit, and obtaining the reputation of being one of the ablest divines of his time, he died in 1625. He was the author of "Commentaries on the Summa Theologiae of Aquinas," in 2 vols. folio, a work much esteemed by catholics.—*Bayle. Moreri. Nouv. Dict. Hist.*

GAMBARA (LORENZO) an Italian poet of the sixteenth century, was protected by cardinal Alexander Farnese. His writings were much esteemed in his own time, but are now little thought of. He was the author of a Latin Poem on Columbus; a Latin Treatise on Poetry; in which he dissuades Christian poets from using pagan mythology; some eclogues, entitled "Venatoria;" and other pieces. He died in 1586.—*Tiraboschi. Moreri. Saxii. Onomast.*

GAMBARA (VERONICA) an Italian poetess, was born in 1485, and was the daughter of count John Francis Gambara. In 1509 she was married to Giberto, lord of Correggio, whom she survived many years, devoting the rest of her life to the education of her children and the cultivation of literature. In 1528 she went to reside with her brother, who was governor of Bologna, where she established a kind of academy, which was frequented by many of the literati of the Roman court. On her return to Correggio, she received as her guest the emperor Charles V. She died in 1550. Her works were collected and published by Zambani in 1759, with a life of the authoress. They possess much originality and vivacity, and are far superior to the inundation of sonnets at that time poured forth in Italy.—*Tiraboschi. Roscoe's Leo X. Moreri.*

GAMBOLD (JOHN) an ecclesiastic, born at Haverfordwest in the early part of the last century. In 1734 he took the degree of Master of Arts at Christchurch, Oxford, and was about four years after presented by archbishop Secker to the living of Stanton Harcourt. This piece of preferment he resigned in 1748, from motives of conscience, having become a convert to the opinions of Zinzendorf, an account of whose life and character he afterwards published. In 1754 the Moravian fraternity, of which he was now become a distinguished member, consecrated him one of their bishops; in which situation he displayed much activity until his death, which took place at his native town in 1771. He was a man of blameless morals, deep erudition, and sincere though enthusiastic piety, and was much beloved for the amiableness of his manners and the inoffensive tenor of his life. While at Oxford he published in 1740 a sacred drama, having for its subject the martyrdom of St Ignatius, and in 1742 superintended an edition of the Greek Testament through the Clarendon press. At a subsequent period of his life he assisted in trans-

being Cranz's history of Greenland from the Dutch, and was the author of several sermons, especially one on the second Article of the Church of England; and of a volume entitled "Maxims and Theological Ideas."—*Nichols's Lit. Anec.*

GANDON (JAMES) an ingenious English architect, who studied his profession under sir William Chambers. He was the first who gained the gold medal as an architectural prize from the Royal Academy, and early acquired considerable professional reputation, which was much enhanced by the publication of his "Vitruvius Britannicus," 3 vols. folio. He soon after went to Ireland, where he built the Royal Exchange at Dublin, the portico of the house of Lords, the four courts, and other highly esteemed buildings in that capital. He was a fellow of the Society of Antiquaries, as also of the Royal Irish Academy, and died at Canon-brook near Lucan, in 1824, being then in his eighty-fifth year.—*Month. Mag.*

GANDY (JAMES) an able artist, was born in 1619, and was a pupil of Vandyck. His works possess considerable merit, and some of his portraits are very little inferior to Vandyck, either in dignity, expression, or colouring. He is however almost unknown; being taken to Ireland by the old duke of Ormond, and retained in his service, the then unsettled state of that country prevented his talents from receiving due notice. He died at Exeter in 1689.—*Pilkington.*

GANGANELLI, (see CLEMENT XIV.)

GARAMOND (CLAUDE) an engraver and letter-founder, was born at Paris. He first distinguished himself about 1510, when he founded his printing types clear from all remains of the black letter, which he brought to such perfection as to surpass every thing that had been done in this way before. All parts of Europe were supplied with his types, which were distinguished by his name by way of excellence, particularly his small roman. By command of Francis I, he founded three species of Greek types for the use of Robert Stephens, who printed with them all his beautiful editions, both of the New Testament and several Greek authors. He died in 1561.—*Moreri.*

GARASSE (FRANCIS) a French jesuit, noted for the violence and scurrility of his controversial writings, was born at Angoulême in the year 1585. He entered the Jesuits' college at the age of fifteen, and during his novitiate published a defence of his order, which, without being devoid of wit, was still more distinguished for asperity and buffoonry. He followed this publication up with many more in a similar strain; and on taking orders became a very popular preacher. In 1623 he ventured on the production of a larger work, entitled "The curious Doctrine of Wits, or Pretenders to Wit of this Age, &c. refuted by Father Garasse, of the Order of Jesus," 4to. This production, with a vein of wit, was so defective in respect to accuracy, judgment, and argumentation, as to produce considerable animadversion; nor was he more fortunate in his "Theological Summary of the Capital

Truths of the Christian Religion," which was not only severely exposed by the abbé de St Cyran, but provoked a formal censure from the Sorbonne. The jesuits thought fit to yield to the storm, and banished him to one of the houses of their order at Poitiers, where he caught the plague during a charitable attendance on the infected, and died in 1631 at the age of forty-six.—*Bayle. Moreri.*

GARCÍAS-LASSO or GARCILASSO DE LA VEGA an eminent Spanish poet, was born at Toledo in 1503, being the younger son of a nobleman, who had been employed on some important negotiations. He was early distinguished for his wit and fancy, and adopting the poetical principles of his friend Boscan, who rejected the ancient maxims, and substituted others borrowed from Italy, was a principal instrument in rendering them popular. His works, which are contained in a small volume, consist principally of pastorals; in which his chief excellence is a tenderness that is still more beautifully displayed in his sonnets. His classical taste kept him clear from the bombast of his countrymen, but his learning and judgment were superior to his genius. Garcilasso followed the profession of arms, and attended Charles V in many of his expeditions, in one of which he lost his life in 1536, at the early age of thirty-three.—Another GARCILASSO DE LA VEGA, a native of Peru, composed a Spanish History of Florida and of Peru.—*Moreri. Monthly Mag. Oct. 1796.*

GARRARD or GERARDS (MARK) a Flemish painter, was born at Bruges in 1561. He came to England soon after 1580, and remained here until his death, which happened in 1635. He painted history, landscape, architecture, and portraits. His works are numerous, but possessing no peculiar mark, are not easily known. His procession of queen Elizabeth to Hunsdon house, has been engraved by Vertue. His execution is neat, but his flesh-colours are thin and light, possessing rather a blueish tinge.—*Walpole's Anecdotes.*

GARDEN (ALEXANDER) an eminent botanist and zoologist, born in Scotland in 1730, and educated at the university of Edinburgh. He went to America, and settled as a physician at Charlestown in South Carolina, in 1752. From his first arrival in the country he engaged in botanical researches, and becoming dissatisfied with the system of Tournefort, then followed by most naturalists, he opened a correspondence with the celebrated Linnaeus in 1755. Soon after he obtained the *Philosophia Botanica*, the *Systema Naturæ*, and some other works of the Swedish botanist, which greatly assisted him in his enquiries. His labours were directed to the discovery and verification of new species among the animal and vegetable tribes of North America, in which he was very successful. To his exertions Linnaeus was indebted, particularly for a knowledge of the insects and fishes of Carolina; among which is the Siren lacertina, a most curious animal, resembling both a lizard and a fish. After a residence of nearly twenty years in America, Fr Garden returned to England,

in consequence of the political commotions which preceded the American war. He was elected a fellow of the Royal Society in 1773; but was not admitted until ten years after. From that period he resided in London, where he died April 15, 1791. Dr Garden published "An Account of the Gymnotus Electricus, or Electrical Eel," in the Philosophical Transactions, and some other detached papers, but produced no separate work.—*Rees's Cyclop.*

GARDEN (FRANCIS) lord Gardenstone, a Scottish lawyer of eminence, born in 1721 at Edinburgh, and educated in the university of that capital. Having practised with great reputation as an advocate, he was in 1764 appointed solicitor to the king, and soon after raised to the dignity of a judge, when he took, agreeably to the custom of the Scottish bench, the title by which he is now most commonly known. A volume of miscellaneous pieces in verse and prose, and two more, entitled "Travelling Memoranda," were published by him anonymously, and after his death a posthumous volume was added to the latter work. He died in 1793.—*Memoirs prefixed to Posthumous Volume of his Works.*

GARDINER (JAMES) an officer of distinguished merit in the reign of George II. He was born in 1688 at Carriden, Linlithgowshire, and made the army his profession at the early age of fourteen, when he obtained a commission in the Dutch service. He afterwards commanded a company among the English troops at the battle of Ramillies, and rose to the rank of lieutenant-colonel. On the breaking out of the Scottish rebellion of 1745, Gardiner, who then commanded a regiment of dragoons, fell at the head of his men, in the action fought at Preston Pans, on the 21st of September in that year, being cut down by a blow from a Lochaber axe, in sight of his own house. A singular story is told of his sudden conversion from a licentious course of life by the accidental perusal of a Calvinistic treatise, entitled "Heaven taken by Storm." He is also said to have received a supernatural intimation of his own approaching death. It is remarkable that three of his nearest relations, including his father, were killed, like himself, in action.—*Life by Doddrige.*

GARDINER (STEPHEN) an English prelate in the reigns of Henry VIII, Edward VI, and queen Mary. He was the natural son of Lionel Woodville, bishop of Salisbury, brother to the lady Elizabeth Woodville, who, as the widow of sir John Grey, captivated the affections of Edward IV, and became his queen. Gardiner was born in 1483 at St Edmund's Bury, Suffolk, and received his education at Trinity hall, Cambridge, where he distinguished himself by his progress in the study of the canon and civil law, the classics, and theology. In 1520 he succeeded to the headship of the society to which he belonged, but soon after quitted the university, and attached himself to the Howard family, which he again quitted, a favourable opportunity occurring of ingratiating himself with Wolsey, then fast rising into power. In the service of this

prefate he proved himself an active agent as well as an able secretary, and soon ranked high in the favour of his master, and consequently in that of the court. In 1527 his talents and address pointed him out a proper person to be entrusted with the negotiation then going on at the papal court, respecting the king's divorce from Catherine of Arragon; and although unsuccessful in his mission, his exertions were not the less appreciated, being rewarded with the archdeaconries of Norwich and Leicester in succession, and the appointment of secretary of state. His devotion to the king now got the better of his allegiance as churchman to the pope, and he not only did all in his power to facilitate his designs with respect to the queen, whose divorce he signed, but on Henry's abjuring the supremacy of the pontiff, and declaring himself head of the church, he was warmly supported by Gardiner, newly created bishop of Winchester. The first proof of his acquiescence in and approbation of this measure, was a treatise written by him in its favour, entitled "De verâ Obedientiâ." The bishop continued to enjoy the full sunshine of court favour till his capricious master, taking a disgust at queen Catherine Parr, consulted with him on the easiest method of getting rid of her, and acquiesced in a plan, the leading feature of which was the exhibition of articles against her on a charge of heresy. The design had proceeded so far that officers were already summoned for the purpose of arresting her, when the queen, in a personal interview with her husband, had address enough to turn the tables on the bishop, to re-establish herself in the king's favour, and to plunge him, whom she suspected of being a principal adversary, in a state of disgrace from which he never emerged during the life of Henry. With his immediate successor he stood in a light still more unfavourable; his continued opposition to the doctrines of the reformed church, and their establishment as the national religion, bringing on him the full weight of the displeasure of the prevailing party, who succeeded in inducing the young monarch to commit him to the tower, with a sentence of deprivation from his diocese. On the accession of Mary however, his star was again in the ascendant; he was not only received into favour and restored to his see, but elevated to the office of chancellor of England and first minister of state. The persecution he had himself undergone, on account of his religious tenets, had not taught him mercy or tenderness towards others, and he now distinguished himself as a principal mover in the executions which took place during this reign, acting occasionally with equal caprice and cruelty. In his private character however he appears to much greater advantage, being not only learned himself, but a great encourager of learning in others; though artful, and skilled in dissimulation, with no slight degree of ambition, and its usual concomitant, pride, he yet possessed one of the most amiable traits in the human disposition—gratitude to perfection. To Wolsey he was

as much devoted in his decline as in his zenith; and notwithstanding the coolness he experienced latterly from Henry, he never was known to speak of that monarch but in terms of the most affectionate respect. His errors, whatever they were, may be considered as almost atoned for by the regret with which previously to his decease he looked back upon them. "Erravi cum Petro sed non flevi cum Petro," is said to have been a frequent exclamation of his in his latter days. He died November 12, 1555. A treatise by him, entitled "Necessary Doctrine of a Christian Man," printed in 1543, is said to be a joint work by him and Cranmer.—*Biog. Brit.*

GARDNER (ALAN, lord) a naval officer, was born in the north of England, and at the age of thirteen became a midshipman. After passing through various promotions, in 1766 he was made post-captain in the *Preston*, of fifty guns, which he commanded on the Jamaica station. In 1782 he had the *Duke*, of ninety-eight guns, in which ship he first broke the French line on the 12th of April. In 1793 he was made rear-admiral, and appointed commander-in-chief on the Leeward Island station. After making an ineffectual attempt on Martinico, he returned home, and was then employed as rear-admiral of the white with lord Howe, and so distinguished himself upon the 1st of June, that he was made a baronet and major-general of the marines. A dangerous mutiny breaking out in the fleet at Portsmouth, admiral Gardner attempted to quell it, but using harsh means, the crew became so enraged against him, that it was with difficulty he escaped with life. In 1800 he was created an Irish peer, and in 1807 succeeded earl St Vincent in the command of the channel fleet, which his health obliged him soon to relinquish. He sat in three successive parliaments, and was finally made a British peer with the title of baron Gardner of Uttoxeter. He died at Bath in 1809.—*Naval Chronicle.*

GARENCIERES (ΓΕΩΡΓΙΟΣ) A French physician, a native of Paris, who abjured the Romish faith, and quitting a respectable practice at Caen in Normandy, came over to this country. He was a good linguist, and published an English translation of the Prognostications of Nostradamus. His other works are a treatise, entitled "Anglicæ Flagellum," and another on the Tincture of Coral. He died in London in great distress in 1680.—*Wood.*

GARET (JOHN) a learned French Benedictine of the congregation of St Maur, was born at Havre-de-Grace about 1627, and died at the abbey of Jumièges in 1694. He edited a valuable edition of the works of Cassiodorus, in 2 vols. folio, with notes, published at Rouen, 1679. It is preceded by a curious dissertation on the monastic life of that celebrated senator.—*Moreri. Nouv. Dict. Hist.*

GARISSOLES (ΑΝΤΩΝΥ) professor of divinity at Montauban, where he was born in 1587. He also filled the office of moderator of the synod held at Chareuton, and published several theological works, the principal of which are—an "Explanation of the Cate-

chism of the Reformed Church;" "A Way to Salvation;" and "On the Mediatorial Office of Christ." He also possessed a talent for poetry, which he exhibited in two Latin heroic poems, the one entitled "Adolphidos," the hero of which is the celebrated Gustavus Adolphus; and another which has for its subject the "Swiss Cantons." He died in 1650.—*Moreri.*

GARLAND, a grammarian and poet of the eleventh century, whose name is variously spelt, John Garland by some, who contend that he was a native of Devonshire, while others call him Jean de Garlande, contending that he was born at a place of that name in Normandy, and attributing the supposition of his English birth to his constant attendance in this country upon his patron, William the Conqueror. His works are—two Treatises on Synonymes and Ambiguous Terms, Paris, 1490, 4to, reprinted by Pynson, 1496, and again in 1500, London; "A Dictionary of Alchemy," 1571, Basle, 8vo; and three poems, one on the Doctrines of Faith, entitled, "Floretus," and a second on the Duties of Man to his Creator, called "Facetus," and a third "On the Contempt of the World." He died about the year 1081.—*Prince's Worthies.*

GARNERIN (——) a celebrated aëronaut, who, if not the most scientific, was at least one of the most daring and adventurous of the profession. He was the first man who made the experiment of descending in a parachute; a feat which he accomplished on the 21st of September, 1802, ascending from an inclosure in North Audley-street, Grosvenor-square. At the computed height of 4154 French feet, this intrepid "voyager through the fields of air," cut the rope which attached the car to the balloon, and descended safely in the fields near Kentish Town, the balloon falling next day near Farnham in Surry. M. Garnerin's death was occasioned by apoplexy in the Theatre du Jardin Beaujolin at Paris, August, 1823. Having the rope which sustained the curtain in his hand, by a sudden relaxation of his grasp, he allowed it to fall, when one of the weights struck him on the head, and he never recovered from the effects of the blow.—*Ann. Biog.*

GARNET (HENRY) an English jesuit of great notoriety, was born in Nottinghamshire in 1555, and was educated at Winchester school. He then went to Rome and entered into the Society of Jesus in 1575, and became professor of philosophy and theology in the Italian college at Rome. In 1586 he returned to England as provincial of his order; and although it was then illegal for a catholic priest to remain in the country, he abode there without molestation for many years. In this situation he held a secret correspondence with the king of Spain; and by an answer which he gave to a case of conscience submitted to him, in regard to the destruction of heretics, is said to have given an impulse to the gunpowder plot, and as an accomplice in this conspiracy, he was tried and executed at the west end of St Paul's, May 3, 1606. He acknowledged, previously to his

execution, that the plot had been revealed to him in confession, but that thus obtained, he thought it his duty to conceal it. He died with great magnanimity and fortitude, and was probably a conscientious enthusiast. He was the author of some religious tracts. As some difference of opinion existed as to the propriety of the steps taken against him, many works were written in defence of them by the writers of the day.—*Hume's Hist. of England. Dodd's Church Hist.*

GARNET (THOMAS) an ingenious physician and natural philosopher, who was a native of Casterton in Westmoreland. After having served an apprenticeship to a surgeon, he went and studied at Edinburgh and took the degree of MD. He commenced professional practice at Bradford in Yorkshire, where he delivered chemical and philosophical lectures. He then removed to Knaresborough and afterwards to Harrogate. In 1795 he went to Liverpool, intending to embark for America, but while waiting to take his passage, he commenced lectures, which met with so much approbation, that he relinquished his design of emigrating, and in 1796 he obtained the professorship of chemistry at Anderson's Institution, Glasgow. On the foundation of the Royal Institution in 1800 he was invited to become lecturer on chemistry, which offer he was obliged to resign through ill health, and he died in 1802 at the age of thirty-six. Dr Garnet was the author of "A Tour through the Highlands and part of the Western Isles of Scotland," 2 vols. 4to; "Outlines of Chemistry," 8vo; and "Zoonomia, or the Laws of Animal Life, in Health and Disease," 4to; which last was a posthumous publication.—*Preface to Zoonomia.*

GARNIER. There were three French authors of this name. **JEAN GARNIER**, a native of Paris, born 1612, entered into the order of jesuits, and became professor of eloquence and philosophy at Bologna, where he died in 1681. He published a folio edition of Mercator 1673; "A Supplement to Theodoret," in 4to; and "Systema Bibliothecæ Collegii Parisiensis Soc. Jes." He also edited the "Breviary of Liberatus," and the Journal of the Popes.—**JEAN JACQUES GARNIER** was born in 1729 at Goron-sur-Maine, and at the breaking out of the Revolution filled the chair of Hebrew professor at Paris. He published a Continuation of the History of France by Velly and Villaret; an essay "On the Origin of the Government of France," 12mo; two treatises, "De l'Education Civile," 12mo; and "Du Commerce remis a sa place;" and a work in two small volumes, entitled "The Man of Letters." During the reign of terror he fled from the capital to Boujival, where he died in 1795.—**ROBERT GARNIER**, a dramatic writer of some note, was much anterior in point of time to the other two. He was a native of Ferté Bernard in Maine, born about the year 1534, and was so successful in the composition of tragedies and elegies, that he acquired great reputation as a poet, and was induced to abandon the study of the law, which he had commenced

at Thoulouse, for the purpose of devoting himself wholly to the service of the muses. His works, which are now become obsolete, were collected and printed at Lyons in Paris 1597, 12mo. There is also a later edition, 1607. His death took place in 1590.—There was also a learned Benedictine of this name, known as the editor of St Basil's works, who died in the year 1725.—*Moreri. Nouv. Dict. Hist.*

GARRICK (DAVID) the most eminent actor ever produced by the English stage, was born at Hereford in 1706. His grandfather was a French refugee on account of the edict of Nantz; and his father, a captain in the army on half pay, usually resided at Lichfield, where he married the daughter of one of the vicars of the cathedral. He was educated at the grammar-school of Lichfield, but was more distinguished for his sprightliness than attachment to literature; and he gave an early proof of his dramatic tendency by inducing his school-fellows to act the Recruiting Officer, in which he himself took the part of serjeant Kite, being then only twelve years of age. As the circumstances of his father were narrow, he was sent to Lisbon upon the invitation of his uncle, a considerable wine-merchant in that capital. His stay at Lisbon was very short, and returning to Lichfield, he was placed under the celebrated Samuel Johnson, who had then undertaken to instruct a few youths in the belles-lettres. A love for the stage had however become firmly rooted in the mind of Garrick, and singular to say, his grave-tutor was induced to accompany him in a speculative journey to the metropolis. This remarkable event took place in the years 1736-7, and at the recommendation of Mr Gilbert Walmley, Garrick was placed under the care of an eminent mathematician at Rochester, with a view of cultivating his general powers previously to his admission at the Temple. The death of his father however disturbed this arrangement, and having been left a legacy of a thousand pounds by his uncle, he joined his brother, Peter Garrick, in the wine trade. This connexion was however soon dissolved, and in the summer of 1741 he gave entire sway to his long-repressed inclination, by joining Giffard's company at Ipswich, where, under the assumed name of Lyddal, he played a great variety of parts with uniform success. At this time the stages of the metropolis were but indifferently supplied with leading performers, so that when Giffard, who was manager of a theatre in Goodman's-fields, introduced his accomplished recruit there on the 19th of October, 1741, the effect was immediate and decisive. He judiciously chose the part of Richard III, which required not that dignity of person which he did not possess, while it gave him a scope for all the strong marking of character and changes of passion, in which his principal excellence consisted. He at the same time adopted a natural mode of recitation, which was a daring innovation on the part of a new performer, before audiences accustomed to the artificial declamation of the school which preceded him; but so favourably did this return to nature

aid his facility of expression, that the effect was irresistible. The part of Richard was repeated for many successive nights, and the established theatres were deserted, and strings of carriages from the west end of the town thronged the streets of the city. The proprietors of the old theatres, alarmed at his success, threatened Giffard with a prosecution, as an infringer upon their patents, and Fleetwood drew Garrick over to Drury-lane. After finishing the winter season of 1742 at this theatre, he visited Dublin, where his reception was equally flattering. On his return he varied his characters by parts in genteel comedy, and even descended to the representation of almost absolute stupidity in that of Abel Druggier. Stage quarrels and a second visit to Dublin engrossed the interval until he became a manager in his own right; an event which took place in the spring of 1747. By acting at Covent-garden he had reduced Drury-lane to such a state of inferiority that Lacy, the patentee, was glad to admit him a partner upon equal terms, Lacy assuming the care of the property and general economy, and Garrick the management of the stage. Under these auspices Drury-lane opened in 1747; on which occasion his old and constant friend, Samuel Johnson, furnished the new manager with a celebrated prologue, one of the few which merit lasting preservation. This period formed an era in the English stage, from which may be dated a comparative revival of Shakspeare, and a reform both in the conduct and licence of the drama, which is very honourable to the genius of the actor who effected it. In 1749 Garrick married Mademoiselle Violette, (see ensuing article,) and the remainder of his theatrical career was a long and uninterrupted series of success and prosperity until its close. Although parsimonious, and occasionally too hasty in his intercourse with authors, he managed to keep on terms with the majority of the most respectable, and received from many of them an excess of incense which was but too acceptable. In 1763 he visited the continent, and on his return, after an absence of a year and a half, was received with excessive applause. He had written while an actor his farces of "The Lying Valet," "Lethe," and "Miss in her Teens," and in 1766 he composed, jointly with Colman, the excellent comedy of "The Clandestine Marriage." The year 1769 was signalized by the famous Stratford Jubilee, a striking proof of his enthusiasm for Shakspeare. It occupied three days at Stratford, and its representation at the theatre lasted for ninety-two nights. After the death of Lacy in 1773, the sole management of the theatre devolved upon Garrick, who continued to fulfil the duties of that office until 1776, when he determined upon his final retreat, and sold his moiety of the theatre for £37,000. The last part which he performed was Don Felix in "The Wonder," for the benefit of the Theatrical Fund, an institution for the relief of decayed actors, the plan of which he perfected. At the conclusion of the play he addressed a brief fare-

well to the audience. The general feeling with which this was delivered and received, rendered it truly impressive, and few persons ever quitted the stage with plaudits so loud and unanimous. He did not long enjoy his opulent and well-earned repose, dying under a suppression of urine, the effects of which produced a stupor, on the 20th of January, 1779. His remains were interred with great pomp in Westminster abbey, his funeral being attended by a numerous assemblage of rank and talent. His large fortune, after an ample provision for his widow, leaving no children, was divided among his relations. As an actor David Garrick seems never to have been surpassed for truth, nature, and variety and facility of expression, for which his countenance appears to have been admirably adapted. Expression, indeed, and the language of passion, formed his great strength, being equalled by many of his contemporaries in the enunciation of calm, sentimental, and poetical declamation. As a man his predominant fault was vanity, and a spirit of economy bordering on parsimony, a censure which Dr Johnson would however occasionally dispute. His excessive love of praise necessarily made him unwilling to share it, and he is charged with endeavouring to keep down rising talents on this account. In his commerce with the great he was exceedingly happy, preserving sufficient freedom to make him a pleasing companion, without encroachment on either side; and his attention to decorum secured him the society of the most grave and dignified characters. His literary talents were respectable, but not superior; besides the pieces already mentioned, he is author of some smart epigrams and jeux d'esprit; a great number of pleasant prologues and epilogues; a few dramatic interludes; and many judicious alterations of old plays.—*Davies' Life of Garrick. Ann. Reg.*

GARRICK (EVA MARIA) wife and relict of the celebrated David Garrick, was born at Vienna, February 29, 1725. Her maiden name was Viegel, under which appellation she attracted the notice of the empress-queen, Maria Theresa, as a dancer, and by her command changed it to that of Violette, a translation of the German word vielge, the anagram of her name. In 1744 she arrived in England, bringing with her a recommendation from the countess of Stahrenberg to the countess of Burlington, who received her, on her obtaining an engagement at the Opera, as an inmate of Burlington-house, and ever after treated her with maternal affection. This circumstance gave rise to a very general but erroneous idea, that she was a natural daughter of the earl's, born before his marriage with the countess; but the dates of the respective events prove the inaccuracy of the supposition. While under the protection of this noble family, mademoiselle Violette formed an attachment with David Garrick, and on the 22d of June, 1749, the nuptials were celebrated with the sanction of the earl and countess, a marriage portion of £6000 being bestowed upon the bride by the former. In 1751 and in 1763 she accompa-

nied her husband to the continent, and in 1769 the journals of the day speak highly of the grace and elegance displayed by her at the ball of the Stratford jubilee. After the death of her husband, though strongly solicited by several persons of rank and fortune (among others by the learned lord Monboddo) to re-enter the marriage state, she continued a widow, residing in her house on the Adelphi terrace, where she died suddenly in her chair, October 16, 1822, and was buried in the same vault with her husband, near the cenotaph of Shakespeare in Westminster abbey, on the 25th day of October in the same year.—*Ann. Biog.*

GARSAULT (FRANCIS ALEXANDER DE) a native of Paris, who became captain of the royal stables, and was the author of several treatises on horsemanship. He died at an advanced age in 1771. Among his works are—"Le Nouveau parfait Maréchal," 4to; "Traité des Voitures," 4to; "Le Guide du Cavalier," 12mo; "Le Notionnaire de ce qu'il y a de plus utile dans les Connoissances acquises," 8vo; and Descriptive Accounts of several Arts, in the Collection of the Academy.—*Nouv. Dict. Hist.*

GARTH (SAMUEL) a physician and poet, was descended from a respectable family in Yorkshire. He received his academical education at Peter house, Cambridge, where it is said he resided until he took his degree of M.D. in 1691. He was admitted a fellow of the college of physicians the next year, and soon attained the first rank in his profession. He was a zealous whig, and his companionable talents, and proficiency in polite literature, acquired him patrons of great rank and influence. A division which arose among the medical profession, on the subject of the establishment of a dispensary for the poor of the metropolis, induced Dr Garth, who espoused the measure, to compose his mock-heroic poem, "The Dispensary." It was first published in 1699, and being widely read and admired, materially contributed to the fame of the author. In 1697 he composed and printed his "Harveian Oration," which was much extolled for its latinity. Although a party man, he was always ready to benefit men of merit on every side, and hence was an early encourager of Pope. In 1710 he addressed a copy of verses to lord Godolphin, on his dismissal, and displayed his attachment to the house of Hanover by an elegant Latin dedication of an intended version of Lucretius to the elector, afterwards George I. On the accession of the latter, he received the honour of knighthood, and was appointed physician in ordinary to the king, and physician-general to the army. He died in the height both of medical and literary reputation, in June, 1718. Sir Samuel Garth has left no work behind him directly professional, and indeed appears to have been too much addicted to conviviality and elegant literature, to pay any very close attention to science. He was a distinguished member of the famous Kit-Kat Club; and was deemed a latitudinarian as to religion, which induced Pope, in allusion to his benevolence and kind-

heartedness, to call him one who was "a good Christian, without knowing himself to be so." His principal poem, "The Dispensary," is an evident imitation, as to plan, of the "Lutrin" of Boileau. It is culvered by much digressional observation, which is animated and poetical; but the subject afforded no sufficient ground for distinction of character or felicity of humour. His "Claremont," a complimentary poem on the seat of the duke of Newcastle, is his next most elaborate production, and is not without merit and Ovidian graces. His occasional pieces are sprightly and elegant; and his last literary labour was to superintend a translation of Ovid's *Metamorphoses*, to which he supplied a preface, which is not very highly esteemed.—*Biog. Brit. Johnson's Life of Garth.*

GARTHSHORE (MAXWELL) an eminent physician and accoucheur, who was a native of Kirkcubright in Scotland, where his father was minister. After serving an apprenticeship to a surgeon and apothecary at Edinburgh, he entered into the army, but left it in 1736, and settled at Uppingham in Rutlandshire. Thence he removed to London about 1763, and continued during nearly half a century the practice of those branches of the profession to which he had devoted himself. He was a fellow of the Royal Society and of the Society of Antiquaries, and physician to the British Lying-in-hospital. Though Dr Garthshore enjoyed a high reputation for skill and learning, he was not much distinguished for his literary productions, which consisted of medical and physiological papers in the *Philosophical Transactions*, the *London Medical Journal*, &c. His death took place in 1812, at the age of eighty.—*Genl. Mag.*

GARVE (CHRISTIAN) a German metaphysician, was born in 1742 at Breslau in Silesia. He studied at Frankfort, Halle, and Leipsic, at which latter place he was professor of philosophy. He died in 1798. His works are—a translation of Cicero *De Officiis*, with a philosophical commentary; "Remarks on the Writings of Gellert;" "Essays on various Subjects;" "Observations on the general Principles of Morals;" "Dissertatio de ratione scribendi historiam philosophicæ;" "On the Inclinations," a prize essay crowned by the Academy of Berlin in 1769; "Dissertatio de nonnullis quæ pertinent ad logicam probabilium;" "A Sketch of the most remarkable Principles of Moral Philosophy, from the time of Aristotle to the present Day." Garve also translated some of our best authors into German, as Smith's *Wealth of Nations*, Paley's *Moral and Political Philosophy*, and Burke on the *Sublime and Beautiful*.—*Biog. Univ.*

GARZI (LOUIS) an Italian painter, was born at Rome in 1640, and was a disciple of Andrea Sacchi. His works are not much known here, but in Italy are celebrated for their design, execution, and colouring. At the age of eighty, by order of Clement XI, he painted his most excellent work, the dome of the church of *Degli Stigmati*, which he lived to finish, dying in 1721. He is considered by

many as equal, if not superior, to Carlo Maratti. —*D'Argeville, Pilkington.*

GARZONI (THOMAS) an Italian writer, was born at Bagnacavallo near Ferrara, in 1549, and was a regular canon lateran. His principal work is entitled "La Piazza universale di tutte le professioni del Mondo;" a work of great labour and infinite utility at the time at which it was written, as there was no model then existing on so large a scale. He was almost a self-educated man, and it is truly said by Nicéron, "that his works prove him to have dipped into all the sciences, and sufficiently manifest the extent of his knowledge, and of what he would have been capable with a regular education and a longer life. Garzoni died in 1539.—*Nicéron. Moreri.*

GASCOIGNE (GEOERGE) an English poet of celebrity in the reign of queen Elizabeth. He was a native of Walthamstow in Essex, and was the son of sir John Gascoigne, by whom he was disinherited. He studied at Cambridge, and afterwards at Gray's-inn. He then entered into the army, and served in the Low Countries, under the prince of Orange, who gave him a captain's commission, which he soon resigned, in consequence of a quarrel with his colonel. Returning to England he became a courtier, and employed his talents in writing masques for the entertainment of the queen. Four dramatic pieces and several poems, including a satire, entitled "The Steel Glass," were the productions of his pen. He died at Stamford in Lincolnshire, in 1577. His works, which display harmony and elegance of versification, have of late years, in common with those of several of his contemporaries, attracted that attention to which they are entitled.—*Chalmers's Biog. Dict.*

GASCOIGNE (sir WILLIAM) chief-justice of the court of king's bench, in the reign of Henry IV. He was a native of Gawthorp in Yorkshire, and after completing his legal studies, he was called to the bar. In 1398 he was made a serjeant, and the following year was raised to the bench of Common Pleas, whence in 1401 he was removed to the chief-justiceship of the King's Bench. In this high office he is said to have distinguished himself by committing to prison the heir-apparent to the crown, afterwards king Henry V, for an assault on the person of the judge, and an attempt to rescue from the arm of the law one of his dissolute companions. Several abstracts of the opinions of this judge on legal questions, as well as his official arguments and decisions, occur in old law-books. He died in 1413.—*Biog. Brit.*

GASCOIGNE (WILLIAM) an ingenious natural philosopher of the seventeenth century, who appears to have had the best title to be considered as the first inventor of the micrometer. On the publication of a similar discovery by M. Auzout, in the first volume of Philosophical Transactions, Mr Townley addressed to the Royal Society a communication, in which he says, "I think it right to inform the world that I have found, by some scattered papers of one Mr Gascoigne, that, before the

late civil wars, he had not only devised an instrument of as great power as M. Auzout's, but had also for some years made use of it, not only for taking the diameters of the planets and distances upon land, but had farther endeavoured to gather many certainties in the heavens. The very instrument he first made I have now by me, and two more perfected by him; which doubtless he would have greatly improved, had he not been unfortunately slain in his late majesty's service. He had a treatise on Optics nearly ready for the press, but though I have used my utmost endeavours to retrieve it, it has not been with success."—*Hutton's Abridgment of the Philosophical Transactions*, vol. i. p. 161.—Gascoigne was a native of Lancashire, and was probably a volunteer in the royal army during the civil war, as he was killed, while fighting for Charles I, at Marston Moor, July 2, 1644, at the age of twenty-three.—*Ann. Reg.*

GASPARINI (FRANCESCO) a native of Lucca, born in 1650. He was one of the ablest musical composers of the last century; and besides the opera of Engelberta, written in conjunction with Albinoni, was the author of "Cantate da Camera a Voce Sola," Lucca, 1697; and a treatise, entitled "L'Armonico pratico al Cimbola," Sc. Venice, 1708. He died about the year 1724.—*Biog. Dict. of Mus.*

GASSENDI (PETER) an eminent philosopher and mathematician, was born in the year 1592 at Chantersier, near Digne in Provence. He early displayed a lively and inquisitive genius, which determined his parents, although in moderate circumstances, to bestow upon him the best education in their power. Under the instruction of an able master at Digne, he made a rapid progress in the Latin language, and was afterwards put to philosophy at the university of Aix. At the age of nineteen he was appointed to fill the vacant chair of philosophy at Aix, and notwithstanding that the authority of Aristotle was still warmly maintained, after the example of Vives, Ramus, and others, he ventured publicly to expose the defects of his system. His lectures on this subject, which were delivered in the indirect form of paradoxical problems, and published under the title of "Exercitationes Paradoxicae adversus Aristotelem," gave great offence to the votaries of the declining philosophy, but obtained him no small reputation with Peiresc and other learned men, through whose interest, after being induced to take orders, he was presented to a canonry in the cathedral church of Digne, and made doctor of divinity. Thus enabled to apply closely to philosophical and astronomical pursuits, he composed a second book of "Exercitationes," which excited so much enmity, that he ceased all direct attacks on Aristotle, although he still maintained the predilection he had formed for the doctrines of Epicurus, which he defended with great learning and ability. He strenuously maintained the atomic theory in opposition to the fictions of the Cartesians, and in particular asserted the doctrine of a vacuum. On the subject of morals he also explained the plea

sure or indolence of Epicurus, in a sense the most favourable to morality. In 1628 he visited Holland, and being some time after called to Paris by a law-suit, secured the countenance of persons of the first rank and talents, and among the rest that of cardinal Richelieu, by whose interest he was appointed in 1645 regius-professor of mathematics at Paris. Here he delivered lectures on astronomy to crowded audiences, and by his great application so injured his health, that he was obliged to return to Digne in 1647, from which place he did not return until 1653, when he published the lives of Tycho Brahe, Copernicus, Purbach, and Regiomontanus. He also resumed his astronomical labours with an intensity to which his state of health not being adequate, his former disorder returned, and terminated his life in 1655, in the sixty-third year of his age. He is ranked by Barrow among the most eminent mathematicians of the age, and mentioned with Galileo, Gilbert, and Descartes. Gassendi was the first person who observed the transit of Mercury over the sun. It is to the credit of both philosophers, that although mutually warm in their scientific controversies, Gassendi and Descartes became friends in the sequel. The MSS. which the former left behind him, and the treatises published during his life, were in 1658 collected by Sorbriere, in six volumes, folio. They consist of the philosophy of Epicurus; the author's own philosophy; the lives of Epicurus, Peiresc, Muller, and others, in addition to those already mentioned; refutations of Descartes's Epistles, and other treatises.—*Enfield's Hist. of Phil. Nouv. Dict. Hist. Hutton's Math. Dict.*

GASSICOURT (CHARLES LEWIS CADET DE) an acute French philosopher of the present age, the son of a Parisian apothecary, by whom he was educated for the bar, and even practised with much reputation and intrepidity during that sanguinary period of the Revolution so fatal to many of his brethren, whose exertions in behalf of the accused not unfrequently involved the advocate in the fate he vainly strove to avert from his client. M. Cadet Gassicourt being, however, fortunate enough to escape the dangers of the times into the politics of which he entered, published in 1797 a pamphlet which attracted some attention, on the "Theory of Elections." This was his first production, with the exception of a "Memoir on Natural History," written at the early age of fifteen. Several other essays, on political and other subjects, followed, among which was one "On the Private Life of Mirabeau," "St Geran, a critique on the New Modes of Thinking, Writing, and Speaking, introduced into France by the Changes of the Times;" and others on the "Influence of the Masonic Societies in the Process of the Revolution," and the "Four Ages of the National Guard." Among his more miscellaneous writings, which appeared about the same period, were a volume of "Travels in Normandy," and a Dramatic Sketch, portraying the principal characters who flourished under Louis XIV and his im-

mediate successor, entitled "The Supper of Moliere." On the death of his father, who was himself a man of scientific pursuits, and the personal friend of Buffon, Bailly, Lalande, and Condorcet, he seems to have diverted his attention in a great degree, if not altogether, from the stormy track of politics, and to have devoted his time principally to the study of chemistry and physics. Having occupied himself in revising a treatise of his father's on "Domestic Pharmacy," the work ran at once through several editions, as did also a "Formulary" on the same subject; and to these he added several valuable works of his own, the most important of which is the "New Dictionary of Chemistry," afterwards introduced with great success into the Polytechnic school. This book appeared first in 1803. In 1809 he followed the army into Austria, and subsequently wrote an account of the campaign, during which he invented a military instrument, called "Les Baquettes." The plan for the organization of the board of health also owes its origin to him, and he had not only the satisfaction of seeing it eagerly adopted, but that of obtaining the appointment of reporting secretary to his own institution. In this capacity he continued till the day of his death, which took place at Paris early in the summer of 1823. Besides the literary productions already enumerated, he was the author of a series of epistles on "London and the English Nation," in which he displays much candour and impartiality; and a treatise on the application of the Physical Science to Military Purposes. To a great variety of other useful and scientific publications he was a material contributor, such as the "Journal of Pharmacy," originally edited in 1809 under the title of the "Bulletin of Pharmacy;" "The Annals of Physics and Chemistry;" "Complete Course of Agriculture;" "Révue Encyclopedique;" "Dictionary of Medical Sciences;" "Memoirs of the Medical Society of Emulation;" &c. &c.; and almost on his first introduction into literary society, assisted in founding the Lyceum, afterwards the Athenæum, at Paris, of which he was the of the original members in the year 1785.—*N. Month. Mag.*

GASETLIER (RENE GEORGES) a physician, was born at Ferrières in Gâtinais, in 1741. He early devoted himself to the study of physic, which he practised at the epoch of the Revolution. In 1787 he was chosen a member of the provincial assembly of Orleans, and was elected mayor of Montargis in 1788, according to the new popular forms. In 1791 he was deputed by the Loiret to the Legislative Assembly. The sincerity of his principles could not secure him from the fury of the ultra-revolutionary party, and in 1793 he was declared a traitor to his country, and arrested. The fall of Robespierre and of his principal accomplices, happily rescued him from the fate which awaited him; but still being pursued by the hatred of his enemies, he was obliged to continue concealed for five years. In the promotion of 1817, the king decorated him with the order of St Michael. He was the author of numerous

medical works, which however are not now much esteemed. The principal are—"Histoire d'un Enfant monstreux en tout Genre;" "Avis à mes Concitoyens, ou Essai sur la Fièvre militaire essentielle;"—this work met with success at the time at which it was published, but is at present opposed by the doctrine of Broussais; "Mémoire sur la Topographie médicale et sur l'Histoire naturelle du Gâtinais," 1780; "Precis historique des Epidémies qui ont régnés pendant douze ans dans le Gâtinais," 1783; "Annus medicus annus physicus;" "Traité sur les Specificques en Médecine;" these four last received the prizes of the Royal Society of Medicine; "Dissertation sur le supplice de la Guillotine." This was written to contradict an error which had been asserted by the physiologist, Sæmmering, and maintained by M. Sue, jun. Both pretended that the criminals suffered great pain after decapitation, and M. Sue added, that after the death of the courageous Charlotte Corday, he had seen her fine face blush with indignation in the dirty hands of the executioner, who showed her to the populace. Besides numerous other works, in 1816 Gastelier published a pamphlet with this title—"A mes Concitoyens;" in which he refuted the calumnies which slander had spread against his conduct during the Revolution. Gastelier died in 1821.—*Biographie Nouvelle des Contemporains*.

GAUBIL (ANTONY) a jesuit, was born at Caillac in 1708. He was sent as a missionary into China, where he remained thirty-six years. He became so thoroughly acquainted with the history and literature of the Chinese, as to astonish the natives themselves. He was the author of "A History of Genghiskhan, and of all the Dynasty of the Mongols his Successors, Conquerors of China; drawn from the History of China;" of which Mr Gibbon says: "This translation is stamped with the Chinese character of domestic accuracy and foreign ignorance." He also gave a translation of the "Chouking," and sent several memoirs to fathers Souciet and Freret, which they have used in their works. He died in 1759.—*Nouv. Dict. Hist.*

GASTRELL (FRANCIS) bishop of Chester, born in 1662 at Slapton, Northamptonshire. He proceeded from Westminster school on the foundation to Christchurch, Oxford, where he graduated as AM. in 1687, and as DD. in 1700, on obtaining the chaplaincy to the house of Commons. Two years afterwards, on the recommendation of the house, he was presented to a canonry at Christchurch, which piece of preferment he was allowed to retain when, in 1714, he was raised to the episcopal bench. Soon after his elevation, his refusal to institute Mr Peploe into the wardenship of Manchester college, on the ground that he was disqualified by holding only a metropolitan degree, became the subject of judicial enquiry in the court of King's Bench. The point was given against him, but he nevertheless received a public vote of thanks from the university of Oxford, for his conduct in vindicating their privileges. On the accession of

George I, bishop Gastrell became unpopular with the ministry, and never attained to a translation. In the affair of Atterbury, although personally disliking that prelate, he yet opposed the proceedings against him in the house of Peers, which he censured as acrimonious and unjust. Among the most celebrated of his writings are—a treatise on the "Moral Proof of a Future State," and another, entitled "Christian Institutes;" "A series of Boyle Lectures," afterwards arranged as a continuous discourse against deism; and pamphlets against Dr Samuel Clarke and Mr Collins, on the question of the Trinity. This last treatise was written early in 1714, and mainly contributed to his advancement to the episcopal dignity. He enjoyed the reputation of a sound scholar and an able polemic, and died in a fit of the gout in 1725.—*Biog. Brit.*

GATAKER (THOMAS) a learned English divine and critic of the seventeenth century. He was born in London in 1574; was sent to St John's college, Cambridge, in 1590; and on the foundation of Sidney college, in 1596, he was appointed one of the fellows. Having been ordained, he commenced preaching at the parish church of Everton, near Cambridge, and soon after removed to London, and became preacher to the society of Lincoln's Inn. In 1603 he took the degree of BD. In 1611 he was presented to the rectory of Rotherhithe in Surrey; and while there resident published the substance of a course of sermons under the title of "The nature and use of Lots; a treatise historical and theological," 1619, 4to. In the next year he made a tour through the Netherlands, and after his return home in 1623, he published a Defence of his Treatise on Lots, against the animadversions of a Mr Balmford. In 1637 appeared a more extended defence of his opinions under the title of "Thomæ Gatakeri Londinatis Antithesis partim Gulielmi Amesii, partim Gisberti Voetii de Sorte Theibus reposita," 4to. In 1642 he was chosen one of the assembly of divines at Westminster; but in the discussions which took place, he opposed the introduction of the Covenant, and declared in favour of Episcopacy; and though he in general complied with the authority of the parliament, yet he remonstrated strongly against the trial of king Charles I. In 1648 he published "Thomæ Gatakeri de Novi Testamenti Stylo Dissertatio," 4to, in which he vindicated the purity of the language of the sacred writers against the objections of Sebastian Pfochenius. This was followed by his "Adversaria miscellanea Animadversionum variorum, lib. vi. comprehensa," 1651, 4to. The following year he published an edition of the Meditations of the emperor Marcus Antoninus. He died in 1654; and in 1659 his son, Charles Gataker published "Adversaria Miscellanea Posthuma," folio, forming the sequel to the former work. He was the author of several other theological productions. His Opera Critica were printed at Utrecht, 1693, folio.—*Biog. Brit.*

GAUCHER (CHARLES STEPHEN) a French engraver, and writer on the fine arts. He was a native of Paris, and studied under Le Bas with such success as to become eminent, especially as an engraver of portraits. He died in 1803, aged sixty-two. He published—"Observations sur le Costume Française;" "Voyage au Havre;" "Iconologie, ou Traité complet des Allegories et Emblemes," 4 vols. 8vo; "Essai sur la Gravure;" "Traité d'Anatomie à l'usage des Artistes," folio, &c.; and he also was the author of the lives of engravers inserted in Fontenay's "Dictionnaire des Artistes."—*Nouv. Dict. Hist.*

GAUDEN (JOHN) an English prelate, was born in 1603, at Mayfield in Essex. He was educated at St John's college, Cambridge, where he took his degrees in arts, and was subsequently presented to the vicarage of Chippenham in Cambridgeshire, and to the rectory of Brightwell, Berks. He then entered himself a member of Wadham college, Oxford, where in 1641 he graduated as DD. On the commencement of the civil war he complied with the prevailing party, was made dean of Bocking, and a member of the Westminster assembly of divines, which however he did not attend, but abandoned the cause of the parliament when it proceeded against monarchy and episcopacy. In 1648 he printed the celebrated treatise—"Εικων Βασιλικη, or the Portraiture of his sacred Majesty in his solitude and sufferings;" which in a few months had run through seventeen editions. That Dr Gauden was the principal instrument in making this work public, cannot be disputed; but how far he may be deemed the author of it, or in how great a degree it may have originated with the king, has been a subject of much controversy. The evidence for and against its authorship by Gauden, is to be found in Nichols's Literary Anecdotes, and Laing's History of Scotland. However the point may be determined, the ascribing this treatise to the king created the most favourable impressions, both at home and abroad, of his piety, meekness, and humanity; and in the opinion of lord Shaftesbury, it was mainly instrumental in procuring for him the title of martyr. Dr Gauden was subsequently the acknowledged author of several tracts in favour of the depressed church, the merit of which he did not fail to plead at the Restoration, in the first year of which he was promoted to the vacant see of Exeter. At once greedy and ambitious, he was by no means satisfied with this recompence, but sought to be bishop of Winchester. He could only obtain, however, a translation to the see of Worcester; and his disappointment is said so materially to have affected him, as to bring on a violent fit of the stone and strangury, which terminated his existence in 1662, in his fifty-seventh year. Bishop Gauden appears to have been an able, worldly-minded man, whose principles could be made subservient to circumstances, and whose views of expediency, and of allowable deception, were better suited to the politician, than to either the moralist or divine.—*Biog.*

Brit. Nichols's Lit. Anec. Laing's Hist. of Scot. Burnet's Own Times.

GAVARD (HYACINTH) a French physician and anatomist of eminence, born at Montmelian in 1753. Going to Paris to engage in medical studies he became the pupil of Desault, under whom he distinguished himself by his assiduous attention to professional researches. The knowledge which he displayed of the different branches of medicine, procured him the appointment of instructor of the pupils in the School of Mars, and he was afterwards nominated a member of the Society of Medicine at Paris. In this situation he contrived a mode of facilitating instruction in reading and writing, somewhat on the plan of Joseph Lancaster. On this subject he published a work, entitled "Methode pour apprendre en même temps, à écrire, à lire, et à écrire sous la dictée, à l'usage des écoles primaires," Paris, An. 3, 8vo. He also published treatises on Osteology, Myology, and Splanchnology; the latter of which especially has been highly praised, as a classical manual of a branch of anatomical science. Gavard, notwithstanding his literary and professional labours, and the excellence of his private character, appears to have received little patronage. He lived poor, and died at Paris almost unknown, in 1802.—*Biog. Univ.*

GAULTIER (LOUIS) abbé, born in Italy, of French parents, was taken early to France, which country he adopted. This worthy man devoted himself entirely to the service and instruction of youth. Observing that the severe forms of education deprived infancy and youth of that portion of happiness so necessary to the development of their moral and physical faculties, he conceived the project of smoothing the rugged path of education by instructive games, known to children by the name of the "Abbé Gaultier's Games." He was one of the warmest supporters of the systems of Bell and Lancaster. The horrors of the Revolution forced him to quit France, and he retired to the Hague. Not wishing to live in idle dependence, he accepted the situation of tutor to the children of the British ambassador, whom he accompanied to England. Wishing to be useful in his misfortunes, he gave his instructions gratuitously to the children of French emigrants; and with the same benevolence qualified masters, who successfully propagated his method of instruction. After the peace of Amiens he returned to Paris, and resumed his teaching, which he continued until his death, which took place in 1818, in his seventy-fifth year. His works are very popular, and some of them have gone through twenty editions. The following are among the principal—"Leçons de Grammaire suivant la méthode des Tableaux analytiques," 1787; "Jeu raisonnable et moral pour les Enfants," 1791; "Méthode pour analyser la pensée et la réduire à ses Principes Elémentaires;" "Méthode pour apprendre grammaticalement la Langue Latine sans connaître les règles de la Composition;" "Traits caractéristiques d'une mauvaise Education ou Actions et Discours con-

raires a la Politesse, et regardés comme telst par les Moralistes tant Anciens que Modernes ;" " Les Notions de géométrie Pratique, nécessaires a l'exercice de la plupart des Arts et Metiers," 1807; &c. &c.—*Biog. Nouv. des Contemporains*.

GAUTIER D'AGOTY (JAMES) a native of Marseilles, who lived at Paris in the latter part of the eighteenth century, and was a member of the Academy of Sciences of Dijon. He was a painter, engraver, and anatomist, and assumed to himself the merit of being the inventor of the art of making engravings to be printed in colours. The same method however was previously practised by Leblon, who used only three colours, while Gautier used four. The numerous plates which he executed in this manner, form the best monument of his fame. He published several works on anatomy, with engravings; "Nouveau système de l'Univers," 2 vols. 12mo, 1750, 1751, the second volume of which was an attack on the Newtonian doctrine of colours; "Zoogenie, ou génération des Animaux," 1750, 12mo; "Observations sur la Physique, l'Histoire Naturelle, et la Peinture," a scientific journal, continued from 1752 to 1755, which gave rise to the *Journal de Physique*; "Observations sur la Peinture, et les tableaux anciens et modernes," 1753, 2 vols. 12mo; and "Collection de Plantes usuelles, gravées en couleurs," 1767, 4to, left incomplete. He died at a very advanced age, in 1785. His end is said to have been hastened by chagrin at learning that his name had been struck out of the list of the academicians of Dijon, through the intrigues of Maret, secretary of the Academy, with whom he had quarrelled.

—GAUTIER (ARNAUD ELOY) son of the foregoing, practised the same art, and executed the plates for the early numbers of the "Observations périodiques sur l'Histoire Naturelle, &c." published by Rozier; and published "Cours complet d'Anatomie," Nancy, 1773, folio, containing a collection of the various anatomical plates engraved by his father, with explanations by M. Jadelot.—GAUTIER (JOHN BAPTIST) another son of James, died at Paris in 1786, after having published, under the title of "Galerie Française," Paris, 1770, 4to, portraits of celebrated French men and women, with memoirs.—GAUTIER D'AGOTY (EDWARD) grandson of James, practised the art of engraving in colours, in which he made some improvements. He published, at Paris, about 1780, engravings from the pictures of some celebrated painters; but the work had little success, and the artist, in disgust, went to Italy, and died at Milan in 1784.—*Biog. Univ.*

GAUTHEY (EMILAN MARIE) an eminent mechanic and engineer, who was a native of Chalon-sur-Saone in France. He studied mathematics at Versailles, under his uncle, who was instructor of the court pages; after which he entered the school of bridges and highways, then directed by the celebrated Perronet. The states of Burgundy appointed him sub-engineer in 1758; and he was shortly after elected a member of the Academy of Dijon. In 1767

he conceived the idea of forming a canal from Chalon to Dijon, which was commenced in 1783, and finished in 1791. It is termed the central canal [*canal du centre*], forming a navigable track, twenty-three leagues in extent. Besides this work, he executed several great undertakings in the same province, among which are the quay of Chalon-sur-Saone, the bridge of Navilly over the Doubs, part of the junction canal of the Saone and the Yonne, and part of the canal of the Doubs and the Saone. The two latter works completed a communication by water between the Atlantic and the Mediterranean; on which account a medal was struck with the legend—"Utriusque maris junctio triplex." These labours procured for Gauthey great reputation, and he was about to be rewarded with the order of St Michael, when the Revolution broke out. Subsequent events having occasioned a union of the corps of engineers of the state, with the engineers of bridges and highways, Gauthey was appointed inspector-general, and called to Paris in that capacity in 1791. He took an active part in the various projects which came under discussion before the council; and on various occasions displayed an enlightened zeal in the promotion of schemes beneficial to the nation. He was nominated a member of the Legion of Honour at the time of its institution, and was commandant of that legion some years afterwards. He died July 14, 1806, aged sixty-four. Among the works which he published are—"Mémoire sur l'application de la Mécanique à la construction des Voûtes," 1772, 4to; "Dissertation sur les dégradations survenues aux piliers du Dôme du Pantheon Français, et sur les moyens d'y remédier," 1798, 4to; "Projet de dérivation jusqu'à Paris des Rivières d'Ourcq, Theroanne, et Beuvronne, d'une part; et des Rivières d'Essonne, Juigne, Orge, Yvette, et Bièvre d'autre part," 1803, 4to. For several years previously to his death he was engaged in arranging the information derived from his professional researches, in a work entitled "Traité complet sur la construction des Ponts et des Canaux navigables," which was published in 2 vols. 4to, 1809, 1813, by his nephew, M. Navier, with a memoir of the author.—*Biog. Univ.*

GAY (JOHN) an eminent English poet, was born at or near Barnstaple, in 1688. He was descended from an ancient but reduced family, who, after an education at the free-school at Barnstaple, apprenticed him to a silk-mercator in London. He shewed however such a dislike to trade, that after a few years of negligent attendance, his indentures were cancelled by agreement, and he devoted himself henceforward to literature. In 1711 he published his "Rural Sports," which he dedicated to Pope, then a young poet like himself; which compliment introduced them to each other, and proved the foundation of a friendship which lasted for life. In 1712 the easy, improvident disposition of Gay being unfavourable to his pecuniary circumstances, he accepted the office of secretary to Anne, duchess of Monmouth, which probably being little more than nominal as to

employment, left him at leisure to pay his court to the muses; and his pleasant mock-heroic poem, entitled "Trivia, or the Art of Walking the streets of London," was published in the same year. He also soon after engaged in dramatic writing, "The Mohocks," a tragico-comical farce, being attributed to his pen; which piece was followed by an unsuccessful comedy, entitled "The Wife of Bath." In 1714 his able caricature of Ambrose Philips's system of pastoral was published, under the title of "The Shepherd's Week." This performance, which attracted considerable attention, was dedicated to lord Bolingbroke, who, with the tory party then in power, much befriended the poet. By their interest he was at length appointed secretary to the earl of Clarendon, in his embassy to the court of Hanover; but the death of the queen once more threw a cloud upon his rising prospects. In 1715 appeared his burlesque drama of "What d'ye Call it?" which was followed by a farce, in conjunction with Pope and Arbuthnot, called "Three Weeks after Marriage," which altogether failed. In 1720 he was encouraged by the countenance of the numerous friends whom his kind and amiable disposition had ensured, (many of them possessing rank and fortune,) to publish his poems by subscription; by which expedient he secured a thousand pounds and a present of South-sea stock from secretary Craggs, and might have made his fortune, had he sold in time. This he could not be persuaded to do, and his consequent disappointment seriously affected his health. In 1723 he produced his tragedy of "The Captives;" and some instances of court favour encouraged him to employ himself in his well-known "Fables," written professedly for the instruction of the duke of Cumberland, and published with a dedication to that prince in 1726. For this performance, which, while it falls short of La Fontaine, exhibits great ease in the mode of narration, and much lively and natural painting, he naturally expected a handsome reward, but was offered nothing better than the office of gentleman-usher to the young princess Louisa, which he declined as an indignity; and all the subsequent solicitations in his behalf were unattended to. Under this sense of disappointment, he composed his famous "Beggar's Opera," the notion of which seems to have been afforded by Swift. It was first acted in 1727 at Lincoln's-inn Fields, having been previously refused at Drury-lane. Its chief purpose was to ridicule the Italian opera, but the tact and spirit of the poet rendered it an unique performance; nor is it easy to define the mixture of nature, pathos, burlesque, and satire, which in the first instance formed its originality and attraction. Its moral tendency has been much impugned, both when it appeared and ever since; but it was obviously never Gay's intention to encourage the vices of one rank, because they took their rise in sources similar to those which produced the vices of another. His object was evidently rather to strip off the gilding by which selfishness and depravity in

the higher grades are concealed from the view, not only of the world at large, but of the offending parties themselves. Be this as it may, the "Beggar's Opera," which ran for sixty-three successive nights, and transformed the actress who represented the heroine into a duchess, so offended the persons then in power, that the lord chamberlain refused to licence for performance a second part of it, entitled "Polly." This resentment however rather served the author than otherwise, as it induced his friends and the party in opposition, to come forward on its publication with so handsome a subscription, that his profits amounted to 1200*l.* whereas the "Beggar's Opera" had gained him only 400*l.* A farther benefit accrued in the patronage of the duke and duchess of Queensbury, who took him into their house, and condescended to manage his pecuniary concerns. He was soon after seized with dejection of spirits, attributed to disappointment, but which possibly originated in habitual indolence, and a constitutional tendency to choleric. He enjoyed however intervals of ease, sufficient to enable him to compose his sonata of "Acis and Galatea," and the opera of "Achilles;" but being seized with an inflammation of the bowels, he died in December 1732, at the age of forty-five. No man was more sincerely lamented by all who knew him; and his memory was honoured by interment in Westminster abbey, where his monument exhibits an epitaph by Pope, which evinces considerable affection and feeling. Swift and Arbuthnot also manifested great regard for him. As a man, Gay possessed too little energy of mind to support the independence which he affected, but he was eminently gifted with the gentle virtues which beget affection. As a poet he cannot be ranked in the first class, but he seldom fails to give pleasure; and among his smaller pieces his two ballads of "All in the Downs," and "Twas when the Seas were roaring," will ever be felt and admired. "The Beggar's Opera" may be deemed the finest of the ballad or modern comic operas, a species of praise that will be estimated according to the very different opinions formed of the merit of that species of entertainments. Gay's works are to be found in all collections.—*Biog. Brit. Johnson's Poets Spence's Anecdotes.*

GAYE, a musician in the service of Louis XV, with whom he was a great favourite. He is principally known as having furnished occasion to that monarch for a royal bon-mot. Gaye had given offence by some impertinent remark to the archbishop of Rheims, and dreading that prelate's influence at court, hastened to acknowledge his fault to the king, and obtained his pardon beforehand. A few days after, while he was engaged in singing part of a mass, the archbishop took occasion to insinuate to the king that the unfortunate musician's voice was much injured by time, with the view of procuring his dismissal. "You are in error," replied Louis, "the man sings well enough; his fault lies in the way in which he is apt to speak."—*Biog. Dic. of Mus.*

GAYOT DE PITAVAL (FRANCIS) a French author, was born at Lyons in 1673, of a noble family, and was educated at Paris. He took orders, and became an abbé; he then quitted the church and entered the army, without obtaining any distinction. At the age of fifty he became an advocate, but meeting with no greater success in this than in the other profession, he devoted himself to literature. His principal work, entitled—"Causes Célèbres," is more remarkable for its length than its merit, being in twenty volumes, 12mo. Though interesting in its subject, it is heavy, weak, and puerile in its style. It has been two or three times abridged. His other works are—"The Art of adorning and improving the Mind;" a compilation, entitled "Bibliothèque des Gens de Cour;" and "An Account of the Campaigns of 1713 and 1714," a compilation from the Memoirs of Vilbart. He died in 1743.—*Moreri. Dict. Hist.*

GAZA (THEODORE) a native of Thessalonica, who was one of the principal revivers of Greek literature in Italy, in the fifteenth century. On the devastation of his native place by the Turks in 1430, he took leave of Greece, and went to Mantua, where he acquired a knowledge of the Latin language. In 1441 he was made a professor in the university of Ferrara, where he taught Greek from a grammar of his own composition, and lectured on the Orations of Demosthenes. About 1450 he entered into the service of pope Nicholas V, and he was also patronized by cardinal Bessarion. On the death of the pope he resided some time with Alphonso, king of Naples, who dying in 1458, Gaza returned to Rome. Cardinal Bessarion then procured him a rich benefice in Calabria, from which he derived little revenue, through his own negligence. Having completed a Latin translation of Aristotle's Treatise on Animals, he presented the work to pope Sixtus IV, who gave him fifty crowns for his learned labour, which the indignant scholar is said to have thrown into the Tiber. He then went to Ferrara, whence he removed to Calabria; but he afterwards appears to have returned to Rome, and died there in 1478. Besides the works noticed before, he translated into Latin the Aphorisms of Hippocrates, with Galen's Commentaries; Theophrastus on Plants; Ælian's Tactics; Dionysius of Halicarnassus on Composition; some Homilies of John Chrysostom; &c. He likewise made a Greek version of Cicero de Senectute, and his *Somnium Scipionis*; and wrote "Liber de Atticis Mensibus;" and "Epistola de Origine Turcarum." Gaza is said to have been the most accomplished of all the Greek emigrants, who contributed to the revival of learning in the west of Europe.—*Boerner's Diss. II. de Græcis Exulibus. Tiraboschi. Biog. Univ.*

GEBER, an Arabian philosopher, who, according to Leo Africanus, lived in the eight century. He is said to have been a Greek by birth, and to have apostatized from Christianity to Mahometism. His writings relate to astronomy and chemistry, or rather alchemy, on which last subject his authority was

so great, that he was styled the master of masters in that art. A Latin translation of his Commentary on the *Almagest* of Ptolemy was printed at Nuremberg in 1533; and his alchemical works were published in Latin, by Golius, under the title of "*Lapis Philosophorum*;" and an English translation of them by Robert Russel appeared at Leyden in 1668, 8vo. Geber corrected many errors in the astronomy of the ancients; and described chemical instruments and operations with greater accuracy than his predecessors. Vulgar ignorance ascribed to this philosopher the character of a magician; on which Naudé remarks, that from the catalogue of the works of Geber given by Gesner, it may be concluded he understood every thing except magic.—Another philosopher, named **GEBER**, is supposed to have been a native of Seville in Spain, and to have flourished about 1090. These individuals have been improperly confounded by some writers.—*Naudé Apologie pour les Grands Hommes soupçonnés de Magie. Moreri. Aikin's G. Biog.*

GED (WILLIAM) a goldsmith of Edinburgh, was the inventor of stereotype printing, which he first practised in 1725. In 1729 he went into partnership with one William Fenner, a stationer in London, but owing to the jealousy of the other printers, and the ill-treatment of his partner, he lost considerably, and in 1733 he returned to Scotland, where he printed an edition of Sallust. He died in very indifferent circumstances in 1749.—*Gen. Biog. Dict.*

GEDDES (ALEXANDER) a Roman catholic divine, was born in 1737, in the parish of Ruthven, in the county of Banff, Scotland. His parents, who were Roman catholics, sent him, at the age of fourteen, to be educated at Scaln, a free Roman catholic seminary in the Highlands. At the age of twenty-one he was removed to the Scottish college at Paris; and returning to Scotland in 1764, he was ordered to Dundee to officiate as priest among the catholics in Angus. The next year he removed to Traquair, and became chaplain to the earl of that title; and in 1768 again visited Paris. In 1769 he returned to Scotland, and became pastor of a considerable Roman catholic congregation at Auchinhalrigg in Banffshire. This office he retained for ten years, which were however signalized by much pecuniary embarrassment and many difficulties, arising from a zeal to build chapels, and a false notion of relieving himself by farming speculations, none of which projects prospered, although he finally extricated himself with honour and punctuality. In 1779 the University of Aberdeen granted him the degree of LL.D. being the first catholic since the Reformation to whom it had been assigned. About this time he repaired to London, with a view of obtaining the necessary facilities for his grand scheme of a new English translation of the Old and New Testament. This work he had meditated for many years, but as the scheme of a version of the scriptures in the mother tongue was never favoured by the

priesthood of his own persuasion, he met with many obstacles, until the patronage of lord Petre enabled him to publish the first volume of his arduous undertaking in 1792. In consequence of the known opinions of Dr Geddes in regard to the plenary inspiration of the scriptures, and the divine mission of Moses, his work met with much censure, and his own immediate superiors suspended him. To these censures he replied with great animation, and a mixture of argument and irony that was much felt at the time. In 1797 he published the second volume of his translation, which, displaying equal latitude, produced similar censures from both catholics and protestants. He was in the midst of a translation of the Psalms, when he yielded to the ravages of a painful disease, and expired on the 26th of February, 1802. Dr Geddes asserted the freedom of private judgment in too great a degree to be palatable to his own communion; and as he assumed so many new views in respect to scriptural authority and doctrine, it is not very surprising that he should be regarded as an infidel by the rigidly orthodox, both catholic and protestant. This learned but eccentric divine wrote many tracts of more or less power in vindication of his peculiar notions and opinions, as well as some indifferent verses; but his labours have met the fate of those of every man who only theorizes against the accumulated authority and tradition of ages. Votaries of his own persuasion, at least, may very naturally prefer a blind repose on authority to the admission of a sea of doubt and conjecture, which requires very little less in the way of faith, and reposes upon no stronger foundation than individual opinion.—*New Ann. Reg. Good's Life of Geddes.*

GELDENHAUR (GERARD) an historian and divine, was born at Nimeguen in 1482, and was educated first at Darenter and thien at Louvain. He was for some time historian and reader to Charles V, while archduke; and then became secretary and private reader to the bishop of Utrecht. In 1526, being sent by Maximilian of Burgundy to Wittenberg to examine the state of religion there, he turned Lutheran, and going to Worms he married, and became a teacher of youth. He died in 1542. He was intimate with the celebrated Erasmus, who was so displeased at his change of religion, that he wrote against him under the name of Vulturius. He was the author of "Historia Batavica;" "Historiæ suæ Ætatis," lib. vii; "Descriptio Insulæ Batavorum;" "Catalogus Episcoporum Ultrajectiuorum;" "Epistolæ Zelandiæ;" "De Viris Illustribus Inferioris Germaniæ," &c. with some Latin poems, orations, and epistles, and several controversial pieces.—*Freheri Theat. Moreri. Bayle.*

GELLERT (CHRISTIAN FURCHTEGOTT) an eminent German poet and writer on the belles lettres. He was born in 1715 at Haynichen near Freyberg, in Saxony, where his father was a clergyman. When quite young he displayed a predilection for poetry; and while at school at Meissen, he formed an intimacy with

Rabener and Gaertner, which lasted during their lives. In 1734 he went to the university of Leipsic to study theology, and after four years, returned home and commenced preacher, but he never acquired much fame as an orator. He afterwards became tutor to young gentlemen of fortune; and in 1741 he accompanied one of his pupils to Leipsic. His first poetical production was entitled "Amusements of Reason and Wit," begun 1742, which procured him the reputation of being a lively agreeable writer. He now gave up his clerical profession, and devoted himself entirely to academical tuition. In 1744 he took the degree of M.A. and the following year he published the first volume of his Fables, some plays, and a novel, entitled "The Swedish Countess." In 1748 appeared the second volume of his Fables, and he also produced a work called "Consolations for Valetudinarians," probably suggested by the state of his own health, as he was a great sufferer from hypochondriac affections. In 1751 he was made professor extraordinary of philosophy at Leipsic; and he was afterwards offered another appointment in the same university, but ill-health prevented him from accepting it. He died December 13th, 1769. Few writers have exercised so much influence over their contemporaries as the amiable and virtuous Gellert; who, in a great measure, formed the taste and directed the opinions of his age. Though not a poet of the first class, he deserves to be ranked among the national classics, on account of the purity of his style in narration and didactic composition. His verses are easy and flowing, and his prose is simple and elegant, but he never reaches the sublime. His comedies are strictly moral, yet deficient in that fire and spirit which may be considered as almost essential to such compositions; in spite of which, however, they were all well received by the public. His works have often been published, both collectively and separately.—*Nouv. Dict. Hist. Aikin's G. Biog.*

GELLERT (CHRISTLIEB EHREGOTT) brother of the preceding, distinguished as a metallurgist. He studied first at Meissen, and then at the university of Leipsic. Being invited, with several other learned Saxons, to Petersburg, he became an adjunct of the academy for ten years; and his intimacy with the celebrated Euler inspired him with a passion for the cultivation of the sciences of physic and chemistry. He returned to Saxony about 1746, to prosecute his researches. His mineralogical lectures attracted to Freyberg a great many strangers, and proved extremely profitable. In 1753 he was nominated counsellor-commissary of the mines, and charged with the inspection of machines and the examination of ores and minerals of Saxony; in 1764 administrator in chief of founderies and forges at Freyberg; in 1765 professor of metallurgy at the academy of mines in that city; and at length, in 1782, effective counsellor of mines. He made great improvements in science by his mineralogical researches; and he was the first introducer of the process of

parting metals by amalgamation on a large scale. He died May 13th, 1795. His works, written in German, include "Elements of Docimastics," translated from the Latin of Cræmer; "Elements of Chemical Metallurgy," 2 vols. besides detached memoirs.—*Biog. Univ.*

GELLI (GIAMBATISTA) an Italian poet and prose writer, was born at Florence in 1498. He was originally a shoemaker, but, possessing the advantages of education, he soon became distinguished. He wrote two comedies in prose "L'Errore," and "La Sporta," which were considered the best compositions of the kind then existing. He was also the author of some dialogues entitled "I Capricci del Bottaio;" others on physical topics styled "La Circe," with some dissertations on the poems of Petrarch and Dante; Remarks on the Italian Language, &c. He likewise translated the Hecuba of Euripides into Italian. He died in 1563.—*Moreri. Tiraboschi.*

GELLIBRAND (HENRY) a mathematical writer of eminence in the 17th century. He was born in London in 1597; and was admitted a commoner of Trinity college, Oxford, in 1615, where about four years after he took the degree of B.A. and proceeded M.A. in 1623. The professorship of Astronomy at Gresham college becoming vacant by the death of Edmund Gunter, he was chosen to fill that office in 1626. He was extremely intimate with Henry Briggs, the Savilian professor of astronomy at Oxford, who dying in 1630, while engaged in writing a work on trigonometry, the task of completing it devolved to Gellibrand. During the time he was thus occupied, he was cited before the high commission court by Dr Laud, bishop of London, on account of the publication of an almanack, for 1631, by William Beale, his servant, in which the names of protestant sufferers for religion, taken from Fox's Martyrology, were inserted instead of the saints of the Romish calendar. But it appearing that similar almanacks had been previously published, Gellibrand and his servant were both acquitted. In 1633, having completed the work entrusted to him by Briggs, he published it under the title of "Trigonometria Britannica, sive de Doctrina Triangulorum, libri ii." folio. He died in 1636, at Gresham college, and was buried in the church of St Peter-le-Poor, in Broad-street, London. His works include treatises on the longitude; the variation of the magnetic needle; and on navigation; besides several not published.—*Ward's Lives of the Gresham Professors. Martin's Biog. Philos.*

GELLIUS (AULUS) a Roman critic and miscellaneous writer of the second century. He studied rhetoric under Cornelius Fronto, at Rome; and philosophy at Athens, under Favorinus, Taurus, and others. His work, entitled "Noctes Atticæ," consisting of critical and philological observations, which he had collected from reading and conversation, has preserved his name from oblivion. It was commenced in the nights of a winter which he spent in the country near Athens, from which circumstance the title originated. Like the

works of Athenæus, Macrobius, and other miscellaneous Collectanea, it derives its chief value from the facts and monuments of antiquity, and the fragments of former writers which are included in it. Gellius died about the beginning of the reign of Marcus Aurelius. The best editions of his works are those of Gronovius, Lugd. Bat. 1706, 4to; and Conradus, Lips. 1762, 2 vols. 8vo. There is an English translation of the Noctes Atticæ, by the Rev. W. Beloe.—*Fabricii Bibl. Lat. Stollii Intrad. in Hist. Lit.*

GEMINIANI (FRANCESCO) an eminent composer, principally for the violin, born at Lucca in 1666. He commenced his musical education under Lonati, of Milan, a celebrated violinist, better known by the name of Il Gobbo; afterwards studied counterpoint under Scarlatti at Rome; and finally became a pupil of Corelli. Although a perfect master of his instrument, he was considered so wild and unsteady a timist, that he put the whole orchestra into confusion more than once at Naples, while acting as leader of the band, and was therefore induced to retire from that situation. In 1714 he came to London, where he published his first work, consisting of twelve solos, which, though extremely difficult, professors have considered superior to those of his great master. While in England he continued to print, at intervals, various compositions of the same description, all of which are as remarkable for the excellence of their style, as for the labour and skill necessary to their execution. He was also the author of three treatises on the art of managing his favourite instrument; and of a musical piece, entitled "The Enchanted Forest." This latter composition, printed in 1756, is an attempt to express, by mere sound, without the assistance of words, the episode contained in the thirteenth book of the Jerusalem Delivered. It was not, however, very successful. Geminiani continued to reside in London, playing occasionally his own compositions at the houses of the nobility, and supporting himself by teaching, till 1750, when he went to Paris, but returned in 1755. Dubourg, master of the king's band in Ireland, was one of his best scholars, and sent him an invitation, which he accepted, to come to Dublin; but owing to his great age, and the vexations which he experienced at being robbed of some valuable music, he did not survive his journey more than a twelvemonth, dying at Dublin in 1762.—*Biog. Dict. of Mus.*

GEMISTUS PLETHO (GEORGE) a philosopher of the fifteenth century. He was a native of Constantinople, and appears to have resided chiefly in the Peloponnesus, where he acquired the character of a man of great learning and virtue. He became a zealous advocate for the doctrines of the later Platonists, and consequently a violent opponent of the Aristotelians. He also defended the Greek church against the Latins; and in 1438 he was sent to the council of Florence to discuss the subject of a proposed union between the two churches. His zeal and eloquence in the cause which he advocated, gained the admiration of his oppo

nents; but his visit to Italy was memorable, principally on account of his having excited, among the western literati, a taste for the Platonic philosophy. He had the honour to have among his disciples, Cosmo de Medicis, and Marsilius Ficinus; and through his influence a Platonic academy was established at Florence. After the conclusion of the council to which he had been deputed, he returned to Greece, and died there in 1490, at the age of one hundred. Among his writings are a tract on the difference between the doctrines of Plato and Aristotle; a book against the arguments of George Scholarius for Aristotle; a treatise on the virtues; two books on the affairs of Greece after the battle of Mantinea; commentaries on the magic oracles of Zoroaster; besides a number of theological, historical, and philosophical pieces yet remaining in manuscript.—*Fabricii Bibl. Græc. Aikin's G. Biog.*

GENDRE (GILBERT CHARLES LE) marquis de St Aubin, born in 1688, was a counsellor of the parliament of Paris, and filled the office of master of requests. He was the author of "Traité de l'Opinion, ou Mémoires pour servir à l'Histoire de l'Esprit Humain," 6 vols. 12mo, 1733, afterwards augmented to eight volumes; and in 1739 he published "Antiquités de la Maison de France," 4to. He died in 1746. *Moreri. Nouv. Dict. Hist.*

GENDRE (LOUIS LE) a French historian, born of an obscure family at Rouen, and educated through the patronage of De Harlai, afterwards archbishop of Paris. He entered into the church, and became a canon and subchanter of the cathedral of Notre Dame. After publishing a life of his patron, he produced "Histoire de la France," 3 vols. folio, Paris, 1718; reprinted in 3 vols. 12mo. Besides an abridgment of the national annals, this work includes a catalogue of the ancient and modern French historians, with criticisms on their writings; an account of the manners and customs of the French in different ages; the genealogy of the royal family; and a chronological catalogue of the great officers of the crown. He was made abbot of Notre Dame de Claire Fontaine, in the diocese of Chartres. His death took place February 1, 1733. He published several other works, and left in manuscript five histories of his own life, each composed in a different style and manner, which he directed to be committed to the press.—*Idem.*

GENDRE (LOUIS LE) one of the revolutionary chiefs in France, who was originally a sailor, and afterwards a butcher at Paris. He possessed considerable natural talents, which enabled him to attract notice amidst the national misfortunes. After having been a leader of street processions, he was employed by some of the heads of the popular party to forward their schemes. He distinguished himself on various occasions as an enemy to monarchy, and connecting himself with Marat, Danton, &c. became one of the chiefs of the Jacobin Club. His incendiary publications subjected him to the danger of being arrested, and for a while he concealed himself; but on

the 11th of December 1791, he again made his public appearance in the capital, and was a conspicuous actor in the scenes which led to the downfall of royalty. In September 1792 he was chosen a deputy from Paris to the National Convention, in which he voted for the death of the king. After having, both in the metropolis and the departments, been one of the most violent among the Terrorists, who participated in the tyrannical government of Robespierre, he joined Tallien and others in the destruction of that chief. It was then that he signalized himself by driving away the members of the Jacobin Club, locking up their hall, and delivering the keys to the Convention. He was named a member of the Committee of Public Safety in August 1794; and he denounced those with whom he had been connected, and declaimed continually against the sanguinary measures in which he had participated. On the revolt of the Jacobins against the Convention, in April and May 1795, he displayed a great deal of courage and activity; marching several times at the head of the troops who defended the legislative body, and contributing much to the defeat of his old associates. He afterwards was made a member of the Council of Ancients, in which he figured to less advantage than in the Convention; his eloquence being more remarkable for force of expression than for precision or elegance. He died at Paris, December 13, 1797, at the age of forty-one, leaving his body to the surgeons, that he might, as he said, become useful to mankind even after his death.—*Dict. des H. M. du 18me. S.*

GENDRE (ADRIAN MARIE LE) professor of mathematics at the military school of Paris, member of the Académie des Sciences, and chevalier of the legion of honour. In 1787 doubts being raised as to the respective positions of the observatories of Paris and London, to put an end to them it was resolved that the points placed between Dunkirk and Boulogne should be verified; and Le Gendre, Cassini, and Mechain were employed in this operation, and the new means which they employed gave a much more exact result than any which had been tried before. In 1794 M. le Gendre published his "Mémoire sur les transcendentes elliptiques," and his "Elémens de Géométrie," which last is considered very able. His new treatment of the orbits of planets being founded on principles purely analytical, he was accused of having given loose to some paradoxical ideas, which induced him to remodel his book and make it much clearer. M. le Gendre also made many learned researches on the subject of the attraction of elliptical spheroids; and commenced his researches on heterogeneous spheroids to the Académie des Sciences. In 1774 he assisted M. de Prony to form trigonometrical tables for the decimal division of the circle taking the lead in the analytical part, and composing very elegant formulæ to determine the successive differences of the sine. In 1795, becoming a member of the temporary superintendency of weights and measures, he discharged the functions of his

office until it was united to the ministry of the interior. M. le Genre was a member of the Institute from the formation of that body; and under the imperial government was named counsellor for life of the university. On the re-establishment of the king he became, in 1815, member of the council for public instruction, and in 1816 he was named, conjointly with M. Poisson, examiner of the candidates for the Polytechnical school. Besides the above-mentioned works he also published "Nouvelle Théorie des Paralleles;" "Nouvelles Méthodes pour la détermination des Orbites de Comètes;" "Supplément à l'Essai sur la Théorie des nombres;" "Exercices de Calcul integral."—*Biog. Univ. des Contemporains.*

GENESIUS (JOSEPHUS) one of the Byzantine historians, flourished about the year 940. By order of Constantine Porphyrogenitus, he wrote a history of Constantinople, in four books, from Leo the Armenian, to Basilius the Macedonian. It was printed in 1733 at Venice, by Pasquali, in his edition of the Byzantine historians, but was very imperfect.—*Saxii Onomast.*

GENNADIUS. There were two ecclesiastics of this name in the latter part of the fifth century. Of these the elder succeeded Anatholius as patriarch of Constantinople in 458, and died in 471. He was an able and active prelate, and was the author of a Commentary on the Prophecies of Daniel, and a treatise written against the Anathemata of Cyril; of which latter work alone a few fragments are remaining.—The other was a priest of Marseilles, and wrote, about the year 493, a treatise on Ecclesiastical Dogmata, and a volume of Memoirs of the most celebrated Writers of the Church. Some have asserted that he was in his heart a Pelagian, but the accusation appears to have been advanced without sufficient proof of its correctness.—*Moreri.*

GENOVESI (ANTONIO) an able writer on philosophical and metaphysical subjects, born in 1712, at Castiglione in Italy. His friends intended him for the church, which he declined, in order to follow the law, a study which he abandoned in its turn, and devoted himself to general literature. He acquired considerable notoriety at Naples, about the middle of the last century, by the lectures which he delivered as professor of metaphysics, having been chosen to fill the chair in 1741. A considerable degree of popular odium was excited against him by his advocating in this capacity the opinions of Galileo and Newton; from the effects of which he was protected only by the immediate patronage of the king, who gave him the professorship of ethics. In an attempt to succeed to the divinity chair he was foiled by the clergy, who exclaimed against him as a heretic, but he eventually succeeded to that of political economy. The work by which he is most advantageously known is his "Italian Morality." His other writings are—"Philosophical Considerations on Religion and Morality;" "A Collection of Humorous Epistles;" "A System of Logic,"

in five books; "The Elements of Metaphysics," 4 vols. 8vo; and a treatise "Delle Lezioni di Commercio." His death took place in 1769.—*Fabrini Vita Italorum.*

GENTILESCHI (HORATIO) an Italian painter, whose family name was Souci, was born at Pisa in 1563. He was invited to England by Charles I, who appointed him lodgings in his court, with a considerable salary, and employed him in his palace at Greenwich and at other public places. His principal performances in England were the ceilings of Greenwich and York house. On the death of the king, when his collection of paintings were sold, 600*l.* were given for nine of Gentileschi's pictures, which are said to be in Marlborough-house. His most admired performance abroad was the portico of cardinal Bentivoglio's palace at Rome. He attempted portrait painting, but without success, his talent lying altogether in history. He died here in 1647.—His daughter, ARTEMISIA GENTILESCHI, equally famous for her love intrigues and talents in painting, passed the greatest part of her life at Naples, and died in 1662. She excelled her father in portraits, and was but little inferior in history. Her principal historical picture was that of David and Goliath. She took the portraits of the royal family, and of many of the nobility of England.—*Pilkington. Lord Orford's Anecdotes.*

GENTILIS. There were two brothers of this name, sons of a physician at Ancona. ALBERIC, the elder, born in 1550, accompanied his father, who had abjured the Romish church, to England, where he resumed the study of jurisprudence, and obtained the professorship of civil law at Oxford. He was the author of a treatise "De Jure Belli," favourably noticed and used by Grotius; six dialogues "On the Interpretation of the Law;" and a small work, entitled "Lectiones Virgilianæ." He died in 1608, or as some say, in 1611.—A son of his, named ROBERT, an ingenious but dissipated man, translated father Paul's History of the Inquisition into English.—SCIPIO GENTILIS, the younger brother, born 1565, was compelled to quit his native country by the same motives which expatriated the rest of the family. He sought refuge in Germany, and after studying at Wittenberg, Leyden, &c. obtained the professorship of civil law at Altorf. His translation of Tasso's Jerusalem Delivered into Latin verse, has been much admired. His other works are—a Paraphrase of the Psalms; "De Jure publico populi Romani;" "De Bonis maternis et secundis Nuptiis;" "De Conjuracionibus;" "De donationibus inter virum et uxorem," &c. He died in 1610.

GENTILLET (VALENTINE) a learned French protestant writer, was a native of Vienne in Dauphiné, and flourished in the sixteenth century. He is said by some to have been first an advocate in the parliament of Toulouse, and afterwards syndic of the republic of Geneva; and from the preface to one of his works, it appears that he was at one time president of the parliament of Grenoble. His

works were highly esteemed by the protestants, whose cause he ably defended. He was at length driven into exile, by the edicts published in France against those of the reformed religion. He was the author of—"Le Bureau du Coucile de Trente;" and of a Latin edition of the same; of "Apologia pro Christianis, Gallis Religionis Evangelicæ seu Reformatæ qua docetur hujus religionis fundamenta in sacra Scriptura jacta esse, &c.;" "Anti-Machiavel; or Discourses on the means of well-governing a kingdom;" "Anti-Socinus," &c.—*Bayle. Nouv. Dict. Hist.*

GENTLEMAN (FRANCIS) a dramatic writer and actor, born in Ireland in 1728. He was educated at Dublin, and was the schoolfellow of Mossop. At the age of fifteen he obtained a commission in the army; but on peace taking place in 1748, his regiment was reduced, and he left the service. He then indulged his inclination by going on the stage. His first appearance was at Dublin in the character of Aboan in Oroonoko; and he afterwards performed at Bath, Edinburgh, and many places in various parts of the country, but with no extraordinary success, as his histrionic talents did not surpass mediocrity. He then relinquished his profession, in expectation of some provision from the marquis of Granby, but the sudden death of that nobleman disappointed his hopes, and he was again obliged to become an actor. In 1770 he was engaged at the Haymarket, by Mr. Foote; and being dismissed after three seasons, he went to Dublin. Having experienced the various hardships of a wandering actor, and the disappointments of an unfriended author, he closed his mortal career, December 18th, 1784, leaving the history of his professional life as a warning to stage-struck youth. He was the author of several plays, a volume of fables, and other pieces of no importance.—*Biog. Dram.*

GEOFFREY OF MONMOUTH, called also Geoffrey ap Arthur, an ecclesiastic and historian of the twelfth century. According to Leland, he was educated at Monmouth, in a convent of the Benedictines, among whom he entered. He was afterwards made archdeacon of Monmouth, whence he was raised to the bishopric of St Asaph. The unsettled state of affairs in North Wales induced him to quit that country, and retire to the court of Henry II, who gave him the abbey of Abingdon, which he intended to hold in commendam with the episcopal see; but his clergy insisting on his residence among them, he refused to submit to their requisition, and thus lost the bishopric, when the abbacy being bestowed on another person, he was left without a benefice. Geoffrey wrote various works, but his Chronicle, or History of the Britons, is the only production of his pen which requires notice. This Chronicle is now known to be, as the compiler states, chiefly a translation from Armorican manuscripts. It contains a pretended genealogy of the kings of Britain from the time of the fabulous Bruce or Brute the Trojan; and the wonderful stories told of

king Arthur also take their rise in this work, and, fables as they are, it is supposed that they rest upon some slight foundation of truth.—*Bale. Moreri.*—See ROBERTS (PETER).

GEORGE LEWIS I, king of Great Britain, and elector of Hanover, was the son of the elector, Ernest Augustus, by Sophia, daughter of Frederick, elector palatine, and grand-daughter to James I. He was born in 1660, and was early trained to arms under his father. In 1682 he married his cousin, Sophia Dorothea, only daughter of the duke of Zell, a match attended with little domestic happiness. He then engaged in the service of the emperor, and signalized his valour in three campaigns against the Turks in Hungary. In 1700 he succeeded to the electorate, and in this succession was joined in the alliance against France. The command of the imperial army was conferred upon him after the battle of Blenheim in 1707; but owing to the jealousies among his confederates, being enabled to act on the defensive only, he resigned the command at the end of three campaigns, leaving however his own troops in the service of the allies. At the peace of Rastadt, Lewis XIV solemnly recognised the electoral dignity in the house of Lunenburg, as he had before done in the treaty of Utrecht, the succession of the same house to the throne of Great Britain, which event took place on the death of Anne in 1714, when the elector was in the fifty-fourth year of his age. On his accession he was of course thrown into the arms of the whig party, who indeed alone maintained the principle by which the Stuarts had been set aside. As George I excited little personal influence on the events of his reign, they need only be reverted to with brevity. The late tory ministers were called to account for their conduct in respect to the treaty of Utrecht, and several of the leaders were impeached or driven into exile. Owing to the dissatisfaction produced by these measures among a still powerful party, including a majority of the high church clergy and the jacobites, tumults ensued in various parts of the country, until at length in 1715 the earl of Mar openly proclaimed the Pretender in Scotland. After some actions, attended with various success, this insurrection being ill seconded by the English jacobites, was entirely quelled, and several of the leaders lost their lives on the scaffold. The disaffection to the new family continued however so great, that the whigs were driven into more than one unpopular measure with a view to support it, the most conspicuous and indefensible of which was the septennial act, extending the duration of parliament from three years to seven. The king, who probably considered the possession of the British crown precarious, sought to increase the value of his German territories by the purchase of Bremen and Verden, which accession he determined to support against the claims of Sweden. This proceeding involved him in a quarrel with Charles XII, who, in conjunction with the czar Peter, projected an invasion of Scotland in favour of the

Pretender. To obviate this danger, George entered into an alliance with Holland and France, then under the regency of the duke of Orleans, whose interest it was to be on good terms with Great Britain. The death of Charles XII in 1717 put an end to this alarm; which, however, was soon renewed by the audacious project of the celebrated Spanish minister, cardinal Alberoni, who formed a quadruple alliance between the three powers already mentioned, with the accession of the emperor. The seizure of Sardinia and invasion of Italy by the Spaniards, gave pretence for the sailing of a strong British naval expedition into the Mediterranean, under sir George Byng, who encountered and nearly destroyed the whole of the Spanish fleet off Sicily. This success was followed by the recovery both of Sicily and Sardinia, and although the court of Spain made heavy complaints of the attack without a declaration of war, it was obliged to accede to the terms of the allied powers, and a pacification of the north of Europe was also effected by the mediation of Great Britain. In 1720 the national delusion, usually entitled the South-sea Bubble, was the source of much private calamity in England, and produced disturbances which recalled the king from a visit to his German dominions, in order to concert with his ministers on the measures necessary to restore public credit. In 1722 a new conspiracy against the existing government was discovered, which led to the apprehension of several persons, among whom was the celebrated Atterbury, bishop of Rochester, who was exiled for life. The ministers of France and England, cardinal Fleury and sir Robert Walpole, being both pacifically inclined, the two countries long remained in peace, notwithstanding the death of the duke of Orleans, and the good understanding secured for some years the general repose of Europe. In 1725 a treaty between Spain and the emperor excited king George's jealousy so much, that he deemed it necessary to counteract it by another at Hanover, comprising most of the other European powers. He also sent a fleet to the West Indies under admiral Hosier, who, with his crew, fell a sacrifice to disease and the tantalizing ambiguity of his orders, a catastrophe which was considered the most inglorious disaster of this reign. The Spaniards then commenced the siege of Gibraltar; but all differences were finally settled by a negotiation, during which the king, who had set out on a journey to the continent, was seized with a paralytic attack, of which he died at Osnaburgh, June 11, 1727, in the sixty-eighth year of his age, and the thirteenth of his reign. George I was plain and simple in his taste and appearance, and grave and sedate in his general inanner, although gay and familiar with his intimates. He possessed much natural prudence and good sense, and well understood his interests, at least where his heart was concerned. His able management of his German dominions, was conspicuous; and possibly, looking at the time of life in which he as-

cended the throne of Great Britain, we ought not to wonder at his disposition to make his acquired dominions of service to his hereditary states. George I, who had put away his wife for several years, had female favourites, but was not governed by them. Learning owes to the first sovereign of the house of Hanover a professorship of modern history in each university, although, in other respects, literature seems to have claimed little either of his respect or attention.—*Aikin's Gen. Biog. Smollett.*

GEORGE AUGUSTUS II, king of Great Britain, son of George I, was born in 1683. He married in 1703 Wilhelmina Dorothea Carolina of Brandenburg Anspach, and came to England with his father at the accession of the latter, and was created prince of Wales. He was made regent during the king's visit to the continent in 1716, but a political difference ensuing, he lived some time estranged from the court. This breach was however finally accommodated, and he again received the attentions due to the heir apparent, until his father's death in 1727, when he succeeded to the throne. He inherited in full force the predilection of George I for Germany; and the same system of politics, and the same ministers, continued to govern the nation after his accession as before it. In 1732 Walpole introduced into parliament his financial scheme of an extension of excise, which excited so violent an opposition that he was obliged to withdraw it; but most of its intended provisions have been since adopted. In 1737 the same minister took advantage of some theatrical pasquinades (probably rendered obnoxious by design) in order to limit the number of play-houses, and to subject dramatic writings to the inspection of the lord chamberlain. Disputes having long prevailed with Spain, in regard to the trade to the West Indies, a convention between the two courts was signed in 1739, but the terms gave so little satisfaction to the merchants of Great Britain, that Walpole found himself obliged to yield to the clamour, and war with that country taking place the same year, the nation was gratified by the capture of Porto Bello by admiral Vernon. Anson (see his life) was also sent out on his celebrated expedition, and a powerful fleet and army were fitted out to capture Carthage. The failure of this latter enterprise, owing to the mismanagement and disagreement between the naval and military commanders, produced so much discontent throughout the nation, that Walpole, in 1742, was obliged to resign. In the mean time, the death of the emperor Charles VI roused the cupidity of France and other powers, to strip his daughter, Maria Theresa, of her inheritance, which conduct induced George II, as guarantee of the pragmatic sanction, to declare in her favour. An English army was accordingly sent to the continent, and strengthened by a body of Hanoverians in British pay. The king himself shared in the campaign, the conduct of which was however entrusted to the earl of Stair. The battle of Dettingen followed, in which the French were defeated, but with little benefit to the victors, who were obliged to quit

the field of battle and abandon their wounded. In this battle the king displayed great bravery, but as he interfered with the discretion of lord Stair, that officer soon after resigned in disgust, and the command of the army was entrusted to the king's second son, William, duke of Cumberland, who lost the bloody battle of Fontenoi in 1744, and the French remained ascendant in Flanders during the rest of the war. Instigated by the illusory promises of France, the jacobite leaders in 1745 invited the young pretender to try his fortune in a descent on the northern part of the island; and accordingly he embarked in a French frigate, and landed on the Scottish coast in the July of the same year. He was immediately joined by many of the clans, with whom he proceeded southward, and continually adding to his army, he proclaimed his father king at Perth, and took possession of Edinburgh. Having defeated the royal troops at Preston Pans, he at length entered England, where he had promises of adequate support, but although he penetrated without opposition as far as Derby, the people showed but little active inclination to his cause. News of the arrival of the duke of Cumberland with several regiments from Flanders, and of the rapid assemblage of troops from all quarters, to oppose and intercept him, so intimidated the pretender and his council, that a retreat was quickly determined upon, and effected without loss. The arms of the adventurers were again successful in a skirmish at Falkirk, but here their fortune ended, for the duke of Cumberland uniting his forces, came up with the insurgent army at Culloden near Inverness, and on the 17th of April, 1746, obtained an easy victory, which finally terminated the struggles of the house of Stuart. The young pretender with great difficulty made his escape, and the blood of his adherents, who were treated with great military severity by the duke of Cumberland, also flowed very copiously on the scaffold. During these events the king received numerous demonstrations of attachment to his person and family; and it was obvious that the greater part of the nation connected the interests of civil liberty with the support of the principles which had called the house of Hanover to the throne. In 1748 the war, which had been very unproductive of advantage to England, was terminated by the treaty of Aix-la-Chapelle. In 1751 died Frederick, prince of Wales, who having lived for a considerable time at variance with his father, was naturally thrown into the opposition party, and thereby in a manner which has not been unusual with English heirs-apparent, became the avowed patron of popular maxims of government. He appears to have been a well-disposed prince, with moderate talents, and little energy of character. In 1755 the disputes between Great Britain and France, in relation to their respective boundaries in Canada, produced hostilities in that country, and an open war between the two nations the following year. The events of this war, in which the principal powers of Europe became engaged, and which finally, under the auspices of Pitt (first earl of Chatham) raised

Great Britain to the pinnacle of power and glory, belong to the province of history, rather than to the biography of the sovereign. The warfare in Germany formed the most inglorious part of these transactions, as the duke of Cumberland, at the head of an Hanoverian army, was obliged to capitulate to the French, who took possession of the whole of the electorate. When Mr. Pitt, however, was called by the voice of the people to the direction of affairs, England, whom weak and divided councils had reduced so low that few troops had been summoned to defend the kingdom from invasion, suddenly exerted the martial energies of her character, and victories followed in every quarter of the globe. The French power in the East Indies was annihilated. In America, Quebec and the whole of Canada yielded to her arms. The islands of Senegal and Guadaloupe fell under British dominion, and the battle of Minden healed the national reputation in Germany. In this state of affairs George II suddenly died, from the uncommon circumstance of the rupture of the right ventricle of the heart, which, without previous suffering, terminated his life on the 25th of October, 1760, in the seventy-seventh year of his age, and thirty-third of his reign. George II was a prince of very moderate abilities, personally parsimonious, and wholly regardless of science or literature; but although hasty and somewhat obstinate in temper, he was honest and open in his disposition. His queen, the cultivated and well-informed Caroline, acquired a great ascendancy over him, which did not however prevent some of the sexual attachments so common with royalty; but George II was not of a disposition to permit them to be very injurious to his people. Upon the whole, this monarch was not unpopular, and dying as he did, in the midst of a successful war, he enjoyed at the time of his decease, no small share of national attachment.—*Aikin's G. Biog. Smollet's Hist. of England.*

GEORGE III, king of Great Britain, born the 4th of June, 1738, was the eldest son of Frederick, prince of Wales, by the princess Augusta of Saxe-Gotha. On the death of his father in 1751, his education was entrusted to the earl of Harcourt and the bishop of Norwich, but the formation of his opinions and character seems to have been materially influenced by the maternal ascendancy of the princess dowager, who in her turn appears to have been principally guided by the councils of the earl of Bute. George III, who had been previously created prince of Wales, ascended the throne on the demise of his grandfather, George II, on the 25th of October, 1760, being then in his twenty-third year. A prosperous war having made the existing administration, headed by Mr Pitt, (afterwards earl of Chatham,) exceedingly popular, no immediate change was made in the cabinet, and the first speeches of the new king to his council and parliament, were favourable to the sanguine anticipations formed of the conduct of a young prince of handsome person and unspotted reputation, who enjoyed the advantage of being

the first sovereign of the line whose birth and education were entirely English. As all attempts to give a summary of the events of a reign of upwards of half a century, would be nugatory, nothing more will be attempted beyond a slight advertence to its principal features, as illustrative of the character and conduct of the monarch. In 1761 the Pitt administration exchanged Mr Legge and lord Holderness for viscount Barrington and the earl of Bute, a fact worthy notice as commencing that series of incessant ministerial changes which so curiously distinguished the first ten years of the reign of George III. In the same year Mr Pitt resigned the seals of foreign secretary, in consequence of being outvoted in the cabinet on the subject of a war with Spain, which he deemed absolutely necessary, an opinion that was borne out by the event before the year expired. The marriage of the king with the princess Charlotte Sophia of Mecklenberg Strelitz, (an union which in its result operated materially on the domestic character of this reign,) also took place in 1761, that ceremony being performed on the 8th of September, and the joint coronation of the king and queen following on the 22d of the same month. A new administration, formally headed by lord Bute, having entered into negociations with France and Spain, preliminaries of peace with those nations were signed on the 3rd of November, 1762, at Fontainebleau, on terms which, although favourable to Great Britain, fell far short of national expectation. In 1763 the publication of the celebrated periodical paper entitled the North Briton, written by Mr John Wilkes, then member for Aylesbury, in a spirit of unsparing censure of the Bute administration, led to a series of ill-judged measures, in regard to that individual, that did any thing but honour to the councils which produced them; a remark rather strengthened than otherwise by the fact, that the result of them proved favourable to the interests of civil liberty. In the midst of these differences, two voyages of discovery were undertaken, the one under commodore Byron, and the other commanded by captains Wallis and Cartwright, being the first of the series of similar expeditions, which have done very considerable honour to this reign. In 1764 Mr George Grenville, who had become premier by the unexpected retirement of the earl of Bute, began that career of measures in relation to the taxation of the American colonies, the consequences of which have proved so momentous; and notwithstanding the strenuous opposition of the colonists, the impolitic stamp act was passed the following year. About the same time, in consequence of some appearance indicative of the malady which obscured the latter years of the king's existence, a bill was passed to enable his majesty to appoint the queen or any of the royal family residing in England, guardian to his successor, and regent of the kingdom. The attempt of the ministry to confine the term *royal family* to the descendants of George II, with the exclusion of the princess dowager of Wales, caused such

offence, that another change of administration took place, in which the marquis of Rockingham was placed at the head of the treasury. In 1766 the new administration, among other popular measures, repealed the inadvisable American stamp act; at the same time however passing a declaratory act, assertive of the right of imposing colonial taxation. The public approbation which followed this concession, and other measures of the Rockingham cabinet, could not however preserve it from the fate of the many which had preceded it; and upon the 30th July, 1766, it was dissolved, and succeeded by one formed by Mr Pitt, (then created earl of Chatham,) who took the office of lord privy seal, but not without a considerable decline in public favour, and with a paucity of support that materially paralyzed his energies. In 1767 Mr C. Townsend, chancellor of the Exchequer in this administration, revived the American disputes, by imposing duties on certain articles imported into America; and in 1768, lord Chatham, disgusted with the conduct of his colleagues, resigned the privy seal, and was succeeded by lord Bristol. The same year was distinguished by the return of Mr Wilkes for Middlesex, and the popular tumults attendant upon his imprisonment and outlawry. In 1769 that popular leader was expelled the house of commons, for publishing, with severe comments, a letter written by lord Weymouth, one of the ministers, in his capacity of chairman of the quarter-sessions at Lambeth; he was however returned by his constituents a third, and even a fourth time, until the administration determining to enforce his expulsion at all events, declared the opposing candidate, colonel Luttrell, (notwithstanding a minority of nearly 1000 votes,) duly elected, a proceeding which, some time after the event, was virtually declared illegal by parliament itself. This unconstitutional proceeding did not prevent the same bold and active partizan from gaining a verdict of four thousand pounds against the secretary of state, lord Halifax, for the illegal seizure of his person and papers, by which decision general warrants were judicially declared illegal. The year 1770 was signalized by another change of administration, which rendered lord North premier: by the passing of the Grenville act in regulation of the proceedings of the house of commons, in regard to contested election; by a bold address and remonstrance to the throne from the livery and corporation of the city of London; and by the celebrated letters of Junius. In the session of 1771, the house of commons ordered the attendance of certain printers, for publishing the debates of the house. The printers not attending to the summons, were ordered into the custody of the sergent-at-arms, and one of them being taken and carried before alderman Wilkes, he immediately discharged him, and bound him over to prosecute the person who had arrested him, for false imprisonment. The lord mayor (Crosby) and alderman Oliver acted in a similar manner on the arrest of others of the printers; on which, being members of the house, they were ordered to attend in their

places, and were committed to the Tower, until the prorogation of parliament released them of course. These unpopular and nugatory proceedings, which excited the common mind in the highest degree, ended in the triumph of the press, the debates having been openly and usefully published ever since. The ministry however was in no way weakened by these defeats, and the opposition, by the defection of the Grenville party, was reduced into extreme insignificance. In 1772 the marriages of the dukes of Gloucester and Cumberland with lady Waldegrave and Mrs Horton, produced the royal marriage-act, which prevents the members of the royal family from marrying, without the king's approbation, before the age of twenty-five; as also subsequently, if disapproved by both houses of parliament. In 1773 the discontents in America burst into an open flame, and three sloops laden with tea (one of the taxed articles in the port of Boston) were boarded by armed persons in disguise, who threw the whole of the cargoes overboard. These disturbances produced a royal message in the commencement of the sessions of 1774, calling on parliament for such measures as would duly assert the supremacy of the mother country. This communication was immediately followed by the introduction of new bills by lord North: the first inflicting a penalty equal to the value of the cargoes destroyed, and shutting up the port of Boston; the second annihilating the charter of king William, by investing the crown with the nomination to all offices and employments; and the third giving power to send persons accused of political offences to England for trial. It is the province of history to record the consequences of this injudicious policy in the colonies, and the progress of events from the formation of a general congress of the American states at Philadelphia in 1774, until the hostile interference of France, Spain, and Holland; and finally, of the peace which ensured the existence and independence of the United States of America in 1783. The previous summary, as illustrative of the opening of a new reign, and as bearing some reference to the elucidation of personal character might be necessary; but from the commencement of the American war, the personal history of the sovereign merges into that of the country; nor would much information be afforded by a mere advertence to the parliamentary and party struggles which ended in the accession to power of the late Mr Pitt, beyond the fact that George III always exhibited a firmness of temper that, sooner or later, set aside all attempts to force administrations upon him which were disagreeable to himself. The conduct of party-men, indeed, in the notorious coalition, and the oligarchical attempts to form administrations upon principles in opposition to the voice both of king and people, began about this time to produce universal disgust; and notwithstanding the long and disastrous American war, and the loss of what may almost be termed an empire by a course of the most injudicious theoretical policy, and imbecile

practical performance, George III, by the steadiness with which he put down the coalition administration, acquired a degree of popularity which never afterwards entirely deserted him. The smooth course of the early years of the administration of Mr. Pitt, materially added to this national disposition, which exhibited itself very strongly when the constitutional malady of the king again displayed itself in 1789, and still more upon his subsequent recovery. In reference to the French Revolution, and the important contests which arose out of it, it is sufficient to remark, that George III zealously coincided in the policy adopted by his administration, and consequently is entitled to his share of the credit or censure which impartial posterity may pass upon the consequences, as exhibited in the lasting benefits acquired, or the lasting burdens which it has imposed on the people of Great Britain. A similar observation will apply to the domestic, and Irish, and Indian policy of the Pitt cabinet; as also to the transactions connected with the Irish rebellion. It is unnecessary to observe that George III was immovable in his opposition to the demands of the Irish catholics; and seconded by the influence of the church, and a preponderant share of popular feeling in unison with his own, was enabled to eject the Fox and Grenville administration, which succeeded on the death of Mr Pitt, with nearly as much public countenance as had attended the dissolution of the cabinet arising out of the coalition of Mr Fox with Lord North. The proceedings of the Perceval administration, until the final retirement of the king in 1810, require no detail here; while the peculiar species of affliction endured by the monarch, renders the interval which elapsed from his retirement to his death, a blank in his biography. His decease took place on the 29th January, 1820, in the eighty-second year of his age, and fifty-ninth of his reign. The political character of George III is tolerably deducible from the course of policy pursued in his long and eventful reign. It is obvious that he ascended the throne with a disposition to resist that predominant whig influence which, since the accession of the house of Hanover, had exclusively engrossed the management of public affairs. That an abatement of a portion of the oligarchical dictation which the events of the Revolution of 1688, and the Hanoverian succession, had tended so much to systematise, was desirable, will now possibly be allowed by the candid on all sides. It must however be at the same time granted, that the covert influence opposed to whiggish domination on the succession of George III, exhibited notions of government in other respects, which became those who entertained them far better in the character of adherents of the expatriated family, than in that of subjects of the house of Hanover. That the American war, although by no means unpopular in the first instance, was favoured by the predominance of those theoretical ideas of passive obedience, or implicit submission, so

courtly in theory and impossible in practice, can scarcely be doubted. In point of fact, there was absolutely nothing to be gained by the proposed mode of taxing the colonies, but the barren privilege of acquiring, in one form, what would have been granted in another. In the same spirit all the foolish contests with Wilkes, as well as the really small matters after all, which excited the ire and elquence of Junius, were more or less struggles for the maintenance of some barren privilege or pretension, magnified into theoretical and artificial importance, by the friends of close government and prerogative. The change of circumstances produced by the French Revolution, gave quite a new impulse to practical British policy; and it is for the curious to trace the personal character of the monarch in the course of events so overwhelming and various. Backed as the adopted policy of the country henceforth was, by the fears, alarms, and convictions, of the most influential portion of the community, George III from this time had seldom occasion to put forth his personal feelings or opinions, which are therefore to be gathered only from his ready acquiescence in the various strong domestic measures affecting the liberty of the subject, and otherwise restrictive or severe, upon the partizans of what one side called reform, and the other revolution. It is always useful when a sovereign acts for a series of years in accordance with the views and opinions of a large portion of his subjects: whether altogether correct or not, it tends to strengthen the popular voice, and proportionably to weaken mere jobbing party interests. The principal feature of the last half of the reign of George III, is indisputably the increasing importance and accuracy of public opinion, which, in conjunction with the press, is gradually becoming a species of fourth estate, which can never be again neglected as it has been, and which, it is obvious is rapidly undermining the close oligarchical influence to which it is in its nature so decidedly opposed. The great progress of the country, in every branch of science and information during the last half century, will, in fact, always reflect a portion of honour on the individual whose name it bears; and although, with the exception of voyages of discovery, and the inventions connected with war, the government of George III seems to have had little direct share in the promotion of arts, sciences, or literature, it will, and possibly ought, to share in the honour which follows from their diffusion and prosperity. For the rest it may be observed of this sovereign, that he possessed personal courage and steadiness of character in a high degree; and he certainly merits the credit, always due to those, whether kings or subjects, who strictly adhere to their own principles. Of a plain, sound, but not enlarged understanding, he acted upon his convictions with sincerity; but was probably neither eminently qualified to anticipate the progress of events himself, or to be instructed in that respect by others.

It must be observed however, that he no way expressed dislike to the diffusion of education, the subject of so much alarm to many of his courtiers. With strict conformity, his tastes and amusements were plain and practical. Literature and the fine arts engrossed but a small share of his attention, and hunting, agriculture, mechanical contrivances, and domestic intercourse, seem to have chiefly occupied his leisure. Religious, moral, and in the highest degree temperate, the decorum of his private life was always exemplary, and few sovereigns have enjoyed the benefit of a good character in this respect more abundantly. His deportment as a father and a husband, according strictly with the national and popular notions of propriety, rendered him and the queen an eternal theme of praise; and the throne was regarded as a pattern in respect to the conjugal duties. Although occasionally hurried and repetitious in speech, his manners were extremely easy and familiar. In conversation he exhibited much general and particular curiosity, a tendency often accompanied with a minutely retentive memory, which he also eminently possessed, never forgetting a person whom he had ever seen, or a circumstance which had ever been communicated to him. To conclude, it has been observed of George III, that "he would never do wrong except he mistook wrong for right;" and such doubtless may be regarded as the opinion of a large majority of the people over whom he so long reigned.—*Original.*

GEORGE, called also Amira, a learned Maronite, flourished towards the latter end of the sixteenth, and beginning of the seventeenth century. He came to Rome during the pontificate of Clemeut VIII, and there published "A Syriac and Chaldee Grammar," which is much esteemed. On his return home he was chosen patriarch of the Maronites, and died in 1641. He introduced the use of the Gregorian calendar among the Maronites.—*Moreri.*

GEORGE, surnamed the Cappadocian, was born at Epiphania in Cilicia, where his father was a fuller. From this station he raised himself by his talents of ingratiation, and obtaining, through the influence of his patrons, a lucrative commission to supply provisions to the army, he hesitated not to enrich himself by the basest acts of fraud, until his conduct became so notorious that he was obliged to flee from justice. He then went to Alexandria, and professing much zeal for the doctrines of Arius, he acquired great influence. About the year 356, when Athanasius was obliged to flee from the fury of the soldiers, who were commanded by the emperor Constantius to expel him from his see, George was elected bishop in his place. In this station he gave full liberty to his cruel nature, persecuting the catholics with unrelenting fury, plundering their houses, and burning their monasteries. Nor was his oppression confined to the catholics alone, all the inhabitants of his diocese were alike victims to his rapacity, which he carried to such a pitch, that the people at length rose up and expelled him from the city; nor was

it without great difficulty that they permitted him to resume his authority. On the succession of Juliau, the public rage again broke out against George; he was seized and dragged in chains to prison, and at length was murdered by the populace. The rival of Athanasius was dear to the Arians, and on their seeming conversion, his worship was introduced into the catholic church, and the vile George of Cappadocia is considered as a saint and a martyr, if not the patron of England and of the order of the garter. George of Cappadocia formed a very valuable collection of books, which the emperor Julian made the foundation of the library which he established in the temple erected in honour of Trajan at Antioch, but which the emperor Jovian shamefully permitted to be burnt.—*Fabricii Bibl. Græc. Gibbon's Decline and Fall. Moreri.*

GEORGE of Trebisond, a learned Greek, was born in 1395 in the isle of Crete, of a family originally from Trebisond. He went to Italy, and was patronized by Francis Barbaro, a noble of Venice, through whose influence he obtained a Greek professorship at Vicenza, which he was obliged to quit, he says, in consequence of the unfriendliness of Guarino. He then removed to Venice, where he remained until about 1437, when he received an invitation from pope Eugenius IV to settle at Rome; and during the life of that pontiff he was occupied in teaching rhetoric and philosophy, and in translating Greek into Latin. Pope Nicholas V made him his secretary, but his arrogant temper led him into many quarrels with the learned men of the court, among whom were Guarino, Gaza, and Poggio. Some of his translations also giving offence to the pope, he was obliged to leave Rome; and in 1452 he took refuge at Naples, where he was well received by king Alphonso. In 1459, being at Venice, he presented to the doge his version of Plato's Book on Laws, and was engaged as a professor of belles lettres. In 1464 he revisited his native land, and thence proceeded to Constantinople. On his return to Italy, finding that one of his pupils, Paul II, was pope, he returned to Rome, but falling under his displeasure, he was imprisoned for four months in the castle of St Angelo. He is supposed to have died about 1480. His works, which are very numerous, contributed greatly towards the introduction of Greek literature in the west. He translated into Latin "Eusebius's Evangelic Preparation;" several works of Cyril of Alexandria, of Gregory Nyssen, of Gregory Nazianzen, and of John Chrysostom; many pieces of Aristotle, Plato on laws, Ptolemy's Almagest and Centiloquium, and an oration of Demosthenes. He likewise composed "De Arte Rhetorica, lib.v.;" "Reflections and Commentaries on some Orations of Cicero;" "Letters," "Orations," and many controversial pieces. His "Comparison of Aristotle and Plato" gave great offence to the Platonists, against whom he inveighs vehemently.—*Hodii de Græc. illust.—Tiraboschi.*

GEORGE CADOU DAL, the son of a miller, named Cadoudal, born at a village near Auray

in Lower Brittany, in 1769. As he was known in the civil wars only under his Christian name, that has become his historical appellation. He was instructed in the college of Vannes in the principles of religion, which he never forgot. He had scarcely finished his studies when the Revolution broke out, in which he at first took no part; but in March 1793, on the first insurrection of Morbihan, he enlisted as a private soldier among the royalists. In November, the same year, George, learning that the Vendéans had passed the Loire, determined on joining them, and after having distinguished himself among them by his courage, he was appointed an officer at the siege of Granville. The royal army having been successively defeated and dispersed at Mans and Savenay, he returned to his native province. Engaging in a new insurrection of the royalists in Morbihan, he was made captive by a party of republicans, and committed to prison at Brest. He made his escape, and after having distinguished himself by his courage and address, he assisted in the scheme of the emigrants, who, under Puisaye, landed at Quiberon bay. The disastrous result of that expedition did not prevent George from continuing his efforts for the restoration of royalty. On the elevation of Buonaparte to sovereign power, he directed his designs against that chief, and formed connexions with the English government, in order to effect his purpose. He assembled an army of 15,000 men, with which he opposed general Brune; but being defeated at Grand Champ and Elvas, he agreed to conditions of peace, and disbanded his troops. He then went to Paris, where he resisted the offers made by Buonaparte to retain him in his service. Finding himself compelled to remain inactive at home, he made a visit to England, and was received with distinction by the ministry and the count d'Artois, who bestowed on him the Cordon Rouge, and the rank of lieutenant-general. About the end of 1800 he returned secretly to Brittany, where he made fresh attempts to organize a royalist insurrection, but in vain. He then went again to England, and connected himself with Pichegru, with whom he concerted measures for overturning the government of Buonaparte. To accomplish their object, they returned to France in the beginning of 1803, and in the following year they were secretly pursuing their projects at Paris, when George was taken by the police; and on the 23rd of June, 1804, he suffered execution, agreeably to a sentence previously passed on him for conspiracy against the emperor Napoleon. George was suspected, and indeed accused, of being connected with the affair of the infernal machine; but he firmly denied having authorized that infamous project, which appears to have been contrived by some officers who had served under him.—*Biog. Univ.*

GEORGES (Chevalier de St) a native of Guadaloupe, equally celebrated for his skill as a swordsman and as a performer on the violin. He composed an opera, entitled "La Chape," and was director of the orchestra at the concert of amateurs in Paris in 1770. The che-

alier was repeatedly in England where he was in the habit of fencing in public against all comers, and seldom met with an antagonist who could compete with him in the management of his weapon. He afterwards returned to Paris, where he died in indigent circumstances in 1801.—*Biog. Dict. Mus.*

GERARD (ALEXANDER) a Scotch presbyterian divine and ingenious writer on polite literature. He was born at Garioch in Aberdeenshire in 1728, and was educated at the Marischal college, where he took his degrees in arts, and then went to Edinburgh. In 1743 he obtained a licence as a preacher in the kirk of Scotland; and in 1750 he was chosen assistant to David Fordyce, Marischal professor of moral philosophy at Aberdeen; on whose death he succeeded to the vacant chair in 1752. He took orders in 1759, and the next year he was appointed professor of divinity in the Marischal college, and minister of the Grey Friar's church in Aberdeen. About the same time he was created DD. In 1771 he resigned his professorship and benefice, and was raised to the theological chair of King's college, Aberdeen; to the duties of which office he assiduously attended till near the time of his death, which occurred in 1795. His works consist of several occasional sermons; "An Essay on Taste," 1579, 8vo, which was rewarded with a gold medal, offered for the best piece on the subject by the Philosophical Society of Edinburgh, and of which an enlarged edition was published in 1780; "Dissertations on the Genius and Evidences of Christianity," 1766, 8vo; "An Essay on Genius," 1774, 8vo; and two volumes of Sermons, 1780 and 1782.—*Suppl. to Encycl. Brit. Aikin's G. Biog.*—GERARD (GILBERT) son of the preceding, was a native of Aberdeen, where he received his education. Adopting the clerical profession, he went to Holland, and became minister of an English church at Amsterdam. On returning to his native country he was chosen Greek professor at King's college, Aberdeen. After the death of his father he was professor of divinity in the same college; and he was appointed one of the royal chaplains for Scotland. He died in 1815. He published from his father's manuscripts in 1799, a portion of his theological lectures, under the title of "The Pastoral Care," 8vo, a work of considerable merit. His own productions are—"A Sermon on Indifference with respect to Religious Truths," and "Institutes of Biblical Criticism," 8vo.—*Gent. Mag.*

GERARD (JOHN) a learned German divine of the Lutheran church, in the seventeenth century. He was a native of Jena, and after studying at the university there, he went to Altdorf in 1640, to acquire a knowledge of the Oriental languages. Having returned to Jena, in 1643 he took the degree of MA. and in 1646 he was appointed assistant professor of philosophy at Wittemberg. He afterwards was professor of history at Jena, and finally professor of divinity and rector of the university. He died in 1663, aged forty-seven. Among his works are a valuable treatise on the

harmony of the oriental languages; a discourse on the origin, progress, and doctrine of the Coptic church; and an epitome of theological common places; of which an improved edition was published by his son, J. ERNEST GERARD, professor of divinity at Giessen, where he died in 1707.—*Aikin's Gen. Biog. Nicéron.*

GERARD THOM, TUNG, or TENQUA, the founder and first grand-master of the order of Knights Hospitallers, or Knights of St John of Jerusalem. He was a native of the Isle of Martigues on the coast of Provence, or, according to others, of Amalfi in Italy. Having made a pilgrimage to Jerusalem, while it was in the hands of the infidels, he distinguished himself so much for piety and prudence, that in 1080 he was made superior of an hospital attached to a Benedictine monastery near the holy sepulchre. The chapel of this establishment was dedicated to St John, in consequence of a tradition that it stood on the site of the house of Zebedee, the father of St John the Evangelist. After the capture of Jerusalem by Godfrey of Bouillon, Gerard proposed the foundation of a new religious order, which should be devoted to the seemingly incompatible observances of monachism and chivalry. The project was adopted, and in 1100 many individuals entered into an association under the title of Hospitallers of St John of Jerusalem, who, besides the vows of chastity, poverty, and obedience, bound themselves especially to assist and protect all distressed Christians. The rules of the order being drawn up, were approved by pope Paschal II, and Gerard was recognized as the first grand-master, which office he retained till his death in 1120. Such was the origin of this celebrated order of military monks, who obtained extensive possessions in almost every part of Christendom; and after escaping the catastrophe which awaited the haughty Templars, they have survived amidst political and religious revolutions, even to the present age, as the knights of Malta.—*Moreri.*

GERARDE (JOHN) an English surgeon, who wrote on botany in the latter part of the sixteenth century. He was a native of Cheshire, and after having been educated as a surgeon, he appears to have travelled abroad. He at length settled in London, where he not only practised his profession, but also superintended a botanical garden belonging to lord Burleigh. He resided in Holborn, then a suburb of the metropolis, where he had a garden of his own, in which he cultivated many curious exotics. He was master of the Apothecaries' Company, and appears to have been favoured by the College of Physicians. His works are—"Catalogus Arborum, Fruticum, et Plantarum, tam indigenarum quam exoticarum, in Horto Joh. Gerardi, civis et chirurgi Londin. nascentium," 4to, 1596 and 1599, and a "Herbal, or General History of Plants," folio, 1597, republished with great improvements by Thomas Johnson in 1633. The former of these productions contained an enumeration of 1033 species of plants; and the latter was founded on the Herbal of Dodo-

næus, with figures from the Dutch Herbal of Tabernæmontanus. Though the literary abilities of Gerarde appear to have been inconsiderable, yet he has the merit of having excited a taste for botany in this country, and furnished to the cultivators of the science a useful book for reference.—*Pulteney's Sketches of Botany in England. Aikin's G. Biog.*

GERBERT (MARTIN) a dignified ecclesiastic, prince-abbot of a Benedictine convent at St Blair in the Black Forest, born in the Austrian states in 1720. He united a liberal disposition to extensive learning and great taste in the fine arts, especially in music. With a view to advance the latter, his favourite science, he travelled, with the permission of the pope, through France, Germany, and Italy, his rank in the church procuring him access to the libraries, &c. of all the principal monastic institutions, and thus enabling him to collect materials for a history of church music, from the best and most authentic sources. This work he finished in six years after his return, although a fire, which destroyed the valuable library belonging to his abbey, consumed also a great part of the materials which he had collected, and rendered it much less complete than it would otherwise have been. It appeared in 1774 in two volumes, with numerous engravings, and is entitled "De Cantu et Musicâ Sacra primâ ecclesiæ ætate usque ad presens tempus." The historical part of it embraces three distinct eras, the first of which ends with the accession of St Gregory to the papal chair; the second descends to the fifteenth century, and the third brings his narrative down to the period in which he lived. In 1784 a work of still greater value to artists and literati issued from his pen, being a collection of all the ancient musical writers between the third century and the invention of printing, whose compositions had till his time remained in manuscript. This book, which is entitled "Scriptores Ecclesiastici de Musicâ Sacra potissimum," is now become exceedingly scarce; an excellent analysis of its contents is however given by M. Forkel in his "Histoire de la Musique." The prince-abbot survived till the year 1793.—*Biog. Dict. of Mus.*

GERBIER (sir BALTHASAR) a miniature painter, was born at Antwerp in 1592. He is distinguished as having been engaged, in conjunction with Rubens, to negotiate a treaty with Spain, and as being for some time British resident at Brussels. He was employed by Charles I; and being also acquainted with architecture, was engaged by lord Craven to give designs for Hempsted-hall, which has been burnt. In 1648 he made his appearance as an author and founder of an academy at Bethnal-green, and he continued to publish pamphlets with all kinds of wild schemes and projects. He afterwards settled at Surinam, but the Dutch government considering him an agent of the king of England, he was seized and sent back to Holland. He returned to England on the Restoration, and died in 1667.

He was not much distinguished as an artist.—*Walpole's Anecdotes. Pilkington.*

GERBILLON (JOHN FRANCIS) a jesuit missionary, was born at Verdun in 1654, and entered the Society of Jesuits in 1670. In 1685 he embarked on a mission to China with six other mathematicians of the society. He remained at Pekin to study the Tartarian language, and so ingratiated himself with the emperor, that he appointed him to join an embassy sent to regulate the boundaries with the court of Muscovy. By his address he contributed greatly to the success of this negotiation; and on his return to China was chosen by the emperor his instructor in mathematics and philosophy. He was permitted to preach the Christian religion in China, and had [the] direction of the French college in Pekin, and finally was made superior-general of all the jesuit missionaries sent from France. He was the author of "Elements of Geometry, extracted from Euclid and Archimedes," and "Geometry practical and speculative," both written in the Chinese and Tartar languages, and printed at Pekin. He left in MS. a voyage to Siam, of which extracts are given in Michault's *Melanges Historiques*. Gerbillon died at Pekin in 1707.—*Moreri. Nouv. Dict. Hist.*

GERDIL (HYACINTH SIGISMUND) a Roman cardinal, was born at Samoens, in Piedmont, in 1718. He entered the Barnabite order, and in 1742 he became professor of philosophy at Macerata, and afterwards at Turin, where he was appointed tutor to the prince royal of Sardinia. In 1777 Gerdil was made a cardinal, and removed to Rome, where he lived in comparative retirement. He warmly opposed the intended negotiations with the French consular government in 1801; and considering Buonaparte's proposal for a concordat as a mockery, he openly dissented from it. He died at Rome in 1802. His works are "A Treatise on the Immortality of the Soul;" "Treatise on the Nature and Origin of Ideas;" in which he maintained the opinions of Malebranche against those of Locke; an "Introduction to the Study of Religion;" "A Treatise against Duels;" "The Phenomena of Capillary Tubes." He also published three works in confutation of some paradoxes of Melon, Montesquieu, and Rousseau. Of these the last appears to be the best; and Rousseau himself acknowledges, that it was the only book written against him which he thought worthy of being read to the end.—*Athenæum*, vol. v. from his *Eloge published at Rome.*—*Dict. Hist. Nouv.*

GERHARD (EPHRAÏM) a German lawyer and philosopher, was born at Giersdorf in Silesia, in 1682. He was advocate to the court and regency of Weimar, and afterwards became professor of law in the university of Aitdorf, where he died in 1718. He was the author of "Delineatio Philosophiæ rationalis;" to which is subjoined an excellent dissertation, "De Præcipuis Sapientis Impedimentis," &c. with several treatises in jurisprudence and philosophy.—*Nouv. Dict. Hist.*

GERIARD (JOHN) an eminent Lutheran

divine, was born at Quedlinburgh in Saxony, in 1582. He was appointed by John Casimir, duke of Saxony, to a church in Frauconia, and at the same time to be professor of divinity in the Casimirian college of Cobourg. In 1616 he was appointed professor of divinity at Jena, where he continued until his death in 1657. He was four times chosen rector of the university. His works, written in Latin and German, consist of treatises on theological subjects; critical and polemical commentaries on certain books of the old and new Testament, &c. only one of which, his "Meditations," is well known in this country.—His eldest son, JOHN ERNEST, was born in 1621 at Jena. He was appointed professor of philosophy at Wittemberg in 1646; and of history at Jena in 1652. He died in 1688. His principal works are "Disputationum theologiarum Fasciculus;" "De Ecclesiæ Copticæ Ortus, Progressu et Doctrinâ;" "Harmonia Linguarum Orientalium."—*Historia ecclesiastica Seculi*, xvii. in *vita Io Gerhardi, Lipsic*, 1727. *Moreri*.

GERLACHI (STEPHEN) a Lutheran divine, was born at Knitlingen in Suabia, in 1546, and studied at the university of Tubingen, where, in 1566, he took his degree of BA. On account of the plague he removed to Eslingen, where he obtained the degree of doctor in philosophy. In 1573 he accompanied David Ungnad on an embassy from the emperor Maximilian II. to the Turkish court. He continued at Constantinople for five years, during which time he collected several Greek MSS. which he purchased for Crusius. On his return to Tubingen he was made professor, dean of the church, and a member of the senatus academicus. He was the author of several controversial pieces; of "Disputationes Theologicæ de præcipuis horum temporum controversiis;" and of a journal (in German) of the embassy to the Porte. He died in 1612.—*Melchior Adam, Freheri Theatrum, Niceron*.

GERMANICUS (CÆSAR) a Roman general, the son of Drusus, and nephew of the emperor Tiberius. When Augustus adopted the latter as his successor, Germanicus was in turn adopted by his uncle. He entered when young on military service; and towards the close of the reign of Augustus he was sent into Germany, to oppose the celebrated chieftain, Arminius, whom he at length subdued after a severe contest; and on his return to Rome he was rewarded with the honours of a triumph. His talents and success excited the suspicious jealousy of his imperial uncle, which was much increased by the disposition which his soldiers had shown, to make him emperor on the death of Augustus. He was then sent into the Oriental provinces, where he extended the Roman power; but was thwarted in his operations by Piso, the governor of Syria, who had been employed by Tiberius as a spy on the actions of his nephew. He died at Antioch AD. 19, at the age of thirty-three, owing, as is supposed, to poison administered to him by Piso. His death occasioned a great sensation at Rome, and a profusion of honours was decreed to the memory of this prince, who had

been the hope and delight of the Roman people. He was not only famous for his military talents, but also acquired literary reputation, as he wrote some Greek comedies, and translated the *Phænomena* of Aratus into Latin verse, though the latter production has been ascribed to the emperor Domitian, who was also called Germanicus.—*Moreri, Univ. Hist.*

GERSON (JOHN) by some called Charlier, an illustrious Frenchman, usually styled "Doctor Christianissimus," was born at Gerson in France, in 1363. He studied divinity, and received the degree of doctor in 1392, and three years after he became canon-chancellor of the church of Paris. In 1408, when Louis Duke of Orleans was murdered by order of the duke of Burgundy, which John Petit was base enough to justify, Gerson caused the doctrine of this tyrannicide to be censured by the doctors and bishops of Paris. He also distinguished himself at the council of Constance, where he made a speech, in which he enforced the superiority of the council over the pope; he also caused the doctrine of John Petit to be condemned there. Not daring to return to France, for fear of the vengeance of the duke of Burgundy, he retired into Germany, and finally went into a convent at Lyons, where he died in 1429. The best edition of his writings is that of Du Pin, in 1706, in 5 vols. fol. in which there is a Gersoniana, which is represented as being very curious.—*Du Pin, Blois's Censura, Cave, Moreri*.

GERVAISE (ARMAND FRANCIS) a French monk, entered among the barefooted Carmelites, but not finding them sufficiently austere, he took the habit of La Trappe in 1695, of which order he became abbot. He however made himself so obnoxious in this office, rousing and fomenting divisions among the monks, that he was obliged to resign, although he still continued to live according to the rules of La Trappe. In his first volume of his "Hist. generale de Cîteaux," the Bernardines were so violently attacked, that they obtained an order from the court against him, and he was arrested at Paris, and conducted to the abbey of Notre Dame de Reclus, where he was confined, and died in 1765. He was the author of "The Life of St. Cyprian;" "The Lives of Abelard and Heloise;" "History of the Abbé Segur;" "Life of St. Irenæus;" "Life of the Apostle Paul;" "Letters on English Ordinations, and against Courayer;" "Life of Rufinus;" &c.—*Moreri*.

GERVAISE (NICOLAS) a French missionary, brother of the preceding, was born at Paris. Before he arrived at his twentieth year he went with some missionaries to Siam, where he staid four years, and made himself master of the language. On his return he published "Hist. naturelle et politique du Royaume de Siam," 1638, 4to.; and "Description historique du Royaume de Macassar;" two very curious works. He was afterwards provost of the church of St Martin at Tours, when he wrote a life of St Martin, which was criticised by don Stephen Badius; and sixteen years after he published "Hist. de Bœce."

Being consecrated bishop of Horren in Guiana, he went there; but on their arrival, he and all his clergy were murdered by the Caribbs, Nov. 20, 1729.—*Moreri*.

GERVASE of Canterbury, an historian of the thirteenth century, was a monk of the monastery of Christchurch in that city. His principal works are a chronicle of the Kings of England from the year 1122 to 1200; and a history of the Archbishops of Canterbury, from St Augustine to archbishop Hubert, who died in 1205. His chief excellence consists in his strict attention to chronology. The above works are published in Twisden's "Hist. Anglican scrip X."—*Twisden ubi supra*.

GERVASE (OF TILBURY) an historian of the thirteenth century, so called from the place of his birth, was nephew to king Henry II, and through the interest of Otho IV he was made marshal of the kingdom of Arles. He was the author of—"A History of the Holy Land;" "Origines Burgundiorum;" "Mirabilia Orbis;" a chronicle entitled "De Otii imperialibus," of which there is a MS. in Benet college, Cambridge. He likewise wrote a commentary on Geoffrey of Monmouth's British history, and a tripartite history of England. The compilation of the exchequer book, entitled "Liber Niger Scaccarii," has also been ascribed to him by some, but this has been disputed.—*Tanner's Bibl. Brit. Nicholson's Hist. Library*

GESNER (CONRAD) an eminent physician, naturalist, and general scholar of the sixteenth century. He was born at Zurich in Switzerland, in 1516. The circumstances of his father would perhaps have prevented the due cultivation of those talents for study which he early displayed, had not Ammianus, professor of Latin and rhetoric at Zurich, taken him into his house and liberally afforded him classical instruction. He stayed three years with his patron, and pursued his studies with great diligence. When he was not more than fifteen he lost his father, who was killed during military service, and the small patrimony which he left being divided among a numerous family, Gesner was reduced to distress, which was heightened by his sufferings from a dropsical disease with which he was afflicted. Having however recovered his health, he resolved to seek his fortune abroad, and going to Strasburgh he entered into the service of Wolfgang Fabricius Capito, Hebrew professor in the university, who taught him that language. In a few months he returned to Zurich, and procured a pension from the senate to enable him to make the tour of France. He passed a year at Bourges, where he studied the Greek and Roman classics, and added to his scanty income by giving instruction to others. He afterwards visited Paris, whence he returned to Strasburgh, and not long after was recalled to Zurich to teach grammar to children, at a salary barely sufficient for his support. In this situation he increased his cares and difficulties by entering into wedlock; and with a view to improve his circumstances, engaged at his leisure hours in the

study of medicine. At length he went to Basil, to avail himself of the means of improvement which the university of that place afforded. Though his pension was continued, he found it inadequate to his expences, and therefore engaged in editing the Greek lexicon of Phavorinus. From Basil he removed to Lausanne, where the senate of Berne appointed him professor of Greek, and gave him a stipend, which relieved him from the fears of indigence, and enabled him to prosecute his literary researches with less embarrassment than before. After continuing three years in this station he went to Montpellier, where he applied himself particularly to anatomical and botanical enquiries; and then going to Basil, he obtained the degree of MD. Thus qualified for the practice of his profession, he took up his residence at Zurich, where, in addition to his employment as a physician, he gave public lectures on philosophy. Besides these, his stated labours, he took several journeys, in order to collect plants and other objects of natural history, of which he was the first in modern times who is recorded to have formed a museum. He also cultivated a botanic garden, and employed a painter and an engraver, whose labours he assisted and directed. His correspondence with men of learning and science, in various parts of Europe was very extensive; and the vast number of new observations which he collected relative to natural history, entitle him to a place among the principal benefactors of that branch of knowledge. The number of books which he published was so great, that it seems difficult to conceive how, amidst his other occupations, he could have found time to compose them. Among his principal productions may be mentioned—"Historia Animalium;" "Mithridates, sive de differentiis Linguarum Observationes;" "Bibliotheca universalis, sive Catalogus omnium Scriptorum locupletissimus, in tribere linguis Lat. Græc. et Heb. extantium et non extantium, usque ad annum, 1565." He also published an amplification of a part of this treatise, under the title of "Pandects." This very industrious scholar died of the plague in 1565.—*Tessier Eloges des Savans. Halleri Bib. Med. et Bot. Hutchinson's Biog. Med.*

GESNER (JOHN) canon of Zurich, and professor of natural philosophy in the university there. He pursued his studies at Leyden, and afterwards at Basil, where he formed an intimacy with the celebrated Haller. He attached himself particularly to the study of natural history, and in 1741 he published two Dissertations on Plants, in which he announced the discoveries of Linnæus as destined to produce a reform in the science of nature. He was also the author of two dissertations on Petrifications, or extraneous Fossils, reprinted together at Leyden in 1753. Another discourse which he produced on vegetable monsters, entitled "De Ranunculo Bellidi floro," did not do much credit to his penetration, as it was a descriptive account of a supposed wonderful plant, which in fact had

been formed artificially by fastening the flowers of the daisy on a branch of crowfoot, or ranunculus. Haller, as well as Gesner, became the dupe of this deception, which was discovered by Sir Joseph Banks. Gesner's principal work is entitled—"Tabulæ Phytographiæ, analysis Generum Plantarum exhibentes," of which a new and improved edition appeared at Zurich in 15 fasciculi, 1795-1813. Gesner died in 1790, aged eighty-one.—*Rees's Cyclopæd. Nouv. Dict. Hist.*

GESNER (JOHN JAMES) brother of the preceding, was professor of Hebrew in the Caroline college at Zurich, and was distinguished as a writer on numismatics. He formed an extensive collection of coins and medals, which he bequeathed to his brother on his death in 1787, at the age of eighty. His works comprise accounts of the medals of the Greeks, Macedonians, Syrians, Egyptians, Sicilians, &c. and of those of the Roman emperors; and contain the result of his own researches, as well as those of the learned medalists who preceded him.—*Hirsching's Manual of Eminent persons of the 18th Cent. Biog. Univ.*

GESNER (JOHN MATTHIAS) an eminent philological writer, who was a native of Franconia in Germany, and was educated in the gymnasium of Anspach, whence, in 1710, he removed to the university of Jena, and studied theology. In 1715 he was appointed rector of the gymnasium of Weimar, and keeper of the public records. Thence he went to Leipsic to preside over the school of St. Thomas in that city; and on the establishment of the university of Gottingen, he accepted of an invitation to become professor of rhetoric, in 1734. He was also entrusted with the inspection of all the schools in Gottingen, and of the philological seminary there; and was made librarian and president of the German society. On the establishment of the Royal Society of Gottingen in 1751, he was appointed a member; in 1753 he was nominated a counsellor of state, and in 1761 perpetual director. He died August 3, the same year, at the age of seventy.—His principal work is "Novus Thesaurus Linguæ Latinæ," 4 vols. folio, besides which he published selections from the classic writers, under the titles of "Chrestomathia Græca;" "Ciceroniana, Pliniana," &c.; editions of the *Scriptores Rei Rusticæ*, of Quintilian, of Horace, of Claudian, of the Orphic Fragments; and he was also the author of "Prima liniæ Isagoges in Eruditionem universalem," 2 vols. 8vo, and other learned productions.—*Aikin's G. Biog.*

GESNER or GESSNER (SOLOMON) a Swiss landscape painter, more distinguished as a writer of pastoral romance. He was born in 1730 at Zurich, where his father was a bookseller. After having finished his education, he was admitted as a partner in the trade, and at the age of twenty-two he travelled through Germany on commercial business, and in the course of his tour formed an acquaintance with many of the German literati. Soon after his return home in 1753 ap-

peared his first production, a short piece, entitled "Night," in a style of composition between prose and verse; of which the English reader may form an idea from the translation of Gesner's subsequent work, "The Death of Abel," or from Macpherson's *Ossian*. His next publication was "Daphnis," a pastoral romance in three cantos; and this was followed by his "Idylls," which established his reputation. "The Death of Abel" appeared in 1758, and not only went through numerous editions at home, but was also translated into many foreign languages. Gesner afterwards published some minor pieces, among which was "The First Navigator;" and he attempted, but with no extraordinary success, the pastoral drama. About his thirtieth year he married the daughter of M. Heidegger, a gentleman of Zurich, who had a collection of paintings by artists of the Flemish school, the inspection of which inspired Gesner with a taste for the art of design. He had learned to draw when young, and he now began seriously to attempt the imitation of those productions which he so much admired. He at first only designed ornaments for the books which he published; but in 1765 he published twelve etchings of landscapes, from his own designs, and twelve more appeared in 1769. His offices and employment were various, for to his occupations of bookseller, engraver, painter, and author, he added the civic distinction of being a member of the council of Zurich; and in 1768 he was appointed bailiff of Ellibach. He received testimonies of respect and admiration from several parts of Europe, and the empress Catherine of Russia presented him with a gold medal. He died of apoplexy March 2, 1788. All his works are written in prose, but in a style of great purity and elegance, fewer traces of the Swiss dialect appearing in his compositions than in those of any of his countrymen. Popular as his "Death of Abel" has been in England, the translation affords no just ideas of the German original, much of the merit of which depends on taste and delicacy of expression. An edition of his works was published in two vols, 4to, embellished with engravings from his own designs.—*Aikin's G. Biog. Nouv. Dict. Hist. Biog. Univ.*

GESUALDO (CARLO) prince of Venosa in the Neapolitan territories, flourished about the close of the sixteenth century. He gave his attention to the cultivation of the science of music, which he studied under Pomponio Nenna. In the composition of madrigals he met with great success, and is supposed to have formed his style on the model of those ancient Scottish melodies which had become popular in the preceding century, but which he is said to have much improved upon. Dr. Burney, however, who appears to have examined the whole six books of madrigals, which go under his name, is of a different opinion; but Geminiani, on the other hand, was frequently known to declare that the foundation of all his studies was laid on the works of this author. Two editions of detached parts of his composition were

printed in 1585 and 1593, by Simon Molinaro at Genoa. A complete collection of his works afterwards appeared in 1613. The date of his decease is uncertain.—*Biog. Dict. of Mus. Burney's Hist. of Mus.*

GETHIN (lady GRACE) an ingenious lady, the daughter of sir George Norton of Abbotsleigh in Somersetshire, was born in 1676. She married sir Richard Gethin in Ireland, but died shortly after in 1677, in her twenty-first year. She left behind her some papers which were collected and published under the title of "*Reliquæ Gethinianæ*, or some remains of the most ingenious and excellent lady Grace lady Gethin, lately deceased; being a collection of choice discourses, pleasant apothegms, and witty sentences, written by her for the most part, by way of essay, and at spare hours," 1700. Mr Congreve wrote a copy of verses to her memory; and Dr Birch, in his anniversary sermon on her death, says, that to superior talents and mental endowments, she joined meekness, candour, piety, and integrity. A monument was erected to her memory in Westminster abbey, though she was really buried at Hollingbourne in Kent.—*Ballard's Memoirs. Noble's Continuation of Granger.*

GETHING (RICHARD) a penman, was a native of Herefordshire, but settled in London. In 1616 he published a copybook of various hands well executed, which was followed by another, entitled "*Chirographia*," in which he aims at the improvement of the Italian hand. He also published "*Calligraphotechnia*," which was dedicated to sir Francis Bacon.—*Massey's Origin and Progress of Letters.*

GEVARTIUS (JOHN GASPER) a learned critic, was born at Antwerp in 1593. He first studied in the Jesuits' college at Antwerp, whence he removed to Louvain, and then to Douay. In 1621 he took the degree of LL.D. at the latter place, and afterwards went to Antwerp, where he was made town-clerk. He devoted great part of his time to literary pursuits, and published "*Lectionum Papinianarum Libri quinque in Statii Papinii Sylvas*," and "*Electorum Libri tres, in quibus plurima veterum Scriptorum loco obscura et Contraversa explicantur, illustrantur, et emendantur*." He also distinguished himself by his poetical attempts, particularly by a Latin poem published at Paris in 1618, on the death of Thuanus. He corresponded with most of the learned men of his time, and some of his letters have been printed in the "*Sylloge Epistolarum*" by Burman. He died in 1666.—*Niceron. Saxii Onomast. Moreri.*

GEWOLD (CHRISTOPHER) a lawyer and historian of the seventeenth century, was a native of Franconia, but the year of his birth and that of his death are unknown. He was one of the aulic counsellors of Maximilian, first elector of Bavaria, who confided to him the inspection of the archives of the duchy. He published "*Genealogia Serenissimorum Bojariæ Ducum*," 1605, folio; "*Chronicon Monasterii Reicherspergensis*," &c.; "*Henrici Monachi in Rebdorf Annales*," 1618;

Wigulæi Hunds Metropolis Salisburgensis, 1620; "*Delineatio Norico veteris ejusque Confinium*," 1619; and "*Commentarius de Septemviratu Romani Imperii*," 1621.—*Moreri.*

GHEHT (HENRY OF) Henricus de Gandavo, archdeacon of Tournay, in the thirteenth century. He was a German by birth, and appears to have studied at the university of Paris, where he took the degree of doctor in theology. He is said to have surpassed all his contemporaries in knowledge of the scriptures, and to have been intimately acquainted with the Aristotelian philosophy. He died in 1293. His works include a treatise entitled "*Summa Theologiæ*;" and Commentaries on the Metaphysics and Natural Philosophy of Aristotle.—*Trithemius de Script. Eccles.*

GHEZZI (JOSEPH) an Italian artist, born in the territory of Ascoli in 1634. He was instructed in painting by his father, SEBASTIAN GHEZZI, who had been a scholar of Guercino. After the death of his father he went to Fermo to study jurisprudence and philosophy; but he likewise continued his attention to the art of painting, in which he became a proficient by the assistance of Lorenzino, an eminent painter of Fermo. Having completed his studies, he went to Rome, where he relinquished his legal pursuits, to devote himself to the cultivation of the arts. Many of the churches of Rome were decorated with the works of his pencil, executed in conjunction with Baldi, Saiter, Passari, Parodi, and other artists. In 1674 he was appointed secretary of the Academy of St Luke at Rome, and he was also a member of the academy of Arcadians. He was still living in 1718, when Orlandi published an account of him in his *Abecedario Pittorico*.—GHEZZI (PETER LEO) his son, was born at Rome in 1674. He studied the art of painting under his father, whom he assisted in ornamenting the Roman churches. He also made designs for a gallery in the papal palace of Castel Gandolfo, but the work was never executed. He is chiefly celebrated as a caricaturist, his productions displaying a striking peculiarity of style and composition. The title of one of his works is "*Racolta di XXIV. Caricature designate colla penna del cel. Cav. P. L. Ghezzi, conservate nel gabinetto di S. M. il Re di Polonia*," 1750, folio. He died in 1755.—*Abeced. Pitt. Elmes's Dict. of the Fine Arts.*

GHIRBERTI (LORENZO) a Florentine, famous for his skill as a sculptor in metal. He was instructed in the goldsmith's art by his father, BARTOLOCCIO. He soon surpassed his master, and attained such excellence in the engraving, casting, and working of metals, that, among various artists who presented designs for a brazen portal for the church of St John Lateran at Rome, he obtained the preference. He executed this undertaking in 1410, at the expence of 22,000 florins, and in so admirable a manner that Michael Angelo on beholding the workmanship, enthusiastically declared it was worthy to decorate the gate of Paradise. When pope Eugenius IV went to the council of Florence in 1439,

Ghiberti made for him a golden mitre or tiara, which weighed fifteen pounds, the pearls and precious stones with which it was adorned, weighed five pounds, and the cost of the whole was 30,000 ducats. He died at the age of sixty-four, and was interred in the church of St Croce, at Florence. He left a work on ancient paintings, which remained unpublished.—

Abecedar. Pittor.—**BONACORSO GIBERTI**, the son of Lorenzo, was of the same occupation, and was extremely skilful in making chased figures and ornaments. He died young, leaving a son, VITTORIO, whom he instructed in his art; but he proved worthless and dissolute, and wasted his paternal inheritance. Pope Paul III having sent him to Ascoli to carry on some architectural work, he was killed in the night by his own servant, whom he had attempted to rob.—*Ibid.*

GHILINI (JEROME) a man of letters, was born at Monza in the Milanese, in 1789. He studied in civil and canon law, and settled at Alessandria, but on becoming a widower he took the ecclesiastical habit. He had an abbacy in the kingdom of Naples, and was made apostolical prothonotary, and was afterwards presented to a theological canonry in the church of St Ambrose at Milan. He published "Poems," "Cases of Conscience;" "Annals of Alessandria and its circumjacent Territory," and "Teatro di Nomini Litterati;" a work which, though little valued for correctness, is often quoted in biography. The year of his death is unknown.—*Moreri.*

GHIRLANDAJO (DOMENICO) a painter, whose real name was Corradi, was the son of a goldsmith at Florence, and was born in 1449. He painted for the churches and convents in Florence, and was called to Rome by Sixtus IV, to assist in painting his chapel. He was much distinguished and employed, but his greatest glory is his having been the master of Michael Angelo. He died in 1493.—His son, **RODOLFO**, was also brought up to the art, and was much esteemed by Raphael himself, whose style he imitated. He died in 1560.—*Moreri. Pilkington. Rees's Cyclopaedia.*

GIAMBERTI (FRANCESCO) a Florentine architect of the fifteenth century. He made the designs for many buildings at Florence and at Rome; but he particularly deserves notice on account of a work which he composed, containing numerous drawings of ancient monuments remaining in the Roman territory and in Greece. The designs are drawn on parchment; and the work, which has never been published, is preserved in the Barberini library at Rome.—*Elmes's Dict. of the Fine Arts.*

GIAMBERTI DI ST. GALLO (GIULIANO) an eminent architect, the son of the preceding, born in 1443, and died in 1517. He built a cloister for the hermits of St Augustine at Florence, which stood near the gate San Gallo, whence the architect derived the appellation by which he is best known. He was architect, sculptor, and engineer, to the house of Medici; and besides a magnificent palace which he erected for the grand duke Lorenzo, he built many palaces, churches, and fortresses,

at Florence, Pisa, Rome, &c. He was reckoned one of the first architects of his age; and being a candidate for the office of architect of St Peter's, when the rebuilding of that church was proposed, he was much mortified at the preference being given to Bramante. The direction of the undertaking was subsequently offered him by Pope Leo X, but he then refused to accept it, as he was in the decline of life.—**ANTONIO DI SAN GALLO**, his brother, who was a carver in wood, an architect, and engineer, died in 1534.—*Elmes's Abecedario Pittorico.*—See **SAN GALLO**.

GIANNONE (PETER) an esteemed modern historian, was born at Ischitella in Apulia, in 1676. He was brought up to the law, and distinguished himself by writing a "History of Naples," 4 vols. 4to. 1723. Its freedom with respect to the origin of papal power, gave great offence to the court of Rome, which raised a persecution against the author that necessitated him to quit his country. He found an asylum in Piedmont with the king of Sardinia, who however deemed it expedient to disguise his protection under the appearance of confinement. He died in 1748. His posthumous works were published in 1768, in a quarto volume, containing, among other miscellaneous matter, his profession of faith; a justification of his history; and a life of him by Panzini.—*Fabroni Vite Italorum.*

GIARDINI (FELICE) a Piedmontese musician, originally a chorister at the Duomo in Milan, afterwards a pupil of the celebrated Somis at Turin, through whose instructions he became eventually the first violinist of his day. In 1750 he came to England, where the applause which his performance excited is described to have been only equalled by that bestowed upon Garrick. In 1754 he was placed at the head of the orchestral department at the opera-house, and afterwards joined Mingotti in the management of that theatre; the speculation did not however prove a fortunate one. With the exception of a visit paid to Naples from 1784 to 1789 inclusive, under the patronage of sir W. Hamilton, Giardini remained in this country till 1793, when he was induced to visit Russia, and attempted to get up burlettas of his own composing, both at St Petersburg and at Moscow. The effects of a dropsy had however now materially impaired his physical powers, and he met with little success; but died at the latter capital in great indigence, about the close of the same year.—*Biog. Dict. of Music.*

GIBBON (EDWARD) an eminent English historian, was born at Putney in 1737. He was the only surviving child of Edward Gibbon, esq, a gentleman of an ancient Kentish family, and his constitution was so infirm in his infancy, that he was reared with great difficulty. After being two years at a private school at Kingston-upon-Thames, he was sent at the age of twelve to Westminster, where his weakly state of health precluded him from making a regular progress in the classical studies of the school. After several changes of situation, in which he was chiefly the object

of medical care, his constitution suddenly acquired firmness; and he entered as a gentleman commoner at Magdalen college Oxford, before he had completed his fifteenth year. He remained fourteen months at Oxford, which he characterises in his memoirs as most unprofitably spent; and his censure of that university is very strong and unequivocal. To a total neglect of religious instruction he attributes his boyish conversion to the Roman catholic religion, which was produced entirely by an assiduous perusal of the controversies between the catholics and protestants; and to use his own expressions, as he entered into the field "without armour," he fell before the "weapons of authority, which the catholics know so well how to wield." Following his convictions, he solemnly abjured the errors of heresy at the feet of a catholic priest in London; and then wrote a long letter to his father to justify the step which he had taken. The consequence of this disclosure was his immediate banishment to Lausanne, where he was placed under the care of M. Pavillard, a learned calvinistic minister. By the well-directed efforts of his tutor, aided by his own mature reflections, his new faith gradually gave way, and he was again restored to protestantism. His residence at Lausanne was also highly favourable to his progress in knowledge, and the formation of regular habits of study. The belles lettres, and the history of the human mind, chiefly occupied his attention; and to this fortunate period of retirement and application, he was chiefly indebted for his future reputation as a writer and a thinker. In 1758 he returned to England, and immediately began to lay the foundation of a copious library; and soon after composed his "Essai sur l'Etude de la Littérature," in the French language, which for some years had been more familiar to him than his own. This work, which was printed in 1761, was a highly respectable juvenile performance, and obtained considerable praise in the foreign journals. He some time after accepted a captain's commission in the Hants militia, and for some time studied military tactics with great assiduity; but he heartily rejoiced when the peace of 1763 set him free. After passing some months in the metropolis he visited Paris and Lausanne, at which latter place he employed himself in collecting and preparing materials for a profitable journey to Italy. This took place in 1764; and it was at Rome, as he himself informs us, on the 15th October in that year, as he sat musing among the ruins of the capitol, "while the bare-footed friars were singing vespers in the temple of Jupiter," that his idea of writing the decline and fall of the Roman empire entered his mind. He had previously thought of the history of the republic of Florence; and of that of the Swiss liberty; in the last of which he had made some progress, but he subsequently committed the MS. to the flames. In 1770 he first tried his powers in his native tongue, by a pamphlet in refutation of Warburton's extraordinary hypothesis concerning the connexion of Virgil's

fabled descent of Æneas, with the Elcusian mysteries, entitled "Critical Observations on the sixth book of the Æneid." It received great commendation, particularly from professor Heyne; and with some unnecessary asperity, of which however Warburton was little entitled to complain, proved a conclusive refutation. In the same year he lost his father, who left him possessor of an involved estate, which never seems to have been entirely extricated. In 1774, by the favour of his kinsman, Mr, afterwards lord Eliott, he obtained a seat in parliament for the borough of Liskeard, and was a silent supporter of the North administration and its American politics for eight years. In 1776 the first quarto volume of his "Decline and Fall of the Roman Empire" was given to the public, which at once rivetted general attention; the first edition going off in a few days, and a second and a third being scarcely equal to the demand. Of all the applause he received, none seemed to flatter him so much as the spontaneous suffrages of Hume and Robertson; but on the other hand his chapters on the secondary causes of the growth and progress of Christianity, produced much acrimonious attack. Of his numerous assailants, however, he answered Mr Davis only; and that because he attacked "not the faith, but the fidelity of the historian." His vindication against this opponent has been much admired for the keenness and polish of its retort; and it is generally admitted that he successfully refuted the principal charges against his historical accuracy; and as he was evidently an unbeliever in revelation, he judiciously sought to do no more. The prosecution of his history was for some time delayed, by his complying with the request of ministers to answer a manifesto which the French court had issued against Great Britain, preparatory to war. This he very ably executed, in a "Memoir Justificatif," composed in French, which was delivered in a state paper to the courts of Europe; and for this service he received the appointment of one of the lords of trade. In 1781 appeared the second and third volumes of his history; and at a new election he lost his seat for Liskeard, but was brought in by ministerial influence for the borough of Lymington. On the retirement of the North administration, he lost his appointment by the dissolution of the board of trade, and immediately formed the resolution of retiring to his favourite Lausanne, which plan he put into execution in 1783; and becoming joint possessor with his friend Deyverdun of a handsome and finely situated house, he commenced a mode of living happily compounded of the man of letters, and the gentleman of easy fortune. Here in the course of four years he completed the three remaining volumes of his history, which were published together in April 1788. Of a work so well known, it is unnecessary to dilate in a compendium like this dictionary; although liable to some objection on the score of style, and occasionally of sober moral propriety, it has taken a secure

place among the English classics, and forms a distinguished object in the literary history of the eighteenth century. The remainder of Mr Gibbon's life was that of a private gentleman. The storms of the French Revolution, which he regarded from the first with extreme fear and aversion, gradually lessened his attachment to Lausanne; but his return to England, which took place in 1793, was hastened by his solicitude to sympathise with his friend lord Sheffield, under a heavy domestic calamity. He spent some months with the nobleman; when his attention was called to the progress of a disorder which he had endured in silence for three-and-twenty years. This was a rupture, that finally produced a hydrocele, which after two palliative operations terminated in a mortification, that carried him off on the 16th January, 1794, in the sixty-seventh year of his age. Mr Gibbon was fond of society; and possessed in an eminent degree the manners and sentiments of a gentleman. As a politician or public man, he appears to less advantage, as he wore the yoke of ministerial servitude, on the merest notions of interest and emolument; and never seems to have ascended to the dignity of a principle in reference to any portion of his parliamentary career. It is however as the student and historian that he principally claims attention; and in these capacities the universal acknowledgment of the world has allowed him the highest rank. In 1796 his friend, lord Sheffield, published two quarto volumes of his miscellaneous works, of which the most valuable part is the memoirs of his life and writings, which are written with much apparent frankness. Many of his private letters are subjoined, which are lively and entertaining. The second volume contains a journal of his studies, with remarks upon books, besides his smaller publications already mentioned.—*Gibbon's Mem. with lord Sheffield's Additions.*

GIBBON (JOHN) an ancestor of the preceding, was born in London in 1629. After serving as a soldier in the Netherlands and America, he returned home; and by the patronage of Sir William Dugdale procured the employment of blue mantle in the herald's college. At his death he was the oldest officer at arms; but his visionary and eccentric conduct prevented his farther promotion. He died about 1700. He wrote "Introductio ad Latinam Blazoniam, an Essay towards a more correct blazon in Latin," 8vo. and various tracts, exhibitiv of much superstition and credulity in regard to astrology, omens, &c. &c. He also collected a particular account of the services of heralds, from various authors, which he published under the title of "Heraldo Memoriali."—*Noble's Hist. of College at Arms.*

GIBBONS (GRINLING) an eminent sculptor, born in London, of Dutch parents, about the middle of the seventeenth century. He was a member of the board of works under Charles II and James II. He excelled particularly in carving flowers, both in wood and stone; and many fine productions

of his chisel are yet to be seen in the choirs of St Paul's and Windsor; the font in St James's church, Westminster; the archbishop's throne in Canterbury cathedral; the decorations of Petworth house; and Lord Campden's monument at Exton. The base of the fine equestrian statue of Charles I at Charing-cross, and that of James II at the back of Whitehall chapel, are also specimens of his ability as a statuary. His death took place in 1721.—*Walpole's Anecdotes.*

GIBBONS Mus. Doc. (ORLANDO,) an excellent musician and composer, born in 1583 at Cambridge. In 1604 he was appointed organist to the chapel royal St James's, and graduated as MD. at Oxford in 1622. In his capacity of composer to the king, he was appointed to write the music to be introduced in solemnizing the nuptials between Charles I and Henrietta Maria, on which occasion he went to Canterbury in 1623, and presided at the organ during the ceremony; but unfortunately catching the small-pox, he died in that city, and lies buried in the cathedral. Besides his church music, the characteristics of which are fine harmony, simplicity, and extraordinary grandeur, he published in 1612 a collection of madrigals of five parts; the melodies of Withers' translation of "Hymns and Songs of the Church;" and several pieces for the organ and the virginals. His was a musical family;—EDWARD, his elder brother, having taken his degree as Mus. Bac. at Oxford, became organist to the cathedral at Bristol, and was the preceptor of Matthew Lock. He was possessed of considerable landed property, the whole of which was sequestered by the parliament, on account of his having advanced 1000*l.* for the king's service during the civil war.—ELLIS, the younger brother, published in 1501 a collection of madrigals.—CHRISTOPHER GIBBONS, the son of Orlando, was educated under his uncle Ellis; and in 1664 was admitted to the degree of doctor in music by the university of Oxford, on the personal recommendation of the king, with whom he was a great favourite. Several anthems of his are extant; and he is said to have assisted in the "Cantica Sacra," published in 1674. His death took place in 1676.—*Biog. Dict. of Music.*

GIBBONS (THOMAS) a dissenting clergyman of the sect called independents, born in 1720 at Swaffham, Norfolk. In 1742 he came to London, and entered upon his ministerial functions in Silver-street, Haberdashers' hall, &c. and ultimately occupied a situation as one of the masters of the Mile-end academy. He was the author of a great variety of sermons, several of which were collected and published, after his decease, in three volumes. His other works are a "Life of Dr I. Watts;" "Female Worthies;" "Juvenilia," a collection of miscellaneous poems; and a "System of Rhetoric." He obtained the degree of DD. from the University of Aberdeen in 1764, and died in 1785.—*Aikin's G. Biog.*

GIBBS (JAMES) a Scotch architect, born, according to some, in 1674, though others

nave fixed the time of his birth so late as in 1685. He was a native of Aberdeen, and educated at the Marischal-college in that university, where he graduated. Travelling into the Netherlands he was fortunate enough to attract the notice of a noble countryman, the then earl of Mar, whose liberality gave him the means of following up the pursuit of his favourite study, architecture, among the classical models of ancient Rome. The interest of the same patron was exerted in his behalf on his return to Great Britain in 1710; and through his exertions and recommendation Mr Gibbs was entrusted with the execution of several public buildings, an employment which tended much to the increase, not only of his pecuniary resources, but of his reputation. Among these the church of St Martin's-in-the-fields, (the beautiful façade of which is considered his *chef d'œuvre*,) was erected by him, at an expence, it is said, of 32,000*l*. A church at Derby; the new buildings of King's college Cambridge, and the senate-house in the same University; the church of St Mary-le-Strand, London; and the Radcliffe library at Oxford, are also reckoned among his happiest efforts. The copyright of a collection of his designs, which appeared in 1728 in folio, including the copper-plates, sold for 1900*l*. His death took place in August 1754.—*Walpole's Anecdotes*.

GIBBS (VICARY) a clever English lawyer, born in 1752 at Exeter, in which city his father practised as a surgeon. He proceeded in due course from Eton to King's college, Cambridge on the royal foundation, and in 1772 obtained a Craven scholarship. Entering himself of Lincoln's-inn, he contracted an intimate acquaintance there with Mr Dunning, afterwards lord Ashburton, whose countenance and support tended mainly to his future advancement in the profession of the law. He succeeded Mr Burke in the recordership of the city of Bristol, and was soon distinguished as an eloquent pleader and an able advocate. His subsequent exertion on the trials of Hardy, Tooke, Thelwall, &c. ranked him still higher in his profession. He obtained a silk gown, and proceeded rapidly through the different situations of chief-justice of Chester, solicitor, and attorney-general, (on accepting which last office he was knighted,) till being raised to the bench as a puisne judge, he was finally elevated to the dignity of lord-chief-justice of the Common Pleas in 1814. Sir Vicary Gibbs filled this important post about four years, when his advanced age and increasing infirmities induced him to resign. He survived his retirement from public life about two years, and died in the month of February 1820.—*Gent. Mag.*

GIBSON (EDMUND) an English prelate, distinguished as an antiquary and divine. He was born at Knipe in Westmoreland in 1669, and after receiving a grammatical education at a free-school in his native county, he proceeded to Oxford, and entered himself a servant at Queen's college. He much distinguished himself while at the university by his

learning and industry, especially in the acquirement of the northern languages. He commenced his literary career by the publication of new editions of Drummond's "Polemia Middiana," and James V of Scotland's "Cantilena Rustica." These works were followed by a Latin version of the "Chronicon Saxonicum," and a catalogue of MSS. in the library of bishop Tension, together with those of Dugdale at Oxford. In 1713 appeared his "Codex Juris Ecclesiastici Anglicani." In 1715 he succeeded Dr Wake as bishop of Lincoln, and in 1720 was translated to the see of London, over which he presided until his death in 1748. Besides the publications already noticed, he edited in 1698 the posthumous works of sir Henry Spelman, and composed a life of sir Thomas Bodley; several tracts on the antiquities of Britain; sermons, and pastoral letters.—*Biog. Brit.*

GIBSON (RICHARD) an English portrait painter of considerable eminence in his profession, though singularly diminutive in stature, his height not exceeding three feet ten inches. He was born in 1685 of humble parentage, and was placed as dwarf page in the service of a lady of rank, residing at Mortlake, who noticing his talents, placed him under the tuition of De Cleyn, superintendent of the tapestry works in that village, and an artist of no mean skill. With these advantages, Gibson made considerable progress, especially in water-colour drawing. In oils also his copies from Lely, whose manner and style of painting he was most successful in catching, obtained him considerable reputation. Charles I sent for him to court, took him into his household in the capacity of page of the back stairs, and carried his condescension so far as to give away the bride in person at his wedding. A wife seems to have been purposely provided for him by nature, in the person of a Mrs. Anne Shepherd, who was of precisely the same height with himself. The fruits of this eccentric marriage, on which Waller composed an epithalamium, were nine children, all of the usual stature, five of whom attained to maturity. During the Commonwealth, Gibson was in high favour with the protector Cromwell, who sat to him repeatedly. His political sentiments indeed appear to have been either extremely pliant or little regarded from the insignificance of his person, as after the Restoration we find him equally patronized by the court, and instructing the daughter of James II in his favourite art. Gibson reached his seventy-fifth year, when he died at his lodgings in Covent-garden in 1690. His wife survived him nineteen years, and attained to the age of eighty-nine. The portraits of this diminutive couple were painted by sir Peter Lely. Two members of the same family exercised the same art—WILLIAM GIBSON, nephew of Richard, whose style he followed—and EDWARD, who purchased the whole of Lely's collection at his death, and who applied himself principally to Crayon paintings. The former was born in 1644, and died in 1702.—There was also a THOMAS GIBSON, a painter, who

lived in the early part of the last century at Oxford, and produced many creditable pictures. He was born in 1680, and died in 1751.—*Walpole's Anecdotes.*

GIBSON (THOMAS) a native of Morpeth in Northumberland, equally eminent in the sixteenth century as a physician and a polemic. In his controversial writings he distinguished himself as a warm advocate of the reformed religion, of which he was a most zealous member. The free promulgation of his opinions made it advisable for him to go abroad for the Continent, during the reign of Mary; but on the accession of her successor he returned to England. His writings are now but little known, the titles of most of them have been however preserved by Tanner and Aikin. The principal are—"The sum of the Actes and Decrees made by divers Bishops of Rome;" "A briefe Chronicle of the Bishops of Rome's Blessynge;" and a tract, entitled "A Treatise behooveful to preserve the People from Pestilence." His death took place in 1652.—*Wood.*

GIFFORD (JOHN) an historical and political writer, whose real name is stated to have been *John Richard Green*. He was born in 1758, and was supported by his grandfather, from whom he derived property sufficient to enable him to enter as a gentleman commoner at St John's college, Oxford. He left the university without taking a degree, and adopted the legal profession; but having dissipated his fortune, and involved himself in difficulties, he went to the Continent under the assumed name by which he was subsequently designated. He returned to England in 1788, and when the French Revolution had excited the hopes and expectations of one party in this country, and the anxious fears of another, Mr Gifford took up his pen in behalf of the alarmists, and produced some political pamphlets, which have been long since consigned to oblivion. He also became a contributor to the *British Critic* and to the *Antijacobin Review*; besides which he was the author of "The Reign of Louis XVI, and complete History of the French Revolution," 1794, 4to; "The History of France, from the earliest Times to the End of the Revolution," 1795, 5 vols. 4to; "A Residence in France in the Years 1792, 3, 4, and 5, &c." 1797, 2 vols. 8vo; and "A History of the Political Life of the Right Honourable William Pitt," 3 vols. 4to. In reward of his services as a political partizan, Mr. Gifford obtained a pension, and he was made one of the police magistrates of the metropolis. He died at Bromley in Kent, March 6, 1818.—*Ann. Biog.*

GIGEO (ANTHONY) a learned Italian ecclesiastic and Oriental scholar, flourished during the former part of the seventeenth century, and was a priest of the congregation of Oblati at Milan. He was admitted by the Ambrosian college of Milan to the degree of doctor. He was the author of a Latin translation of the "Commentaries of R. R. Solomon, Aben Ezra, and Levi-Gersom, on the Book of Proverbs," of a "Chaldee and Targumic

Grammar;" and of "Thesaurus Lingue Arabicæ seu Lexicon Arabico-Latinum," 1632, 4 vols. folio; for which pope Urban VIII nominated him to an honourable post in the College de Propagandi at Rome, but he died when going to take possession of it in 1632.—*Landi's Hist. de la Lit. d'Italie. Nouv. Dict. Hist.*

GILBERD or GILBERT (WILLIAM) an English physician and experimental philosopher of the sixteenth century. He was born in 1540 at Colchester in Essex, of which borough his father was recorder. After having studied at Cambridge, and, according to Anthony Wood, at Oxford also, he went to a foreign university, where he took the degree of MD. Having returned to England, he was chosen a fellow of the College of Physicians, and settling in London, he was appointed physician in ordinary to queen Elizabeth, who bestowed on him a pension. He was continued in his post by James I, but died very shortly after the accession of that prince, November 30, 1603. His corpse was interred in Trinity church, Colchester, where a monument was erected to his memory. He has perpetuated his name by a work entitled "De Magnete, magneticisque corporibus, et de magno magnate Tellure, Physiologia nova," London, 1600, folio. In reference to this treatise professor Millington, in his Lectures at the Royal Institution, says, "Dr William Gilbert, a physician of Colchester, who, notwithstanding he wrote in the sixteenth century, was a strenuous advocate for the inductive mode of reasoning in philosophical matters, which was so happily introduced by the great lord Bacon, and who investigated every circumstance connected with magnetism with a degree of zeal and success hardly to be expected at so early a period, ascribes the first application of the magnet to the purposes of navigation in Europe, to Flavio or John de Gioja or Giova, a Neapolitan, who, he says, used it in the Mediterranean sea in the thirteenth century." This work has been highly applauded by several English philosophers, especially by lord Bacon and Dr Isaac Barrow; and it is also deserving of notice that Dr Halley adopted Gilbert's hypothesis of a great central magnet in the earth, and applied it to the explanation of the variation and dipping of the needle in the mariner's compass. He also proposed a mode of discovering the latitude at sea, described in a work published in 1624 by Thomas Blondville, under the title of "Theoriques of the Planets, together with the making of two Instruments for Seamen, for finding the Latitude without Sun, Moon, or Stars, invented by Dr Gilbert." A posthumous treatise of this writer, "De Mundo nostro sublunari, Philosophia nova," Amsterdam, 1651, 4to, was edited by the learned Gruter. It is an ingenious but fanciful piece, in which he advances the notion that the planets are animated beings, actuated by magnetism as an intelligent principle.—*Wood's Athen Oxon. Hutchinson's Biog. Med. Aikin's G. Biog.*

GILBERT (sir HUMPHREY) an English navigator and maritime discoverer in the reign of queen Elizabeth. He was born in Devonshire about 1539, and his mother, soon after becoming a widow, married Mr Raleigh, and the celebrated sir Walter Raleigh was the fruit of her second nuptials. The subject of this article studied at Eton and Oxford, but his disposition inclining him to prefer an active life to literary retirement, he was early introduced at court, where he probably acquired those principles of devoted loyalty, which were then extremely fashionable. Adopting the military profession, he served with reputation in the expedition to Harve in 1563, and on other occasions. He was then sent into Ireland, where he rose to the chief command in the province of Munster; and in 1570 he was knighted by the lord deputy, sir H. Sydney. Returning to England shortly after, he married a rich heiress; but unfortunately lost a part of his fortune by engaging in a project for converting iron into copper. In 1571 he was returned MP. for the borough of Plymouth; and the next year he was sent on military service to the Netherlands. Possessing a strong propensity for speculation and enterprise, he next turned his attention to a scheme for exploring the Arctic Seas, relative to which he published "A Discourse of a Discovery for a new passage to Cataia," 1576. This work, which is said to display the knowledge and ingenuity of the author to advantage, is a book of very rare occurrence, and in a bookseller's catalogue for 1825, a copy is marked £85! It was reprinted in Hakluyt's collection of voyages, vol. iii. In 1578 sir Humphrey Gilbert obtained from the queen a most ample patent, empowering him to discover and colonize in North America any land then unsettled. He made a voyage to Newfoundland; but soon returned home unsuccessful. In 1583 he sailed again with a small fleet, and having landed on Newfoundland in the beginning of August, he took possession of the harbour of St John's. Shortly after he embarked in a small sloop to explore the coast, and one of his vessels having foundered, he steered homewards in the midst of a tempestuous sea. On the 9th of September, when his little bark was in manifest danger, he was seen by the crew of the larger vessel, standing on the stern with a book in his hand, and was heard to exclaim, "Courage, my lads! we are as near heaven at sea as on land." About midnight the bark was swallowed up by the waves, and all on board perished with her. Such was the fate of a man who possessed talent, enterprise, and courage, which, had he survived, might have enabled him to make some important discoveries.—*Pitceus de Brit. Scriptor. Prince's Worthies of Devon. Biog. Brit.*

GILBERT (sir JEFFREY) an English judge and writer on judicial affairs, whose works are much esteemed. He was born in Devonshire in 1674, and probably received a regular legal education, but where he studied is uncertain. In 1715 he was appointed one of the judges of the court of King's Bench in Ireland, and

was afterwards chief baron of the Exchequer in that kingdom. In 1772 he obtained the office of a baron of the Exchequer in England, and was subsequently joined in a commission with sir Joseph Jekyll and sir Robert Raymond, for the custody of the great seal. He rose to the rank of chief baron of the exchequer, and died not long after at Bath, in 1726. He was interred at Bath abbey church, and a commemorative cenotaph was erected for him in the Temple church, London. He published "Reports of Cases in Equity and the Exchequer," folio; "The History and Practice of Civil Actions in the Common Pleas," 8vo; "A Treatise of the Court of Exchequer," 8vo; "The History and Practice of the Court of Chancery," 8vo: besides works on wills, trusts, ejectments, distresses, and replevins, tenures, rents, &c.; and an abridgment of Locke's Essay on the Human Understanding; but his principal production is a treatise on the "Theory of the Law of Evidence," which has passed through several editions, one of the latest of which, considerably enlarged by Capel Loft, appeared in 1801, 3 vols. 8vo.—*Chalmers's Biog. Dict.*

GILBERT (THOMAS) an English gentleman, distinguished for his efforts towards the improvement of the poor laws. He inherited a small estate, which he endeavoured to improve by legal practice, and with that view he entered as a student of the Temple. Not meeting with much success as a lawyer, he accepted of a military commission in a regiment raised by lord Gower in 1745, and was afterwards appointed paymaster of the pensions to the widows of officers in the royal navy, which office he held from the first institution of the fund till his death. Through the interest of the Gower family, he was elected MP. for Newcastle-under-line, and afterwards for Lichfield, which place he represented for several years, but at length vacated his seat in favour of lord Francis Gower, and retired from public life. While a senator he promoted many plans for the improvement of the roads in the interior of the kingdom: but his exertions were principally directed towards the amelioration of the laws for the relief of paupers. He procured an act of parliament to oblige overseers of the poor to make returns of the sums expended for their maintenance, and another for a list of all charitable donations for their support. He proposed various other measures, which failed from the opposition they experienced. Mr Gilbert succeeded sir Charles Whitworth as chairman of the committee of ways and means; and he held the place of comptroller of the great wardrobe till it was abolished. He died at his seat at Cotton, in Staffordshire, in December 1793, aged seventy-eight. Between 1781 and 1787 he published several tracts on the poor laws, among which was a "Plan for the better relief and employment of the Poor," 8vo.—*Gent. Mag.*

GILBERT (JOHN) the younger brother of Thomas, and son of a gentleman in Staffordshire, who, after receiving a common education

at home, was bound apprentice to the father of Matthew Boulton of Birmingham, the celebrated engineer. On the death of his father, when he was but nineteen, he undertook the management of some extensive lime-works belonging to his family. He was subsequently introduced to the duke of Bridgewater, at the time when he was projecting improvements of his collieries in the vicinity of Manchester. Mr Gilbert having surveyed the works, formed the plan of making a navigable canal for the conveyance of coal to Manchester, which undertaking he afterwards carried into execution in conjunction with Mr Brindley, to whom the whole design and conduct of the work has been usually attributed. In June 1757, Mr Gilbert removed with his family to Worsley, that he might with greater convenience attend the prosecution of the business in which he had engaged. He resided there forty years, highly respected and esteemed by his noble employer and all with whom he was connected, dying August 4th, 1797, aged seventy-three. Besides the works carried on for the duke of Bridgewater, he was employed on other occasions wherein he manifested no common degree of skill and judgment as a civil engineer; and among the improvements which he suggested was a method of obtaining rock-salt, by blowing it up with gunpowder.—*Rees's Cyclopæd.*

GILBERTUS (ANGLICUS) a medical practitioner and writer of the twelfth century. Leland bestows on him high praise for his skill in the art of healing; and he is said to have been the first Englishman who treated diseases in a rational manner. He was the author of a work entitled "Practices Medicinæ;" another called "Compendium Medicinæ;" and commentaries or illustrations of the aphorisms of Hippocrates.—*Leland de Script. Brit. Freund's Hist. of Physic.*

GILBERT (WILLIAM) a writer distinguished for the peculiarity of his opinions, and his merit as a poet. He was a native of the West Indies, and was bred to the colonial bar, between 1780 and 1790 he came to England; being employed on a case of court-martial: and here he appears to have spent the remainder of his days; at first in a state of distress, owing to the detention of some litigated property, which was however afterwards adjudged to him. Of his private life but little is known, except that he was an admirer of the French Revolution, from its imagined correspondence with some peculiar speculations of his own relative to providential retribution, and the causes of the rise and fall of nations. He was also a believer in judicial astrology. His principal literary production is "The Hurricane: a Theosophical and Western Eclogue. To which is subjoined, a Solitary Effusion in a Summer's Evening," Bristol, 1796. He also published a pamphlet on a professional topic; and two works entitled "The Law of Fire," and "The Standard of God displayed;" which were probably expositions of the author's peculiar theological tenets. Besides these publications he wrote a poem in praise of Garrick, perhaps suggested by sir Joshua Reynolds's

picture of the celebrated actor between tragedy and comedy, as it turned on the same idea. Mr Gilbert at length became deranged, and died in that state about 1804.—*Retrospective Review*, vol. x.

GILCHRIST, FSA. (OCTAVIUS) a distinguished literary character, son of an officer of the 3d regiment of dragoon guards, and brother of Mr R. A. Gilchrist, an artist of eminence. He was born at Twickenham in 1779, and educated at Magdalen college, Oxford. Mr Gilchrist's principal productions are an "Examination of the Assertions of Ben Jonson's enmity to Shakspeare," 8vo, 1808; an edition of the "Poems of Bishop Corbet, with notes, and a Life of the Author," 8vo, 1808; and a "Letter to W. Gifford, esq: on a late edition of Ford's plays." He had collected materials for, and made considerable progress in, a work intended to illustrate the rise and progress of the English stage, comprehending specimens of every one of the minor dramatic writers anterior to the Revolution, including the collections of Dodsley, Reed, and Hawkins, with selections from the works of Greene, Peele, Lodge, Nash, and others, and specimens of masques, pageants, &c. The appearance however of another publication in periodical numbers, entitled "Old Plays," partially anticipating his design, deterred him from publication. He died at Stamford, in Lincolnshire, in June, 1823, aged 44.—*Ann. Biog.*

GILDAS SAPIENS, a British ecclesiastic and historian of the sixth century. He was the son of Caw, a prince of the Strathclyd Britons, who, with his family emigrated to North Wales, to avoid submission to the Anglo-Saxons. Gildas is supposed to have been educated in the famous monastery of Bangor, and to have gone as a missionary to Ireland; after which, according to some authors, he visited France and Italy. He appears to have passed some time in retirement on one of the small islands called the Holmes, in the estuary of the Severn; but being disturbed by piratical intruders, he removed to the monastery of Glastonbury, where he died in 570. There is extant a declamatory diatribe ascribed to Gildas, which has been repeatedly published under the title of "Epistola de Excidio Britanniae, et Castigatio Ordinis Ecclesiastici." This is a violent invective against the whole British nation, exhibiting a frightful picture of the depravity of manners which pervaded all ranks of society; and imputing to the retributive vengeance of heaven the miseries consequent on the numerous Saxon invasions. Some doubts have arisen as to the authenticity of this epistle, the unsparing severity of aimadversion with which the Britons are treated being considered as more characteristic of a foe to their race and nation, than of the alleged author. Such was the opinion of the rev. Peter Roberts, who moreover conjectured that the chronicle of the kings of Britain, called "Brut Tysilio" was the work of Gildas; and that the querulous epistle ascribed to him was written by the Saxon prelate, St Aldhelm, who, according to

William of Malmesbury, composed such a work against the Britons.—*Leland de Script. Brit. Nicholson's Eng. Hist. Lib. Roberts's Transl. of the Brit. Chron. Append. No. 1.*

GILDON (CHARLES) an English dramatic writer, one of the many heroes of the Dunciad, whom Boyer describes as "a person of great literature but mean genius." He was a native of Gillingham, Dorset, where he was born in 1666, and placed at an early age in the college at Douai, with the view of taking orders in the Romish church. Neither his inclination however, nor his opinions, which were adverse to revelation, fitted him for the cloister, and he accordingly returned abruptly to his native country in 1685. The little property in his possession was soon wasted in the pleasures of a town life, and an imprudent marriage completed, the disarrangement of his affairs, for the purpose of retrieving which he turned his attention to the stage, in the double capacity of actor and author. In neither of the branches of his new pursuit however, was his success commensurate with his expectations. Besides three plays, all of which were unsuccessful, he was the author of a life of Betterton the actor, a grammar of the English language, and a treatise, entitled the "Deist's Manual," in which he recants certain sceptical opinions, formerly published by him in the preface to his friend Charles Blount's works, an edition of which he superintended. The work by which he is principally known is his "Complete Art of Poetry." He printed several other pamphlets in his capacity of critic, and died in 1723.—*Biog. Dram.*

GILL (ALEXANDER) There were two of this name, father and son, both in succession head masters of St Paul's school. The elder was a native of Lincolnshire, born 1564. He studied at Corpus Christi college, Oxford, where he graduated as A.M. in 1590, and in 1608 was placed by the Mercers' Company at the head of the foundation above mentioned, over which he presided with considerable reputation till his death in 1635. He was the author of a Commentary on the Creed, printed in one volume folio, a tract on the Trinity, and another entitled "Logouomia Auglica," in 4to. He lies buried in the chapel belonging to Mercers' Hall, in Cheapside. His son, who was born in London in 1597, succeeded his father in his appointment, on obtaining which he took the degree of D.D. at Trinity college, Oxford, of which society he was a member. While in this situation he had for his pupil John Milton, who appears to have been much attached to his preceptor. In 1640 circumstances occasioned his removal from the school, on which he opened one on his own account, in Aldersgate-street. Wood speaks highly of his Latin poems, a collection of which was printed in 1632, in 1 vol. 12mo, under the modest title "Poetici Conatus." His death took place in 1642.—*Wood. Warton's edition of Milton.*

GILL (JOHN) a suprainapsarian divine of the last century, eminent as an oriental scholar, and possessing at the same time a profound

acquaintance with the Classics. He was born Nov. 19, 1697 at Kettering, Northamptonshire, and at the age of nineteen became pastor to a congregation of Baptists in his native place. In 1718 he removed to Higham Ferrers, which again he quitted for the superintendance of a more considerable meeting in the Borough of Southwark. He was the author of a most laborious commentary, in 9 folio volumes, entitled an "Exposition of the Bible," in which he displays deep erudition and unwearied industry. This work, of which a subsequent edition, in ten volumes, has appeared, procured him the honorary degree of Doctor in Divinity from the university of Aberdeen. His other productions, all distinguished for the learning which they exhibit, are "An Exposition of the Song of Solomon," folio, 1728; "The Cause of God and Truth," 4 vols. 8vo, 1735; "A Dissertation on the Antiquity of the Hebrew Tongue," 1767; and "A Body of Divinity," 3 vols. 4to; besides a great variety of sermons and other devotional tracts. His death took place in the month of October, 1771, at his house in Tooley-street, Southwark.—*Life prefixed to Tracts & Sermons.*

GILLES (JEAN) an eminent composer and native of Provence, educated for the profession of music, in the cathedral of Aix. Besides several fine motets. He was the author of a celebrated "Requiem for the Dead," originally written in order to be performed at the funeral of two brothers, counsellors of the parliament of Toulouse, whose sons employed Gilles for the purpose. At the end of six months however, the time originally agreed upon for the production of the music, when all the most celebrated musicians of the neighbouring provinces were engaged for the performance, the filial piety of the young men seems to have so far cooled that they demurred to the payment of the stipulated sum; on which the indignant composer exclaimed, "Very well then, I will keep it for myself." His decease taking place within a few months, it was actually performed at his funeral, and in 1767 was repeated at the church of the oratory in Paris, in the burial service for Rameau.—*Biog. Dict. of Mus.*

GILLES (PETER) a scholar and traveller, was born at Albi, in 1490. He visited the coasts of Provence, and travelled into Italy, making observations on natural history and antiquities. On his return he passed some time with George d'Armagnac, bishop of Rhodéz, who induced him to compose his book "De Vi et Natura Animalium," which he dedicated to Francis I in 1533. He was some time after sent by that monarch to travel in the Levant, but not being supplied with money, he was at length obliged to enlist in the troops of Sultan Soliman II for a subsistence. He returned in 1550, and went to Rome to his patron, the cardinal d'Armagnac, where he died in 1555. He also published some translations from the Greek, and two geographical pieces, "De Topographia Constantinopolensis lib. iv;" and "De Bosphoro Thracico, lib. iii," which are much esteemed.—*Moreri.*

GILPIN (BERNARD) an English divine of the sixteenth century, styled, on account of his zeal and piety, the Apostle of the North. He was born at Kentmire in Westmoreland, in 1517, and received his education at Queen's college, Oxford, where he took the degree of M.A. in 1541, and about the same time obtained a fellowship, and was admitted into holy orders. His reputation as a scholar procured him advantageous offers from the agents of cardinal Wolsey on the foundation of the college of Christchurch, and he accordingly removed thither. In this station he displayed his zeal as an advocate for the catholic faith in a public dispute with Hooper, afterwards bishop of Gloucester. On the accession of Edward VI Gilpin again entered the lists as a catholic advocate, though not without some reluctance; and being opposed by the famous Peter Martyr, he acknowledged himself unable to maintain his cause. From this time his religious opinions became unsettled, till his doubts finally terminated in his becoming a protestant. In 1549 he commenced B.D.; and in 1552 he was presented to the vicarage of Norton, in the diocese of Durham. This living however he resigned, and went abroad, first to Louvain and then to Paris, where he superintended the printing of a treatise on the Eucharist, written by his uncle, bishop Tonsal, who had entrusted him with it for that purpose. In 1556 he returned to England, and was made rector of Easington, and archdeacon of Durham; which benefices he subsequently exchanged for the living of Houghton-le-Spring. Being now ardently attached to the cause of reformation, he applied himself to the correction of superstitious practices among his parishioners, and the promotion of the Protestant cause. Queen Mary being on the throne, and the old religion re-established, the conduct of Mr Gilpin exposed him to the displeasure of his superiors. Twice he was accused of heresy before his relative bishop Tonsal, who protected him against his enemies, though he disapproved of his principles. At length an information was forwarded to bishop Bonner, whose zeal for the doctrines of the Catholic church induced him to adopt immediate measures for the apprehension of Mr Gilpin. His friends apprised him of his danger, and advised him to withdraw from the kingdom. But his zeal was of too ardent a character to admit of his profiting by this counsel; and anticipating the fate of martyrdom, he ordered his steward to provide him a long garment to wear at the stake, and awaited with composure the arrival of the expected messenger with the order for his arrest. Before he could reach London, queen Mary died, and he returned in peace and safety to Houghton. The accession of Elizabeth restored the ascendancy with the protestants, and the bishopric of Carlisle becoming vacant, he was destined to fill that situation; but conscientious motives prevented him from accepting it. In 1561 the provostship of Queen's college was offered him, but this also he refused, contenting himself with the living of Houghton, where he discharged

in a most exemplary manner the duties of a parish priest; besides which he founded schools for the education of youth, and contributed as far as his influence extended, to the advancement of religion and virtue. His death took place March 4, 1583. Independent of his theological studies he was a man of learning, having a general acquaintance with such branches of knowledge as were then cultivated. But though he is said to have had a talent for poetry as well as prose composition, he did not publish any of his own productions.—*Life by Rev. W. Gilpin.*

GILPIN (SAWREY) RA. an eminent modern painter of horses and wild beasts. He was born at Carlisle in 1733, and at the age of fourteen was apprenticed to Mr Scott, a ship painter, who resided in Covent-garden. The taste of the young artist was influenced by the scenes amidst which he was placed, and the first productions of his pencil which attracted notice, were sketches of carts, horses, and market groups, made from his master's shop-window. He obtained the patronage of William duke of Cumberland, uncle of his late majesty, from whose stud at Windsor he selected subjects on which to employ his pencil, and by practice and observation made himself intimately acquainted with the structure and action of that noble animal the horse, whence the peculiar spirit and accuracy of his delineations. Some of his compositions on historical subjects have great merit, especially "The Triumph of Camillus;" the "Election of Darius;" "The Horses of Diomedes;" and "The Fall of Phaeton." He also executed a painting of a group of tigers, which has been much admired, and is said to be his chef-d'œuvre. This piece was in the collection of the late Mr Whitbread. His studies from nature of the lion are strikingly characteristic of the sullen dignity and commanding presence of the king of brutes. Mr Gilpin practised at least one branch of engraving, as he made etchings of heads for works on biography, published by his brother, the rev W. Gilpin. He died at Brompton, March 8, 1807.—*Bryant's Dict of Paint. Rees's Encyclopad.*

GILPIN (WILLIAM) brother of the subject of the last article, born at Carlisle in 1724. He was destined for the church, and received his education at Queen's college, Oxford, where he took the degree of M.A. in 1748. After entering into orders he for many years kept a grammar-school at Cheam, in Surrey; but at length he obtained a prebend in the cathedral of Salisbury, and the vicarage of Boldre, in the New Forest in Hampshire, where he died, April 5, 1804. He was the author of several works relating to divinity and ecclesiastical biography, which were well received by the public; but his literary reputation is principally founded on his picturesque tours through various parts of the kingdom. His principal publications were "The Life of Bernard Gilpin," 1751, 8vo; "The Lives of John Wicliff, &c." (1764, 8vo, which was translated into German; "Lectures on the Catechism of the Church of England," 1779,

2 vols. 8vo; "Remarks on Forest Scenery," 2 vols. 8vo; "Observations relative to Picturesque Beauty, made in 1772, on several parts of England, particularly the mountains and lakes of Cumberland and Westmoreland," 2 vols. 8vo; "Observations relative to Picturesque Beauty, made in 1776, on several parts of Great Britain, particularly the Highlands of Scotland," 2 vols. 8vo; "Sermons to a Country Congregation," 2 vols. 8vo; and "Exposition of the New Testament, &c." 4to, 1790, reprinted in 2 vols. 8vo.—*Gent. Mag.*

GILRAY (JAMES) an artist famous for his talents as a designer of caricatures, which he engraved or etched with aqua fortis. His works, which exhibit much humour, spirit, and fertility of invention, procured him the reputation of being the first caricaturist of his day. He died June 1, 1815.—*Elmes's Dict. of the Fine Arts.*

GIN (PETER LOUIS CLAUDE) a French writer, was born at Paris in 1726, and became successively counsellor of the parliament of Paris, and member of the grand council. His works are "Traité de l'Eloquence de barreau;" "De la Religion par un homme du Monde, 1778;" "Les vrais Principes du Gouvernement Française;" "Analyse raisonnée du droit François." He was also the author of several translations, which are highly esteemed of Homer, Hesiod, Theocritus, Demosthenes, and Goldsmith's Vicar of Wakefield. He died in 1807.—*Dict. Hist.*

GIOJA (FLAVIO, or JOHN) an Italian mathematician of the fourteenth century, who is supposed to have invented the mariner's compass. He was a native of Pasitano, near Amalfi, in the kingdom of Naples, and was born about the year 1300. The custom of marking the north point of the compass with a fleur-de-lis is said to have been adopted in honour of the Neapolitan royal family of the house of Anjou, who bore the arms of France; and as a memorial of Gioja's discovery, the territory of Principato, in which he was born, has a compass for his armorial ensign. Yet this valuable instrument seems to have been known in Europe before the time of Gioja, since Dante alludes to the magnetic property of the needle and its attraction for the north pole. And there is reason to believe that the Chinese were accustomed to use the magnetic needle for nautical purposes long before their country was known to the Europeans, who probably derived it, either mediately or immediately, from that ingenious people. The claims of Gioja as an original discoverer are at best extremely problematical.—*Aikin's Gen. Biog.*

GIORDANI (VITAL) an able engineer and mathematician, born in 1633, at Bitonto, in the Neapolitan territories. He was of low origin, and served in his youth as a private soldier in the Pope's Gallies. Having devoted his leisure hours to the study of arithmetic, he succeeded in obtaining a situation on board one of them as purser, but quitted it on being appointed keeper of the castle of St Angelo at Rome. On the foundation of the academy in

that capital, by Louis XIV. Giordani, who had by this time acquired considerable reputation as a mathematician, was appointed by him tutor in that science, and afterwards obtained a professorship in the Sapienza college. He published a treatise, "De Componendis Graviorum momentis," folio; "De Euclide Restituto," folio; "Fundamentum doctrinae Motus Graviorum;" and an epistle, "Ad Hyacinthum Christophorum." His death took place in 1711 at Rome.—*Moreri.*

GIORDANO (LUCA) a Neapolitan artist, the pupil of Spagnoletto and Pietro da Cortona, born 1629. After travelling through the principal cities of Italy, and studying more particularly the style of Paolo Veronese, Correggio, and Titian, he settled in Spain, where he became a great favourite with Philip V, who conferred on him the honour of knighthood, and carried him with him to Naples. His most celebrated picture, the "Revolt of Lucifer," is still preserved in that capital; others of his works are to be found at Milan. Some of them are said to be such excellent imitations of Titian, both in composition and colouring, as to be with difficulty distinguished from the paintings of that great master. His death took place at Naples in 1704.—*Pilkington.*

GIORGI (AUGUSTINE ANTHONY) a learned Italian ecclesiastic, was born in 1711 at St Maur, in the diocese of Rimini, and entered the Augustine order in 1727. He devoted himself particularly to the study of the oriental languages, and was professor at various Italian seminaries until 1746, when he was invited to Rome by pope Benedict XIV, to the theological chair of La Sapienza; he also made him librarian del Angelica. The emperor Francis I gave him repeated invitations to settle at Vienna, accompanied by the most liberal offers, all of which Giorgi declined. In 1761 he published a work entitled "Alphabetum Thibetanum," containing many valuable dissertations, and the geography, mythology, history, and antiquities of Thibet," which proved of considerable use to the missionaries sent by the college de Propaganda to Thibet. His next publication, "Fragmentum Evangelii S. Iobannis Græco-Copto Thebaicum sæculi quarti, &c. &c." was no less valuable. His other works consist of letters, dissertations on subjects of oriental criticism, and antiquities and polemical treatises. He died in 1797.—*Fabroni Vitæ Italarum.*

GIORGIONE, an eminent painter, whose real name was GIORGIO BARBARELLI, was born in 1478 at Castel Franco in the Trevisan, but was educated at Venice. His earliest passion was music, in which he was no mean proficient; but applying himself next to design, he became a scholar of John Bellini, whom he soon surpassed. By frequent experiments he became the first colourist of his time. Titian worked under him to learn his secret, but Giorgione discovering his aim, it is said, immediately dismissed him. He introduced the fashion of painting the fronts of the houses at Venice in fresco. He died of the plague in

1511. His expression was strong and elevated; his imagination rich, and colouring lively and strictly natural. He painted some spirited portraits and beautiful landscapes.—*D'Argenville Vies de Peint. Pilkington.*

GIOTTO, the second of the revivers of painting in Italy, was the son of a simple peasant named Bondone, and was born in 1276, in the district of Vespigniano near Florence. Being observed by Cimabue drawing figures on the ground whilst feeding his sheep, he took him to Florence, and instructed him in the art of painting, to which he entirely devoted himself. He improved greatly upon his master, and his reputation soon spread through Italy, many cities of which he adorned with his works, which are still existing. He particularly excelled in mosaic, in which the Death of the Virgin at Florence was highly admired by Michael Angelo, and the Ship of St Peter, placed over the grand entrance of that church in Rome, has received numerous encomiums. Giotto was a generally informed and lively man, and has been often introduced into their novels by Boccaccio and Sacchetti. He died in 1336.—*Tiraboschi. Pilkington's Dict.*

GIRALDI (LILIO GREGORIO) better known to the learned by his Latin name Gyraldus, an erudite and ingenious author, born in 1479 at Ferrara. He studied under Guarini and Demetrius Chalcondyles, and has been considered by Causabon, De Thou, and other authorities, one of the most learned men whom modern Italy has produced. Cardinal Rangoni induced him to quit Modena for Rome, where he continued till the sacking of that city by the troops of Charles V; on which occasion he lost every thing that he possessed, and returned in indigence to his native city, where he died of gout in 1552, and was buried in the cathedral. He was the author of seventeen publications on various subjects, the principal of which are—his history of the heathen deities; ten dialogues on the histories of the Greek and Latin poets; two on those of modern Italy, and a treatise on the calendar, entitled "De Aunis et Mensibus." His works were collected after his decease, and printed first at Basil in 1580, in two folio volumes, and again at Leyden in 1696.—*Moreri.*

GIRALDI (GIOVANNI BATTISTA) better known by his adopted name Cintio, an Italian novelist and poet, whom some have not hesitated to rank among the best tragic authors of his country. He was nearly related to Lilio Gregorio, with whom he was contemporary, being born at Ferrara in 1504. His attention was in the earlier part of his life directed to the study of medicine, in which science he graduated and lectured in the university belonging to his native city at a period when he had scarce attained the age of majority. He was afterwards secretary to the duke his sovereign; and on his decease read lectures on the belles lettres at Turin, Mondovi, and other principal cities, till he obtained the professorship of eloquence at Pavia. His principal works are, nine tragedies, and a series of 100 novels, written in the manner of those of Boccaccio, *Dict.*—Vol. II.

cacio, and published under the title of "Hecatonmithi." He was also the author of some orations composed in the Latin language. The gout, which seems to have been hereditary in his family, afflicted him severely, and at length caused his death, which took place at Ferrara in 1573. His son, Celso Giraldi, collected his works after his decease, and published the whole in 8vo at Venice, 1583.—*Moreri. Biog Univ.*

GIRALDUS, (see BARRY).

GIRARD (GABRIEL) a learned and ingenious ecclesiastic, a native of Clermont, born 1678. The duties of a canonry, which he possessed, interfering with his studies, he resigned it, in order to be able to pursue them at leisure. The duchess de Berri made him her almoner, and he was employed by the government as Russian and Sclavonian interpreter to the king. He became a member of the Academy in 1744, and published a treatise on the principles of the French tongue, in two duodecimo volumes; as also another on French Synonyms, which has gone through several editions. He died in 1748.—There was also a jesuit of this name, a native of Dol, accused of sorcery before the parliament of Aix, by a girl of eighteen, named Cadiere, who declared that he had made use of infernal arts to debauch her person. He was however acquitted after a long trial, which caused a great sensation at the period, all over France. *Nouv. Dict. Hist.*

GIRARDON (FRANCIS) an eminent French sculptor, the pupil of Anguier. He was born at Troyes in 1628. Louis XIV patronised him, and sent him to Rome in order to complete his studies. On his return he executed the celebrated equestrian statue of his royal patron, who, on the death of Le Brun, appointed him his successor as inspector-general of sculpture, &c. Girardon produced several very fine specimens of art; among the best of which are the Richelieu mausoleum in the church of the Sorbonne, and a group on the subject of the rape of Proserpine, in the royal gardens at Versailles. He died in 1715.—*D'Argenville.*

GIRTIN (THOMAS) an eminent English landscape painter, a native of London, born in 1773. He was a pupil of Dayes, and was the first who introduced the method, since practised with success, of drawing on cartridge-paper. Many of his landscapes thus executed were equally admired with his paintings in oils. The productions by which he was principally known in his life-time were his panoramic views of Paris and London, exhibited in Spring-gardens, which evinced both taste and genius. He laboured for many years previously to his death under a constitutional asthma, which did not however entirely prevent his following up his profession till within a very short period of his decease. This took place in November 1802.—*Edwards's Anec.*

GLABER (RODOLPH) a Benedictine monk of Clugni, who flourished in the eleventh century, and who has perpetuated his name by a "Chronicle or History of France," written in

Latin, which, though barbarously composed and full of fable, is valuable for the information it contains of those remote periods. It consists of five books, the first of which contains the events of the monarchy previously to the election of Hugh Capet, and the others which followed it, to the year 1046. He also wrote a life of William, abbot of St Benignus at Dijon.—*Moreri*.

GLANDORP (MATTHIAS LEWIS) a German physician of the seventeenth century. He was a native of Cologne, where his father was a surgeon, under whom he pursued his professional studies. He afterwards went to Padua, to attend the lectures of Fabricius ab Aquapendente, Spigelius, and Sanctorius; and in the university of that place he graduated as MD. Having visited the principal towns of Italy, he returned in 1618 to Bremen, where he settled as a practitioner of physic and surgery, and acquired so much reputation, that in 1628 he was made first physician to the archbishop, and afterwards to the state of Bremen. He died after 1633, but at what period is not exactly known, though some writers date his death as late as 1660. He wrote on surgical topics; and his works, consisting of four tracts, were republished in one volume, 4to, at London in 1729, with a life of the author.—*Hutchinson's Biog. Med.*

GLANVIL or GLANVILLE (JOSEPH) a philosophical and theological writer of the seventeenth century. He was born at Plymouth in 1636, and was educated at Exeter college, Oxford, where he took the degree of B.A. in 1655. The next year he removed to Lincoln college, and proceeded M.A. in 1658, about which time he was appointed chaplain to Francis Rus, provost of Eton college, who was in favour with Oliver Cromwell. The death of his patron taking place, Mr Glanvil returned to Oxford, and engaged in making researches into experimental philosophy. On the formation of the Royal Society, after the Restoration, he was chosen one of the fellows, and he distinguished himself as a zealous and active, if not a very efficient member of that scientific association. Having taken holy orders he obtained a living in Essex, and in 1662 he was inducted to the vicarage of Frome in Somersetshire. This he exchanged in 1666 for the rectory of the abbey-church at Bath, in which city he then fixed his residence. Much of the remainder of his life was occupied in literary disputes in defence of the Royal Society and the philosophy of Bacon, against those who advocated the sinking cause of Aristotle and the schoolmen. Glanvil's chief opponent was Henry Stubbe, a physician of Bath; but their controversy has long since ceased to interest the reading public; and our author is better known at present on account of an elaborate and singularly credulous treatise which he wrote, entitled "Some Philosophical Considerations touching the Being of Witches and Witchcraft," than as the advocate of experimental philosophy. He died in 1680.—*Biog. Brit.*

GLANVIL or GLANVILL (RANULPH

DE) an English baron of the twelfth century, celebrated as a lawyer and a warrior. He was of Norman descent; and in the reign of Henry II he held the office of justiciary of the kingdom. It was at that period that he signalized his valour in repelling the invasion of England by William, king of Scotland, who was taken prisoner as he was besieging the castle of Alawick. Richard I, after his accession to the crown, is said to have imprisoned Glanvil, and obliged him to pay for his freedom the immense sum of fifteen thousand pounds towards the expenses of a crusade to the Holy Land. The aged magistrate accompanied his master on the expedition to which he had so largely contributed, and perished, together with a vast multitude of other English warriors, at the siege of Acre in 1190. To judge Glanvil is attributed a curious treatise on the laws and customs of England. This work remained in manuscript till 1554, when it was published by the "permission and procurement of sir William Stanford," a judge of the Common Pleas, as sir Edward Coke informs us; and a translation from the pen of John Beames, esq. of Lincoln's-inn, appeared in 1812, with a life of the author.—*Dugdale Orig. Jurid.*

GLASS (JOHN) a Scottish clergyman, was born at Dundee in 1633, and educated at New College, St Andrews. After taking his degrees, he became minister of a country church and in 1727 he published a treatise to prove that the civil establishment of religion was inconsistent with Christianity. This gave so much displeasure that he was deposed, and became the founder of a new sect, called Glassites, and afterwards Sandemanians. He wrote a great number of controversial tracts, and died at Dundee in 1773.—His son, JOHN GLASS, was also born at Dundee in 1725, and was brought up a surgeon. He made several voyages to the West Indies, but not liking his profession he quitted it, and took the command of a merchant-ship trading to the Brazils. In 1763, returning to London with all his property on board, four of the sailors entered into a conspiracy, and murdered captain Glass, his wife and daughter, and some of the men. They then proceeded to Dublin, where they were apprehended and executed. Captain Glass was a man of considerable abilities, and published "A Description of Teneriffe, with the Manners and Customs of the Portuguese who are settled there."—*Aikin's G. Biog. Biog. Dict.*

GLASSE (GEORGE HENRY) an English clergyman and classical scholar of eminence. He was educated at Christchurch college, Oxford, where he took the degree of M.A. in 1782. On the resignation of the rectory of Hanwell, Middlesex, by his father, Dr Samuel Glasse, in 1785 he was collated to that benefice, which he held till his death in November 1809. He fell by his own hand in a state of mental irritability. Mr Glasse obtained distinction for his classical acquirements at an early period of his life, and possessed a remarkable facility of writing Greek verses. In 1781 he published a Greek translation

6. Mason's *Caractacus*, and in 1788 a translation of the *Samson Agonistes* of Milton into the same language, both in verse. He likewise published "Contemplations on the Sacred History, altered from the Works of Bishop Hall," 4 vols. 12mo; "Louisa, a Narrative of Facts, supposed to throw Light on the Mysterious History of the Lady of the Hay-stack," translated from the French; a volume of sermons on various subjects; besides many single sermons, and articles in the *Gentleman's Magazine*.—*Lysous's Environs of Lond. Supp. Gent. Mag.*

GLASSIUS (SOLOMON) a learned ecclesiastic, a native of Thuringia, born at Sonderhausen in that province in 1593. He received his education in the university of Jena, where he took his doctor's degree in theology, and was elected to a professorship in the same science. He afterwards obtained the appointment of superintendent of the churches and schools in Saxegotha. He was the author of "Onomatologia Messiaë Prophetica;" "Philologia Sacra," 4to; "Exegesis Evangeliorum et Epistolarum;" "Christologia Mosaica et Davidica;" "Disputationes in Augustanam Confessionem," &c. His death took place in 1656.—*Moreri*.

GLAREANUS, the name by which Henry Loris or Lorit, a celebrated Swiss musician, author and composer, is generally known, being so called from the place of his nativity Glaris, where he was born in 1488. He studied under Cochlæus, and was the intimate friend of the celebrated Erasmus, who speaks of him as an excellent general scholar, and one well versed in divinity, philosophy, mathematics, and other sciences. His principal work is a treatise, now become extremely rare, entitled "Dodecachordon," printed at Basle in one volume, 1547. It is important from the insight it gives into the state of practical music at the commencement of the sixteenth century, and contains a variety of specimens selected from the chef d'œuvres of the principal composers of the period, with many anecdotes and documents connected with them and their works. Choron has made much use of this tract. He also composed the poetry of the "Panegyrique de l'Alliance des Cantons," which gained him great credit as well as more substantial marks of approbation from his countrymen; and the emperor, Maximilian I, honoured him on another occasion, with a ring and laurel wreath. He died in 1563.—*Biog. Dict. of Mus. Teissier*.

GLAUBER (JOHN RODOLPH) a chemist of eminence in the seventeenth century. He was a native of Germany, and after having travelled in other countries, he settled at Amsterdam in Holland, where he carried on his researches into the theory and practice of chemistry with some success, and made some useful discoveries. He published the following works:—"Furni novi philosophici," 1650; "De Auri tinctura, seu de Auro potabili vero," 1650; "Explicatio miraculum mundi," 1656; "Salus Germaniæ, seu Concentratio Vini,

Frumenti et Ligni;" "De Natura Salium," 1658; "Operis Mineralis partes tres," 1659; &c. These treatises appear to have contained all the chemical science then extant, intermixed however with a great deal of visionary speculation concerning the philosopher's stone and the elixir of life. The compound now termed sulphate of soda, was discovered by this chemist, whence it was long known by the appellation of Glauber's salts. Mr Brande ranks Glauber with Van Helmont, Basil Valentine, Beguin, and George Agricola; and to these experimentalists, as he observes, we are indebted for a rich and profitable harvest of discoveries; and with them many weighty doctrines and brilliant discoveries had their origin, which now adorn our science, and of which we daily avail ourselves, forgetful of the fountain whence they flow. An abridgement of the works of Glauber was published in German in 1715.—*Rees's Cyclopæd. Journal of the Royal Institution*, vol. ix.

GLEDITSCH (JOHN GOTLIEB) a physician of Frankfort-on-the-Oder, born at Leipsic in 1714, graduated as MD. at the former university in 1740. Here he lectured on physiology, the materia medica, botany, and other cognate branches of the art of medicine. He afterwards settled at Berlin, where he was appointed superintendent of the botanical garden, and professor of anatomy in the Royal Academy of Sciences. He wrote on the management of trees; on the method of destroying locusts; on fungi; on the management of bees; on the system of plants; with a variety of miscellaneous tracts on subjects connected with rural economy, botany, physic, &c. and died in 1786.—*Chalmers's Biog.*

GLENDOWER (OWEN) who has been sometimes called the Wallace of Wales. The precise date of his birth is uncertain, some fixing it at May 28th, 1349, others on the same day in 1354. The place of his nativity is better ascertained to have been Trefgarn, in Pembroke-shire, where he was born of Ellen, a lineal descendant from Catherine, daughter and heiress to Llewellyn, last Prince of Wales. His father's name was Gryffyd Vychan. At an early age he was sent to London for education, and afterwards entering himself of one of the inns of court, studied for the English bar, but relinquished the profession on being appointed scutiger to Richard II. Jolo Goch, a contemporary bard, gives a splendid description of his family mansion, or rather palace, and indeed he appears at this time to have exercised considerable feudal influence, carrying on with great spirit a contest of some duration with Reginald lord Grey de Ruthyn respecting an estate called Croesau, in which he was for a time successful; but on the deposition of his royal patron by Henry of Bolingbroke, his old antagonist took advantage of the unsettled state of the country to renew his usurpation. Nor did his evil practices end here, for Grey, being charged with the delivery of a summons to Owen from the new king to attend him on his Scotch expedition, purposely neglected to deliver it, and Glendower being in consequence

outlawed for disaffection, his enemy seized upon all his lands, and the parliament treated his remonstrances with contempt. Glendower, in revenge, rushed into rebellion, forcibly dispossessed Grey of his lands, and having succeeded in raising a considerable force, caused himself to be proclaimed prince of Wales, September 20, 1400. To this strong measure he is said to have been mainly incited by some traditional prophecies of Merlin; and certain it is, that many of his countrymen of consideration were induced, by the same motives, to join his standard. In one of the battles fought on this occasion, in 1402, he made prisoner his old enemy, the lord Grey, the price of whose ransom was fixed at 10,000 marks, and a stipulation of neutrality, which latter was cemented, or rather converted into amity afterwards, by Jane, Owen's third daughter, becoming lady Grey. Having defeated the king's troops under sir Edward Mortimer, Henry put in motion against him three grand divisions of his army, but retiring to the mountains he foiled all attempts to bring him to action, and the rebellion of the Percys breaking out, joined the coalition, causing himself at the same time to be formally crowned, at Machyn-laeth in Montgomeryshire, "Sovereign of Wales." The rashness of Henry Percy brought on the fatal battle of Shrewsbury before all his Welch auxiliaries had come up. Their Prince, however, is said to have been so near as to have reconnoitred the action from the top of a lofty tree; but seeing all was lost, directly retreated, and continued his marauding warfare. This he kept up with various success, occasionally assisted by Charles VI of France, with whom a treaty of his is yet extant, dated 1404, in which he is styled "Owenus Dei gratiâ Princeps Walliæ." Finding it impossible to subdue, Henry in 1415 condescended to treat with him; but Owen died on the 20th of September in that year, during the negotiation, which was however continued and ratified by his son Meredith ap Owen, February 24, 1416. Direct descendants of his are yet living in the family of Monington, settled at the place of that name in Herefordshire; which is also assigned, by tradition, as the burial-place of Glendower. He appears to have been a man of considerable ability, considering the rude age in which he lived; and to have united, in no common degree, the different qualities of a statesman and a captain of banditti.—*Thomas's Life of O. Glendower.*

GLISSON (FRANCIS) an eminent English physician and anatomist, was born in 1597 at Rampisham, in Dorsetshire. He received his academical education at Cambridge; and applying to the study of physic, settled in London in 1634; became a fellow of the college of physicians in 1639; and acquired great reputation by his lectures "De Mõrbis Partium." During the civil wars he retired to Colchester, where he practised with great credit. Returning to London he remained there during the great plague, and although he visited many patients, escaped the infec-

tion. He died in 1677, at the age of sixty. Dr. Glisson was highly esteemed by the greatest men of the faculty in his own day. His "Anatomia Hepatis," London, 1654, in particular, attracted considerable attention; containing a more exact account of the anatomy and functions of the liver than had hitherto appeared: and the name of the author has been attached to a part supposed to be of his own discovery—the capsule of the vena portarum. Besides his medical and anatomical works, Dr. Glisson was author of an elaborate metaphysical treatise, entitled "Tractatus de Natura Substantiæ Energetica." London, 1672; 4to.—*Halleri Bibl. Med. Aikin's Mem. of Medicine.*

GLOVER (RICHARD) a poet of some reputation. He was the son of Richard Glover, a merchant of London; and was born in St Martin's-lane, Cannon-street, in 1712. Being intended for trade, although he received a classical education at a private school, it was not followed up by an attendance at either university. He early displayed an attachment to the belles lettres; and when only sixteen, wrote some verses to the memory of sir Isaac Newton, which obtained considerable attention. In 1737 he married a lady with a handsome fortune; and in the same year published the epic poem of "Leonidas," which was highly countenanced by the party in opposition to sir Robert Walpole, headed by Frederick prince of Wales. It is no mean performance, abounding in noble sentiments, considerably varied by incident and description; but it labours under the want of interest, and its poetry is not of a character sufficiently imaginative for lasting popularity. A poem, entitled the "Progress of Commerce," followed in 1739; one of the objects of which was to rouse a spirit of national hostility against the Spaniards and the ministry, a purpose which was much more effectually answered by his celebrated ballad of "Hosier's Ghost." In 1742 he was chosen by the London merchants to conduct an application to parliament, complaining of the neglect of trade; and the speech which he pronounced at the bar of the house was printed, and much applauded. While rising to notice as a public man however, he became embarrassed in his private affairs, and made a temporary but honourable retreat, with a view to greater economy. In 1751 he was an unsuccessful candidate for the office of chamberlain to the city of London. In 1753 his tragedy of "Boadicea" was performed at Drury-lane theatre, with partial success. His "Medea," imitated from Euripides and Seneca, appeared in 1761, and obtained greater attention. About this time too, his circumstances were so much improved that he ventured to return to public life; and being chosen MP. for Weymouth, he was esteemed by the mercantile interest as an active and able supporter. He died in November 1785, at the age of seventy-three. He left behind him another epic poem, forming a sequel to "Leonidas," entitled the "Athenaid," which was published in 1788, but engaged very little

attention. Mr Glover was also one of the many persons to whom partizans have attributed the letters of Junius.—*Johnson and Chalmers's British Poets.*

GLOVER (THOMAS) a native of Ashford, Kent, born 1543. He was well skilled in the antiquities of this country; and obtained the appointment of Somerset herald, after going through the preliminary grade of pursuivant-at-arms in the herald's college. In this capacity he was employed to accompany the lords Willoughby and Derby on their missions to the courts of Copenhagen and Paris, in order to institute the several sovereigns knights companions of the order of the garter. He was the author of a treatise "De Nobilitate Politicâ," folio, 1603; and a "Catalogue of Honor," folio, 1610; both which were printed after his decease, by his nephew, Thomas Miller. Camden was much indebted to him for his assistance in developing many pedigrees of the principal families of Great Britain. His death took place in 1588.—*Noble's College of Arms. Fuller's Worthies.*

GLUCK (CHRISTOPHER) one of the most eminent composers of modern times, who has indeed been styled the Michael Angelo of music. He was born of low parentage in the Upper Palatinate, on the borders of Bohemia, in 1714; or as Laborde asserts, in 1712. In this part of the country the peasantry are naturally inclined to music, and young Gluck exhibiting a still more decided taste for it than even the generality of his young companions, set out for Vienna, supporting himself on the road by the exercise of his talents. Arrived at the capital, by laborious application and the strictest economy, he was enabled to procure better instruction than his native province afforded, until a nobleman of the court, whose notice he was fortunate enough to attract, took him with him into Italy, where he studied under Martini, at Milan, and made so great a proficiency in a very short period, that before the expiration of the four years, during which he remained in the country, he had composed several operas; and acquired such a reputation, that lord Middlesex, then the principal director of the English opera, was induced to offer him an engagement, which he accepted, to visit London. The times however were unfavourable to him: he reached England in 1745, during the height of the rebellion, when all foreigners, especially catholics, were looked upon with suspicion; and although, in order to conciliate public favour, Gluck commenced by the production of a piece entitled "La Caduta de Giganti," full of complimentary allusions to the duke of Cumberland, it had not the good fortune to survive more than five representations. His "Artamene," and "Piramo e Tisbe," which followed, were scarcely more successful; and mortified and disappointed at his failure, he returned to Italy, where he applied himself, with great success, to the reformation of the dialogue and business of the opera, which up to this period had been little more than a series of unconnected scenes, serving as mere

vehicles for the airs and accompaniments. In this design he derived great assistance from Calzabigi, a writer of considerable taste and genius, who composed for him several dramas, all the parts of which were in unison, and regularly developing a specific plot. Of these the principal were, the "Orfeo;" "Alceste;" and "Armida;" pieces which stimulated the genius of Gluck to the composition of that sublime and powerful music which has insured his immortality. Vienna, Naples, Rome, Milan, and Venice, were in turn the theatres of his glory; and an additional expenditure of upwards of fifty thousand pounds in a single winter, is said to have enriched the Bolognese, arising principally from the concourse of strangers attracted to their city, in order to witness the performance of "Orfeo." His next attempt, which he commenced at Paris, was of a nature hardly less hazardous; this was to adapt, if possible, the French tongue, with success, to Italian melody, of which, from the genius of the language, it was supposed to be scarcely susceptible. Here too he was again completely triumphant, as was evinced by the brilliant run of his "Iphigenie en Aulide," the text of which was taken, with little or no variation, from the drama of Racine. In 1766 "Alceste," an exact copy of the tragedy of Euripides, made an impression equally strong; after which "Iphigenie en Tauride," closed the lyric career of the composer. Gluck was at the zenith of his reputation when the celebrated Piccini arrived at Paris; and immediately a contest, hitherto unknown in the annals of musical rivalry commenced. The whole capital was divided upon the merits of the two composers; and "Etes vous Picciniste ou Gluckiste?" was the first question asked of every one. Pamphlets innumerable were published on the occasion. Suard and Arnaud espoused the cause of Gluck; while La Harpe and Marmontel wrote on the part of Piccini. The merits however of the parties were so nicely balanced, that it proved at last but a drawn battle. In 1779 Gluck quitted Paris for Vienna; where, in 1782, he was visited by the grand duke Paul of Russia and his consort; two years after which he suffered a paralytic affection, which eventually deprived him of life, November 15, 1787. He was said to have amassed a fortune of thirty thousand pounds sterling by the exercise of his talents, and the profits arising from the sale and performance of his compositions.—*Biog. Dict. of Mus.*

GLYCAS (MICHAEL) a Greek historian, was a native of Byzantium; is supposed to have flourished in the twelfth or thirteenth century. He is principally known by his "Annals," in four parts; containing the history of the world to the birth of Christ; and that of the Byzantine emperors down to the death of Alexius Comnenus in 1118. His "Annals" were translated into Latin by Leunclavius, and published by father Labbe in 1660, with notes.—*Vossii Hist. Græc. Moreri.*

G MELIN (JOHN GEORGE) a German botanist, physician, and traveller, of the last cen-

ture. His father was an apothecary at Tubingen; where he was born in 1709; and after completing his studies in the university there, he took the degree of MD. in 1727. He went to Petersburg, and was made a member of the imperial academy; and in 1731 professor of chemistry and natural history. In 1733 he was employed, in conjunction with G. F. Muller and others, in an expedition to explore the boundaries of Siberia. He returned to Petersburg in 1743, and resumed the offices he had previously filled. In 1747 he visited his native country; and during his absence he was appointed to another professorship, vacant by the death of Bachmeister, on the duties of which he entered in 1749. He died of a fever, in May 1755. His works, which are valuable for the scientific information they afford, are "Flora Siberica, seu Historia Plantarum Siberiæ," 1747, 1749, 2 vols. 4to, to which two more parts were added by his nephew; and "Travels through Siberia," written in German, 4 vols. 8vo.—*Aikin's Gen. Biog.*

GMELIN (SAMUEL THEOPHILUS) nephew of the preceding, was born in 1743 at Tubingen, where he studied, and took the degree of MD. in 1763. He travelled through France and Holland, and becoming distinguished for his acquaintance with natural history, he was made professor in the Imperial academy at Petersburg. He was sent by the Russian government, with professor Galdenstadt, on an expedition of discovery to the provinces of the empire bordering on the Caspian sea. After travelling from 1768 till 1773, Gmelin was made a prisoner by a Tartar chief; who being disappointed of the sum he demanded for his liberation, treated the traveller with so much harshness that he died in confinement, in July 1774. He published "Historia Furcorum," Petrop. 1768, 4to; and an account of his travels appeared in 4 vols. 4to, 1771, 1774, and 1786, the last volume having been edited by professor Pallas.—*Idem.*

GMELIN (JOHN FREDERICK) an eminent chemist and natural philosopher, who, like the foregoing, was a native of Tubingen. He studied at the university of that place, and at Gottingen, where he obtained the professorship of chemistry and natural history. He was the author of "Onomatologia Botanica," 9 vols. 8vo; "Apparatus Medicaminum," 2 vols. 8vo; and many other works relating to chemistry, mineralogy, and natural history; but he is most advantageously known as the editor of the "Systema Naturæ," of Linnaeus, published at Leipsic, in 9 vols. 8vo, 1788. He died at Gottingen in May 1805. Besides his literary labours he is distinguished by some discoveries of vegetable and mineral substances useful in the art of dying.—*Nouv. Dict. Hist.*

GOAD (JOHN) an eminent classical teacher, was born in London in 1651, and educated at Merchant Tailors' school, and at St John's college, Oxford. He took orders, and in 1643 was made vicar of St Giles's, Oxford, where he performed his duties with perseverance during the siege of the city by the parliamentary forces. He then obtained the vicarage of

Yarnton, and took his degree of BD. In 1661 he was made head master of Merchant Tailors' school, which situation he held for nearly twenty years, but in 1631 it being suspected that he was inclined towards popery, he was discharged, but with a gratuity of 70l. These suspicions proved true, for in 1686, in the reign of James II, he openly professed himself a Roman catholic. He died in 1689. His works are "Genealogicon Latinum," a dictionary for the use of Merchant Tailors' school; "Autodidactica, or a practical vocabulary, &c.;" "Declamation whether monarchy be the best form of Government?" "Astro-Meteorologica, or Aphorisms and Discourses of the Bodies celestial, their natures, influences, &c." The subject of this is a kind of astrology founded on reason and experiment, and gained him great reputation. After his death was published "Astro-Meteorologia sana," &c.—*Ath. Oxon. Dodd's Church Hist. Granger.*

GOBELIN (GILES) a French dyer, who lived in the seventeenth century, whose name has been perpetuated by being applied as the designation of a kind of tapestry. He made improvements in the art of dyeing scarlet; and residing in the suburbs of Paris, his house and manufactory were called the Gobelins. He died before the middle of the seventeenth century, and in 1666 an establishment for the manufactory of fine tapestry was founded on the spot he had occupied, under the auspices of the minister Colbert, whence the work produced there was termed the Gobelin tapestry.—*Dufresnoy.*

GOBIEN (CHARLES LE) a French jesuit, born in 1653 at St Maloes. He is principally known as the author of a series of letters on the progress of Christianity among the Chinese, having accompanied the missionaries sent out by the brethren of his order to that empire in the capacity of secretary. He also published an account of the edict issued by the emperor of China in favour of the Christian religion, in 12mo. "A History of the Marian Islands," 12mo; and was a contributor to the "Lettres Edifiantes et Curieuses." He died in 1708 at Paris.—*Moreri.*

GODDARD (JONATHAN) a learned and ingenious chemist and physician, born at Greenwich about the year 1617. He was originally a member of Magdalen college, Oxford, and went through the usual course of study during a residence of four years in that university, after which he travelled, and on his return graduated as doctor of medicine, at Catherine hall, Cambridge. On the breaking out of the civil war, Dr Goddard took part with the parliament, and was in 1651 appointed by Cromwell (whom he attended both in Scotch and Irish expeditions, in quality of physician to the forces) warden of Merton college, in the university where he had first matriculated, his patron being then its chancellor. In the short parliament of 1653 he sat as sole representative for Oxford, and two years after was chosen professor of physic in Gresham college. His acknowledged rank as a man of science and

talent, at length overcame the prejudice raised against him by his republican principles, which were not however of so uncompromising a nature as to prevent his accepting, in 1663, a situation at the council board of the Royal Society, on the first institution of that incorporation. In 1668 he published a pamphlet, entitled a "Discourse setting forth the unhappy condition of the practice of physic in London," the principal object of which was to induce his brother physicians to follow his example in always mixing up his own prescriptions without the intervention of the apothecaries. This excited of course a strong sensation among the members of the latter body, who attacked him in all directions, and eventually carried their point. The invention of the famous nostrum, called *Guttæ Anglicanæ*, but more generally known by the name of Goddard's Drops, the secret of which composition Charles II is said to have purchased for 5000*l.*, has been erroneously attributed to him, instead of Dr William Goddard. The principal pretension however of Dr Goddard, on the score of ingenuity, is his title to be considered the first English constructor of a telescope, a claim which professor Ward, in his history of Gresham college, advances for him. He continued to lecture on chemistry and medicine as Gresham professor till the 24th of March, 1674, when returning from a meeting of some philosophical friends, he was suddenly seized with apoplexy, in Cheapside, and died before he could be conveyed home. Several of his tracts are preserved in Birch's Memoirs of the Royal Society, and in the philosophical transactions of that body.—*Biog. Brit. Ward's Gresham Professors.*

GODEAU (ANTOINE) an active and exemplary French prelate, bishop of Grasse, and afterwards of Vence, born in 1605 at Dreux. He was one of the earliest and most able members of the French Academy, and was particularly distinguished by cardinal Richelieu, to whose patronage he owed his preferment. He appears to have had a strong turn for sacred poetry, and was a voluminous writer on devotional subjects, as well in verse as in prose; of the former, a specimen exists in his translation of the book of Psalms, which the protestants preferred to that of Marot, while in the latter, his ecclesiastical history, in three folio volumes, 1655, which, though left unfinished, contains the history of the first eight centuries, gives ample proof of his learning and industry. He also published a treatise called "Christian Morals," of which there is an English translation by Kennet. He died of apoplexy April 21, 1671.—*Now. Dict. Hist.*

GODEFROL. There was a French family of this name, several members of which were distinguished for their learning and abilities during the latter half of the seventeenth and the eighteenth centuries.—**DENYS GODEFROL**, the father, was a native of Paris, born in 1549. He was eminent as a lawyer, and held a seat in the parliament of Paris till the revocation of

the edict of Nantes drove him from his native country to Geneva, whence he afterwards retired to Strasburg. Of his works, which are voluminous, those by which he is most advantageously known are his "*Corpus Juris Civilis*," 4to; "*Notæ in Quatuor Lib. Instit.*;" and "*Opuscula varia Juris*." He died in 1622 at Strasburg, leaving two sons, **THEODORE** and **JAMES**: of these the former adhered to the religion which his father had abjured, and became a counsellor of state in Paris. He published a work on the genealogies of the principal French families, and died in 1642, at Munster.—His son **DENYS**, so named after his grandfather, was the author of a political treatise, containing memoirs of instructions concerning "*Les Droits du Roi*," folio. His death took place in 1681.—**JOHN GODEFROL**, a son of his, published an edition of the memoirs of Philip de Comines, in 5 8vo vols.; the "*Memoirs of Queen Margaret*;" and the "*Journal of Henry III.*" He died in 1732.—**JAMES**, the brother of the first Theodore, followed his father to Geneva, where he became professor of jurisprudence and a member of the council, having embraced the reformed religion. He was the author of several tracts on professional as well as miscellaneous subjects, and died in 1652.—*Now. Dict. Hist.*

GODFREY of Bouillon, chief of the first crusade, and king of Jerusalem, was the son of Eustace II, count of Boulogne, and in his mother's right was heir of the Lower Lorraine. He served in the armies of the emperor Henry IV, who conferred upon him the title of duke of Lorraine. When the first crusade was set on foot, Godfrey was one of the earliest and most illustrious princes who took the cross, and the command of the principal army was confided to him, for which he was eminently calculated by his prudence and moderation. He was accompanied by two of his brothers, Eustace and Baldwin. Before his departure he sold or pledged his reversion of the lands of Bouillon to the church of Liege. In the autumn of 1096 he led his army through Germany, Hungary, and Bulgaria, and arriving at Philippolis in Thrace, he sent to the Greek emperor, Alexius Comnenus, to demand the liberation of Hugh, count of Vermandois, brother to the king of France, who had been seized at Durazzo, and detained as a captive. Mutual jealousies arising between the eastern and western Christians, he was obliged to use some violence to obtain the security and justice which he required; but at length an agreement was concluded. After gaining several advantages of less moment, Godfrey at length proceeded to the great object of his enterprise, the conquest of Jerusalem. The siege of this city began in June 1099, and it was carried by storm July 15. Eight days after Godfrey was proclaimed king of Jerusalem, by the unanimous voice of the army, but his humility would not suffer him to assume the ensigns and titles of a sovereign, and he governed under the title of Defender and Baron of the Holy Sepulchre. He then overthrew the sultan of Egypt with a vast host at

the battle of Ascalon, and the reduction of all Palestine followed. Godfrey established the feudal institution in his kingdom, and a code of jurisprudence, entitled "The Assize of Jerusalem." He died after a year's reign in 1100. He is immortalized as the hero of Tasso's "Jerusalem Delivered;" nor did his splendid qualities require the aid of fiction to establish his character.—*Univ. Hist. Gibbon, Moreri.*

GODFREY, of Viterbo, an ancient chronicler, is supposed to have been born in the twelfth century, at Viterbo, in Italy. He was chaplain and secretary to the emperor Frederick, and his son Henry VI. His chronicle, which, according to his own account, was the fruit of immense research, begins with the creation of the world, and ends with 1186. It is written in Latin prose, and entitled "Pantheon." It was first printed at Basle in 1559, and is to be found in Pistorius's collection of German writers. Although of little authority in other respects, it is thought worthy of credit for the events of his own time. Another work by Godfrey, entitled "Speculum Regium," is preserved in MS. in the imperial library at Vienna.—*Moreri, Tiraboschi.*

GODOLPHIN (JOHN) a learned civilian of the seventeenth century, born at the place of the same name in one of the Scilly islands in 1617. He was educated at Gloucester Hall, Oxford, where he graduated in 1643, as LL.D. On the breaking out of the troubles he joined the puritanical party, and during the protectorate was a judge of the admiralty court. After the restoration his reputation for learning and integrity did away the offence of his previous political conduct, and the court appointed him one of the king's advocates, in which situation he became a warm assertor of royal supremacy. His works are—"A View of the Admiral's Jurisdiction," 1661, 8vo; "The Orphan's Legacy," 1674, 4to; "The Holy Arbour," folio; "The Holy Limbec;" and "Repertorium Canonicum," 4to. He died in 1678.—*Biog. Brit.*

GODOLPHIN (SIDNEY) a native of Cornwall, born in 1610. He received his education at Exeter college, Oxford, and according to Hobbes, was possessed of considerable literary attainments, as well as of an elegant fancy. Of his works there are only remaining a few miscellaneous poems, and a translation of that part of Virgil's *Aeneid* which describes the loves of Dido and *Aeneas*, printed together, in one 8vo volume, 1658. He espoused the Royalist party during the civil wars, and was killed in a skirmish at Chagford, Devonshire, in 1643.—SIDNEY GODOLPHIN, earl of Godolphin, of the same family as the preceding, and educated at the same university. He began a career of politics at an early age, under Charles II, and was one of those who voted for the exclusion of the duke of York from the throne in 1680, notwithstanding which he continued in office after the accession of James II. On the flight of that monarch, and while the country was yet in suspense, Godolphin voted for a regency,

yet was, after the settlement of the crown on William and Mary, made a treasury commissioner. During the reign of Anne he reached the head of his department, being appointed lord high treasurer of England, and in 1703 became a knight companion of the garter. This honour was followed up in 1706 by a patent creating him earl of Godolphin. He had now however reached the zenith, and four years afterwards was obliged to retire from office. His death took place in 1712.—*Birch's Lives.*

GODWIN (FRANCIS) son of Thomas Godwin, bishop of Bath and Wells, a prelate who fell into disgrace with queen Elizabeth, in consequence of his contracting a second (some say a third) marriage in his seventieth year. Francis, the subject of this article, was born in 1561, at Havington, Northamptonshire; and in his seventeenth year was elected to a studentship at Christchurch, Oxford. Having entered the church he obtained the rectory of Samford Orcas, in Somersetshire, with a stall in Salisbury cathedral, and in 1595 graduated as Doctor in Divinity, on being promoted to the sub-deanery of Exeter. Possessing a strong turn for the study of ecclesiastical antiquities, he associated himself with his friend Camden in a tour, for the purpose of exploring the principal monastic remains in the kingdom, especially in Wales. The result of his labours was a work descriptive of that part of their united researches, to which he had more particularly applied himself, which he published in 1601, under the title of "A Catalogue and Lives of English bishops." This treatise, through the recommendation of Lord Buckhurst, gained him the notice and the favour of Elizabeth, who raised him to the see of Llandaff, whence her successor, in 1617, translated him to the more lucrative one of Hereford. He married a daughter of Wollton, bishop of Exeter, and after a lingering illness died in 1633. Bishop Godwin was a good mathematical scholar, and is said to have understood the true theory of the motion of the moon nearly a century before it was generally known. Bishop Wilkins is indebted to him for many hints, afterwards followed up by the latter in his "Secret and Swift Messenger." He was also an elegant Latinist as appears by the third edition of his Episcopal Catalogue, which he published under his own superintendence, in consequence of the very slovenly manner in which the second had been printed in his absence. As an historian he is considered clear and accurate, and his annals of the reigns of Henry VIII, Edward VI, and Mary, have gone through three editions, to the last of which his son Morgan (archdeacon of Shropshire) added an English translation in 1630. His other works are "The Man in the Moon, by Domingo Gonzales," 8vo, printed after his death; a treatise "On the Value of the Roman Sesterce and Attic Talent;" and "Nunciatus Inanimatus."—*Biog. Brit.*

GODWIN (MARY) better known by her maiden name of Wolstonecraft, a writer of considerable but eccentric genius, was born in

or near London in 1759. Her parents, whose circumstances were humble, afterwards removed to a farm near Beverley in Yorkshire, where she attended a day-school. The family again returned to London, but nothing appears to have taken place remarkable until Miss Wolstonecraft attained her twenty-fourth year, except her adoption of very singular opinions in respect to the privileges of her own sex, and on religion, politics, and matters generally. On attaining the age above mentioned, she set up a school, in conjunction with her sisters, with whom she removed to Newington-green, where she obtained the notice and friendship of Dr Price. She never however appears to have relished the confinement of a school, and meditating literary employment, she wrote a pamphlet, entitled "Thoughts on the Education of Daughters;" the copyright of which she sold for ten guineas to Mr Johnson of St Paul's Church-yard, who afterwards proved one of her most liberal patrons. She was subsequently employed for some time as governess in the family of an Irish nobleman; on quitting which she had again recourse to literature, and produced "Mary, a Fiction;" "Original Letters from real Life;" "The Female Reader;" and some articles in the Analytical Review. She was also one of the first to answer Burke's Reflections on the French Revolution, which answer was followed by her celebrated "Vindication of the Rights of Women." The eccentricity of her theory was altogether equalled by the singularity of her practice, which led her first into the indulgence of a romantic but fruitless attachment to Mr Fuseli, the painter, although a married man, and unhappily to one more intimate with an American, of the name of Inlay, whose desertion caused her to attempt suicide. This ardent passion, like the former, was however overcome by a succeeding one, the object of which was Mr Godwin, author of "Political Justice," "Caleb Williams," and other well-known productions. As the bonds of wedlock were deemed a species of slavery in the theory of this strong-minded but fanciful female, it was only to legitimize the forthcoming fruits of the union that a marriage between the parties took place. The connexion however proved unfortunate, as she died in childbed, after being delivered of a daughter in August 1797. From the account given of her by Mr Godwin, who published her life, she was a woman of great, but undisciplined, natural powers and strong passions, to the suggestions of which she yielded as to the voice of nature, which it could not be improper to attend to; and as the forms and laws of society are particularly restrictive upon females in this respect, she held that they augmented the prejudices to which it was unreasonable to submit. Setting aside all discussion of the correctness of this theory, of the danger attendant on its practice this extraordinary female was herself an eminent instance. Besides the works above-mentioned, Mrs Godwin published a "Moral and Historical View of the French Revolution," and "Letters from Norway," which

were written with great sense and elegance. After her death, Mr Godwin published, in 4 vols. 12mo, some miscellaneous letters and an unfinished novel, with a life of the authoress, almost as curious as herself, and which it is apprehended will do little to advance the credit of the theory under which she acted.—*Life by Godwin.*

GODWIN (THOMAS) a native of Somersetshire, born 1587, and educated at Magdalen hall, Oxford. He took his master's degree in that university in 1609, and became shortly after master of the Abingdon grammar-school. Bishop Montagu patronized him much on account of his learning and abilities, and presented him in 1616 to the living of Brightwell, Berks, when he retired from his former situation. His writings consist of "Romane Historiæ Anthologia," an excellent school-book, printed in 4to, 1613, for the use of the seminary over which he then presided; "Synopsis Antiquitatum Hebraicarum," 8vo, 1616; "Moses et Aaron," a treatise on the Jewish rites and ceremonies, 1637; "Three Arguments to prove Election upon Foresight by Faith;" and "Florilegium Phrasicon." His death took place in the spring of 1643, at his parsonage-house in Brightwell.—*Biog. Brit.*

GOEZ (DAMIAN DE) a Portuguese author of the sixteenth century, born of a noble family in 1501 at Alenquer, and educated in the court of king Emanuel, of whose household he was a member. Having obtained permission to travel, he visited most of the continental courts, cultivating an acquaintance with the literati whom they maintained; among others with Erasmus, Olaus Magnus, and cardinal Bembo. John III recalled him to Lisbon after fourteen years' absence from his native country, during which he had married and settled at Louvain. His reception was at first in the highest degree favourable, and he was commissioned by the court to write the history of Portugal; his success however appears to have created him enemies, who went so far as to lodge a public accusation against him, and procured him to be put under arrest with orders not to pass the boundaries of the capital. The truth or falsehood of the charge was prevented from being brought to an issue by his sudden and unexpected death, the manner of which has been variously related, some asserting that it took place accidentally in a fire, while others aver that he was found dead in his own house, whether by apoplexy or strangulation could never be ascertained. The date of his decease is by all fixed in 1560. His principal writings are—"Hispaniæ Laudatio;" "Fides, Religio, Moresque Æthiopia;" "De imperio et Rebus Lusitanorum;" "Commentarius Rerum Gestarum in India Lusitanis;" and "Legatio Indorum Imperatoris ad Emanuelem Lusitanicæ Regem, AD. 1532." The style of his compositions in the Portuguese language is said to have been much vitiated by his long residence in foreign countries.—*Moreri.*

GOFF (THOMAS) a divine and dramatic writer, born in Essex about 1592, and was educated at

Westminster school and at Christ's college, Oxford, where he took the degree of B.D. In 1625 he was preferred to the living of East Clandon, where he died in 1629. He wrote several pieces and five tragedies, which were not published until some years after his death. In the latter part of his life he wrote some sermons which possess a good deal of fancy and vivacity, with funeral orations.—*Athen. Oxon.* vol. i. *Biog. Dram. Gent. Mag.*

GOGUET (ANTHONY YVES) a French writer, who was the son of a Parisian advocate, and was educated for his father's profession. He obtained by purchase the place of counsellor of the parliament; but distinguished himself more as a man of letters than as a lawyer. In 1758 he published a work, entitled "Origine des Loix, des Sciences, et des Arts et de leurs Progrès chez les Anciens Peuples," 3 vols. 4to, reprinted in 1758 and 1809, and translated into English. He commenced a treatise on the origin and progress of laws, &c. among the French, but was prevented from completing it by his death, which occurred in 1758, at the age of forty-two. As an author Goguet exhibits much industry and research, and a considerable degree of learning; but there is nothing in his speculations very striking or profound, and his volumes are valuable only for the mass of information which he has laboriously collected.—*Nouv. Dict. Hist. Biog. Univ.*

GOLDING (ARTHUR) an English writer of the age of Elizabeth, born in London. He translated Ovid's *Metamorphoses* into English verse, of which Pope speaks in terms of qualified commendation; also *Cæsar's Commentaries* and *Pomponius Mela* into prose. He was likewise the author of an account of the earthquake of 1580, and of several devotional and other treatises. He was patronized by Cecil, Sidney, and other of the leading literati of his time; but the precise period both of his birth and decease is uncertain.—*Biog. Brit.*

GOLDONI (CHARLES) an eminent writer of comedy, was the son of a physician of Venice, where he was born in 1707. As soon as he could read, he attached himself to the writers of comic drama, and before he was eight years of age he sketched a plan of a comedy of his own invention. He was sent to learn rhetoric at the Jesuits' college of Perugia, and philosophy at Rimini. However, his inclinations still leading him the contrary way, he eloped from Rimini with a company of comedians. After his father's death he was prevailed upon by his mother to take up the profession of a lawyer at Venice, but circumstances causing him to quit it he went to Milan, where he became the secretary of the Venetian resident. He here brought out his first piece, entitled "Il Gondoliere Veneziano," and soon after removing to Verona, he joined a company of players, whom he accompanied to Genoa, where he married. He then returned to Venice, and set himself about reforming the Italian stage. In 1761 he received an invitation from the manager of the Italian

theatre at Paris, whither he repaired, and made similar efforts. On the conclusion of his engagement he obtained an introduction to court, and was appointed Italian master to the princesses, with apartments in Versailles and a pension. On the accession of Louis XVI he was appointed Italian teacher to the princesses Clotilda and Elizabeth, but his infirmities obliging him to retire from court, he went to Paris, where in his old age he was deprived of his pension, in consequence of the Revolution. He died in 1792 at the age of eighty-five. Goldoni possessed real comic talents, but he wrote too rapidly to attain the highest rank. Voltaire in one of his letters styles him "the painter of nature." His dialogue is lively and spirited, and his pieces have a moral tendency. They were printed at Leghorn in thirty-one volumes, 8vo, 1788-91.—*Life by Himself. Monthly Mag.*

GOLDSMITH (OLIVER) an eminent poet, and miscellaneous writer, was born in 1751, at Pallas, in the county of Longford, Ireland. His father, the rev Charles Goldsmith, a clergyman of the establishment, sent him, at an early period, to Dublin college, and afterwards, with a view to the medical profession, to the university of Edinburgh. At both these institutions, the eccentricity and carelessness of his conduct involved his friends in considerable difficulties; and he was removed to Leyden at the expense of his uncle, the rev Thomas Contarine. After studying medicine and chemistry at the university for about a year, he left it, with only one clean shirt, and no money in his pocket, to make the tour of Europe on foot, and actually travelled in this way through Flanders, part of France, Germany, Switzerland, and Italy. It was probably at Padua that he took a medical degree, as he remained there six months, but his uncle dying while he was in Italy, he was again obliged to travel on foot to England, and reached London with a few pence in his pocket. He luckily found a countryman and fellow collegian, Dr Sleigh, who generously assisted him, and recommended him as an usher to a school at Peckham. He remained but a short time in this situation, and then took lodgings in London, in order to follow the profession of an author. He acquired a department in the *Monthly Review*, wrote essays in the *Public Ledger*, (since published under the title of "The Citizen of the World,") and also a weekly pamphlet, entitled "The Bee." In 1765 he suddenly appeared as a poet, by the publication of his celebrated production, "The Traveller," which having been written some time before, he finished and enlarged at the recommendation of Dr Johnson. The public agreed with that eminent critic, and the celebrity which this poem procured its author, was the cause of his introduction to the most eminent literary characters of the day. In 1766 appeared his well-known "Vicar of Wakefield," which at once secured merited applause. He also about this time, composed one of his most successful works, a "History of England, in a Series of Letters from a Nobleman to his Son,"

2 vols. 8vo, which for its elegance and liberal spirit was usually attributed to lord Lyttelton. In 1768 his comedy of the "Good Natured Man," was acted at Covent-garden with but indifferent success, and he applied to the more certain labour of a "Roman History," and a "History of England," in four volumes. His poetical fame was greatly enhanced in 1770 by the publication of his "Deserted Village," for which he could hardly be induced to take the proffered recompence of 100*l.* until satisfied that the profits of the bookseller could afford it. In 1772 he produced his comedy of "She Stoops to Conquer," which being completely successful was very profitable. He did not on this account neglect compilation, and besides a Grecian history, he supplied the booksellers with "A History of the Earth and Animated Nature," composed out of Buffon and others, in a manner which was both amusing and instructive, although the scientific acquirements of the author were not sufficient to guard against numerous errors. Such was the confidence he had acquired of his skill in compilation, that he was meditating a universal dictionary of the arts and sciences, when a despondency of mind, probably owing to the derangement of his circumstances, brought on a low fever, which, owing to an over-dose of a powerful remedy, terminated his existence in April 1774. He was buried with little attendance in the Temple church, but a monument has been erected to his memory in Westminster Abbey, with a Latin inscription, by Dr Johnson. The manners of Goldsmith were eccentric, even to absurdity; but no writer of his time possessed more genuine humour, or was capable of more poignancy in marking the foibles of individuals, of which faculty his unfinished poem of "Retaliation" furnishes a very happy specimen. His literary fame as a poet is fixed by his poems of "The Traveller," and "The Deserted Village," not to mention his pleasing ballad of "The Hermit," which, with some short miscellaneous pieces, complete the catalogue of his pieces in verse. His "Vicar of Wakefield" forms no mean claim for him as a novelist, and as a prose writer his style is peculiarly easy, clear, and unaffected. As a thinker he possibly possesses little depth or originality, and his humour both as a dramatist and essayist, although lively, is occasionally extravagant. His compilations are peculiarly felicitous, and it was truly observed in his epitaph, by Dr Johnson, that he left no species of writing untouched, and adorned all to which he applied himself.—*Ann. Reg. Aikin's G. Biog.*

GOLIUS. The name of two brothers, natives of Holland, born of an ancient family, and both celebrated as eminent Oriental scholars. **JAMES**, the elder and more distinguished of the two, was born in 1596 at the Hague. He commenced his education at Leyden, and in 1622 accompanied the Dutch embassy to the court of Muley Zeydan, emperor of Morocco, in quality of interpreter. He acquired the favour of the emperor, who made him many valuable presents of books and manu-

scripts, including a history of the kingdoms of Fez and Morocco. On his return to Europe, he was chosen to succeed his former friend Erpenius, lately deceased, in the Arabic professorship at Leyden, and was soon after appointed also to the mathematical chair in the same university, and made Oriental interpreter to the states-general, having previously spent fifteen months in travelling to Aleppo, various parts of Syria and Constantinople. A large collection of manuscripts, made by him in his travels, he presented to his university, and died at length September 28, 1667. Of his works the principal are an Arabic translation of the New Testament, with a Greek version, as also the Protestant Confession, Catechism, and Liturgy. He compiled two valuable lexicons of the Arabic and Persian tongues, the latter of which was printed in London; wrote a life of Tamerlane, and published a new edition of Erpenius's Grammar, and translations of Elmacin's "History of the Saracens" and the astronomical works of Alfragan.—**PEFFR**, his brother, born at Leyden, embraced the Catholic religion, and travelled into Syria, where he became the founder of a carmelite convent on Mount Libanus. Returning to Europe he went to Rome, and assisted in bringing out the Arabic Bible, printed in that capital in 1671. He translated also the works of Thomas-a-Kempis into the same language, and died in 1673 at Surat in the East Indies, whither he had proceeded as a missionary.—There was also a **THEOPHILUS GOLIUS**, professor of ethics at Strasburg, in which city he was born in 1528. He published a Greek grammar, and is known as the author of an abridgment of Aristotle's "ad Nicomachum." His death took place in 1600.—*Moreri.*

GOLTZIUS (HUBERT) an eminent antiquary, was the son of a painter, and was born at Venloo in 1526. He was instructed in his father's art, and at the same time he applied himself to the study of literature, history, and particularly of antiquities. He resided some years at Antwerp, but in 1558 he removed to Bruges. He made several tours through the Low Countries, Germany, France, and Italy, in pursuit of his favourite study. He was patronized by the emperor Ferdinand and other distinguished persons, and he was created a citizen of Rome. He died at Bruges in 1583. He was the author of "Fasti Romani ex Antiquis numismatibus et marmoribus;" "Julii Cæsaris et Augusti Vit. ex numismatibus;" "Sicilia et Magna Græcia ex numismatibus;" "Icones Imp. Romanorum et series Austriacorum;" "Thesaurus Antiquitatum." Goltzius was also a printer and engraver on wood.—*Moreri.*

GOMAR or **GOMARUS (FRANCIS)** an eminent Calvinistic divine, a native of Bruges, born 1563. He studied awhile in both the English universities, and graduated at Cambridge as B.D. On his return he obtained a professorship at Heidelberg, which in 1623 he relinquished for the theological chair, at Ley-

den, the celebrated Arminius being his colleague. The different views taken by these two professors on some of the leading polemical questions, both as to doctrine and discipline, soon terminated in a controversy which was carried on by both parties with scarcely less acrimony than acuteness. Gomar stoutly defending the opinions of Calvin, especially on the points of election and predestination, and distinguishing himself much by his zeal in the synod, which condemned those of his opponent. He subsequently filled literary situations, both at Middleburgh and Saumur, but died at Groningen in 1641, having for some short time previously to his decease filled the chair of Hebrew professor there. His controversial tracts were collected four years after his death, and printed in one folio volume at Amsterdam.—*Aikin's G. Biog.*

GOMBERVILLE (MARIN LE ROI, sieur de) a French writer, was born in or near Paris in 1599. His first productions were romances and works of a light kind, which gained him a literary reputation, and caused him to be enrolled in the number assembled by cardinal Richelieu for the foundation of the French Academy. At the latter part of his life he determined to devote his mind and his pen to religion, and adopted a strict course of life, which it is hinted was not long continued. He died in 1674. His works are—"Mémoires de Louis de Gonzague, duc de Nevers;" "Relation de la Riviere des Amazones;" "La Doctrine des Mœurs, tirée de la Philosophie des Stoïques représentée en cent Tableaux," which, though curious, is not much admired; "Carité;" "Cytherea;" "Polexandre;" and "Le jeune Alcidiene," published by Madame Gornez, who says that Gomberville's was merely an outline. He also wrote "Discours des Vertus et des Vices de l'Histoire," with several pieces of sacred poetry, &c.—*Niceron. Moreri.*

GOMERSAL (ROBERT) a divine and poet, was born in London in 1600, and was educated at Christchurch, Oxford, where he took his degrees in arts, and being created bachelor of divinity, distinguished himself as a preacher at the university. He became vicar of Thornecombe in Devonshire, where he died in 1646. He published a volume of sermons, which were much esteemed. His poetical productions are numerous; the principal are—"The Levite's Revenge," and a tragedy called "Lodovick Sforza, duke of Milan."—*Athen. Oxon. Biog. Dram.*

GOMEZ DE CIUDAD REAL (ALVAREZ) a Spanish Latin poet, was born in 1488 at Guadalaxara in Spain. He was page of honour to the archduke, afterwards the emperor Charles. He was the author of "Thalia Christiana," or the triumph of Jesus Christ, in twenty-five books; "Musa Paulina," or the Epistles of St Paul, in elegiac verse; the Proverbs of Solomon; but his most esteemed work is a poem on the order of the golden fleece, entitled "De Principis Burgundi Militia quam Velleris auri vocant." He died in 1538.—*Antonio Bibl. Hisp. Moreri.*

GOMEZ DE CASTRO (ALVAREZ) a Spanish writer, was born at St Eulalia near Toledo in 1515, and was educated at Alcalá. He was the author of many works, the principal of which is a life of "Cardinal Ximenes." He was patronized by Philip II, who employed him in preparing an edition of the works of St Isidore; but on the death of Gomez it was concluded and published by John Grialus. Gomez died in 1580.—*Ant. Bibl. Hist. Moreri.*

GOMEZ (MAGDALEN ANGELICA POISSON DE) a French authoress, was the daughter of Paul Poisson, a player, and was born at Paris in 1684. She married M. de Gomez, a Spanish gentleman of small fortune, in whose circumstances she was deceived. She however procured sufficient by her works to live at St Germaine-en-Laye, where she died in 1770. She was the author of a great number of romances, which are well written, and have been much esteemed:—"Les Journées Amusantes," 8 vols.; "Crementine," 2 vols.; "Anecdotes Persans," 2 vols.; "Hist. du Comte d'Oxford;" "La Jeune Alcidiene," 3 vols. (see Gomberville); "Les Cent Nouvelles," 8 vols. She also wrote some tragedies, which were unsuccessful.—*Dict. Hist. Moreri.*

GONGORA (LOUIS) a celebrated Spanish poet, was born at Cordova in 1562, and was the son of Francis des Argores and Eleanora de Gongora, whose name he took. He was brought up to the church, and was made chaplain to the king, and a prebendary in the cathedral of Cordova. His works were published in one volume, quarto, under the title of "Obras de Dom. Louis de Gongora-y-Argore." They consist chiefly of lyrical poems, in which he excelled, being called by his countrymen "the prince of lyric poets." His style however is often difficult to comprehend, even to the Spaniards themselves, and he has had almost as many censurers as admirers in his own country. He died in 1627.—*Moreri.*

GONZAGA (LUCRETIA) a celebrated lady of the sixteenth century, was the daughter of Pirro Gonzaga, lord of Gazzuolo. She received a literary education, and was a pupil of the famous Bandello. At the age of fourteen she married Gianpaola Manfroni of Ferrara, who, conspiring against the life of duke Hercules II, was capitally condemned in 1546. Lucretia used every effort to procure his pardon, but in vain, for though his life was granted him he was imprisoned for life. A collection of letters, imploring the intercession of almost all the powers of Europe, have been attributed to this lady, but are now proved to have been composed by Ortensio Landi. They however show that she had acquired much reputation by her real compositions. She died at Mantua in 1576. Several of her works were printed, one of which was a small volume of poems.—*Bayle. Moreri. Tiraboschi.*

GOODAL (WALTER) a Scotch antiquary, was born in Banffshire, Scotland, in 1706, and in 1723 he entered himself a student in King's college, Aberdeen. In 1730 he was employed in the advocate's library, Edinburgh, of which

He was appointed librarian in 1735. He died in 1766. He was warmly devoted to Mary queen of Scots, and projected her life, which he relinquished for his work entitled "An Examination of the Letters said to have been written by Mary to James, earl of Bothwell, in which he endeavoured to prove them forgeries. In 1734 he published an edition with emendatory notes of sir John Scot's "Staggering State of Scot's Statesmen," and contributed to Keith's "New Catalogue of Scotch Bishops;" and published an edition of Fordun's "Scotochronicon." He also assisted the celebrated Thomas Ruddiman in compiling the catalogue of the Advocates' library, upon the plan of the "Bibliotheca Cardinalis Imperialis.—*Life of Ruddiman by Mr. G. Chalmers.*

GOODWIN (THOMAS) a nonconformist divine in the seventeenth century, was born at Rolesby in Norfolk in 1600. He was educated at Christchurch college and Catherine-hall, Cambridge, of which he afterwards became fellow. Having taken orders, he was elected lecturer of Trinity church in Cambridge in 1628; and in 1632 he was presented by the king to the vicarage of the same church. Becoming however dissatisfied with the terms of conformity, he relinquished his preferments, and in 1634 he quitted the university. When the puritans were persecuted by the episcopal consistories, he fled to Holland, where he became pastor of the congregation at Arnheim. At the beginning of the long parliament he returned to London, and became a member of the assembly of divines, with whom however he did not always agree. His attachment to the independent party rendered him a favourite with Cromwell, through whose influence

1649 he was made one of the commissioners for the approbation of public preachers, and appointed president of Magdalen college, Oxford, where he formed a meeting upon the independent plan. He attended Cromwell upon his death-bed, and expressed himself most confident in his recovery, and when the event proved that he was mistaken, he thus expressed himself in a subsequent address to God, "thou has deceived us, and we are deceived." After the Restoration he was ejected from Oxford, and retired to London, where he was permitted to continue in the exercise of the ministry till his death in 1679. He was the author of numerous sermons, expositions, pious and controversial treatises.—*Calamy's Account of eject. Min. Palmer's Noncon. Mem. Neal's Hist. Purit. Granger's Biog. Hist. of Eng.*

GOOGE (BARNABY) a celebrated poet and translator, flourished in the sixteenth century. He was educated at Christ's college, Cambridge, whence he removed to Staple's-inn. He is supposed to have been the same who was a relation and retainer of sir William Cecil, queen Elizabeth's minister, and who was gentleman pensioner to the queen. He was the author of a volume published in 1563, entitled "Ecloges, Epitaphs, and Sonnets," which is very scarce. His principal transla-

tion was the "Zodiack of Life," from Marcellus Palingenius Stellatus, a very moral but tiresome satire, with other works.—*Phillips's Theatrum Poet.*

GORDON (ALEXANDER) a learned writer and excellent draughtsman, was a native of Scotland, but resided for many years in Italy and other parts of Europe. He was successively appointed secretary to the society for the encouragement of learning, to the Egyptian Club, and to the Antiquarian Society. In 1741 he went to Carolina with governor Glen, where he received a grant of land and occupied several offices. He died there about 1750. He was the author of "The Lives of Pope Alexander VI and his son, Cæsar Borgia;" "Itinerarium Septentrionale, or a Journey through most Parts of the Counties of Scotland, illustrated by Copper-plates;" "Additions and Corrections to the Above;" "A Complete History of ancient Amphitheatres, translated from the Italian;" "Twenty-five Plates of all the Egyptian Mummies in England and other Egyptian Antiquities;" "An Essay towards explaining the Hieroglyphical Figures on the Coffin of a Mummy."—*Nichols's Lit. Anecdotes.*

GORDON (ANDREW) professor of philosophy in the Scot's monastery of the Benedictines at Erfurt, and correspondent of the Academy of Sciences at Paris, was born near Aberdeen in Scotland in 1712. He was sent to study at Ratisbon, and in 1731 he undertook a tour through Austria, Italy, and France. In 1732 on his return he entered the order of the Benedictines in the Scot's monastery, where he was ordained a priest. He drew upon himself the attacks of the jesuits and the displeasure of some of his catholic brethren, by preferring the modern philosophy to the scholastic. He is also well known by his discoveries in electricity. Besides some controversial pieces, he was the author of the following—"Impartial Account of the Origin of the present War in Great Britain;" "Physica experimentalis Elementa;" "Philosophia utilis et jucunda;" "Phænomena Electricitatis exposita." Dr Priestley mentions him as the first person who used a cylinder instead of a globe in the electrical apparatus. He died in 1751.—*Hirsching's Manual of eminent Persons who died in the Eighteenth Century.*

GORDON (hon GEORGE) called, by courtesy, lord George Gordon, was the son of Cosmo George, duke of Gordon, in Scotland, and was born in 1750. He entered when young into the navy, but left the service during the American war, in consequence of a dispute with lord Sandwich relative to promotion. He then became a member of the house of Commons, where he sat during several sessions for the borough of Ludgershal. His parliamentary conduct was marked by a certain degree of that eccentricity which became but too conspicuous in his subsequent behaviour; but he displayed no deficiency of wit or talent, often animadverting with great freedom on the proceedings of the ministers and their opponents. At length, in 1780, a bill

having been introduced into the house for the relief of Roman catholics from certain penalties and disabilities, he collected a vast mob, consisting of the members of a protestant association and the rabble of the metropolis, at the head of whom he marched in procession to the house of Commons, to present a petition against the proposed measure. The dreadful riot which ensued, and which was not suppressed till after the destruction of many catholic chapels and dwellings, the prison of Newgate, and the house of the chief-justice, lord Mansfield, led to the arrest of lord George Gordon, and his trial on the charge of high treason; but no evidence being adduced of treasonable design, he was acquitted, though the magnitude of the mischief which his impudence had occasioned, rendered him the object of apprehension as an insane and dangerous enthusiast. His future conduct was little calculated to efface such impressions. In May 1786 he was excommunicated for refusing to come forward as a witness in a court of law. He then published a "Letter from Lord G. Gordon to the Attorney-General of England, in which the motives of his Lordship's public Conduct from the beginning of 1780 to the present Time are vindicated," 1787, 8vo. In the beginning of 1788, having been twice convicted of libelling the French ambassador, the queen of France, and the criminal justice of this country, he retired to Hollaud, but he was arrested, sent home, and committed to Newgate, where he passed the remainder of his life. He died November 1, 1793, disturbed in his last moments by the knowledge that he could not be buried among the jews, of whose religion he had become a zealous professor during his imprisonment.—*Ann. Reg.*

GORDON (THOMAS) an industrious writer in favour of civil and religious liberty, was born at Kircudbright, in Scotland, towards the close of the seventeenth century. After receiving an academical education in his own country, he came to London, and maintained himself as a classical teacher. He first distinguished himself in the Bangorian controversy, in defence of bishop Hoadly, which acquired him the notice of Mr Trenchard, a zealous Whig, in conjunction with whom he wrote a series of papers, entitled "Cato's Letters." They were likewise the authors of "The Independent Whig;" and on the death of Trenchard, sir Robert Walpole acquired the literary aid of Gordon, and procured him the place of commissioner of wine licences, which he held until his death. Besides his political works he supplied English versions of Tacitus and Sallust, which he disfigured by an attempt to imitate the energy and conciseness of the originals, but on the other hand showed a very critical knowledge of the sense of his authors. He died in 1750, at the age of sixty-six, leaving behind him two posthumous works, entitled "A Cordial for Low Spirits," and "The Pillars of Priestcraft, and Orthodoxy shaken." As a party writer he possesses strength and acuteness, but is too prone to

coarseness and vulgarity. He was a manly writer on the side of freedom, but it was at a time when exertions in this direction were not unrewarded.—*Aikin's G. Biog.*

GORE (THOMAS) an heraldic writer, was born at Alderton in Wiltshire, and was educated at Magdalen college, Oxford. He then went to Lincoln's-inn, but soon after retired to his patrimony at Alderton. In 1680 he was appointed high sheriff of Wiltshire, but having suffered from some attacks upon his character while in that office, he wrote a defence, entitled "Loyalty displayed, and Falsehood unmasked." He was also the author of "A Table shewing how to blazon a Coat ten several ways," 1655; "Series Alphabeticæ Latino-Anglicæ, Nomina Gentilitiorum, sive cognominum plurimarum familiarum, quæ multos per annos in Anglia floruerunt," 1667; "Catalogus in certa capita, seu classes, alphabeticò ordine concinnatus plerorumque omnium Authorum (tam antiquorum quam recentiorum) qui de re Heraldica, Latine, Gallicè, Ital. Hisp. scripserunt;" "Nomenclator Geographicus." He died at Alderton in 1684.—*Ath. Oz. Gent. Mag.*

GORGIAS, surnamed LEONTINUS, from Leontium in Sicily, was a learned orator and sophist, who flourished in the fifth century BC. He is said to have been a disciple of Empedocles, and was one of the earliest writers on rhetoric. He displayed his eloquence at the Olympian and Pythian games, and made such an impression that a golden statue was erected in his honour at Delphi. He was one of the first who introduced numbers into prose, and who treated of common places, and showed the use of them for the invention of arguments; and on this account Plato gave the name of Gorgias to his elegant dialogue on this subject, which is still extant. Gorgias lived to the age of one hundred and seven or one hundred and eight years.—*Fabrieius. Bibl. Græc. Moreri. Sæxii Onom.*

GORIO (ANTONY FRANCIS) a learned antiquary of the eighteenth century, was a native of Florence. He was the author of "Musæum Etruscum," 3 vols. folio, 1737; "Musæum Cortonense," folio, 1750; "Musæum Florentinum, or a Description of the Cabinet of the Grand Duke," 11 vols. folio; and of "Ancient Inscriptions in the Towns of Tuscany," 3 vols. folio, 1727.—*Now. Dict. Hist.*

GORLÆUS (ABRAHAM) a celebrated medalist, was born at Antwerp in 1549. He resided at Delft, and devoted himself entirely to collecting ancient rings, seals, and curiosities. His works are much valued by all antiquarians; they consist of "Dactylotheca, seu Annulorum, Sigillorumque e Ferro, Ere Argento, atque Auro, promptuarium;" "Paralipomena Numismatum;" and "Thesaurus Numismatum familiarum Romanum."—*Bayle. Moreri.*

GOSELINI (JULIAN) an Italian writer, was born at Rome in 1525, and at the age of seventeen was taken into the service of Ferdinand Gonzaga, then viceroy of Sicily, whom he accompanied to his government of Milan in 1646. He then became his secretary, which situation he held under three succeeding

governors. His writings were much esteemed, and obtained him great reputation; the principal are—"Three Conspiracies, viz. of the Pazzi and Salviati against the Medici; of Giovan-Luigi de Fieschi against the Republic of Genoa; and of some Placentines against the duke Pietro Luigi Farnese;" "The Life of Ferdinand Gonzaga;" "Rime," or a collection of Poems several times reprinted; "Discourses;" "Letters;" and some Latin poems and letters. He died in 1587.—*Bayle. Tiraboschi.*

GOSSON (STEPHEN) a divine and poet, was born in Kent in 1554, and studied in Christchurch, Oxford. He left the university without completing his degrees, and came to London, where he wrote some dramatic pieces which were never published. He then took a rooted dislike to the drama, and retiring into the country he became tutor to a gentleman's son, but in consequence of some dispute with the father, he quitted his situation and took orders. He was first preferred to the living of Great Wigborow in Essex, and in 1600 to the rectory of St Botolph, Bishopsgate, where he died in 1623. He was an imitator of sir Philip Sidney, whose contemporary he was. His unpublished plays were—"The Comedy of Captain Murio;" "Praise at Parting;" and "Catiline's Conspiracies;" and in opposition to the drama he wrote "Play confuted in five several Actions," and "The School of Abuse." He was also the author of the "Ephemerides of Phialo," and of a sermon, entitled "The Trumpet of War."—*Athen. Oion. Gent. Mag. Biog. Dram.*

GOSTLING (WILLIAM) an English clergyman of some note as a collector of antiquities and topographical writer. He was born in 1705, and having received an academical education, and taken the degree of MA. he entered into holy orders. He obtained the vicarage of Stone in the Island of Oxney, and was a minor canon of Canterbury, where he long resided, and died March 9, 1777. He published in the Philosophical Transactions an account of a fire-ball seen in the air, and an explosion heard December 11, 1741; and he was also the author of "A Walk in and about the City of Canterbury; with many Observations not to be found in any Description hitherto published," London, 1774, 8vo, second edition, enlarged, Canterbury, 1777. It is rather an odd circumstance that this perambulation on paper was performed while the author was confined to his chamber by a tedious fit of sickness.—*Reuss's Register of Eng. Authors. Pref. to Hasted's Hist. of Canterbury.*

GOTTSCHED (JOHN CHRISTOPHER) a German author of the last century, born at Koningsberg in 1700. He was professor of philosophy, logic, and metaphysics in the university of Leipsic, and did much by the purity of taste exhibited in his dramatic writings, towards the reformation of the German stage. In the composition of these pieces he derived considerable assistance from his wife, herself a woman of great talent, who translated the "Rape of the Lock" into Ger-

man, with much felicity of adaptation. The principal works of Gottsched are his tragedy of "The Death of Cato;" an "Introduction to Dramatic Poetry;" "Principles of General Philosophy;" "Principles of the German Language;" "Critical History of the Language, Poetry, &c. of the Germans;" "The German Poets;" and some miscellaneous poems. He was also the author of several treatises on music, among which are—"Remarks on the Origin and Antiquity of Music, &c.;" "On the Composition of Cantatas;" and "Remarks on the Opera." He survived his wife little more than two years, dying at Leipsic in 1765.—*Nouv. Dict. Hist.*

GOUDIMEL (CLAUDE) an eminent musician of Franche Comté, much celebrated among the Calvinists in France for his church music. He appears to have been originally a Catholic, from the circumstance of his setting to music the "Chansons Spirituelles" of Muret, which were printed in 1555 at Paris. In 1565 however appeared his music of the Psalms of Marot, reprinted in 1607 for the use of the Calvinists in Holland. These are composed in fugue, and are some of them so difficult, that though much admired by those for whom they were written, they seem to have availed little for general use. This work lost the unfortunate composer his life, as he was one of those assassinated by the mob at Lyons in 1572, on the day of the memorable massacre of St Bartholemew.—*Biog. Dict. of Mus.*

GOUFFIER (MARIE GABRIEL AUGUSTE LAURENT, count de Choiseul) a French nobleman of the same family with the duke de Choiseul, who distinguished himself by his patronage of the fine arts, as illustrative of classical archæology. He was born in 1752, and was educated in a manner becoming his station in society. At the age of twenty-two he commenced a tour through Greece and the neighbouring islands; and on his return to France he published a most splendid work, entitled "Voyage pittoresque de la Grece," folio, illustrated with engravings by artists of the first eminence. The merit of this production however is by no means confined to the plates, as the text which accompanies them is replete with valuable information, derived from the labours of historians, poets, and geographers, ancient and modern, as well as from the observations of the author. The reputation which the count de Choiseul Gouffier derived from this undertaking, procured him admission into the Academy of Inscriptions and Belles Lettres, and likewise into the French Academy. But he had completed only one volume of his work, which was published in parts, when in 1784 he was appointed ambassador to Constantinople. Intending to prosecute his design of illustrating the antiquities of Greece, he took out in his suite several artists and literati, and established a printing-press in the palace which he occupied in the Turkish capital. The occurrence of the French Revolution diverted his attention from the arts and sciences to politics. In January

1790 a letter was read before the National Assembly, which announced the patriotic donation of 12,000 livres from the French residents at Constantinople, and also of an equal sum from a citizen, who professed a desire to remain unknown, but it was well understood that the anonymous citizen was the count de Choiseul. In 1791 he was nominated ambassador to the court of London, but he did not accept the appointment; and on the 22d of October, 1792, a decree of arrestation was issued against him by the Convention, for having held intercourse with the French emigrant princes. He then quitted Constantinople and went to Russia, where the empress, Catharine II, gave him a most favourable reception, and bestowed on him a pension as a member of the Academy of Petersburg. Paul I in February 1797, made him a privy counsellor, and he was also appointed director of the Academy of Arts, and superintendent of the imperial libraries. His name having been erased from the list of emigrants, he returned to France in 1802. He was elected a member of the National Institute in 1803, and resuming his literary undertaking he published in 1809 part of the second volume of his Picturesque Tour in Greece, and the remainder soon after. The publication of Le Chevalier's "Voyage de la Troade," and the Picturesque Travels of Cassas, gave offence to M. de Choiseul, both those gentlemen having made their researches under his auspices. An appeal to the press was productive of a controversy of too personal a nature to be permanently interesting. On the re-establishment of royalty in France, the subject of this article obtained a place among the peers of the realm. He did not enjoy this dignity many years, his death having taken place in 1817. Besides his great work, he published papers in the Memoirs of the Academy of Inscriptions.—*Biog. Univ. Dict. des H. M. du 18me. S.*

GOUGH (RICHARD) an eminent English topographer and antiquary, who was the son of an East India director, and was born in Winchester-street, Austin Friars, London, in 1735. He was educated at home, and the first fruits of his studies was a translation from the French of a history of the Bible, produced when he was only eleven years old.—The pardonable partiality of a fond mother induced her to have this monument of precocious talent printed; only however for private distribution, the edition being limited to twenty-five copies. At the age of fifteen Mr. Gough translated Fleury's treatise on the manners of the Israelites; and this work was also printed for gratuitous circulation. As an additional proof of his application, it may be mentioned that he formed a laborious compilation, entitled "Atlas Renovatus, or Geography Modernized." In 1752 he entered as a student at Bennet college, Cambridge, and his academical pursuits appear to have been of a similar description with those which occupied his future life, as it was during the time he remained at the university that he laid the plan of his very useful work, entitled "Anecdotes of British Topography," pub-

lished in one volume quarto in 1768, and reprinted with improvements in 2 vols. 1780. He left Cambridge without taking a degree, the exclusive nature of his literary researches having probably prevented him from following the accustomed routine of study. Engaging in no profession, and being possessed of a competent income, he was enabled to dedicate his time and talents to the cultivation of his favourite branches of science, and the number and importance of his publications are creditable to his industry, and have secured him no small share of reputation. He was chosen a fellow of the Society of Antiquaries, and in the Archæologia, or Transactions of that Society, as well as in the Bibliotheca Topographica Britannica, and the Gentleman's Magazine, he published many communications. He also produced a work entitled "Sepulchral Monuments of Great Britain," 1786, 2 vols. folio; an enlarged edition of Camden's Britannia, 1789, 3 vols. folio; and one still more augmented in 4 vols. 1806; an Account of the Bedford Missal; and the History of Pleshy in Essex. After having resided many years at Enfield in Middlesex, he died there February 20, 1809, and was interred at Wormley in Hertfordshire. He bequeathed to the Bodleian Library at Oxford his collection of books and manuscripts, relative to Saxon and Northern literature and to British topography.—*Nichols's Lit. Anec.*

GOUJET (CLAUDE PETER) a French writer, was the son of a tailor, and was born at Paris in 1697. He was educated in the Jesuits' college, and on taking orders he became a canon of the church of St Jacques de l'Hôpital in Paris. His works are very numerous, and display much erudition; the principal are—"L'Histoire du College Royal de France," 12mo; "Hist. du Pontificat de Paul V," in which he is by no means favourable to the jesuits; "Les Vies des Saints," 2 vols. 4to; "Supplement to Moreri's Dictionary," displaying much industry but little judgment; "De l'Etat des Sciences en France," 12mo; "Bibliothèque des Auteurs ecclesiastiques du XVIII Siècle," 3 vols. 8vo.—*Nouv. Dict. Hist.*

GOUJON (JEAN) a French artist in the reigns of Francis I and Henry II, a native of Paris, the elegance and correctness of whose works have procured him the honourable designation of the "Correggio of Sculpture." Goujon was a Huguenot, and constituted one of the many victims who perished in the general massacre of St Bartholemew in 1572. The fine façade of the old Louvre was by him.—*D'Argenville.*

GOULET (NICHOLAS) a French architect, was born at Paris in 1745, and died in 1820. He built or decorated many Parisian hotels, and was the author of the following works:—"Dissertations sur les Meurs des Quais, sur les Trottoirs et les Fontaines de Paris;" "Sur les moyens d'éviter les incendies et d'économiser le bois des la construction des Bâtimens;" "Sur les inconveniens des Fosses d'aisance et les moyens d'y suppléer;" "Description des Fêtes à l'occasion du Mariage d'

Napoleon," with the text of the "Description de Paris et de ses Edifices," in the third volume of Landon's work; lastly, the text of M. Krafft's work, entitled "Recueil d'Architecture civile." Goulet also cultivated elegant literature, and was the author of some agreeable songs and poetry.—*Biog. Univ. des Contemporains.*

GOURNAY (MARY LE JARS DE) a learned French lady, was born at Paris in 1566. While very young she lost her father, and was adopted by the celebrated Michael de Montagne, who called her his daughter of alliance. She was well versed in the learned languages, and corresponded with most of the literary characters of her time, by some of whom she was styled the "tenth muse" and the "French syren." Her style however was stiff and awkward, and she was greatly attached to ancient phraseology. Her temper also was so violent and resentful that she made herself many enemies, who attacked her in writings, the principal of which were the "Remerciment•les Beurrieres," and the "Anti-Gournai." She published an edition of the "Essays" of her adopted father, dedicated to cardinal Richelieu. Her works were collected and published in a quarto volume, under the title of "Les Airs ou les Presens de la Demoiselle de Gournai." She passed her life in celibacy, and receiving a small pension from the court. She died in 1645.—*Bayle. Moreri. Nouv. Dict. Hist.*

GOUSSIER (JOHN JAMES) a French writer on mathematics and natural philosophy. He was a native of Paris, where he died in 1800, at the age of seventy-eight. His principal production was a work entitled "La Physique du Monde," Paris, 1780, 7 vols. 4to, published in conjunction with M. Marivetz. He was also the author of "A Prospectus of a Treatise on the Physical Geometry of France," 4to; and he edited Condamine's "Memoir on the Mensuration of the first three Degrees of the Meridian in the Southern Hemisphere," 4to. He was well acquainted with mechanics, and invented some ingenious machinery for agricultural operations, &c.—*Nouv. Dict. Hist.*

GOW (NEIL) a native of Strathband in Perthshire, of humble origin, born in 1727. He exhibited an early talent for music, but appears to have been almost entirely self-taught till his fourteenth year, when he received some instruction from a Mr Cameron, a musician in the employ of sir G. Stewart of Grandtully. His progress towards excellence as a violinist was singularly rapid, and he soon carried away a prize from some of the best performers in the country, the judge, who was blind, declaring he could "distinguish the stroke of Neil's bow among a hundred players." The patronage of the Athol and Gordon families soon after introduced him to the notice of the fashionable world, with which he continued a distinguished favourite till his death. This took place at Inver near Dunkeld in 1807. One peculiar excellence appears to have been a striking feature in

Gow's performance, the power with which he bundled his bow, particularly in what is called the upward or returning stroke. This was his excellence; and where the note produced by it was generally feeble in other hands, in his it was struck with a strength and certainty which never failed at once to delight and to astonish. In private life he was distinguished by a sound and vigorous understanding, while his appearance exhibited so characteristic a model of the Highlander, that his portraits have been multiplied all over the country. Four excellent originals of him are in existence, three by sir Henry Raeburn, and the fourth by Allan, who has introduced striking likenesses both of him and his brother, Donald Gow, (who usually accompanied him on the violin-cello) into his picture of "A Highland Wedding."—*Biog. Dict. of Mus.*

GOWER (JOHN) an ancient English poet of the fourteenth century, said by Leland to have descended from a family settled at Sittenham in Yorkshire. He was liberally educated, and was a member of the society of the Inner Temple, and some have asserted that he became chief-justice of the Common Pleas, but the more general opinion is that the judge was another person of the same name. He particularly attached himself to Thomas of Woodstock, duke of Gloucester, uncle to Richard II, and wrote his principal work at the desire of that unfortunate monarch. He appears to have been in affluent circumstances, as he contributed largely to the building of the conventual church of St Mary Overy in Southwark. He lost his sight in the first year of the reign of Henry IV, which misfortune he did not long survive, dying at an advanced age in 1402. He was buried in the church to which he was a benefactor, where his tomb is still to be seen. Gower takes a place among English poets, more in reference to antiquity than poetical merits. He abounded in the learning of the age, but advances little claim to genius or invention; and is so uniformly grave and sententious, even upon topics which might inspire vivacity; that his friend Chaucer styles him "the moral Gower." He was author of a tripartite work, entitled "Speculum Meditantis;" "Vox Clamantis," and "Confessio Amantis;" of which the first is a moral tract relative to the conjugal duties, written in French rhymes: the second a metrical chronicle of the insurrection of the commons under Richard II, in elegiac verse, and the third an English poem in eight books, relative to the morals and metaphysics of love; which alone has been printed, and was one of the earliest products of the English press, being printed by Caxton in 1483. The most interesting part of this motley work, in which he endeavours to display all his erudition, is composed of a variety of stories, adduced as moral examples. The language of this early production is tolerably perspicuous, and the versification often harmonious. In his Latin style he aims at copying Ovid's Elegiacs, but had not surmounted the barbarism of monkish rhymes.—*Warton's Hist. of Eng. Poetry.*

GOZZI (GASPAR) count, was born in Venice in 1713, and died in 1786. He distinguished himself among modern writers by the purity of his language and style. His translation of the "Loves of Daphnis and Chloe" of Longus is much esteemed; but his tragedies and other dramatic works are inferior to those of his brother, count Carlo. The "Osservatore Veneto," a periodical work which he brought out in imitation of the Spectator, also enjoys a deservedly high reputation. His works were collected and printed in 12 vols. 8vo.—*Biog. Univ.*

GRABE (JOHN ERNEST) a learned divine and critic of the last century. He was born in 1666 at Königsberg in Prussia, his father being professor of theology and history in the university there. After having gone through a course of study to qualify him for the clerical office, and taken the degree of M.A. he was led from perusing the writings of the fathers, to adopt the opinion that an outward and uninterrupted succession of bishops is essential to the constitution of a true church. Dissatisfied with Lutheranism, in which he had been educated, he was on the point of taking refuge in the bosom of the church of Rome, when the arguments of M. Spener, a Prussian divine, induced him to relinquish his purpose, and seek a religious communion congenial with his views in the episcopal church of England. Coming to this country he was patronized by king William III, who allowed him a pension of 100*l.* a year. He then devoted his talents chiefly to the illustration of the monuments of ecclesiastical antiquity. In 1693 he published the first volume of a collection of the smaller treatises and remains of the early Christian fathers and heretics, entitled "Spicilgium SS. Patrum;" and the second volume of the work appeared in the following year. In 1700 he took deacon's orders in the church, and was presented to the chaplaincy of Christchurch, Oxford, which was the only preferment he ever held. He next edited some of the works of Justus Martyr and Irenæus; and queen Anne on her accession having continued his pension, employed him in publishing the Septuagint version of the Old Testament, from the Alexandrian MS. In 1705 he issued proposals for a subscription in aid of his undertaking, with specimens of the manner in which it might be executed. The university of Oxford testified approbation of his design by giving him a diploma of DD. In 1707 appeared the first volume of his edition of the Septuagint in folio and octavo. The expectation of obtaining additional materials for the second and third volumes, induced him to postpone their publication till after the fourth, which issued from the press in 1709. He died in 1712, and the remainder of the work was published from his manuscripts in 1719 and 1720. Besides his literary labours already noticed, he edited the Latin works of bishop Bull, and wrote a tract against Whiston.—*Aikin's G. Biog.*

GRACCHUS (TIBERIUS SEMPRONIUS) a highly distinguished Roman, was the son of a

father of the same name, who, although of plebeian origin, had obtained the consulship. The happy disposition of Tiberius was cultivated with the most assiduous care; and he early distinguished himself for eloquence, sobriety, and political knowledge. In conformity with the Roman custom, he passed his youth in military service; and as his influence increased, stimulated by the abject condition of the lower classes of Roman citizens, he attempted to revive a modification of the Licinian law, in total contempt of which, the patricians and men of opulence had, by a long series of usurpations, appropriated to themselves all the public lands. The opposition of the superior orders was, of course, violent and strenuous; and Gracchus, who had procured himself to be elected a tribune of the people, was not backward, on his part, in rousing the people to an assertion of their rights. He was however defeated in the first instance by the negatives of his colleague, the tribune Cæcina, who, although at one time the friend of Gracchus, had been gained over by the patricians. He then took a step which the strange constitution of Rome allowed, and suspended all the magistrates from the execution of their offices. This strong measure not availing, he induced the people to deprive Cæcina of his office, upon which the agrarian law was passed without farther opposition, and Gracchus, his brother Caius, and Appius Claudius, were appointed to see it put into execution. He also carried his attack upon the nobles still farther, by adding to his law a clause for recalling all usurpations from the republic; and passing another, for distributing among the poorer citizens the treasures of Attalus, king of Pergamus, who had made the Roman people his heirs. He also planned other regulations for abridging the authority of the nobles, until the latter determined to make a final stand; and on the day of the election for tribunes, a violent affray took place, which terminated in the assassination of Gracchus, and three hundred of his party, by an armed faction led on by Scipio Nasica. This storm of civil fury took place BC. 133, before Gracchus had reached his thirtieth year. All have agreed in acknowledging the great talents and private worth of Tiberius Gracchus; and his memory has been regarded either as that of a martyr to patriotism, or a victim to personal ambition, according to the principles of those who have studied his history. The most candid however, are disposed to credit the purity of his original intentions, and to regard such of his actions as appear the most indefensible, to the inevitable consequences of the nature of the influence against which he had to contend.—*Plutarch, Vit. Gracc.*

GRACCHUS (CAIUS) brother of the preceding, and his junior by nine years. He enjoyed the same advantages of education, which he so well improved, that he became one of the ablest orators of his time. After the tragical end of Tiberius, he passed some time in retirement; but subsequently accompanied the consul, Aurelius Orestes, to Sardinia, as his

questor. On his return he became candidate for the tribuneship; and such was the zeal of the people, that the Campus Martius could not contain the multitude which flocked from the Italian cities to support his election. He soon openly pursued the plans of his deceased brother, and passed laws still more obnoxious to the patricians. By the arts of the senate, however, his influence was gradually undermined, and he not only lost his third election for tribune, but his professed enemy, Opinius, was chosen consul. The two parties at length came into open conflict, and Fulvius, one of the partizans of Gracchus, having seized upon mount Aventine, Caius reluctantly set out to join him. On arriving at the spot, he sent proposals of accommodation to the consul, which being rejected, a formal battle ensued; and Caius, who either from timidity or humanity had refrained from fighting, was induced to retire from the city. Being pursued, he reached a grove dedicated to the Furies, where, according to one account, he ordered his slave to dispatch him; and to another statement, he fell beneath the weapons of his pursuers. His head was cut off, and sold by his captors for its weight in gold; and his body was thrown into the Tiber, but subsequently delivered to his mother for burial. Three thousand persons perished in this catastrophe, which happened BC. 121. The senate immediately abolished all the laws of the Gracchi, whose names were long fondly cherished by the people, and held in equal detestation by the aristocracy. Caius has generally been regarded as more violent and less pure in his intentions than his brother Tiberius; but the difference appears rather in the circumstances opposed to him, than in original purpose.—*Ibid.*

GRACIÁN (BALTHASAR) an eminent Spanish writer, was born at Calatayud in 1603; and entering among the Jesuits at the age of sixteen, he became successively a teacher of belles lettres, of philosophy, and of theology. He was also a preacher, and was made rector of the Jesuits' college of Tarragona. He is much esteemed by his own countrymen; and his works have been translated into French and other languages. They are "Agudezza y arte de Ingenio," 1642, a treatise on the different kinds of witty conceptions; "El Heroe," 1637; "El Politico D. Ferdinando el Catholico," 1641; "El Discreto;" "El Criticon," a work treating of the errors to which man is liable; "El Comulgador," 1655, a collection of meditations on taking the holy communion; "Oraculo Manuel y arte de Prudencia," 1647, a manual for prudent conduct. He died in 1658.—*Moreri. Nouv. Dict. Hist.*

GRÆME (JOHN) a Scottish poet, was born at Carnwarth, in Lauarkshire, in 1748. He was the youngest of four sons of a petty farmer, who on discovering his early capacity, found means at a late period to have him classically educated; and in due time to remove him to the university of Edinburgh. His turn for elegant composition, first appeared in the solution of a philosophic question, proposed as a

college exercise, which he chose to exemplify in the form of a poetic tale. This happened in 1769; and he fell a sacrifice to a consumption so early as 1772, leaving behind him some elegiac and miscellaneous poetry, which was published in 1773, in an octavo volume.—*Anderson's Poets.*

GRÆVIUS or GRAVE (JOHN GEORGE) a learned classical scholar, born at Naumbourg, in Saxony, in 1432. Such was his ardour for study, that while at school he sometimes passed the greater part of the night in reading the works of Homer and Hesiod. He then went to the university of Leipsic, where he was the pupil of Andrew Rivinus and John Strauchius; and he afterwards passed two years at Deventer. At the age of twenty-four he obtained a professorship at Duisbourg; and subsequently succeeded John Frederic Gronovius, at Deventer. Thence he was invited by the states of Utrecht to become professor of politics, history, and rhetoric, in their university, which station he filled with great reputation during forty-one years; and he also held the office of historiari to the king of Great Britain, William III. He died in 1703. His literary productions consist of valuable editions of the Epistles and Orations of Cicero, and of the works of Florus, Cæsar, Suetonius, Hesiod, &c.; besides two voluminous collections:—"Thesaurus Antiquitatum Romanorum," 12 vols. folio; and "Thesaurus Antiquitatum Italicorum," 6 vols. folio, afterwards continued by Peter Burman. Grævius displayed but little of the pedantry and arrogance which too often deform the character of the critic, and was deservedly esteemed both as a man and a scholar.—*Stollii Introd. in Hist. Lit. Moreri.*

GRAFFIGNY (FRANCES D'ISSEMBOURG D'HAPPOUCOURT, DE) a literary lady, was born at Nanci about 1694. She married the chamberlain to the duke of Lorraine, De Graffigny, a man of such brutal disposition, that after living many years with him, she was obliged to obtain a legal separation. She then went to Paris, where she soon made herself known by her literary productions, the first of which was a Spanish novel. This was soon followed by the "Lettres d'une Peruvienne," which work was much read and esteemed for its development, of the delicacies and intricacies of sentimental passion. She was also the author of a dramatic piece, entitled "Cenée," which was considered an excellent specimen of the grave or pathetic comedy. "La Fille d'Aristide," was less admired. She was an associate of the academy of Florence, and received a pension from the court of Vienna. She died at Paris in 1758.—*Nouv. Dict. Hist.*

GRAFTON (RICHARD) an English chronicler of the sixteenth century. He was a printer in the metropolis, and is said to have written part of Hall's Chronicles, entitled "The Union of the Two Noble and Illustrious Families of York and Lancaster," of which he printed an edition in 1548. He also compiled a "Chronicle at large of the Affayres of Englande, from the Creation of the Worlde

nato queene Elizabeth," 2 vols. folio, printed by Henry Denham, in 1569, when he had probably relinquished his occupation. He was alive in 1572, but the period of his decease is not known. Grafton's "Chronicle" was republished in 2 vols. 4to, 1809.—*Dibdin's Typog. Antiq.*

GRAHAM (GEORGE) a celebrated clock and watch-maker, and the most accurate artist of his day, was born at Kirkclinton, in Cumberland, in 1675. He was received into the family of the celebrated Tompion, and became the inventor of several astronomical instruments, which much advanced the progress of science. He was a member of the Royal Society, and constructed the great mural arch in the observatory at Greenwich. He also composed the whole planetary system, within the compass of a small cabinet, from which model all succeeding orreries have been formed. Several of his papers are in the Philosophical Transactions. He died in 1751.—*Hutchinson's Cumberland.*

GRAHAME (JAMES) a Scottish poet, was bred to the bar, but forsook the law to take orders in the church of England. He then entered upon a curacy in the neighbourhood of Durlham, when he died in the prime of life, in 1811. His poetry is mostly of a meditative and religious character, but animated, flowery, and descriptive. His principal pieces are "The Sabbath;" "The Bards of Scotland;" and "British Georgics."—*Gent. Mag.*

GRAINGER (JAMES) an English physician, who distinguished himself as a poet in the last century. He was born at Duns, in Berwickshire, in 1724. His father, who after having sold an estate in Cumberland, had obtained the situation of an excise officer, bestowed on him a classical education, and placed him as a pupil with a surgeon at Edinburgh, where he also attended the medical lectures at the university. Having finished his studies he entered into the army as a regimental surgeon, and served in Germany under the earl of Stair, till the peace of Aix-la-Chapelle, in 1748; after which he took the degree of MD. and settled in the metropolis. His practice as a physician however was probably but trifling, and he is said to have supported himself principally by writing for the press. An "Ode to Solitude," first published in Dodsley's collection of fugitive poetry, procured him deserved reputation in the literary world; and among his more intimate acquaintances were Shenstone and Dr Percy, afterwards bishop of Dromore. In 1759 he published a translation of the Elegies of Tibullus, which was respectably executed. Some criticisms on this production, in the Critical Review, involved him in a paper war with Dr Smollett. He then went to the West Indies, with a young gentleman to whom he had become tutor; and during the voyage he formed an attachment to a lady whom he married on his arrival at Basseterre, in the island of St Christopher, of which her father was governor. He engaged in medical practice at that place, and was

very successful. His leisure was still devoted to poetry, and he produced a kind of West Indian Georgic, or didactic treatise in blank verse, entitled "The Sugar Cane;" and "Bryan and Pereene," a ballad. The former he published in 1764, during a visit to England, for the purpose of submitting the MS. to the criticism of his friends. He then returned to Basseterre, where he died of an epidemic fever, in 1767. The Ode to Solitude, which, as Boswell informs us, extorted the praise of that severe censor, Dr Johnson, is the only composition of Grainger calculated to yield him durable fame, though some passages in his Sugar Cane, and the West Indian Ballad, occasionally find their way into collections of poetry.—*Hutchinson's Biog. Med. Aikin's Biog.*

GRAMAYE (JOHN BAPTIST) a Flemish traveller, antiquary, and historian of the seventeenth century. He was a native of Antwerp, and studied at the university of Louvain, where he obtained the professorships of law and rhetoric. He was subsequently historiographer to the Netherlands, provost of Arrhem, and apostolical protonotary. Having made a tour through Germany and Italy, he was proceeding by sea to Spain, when he was captured by an Algerine pirate, and taken to Barbary. After his return home he travelled into Moravia and Silesia, and at length was placed at the head of a college in the latter province. He died while on a journey at Lubeck, in 1635. His works are numerous, relating chiefly to the history and antiquities of his native country. Among the others are "Africa illustrata;" "Diarium Algeriense;" and "Specimen Literarum et Linguarum universi Orbis;" besides Latin poems.—*Foppens's Bibliot. Belgic. Moreri. Biog. Univ.*

GRAMMONT (PHILIBERT count of) son of Antony, duke of Grammont. He served under the prince of Condé and Turenne, but having rashly paid his addresses to a lady who was a well-known favourite of Louis XIV, he was obliged to quit France, and came to England two years after the Restoration. He was highly distinguished by Charles II, possessing, with a great turn for gallantry, much wit, humour, politeness, and good nature. He seems to have been indebted for his support chiefly to his profits at play, at which he was very successful. He married Miss Elizabeth Hamilton, daughter of sir George Hamilton, and died in 1707. His celebrated Memoirs were written by his brother-in-law, Anthony, generally called count Hamilton, who followed the fortunes of James II, and afterwards entered the French service, and died in 1720.—*Preface to Memoirs. Collins's Peerage.*

GRAND (JOACHIM LE) a political and historical writer, was born in 1653, at Thorigny in Normandy. He entered the congregation of the Oratory, which he quitted in 1676, and went to Paris, where he became tutor to two young noblemen, and studied history under father Le Cointe. His first work was "A History of the Divorce of Henry VIII, and Catherine of Arragon," in which he attempts

to justify the jesuit Sanders, and to refute the two first books of Burnet's History of the Reformation. He also addressed three letters to the bishop, to which he replied. In 1692 he was appointed secretary to the abbé d'Estrées in his embassy to Portugal, and in 1702 he accompanied the same minister into Spain, where he remained about two years. He afterwards went into the service of the marquis de Torci, minister of state. He was possessed of church preferment, and was for some time censor royal of books. He died in 1733. His works are "De la Succession à la Couronne de France;" "A Translation of Lobo's History of Abyssinia." He also wrote the Life of Louis XI, which was not published.—*Niceron* vol xxvi. *Moreri*.

GRAND (JOHN BAPTIST LA) a miscellaneous writer, was born at Amiens in 1737, and was surnamed D'Aussy. At the age of eighteen he entered the society of Jesuits, and a few years afterwards he was elected to the rhetorical chair at Caen. On the dissolution of the order, he devoted himself to literature, and was employed in the French Glossary projected by La Curne de Sainte Palaye. He next engaged with the marquis de Paulmy and the count de Tressan in the "Bibliothèque des Romains;" after which he occupied himself in collecting, translating, and commenting upon the "Fabliaux," or tales of the old French poets. In 1770 he was appointed secretary in the direction of the studies of the military school, and in 1796 conservator of the national library. He conceived the plan of a complete history of French poetry, and had accomplished part of his design when he was seized with an indisposition which terminated his life in 1801. His works are "Fabliaux, or Tales of the Twelfth and Thirteenth Centuries;" "Contes devots Fables Romains anciens, pour servir de suite aux Fabliaux;" "Histoire de la Vie privée des Français;" "Tour to Auvergne;" "Vie d'Apollonius de Tyane."—*Dict. Hist.*

GRANDIER (URBAN) curate and canon of Loudon in France, famous for his intrigues and tragical end, was born at Bouvere near Sablé, in the latter part of the fifteenth century. He was a man of reading and judgment, and an eloquent preacher, for which he was much hated by the monks of Loudon, especially as he urged the necessity of confessing in preference to the parochial priests at Easter. Being a handsome man and very neat in his apparel, he was suspected of an improper attention to women, and in 1629 he was accused of criminal intercourse with some of his own flock, and condemned by his official to forfeit his benefices. An appeal to the parliament of Paris however acquitted him, on which his monkish enemies induced some Ursuline nuns of Loudon to believe themselves bewitched, and to charge Grandier with the sin of their possession. The accusation failed in the first instance, on which the rancorous conspirators maliciously persuaded cardinal Richelieu, that Grandier was the author of a satire upon his person and family. That vindictive minister immediately countenanced a renewal

of the persecution; and the result was, that on the most gross and absurd of all evidences Grandier was declared guilty, and ordered to be burnt alive, which sentence he endured with great firmness and constancy, on the 18th April, 1634. There is reason to believe that Grandier was a man of loose conduct; but the very curious publication, entitled "Histoire des Diabes de Loudon," proves that the pretended possession of the nuns, was a horrible conspiracy against his life. As an author he is known only for a funeral oration, which is said to possess considerable eloquence.—*Moreri. Nouv. Dict. Hist.*

GRANELLI (JOHN) a Genoese Jesuit, distinguished as a divine, orator, and poet. He was educated at Venice; and became professor of belles lettres at the university of Padua, where he acquired great reputation for eloquence. His superiors sent him to Bologna, to study theology; but the vivacity of his disposition did not exactly coincide with the course prescribed for him, and he amused himself with poetical composition. He wrote for the public exercises of the jesuits' colleges, Latin tragedies, which were much admired. Having finished his theological studies, he became a preacher; and after acquiring much distinction in Italy, he was, in 1761, invited to Vienna, by the empress Maria Theresa, to become Italian preacher in that capital. The last twenty years of his life were divided between his clerical duties and those of his professorship of theology at Modena. He died in March 1770. His works are "Lezioni morali, storiche, critiche, e cronologiche sul Genesi, &c." and other religious publications; besides four tragedies, Sedecia, Manasses, Dione, and Seila.—*Biog. Univ.*

GRANET (FRANCIS) dean of the church of Aix, was born in 1692, at Brignolles in Provence, but came early to Paris. He was employed by Desfontaines in his continuation of his "Nonvelliste du Parnasse," entitled "Observations sur les Ecrits Modernes," until the king revoked the privilege. He then published "Réflexions sur les Ouvrages de Littérature," a journal that extended to twelve volumes. He learned English, and translated sir Isaac Newton's "Chronology," which he published at Paris in 1728. But one of his best editions is that of the works of Launoy, and a "Launoiana," consisting of very curious articles. Moreri mentions many other editions to which he wrote prefaces and notes; and he was also a contributor to the "Bibliothèque Française." He died at Paris in 1741.—*Moreri. Dict. Hist.*

GRANGE (JOSEPH DE CHANCEL DE LA) a poet, was born in Perigord in 1676. He went to the Jesuits' school at Bordeaux, where, at the age of nine years he composed a comedy, which was represented by the scholars. He was taken to Paris, and placed as a page to the princess of Conti. His tragedy of "Jugurtha" was represented when he was only sixteen, and was greatly admired. He continued writing for the stage, but his most famous production was his "Philippiques," a

atire in verse against Philip, duke of Orleans, regent. It contained many infamous accusations against the duke, and even went so far as to charge him with the crime of poisoning several of the royal family. This was published anonymously, but the author was soon discovered. He fled to Avignon, but being pursued, he was taken and committed to the prison of St Marguerite. By some means however he contrived to escape, and being invited by Augustus, king of Poland, to his court, he remained there some time, but upon the regent's death he returned to France, where he lived unmolested. His works were published in 5 vols. 12mo; and consist of tragedies, operas, and miscellaneous poems. The most esteemed tragedies are "Orestes and Pylades;" "Athenais;" "Amasis;" "Jugurtha;" "Ino," and "Melicerte." His cantatas are some of them good, but he wanted refinement. He died in 1758. He left a History of Perigord unfinished in MS.—*Duclos Mem. Nouv. Dict. Hist.*

GRANGER (JAMES) a clergyman who distinguished himself by his researches relative to English biography. He was a native of Berkshire, and was educated at Christchurch college, Oxford, but left the university without a degree. Having taken orders in the church, he obtained the vicarage of Shiplake, in Oxfordshire. He employed himself in making a collection of portraits, which led him to form the design of compiling a complete catalogue of engraved portraits of Englishmen, chronologically arranged and classified. This undertaking he partially executed by the publication of his "Biographical History of England," 1769, 2 vols. 4to, in which the lists of engravings were accompanied by short memoirs, enlivened with anecdotes, particularly illustrative of the modes of dress and manners which prevailed in this country at different periods. Mr Granger subsequently produced a third or supplementary volume; and in 1775 a second edition of the whole work, with large additions and improvements, made its appearance, in 4 vols. 8vo. In the prosecution of his plan he derived assistance from Horace Walpole, the rev R. Farmer, the rev W. Cole, and other men of letters, from whose correspondence and his own researches he accumulated materials for extending his catalogue beyond the reign of queen Anne, at which the fourth volume terminates. His death took place April 15th, 1776, in consequence of an apoplectic seizure the preceding day, while administering the sacrament in Shiplake church, and which prevented him from proceeding with the work. A collection of his letters and those of his correspondents was published by James Peller Malcolm, 8vo. A continuation of the Biographical History through the reigns of George I and George II, by the rev Mark Noble, appeared in 1806, three vols. 8vo.—*Ann. Reg. Chalmers's Biog. Dict.*

GRANT (CHARLES) an eminent East-India proprietor and director, was born in Scotland in 1746. By the death of his father at the

battle of Culloden, the care of his education rested upon his uncle, who sent him out in a military capacity to India. On his arrival, however, he found patronage in the civil service, and in 1770 returned to Scotland and married. In 1772 he was sent out to Bengal as a writer, and was shortly after appointed secretary to the Board of Trade. While in the east he distinguished himself by his patronage of the Christian missions, and on his return to England in 1790 obtained a seat in the East-India direction. He was also a member of the House of Commons, where his opinion on Indian affairs obtained great attention. He soon after wrote a valuable tract, entitled "Observations on the State of Society among the Asiatic Subjects of Great Britain," which in 1813 the House of Commons caused to be printed for the use of its members, the result of which diffusion of his views was the foundation of an ecclesiastical establishment in India, and the appropriation of a sum for the education of the natives. Mr Grant, who exhibited much practical philanthropy and benevolence, was one of the commissioners appointed by parliament to superintend the building of new churches; also a member of the society for promoting Christian knowledge; and a vice-president of the Bible society. He died Oct. 31, 1825.—*Ann. Biog.*

GRANVILLE (GEORGE) viscount Lansdowne, baron of Biddeford, so created in 1711. He was born in 1667 of an ancient and distinguished family, being second son to Barnard Granville, esq, brother to the first earl of Bath of that name, and grandson to sir Bevil Granville (or Greenville) who fell in the royal cause at Lansdowne, in 1643. He was sent on his travels while a mere boy, and on his return entered at Trinity college, Cambridge, where he displayed such quickness and precocity of parts as to be admitted to the degree of A.M. in his fourteenth year. A strong inclination for a military life was checked by the caution of his friends, and he remained inactive during the various and trying changes of the time, employing himself in the cultivation of a vein of poetry, to the indulgence of which an ardent but unsuccessful passion for the beautiful countess of Newburgh (whom he has celebrated under the name of Myra) mainly contributed. On the accession of Anne he made his first appearance at court, and was graciously received, his fame as a man of letters and talent being then established by the flattering success which attended his play called the "British Enchanters." This piece, under the auspices of Betterton, had a run of forty nights, and long continued to be highly popular. Mr Granville now turned his attention to politics, and having become, by the death of his father and elder brother, the head of his family, he took his seat in the House of Commons as member for Fowey. The party with which he connected himself coming into power after the trial of Sacheverell, he in 1710 succeeded Walpole as secretary of state, and in the year following formed one of the twelve peers, whose simultaneous creation for party

purposes made so great a noise at the period. In 1712 he was made a privy counsellor and treasurer of the household, but on the queen's death he not only lost his post, but being suspected of disaffection to the Hanoverian succession, was arrested and sent to the Tower, September 26, 1715, where he remained in durance more than a twelvemonth. Although released he continued to be looked upon with jealousy by the court, and on his friend Atterbury's being accused of treason, he thought it prudent to retire to the Continent, where he remained ten years. He returned to England in 1732, and passed the remainder of his life as a private gentleman, amusing himself by correcting and republishing his poems, and writing a vindication of his uncle, sir Richard, against the charges of Clarendon and Burnet. This he printed in two 4to vols. His death took place January 30, 1735.—*Biog. Brit.*

GRATIAN a benedictine of the twelfth century, was a native of Chiusi, and was the author of a famous work, entitled "Decretal," or "Concordantia discordantium Canonum," in which he endeavours to reconcile those canons that seem to contradict each other. He was however guilty of some errors, which Anthony Augustine endeavoured to correct in his work, entitled "De emendatione Gratiani." Gratian's "Decretal" forms one of the principal parts of the canon law. The best editions are those of Rome, 1582, 4 vols. folio; and of Lyons, 1671, 3 vols. folio.—*Cave. Dupin. Sarii Onom.*

GRATIUS FALISCUS, an eminent Latin poet, supposed to have been contemporary with Ovid, and pointed out by him in the last elegy of his fourth book De Ponto. He was author of a poem, entitled "Cynogeticon, or the Art of Hunting with Dogs," the style of which is deemed pure, but destitute of elevation. The first edition of the Cynogeticon was published in 1504, Bonon. fol., but the best is that of London, 1698, 8vo.—*Vossius de Poet. Lat.*

GRATIUS (ORTIVUS) a native of Holhwic, in the diocese of Munster, who became head of the university of Cologne, where he died in 1542. He is famous not for what he himself wrote, but for the wit and humour he elicited from others, his bigotry inducing Hutton and others to compose the celebrated "Epistolæ obscurorum Virorum ad Dominum Magistrum Ortivum Gratiani," 1516 and 1517, 4to, a work of poignant satire, of which a beautiful edition was printed at London in 1710, 12mo, and dedicated to the author of the Tatler.—*Moreri. Aikin's G. Biog.*

GRATTAN (HENRY) an eminent Irish orator and statesman, was born at Dublin about the year 1750, of which city his father was recorder. He finished his education at Trinity college, whence he removed to England, and became a student in the Middle Temple. He was called to the Irish bar in 1772, and in 1775 was brought into the parliament of Ireland on the borough interest of lord Charlemont. He immediately became highly distinguished in the ranks of opposition, and infused that spirit into the country, which

in the course of two years aroused and disciplined 80,000 volunteers; and finally produced, in 1782, a reluctant assent on the part of the British ministry and parliament to a repeal of the statute of 6th Geo. I. That statute had enacted, that the crown of Ireland was inseparably connected with that of Great Britain; that Ireland was bound by British acts of parliament when named therein; that the Irish house of Lords had no jurisdiction in matters of repeal; and that the dernier resort, in all cases of law and equity, was in the lords of Great Britain; all which was now rescinded. For his share in the acquirement of this great concession, Mr Grattan received addresses from all parts of the country, and the Irish parliament voted him 50,000*l.* and a house and lands for him and his heirs for ever. Two or three sessions of great parliamentary exertion followed, which were distinguished by the oratorical rivalry and political enmity of Messrs. Grattan and Flood, which struggles however, after a little temporary decline of popularity, terminated in the confirmed ascendancy of the former, who gradually became the leader of the country party in the house of commons, and the head of the Irish whigs. In 1790, although already avowedly zealous for concessions to the catholics, Mr Grattan was returned for the city of Dublin, and remained an active senator until the premature recall of earl Fitzwilliam. Disgusted by the policy which followed, and by the unhappy Irish rebellion, and its manifold horrors, he temporarily seceded from parliament, and lived in retirement. The grand project of a union being brought forward by Mr Pitt, he once more obtained a seat in parliament, for the express purpose of opposing it. When carried however, he did not refuse a seat in the united house of Commons, being returned in 1805 for the borough of Malton in Yorkshire. He supported the war policy of the administration, but the later years of his parliamentary attendance were chiefly occupied in a warm and energetic support of catholic emancipation. He may even be said to have died in the service of this important question, for being unanimously called upon by the catholic body to carry their petition to England, and to present and support it in the house of Commons, when the exertions were represented by his friends as incompatible with his age and declining health, he nobly replied, that "he would be happy to die in the discharge of his duty." This event unfortunately took place soon after his arrival in London, on the 14th of May, 1820, at the age of seventy. His remains were interred with due solemnity, and a very honourable attendance in Westminster abbey. In the political life of Mr Grattan there was nothing temporising or dubious; he was the zealous and unequivocal friend to Ireland, and to what he deemed her best interests, from first to last, while in the way of mere party distinction, he may be regarded as an aristocratical whig. In private life he was a warm friend, and until years had softened his ardent temperament, a bitter enemy. His

saimosities then assumed a much miller form, in regard both to oratory and conduct. As a public speaker he had to contend with a defective voice; but his eloquence was always bold and commanding, combining strength with beauty, and energy and elevation with elegance. In regard to figure and illustration, the tone of it was distinctively Irish, but his highly cultivated taste and sound discrimination kept him generally clear of that redundancy of trope and abstraction which is sometimes a conspicuous defect in the eloquence of his countrymen. He was at all times animated, and occasionally altogether powerful. Mr Grattan married early in life a lady of the name of Fitzgerald, which union produced thirteen children, one of whom, called after his father, is the present representative of the city of Dublin.—*Ann. Biog.*

GRAUN (KARL HEINRICH) an eminent German musician of the last century, chapel-master to Frederick the Great. He was born in 1701, at Wahrenbrück, in Saxony, and educated at Dresden. In 1733 he attracted the notice of his patron, then prince-royal of Prussia, who sent him at his own expence to Italy for improvement, and on his return two years afterwards, placed him at the head of the magnificent theatre which he had just constructed. In this situation he remained till his death, in 1759. Graun, who appears to have enjoyed in Germany a reputation scarcely inferior to that of Handel in England, was the author of an almost innumerable variety of Masses, Oratorios, &c. The most celebrated of the latter is a "Te Deum," the best known of his compositions in this country; and "Der Tod Jesu," part of which, together with some of his other compositions, may be found in Latrobe's selections. A few more are printed in Dr Crotch's specimens. The overture and frame-work of the opera of "Galatea" (to which Frederick himself composed many of the airs) are also by him.—*Biog. Dict. of Mus.*

GRAUNT (EDWARD) a man of learning in the sixteenth century, was educated at Westminster, whence he was removed to Oxford, where he took the degree of B.A. in 1571, and of M.A. the year following, when he was appointed master of Westminster school. On resigning his mastership of the school in 1591, he was presented to the living of Barnet, in Middlesex, and soon after to the rectory of Toppersfield, in Essex. He died in 1601. He published the letters and poems of Roger Ascham, to which he subjoined a piece of his own, entitled "Oratio de Vita, Obitu, ac dictionis elegantis Rogeri Aschami cum adhortatione ad adolescentulos;" and "Græcæ Linguae Spicilegium," which was afterwards epitomized by his usher, Mr William Camden, and published in 1597, under the title of *Institutio Græcæ Grammaticæ compendiarium in usum Regiæ Scholæ Westmonasteriensis.* Graunt also appears, from several copies of verses, to have been an excellent Latin poet.—*Art. Or. Tupper. Bentham's Ely. Biog. Brit. Gen. Dict.*

GRAUNT (JOHN) a citizen of London; one of the first in England who turned his attention to political arithmetic, was born in London in 1620. He was a haberdasher, and became a freeman of the drapers' company and a common-councilman. The bills of mortality of the city of London coming under his observation, he conceived that several important inferences might be drawn from them, and he accordingly composed a work, in which he was assisted by his friend sir William Petty, entitled "Natural and Political Observations made upon the Bills of Mortality," 1661, 4to. This went through five editions, and procured for Mr Graunt admittance into the Royal Society. The style of this work is plain, and the observations are not remarkable, but the numerous facts which it contains, and the manner in which they are disposed, made it of considerable service. On his giving up business in 1666, he obtained the management of the New River Company. Some time before his death he changed his religion, and became a convert to popery. His death took place in 1674.—*Biog. Brit.*

GRAVELLOT (HENRY FRANCIS BOURGEOIS) a French artist, was born at Paris in 1699, and soon distinguished himself as a draftsman. He went to St Domingo with La Rochefort, the governor-general, and there meeting with Fiezier, was employed by him on a map of the country. In 1745 he returned to France, and applied himself to drawing, but despairing of distinguishing himself there, he came to London, and was much employed by our artists in drawing ancient buildings, tombs, and prospects, in which he excelled. He is compared by Vertue to Picart; and the same artist says, that in composition and design he surpassed Hollar. He sometimes painted small histories and conversations, and he designed and engraved some of the prints to Hanner's and Theobald's editions of Shakspeare; but his principal engraving is the large print of Kirkstall abbey. He returned to France at the commencement of the late reign, and continued to execute designs for the booksellers of Paris. He died in 1773.—*Walpole's Anec. Nouv. Dict. Hist.*

GRAVES (RICHARD) a clergyman, who obtained distinction as a poet and novelist. He was born at Mickleton in Gloucestershire in 1715, and at the age of sixteen entered as a scholar of Pembroke college, Oxford, and in 1735 he was chosen a fellow of All Souls. He obtained the rectory of Claverton near Bath in 1750; and that pleasant sequestered village became his future residence. Mr Allen, of Prior park, by whom he was highly esteemed, built for his accommodation an apartment at the rectory, as a school-room; observing, that when it had served the purposes of instructing boys, it might be appropriated to the hospitable service of entertaining friends. To this gentleman he was also indebted for the living of Kilmersdon, to which he was presented in 1763. He was the intimate friend and correspondent of the poet Shenstone, after whose death he published "Recollections of Parci-

years in the Life of Shenstone." He was also the author of "The Festoon, or a Collection of Epigrams; with an Essay on that species of Composition;" "Lucubrations in Prose and Rhyme;" "The Spiritual Quixote, a Novel," 3 vols.; "Columella, or the Distressed Anchoret," 2 vols.; "Euphrosyne, a Collection of Poems," 2 vols.; "Eugenius, or the Golden Vale," 2 vols.; "Plexippus, or the Aspiring Plebeian," 2 vols.; "The Reveries of Solitude;" besides a translation from the Greek of the Meditations of Marcus Antoninus; sermons, a comedy, and various miscellaneous productions; all which display more or less of ease, sprightliness, and a peculiar strain of pointed humour, which has made them deservedly popular. But the *Spiritual Quixote* is the best of Mr Graves's works, of which it has been observed, that though it does not display so much wit as the compositions of Fielding, nor so much humour as those of Smollett, yet it combines in a great degree the excellencies of both. It exhibits a faithful, though necessarily somewhat satirical portraiture of the extravagancies of methodism, as they appeared among the immediate followers of Whitfield and Wesley. It has been stated (though we cannot vouch for the accuracy of the information) that the author's son was the prototype of Mr Geoffrey Wildgoose, the hero of the tale. Mr Graves employed his pen to the last, and having published "The Invalid, with the obvious means of enjoying Life, by a Nona-genarian," he died in 1807, at the rectory at Claverton, where he had dwelt nearly sixty years.—*Gent. Mag.*

GRAVESANDE (WILLIAM JAMES LES') an eminent Dutch mathematician and natural philosopher of the eighteenth century. He was born in 1688, at Bois-le-Duc, and studied the civil law at the university of Leyden, where he took his doctor's degree in 1707. He settled at the Hague, and practised as a barrister: but his attention was much engrossed by mathematics and physics, on which subjects he published some dissertations in the *Literary Journal of the Hague*, in the conduct of which he was concerned. In 1715 he was appointed secretary to the embassy sent by the states-general to England, to congratulate George I on his accession to the crown. On this occasion Dr S'Gravesande formed an acquaintance with sir Isaac Newton, and was chosen a FRS. Returning home he became professor of mathematics and astronomy at Leyden, where he first taught the Newtonian philosophy. In 1721 he went to Cassel, at the request of the handgrave of Hesse, to examine the famous wheel of Orffyreus, a professed exhibition of the perpetual motion.—(See ORFFYREUS.)—To his labours in the cause of science as a lecturer he added the publication of several works, which contributed to make known the discoveries of Newton, and extend the boundaries of knowledge. Among these were—"Physices Elementa Mathematica, experimentis confirmata, sive Introductio ad Philosophiam Newtonianam"

1720, translated into English by Dr Desaguliers; "Matheseos Universalis Elementa," 1727, 8vo; and "Introductio ad Philosophiam, Metaphysicam et Logicam continens." In 1734 he added to his other professorships that of philosophy, which he retained till his death in 1742.—*Aikin's G. Biog.*

GRAVINA (JOHN VINCENT) an eminent jurist and man of letters, was born at Rogliano, a castle in Calabria, in 1664. He studied civil and canon law at Naples, and visiting Rome, resided for some years with Paul Coador of Turin. He was one of the founders of the Academy of Arcadi, and drew up their laws in the style of the Roman tables. In 1698 he was appointed professor of civil law at the college of Sapienza, and five years afterwards he succeeded to the chair of canon law and to the exposition of the decretal. He gained great reputation by his writings, which were numerous. The principal "*Origines Juris Civilis*," is considered a classical work, replete with learning. To the Naples edition, printed in 1713, was subjoined a treatise, "*De Imperio Romano*," also highly esteemed. He was also the author of "*Institutes of Civil and Canon Law*;" "*Della Tragedia*;" "*Della Ragion Poetica*;" a treatise, "*De Institutione Poetarum*," and five tragedies, written upon the model of the ancients, which were not favourably received. He was invited to Turin by the duke of Savoy, and was preparing to go thither when he was seized with an illness, and died in 1718, in the arms of his scholar, Metastasio, whom he made his chief heir.—*Moreri. Tiraboschi.*

GRAVINA (PETER) a Latin poet, was born at Palermo in Sicily, of a family originally of Gravina, a city in the kingdom of Naples. He was canon of Naples. Most of his works were lost in 1501, when the French went to Naples under Louis XII, but the remaining pieces were published in 1532, and some were inserted in the "*Carm. Illust. Poet. Ital.*" Sannazarius prefers his epigrams to those of his contemporaries; and Paul Jovius and others speak very highly of his poetry.—*Moreri. Dict. Hist.*

GRAY, MD., FRs. (EDWARD WHITAKER) an English physician and naturalist, who was several years senior secretary to the Royal Society, and keeper of the department of natural history and antiquities at the British Museum. He was the author of an "*Account of the Epidemic Catarrh of the Year 1782*," in the first volume of Dr Duncan's *Medical Commentaries*; "*Observations on the Manner in which Glass is charged with the Electric Fluid and discharged*;" and "*Observations on the Class of Animals called, by Linnaeus, Amphibia*;" both published in the *Philosophical Transactions*. He died in January 1807, aged fifty-nine.—*Hutton's Abr. of Ph. Trans.*

GRAY (STEPHEN) a gentleman belonging to the Charter-house, who in the early part of the last century distinguished himself by his researches concerning natural philosophy. Previously to the year 1733 he discovered the

method of communicating electricity to bodies not naturally possessing it, by contact or contiguity with electric. Hence he drew the conclusion that means might be found to accumulate the electric fluid, and he thus led the way to professor Muschenbroeck's invention of the Leyden phial, the formation of electrical batteries, &c. Mr Gray himself projected a kind of luminous orrery, or electrical planetarium. He was the author of several papers in the Philosophical Transactions.—*Priestley's Hist. of Electricity.*

GRAY (THOMAS) a distinguished English poet, was the son of a money scrivener in the city of London, where he was born in 1716. Being an only child, he was regularly educated and sent to Eton, where he laid the foundation of his future intimacy with Horace Walpole and Richard West. In 1734 he removed to Cambridge as a student of St Peterhouse, where he early obtained some reputation for literature and poetry. He quitted college in 1738, and entered himself at the Inner Temple, with a view of studying law, but was easily induced to accept the invitation of Mr Walpole to accompany him in his tour of Europe, towards the close of which they separated, and Gray, with his moderate resources, finished the expedition by himself, and returned to England in 1741. His father soon after died, and leaving a very small property behind him, Mr Gray wholly resigned the expensive cultivation of the law, and returned to academic retirement at Cambridge. Here he occupied himself several years in laying literary schemes and plans of magnitude, which he often admirably commenced, but uniformly wanted energy to mature. So slow was he to publish, that it was not until 1747 that his "Ode on a distant Prospect of Eton College," made its appearance before the public, and it was only in consequence of the printing of a surreptitious copy, that in 1751 he published his "Elegy, written in a Country Church-yard." This poem, which was sent into the world without the author's name, quickly ran through eleven editions, was translated into Latin verse, and has secured lasting popularity. In 1757, on the death of Cibber, the office of laureate was offered to Mr Gray, who declined it, and the same year published his two principal odes, "On the Progress of Poesy" and "The Bard," which, although little calculated to attract the many, tended materially to exalt his poetic character. In 1759 he removed to London, where he resided for three years, in the vicinity of the British Museum; and in 1769 took a journey in Scotland, and was introduced to the most eminent men of literature of that country. In 1768 the duke of Grafton presented him with the professorship of modern history at Cambridge, in consequence of which he wrote the "Ode for Music," for the installation of that nobleman as chancellor of the university the following year. It was the intention of Gray to do something more than his predecessors, who had made the office a sinecure, although afford-

ing a salary of 300*l.* per annum; but his health soon after declining, he proceeded no farther than to sketch a plan for his inauguration speech. He died of the gout in his stomach on the 30th July, 1771, in his fifty-fifth year, and was buried with his mother in the church-yard of Stoke Poges in Buckinghamshire. As a poet Gray excels not in pure invention, neither is he highly pathetic or sublime, but he is splendid, lofty, energetic, and harmonious. Although lyric poetry was what he chiefly cultivated, if a judgment may be formed from his noble fragment of "An Essay on the Alliance of Education and Government," he would have excelled in the didactic. As a writer of Latin verse he is surpassed by few, and his letters are esteemed very admirable specimens of the epistolary style. In his disposition he was peculiarly fastidious and delicate, which gave an air of effeminacy and timidity to his manners, which subjecting him to much occasional ridicule, at the same time very singularly contrasting with the manly and mental strains of his poetry. In morals he was temperate, upright, and a constant friend to virtue; and such was his delicacy in pecuniary matters, that he carried his fear of receiving favours to a blameable excess. Few men of equal reputation have exhibited less vanity, and he bore all the critical attacks upon his reputation with easy negligence. According to the account of his many friends his general acquirements were very uncommon, and it is to be lamented that a want of correspondent energy and perseverance rendered his extensive research less effective than it might otherwise have been.—*Mason's Life of Gray. Matthias's Edition of Gray.*

GRAZIANI (ANTON-MARIA) bishop of Amelia, was born of a distinguished family at Borga-san-Sepolcra in Tuscany in 1537. He studied the law at Padua, and in 1560 he visited Rome, where he became intimate with Commendone, afterwards cardinal, whom he accompanied in all his journeys into Germany and Poland, and refused to quit him, though solicited by Henry of Valois. After the death of Commendone in 1584 he was made secretary to pope Sixtus V, and in 1592 was created bishop of Amelia by pope Clement VIII, who sent him as his nuncio to the Italian princes and states, to unite them in a league against the Turks. After the close of his nunciature, he retired to his see, where he died in 1611. His works are—"De Vita Johannis Francisci Commendoni Cardinalis," 4to, Paris, 1669; "De Bello Cyprio Lib. V," 4to, Rome, 1624; "De Vita Johannis Francisci Commendoni Cardinalis;" "De Casibus Adversis Virorum illustrium," 4to; a collection of "Synodal Ordinances;" and a curious posthumous work, entitled "De Scriptis In vita Minerva, ad Aloysium Fratrem, Lib. xx."—*Moreri. Tiraboschi.*

GRAZZINI (ANTONIO FRANCESCO) a Florentine poet of the sixteenth century, born 1503. He was celebrated for the purity of his style (in which many considered him not inferior to Bocca io), and was one of the original

members of the academy of his native city; a society one great object of which was to refine the Italian language. On this occasion he assumed the name of Lasca, and was appointed by the grand-duke superintendent of the incorporation. This however giving offence to some of the associates, he retired in disgust, and became one of the principal founders of the Della Cruscan School. He published a series of novels, which were much admired, and reprinted at Paris in 1756. His other works are six comedies, and a collection of miscellaneous poems, Florence, 2 vols. 8vo. His death took place in 1583.—*Biog. Univ.*

GREATRAKES (VALENTINE) a native of Apone near Waterford in Ireland, born 1628. He was sent to England for education in his youth, and on his return held an official situation in Cork, for which county he was in the commission of the peace. His general character, and the testimony which has been borne to the simplicity of his manners and the uprightness of his morals, by Boyle and others, induce an opinion that in the power which he pretended to possess of healing disorders, by passing his hand over the part affected, he was rather himself imposed upon by a diseased imagination, than wilfully imposing upon others. The celebrity he acquired in his own country by his supposed miraculous cures, induced him to come to London, which he reached soon after the Restoration; but although in some instances, aided perhaps by the enthusiasm of the patients, he succeeded, yet the frequency of his failure soon lost him his popularity. His death took place in 1680, or, according to Harris, in 1682.—*Harris's Hist. of Ireland.*

GREAVES. There were three brothers of this name, all eminent for their learning and abilities, who flourished during the first moiety of the seventeenth century. **JOHN**, the elder and most celebrated, was born at Colmore, Hants, in 1602, entered at Baliol college, Oxford, in 1617, and obtained a fellowship at Merton college in 1624. He now directed his attention with great success to the cultivation of the sciences of mathematics and astronomy, as well as of the Oriental languages, and in 1630 was chosen geometrical professor in Gresham college. Five years after obtaining this appointment he left England for the Continent, and travelled through the Netherlands, France, and Italy. At Rome lord Arundel offered him a handsome allowance to attend him in a voyage to Greece, which he declined on a wish of penetrating into Egypt. Archbishop Laud liberally encouraged him in this design, which was discountenanced by the citizens of London, and commissioned him to purchase for the Lambeth library any rare manuscripts he might fall in with in his travels. Accordingly, in the summer of 1637 Mr Greaves set off for Constantinople, where Lucaris, the patriarch, to whom he was introduced by our ambassador, sir Peter Wyche, assisted him materially in making his collection. On the violent death of his new friend, prudence compelled him to pursue his journey

sooner than he had proposed, and he reached Alexandria in the September of the following year. He remained in Egypt till the succeeding April, when he returned to England, and arrived in London in 1640, bringing with him a considerable number of gems, coins, medals, and MSS. The disturbances under which the kingdom laboured, soon threw considerable difficulties in the way of his preparing his papers for publication. As a zealous royalist he excited the suspicions of the parliament, who deprived him of his professorship, which the king endeavoured to recom-pense, by presenting him with the Savilian professorship at Oxford. From this situation however he was ejected by the same influence in 1648, and retired to London, where he married, and employed himself for the remainder of his life in translating his manuscripts. His death took place October 8, 1652. While in Egypt he had made an accurate mensuration of the principal pyramids, the result of his observations on which stupendous piles, he gave to the world in 1646, under the title of "Pyramidographia;" and the year following published a "Dissertation on the Roman Foot and Denarius," deducing from these two a comparative view of the other weights and measures of antiquity. He had also the merit of proposing a plan for the reformation of the calendar, by omitting, for the forty years ensuing, the intercalary days; it was not however adopted, through the prevalence of the party to which he was opposed, though sanctioned by the privy council.—**THOMAS**, the second brother, held a fellowship in Corpus Christi college, Oxford, together with the rectory of Benefield, Norfolk, and a stall at Peterborough. He was a good Orientalist, and published a treatise on the Arabic language, in one volume, 4to; as also some remarks on the Persian version of the Pentateuch and of the Gospel.—**EDWARD**, the youngest of the three, attained considerable reputation as a physician, and was the author of a useful treatise on epidemic disorders. After the Restoration he was advanced to a baronetcy, and died in 1680.—*Biog. Brit.*

GRECOURT (JEAN BAPTISTE JOSEPH VILLART DE) a French ecclesiastic, eminent as a wit and a poet, born in 1683 at Tours, in which city he afterwards obtained the benefice of St Martin. As the liveliness of his parts was at least equalled by the laxity of his morals, the restraints to which a residence on his preferment necessarily subjected him, soon became intolerable, and he returned to Paris, where he had received his education. In this capital he associated with most of the leading characters of his day, and was a general favourite in the fashionable circles, especially with the *maréchal d'Estrees*. He excelled in epigrams, tales, sonnets, &c. and of these a collection was made and published, in three octavo volumes, about twenty years after his decease which took place in 1743.—*Biog. Univ.*

GREEN (JOHN) bishop of Lincoln, was born at Beverley (or, as some assert, at Hull);

n Yorkshire, 1706, and became a fellow of St. John's college, Cambridge. The patronage of the Seymour family obtained for him in 1744 the rectory of Borough Green near Newmarket, and his reputation as a theologian raised him four years afterwards to the divinity chair in the university, of which he still continued a member. In 1750 he was elected master of Corpus Christi (Bene't) college, and served his vicechancellorship in 1756. In the course of the same year the deanry of Lincoln was given him, and in 1764 he succeeded Dr Thomas in that see, the valuable deanry of St Paul's, London, being afterwards annexed to it in 1771. The regius professor of divinity in the university of Cambridge is familiarly denominated "Malleus Hæreticorum;" his having once filled the situation does not however appear to have produced any intolerant opinions in the mind of Dr. Green, inasmuch as he is recorded to have been the only prelate who in 1772 voted in the house of Lords for the bill in favour of dissenters from the establishment. Of his writings the principal are—"The Academic;" a treatise "On Religious Enthusiasm;" and a few sermons, together with some contributions to the "Athenian Letters." His death took place at Bath, April 25, 1779.

—*Genl. Mag.*

GREEN (MATTHEW) an original poet, born probably in London in 1696. Very little is known of his early life beyond the fact, that his parents were dissenters of good repute, and that he obtained a place in the customs, which he discharged with diligence and fidelity. His learning also extended to a little Latin, and the religious austerity in which he was bred, produced its frequent effect of outward compliance and internal scepticism. His conversation abounded with wit of the most inoffensive kind; and he was a man of great probity and sweetness of disposition. He was subject to low spirits, which led to the composition of his principal poem, "The Spleen," which work implies a practical philosophy, soberly Epicurean, and is otherwise a very original production. He was also author of "The Grotto;" "Verses on Barclay's Apology;" "The Seeker;" and some smaller pieces, none of which were published until his death, which took place in 1737, at the early age of forty-five. An ornamented edition of the poems of Green was published, with some critical remarks by Dr Aikin in 1796, 12mo.—*Dodsley's Collection. Europ. Mag. for July 1785.*

GREEN or GREENE (NATHANIEL) a general officer of the American United States during the war of independence. He was the son of a quaker, who was an anchor-smith at Warwick in Rhode Island, and was born about 1741. When young he displayed an aptitude for learning, and was particularly attracted by military history. Being nominated a member of the assembly of Rhode Island, he justified the confidence of his fellow-citizens. Hostilities taking place, he relinquished the pacific principles of his sect, and, with the command of five regiments levied in

Rhode Island, he marched to the relief of Massachusetts. In 1776 the congress appointed him major-general, and he distinguished himself on many occasions. In Decemr 1780 he succeeded Gates in the command of the southern army in Carolina. This was an arduous situation, and on the 7th of February, 1781, he was defeated by lord Cornwallis, in an engagement near Guilford Court-house; and on the 27th of April by lord Rawdon near Camden. He soon however recovered his superiority, and established his fame as a military commander, by the victory which he gained after a hardly-contested battle at Eutaw Springs in Georgia, September 7th the same year. Green then returned to Rhode Island, where his counsels were as useful to the states as his courage had been in the field. He died June 19, 1786, much regretted for his private worth as well as for his public character.—*Biog. Univ.*

GREEN (THOMAS) a native of Ipswich, born 1770. He was originally intended for the bar and received an education more especially directed to the study of the law; but the easiness of his circumstances, and a strong bias towards elegant literature, induced him to decline practising in his profession, although the habit of deep research which he acquired while prosecuting his enquiries in that particular department of science, proved highly beneficial to his progress in his subsequent pursuits. Mr Green published "The Methodistian, a Poetical Olio," 1788, 12mo; "An Examination into the leading Principles of Godwin's Inquiry concerning Political Justice," 1798, 8vo, reprinted in 1799; and "Extracts from the Diary of a Lover of Literature," 4to, 1810. His death took place January 6, 1825.—*Genl. Mag.*

GREEN (VALENTINE) an eminent mezzotinto engraver. He was born in Warwickshire and was intended by his father for the profession of the law. Consulting his own inclination, he left the office of an attorney in which he had been placed, and became pupil to an obscure line engraver at Worcester. He came to London in 1765, and set himself to study mezzotinto engraving, in which he arrived at such excellence as to participate with Mac Ardell and Earlom the merit of having been the first artists, and who gave consequence and variety to that mode of engraving. In 1789 Mr Green undertook to engrave the pictures of the Dusseldorp gallery; and in 1795 he published twenty-two prints from that collection. The French invasion of Bavaria prevented the prosecution of his plan. In 1767 he was chosen a member of the incorporated society of artists of Great Britain; and in 1774 one of the associate engravers of the Royal Academy. On the foundation of the Royal Institution he was appointed keeper. He died in 1813, aged seventy-four. He engraved many portraits after sir Joshua Reynolds, and historical subjects after West; besides other works. His merit was not confined to his productions as an artist; since he published a "Survey of the City of Worcester," 1764,

8vo; a "Review of the Polite Arts in France, under Louis XIV, compared with their present State in England, 1783," 4to; and "The History of the City of Worcester," 1796, 2 vols. 4to. He also was the author of papers in the *Archæologia*.—*Bryan's Dict. of Paint. and Eng. Ed.*

GREENE Mus. Doct. (MAURICE) an eminent English musician, a native of London, in which city his father, the rev Thomas Greene, held the living of St Olave, Old Jewry. He was a pupil of Brind, the organist of St Paul's cathedral, and on the death of his old master, in 1718, succeeded him in his appointment, resigning for that purpose similar situations to which he had been previously appointed, in the churches of St Dunstan in the West, and St Andrew, Holborn. In 1726 he obtained the place at the Chapel Royal, vacant by the death of Dr Croft, as organist and composer to the king. And four years afterwards took the degree of Doctor of Music, at Cambridge, on being elected to the musical professorship in that university. He died in September 1755, bequeathing his manuscripts to his friend Dr Boyce, who completed and published the admirable collection which he had made of church services and anthems in score, now to be found in every cathedral. To Dr Greene also, in conjunction with Festing, is owing that excellent institution, the charitable fund for the support of decayed musicians.—*Biog. Dict. of Mus.*

GREENE (ROBERT) an English author of the age of Elizabeth, not more distinguished for the brilliancy of his wit than notorious for his prostitution of it, and for the general profligacy of his life and manners. He was a native of Norwich, born in that city in 1560, and educated at St John's college, Cambridge, which he afterwards quitted for Clare Hall, where he graduated in 1583. Soon after he went to the Continent, and took orders on his return, but gave great scandal by his subsequent conduct, especially by the grossness and obscenity of his writings. Of these one only is now comparatively known, "A Groat's worth of Wit bought with a Million of Repentance," a new edition of which has appeared within these two years. A surfeit brought on by eating too freely of salted herrings is said to have been the occasion of his death, which took place in 1592. Previously to his decease he seems to have felt some remorse at the poverty, disgrace, and misery in which his conduct had involved himself and others, if the letter published by Cibber, as one addressed by him to his wife, be genuine.—*Cibber's Lives.*

GREGORY I (POPE) designated also The Great. He was born at Rome, of a noble family, about 544; and having received an education suitable to his rank, he became a member of the Senate, and filled other employments in the State. Italy was then subject to the emperors of the east, and Justin II appointed him to the important post of præfect or governor of Rome; which, after having held it for some time with great reputation, he

resigned. The death of his father put him in possession of vast property, which he expended in the foundation of monasteries and charitable institutions. Disgusted with the world, or affecting to be so, he took the monastic vows himself, and became a member of one of his own establishments. He was not suffered to remain in retirement, being sent by Pope Pelagius II on an embassy to Constantinople, to apologize for an informality in the inauguration of that pontiff, who rewarded the services of his envoy by making him papal secretary after his return to Rome. He had however again sought a retreat in his convent, of which he was chosen abbot, when, on the death of Pope Pelagius, in 590, he was chosen his successor, by the general suffrage of the senate, clergy, and people. After a strenuous and apparently sincere opposition on his part, Gregory was seated in the pontifical chair. The remaining events of his life belong to the general history of the age in which he reigned, and the most important can be but slightly noticed at present. He displayed great zeal for the conversion of heretics, the advancement of monarchism, and the rigid enforcement of celibacy among the clergy. His contest for ecclesiastical superiority with John, patriarch of Constantinople, laid the foundation of the schism between the Greek and Latin churches, which has subsisted to the present day; and though he experienced a temporary defeat under the government of the emperor Mauritius, he ultimately succeeded, by flattering the usurper Phocas, in his object of obtaining the fullest recognition from the imperial court of his exclusive right to the title of œcumenical or universal bishop. The conversion of the Anglo-Saxons to Christianity was one of the projects of Gregory the Great, honourable to his zeal and abilities. [See ST AUGUSTIN II.] He died in March, 604. The works ascribed to this pope are very numerous, and have been frequently published. • The most complete edition is that of the Benedictines of St Maur, Paris, 1705, 4 vols. folio, under the superintendance of father Denis de St Martha, who in 1697 published a Life of St Gregory the Great. His genuine writings consist of a treatise on the Pastoral Duty, Letters, Scripture Commentaries, &c. They exhibit a curious mixture of good sense, worldly wisdom, religious zeal, bigotry, and superstition.—*Platina. Moreri. Aikin's Gen. Biog.*

GREGORY VII (POPE) a native of Soano, in Tuscany, of low parentage, whose proper name was *Hildebrand*, by which he is frequently designated in history. He received a clerical education, and after having passed through some inferior dignities, he succeeded Alexander II, in 1073, as bishop of Rome. His pontificate is memorable for the hostile contest which he carried on with the German emperor Henry IV on the subject of investitures, or the right of the pope to dispose of all archbishops, bishops, and other ecclesiastical benefices throughout Christendom. In this struggle for power he was at first very successful. The emperor having resisted the

papal claim, Gregory issued against him a sentence of excommunication, excited the princes of Germany to rebellion, and reduced Henry to such extremities that he was induced to visit the pope at Canosa, in Italy, and submit to the most degrading terms, in order to procure conditional absolution. The emperor repented of his weakness, and after overcoming Rodolph, duke of Suabia, who had been his rival for the imperial crown, he turned his arms against Gregory, and set up against him as anti-pope Guibert, archbishop of Ravenna, who took the title of Clement III. Fortune for a time favoured his arms, and marching into Italy he made himself master of Rome in 1084. Pope Gregory retired to the castle of St Angelo, where he was besieged by the imperialists, and must have fallen into their power, but for the valour of Robert Guiscard, the Norman, whom he had engaged in his interest, and made duke of Apulia. Rescued by that chief, he took refuge under his protection, at Salerno, where he died in 1085. This pontiff may be considered as the founder of the vast temporal power which the popes for several centuries exercised over almost every part of Europe. By the claim of investitures, withdrawing ecclesiastics from the jurisdiction of secular courts of law, and professing the right of deposing princes and absolving subjects from their allegiance, he established in every Catholic kingdom an imperium in imperio, which rendered weak sovereigns vassals of the Romish See, and often shook the authority of the wisest and most powerful. It ought not to be omitted that Gregory, in the early part of his pontificate, animated by the lamentations of the Asiatic Christians, formed the design of conducting in person a crusade to Palestine; but his disputes with Henry IV prevented the execution of his project. The personal character of this pope has been blackened by charges of incontinence and sorcery. It will easily be believed in the present age that the latter accusation has originated from the malicious invention of the partizans of his imperial antagonist; and it may be charitably concluded that the former had no better foundation.—*Naudé Apol. pour les gr. Hommes soupçonnés de Magie. Platina. Dupin. Aikin's G. Biog.*

GREGORY XIII (POPE) whose secular name was Hugo Buoncompagno, was born at Bologna, in 1502. He studied civil and canon law, in which he made great proficiency when young, and at the age of twenty-eight he was made judge of the court of commerce at Bologna. Removing to Rome, he rose after various employments to be a cardinal, and was sent legate into Spain, by Paul IV. On the death of Pius V in 1572 he was elected to the papal chair. The reformation of the calendar, which was effected through his patronage, in 1582, was the event which most favourably distinguished his pontificate. The want of correspondence between the solar and common year having introduced great irregularities into the computation of time, particularly with regard to ascertaining the time of Easter and

other moveable feasts of the church, it was proposed to correct such anomalies by leaving out ten days in the reckoning of time for the current year, with other necessary regulatious as to the recurrence of future leap years; whence the distinction of the old and new style, in dates anterior to the year 1752, when the new style, or Gregorian calendar was adopted in Great Britain, as it had previously been in the Catholic countries of Europe. Among the medals struck by pope Gregory XIII is one which, to his infinite disgrace, was designed to commemorate the massacre of Huguenots in France, on St Bartholomew's day, 1572, of which he otherwise expressed his approbation. He died in 1585. The labours of this pope as a canonist require some notice. He was employed, when cardinal, among various learned men in preparing an edition of the famous Decretal of Gratian, or epitome of canon law drawn from the decrees of councils, the letters of pontiffs, and the writings of ancient doctors; and the work was completed and published under his auspices in 1580, 4 vols. folio. *Aikin's Gen. Biog. Butler's Hora. Juridica Subsecive.*

GREGORY, bishop of Neocæsaria, in the third century, called *Thaumaturgus*, or the Wonder-worker, on account of the miracles which he is supposed to have performed. He was born at Neocæsaria, in Pontus, of gentile parents, who were persons of fortune and respectability. He lost his father at the age of fourteen, and after receiving a learned education, he accompanied his sister and her husband to Cæsaria, in Palestine, where he became the pupil of the celebrated Origen, who had opened a school of philosophy in that city. Under him he studied logic, physics, geometry, astronomy, and ethics, and was converted to Christianity. He appears also to have spent some time at Berytus in the study of law; and about 239 he returned to his native place, having taken leave of Origen, after he had pronounced before a numerous auditory an oration in his praise, which Dupin styles one of the finest rhetorical compositions of all antiquity. A letter of exhortation from his tutor induced him to take on himself the office of a Christian pastor at Neocæsaria; and he was accordingly ordered bishop of that city about the year 245. The church flourished under his care till the Decian persecution, in 250, when he thought it prudent to retire from the threatened danger. When the storm was blown over he resumed his station, and it is said converted almost all the Neocæsarians to Christianity. He was present at the first council of Antioch, when the heresy of Paul of Samosata was the object of enquiry, and he concurred in the lenient measure adopted towards that prelate. Gregory died soon after, in 265. His works, besides the Panegyric on Origen, comprise "A Paraphrase on the Ecclesiastes;" and a "Canonical Epistle." They were published together at Paris, 1626, folio.—*Fabricii Bibl. Græc. Lardner's Credibility. Aikin's G. Biog.*

GREGORY NAZIANZEN (St) a cele-

brated divine of the Christian church in the fourth century. He was born near the city of Nazianzum, in Cappadocia, of which his father was bishop. He received a liberal education at home, and then went for improvement to Casaria, in Palestine, Alexandria, and Athens, at which last place he became acquainted with Julian, subsequently emperor, and with Basil, both students like himself; and with the latter he formed an intimate friendship. Returning to Nazianzum he was baptized when about thirty years old, and afterwards joining his friend Basil, in a retreat among the mountains of Pontus, he adopted the austerities of the monastic, or rather ascetic profession. During the period of his retirement, Julian having ascended the throne, the Christians were subjected to various petty persecutions, among which was a prohibition from using in their schools the works of the heathen classics. This illiberal edict gave Gregory an opportunity for displaying his talents in the composition of beautiful poems, in various kinds of verse, on moral and religious subjects. After having made several visits to his native place, he at length became assessor to his father in the bishopric, and after the death of the old prelate in 372 he retired into a monastery at Seleucia. He was subsequently invited to Constantinople to oppose the Arians, who were then very powerful in that metropolis. On his arrival Gregory found them in possession of all the churches, and he consequently commenced preaching in a private house where he lodged. The influence of his zeal, learning, and eloquence, procured him a multitude of hearers, and attracted the animosity of the dominant party. His prudence and perseverance however overcame all obstacles, and at length he was chosen by the orthodox, bishop of Constantinople. He was scarcely seated on the episcopal throne, when his tranquility was disturbed by a schism in his own church, occasioned by the attempts of Maximus, a cynic philosopher, whom he had baptized, to supplant him in the see. Supported by the emperor Theodosius, he defeated his opponent, and his election was confirmed in the council of Constantinople, held in 381. The difficulties of his situation however induced him shortly after to resign it, when he retired to his paternal estate at Nazianzum, and there lived in seclusion till 389, the period of his decease. Gregory was not only a man of piety, learning, and talent, but also in other respects an estimable character, displaying on most occasions more moderation and liberality than was usual among the divines of his age. His invectives against the emperor Julian, which seem to have been dictated by personal animosity, must however be considered as deducting in some measure from this eulogy; and his zeal for the orthodox doctrine of the Trinity was more conspicuous than his charity, when he excited the enmity of his successor Nectarius against the Apollinarians. The writings of this Christian father are remarkable for eloquence and purity of style, nearly approaching in excellence to the compositions

of the ancient Greek orators, especially Isocrates. His works consist of discourses or sermons, letters and poems; of which the best collective edition is that published by Frederic Morel, Gr. et Lat. Paris, 1609, 2 vols. folio. — *Fabricii Bibl. Græc. Moreri Aikin's Gen. Biog.*

GREGORY of Nyssa, (ΣΤ) Gregorius Nyssenus, an eminent Christian divine of the fourth century, younger brother of St Basil, the friend of Nazianzen. He was born in Cappadocia, and after being liberally educated, he became a professor of rhetoric and legal advocate. He attained great eminence in those pursuits, which he was persuaded to relinquish for ecclesiastical studies; and having taken orders in the church, he distinguished himself as much in the pulpit as he had previously done at the bar. About 372 he was ordained bishop of Nyssa, in Cappadocia, by his brother Basil. The zeal which he displayed in this post, against the Arians excited the resentment of the emperor Valens, who belonged to that sect, and Gregory was consequently banished from his see, and otherwise ill-treated. After the death of his persecutor in 378 he was recalled by Gratian and restored to his benefice. In 381 he was present at the council of Constantinople, when he was appointed to draw up the famous confession of faith termed the Nicene Creed; designed as an explanation of the decision of the council of Nice. In 383 he attended another council at Constantinople; and in 385 he was appointed to deliver a funeral oration for the empress Flaccilla, as he had before done for her daughter the princess Pulcheria. The time of his death is not exactly known, though some writers state it to have taken place in 396. He had married early in life, and continued to live with his wife after his advancement to the episcopal office. His works, consisting of commentaries on parts of scripture, sermons, and funeral orations, lives, letters, &c. were published at Paris in 1615, 2 vols. folio, to which was added an appendix in 1618. — *Fabricii Bibl. Gr. Jortin's Eccles. Hist. Aikin's G. Biog.*

GREGORY (GEORGE FLORENCE) commonly stiled Gregory of Tours, an early Gallic historian and divine. He was born of illustrious parentage in Auvergne, in 544, and was educated under his uncle Gallus, bishop of Clermont, and his successor Avitus. After finishing his studies he was ordained a deacon, and acquired celebrity as a preacher. In 573 he was chosen bishop of Tours, and he discharged the duties of his office with zeal and faithfulness. In 578 he was present at the council of Paris, and he was subsequently employed as an ambassador by Gontran, king of the Burgundian Franks, and by his nephew, Childebert II, king of Austrasia. He made a pilgrimage to Rome in 594, and died there, or after his return to his diocese, in 595. His "History of the Franks, in Ten Books," is much esteemed, notwithstanding its defects, as a repository of original information. He also wrote legendary "Lives of the Saints;" and other works, published together by father

Ruinart, Paris, 1699, folio.—*Vossius de Hist. Lat. Dupin. Moreti.*

GREGORY (JAMES) a mathematician and philosopher, celebrated as the inventor of the reflecting telescope. His father was a minister of the kirk of Scotland, and he was born at Aberdeen in 1638. He received his education at the Marischal college, and after going through the usual course of academic studies he made himself acquainted with the works of Galileo, Kepler, Des Cartes, &c. The fruit of his application appeared in a treatise which he published in 1663, entitled "Optica Promota, seu abditæ Radium reflexorum et refractorum Mysteria, Geometricæ enucleata," 4to. This book unfolded the idea of the telescope, which bears his name; and in 1664 he visited London for the purpose of perfecting the mechanical construction of the instrument. Disappointed for the present by the difficulty of getting a speculum ground and polished of a proper figure, he suspended his design, and set off on a tour to Italy. He stayed some time at Padua, whose university was then famed for mathematical science. There he published in 1667 a treatise on the Quadrature of the Circle and Hyperbola, which added to his reputation, and which he reprinted at Venice in 1668, with some additions. On his return to England he was chosen a fellow of the Royal Society, whose transactions he enriched by some valuable papers. His treatise on the Quadrature of the Circle involved him in a controversy with Huygens, which he managed with rather too much asperity. In 1672 he published a small tract, entitled "The great and new art of Weighing Vanity," under the pseudonym of M. Patrick Mathers; which was a satire on Professor Sinclair, of Glasgow, who had written against Boyle. Some animadversions of sir Isaac Newton, on the construction of the telescope, invented by Gregory, produced a controversy between those two great men, which for the honour of science was conducted with an exemplary degree of amenity and good faith. Previously to this occurrence he had been chosen professor of mathematics in the university of St Andrews, and during his residence there, in 1669, he married the daughter of George Jameson, the painter, who is styled by Walpole, the Scottish Vandyck. In 1674 he was invited to fill the mathematical chair at Edinburgh, whither he removed; but held the situation only a short time, for in October, 1675, while engaged in pointing out to some of his pupils the satellites of Jupiter, he was suddenly struck with total blindness, and died a few days after, in the thirty-seventh year of his age. As a discoverer of mathematical truths, Gregory has had few equals; and, exclusive of Newton, he may be considered as the greatest philosopher of his age.—*Biog. Brit. Martin's Biog. Philos. Aikin's G. Biog.*

GREGORY (DAVID) nephew of the preceding, and the heir of his splendid talents and emulator of his fame. His father, David Gregory, a gentleman of Kinnairdie, was a man of ability, and fond of mechanical pur-

suits. The subject of this article was educated at Edinburgh, where he took the degree of MA. and in 1684 he was elected professor of mathematics in that university; and the same year he published a mathematical treatise from his uncle's papers, with important additions of his own. He has the merit of having first introduced into the schools the Newtonian philosophy by his professional lectures. He continued to fill his post with increasing reputation till 1691, when he visited London, with the view to make interest for the Savilian professorship of astronomy at Oxford, on the expected resignation of Dr Edward Bernard. That event taking place, he was chosen to the vacant chair, though he had the celebrated Halley for his competitor, a circumstance which laid the foundation of a friendly intimacy between these mathematicians. Gregory also formed a personal acquaintance with sir Isaac Newton and Flamstead; and he was elected a fellow of the Royal Society. In 1695 he published at Oxford "Catoptricæ et Dioptricæ Sphericæ Elementa," 8vo; in which he considers those branches of optics chiefly as respects the construction of telescopes, particularly those of his uncle and sir Isaac Newton. In 1697 he gave the first demonstration of the properties of the Catenarian Curve; and in 1702 appeared his most celebrated production "Astronomiæ physicæ et geometricæ Elementa," folio. The object of this work is to explain Newton's geometry of centripetal forces, as far as his discoveries are founded on it; and to exhibit in a more familiar form the astronomical part of the Principia. In 1703 he published an edition of the books of Euclid, in Greek and Latin; and he afterwards engaged with Dr Halley in editing the "Conics" of Apollonius, and being taken ill while thus employed, he retired to Maidenhead in Berkshire, where he died October 10, 1710. He published mathematical papers in the Philosophical Transactions, and left some treatises in manuscript, part of which were subsequently given to the public.—*Hutton's Mat. Dict. Aikin's G. Biog.*

GREGORY (GEORGE) a clergyman of the church of England and writer on general literature. He was descended from a Scottish family, but was born in Ireland, where his father was prebendary of Ferns. On the death of that parent, when he was twelve years old, his mother removed to Liverpool, and he is said to have spent some years in a counting-house at that commercial sea-port. He however studied at Edinburgh, where he applied himself chiefly to mathematics and philosophy. Having taken orders, he obtained a curacy at Liverpool in 1778, when he published in a periodical work some essays against the slave trade. In 1782 he removed to London, and became curate of Cripplegate; but resigned his office in 1785, on being elected morning preacher at the same place, and he also officiated at the Asylum and elsewhere. At this time he made himself known by the publication of a volume of essays, historical, and moral. This was followed in 1789 by his

translation of bishop Lowth's Lectures on the Sacred Poetry of the Hebrews; after which appeared the Life of Chatterton, reprinted in the Biographia Britannica; his Church History, 2 vols. 8vo; a new translation of Telemachus; and the Economy of Nature, 3 vols. 8vo. In 1804, through the interest of lord Sidmouth, whose administration he had defended, he was presented to the living of Westham in Essex; and he had previously obtained a small prebend in St Paul's cathedral, which he resigned, on being preferred to the rectory of Stapleford in Hertfordshire. In his retirement at Westham he superintended the publication of a dictionary of arts and sciences, 2 vols. 4to; the labour of compiling which however, is said to have fallen to the share of the industrious Mr Jeremiah Joyce. His last literary undertaking was, preparing for the press "Letters on Literature and Taste," published after his death, which took place at Westham, March 12, 1808, in the fifty-fourth year of his age.—*Month. Mag.* vol. xxv.

GREGORY, MD. (JAMES) professor of physic in the university of Edinburgh, and a fellow of the Royal Society, born at Aberdeen, 1753. He was the author of various works on literary and scientific subjects, as well as on those connected with his profession. Among them are—a dissertation "De morbis cœli mutatione medendis," 8vo, 1774; "Conspectus Medicinæ theoreticæ," 1780, 2 vols. 8vo, which went through four editions; "Philosophical and Literary Essays," 1792, 2 vols. 8vo; "Memorial presented to the Managers of the Royal Infirmary of Edinburgh," 4to, 1800; "Cullen's first Lines of the Practice of Physic, with Notes," 2 vols. 8vo. This latter work went through seven editions. He also published a paper in the Transactions of the Royal Society of Edinburgh, on the theory of the moods of verbs. Dr Gregory died April 2, 1821.—*Ann. Biog.*

GREGORY (JOHN) a physician and writer on miscellaneous literature, who was a native of Aberdeen, where his father was professor of medicine at King's college. After studying in that seminary he removed in 1742 to Edinburgh, and afterwards to Leyden. Having had the degree of MD. sent him from Aberdeen in 1745, he returned thither, and obtained the professorship of philosophy. He resigned this post in 1749 to devote himself solely to medical pursuits. In 1752 he married the daughter of lord Forbes; and two years after he settled in London, and was chosen FRS. On the death of his brother he succeeded in 1755 to the medical chair at King's college. His professional and literary reputation now became extended, and in 1764 he published an ingenious tract, entitled "A Comparative View of the State and Faculties of Man with those of the Animal World." The same year he removed to Edinburgh, and in 1766 was elected professor of the practice of physic. The course of lectures which he delivered in this capacity, formed the basis of his treatise "On the Duties and Offices of a Physician, and on the Method of prosecuting

Enquiries in Philosophy," 1769; and of his "Elements of the Practice of Physic," 1772. He died February 9, 1773, aged forty-eight, leaving for the press "A Father's Legacy to his Daughters," a piece generally known and deservedly admired.—*Aikin's G. Biog.*

GRESHAM (sir THOMAS) a merchant of London, the son of sir Richard Gresham, also a merchant and lord mayor of London, was born in 1519, and was educated at Gonville-hall in Cambridge. He was then bound apprentice to his uncle, sir John Gresham, and in 1543 he was admitted into the Mercers' Company. His father was agent of the king's money affairs at Antwerp, and in this situation Thomas expected to succeed him, but he was disappointed. However, the person who was preferred to him having brought them into a bad condition, Gresham was sent over in 1552, during the minority of Edward VI, to retrieve them. He acquitted himself so well, that in two years he paid off a heavy loan, and raised the king's credit considerably. On the accession of Elizabeth he was deprived of his office, but it was soon restored to him, with that of queen's merchant, and he was also knighted. In 1564, losing his only son, to divert his grief he turned his attention to public undertakings, and persuading the city to purchase a piece of ground fit for the purpose, in 1566 he planned and erected a bourse or exchange for the merchants of London, in imitation of that of Antwerp. In 1570 queen Elizabeth entered the city in procession, and visiting the new building she solemnly proclaimed it the Royal Exchange, which name its successor since the fire of London still continues to bear. The troubles in the Low Countries interrupting the loans from Antwerp to the crown, sir Thomas advised the minister, Cecil, to apply to the merchants of London, and though they at first refused, by his influence he induced the monied men to join in a small loan, which was the commencement of the great advances since made from the same body. Sir Thomas next determined to found a college in London, and this he carried into effect, notwithstanding the opposition of the university of Cambridge, which endeavoured to prevent the establishment of a rival institution. He devised by will his house in Bishopsgate-street, for the purpose of being converted into habitations and lecture-rooms for seven professors or lecturers on the seven liberal sciences, who were to receive a salary out of the revenues of the Royal Exchange. Gresham-college has since been converted into the modern general excise-office; but the places are still continued, with a double salary for the loss of the apartments, and the lectures are now given in the Royal Exchange. Sir Thomas expended a great sum upon his villa of Osterly-park near Brentford; and among his other edifices were corn, oil, and paper mills upon the stream of the Brent. He died suddenly in 1579, at the age of sixty.—*Biog. Bri.*

GRESSET (JOHN BAPTIST LOUIS) an elegant French poet, was born at Amiens in 1709. He entered at the age of sixteen among

the jesuits, and from that retreat surprised the public by the production of poems, exhibiting all the ease and delicate pleasantry of a man of the world. These were his admirable tale of "Ver Vert," and pleasing epistles of "La Chartreuse," "Les Ombres," and others. The reputation which he obtained by these productions, induced him to quit the society in his twenty-sixth year, and settle in Paris. He then tried his powers in dramatic composition, and by his "Méchant," represented in 1747, obtained great reputation. In 1748 he was admitted a member of the French Academy, but his early education seems to have always left a secret impression in his mind against theatrical representations, and he soon after solemnly renounced the stage and retired to Amiens, where he married a lady of good fortune, and lived in a manner which ensured general respect. On the accession of Louis XVI he revisited Paris, and received from the court letters of nobility, the order of St Michael, and the appointment of historiographer of the order of St Lazare. He died of an abscess in the breast in 1777. The poetical fame of Gresset is principally founded on his "Chartreuse," "Ver Vert," and "Le Méchant;" the first characterised by its philosophical freedom, the second by its ingenious pleasantry, and the third by accuracy of portraiture and beauty of versification.—*Eloge de Gresset. Nouv. Dict. Hist.*

GRETRY (ANDRE ERNESTE MODESTE) the son of a music-master of Liege, where he was born in 1741. A strong predilection for the science which his father professed, developed itself at a very early age, and he astonished all the members of the choir of St Denis, in which he had been placed, by the precocity of his talents and the sweetness of his voice. He soon after had the advantage of Moreau's instructions, whose only difficulty was in repressing the effervescence of his genius. In 1759 he walked to Rome, where he completed his studies, and finally settled at Paris in 1763. Here he produced nearly thirty comic operas, all of which were attended with the most unqualified success, and two of them, "Zemire et Azor" and "Richard Cœur de Lion," have been translated and brought out in London, where they were most favourably received. The taste of the Parisians, and the necessity of conforming to it in a certain degree, did much towards corrupting that of Gretry, while his compositions, on the other hand, were almost equally efficacious in reforming theirs. During the Revolution he embraced the popular principles, both in politics and religion, as is evinced by a treatise which he published, "De la Verité, ce que nous fumes, ce que nous sommes, ce que nous devons etre." He died in 1813 at Montmorency.—*Biog. Dict. of Music.*

GREVILLE (FULK) lord Brooke, an accomplished courtier and ingenious writer, and a great encourager of learning and learned men. He was descended of the ancient families of Neville, Beauchamp, and Willoughby, and was born in 1544 at Beauchamp Court,

Warwickshire, the family seat, then in the possession of his father, sir Fulk Greville. He went from Shrewsbury grammar-school to Trinity college, Cambridge, which university he afterwards quitted for Oxford; and having made the grand tour, presented himself at court, where he soon rose high in the favour of Elizabeth, as well by his literary talents as by his skill in knightly accomplishments. From her hand he received the honour of knighthood and the valuable appointment of clerk of the signet in Wales, and at the coronation of her successor was admitted to the order of the Bath. James also presented him with Warwick-castle, and would in all probability have farther distinguished him by his favour, had not the jealousy of Cecil taken alarm, which induced Greville to retire from public life, till the death of that statesman restored him to the court. He now rose rapidly, filling in quick succession the posts of undertreasurer and chancellor of the exchequer, and in 1620 obtained a barony. Under Charles I he continued to enjoy the royal countenance till the 30th of September, 1628, when conversing with an old servant of the family, one Ralph Heywood, respecting certain dispositions which he had made by his will, the latter considering his legacy disproportioned to his services, replied to him with great insolence, and on his turning from him, took the opportunity to stab him in the back, of which wound he expired immediately, the assassin instantly committing suicide with the same weapon. This melancholy termination of a valuable life took place at his residence, Brooke house, Holborn, which then occupied the ground between the site of Furnival's-inn and Gray's-inn-lane. Lord Brooke was the founder of an historical lecture at Cambridge, and enjoyed the friendship of sir Philip Sidney, Camden, Spenser, Jonson, Shakspeare, Speed, Davenant, and most of the master spirits of the age in which he lived: the bent of his own genius evidently led him to the study of poetry and history. An octavo volume of his miscellaneous writings was printed in 1670, and there is also extant a life of his friend Sidney, by his hand. The envy of Cecil, who denied him access to the necessary records, prevented his carrying into execution an intention he had formed of writing a history of the wars of the Roses.—*Biog. Brit.*

GREY (lady JANE) a young and accomplished female of royal descent, whose disastrous fate, as the victim of an unprincipled relative's ambitious projects, has created an extraordinary interest in her favour, and thrown an air of romance over her story. She was the daughter of Henry Grey, marquis of Dorset, afterwards duke of Suffolk, by the lady Frances, daughter of Charles Brandon, duke of Suffolk, and Mary, younger sister of Henry VIII, in whose reign lady Jane was born, according to the common account, in 1587. The place of her nativity was Bradgate-hall, a seat belonging to her father in Leicestershire. She seems to have displayed uncommon precocity of talent; and to the usual

accomplishments of females, she added an acquaintance with the learned languages, as well as French and Italian. The famous Roger Ascham has related, that on making a visit to Bradgate-hall, where she resided, he found lady Jane, then a girl of fourteen, engaged in perusing Plato's Dialogue on the Immortality of the Soul, in the original Greek, while the rest of the family were amusing themselves with hunting in the park. She owed her early proficiency in literature in some measure to the assiduity and indulgent discipline of her learned tutor, Aylmer, afterwards bishop of London; and from him she probably imbibed a strong attachment to the principles of protestantism. The Oriental as well as the classical languages are said to have been familiar to her, and she is represented as having been altogether a young person of uncommon genius and acquirements. But the latter are less singular than might be supposed by those who do not take into account the general taste for the cultivation of Greek and Roman lore, which prevailed among both sexes for some time after the revival of literature in Europe. Lady Jane Grey was a clever woman, but not a prodigy; and Mrs Roper, the interesting daughter of sir Thomas More, with lady Burleigh and her learned sisters, may be adduced as rivals in erudition of the subject of this article. The literary accomplishments of this unfortunate lady however, had they been as peculiar as they were meritorious, would have done much less honour to her memory than that spirit of sedate, and almost stoical philosophy, with which she encountered the annihilation of her prospects of sovereignty, and the disgrace and ruin of the dearest object of her affections. The tale of her elevation and catastrophe has been often related, in verse and prose, and has furnished a subject for dramatic composition. The most material circumstances are her marriage with lord Guilford Dudley, fourth son of the duke of Northumberland, in May 1553, which, though it originated in the ambitious projects of her intriguing and unprincipled father-in-law, was yet a union of affection. The duke's plan was, to reign in the name of his near relation, in whose favour he persuaded king Edward VI, on his death-bed, to settle the succession to the crown. On the decease of the king soon after, lady Jane had the good sense to refuse the proffered diadem, but unfortunately she afterwards consented to accept it, being influenced by the importunities of her husband. Her pageant reign had lasted but nine days when Mary, the late king's elder sister, was acknowledged queen, and Jane exchanged a throne for a prison. She and her husband were arraigned, convicted of treason, and sentenced to death; but their doom was suspended, and they might perhaps have been allowed to expiate their imprudence by a temporary confinement, but for the ill-advised insurrection under sir Thomas Wyatt, in which the duke of Suffolk, lady Jane's father, was weak enough to participate. The suppression of this rebellion was followed by the execution of lady Jane Grey and her hus-

band. Mary piously suspended the execution of her cousin three days, to afford time for her conversion to the catholic faith; but the queen's charitable purpose was defeated by the constancy of lady Jane, who defended her opinions against the arguments of the Romish divines sent to reason with her, and prepared herself with firmness for her approaching fate. She was beheaded on Tower-hill, February 12, 1554, her husband having previously suffered the same day. A book, entitled "The precious Remains of Lady Jane Grey," 4to, was published directly after her execution; and letters and other pieces ascribed to her may be found in Fox's Martyrology.—*Ballard's Mem. of Br. Ladies. Aikin's G. Biog.*

GREY (RICHARD) a learned and ingenious scholar and divine of the church of England, who was born at Newcastle-upon-Tyne, towards the close of the seventeenth century. He studied at Lincoln college, Oxford, where he proceeded MA. in 1718-19. On leaving the university he became chaplain and secretary to Lord Crewe, bishop of Durham, who gave him the rectory of Hinton in Northamptonshire, to which was added the living of Kinscote in Leicestershire, and a prebend in St Paul's cathedral. In 1730 he published his "Memoria Technica, or a new Method of Artificial Memory, applied to and exemplified in Chronology, History, Geography, Astronomy; also Jewish, Grecian, and Roman Coins, Weights, and Measures, &c. with Tables proper to the respective Sciences, and Memorial Lines adapted to each Table," 8vo. Dr Grey's system of mnemonics, as developed in this work, has been so frequently presented to the public in different forms, as to render it unnecessary particularly to describe it. Though not susceptible of such general application as the inventor imagined, it may be frequently used with advantage, especially for memorializing dates, distances, dimensions, and other objects of number. In 1731 he published "A System of Ecclesiastical Law," extracted from the Codex Juris Ecclesiasticus Anglicani of bishop Gibson, for the use of university students; and his production was so much approved that the heads of the university of Oxford thought proper to reward him with the diploma of DD. He afterwards published several works intended to facilitate the study of the Hebrew language, and in 1742 the Book of Job, divided into metrical verses, with the Latin version and notes of the learned professor Schultens, and additional annotations of his own. In 1746 Dr Grey held the post of official and commissary of the archdeaconry of Leicester. He died in 1771, in the seventy-eighth year of his age.—*Aikin's Gen. Biog. Nichols's Lit. Anecd.*

GREY (ZACHARY) an English episcopal clergyman, best known as a commentator on Butler's Hudibras. He was born in Yorkshire in 1687, and received his education at Jesus college, Cambridge, in which he took the degree of LLD. in 1720. He obtained the rectory of Houghton Conquest in Bedfordshire, and the vicarages of St Peter's and St Giles's

parishes at Cambridge. Of nearly thirty separate works which he published, those relating to history and theology are chiefly controversial. The most important among them is entitled "An impartial Examination of Neal's History of the Puritans," 3 vols. 8vo. His edition of Hudibras, with notes, 2 vols. 8vo, displays much ingenuity and industry, in investigating the source of the poet's allusions, and illustrating them by quotations from the writings of his contemporaries. Dr Grey published, on the same plan, "Critical and Historical Notes on Shakspeare," 2 vols. 8vo. He died at Amphyll in Bedfordshire, in 1766.—*Nichols's Lit. Anecd.*

GRIERSON (CONSTANTIA) an extraordinary woman, whose maiden name is not mentioned by her biographers, was born in the county of Kilkenny in 1706. Mrs Pilkington relates, that at eighteen years of age she was brought to her father to be instructed in midwifery; that she was then a perfect mistress of the Hebrew, Greek, Latin, and French, and far advanced in the study of mathematics; that her parents were poor illiterate country people, who had no means of giving her any advantages, so that her learning was deemed very extraordinary. Constantia married a Mr Grierson, for whom lord Carteret, then lord-lieutenant of Ireland, obtained a patent, appointing him printer to the king, in which, to reward the merit of his wife, her life was inserted. She gave a proof of her knowledge of Latin in her dedication of the Dublin edition of Tacitus, to lord Carteret, and by that of Terence to his son, to whom she also addressed a Greek epigram. She likewise composed some English poems, inserted by Mrs Barber amongst her own. She died in 1733. Her son, who was instructed by herself, was also king's printer at Dublin, and was a man of great learning, wit, and vivacity. He died in Germany at the age of twenty-seven.—*Balard's Mem. Cibber's Lives. Preface to Mrs. Barber's Poems.*

GRIESBACH (JOHN JAMES) a German divine and erudite biblical critic, who was a native of Buzbach in Hesse Darmstadt, where his father was a Lutheran minister. He studied at the universities of Frankfurt, Tubingen, Halle, and Leipsic; and at length became extraordinary professor of theology at Halle. He devoted his talents to the correction and illustration of the Greek text of the New Testament. In 1774 he published at Halle, in two volumes. 8vo, an edition of the Historical Books of the Christian Scriptures, with a copious collection of various readings concisely cited and perspicuously arranged, in the margin of the pages containing a corrected text, in which the variations from that commonly received are distinctly pointed out. The remaining books of the New Testament were subsequently published in the same manner; and the learned critic produced, under the patronage of the late duke of Grafton, an improved edition of the whole work, in 4 vols. 4to, reprinted in 2 vols. 8vo, both in Germany and in England. Professor

Griesbach was also the author of "Symbolæ Criticæ ad suppleendas et corrigendas varium Novi Testamenti lectionum," 1785—1793, 2 vols. 8vo; and other valuable works relating to biblical literature. He removed from Halle to Jena, where he became professor of theology, rector of the university, and privy counsellor for ecclesiastical affairs to the duke of Saxe-Weimar. He died in March 1812, aged sixty-seven.—*Biog. Univ.*

GRIFFITH (ELIZABETH) an ingenious lady, was a native of Wales. She was married early in life to Richard Griffith, a gentleman of small fortune in Ireland. Her first performance was entitled "The Letters of Henry and Frances," which is said to contain the genuine correspondence of her husband and herself before and some time after their marriage. She next wrote, in conjunction with her husband, two novels in letters, 4 vols.; the first and second, entitled "Delicate Distress," by Frances; the third and fourth, "The Gordian Knot, by Henry." Mrs Griffith was also the author of "Lady Barton," "Lady Juliana Harley," and some dramas which had various success. One of her most agreeable publications was "The Morality of Shakspeare's Drama illustrated." She likewise published some translations, the "Letters of Ninon de l'Enclos;" "The Adventures of Pierre Viaud," &c. She died in 1793.—Mr Griffith was the author of a novel entitled "The Triumvirate, or the authentic Memoirs of A. B. and C.;" but of so free a kind that his wife would not venture to recommend it to the fair sex, but says that every gentleman will read it with pleasure.—*Gent. Mag. Gen. Biog. Dict.*

GRIMALDI (FRANCIS MARIA) a Jesuit, one of the best mathematicians of his time, born at Bologna in 1613. After having taught the belles lettres during twenty-five years, he devoted himself to the study of the exact sciences, in which he made so much progress as to render it a subject of regret that he had not applied himself to them sooner. He assisted father Riccioli in his scientific pursuits; and gave a particular description of the spots on the disk of the moon, on which he imposed names different from those bestowed on them by Hevelius, and his nomenclature has been adopted by astronomers in general. He died at Bologna in 1663. He was the author of "Physico-mathesis de Lumine, Coloribus, et Iride, aliisque annexis, libri II.;" 1665, 4to. This work contains some curious experiments and observations on light and colours, particularly relating to the inflexion of the solar rays on approaching certain bodies, and their dilatation by the prism; but the discovery of the different refrangibility of the rays of light was reserved for Newton, of whom however, father Grimaldi may with justice be regarded as the precursor.—*Biog. Univ.*

GRIMALDI (JOHN FRANCIS) called Bolognese, an eminent painter, was born at Bologna in 1606. He first studied under the Caracci to whom he was related, and distinguished himself particularly in landscape. He went to Rome, where pope Innocent X. was

placed him in the Vatican and in the gallery of Monte Cavallo. His reputation caused him to be invited to Paris by cardinal Mazarine, who procured him a considerable pension, and employed him in the Louvre. On his return to Italy he continued his labours at Monte Cavallo under Alexander VII and Clement IX, and the academy of St Luke twice named him their president. His composition was elegant, his colouring bold, and he possessed a light fine touch. He also understood architecture, and etched forty-two landscapes, five of which are after Titian. In private life he was universally esteemed for his amiable qualities and charity. He died of the amy at Rome in 1660.—*D'Argenville. Pilkington. Strutt.*

GRIMBALD (St) a learned ecclesiastic of the ninth century, who was a native of Flanders. He was invited into England by Alfred the Great, and bringing with him several other clerical scholars, he settled at Oxford, where he introduced a new mode of instruction. This innovation, or some other cause of dissatisfaction arising between the strangers and the students before placed there, occasioned such disputes, that after the king had in vain interposed his authority, Grimbald was obliged to leave Oxford. He then retired to a monastery which Alfred had founded at Winchester, where he probably passed the remainder of his life. He is supposed to have been skilful as an architect; and some writers ascribe to him the erection of the crypt of the church of St Peter at Oxford, still remaining; which, whether the work of Grimbald or some other architect, is probably one of the oldest edifices remaining in England.—*Usserii Brit. Eccles. Antiq.*

GRIMM (FREDERICK MELCHIOR, BARON DE) counsellor of state of the Russian empire, grand cross of the order of Wladimir, a man of letters, whose great reputation has arisen from posthumous publications. He was born in 1723 at Ratisbon, of poor parents, who however bestowed on him a good education. His taste for literature manifested itself in his youth, when he wrote a tragedy. Having finished his studies, he went to Paris as governor to the children of the count de Schomberg. Soon after he was appointed reader to the duke of Saxe Gotha, a place of more honour than profit. At this period he became acquainted with Jean Jacques Rousseau, who introduced him to Diderot, d'Alembert, d'Holbach, and other Parisian philosophers, a piece of service which, according to Jean Jacques, he repaid with ingratitude.—[*Confessions*. vi. 8.]—The count de Friese made him his secretary, with appointments which rendered his circumstances agreeable, and left him at liberty to pursue the bent of his inclination. His vanity induced him to give himself the airs of a man of gallantry; and as he attempted to repair the ravages of time by means of cosmetics, the Parisians bestowed on him the sobriquet of Tyran le Blanc. In 1753 he published a pamphlet entitled "Le petit Prophete de Bechmischbrode," in defence of the Italian opera, which was a

clever production. On the death of the count de Friese, Grimm was nominated principal secretary to the duke of Orleans. The fame of the French literati with whom he was connected, led to his being employed, in conjunction with Diderot, to transmit to the duke of Saxe Gotha an account of the writings, friendships, quarrels, &c. of the authors of that period. Copies of this curious correspondence were also sent to the empress Catherine II, the queen of Sweden, Stanislaus, king of Poland, the duke of Deux-Ponts, the prince and princess of Hesse Darmstadt, and the princess of Nassau Saarbruck. In 1776 he was appointed envoy from the duke of Saxe Gotha to the French court, honoured with the title of baron, and decorated with several orders. On the Revolution breaking out he retired to the court of Gotha, where he found a safe asylum. In 1795 the empress of Russia made him her minister plenipotentiary to the states of Lower Saxony; and he was confirmed in that post by Paul I, and retained it till ill-health obliged him to relinquish it. He then returned to Gotha, and died there December 19th, 1807. His grand work was published in different portions successively, under the following titles—"Correspondance Litteraire, Philosophique, et Critique, addressée à un Souverain d'Allemagne, depuis 1770, jusqu'en 1782, par le Baron de Grimm et par Diderot," Paris, 1812, 5 vols. 8vo; "Correspondance Litteraire, &c. en 1775, 1776, 1782, —1790. Troisième et dern. part." 1813, 5 vols. 8vo; and "Correspondance Litteraire &c. depuis 1753 jusqu'en 1760. Prem. part." 6 vols. 8vo. A selection from this voluminous mass of literary gossip was published in 2 vols. 8vo, in French and English.—*Biog. Univ. Biog. des Contemp.*

GRIMOARD (count de) a French general, diplomatist, and man of letters, equally estimable for his talents and personal character. He was descended from an ancient family, which in the fourteenth century had produced a pope in the person of Urban V. The subject of this article was employed by Lewis XVI, who entrusted him with a negotiation in Holland; and on his return he was charged with forming the plans for offensive and defensive operations in the campaign of 1792. After the 10th of August that year his papers were seized and deposited in the bureaux of the committee of public safety. The fall of the king interrupted his political career, and he retired to private life, devoting himself to the cultivation of literature. He died in 1815, at a very advanced age. His works include "Essai theorique et pratique sur les batailles," 1775, 4to; "Traité sur la constitution des Troupes legères, et sur leur emploi à la Guerre," 1782, 8vo; "Recherches sur la force de l'armée Française, &c." 1806, 8vo; "Tableau Historique de la Guerre de la Revolution de France," 1808, in conjunction with general Servan, of which work only 3 vols. were published, when it was suppressed by order of Buonaparte. He also edited and translated military memoirs, letters, and historical works.—*Biog. Univ. Biog. Contemp.*

GRINDAL (EDMUND) an English prelate, was born at Hensingham in Cumberland in 1519, and was sent to Magdalen college, whence he removed to Christ's college, and to Pembroke-hall, Cambridge, where he was chosen fellow and took his degrees. In 1548 he was appointed senior proctor to the university, and the following year he was chosen lady Margaret's preacher. He became acquainted with Dr Ridley, bishop of London, who appointed him his chaplain, and elected him to the precentorship of St Paul's. He was next made chaplain to the king, and in 1552 he obtained a stall in Westminster abbey. On the death of king Edward, to avoid the persecution of queen Mary, he retired to Strasburg, and remained abroad until the accession of queen Elizabeth. He then returned, and was employed with others in preparing the new Liturgy which was to be presented to the queen's first parliament; and was soon after appointed one of her commissioners for the royal visitation in the north to require the oath of supremacy, to inspect cathedrals and the manners of the clergy, to destroy the instruments of superstition, &c. In 1562 he was nominated to the bishopric of London, vacant by the deposition of Bonner. He was then appointed one of the queen's ecclesiastical commissioners, and in conjunction with the archbishop of Canterbury, reformed the calendar, and ordered that the ten commandments should be set upon the east wall of every church in the kingdom. In 1564 he was ordered by the queen and archbishop Parker to prosecute all those who did not comply with the act of uniformity. He obeyed the mandate, but with such gentleness that Parker complained of him to the queen, who sent him a special letter, commanding him to be diligent in punishing all recusants. In 1570 he was translated to the archbishopric of York, a charge which he found very laborious. On the death of archbishop Parker in 1575 he was advanced to the see of Canterbury, and the same year a convocation was held under him, in which some articles for the regulation of the church were agreed upon, entitled "Articles touching the admission of apt and fit Persons to the Ministry, and the establishment of good Order in the Churches." In 1576 he incurred the queen's displeasure by the encouragement he gave to what was called the exercise of prophesying. The rules of these prophesyings were, that the ministers of a particular division, at an appointed time, met at some church, and each explained some portion of scripture, when a moderator made his observations on what had been said, and determined its true sense. The queen viewing them as seminaries of punitanism, took a rooted dislike to them, and desiring their entire abolition, gave orders to that effect to archbishop Grindal. Instead of obeying her commands he wrote a letter to her, remonstrating with her, and exhorting her to leave religious affairs to the bishops and divines of the realm, without deciding upon them in the same peremptory manner as in civil affairs. This letter so dis-

pleased Elizabeth, that after vainly reiterating her commands, she caused an order to be sent to him from the star-chamber, which confined him to his house, and sequestered him from his office for six months. Not choosing to comply, on an application from the lord treasurer, his sequestration was continued, and some thoughts were entertained of deposing him, which however were laid aside; but the legislation was not taken off until 1582, in which year, having lost his sight, he resigned his dignity, and obtained a promise of a pension from the queen, whose favour he never fully recovered. He died at Croydon in 1583. He was a prelate of great learning, piety, and moderation; mild, generous, and affable, and was universally respected by his protestant countrymen. He assisted the French protestants in obtaining permission to open a church in London, which was the origin of the present French church in Threadneedle-street. He was the author of "A Dialogue between Custom and Truth," published in Fox's "Acts and Monuments,"—*Life by Strype. Biog. Brit. Hutchinson's Cumberland.*

GRINGONNEUR (JACQUEMIN) a Parisian painter of the fourteenth century, to whom has been attributed the invention of playing cards. His name is mentioned in 1392, in an account of the treasurer of Charles VI, as having received fifty-six sols of Paris, for three packs of cards, ornamented with devices of gold and various colours. Father Menestrier concluded from this passage that Gringonneur was the inventor of cards; but Bullet, in his "Recherches historiques sur les Cartes à jouer," has shown that they are mentioned earlier than the date of the treasurer's account; and he concludes that they were first contrived in the reign of Charles V, about 1376, and that from France the use of these fascinating instruments of dissipation extended to Spain, Italy, England, Germany, &c. The abbé Rive ascribes their invention to the Spaniards; and Mr S. W. Singer, in his elaborate "Researches into the History of Playing Cards," has shown that they are probably of Oriental origin.—*Biog. Univ. Edit.*

GRONOVIVS (JOHN FREDERICK) an eminent critic and classical editor of the seventeenth century. He was a native of Hamburg, and having received a learned education, he travelled for improvement into Germany, France, and Italy. He then obtained the professorship of the belles lettres at Deventer; and in 1655, on the death of Daniel Heinsius, he accepted an invitation to become professor of Greek at Leyden, where he died in 1672. He published valuable editions of the works of Livy, Sallust, Plautus, Seneca, Pliny, Quintilian, and Aulus Gellius; a treatise on the money of the ancients, "De Sestertiis;" and many other productions relative to criticism and philology.—GRONOVIVS (James) son of the preceding, and distinguished for his acquaintance with the same branches of literature. He was born in 1645, at Deventer where he studied under his father, whom he soon surpassed in his classical acquirements

In 1668 he visited England, and resided some months both at Oxford and Cambridge, forming acquaintance with men of letters in those universities as well as in the metropolis. He subsequently travelled in France and the Netherlands; and in 1672 he went to Spain, with M. Poets, ambassador from the Dutch government. Returning through Italy, he was induced to stay at Pisa, where the grand duke of Tuscany appointed him to a professorship. Two years after he returned to Deventer; and in 1679 he became professor of Greek and history at Leyden, where he remained, notwithstanding several advantageous situations were proposed for his acceptance elsewhere. In 1701 he was nominated geographer to the university. He died in 1716, leaving the character of a very learned, but not very liberal critic and scholar. He published corrected editions, with notes, of the works of Macrobius, Polybius, Tacitus, Cicero, Ammianus Marcellinus, Quintus Curtius, Suetonius, and other Greek and Roman writers; besides which he was the author of critical and archæological disquisitions, controversial tracts, orations, &c. But the undertaking which has contributed principally to the literary fame of James Gronovius is the "Thesaurus Antiquitatum Græcarum," Lugd. Bat. 1697—1702, 12 vols. folio.—GRONOVIVS, (Abraham) the son of James, was, like his father and grandsire, a professor in the university of Leyden, and was eminent for his classical knowledge. He edited the works of Justin, Mela, Tacitus, Ælian, &c. His death took place in 1775.—GRONOVIVS (John Frederick) brother of the foregoing, was born in 1690. He studied at Leyden, where he took the degree of MD. and practised as a physician. He was distinguished as a naturalist, and formed a museum, a part of which, relating to botany, was purchased by sir Joseph Banks. He died in 1762. Among his works are—"Index Suppellectilis Lapideæ, quam collegit, in Classes et Ordines digessit, Specificis nominibus ac Synonymis illustravit," Lugd. Bat. 1740, 8vo, republished, with additions, in 1750. He also was the author of a dissertation on Camphor; Flora Virginica; Flora Orientalis; and papers on natural history, in the Philosophical Transactions, and the Acta Upsaliensia.—GRONOVIVS (Laurence Theodore) son of the last mentioned, born at Leyden in 1730. He made the law his profession, and took his doctor's degree in that faculty; but was chiefly eminent as a naturalist. He was, as well as his father, a magistrate of the city of Leyden; and he died there in 1777. His principal works are "Museum Ichthyologicum Sistens Piscium tam indigenorum quam exoticorum, quos in suo Museo asservat auctor, descriptiones ordine Systematico dispositas," cum Tab. 1754—1756, 2 vols. folio; and "Bibliotheca Regni Animalis atque Lapidei," 1760, 4to. Besides which, he published a description of the Gronovian Museum, and several dissertations.—Moreri. *Nouv. Dict. Hist. Rees's Cyclopæd.*

GROSE (FRANCIS) an English antiquary.

He was the son of a jeweller, and was born at Richmond in Surrey, in 1731. He inherited a good fortune, which he spent in dissipation; and having relinquished a situation which he had held for some time in the Herald's college, he obtained a commission in the Surrey militia, where he was familiarly known by the title of Captain Grose. Having a taste for drawing, he was induced to make sketches of such remarkable buildings and ruins as occurred to his notice, in the course of his tours in a military capacity through various parts of the kingdom. Hence originated his principal work "The Antiquities of England and Wales," 8 vols. 4to, the first of which appeared in 1773. After its completion he visited Scotland, to collect materials for a similar work relating to that country, which he began publishing in 1790, and finished in 2 vols. 4to. He then went to Ireland, to make a similar survey of the objects of curiosity in that island. In the midst of his undertaking he was seized with a fit of apoplexy, and died at Dublin, in May 1791. Besides the works already noticed, he was the author of a "Treatise on Ancient Armour and Weapons," 1786, 4to; "A Provincial Glossary, with a Collection of local Proverbs and popular Superstitions," 1787, 8vo; "Military Antiquities," 1788, 2 vols. 4to, containing the history of the English army from the Conquest; "Rules for Drawing Caricatures, with an Essay on Comic Painting," &c. "The Antiquities of Ireland," left imperfect at his decease, were completed and published by the rev F. Ledwich, 2 vols. 4to. Captain Grose, in the present day, is considered as a somewhat superficial antiquary; and his engraved views of ancient edifices are beneath criticism; but notwithstanding his imperfections, he has the merit of having excited a taste for the study of architectural antiquities in this country; and has preserved from oblivion some monuments of former times, which are now destroyed.—*Europ. Mag. Gent. Mag. Edit.*

GROSSETESTE (ROBERT) bishop of Lincoln, an English prelate of great learning and integrity in the 13th century; born in 1175, at Stradbroke, Suffolk, of poor parents. He pursued his studies at Oxford, and afterwards at Paris; and distinguished himself by his proficiency as a Hebraist. On his return to the former university, his reputation as a theologian procured him many scholars, till having been appointed successively archdeacon of Chester and of Wilts, he was in 1235 raised to the mitre. In the administration of his diocese, his firmness in resisting the encroachments of Rome, drew down on him the displeasure of the Pope, who sent for him to Lyons, but the censures there pronounced against him, had not the effect of inducing him to alter the line of conduct which he thought it his duty to adopt. His death took place at Buckden in 1253. He was the author of a commentary on some of the works of Aristotle, as well as of many other tracts, a list of which may be found in Tanner; the only two which appear to have been printed

are "De Cessatione Legalium;" and "De ὄφρατα."—*Biog. Brit.*

GROTIUS (HUGO) the Latinized name of Hugh de Groot, a celebrated Dutch scholar of the 17th century. His father was a burgomaster of Delft, and one of the curators of the university of Leyden; and his mother was an accomplished woman, descended from one of the first families in Holland. He was born at Delft, April 10th, 1583, and manifesting in his early years a strong inclination for learning, every facility was afforded for the cultivation of his talents. He was placed under the tuition of Utenbogard, a learned Arminian minister at the Hague; and in his twelfth year he was removed to Leyden, where he studied under Francis Junius. At the age of fourteen he maintained public theses in mathematics, law, and philosophy; and his early proficiency excited the astonishment of the Dutch literati, and gave earnest of his future distinction in the republic of letters. In 1598 he went to France with the famous Barneveldt, ambassador extraordinary from the states-general, when Grotius was introduced to Henry IV, who presented him with his picture and a gold chain. He took the degree of doctor of laws during his residence in France, and received many attentions from persons of eminence. Returning to Delft in 1599, he commenced his career as a legal advocate; and the same year he made his debut as an author, by the publication of an edition of the treatise "De Nuptiis Philologæ et Mercurii," of Martianus Capella, which he is said to have prepared for the press before he went to France. This was followed by a Latin translation of a treatise on navigation, by Simon Stevin; and in 1600 he published the "Phænomena" of Aratus, with emendations of the Greek text. He also cultivated Latin poetry, and produced, besides some shorter pieces, three tragedies on sacred subjects, "Adamus Exsul;" "Christus Patiens;" and "Sophompaneas," on the story of Joseph. He was now chosen historiographer to the United Provinces; and he also obtained the professional post of advocate-general of the treasury for Holland and Zealand. In 1608 he married Mary Reigersberg, daughter of the burgomaster of Veer, a lady whose devoted attachment and heroic conduct fully justified his choice. The next year he published an elaborate treatise in defence of the general freedom of the seas, entitled "Mare Liberum," the particular objects of which were to vindicate the right of the Dutch to trade to the East Indies in spite of the exclusive claims of the Portuguese, and to fish in the north seas, where the English asserted their maritime superiority. Selden wrote his "*Mare Clausum*" in answer to this work. Another patriotic publication of Grotius, was his book "De Antiquitate Reipublicæ Bataviæ," for which he received the thanks of the state. In 1613 he was chosen pensionary of Rotterdam, a political office of importance, as it gave him a seat in the states of Holland, and afterwards in the assembly of the states-

general. Disputes having arisen between the Dutch and English governments relative to the Greenland fisheries, Grotius was sent to the court of London to conduct a negotiation on the subject; when he was treated with much respect by King James I. though his character does not appear to have been properly appreciated by the English clergy. The liberality of his sentiments, both in religion and politics, proved sadly detrimental to his interests on his return to Holland. Two parties then divided that country; the Calvinists or Gomarists, and the Arminians or Remonstrants. The stadtholder, Maurice, prince of Orange, supported the Gomarists, who were more numerous and powerful than their opponents; Grotius, with Hoogerbeetz, and the grand pensionary Barneveldt, espoused the side of the Arminians, and endeavoured to thwart the measures of the prince, who had them all three arrested in August 1618. The national synod of Dordrecht or Dort, then sitting, having completed the triumph of the Calvinists, by condemning the principles of the Remonstrants, and deposing or banishing their principal ministers, Barneveldt was first arraigned, condemned, and executed. The trial of Grotius followed, in May 1619, and being very irregularly conducted, it terminated in his conviction of treason against the government; and a sentence of imprisonment for life, and the confiscation of his estate. The place appointed for his confinement, was the castle of Louvestein, near Gorcum in South Holland, where his wife obtained permission to share his fate. In this fortress he remained nearly two years, devoting the time to literary pursuits. The grand fruit of his studies, was a treatise in Dutch verse "On the Truth of the Christian Religion," which formed the ground-work of his celebrated Latin production on the same subject. Grotius at length was liberated from prison, through the ingenious fidelity and fortitude of his wife. He had been permitted to borrow books from his friends, which when consulted he was accustomed to send back to Gorcum in a chest which served to convey him a supply of linen from his laundress. This vehicle was at first regularly searched, but at length the custom was discontinued. The wife of Grotius then persuaded him to allow himself to be confined in a chest, in which she informed the commandant's lady, whose husband was absent, that she was going to send away a large load of books, to prevent Grotius from injuring his health by study. At the time appointed he entered the chest, in the top of which holes had been made for the admission of air, and was thus conveyed down a ladder by two soldiers. One of them observing its weight, said in jest, "there must be an Arminian in it." "There are Arminian books in it," replied the wife of Grotius. This did not quite satisfy the man, who went to inform the governor's lady of the circumstance before the chest was allowed to leave the fortress. Misled by previous information, she directed its removal unexamined. Grotius was conveyed

in safety to the house of a friend at Gorcum. His wife, on receiving information of his safety, avowed what she had done; in consequence of which she was at first detained in close custody, but a petition to the states-general procured her release. Grotius sought an asylum at Paris, and obtained the protection of the French king, Louis XIII, who bestowed on him a pension of three thousand livres. While in France he composed his treatise, entitled "De Jure Belli et Pacis," which was finished and published at Paris, in 1625. His literary reputation is in a great degree founded on this production, which became the object of general admiration, and was commented on, criticised and translated into several languages, becoming a general text-book for lecturers on international policy. Under the ministry of cardinal Richelieu, Grotius was solicited to engage actively in the service of France; and his refusal offending that powerful statesman, his situation became unpleasant, and he determined on removing elsewhere. The stadtholder, Henry Frederic, who had succeeded his brother, prince Maurice, in 1625, had not concurred in the persecution of the Arminians, and was believed to be favourably disposed towards the illustrious exile, who, after waiting in vain for a recall from banishment, at length resolved to brave all danger, and he returned to Holland without permission. Towards the close of the year 1631 he went to Rotterdam, and then to Amsterdam; but his enemies were still so powerful, and his friends so cold or timid, that he found it prudent to retreat, and accordingly removed to Hamburgh, where he resided about two years. At length becoming acquainted with Salvius, vice-chancellor of Sweden, he was recommended by him to the prime minister of that country, count Oxenstiern, who invited him to a conference at Frankfort-on-the-Main. The result of this meeting was the appointment of Grotius to the post of Swedish ambassador to the court of France, with the title of counsellor to Christina, queen of Sweden. He set out on his embassy in the beginning of 1635, and soon reached Paris, where he made his public entry the second of March, after having overcome some obstacles arising from the opposition of cardinal Richelieu to his reception. He continued to exercise his diplomatic function with credit to himself, and advantage to the government he represented, till the spring of the year 1645, when he was recalled at his own request. Being disappointed in his expectation of obtaining some new employment of importance, and finding that his health suffered from the severity of the climate of Sweden, he determined to go to Lubeck. After an audience of the queen, who presented him with a considerable sum of money, and a service of plate, he embarked on board a vessel provided for his voyage. A violent storm obliged him to go on shore near Dantzic, whence he set off for Lubeck in an open wagon. The bad weather continuing, he was so much indisposed when he arrived at Rostock, that he could proceed no farther. His illness

increased so rapidly as to leave no hopes of his recovery, and he died August 28, 1645. His remains were removed to Delft, and interred in the family vault. Besides the literary works already mentioned, he was the author of two "Dissertations on the Origin of the American Nations;" "A History of the Goths, Vandals and Lombards;" "Annals of the Affairs of Belgium;" all in Latin, and the last-mentioned published posthumously. He likewise distinguished himself by his Commentary on the Old and New Testament; and published an edition of Lucan's Pharsalia, and the works of Tacitus, exclusive of less important productions. He left three sons, two of whom adopted the profession of arms; but the second, PETER, was bred to the law, and became pensionary of Amsterdam, and deputy to the states-general.—His brother, WILLIAM GROTIUS, was likewise a lawyer, and a man of learning and abilities.—*De Barigny's Life of Grotius. Aikin's Gen. Biog.*

GROUCHY (SOPHIA) sister of marshal Grouchy, and widow of Condorcet, was carefully educated, and cultivated literature with success. She was the translator of two works of Smith into French, viz, "The Theory of Moral Sentiments;" and "Dissertations on the Origin of Languages." The latter also contains eight "Letters on Sympathy," in which Madame Condorcet supplies some omissions of the author, whom she examines, modifies, and often combats. Her translation is remarkable for the elegance and purity of its style, the ideas and severity of philosophical language. This lady composed a treatise for the education of her daughter, which remains unpublished.—She died in 1822, universally regretted.—*Biog. Univ. des Contemporains.*

GROVE (HENRY) a learned nonconformist divine and eminent tutor, was born at Taunton in Somersetshire, in 1683. He was educated by the reverend Mr Warren, of Taunton, a nonconformist, and completed his theological studies under the rev Mr Rowe, in London. After passing two years in London, he entered the ministry at the age of twenty-two, and upon the death of Mr. Warren, in 1706, he was chosen to succeed him as tutor in the academy of Taunton. He also officiated to two small congregations in the neighbourhood of Taunton, and had several invitations to places of note, but from his love of retirement and independence, he declined them all, and his extreme moderation exposed him to the censures of some of his brethren, who represented him as being indifferent to the truths of the gospel. He however made no change in his conduct, and he gave his reasons and convictions in "An Essay on the terms of Christian Communion." Mr Grove died in 1737-8 of a fever. He was the author of a great number of sermons, essays, treatises, &c. and of a "System of Moral Philosophy," all of which were much esteemed.—*Biog. Brit. Aikin's G. Biog.*

GRUTER or GRUTERUS (JANUS) the son of a burgomaster of Antwerp, where he was born in 1560. His father being banished for

signing the notorious petition to the duchess of Parma, brought him with him to England, and at the proper age placed him at Cambridge. His education was however completed at Leyden, when circumstances admitted of his parents returning to the Continent. Having graduated as LLD. he went first to his native city, but quitted it again previously to the siege of 1584, and having filled successively a professor's chair at Rostock and Wittemberg, and declined another offered him at Padua, settled finally at Heidelberg, where he died, after an illness of only ten days' duration, September 10, 1527, and was buried at St Peter's church in Heidelberg. The most celebrated of his works is a large and valuable collection of Roman inscriptions, published originally in two folio volumes, but afterwards enlarged to four, and dedicated to the emperor Rodolph II, who distinguished the author with his favour, and even entertained an intention of conferring on him a patent of nobility. His other writings are—"Florilegium magnum, seu Polyanthea," fol.; "Deliciae Poetarum Gallorum, Italorum, Belgarum," 8vo, 9 vols.; "Chronicon Chronicorum," folio; and "Thesaurus Criticus," 6 vols. 8vo, reprinted in 7 vols. He also published some annotations on the Latin historians, and an edition of the works of Cicero, in two folio volumes.

GRYNÆUS (SIMON) a divine and philological writer of the sixteenth century, who was a native of Suabia. He studied at Pfortshiem, where he became acquainted with Melancthon, and afterwards at Vienna, in which city he became professor of Greek. He next removed to Buda in Hungary, and for some years filled the office of rector of the seminary in that capital. Having adopted the doctrines of Luther, he was persecuted and imprisoned at the instigation of the monks; but at length obtaining his liberty, he retired to Wirtemberg. In 1523 the elector-palatine made him Greek professor at the university of Heidelberg; whence he removed in 1529 to undertake the professorship of theology at Basil. In 1531 he visited England, for the purpose of examining the libraries, and was much noticed by sir Thomas More, to whom he had been recommended by Erasmus. In 1540 he assisted with Melancthon, Bucer, Calvin, and others, at the famous conferences at Worms. He died of the plague at Basil the following year, aged forty-eight. His publications consist of the Almagest of Ptolemy, in Greek, 1538; Euclid, 1533; Plato, with the Commentaries of Proclus, 1534; Commentaries on the Topics of Aristotle; the Life of Ecolampadius, &c.—*Bayle. Moreri.*

GRYNÆUS (JOHN JAMES) grand-nephew of the preceding, was born at Berne in Switzerland, in 1540. He was instructed in classical literature by his father, after which he studied at Basil, and then at Tubingen, where he took the degree of DD. in 1564. The next year he succeeded his father as pastor of Rotelen, and while in that situation was employed in superintending editions of the

Fathers, and other works published at Basil, where he obtained a professorship in 1575. He afterwards spent two years at Heidelberg, as professor of history and sacred literature; but returned to Basil in 1586, having been chosen principal minister of the city, and professor of history and theology in the university. He died in 1617. His writings include notes on the works of Origen, Irenæus, and Eusebius; expositions of the Scriptures; an ecclesiastical history, &c.—*Melch. Adam. Moreri.*

GRYPHIUS (ANDREW) a German dramatic poet, who was born at Glogau in 1616. He studied at Fraustadt and Dantzic, after which he became tutor to a nobleman's children. In 1633 he went to Leyden, where he formed an intimate acquaintance with Salmasius and Heinsius. After refusing invitations to become professor at Heidelberg, Frankfurt-on-the-Oder, and in Sweden, he at length accepted the post of syndic to the senate of Glogau. In 1664 he was appointed co-deputy to the ducal council, when he died the 16th of July that year. His tragedies, which have been preferred to those of any contemporary German writers, were published with other poetical pieces at Breslau, 1698, 8vo. He also wrote comedies, which are much esteemed by his countrymen, who have termed him the German Corneille and Moliere.—*Stollii Introd. in Hist. Lit. Nouv. Dict. Hist.*

GRYPHIUS (CHRISTIAN) son of Andrew, was born at Fraustadt in 1649. After prosecuting his earlier studies at Glogau and other places, he finished his education at Jena and Strasburg. He then became professor of rhetoric at Breslau in 1674, principal and professor at the Magdalen college in that city in 1686, and afterwards librarian to the university. He published poems and orations in the German language, and wrote dramas which were not printed. His classical acquirements were very considerable, and he was intimately acquainted with the Greek language. His works, exclusive of those just noticed, are—"History of the Orders of Knighthood;" "The German Language formed by Degrees, or a Treatise on the Origin and Progress of that Language;" "Apparatus, sive Dissertatio Isagogica de Scriptoribus Historiam Sæc. xvii. illustrantibus," 4to. He also wrote in the *Leipsic Journal*. His death took place March 6, 1706, owing to apoplexy, just after he had ordered a sacred ode of his own composition, set to music, to be performed in his chamber.—*Idem.*

GUARINI (BATTISTA) a celebrated Italian poet, was born at Ferrara in 1537, and was descended from the ancient family of Guarino or Guarini. He was for some years professor of belles lettres in the university of Ferrara. At the age of thirty he entered the service of Alfonso II, duke of Ferrara, who created him a cavalier, and employed him in various embassies, and in 1585 he nominated him his secretary. He died at Venice in 1612. His fame rests principally upon his famous dramatic pastoral, the "Pastor Fido," which stands first in that class of Italian composi-

tion. He bestowed much time and labour upon it, and it was first represented at Turin in 1585, on occasion of the nuptials of Charles Emanuel, duke of Savoy, with Catharine of Austria. It was printed two years afterwards, and editions multiplied throughout Italy. It is still regarded as one of the standard productions of Italian poetry. He was also the author of "Il Segretaris," or the Art of Letter Writing; a comedy entitled "Idropico," Latin orations, letters, poems, &c.—*Moreri. Tiraboschi.*

GUARINO, surnamed Veronese, was born at Verona about 1370, and learned the Latin language from John of Ravenna, but he went to Constantinople to learn Greek of Manuel Chrysolarus. On his return to Italy he taught at Florence, Bologna, Padua, Trent, Verona, Venice, and Ferrara. His last and longest residence was at Ferrara, where, in 1429, he was invited as preceptor to Leonello d'Este, son of the marquis Nicolas III, and in 1436 he was appointed professor of the learned languages. He died there in 1460. He had many distinguished scholars, and to him may be attributed in great part the restoration of ancient elegance in the Greek and Latin languages in the fifteenth century. He employed himself in translating the ancient Greek authors into Latin; he gave versions of many of Plutarch's Lives, and at the command of pope Nicolas V, he translated the first ten books of Strabo's geography. His other works consist of grammatical treatises on the Greek and Latin languages; commentaries upon ancient authors, orations, Latin poems, letters, &c. He was the first discoverer of the poems of Catullus, or at least he corrected them so as to be read.—His son, BATTISTA, wrote comments upon Lucan, Catullus, and Cicero's Epistles, and was the author of several translations from the Greek. He died after 1494.—*Tiraboschi. Trithemius.*

GUERCINO, an eminent painter, whose proper name was John Francis Barbieri, was born at Cento, in the duchy of Ferrara, in 1590. He acquired the principles of his art from Cremonini and Gennari; but adopted two or three styles in succession, the best of which is grounded on that of Caravaggio, improved by a consultation of the schools of Venice, Bologna, and Rome. Guercino was invited to the latter capital by Gregory XV, and after spending two years there, returned home, whence he could not be withdrawn by the solicitations of the monarchs of France and England. Christina, queen of Sweden, in passing through Bologna, sought in vain to induce him to leave Italy. As an artist he is less distinguished for ideal beauty, than by a vigour or brilliancy of colouring. He received the honour of knighthood from the duke of Mantua; and died a bachelor in 1666, very rich, notwithstanding his expenditure of large sums in building chapels, founding hospitals, and other acts of charity and devotion. The most celebrated pictures of Guercino are his St Petronilla, his Aurora, his St Philip of Neri, and a fine picture of the Resurrection;

he also carried fresco painting to the highest perfection, in the great dome at Piacenza. He painted with extraordinary facility, having executed one hundred and six altar-pieces for churches, and one hundred and forty-four historical pieces, besides his performances in fresco.—*D'Argenville Vies des Peint. Bryan.*

GUERICKE or GUERICHE (OTTO or ОТНО) a natural philosopher of the seventeenth century, famous as the inventor of the air-pump. He was born in 1602; and after pursuing his studies at Leipsic, Helmstadt, Jena, and Leyden, he travelled in France and England. He then settled at Magdeburgh, and after filling various public situations, he became consul or burgomaster of the city, and counsellor to the elector of Brandenburg. He died during a visit which he made to Hamburgh, in 1686. His researches concerning pneumatics, particularly in relation to the pressure of the atmosphere, are contained in a work entitled "Experimenta Magdeburgica," which he published in 1672. He was the author of several other philosophical treatises, which show him to have been a man of an ingenious and speculative disposition.—*Stollit Int. in Hist. Lit. Hutton's Nat. Dict.*

GUEVARA (ANTONY DE) a Spanish writer, was born in the province of Alaba, towards the end of the fifteenth century, and was brought up at the court of Ferdinand and Isabella. After the death of the latter he became a Franciscan monk, and subsequently preacher and historiographer to Charles V, who made him bishop successively of Guadix and Mondonedo. He died in 1548. Guevara was much admired for his eloquence and parts, but his style is extravagantly figurative; and in writing history he vindicated the propriety of falsifying what he pleased, which licence he curiously exemplified in his famous "Dial of Princes, or Life of Marcus Aurelius Antoninus," which is a work of mere fiction, although translated into most of the languages of Europe. He was also the author of "Epistles," which have been much admired, although greatly depreciated by Montaigne. Many of Guevara's remarks have been borrowed, and given in a different form, among which is the celebrated saying, that "Hell is paved with good intentions."—*Moreri. Antonio Bibl. Hist.*

GUEVARA (see VELEZ.)

GUIBERT (JACQUES ANTOINE HYPOLITE) a distinguished French officer and writer on military subjects, was born at Montauban in 1743, and was the son of an officer of rank. At the age of thirteen he accompanied his father to the war in Germany, and obtained the rank of colonel for his services in the action of Ponte Nuovo in Corsica. In 1770 he published his "Essai Générale de Tactique," a work generally admired, but which procured him enemies from its couceited style and usurping censures. After making a tour in Hungary and Germany, he returned to France, and produced a tragedy entitled "Le Connetable de Bourbon;" and afterwards two others, "The Gracchi;" and "Anne Bullen." He also composed admired eulogies of Ca-

tinat, the chancellor de l'Hopital, and the king of Prussia. He was next appointed a member of the council of war, formed to establish a regular system in the French army, and projected a new code; but his enemies arose, and attacked and opposed him from all quarters. At the commencement of the Revolution, sheltering himself under the assumed name of Raynal, he published a work entitled "De la Force Publique considerée sous tous ses Rapports," in which he maintained the principle of a concurrence of the legislative and executive powers, in deciding upon war and peace; and pointed out the means of securing the constitution against the influence of the army. He died in 1790. The regiment of Neustria, which he commanded fourteen years, gave a handsome testimony of their esteem, in a letter to his widow, who published his "German Tour," in 1803.—*Life prefixed to his German Tour.*

GUICCIARDINI (FRANCIS) an eminent Italian historian, was born of an ancient and noble family at Florence in 1482. After finishing his studies at Pisa, Bologna, and other universities, he was engaged at the age of three-and-twenty to read lectures on the Institutes in his native city. A few years afterwards he quitted the chair, and engaging in political life, was sent ambassador from Florence to Ferdinand the Catholic. In 1518 he was deputed to meet pope Leo X at Cortona, when that pontiff was so impressed with his talents, that he committed to him the government of Modena and Reggio, then under ecclesiastical dominion. He was afterwards made governor of Parma, which city, as well as that of Reggio, he successfully defended against the French. In 1523 pope Clement VII conferred upon him the presidency of all Romagna, and afterwards made him lieutenant-general of the papal army. From 1531 to 1534 he was governor of Bologna, and during that time strenuously exerted himself to restore the Medici family in Florence. On the death of Clement VII he returned to Florence, and was made a counsellor of state to duke Alexander, after whose death he applied himself to ensure the succession of Cosmo, but not deeming himself sufficiently considered by that prince, he retired to his villa of Arcetri, and employed himself in the composition of his celebrated history, which he had nearly concluded when he was interrupted by death in May 1540, in the fifty-ninth year of his age. Guicciardini was a man of great gravity of temper and demeanour, and displayed much political sagacity and love of justice, in the administration of the important offices entrusted to him. His great work, the "History of Italy during his own Time," did not appear until many years after his death, in consequence of the severity of his strictures upon several persons of powerful families still surviving. In 1561 the first sixteen books were published by his nephew, Agnolo; but in this and all the Italian editions, various passages were omitted, until that of Friburg, 4 vols, 4to, 1755, printed from the author's own

MS. in the Magliabecchi library at Florence. The history of Guicciardini, although too minute and prolix, is generally allowed to be one of the most valuable productions of its own class in that age. His principal fault, both in style and narrative, is, however, diffuseness. Guicciardini also wrote poetry, and some of his verses are preserved by Crescimbeni.—*Moreri. Tiraboschi.*

GUICCIARDINI (LEWIS) nephew of the preceding, was born at Florence in 1521, and was learnedly educated. For what reason it is not known, he took up his residence in the Low Countries, and resided chiefly at Antwerp until his death in 1589. He wrote various works in Italian, of which the most valuable is "A Description of the Low Countries," Antwerp, 1567—1588. His other works are—"Commentaries on the Affairs of Europe from 1529 to 1560;" "Remarkable Words and Actions of Princes;" "Hours of Amusement;" and a collection of the precepts and maxims of his eminent kinsman.—*Ibid.*

GUIDO RENI, a very celebrated painter, was born at Bologna in 1575, where his father was an eminent musician. Displaying an early taste for design, he was placed, in the first instance, with Calvart, but in his twentieth year he became a student in the school of Ludovico Carracci, being at that time so handsome, that his master made him the model of his angels. The strong manner of Caravaggio was then in vogue; but being advised that a reputation might be obtained by adopting one directly the reverse, he took up the clear and delicate manner of imitating the beautiful in nature, and acquired that grace, elevation, and facility of touch, by which his works are so much distinguished. He accompanied Albani to Rome, and notwithstanding the opposition and jealousy of Caravaggio and others, soon established his reputation. Pope Paul V chose him to paint his private chapel of Monte Cavallo, and often came to see him work, which he was accustomed to do splendidly habited, and served by his disciples, who ranged round him in respectful silence. No artist held higher notions, either of the art or of himself, than Guido; he returned no visits paid him by the great, which he received as intended only to his talents. Discontented with the pope's treasurer, while painting his chapel, he secretly withdrew to Bologna, and when persuaded to return, the cardinals sent their coaches to meet him, as if he had been an ambassador. He might have accumulated wealth as well as fame, but for an unfortunate propensity to gaming, which dissipated his magnificent remuneration as rapidly as he received it. Owing to this pernicious habit, in his advanced years he was reduced to paint for his immediate wants, whence the great inferiority of his later performances. He lived to see out his friends and patrons, and died in a melancholy condition at Bologna in 1642, in his sixty-seventh year. This great painter read little, and wrote less, his sole amusement being his harpsichord. Few names in the art stand higher than that of Guido whose

works are numerous in churches and palaces. In grace and beauty they are unsurpassed, but according to some connoisseurs they want strength and expression. The beau ideal of Guido, in respect to sacred subjects, was admirable; and the celestial character, so peculiarly impressed on his figures, strongly attests his genius. The works of this great painter have employed the gravers of the ablest masters.—*D'Argenville Vies de Peint.*

GUIGNES (JOSEPH DE) an eminent Oriental scholar, who lived in the last century. He was born at Pontoise in France in 1721. The learned Orientalist, Stephen Fourmont, assisted him in his studies at Paris, in which he made so much progress, that in 1741 he received the appointment of royal interpreter. In 1753 he was chosen a member of the Academy of Inscriptions and Belles Lettres; and in 1757 he distinguished himself by the publication of an erudite work, entitled "Histoire générale des Huns, des Turcs, des Moguls, et des autres Tartares Orientaux," 5 vols. 4to. He was likewise the author of "Abrégé de la Vie d'Etienne Fourmont," 4to; "Essai historique sur la Typographie Orientale et Grecque," 4to; besides papers in the Journal des Savans, and in the Memoirs of the Academy, of which he was a member. He suffered in his finances during the revolutionary troubles in France, and died at Paris in 1800.—His son, who cultivated the same branches of literature, distinguished himself as a Chinese scholar, and published, besides other works, "Voyages à Péking, Manille, et l'Isle de France, faits dans l'intervalle de 1784 à 1801," 3 vols. 8vo, Paris, 1808.—*Nouv. Dict. Hist. Biog. Univ.*

GUILIM (JOHN) an English herald, born in Herefordshire of a Welch family in 1565. He received his education at Brazenose college, Oxford, and became a member of the Herald's college, in which he obtained the appointment of rouge croix poursuivant in 1617. For the possession of this situation he is generally considered to have been indebted to a work published under his name in 1610, entitled the "Display of Heraldry." There are however strong grounds for believing that he only corrected the treatise in question, which was in reality the composition of dean Barkham. It went through a number of editions, and in 1679 captain Loggan published a supplement to the fifth, under the title of "A Treatise of Honour, Civil and Military." A sixth appeared in 1724. Guillim died in 1621.—*Biog. Brit.*

GUISCHARD (CHARLES GOTTLIEB) an able writer on military tactics, was a native of Magdeburg. After studying at the universities of Halle, Marburg, and Leyden, he entered into the service of Holland, and while thus employed, found leisure to prepare materials for his "Mémoires Militaires sur les Grecs et les Romains," which appeared in 1757, in 2 vols. 4to, and met with great approbation. The same year he entered a volunteer into the allied army, and acquired the esteem of prince Ferdinand of Brunswick, who recommended

him to the king of Prussia. Frederick kept him near his person in order to converse with him on the art of wars, and bestowed upon him the name of Quintus Icilus, the commander of Cæsar's tenth legion, in compliment to his military knowledge. Besides the work already mentioned, he was the author of "Mémoires Critiques et Historiques sur plusieurs points d'Antiquité militaires," 4 vols. 8vo, upon which work Gibbon bestows very high encomiums. Guischard died in 1775.—*Nouv. Dict. Hist. Gibbon's Mem.*

GUNTER (EDMUND) an English mathematician, born in Herefordshire in 1581. He was sent to Westminster school, whence, at the age of eighteen, he was elected a scholar of Christchurch college, Oxford, where he took his degrees in arts, and having entered into holy orders, proceeded B.D. in 1615. Before this time he invented the sector, a mathematical instrument of which he wrote a Latin description, never published. In 1618 he contrived a small portable quadrant for astronomical purposes; and his reputation becoming established, in 1619 he was elected professor of astronomy at Gresham college, London. The next year he published his "Canon Triangulorum," exhibiting a table of the Logarithms of the Sines and Tangents of all the degrees and minutes of the quadrant, serving greatly to facilitate mathematical computations. In 1622 he discovered that the declination of the magnetic needle or variation of the compass is not constant or regular, as was previously supposed, which important phenomenon was afterwards farther elucidated by Gellibrand, who succeeded Gunter as Gresham professor. The latter next invented his famous "Rule of Proportion," which affords an easy method of combining arithmetic and geometry, admirably adapted for popular use; and this invention has perpetuated his name, as in its mechanical form it is styled "Gunter's Rule," or "Scale." Of this and his other improvements he published an account in 1624, under the title of "The Cross-Staff, in three Books," 4to. In the same year appeared a tract, containing the "Description and Use of his Majesty's Dials in Whitehall Garden," 4to, in the construction of which he had been employed by order of James I. He died 10th December, 1626, at Gresham college, and was buried in the church of St Peter le Poor in Broad-street. His works have been repeatedly published.—*Ward's Lives of Gresham Professors. Martin's Biog. Philos. Aikin's Gen. Biog.*

GUSTAVUS VASA, or **GUSTAVUS I**, king of Sweden, was the son of Eric Vasa, duke of Gripsholm, allied to the royal family, and was born in 1490. He was distinguished in his youth for his courage and accomplishments; and Sweden being under the dominion of the Danes, Christiern II of Denmark, in 1518, took Gustavus and other nobles to Copenhagen, as hostages for the peace of the country. Christiern failing in his endeavours to attach Vasa to his cause, committed him to prison, and afterwards to the guardianship of

a Danish nobleman, who treated him with great generosity. Inspired, however, by a wish to free his country from a foreign yoke, Gustavus made his escape from his keeper, and reached the Swedish province of Sudermania in safety. His first attempts to excite the spirit of patriotism among the Swedes were unsuccessful, and he himself narrowly escaped destruction. At length he took refuge among the miners of Dalecarlia, where, after incurring fresh dangers, he roused the people to action; and overcoming the dependants of Christiern in the northern provinces, he assembled the states of Sweden at Wadstena, and was unanimously elected administrator of the kingdom. In 1523 he was raised to the crown, and soon after obtaining possession of Stockholm, he restored peace to the country. In his endeavours to relieve his subjects from the accumulated burdens produced by a long period of usurpation and anarchy, Gustavus was opposed by the clergy, who were by no means willing to submit their benefices to that equalized taxation which the king proposed to establish. Hence sprung the Reformation in Sweden, where the Lutheran religion was established, and the church freed from its dependance on the Pope. This may be considered as the principal measure in which Gustavus was concerned, after he attained the sovereign power. Having reigned in prosperity thirty-seven years, he died in 1560, leaving the crown to his eldest son, Eric. *Mod. Univ. History.*—GUSTAVUS ADOLPHUS, grandson of the preceding, and son of Charles IX, whom he succeeded in 1611, at the age of eighteen, when he had already acquired some military reputation. Having chosen for his prime minister the chancellor Oxenstiern, he assembled the states in the beginning of 1613, and resumed all crown grants, to provide funds for the war in which Sweden was involved with Denmark, Russia, and Poland. His contests with those powers were terminated to his own advantage; and after a few years of warfare, he strengthened his own dominions by judicious government and external conquests; and established his fame as a successful general and a wise and politic prince. The emperor of Germany, Ferdinand II, having offended him, by giving aid to his enemies, the Poles, and in other respects shown a hostile disposition, he resolved on the bold scheme of invading the dominions of that potentate. He was supported by the co-operation of the protestant princes of Germany, who looked up to him as the champion of their cause; and by the friendship of England and France. Thus sustained, he embarked on this great enterprise in June 1630, with an army of sixty thousand men, and a fleet of seventy sail. He speedily took the isle of Usedom, and passing through Pomerania and Mecklenburg, penetrated into Saxony, baffling all opposition by the boldness and promptitude of his operations. His splendid career belongs to the history of the age, rather than to the memorial of his character as a talented individual. Success

generally, though not uniformly, attended his proceedings. He gained the battle of Leipsic, September 7, 1631, against count Tilly, who was defeated and killed in a subsequent engagement. He was then opposed by Wallenstein, who commanded the imperial army, in an action which took place on the plain of Lutzen, November 16th, 1632, when the Swedes were victorious; but their heroic sovereign fell in the field. He left by his queen, the daughter of the elector of Brandenburg, one child, the celebrated Christina, who became his successor.—*Harte's Life of Gustavus. Aikin's Gen. Biog.*

GUSTAVUS III, king of Sweden, the son of Adolphus Frederick, born January 24, 1746. He was educated under count Tessin, whose published letters to his pupil are highly creditable to his talents. In 1771 he succeeded his father, being then on his travels at Paris. The royal authority was at that period very limited; the kingdom was divided into two political parties or factions, one of which, denominated the *bonnets*, was supported by the influence of Russia and England, exerted through their ambassadors; and the other, called the *hats*, by that of France. The former having the ascendancy in the national diet, expelled the latter, and attempted to set narrower bounds to the king's power. Gustavus, with great coolness and prudence, contrived to counteract their designs, and produce a revolution in his own favour. Captain Hellichius, a military officer, in concert with the young monarch, by a pretended revolt, afforded him a pretext for assembling his troops. On the 19th of August, 1772, Gustavus having secured by his eloquence the fidelity of the guards and the soldiery brought to Stockholm by the states, had the chiefs of the senate arrested, proceeded to the assembly of the states, and caused an act to be passed abolishing all the laws made since 1630, to fetter the regal power, and procured the transfer of sovereignty to himself as king, with the command of all the forces of the realm. The legislative power alone, and the right of making war or peace, were still vested in the states conjointly with the king. During the reign of Gustavus the army rose to greater consideration in Sweden than before; the population of the country increased; the national character was improved; and arts, sciences, and commerce flourished under his auspices. When the French Revolution occurred, the Swedish monarch was one of the first who took the alarm; and in 1791 he went to Spa, as it is asserted, with a design to head an army for the deliverance of Louis XVI. In the beginning of 1792 he attempted, without success, to raise ten millions for the execution of his purpose. He was adopting ulterior measures, when he became the victim of a political conspiracy, falling by the hand of an assassin, March 29, 1792.—[See ANKERSTROM in Appendix.]—This prince possessed considerable learning and talent. He published, in the Swedish language, several dramatic pieces, which, as well as his speeches to the diets, and his

letters, have been translated into French, and printed at Stockholm, in 5 vols. 8vo. He also left in manuscript the history of his own time, which was preserved at Upsal, with directions that it should be published fifty years after his decease.—*Nouv. Dict. Hist. Aikin's G. Biog.*

GUTHRIE (WILLIAM) There were two of this name, both natives of Angus, in which county the elder was born in 1620, at Pitforthly. He was educated for the Scotch kirk, in the university of St Andrews, and in 1644 was placed as minister in the parish of Finwick, but after holding his preferment twenty years, was ejected as a nonconformist. His zeal in defence of the presbyterian discipline exhibited itself in the production of a treatise, entitled "The Christian's great Interest," which is still held in great esteem by those of the persuasion. His death took place in 1665. The second was born at Breichen, in the same county, in 1708, or as some say, in 1701; and after passing through a course of classical study at Aberdeen, quitted his native country in consequence of a disappointment of a tender nature, and came to London. Here he commenced author by profession, and published a "History of England," in 3 vols. folio; "A Translation of Quintilian," in 2 vols. 8vo.; as also one of some of Cicero's works. "The Friends," a novel, 2 vols.; and "Remarks on English Tragedy," 8vo.; the popular "Geographical Grammar," which goes under his name, is said to have been compiled by Knox, a bookseller in the Strand. A "History of Scotland," in ten volumes; a "History of the Peerage," 4to; and a "Universal History," in 13 vols., are also generally ascribed to him; but he is considered to have had but little share in their composition, and only to have lent his name to them. Mr Guthrie obtained a pension from the government, and was in the commission of the peace for Middlesex, but it is believed never acted as magistrate. His death took place in 1770.—*Chalmers's Biog. Dict.*

GUTTENBERG (JOHN) the reputed inventor of the art of printing, was born at Mentz, of noble and wealthy parents, in 1400. In 1427 he resided at Strasburgh, as a merchant; but returned to Mentz in 1430, and between that time and 1439 (as is inferred from the proceedings in a process between him and one to whom he had promised to communicate the secret) he proceeded to make some trials of the art of printing with metal types. Some authors however doubt if these types were of metal. It was in 1446 that he entered into partnership with Fust, the result of which was the publication of the celebrated bible of six hundred and thirty-seven leaves, the first important specimen of printing with metal types. Gutenberg died in 1467.—*Dibdin's Typographical Antiquities.*

GUY (THOMAS) the founder of Guy's hospital, was the son of a lighterman in Southwark, and born in 1644. He was brought up a bookseller, and kept a shop in the angle formed by Cornhill and Lombard-street. He dealt largely in the importation of bibles from

Holland, and afterwards contracted with Oxford for those printed at that university; but his principal gains arose from the disreputable purchase of seamen's prize-tickets, in queen Anne's war, and by South Sea stock, in 1720. By these speculations and practices, aided by the most penurious habits, he amassed a fortune of nearly half a million sterling, of which he spent about 200,000*l.* in the building and endowing his hospital in Southwark. He also erected almshouses at Tanworth, and benefited Christ's hospital and various other charities, leaving 80,000*l.* to be divided among those who could prove any degree of relationship to him. He died in December, 1724, in his eighty-first year, after having dedicated more to charitable purposes than any private man in English record.—*Nichols's Anec.*

GUYON (JEAN MARIE BOUVIERE DE LA MOTHE) a celebrated female enthusiast, was born of a good family at Montargis in 1642. She married a native of the same place, of the name of Guyon, but became widow, with three children, at the age of twenty-eight. Instead however of bringing up her family, she relinquished a large part of her fortune for the support of her children; and gave herself up to the cultivation of mystical devotion, which has obtained the name of Quietism, the leading distinction of which is a passive abandonment to what are deemed divine impulses, and a complete renunciation of self, the silence of the soul, and the annihilation of all earthly cares and emotions. The fame of her conversion and doctrines having reached Paris, calumny made such a representation of her conduct, that in 1688 she was shut up by the king's order in a convent. Through the intercession of Madame Maintenon, who became her friend, if not her disciple, she soon obtained her liberty, and even appeared at Versailles and St Cyr. Such were the attractions of her insinuating eloquence, and tender and ardent devotion, that several of the first ladies of the court began to profess her opinions, and she ended in the conquest of the illustrious Fenelon (see his article.) His patronage however could not protect her from the rigid ecclesiastics, headed by Bossuet, who caused thirty-four articles to be drawn up in condemnation of the system of Quietism, which, in 1695, she was obliged to sign in her retreat at the monastery at Meaux. She however returned to Paris, where her zeal again leading her to make proselytes, she was finally confined in the Bastille, from which she was liberated in 1702; and retired to Blois, where she passed the rest of her life in the private exercise of a devotion which, although the result of a heated imagination, was certainly sincere. Her works are—"Cantiques Spirituels, ou Emblemes sur l'Amour Divin," five volumes; twenty volumes of the Old and New Testament, with "Reflections et Explications concernant la Vie interieure;" "Discours Chretiennes." 2 vols; "Letters to several Persons." 4 vols; "Her Life," written by herself, in 3 vols; "Visitations," 2 vols; "Opuscules," 2 vols. The first in the forego-

ing list is the Song of Songs, interpreted in a mystical sense. She died in 1717. Some of her poems have been translated by the gifted but unhappy Cowper, and appears in the 4th edition of his works.—*Noun. Dict. Hist. Aikin's G. Biog.*

GUYS (PETER AUGUSTINE) a French writer and merchant, was born at Marseilles in 1720. By trading to the Levant he obtained a considerable knowledge of the modern Greeks, and conceived the idea of comparing the ancient and modern nation. Accordingly he made frequent excursions from Constantinople into Greece with Homer in his hand, and the fruit of his observations appeared in a work entitled "Voyage Littéraire de la Grèce;" for which the modern Greeks showed their gratitude by giving him a diploma as citizen of Athens. This is his chief work; he however wrote a "Relation Abrégée de ses Voyages en Italie et dans le Nord;" a translation in verse of the elegies of Tibullus; an essay upon the antiquities of Marseilles; and the eulogy of Duguay-Trouin.—*Dict. Hist.*

GUYTON MORVEAU (LEWIS BERNARD) a celebrated French chemist. He was the son of a lawyer, and was born at Dijon in 1737. Adopting the same profession, he became advocate-general in the parliament of Dijon, and attorney-general of the Côté d'Or. Previously to the Revolution in France, he distinguished himself by the study of chemistry and natural philosophy. In 1777 he engaged in a mineralogical tour in the province of Burgundy, in the course of which he discovered a valuable lead mine. He was a contributor of articles on chemistry to the *Encyclopédie Méthodique*; and he had a share in the researches which led to the foundation of the antiphlogistic theory of chemistry; was one of the authors of the reformed chemical nomenclature, and by his individual discoveries he promoted the improvement of science. He relinquished his office of advocate-general, after having published his pleadings at the bar. At the commencement of political disturbances he joined the revolutionary party; and in September 1791 he was sent as a deputy from the department of Côté d'Or to the Legislative Assembly, and was afterwards a member of the National Convention. He seized all opportunities to display his enmity to the royal authority, the king's ministers, the clergy, and the emigrants; and in September 1792 he voted for the death of Louis XVI. He figured in the committee of public safety, nominated at the commencement of April 1793, and in that formed after the fall of Robespierre. He subsequently proceeded so far as to accuse the abbé Sièyes of moderatism and royalism. Being a member of the council of five hundred, he left it in May, 1797. Buonaparte made him a member of the legion of honour, and a baron of the empire. He was likewise one of the first members of the National Institute, a director of the polytechnic school, and administrator of the mint. He died December 21, 1815. Besides the works already noticed, he

published "Éléments de Chimie, théorique et pratique," Dijon, 1777, 3 vols. 12mo., "Dissertations Académiques, ou Essais sur quelques Sujets de Physique, Chimie," &c. 12mo.; and *Memoirs in the Annales de Chimie*, and other periodical works.—*Dict. B. et H. des H. M. du 18me. S. Journal of the Royal Institut.*

GWINNE, MD. (MATTHEW) a physician of some eminence in the earlier part of the seventeenth century, born in London of Welsh parents, and educated at Merchant Tailors' school, whence he proceeded on a foundation fellowship to St. John's college, Oxford. He was the first professor of medicine on sir Thomas Gresham's foundation; and acquired the favour of James the First as well by his masque of "Vertumnus," performed before that monarch at Oxford, as by his essay against tobacco. He also wrote another play, entitled "Nero;" an "Elegy on the Death of Henry Earl of Derby;" "Aurum non Aurum;" some poems, travels, orations, &c. and died in 1627.—*Ward's Gresham Professors.*

GWYLYM (DAVID AP) one of the most famous Welch bards, was born at Brogynin in Cardiganshire, in 1340. He was brought up in the family of Llewelyn ap Gwelym Fychan, lord of Cardigan, at Emlyn, and afterwards he became steward and private tutor in the family of Ivor Hael. He visited different parts of Wales, and was generally known by the name of David of Glamorgan, and the nightingale of Teivi vale, in Cardiganshire. He died about 1400. His poems consist chiefly of lively descriptions of nature, written in pure Welsh, and were published in 1792, by Mr. Owen Jones, and Mr. William Owen, who think, that in harmony, elegance of language, and invention, he has not been excelled by any of his successors.—*Life prefixed to his Poems.*

GYLLENBORG (CHARLES, COUNT) a Swedish nobleman, who resided for several years in England as ambassador from the court of Sweden. In 1716, Charles XII, irritated against George I. for purchasing Bremen and Verden from Denmark, formed a project for invading Scotland from Gottenburg, and placing the pretender on the throne of Great Britain. This plan was concerted with the English malcontents by Count Gyllenborg; but the ministry intercepting the correspondence, that nobleman was arrested in 1717, and sent out of the kingdom under a suspension of the habeas corpus act. On his return home he was taken into great favour, and finally became high chancellor of Sweden. He died in 1746, leaving behind him the character of a great encourager of learning. His valuable cabinet of natural history was remarkable for a great number of amphibious productions and corals, which have been described by Linnæus under the title of Amphibia Gyllenborgiana. Count Gyllenborg translated *Sherlock ou Death* into the Swedish language, as also some English comedies; and was concerned in a periodical paper entitled *The Argus*.—*Stoever's Life of Linnæus.*

HAAFNER (M.) a native of Holland, who died in Amsterdam, in 1809. After his death, was published a Work entitled "Voyages dans le Péninsule Occidentale de l'Inde et dans l'Isle de Ceylon, 2 vols. 8vo, Paris, 1811, which publication attracted notice for a sprightliness not usually expected from Dutch authors.—*Biblioth. Britannica*.

HAAK (THEODORE) a learned German, born at Worms, in the Palatinate, A. D. 1605, and who died 1690. He is author of Dutch annotations upon the Bible, London, 1567, 2 vols. fol. the Translation of the Bible ordered by the Synod of Dort, and first published in 1637, several books of practical English Divinity, and a part of Milton's Paradise Lost. He is said to have suggested the weekly meetings of the Royal Society of London, and to have been one of its first members.—*Ibid.*

HAAREN (WILLIAM VAN) a Dutch nobleman, born in the province of Friseland, in 1700. He distinguished himself by his services to the state; but he is chiefly known as a poet. He published a poem, entitled "Leonidas;" and an epic. "The Adventures of Friso, King of the Gangarides and the Prasiates," of which last a French prose translation appeared in 1751, 2 vols. 8vo. Van Haaren, in his heroics, imitated the Henriade of Voltaire, who complimented the Batavian bard in a copy of verses commencing with the line;

"Démotène au conseil, et Pindare au Parnasse."

Van Haaren died in 1763.—*Nouv. Dict. Hist. Clement Les Cinq Années Littéraires.*

HAAREN (ONNO ZWIER VAN) a noble Frislander, of the same family with the subject of the last article. He filled several honourable situations in the service of his country; but notwithstanding his virtues and integrity, he was subjected to the most virulent accusations, which were supposed to have originated with the field-marshal, the duke of Brunswick, who procured the exclusion of Van Haaren from the assembly of the states-general, of which he was a member. He was the author of an epic poem, entitled "The Beggars;" besides tragedies, and other poetical productions. He also wrote some pieces in prose, one of which, relative to the state of Christianity in Japan, was translated into French, and is said to afford some very curious details. He died in 1779, aged sixty-six.—*Nouv. Dict. Hist. Biog. Univ.*

HAAS (WILLIAM) an ingenious letter-founder at Basil, where he died in 1800. He improved the art of printing by many useful inventions; such as a balance-press, systematic sets of lines and spaces; a method of printing geographical charts and maps with moveable types, &c. The last-mentioned discovery however is ascribed to Breitkopf, a printer of Leipsic. Haas published a description of his printing press.—*Nouv. Dict. Hist.*

HABERCORN (PETER) a learned Ger-
BIOG. DICTION.—VOL. II.

man Lutheran divine, born in Wetteren, in 1604, and became professor at Gressen, where he died in 1676. He was author of many voluminous controversial works much esteemed by those of his communion.—*Biblioth. Britannica*.

HABERLIN (FRANCIS DOMINIC) a learned German antiquary and historian of the eighteenth century. He was a native of Suabia, and became professor of history at Helmstadt, where he died in 1787. His most valuable production, "The History of the German Empire," 20 vols. 8vo, was left imperfect, in consequence of his death.—**HABERLIN** (CHARLES FREDERICK) son of the preceding, was a celebrated civilian. He held the office of professor of jurisprudence in the university of Helmstadt, and published several works of merit on the public law of Germany. He died in 1808.—*Nouv. Dict. Hist.*

HABERT (GERMAIN) a French poet of the seventeenth century, was abbot of Notre Dame de Cerisi, and one of the first members of the French Academy. He died in 1653, leaving several poems, the most admired of which is entitled "Métamorphose des Yeux d'Iris changés en Astres," 1639, 8vo. He also wrote the "Life of Cardinal de Berulle," 1646, 4to, and paraphrased some of the Psalms.—His brother, PHILIP HABERT, killed at the siege of Emmerich, in 1637, was also one of the first members of the academy, and wrote an elegiac poem, called "The Temple of Death," which was once much admired.—There was also a celebrated doctor of the Sorbonne, canon and theologal of Paris, named ISAAC HABERT, who distinguished himself by several controversial works on Grace, in confutation of Jansenius, and by his Latin poetry. He was made bishop of Vabres in 1645, and died in 1668.—LEWIS HABERT, another French ecclesiastic of note, and also a doctor of the Sorbonne, was born in 1637, and died in 1718. He is author of a "Complete Body of Divinity," in Latin, 7 vols. 12mo, 1700, which being accused of Jansenism, produced a violent controversy.—*Moreri. Nouv. Dict. Hist.*

HABINGTON (THOMAS) a gentleman possessed of landed property in Worcestershire, who employed himself in collecting materials for a topographical history of that county, in the early part of the seventeenth century. His memoranda, which remained unpublished, formed the basis of the history of Worcestershire, by Dr. Treadway Nash. The subject of this article is however chiefly remarkable for having been engaged in political conspiracies against the government of his country, without suffering the penalty of his detected treasons. Mr. Gough says, that Thomas Habington or Abington, esq. of Henlip, in Worcestershire, was implicated in the designs of Babington, and the earl of Essex, against queen Elizabeth, and in the gunpowder plot, and convicted; but relieved, on condition of confining himself to the county of Worcester, in consequence of his having

teen the godson of queen Elizabeth. His daughter, who was married to lord Monteagle, is said to have written the mysterious letter to that nobleman, which led to the discovery of the last-mentioned conspiracy; and to this circumstance may be attributed the lenity exercised towards her father. Habington died in 1647, at the age of eighty-seven; and was buried at Henlip.—*Gough's British Topography*.

HABINGTON (WILLIAM) son of the preceding, eminent as an historian and a poet. He was born in Worcestershire, probably at Henlip, in 1605, the memorable year of the gunpowder plot. After having studied at the college of St Omer's, he completed his education among the jesuits at Paris. Returning to England he married the daughter of lord Powis, whom he has celebrated in his poetical compositions. He died in 1654. His works consist of "The Queen of Arragon," a tragic-comedy; "Observations on History;" "History of Edward the Fourth," 1640, folio; and "Castara," a collection of poems, first published in 1635, which, after having been twice reprinted during the author's life, were republished, with notes and a biographical memoir, by Mr Elton, Bristol, 1812, 12mo. Sir Egerton Bridges says, that the poems of Habington, entitled "Castara," possess much elegance, much poetical fancy; and are almost every where tinged with a deep moral cast, which ought to have made their fame permanent.—*Campbell's Spec. of Brit. Poets*.

HACKET (Dr JOHN) bishop of Lichfield, a learned and munificent English prelate of the seventeenth century, born in London, September 1, 1592. He received at Westminster school the rudiments of an education which he completed at Trinity college, Cambridge. He was chaplain in succession to bishops Andrews and Williams, and afterwards, through the patronage of the latter, to James I. In 1623 he was presented to a stall in Lincoln cathedral, a piece of preferment which was in a short time followed by the valuable livings of Cheam in Surrey, and St Andrews, Holborn, together with the archdeaconry of Bedford. In 1641 he exchanged his stall at Lincoln for a residentiaryship of St. Paul's; but on the success of the parliamentary party he was compelled to consult his personal safety by adopting a life of the strictest retirement at Cheam. On the re-establishment of the royal family, he again emerged from obscurity, and received the bishopric of Lichfield and Coventry. The cathedral belonging to his diocese having suffered considerable dilapidation from the effects of puritan zeal, the new bishop applied himself earnestly to restoring it, and expended upwards of £20,000, nearly the whole of which he gave up with great liberality from the revenues of his see. He was also a liberal benefactor to the college of which he had been a member, and died October 21, 1670. Of his writings the principal are a life of his patron, Williams, archbishop of York, and some time lord-keeper; "A Century of Sermons," and "Loyola," a

comedy written in Latin, which was twice performed at the university before James I. A handsome monument was erected to his memory by his son in Lichfield cathedral, where he lies buried.—*Biog. Brit.*

HACQUET (BALTHASAR) an eminent naturalist, born at Conquet, in Brittany, in 1740. When young he left France for the states of Austria, where he travelled, penetrating into the most remote parts of the country. He then became professor of surgery at the Lyceum of Laybach, in Carniola, and perpetual secretary of the Imperial Society of Agriculture and the Arts in that city. In 1788 the emperor of Germany made him professor of natural history at the university of Lemberg, and member of the council of mines at Vienna. He died in 1815. He produced several works containing much curious information relating to natural history, and the state of the countries he explored. Besides travels in the Alps and Carpathian Mountains; and a great number of memoirs in periodical works, he was the author of "Oryctographia Carniolica; or, the Physical Geography of Carniola, Istria, and parts of the neighbouring countries," Leipsic, 1778—1789 4 vols. 4to.—*Biog. Univ.*

HADDICK (ANDREW, COUNT DE) a military officer, who was a native of Hungary, and who rose to the rank of field-marshal in the service of the emperor of Germany. He distinguished himself much during the seven years' war with Prussia; and his high reputation occasioned his appointment, in February 1789, to the chief command of the Austrian forces, against the Turks. He joined the grand army in May, but his advanced age and declining health obliged him almost immediately to give in his resignation. He died at Vienna in 1790, in his eightieth year. He was renowned no less for courage than for military skill; and was never seen to more advantage than when leading the onset. As a commander of cavalry he had but few equals.—*Diet. des H. M. du 18me. S. Biog. Univ.*

HADDON LLD. (WALTER) an eminent English lawyer of the sixteenth century, a native of Buckinghamshire, born 1516. He was educated at Eton, whence he removed to King's college, Cambridge, on the foundation, and having duly graduated, obtained the professorship of civil law in that university. On the deprivation of Gardiner, bishop of Winchester, from the mastership of Trinity hall, king Edward selected him as a staunch supporter of protestantism, to fill the vacant situation, which he held till 1552, when he resigned it for the presidency of Magdalen college, Oxford. Under Mary he was compelled in his turn to submit to a degradation from office, and found it convenient to hide himself in obscurity during the whole of her reign. The succession of Elizabeth once more restored him to court favour, and he obtained from that princess a mastership of the Court of Requests, and a seat on the bench, as judge of the Pre-rogative Court. In 1566 a treaty of commerce being then on foot between this coun-

try and the Netherlands, Dr Haddon was one of the three commissioners who met at Bruges, to arrange the terms of the negotiation. On his return to England he was principally concerned in drawing up the noted ecclesiastical code, which was published in 1571, in 4to, under the superintendence of John Fox. It is written in the Latin language, and bears the title of "Reformatio Legum Ecclesiasticarum." His other works are, a defence of queen Elizabeth against the attacks of Osorio; a variety of poems composed in Latin; and a collection of miscellaneous pieces printed in 1567, in 1 vol 4to, under the title of "Lucubrations." His Latin is much admired for its purity and elegance, qualities for which it is mainly indebted to his incessant study of the works of Cicero, on whose model he endeavoured successfully to form his style. His decease took place in 1572.—*Biog. Brit.*

HADLEY (—) an English engineer, who was a man of talent in the last century. He made many improvements in the machinery of the water-works at London Bridge, lately removed, preparatory to the demolition of the structure itself. He likewise contrived an instrument for taking observations at sea; and Maitland styles him a great master of hydraulics. The time of his death is not known, but he appears to have been alive in 1783.—*Maitland's History of London*—See MORRICE (Peter.)

HAEN (ANTHONY DE) or Van Haen, professor of medicine in the university of Vienna, was a native of Leyden, where he studied under the celebrated Boerhaave. After having graduated he settled as a physician at the Hague, and practised with great success for several years. At length baron Van Swieten induced him to remove to Vienna, that he might co-operate in a plan which the baron had projected for reforming the medical faculty of that metropolis. He became medical professor at Vienna in 1754, and died there in 1776, aged seventy-two. Graner in his Medical Almanack for 1782, speaks highly of Van Haen as a man of great learning and professional experience, but he censures him for his opposition to new opinions, particularly in his disputes with Haller on sensibility and irritability; with Tralles on inoculation; and baron Von Stoerck, on the use of vegetable poisons in medicine. He also showed his predilection for popular notions in a treatise on Magic, and another on Miracles, in which he appears as the advocate of vulgar superstition. His medical works however are numerous and valuable.—*Aikin's Gen. Biog.* *Nouv. Diet. Hist. Biog. Univ.*

HAFEZ (KHODJA SCHEMSEDDIN MOHAMMED) the most popular of the Persian poets. He flourished in the fourteenth century, and resided chiefly at Schiraz. His poetry consists chiefly of odes or songs, which mingle conviviality with love and sentiment, in the spirit of Anacreon, and now and then of Horace. His practice was in the spirit of his theory, as he declined the invitation of the sultan Ahmed, who earnestly pressed him to visit Bagdad.

"Two affectionate friends," exclaims he in one of his pieces, "two glasses of old wine, a tranquil indolence, a book, and a shady grove, are blessings which I would not sacrifice for all the happiness of this world or the next." He died at Schiraz, where a sepulchral monument was erected for him, which has been often described by travellers. In October 1825 an earthquake happened at Schiraz, which overturned many of the public buildings in that city, and destroyed the celebrated tombs of Hafez and his countryman Sadi, another famous Oriental votary of the muses. The date of the death of Hafez has been differently stated; but it most probably may be fixed in 1389. Some idea of his style and sentiments may be found through the medium of translations. Sir William Jones presented to the public two of his odes in an English dress, which are extremely beautiful. Besides which may be noticed Nott's "Select Odes of Hafez, translated into English verse, with the original text," 1787, 4to; and Hindley's "Persian Lyrics, from the Divan—I—Hafez, with Paraphrases in verse and prose," 1806, 4to. The sprightly ease and Anacreonic festivity of the bard of Schiraz, have for more than five hundred years been the delight and pride of his countrymen.—*Biog. Univ. Delle Valle's and Niebuhr's Travels.*

HAGEDORN (FREDERICK) an eminent German poet, who was a native of Hamburg. His father was Danish minister for the circle of Lower Saxony, and he was born in 1708. He received a good education, and displayed talents for poetry when young; but becoming an orphan at the age of fourteen, he found himself dependant on his own exertions for support. He however continued studying in the Gymnasium at Hamburg till 1726, when he removed to the university of Jena as a law student. In 1729 he published a small collection of poems; and the same year he went to London in the suite of the Danish ambassador, baron Von Solenthal, with whom he resided till 1731. He obtained, in 1733, the appointment of secretary to the English factory at Hamburg, which placed him in easy circumstances. Soon after he married the daughter of an English tailor, a lady who was neither young nor handsome, and whose fortune disappointed his expectations. It was not till 1738 that he again appeared before the public as an author, when he printed the first book of his "Fables," which were much admired. In 1740 he published "The Mau of Letters;" and in 1743 his celebrated poem on "Happiness," which established his reputation as a moral writer. The second book of his "Fables" appeared in 1750; and he afterwards produced many lyric pieces in the style of Prior. He died of dropsy in 1754. Hagedorn was the first of the German poets who aimed at correctness and elegance of expression; whence Wieland, in the preface to his poetical works, terms him the German Horace.—*Aikin's Gen. Biog.*

HAGEDORN (CHRISTIAN LEWIS) brother of the preceding, was born at Hamburg in 1717. He held the rank of counsellor of lega-

tion, and was director-general of the academies in the Saxon dominions. As a connoisseur of the fine arts he possessed considerable merit; and he distinguished himself by the publication of "Remarks on Painting," 2 vols. 8vo; "A Letter from an Amateur of Painting," &c. He died at Dresden in 1780.—*Nouv. Dict. Hist.*

HAGER (JOSEPH VON) a learned German scholar, who was professor of the Oriental languages in the university of Pavia. He first distinguished himself in the literary world by the discovery of the fraud of a Sicilian monk, who had attempted to impose on the court of Palermo by some forged documents relative to the history of Sicily. Hager left Palermo for England, where he in vain endeavoured to excite the attention of the public in favour of his researches concerning Chinese literature. His pretensions as an Oriental scholar were questioned by Dr Antonio Montucci, an Italian, resident in this country, who was engaged in similar pursuits. Hager published "An Explanation of the Elementary Characters of the Chinese; with an Analysis of their Symbols and Hieroglyphics," London, 1801, folio; and "A Dissertation on the newly-discovered Babylonian Inscriptions," 1801, 4to. He then went to Paris, where he produced the following works—"The Monument of Yu, the most ancient Inscription in China; to which are added the thirty-two forms of ancient Chinese characters, with remarks on the Inscription and the Characters," 1802, fol.; "A Description of the Chinese Medals in the Imperial Cabinet of France; preceded by an Essay on Chinese numismatics and observations on the Commerce of the Greeks with China, and on the precious Vases of that country," 1805, 4to; "The Chinese Pantheon, or a comparison of the Religious Rites of the Greeks with those of the Chinese, with additional evidence to prove that China was known to the Greeks, and that the Serica of Classical Authors is China," 1806, 4to. From Paris Hager removed to Milan, where he published in Italian, "Illustrations of an Oriental Zodiac preserved in the Cabinet of Medals at Paris, and which was discovered near the site of ancient Babylon," 1812, folio. He died at Milan, June 27th, 1820.—*Watt's Bibliot. Brit. Biog. N. des Contemp.*

HAGUE, Mus. Doct. (CHARLES) an eminent musician, born at Tadcaster, Yorkshire, in 1769. At ten years old having manifested a talent for music, he was sent to Cambridge, where his brother then resided, for the purpose of instruction, and became the pupil of Manini and the elder Hellendaal. In 1785 he proceeded to London, where he had the benefit of Salomon's instructions, as well as those of Dr Cooke; and in 1799, having taken the degree of Mus. Bac. four years previously, he succeeded Dr Randall in the professorship of music at Cambridge. In this capacity he set Mr Smyth, the professor of modern history's ode for the installation of H. R. H. the duke of Gloucester as chancellor of the university. His other compositions consist of an anthem—"By

the Waters of Babylon," and a great variety of glees, &c., all remarkable for the purity of their harmony and the pleasing simplicity of their style. He is also known as the musical instructor of Dr Crotch. Dr Hague died June 18, 1821.—*Biog. Dict. of Mus.*

HALLAN (BERNARD DE GIRARD, SIEUR D') a native of Bordeaux, born 1535. He devoted himself at an early age to literature, and published several poems, the principal of which is his "Union of the Princes." In his twenty-first year he accompanied the French embassy to London in the capacity of secretary, and on his return applied himself seriously to the study of the history and antiquities of his country. The fruits of this new direction which he had given to his studies soon appeared in a valuable treatise "On the State of France," which procured him the personal notice of Charles IX, who conferred on him, in 1571, the appointment of historiographer royal. Five years afterwards he produced the first complete history of France which had ever appeared in the language of that country, commencing with the reign of Pharamond, and bringing down the narrative to the close of that of Charles VII. Although this work procured him the favour of Henry III, who gave him substantial proofs of his regard, it yet excited considerable criticism among the French literati, who were not sparing of their censures, while the author replied with no little acrimony. Henry IV extorted a promise from him that he would continue his work down to the latest possible period, but a dread of giving offence finally induced him to shrink from his engagement. A supplement was however afterwards added by other hands, continuing the history to the year 1627. This book is generally esteemed for its impartiality and accuracy, although both the sentiment and the language are occasionally of too inflated a cast. The other works of this writer are translations of Cicero's Offices, Eutropius, and Emilius Probus. Though bred a Calvinist he followed the fashion of the court in renouncing the reformed religion, and died at Paris, November 23, 1610.—*Nouv. Dict Hist.*

HAINES (JOSEPH) a theatrical performer towards the close of the seventeenth century. He was of obscure descent, but appearing to possess talents which deserved cultivation, some friends raised contributions to enable him to study at the university. He was accordingly sent to Queen's college, Oxford, where his pleasant manners gained him the friendship of sir Joseph Williamson, afterwards secretary of state. His patron being appointed British minister at Ryswick, took Haines with him as Latin secretary. This situation he forfeited by his imprudence, in betraying some political secrets. His chance of preferment being thus terminated, he went to pursue his studies at Cambridge; whence he eloped to join a company of strolling players at Stourbridge fair. He was now in his element; and his talents having procured him an engagement at Drury-lane theatre, he for some time delighted the town by his drollery and humour in low comic

characters. He afterwards went to France in the suite of an English ambassador; and it is probable he then acquired the sobriquet of count Haines, by which he was familiarly known. He again returned to the stage; and dying in 1701, was interred in the church of St Paul, Covent-garden.—*Lempriere's Univ. Biog.*

HAKEM-BAMRILLAH, a sovereign remarkable for his extravagancies, was the third of the Fatimite caliphs of Egypt, and succeeded his father Azis in the year 996, at the age of eleven. It is reasonable to suppose that a number of the frantic acts which distinguished his reign, were the result of occasional insanity. This is the more probable, as after founding mosques and colleges, and affecting an extraordinary zeal for the propagation of the Koran, a fancy seized him of establishing a religion of his own. He styled himself the visible image of God upon earth; claimed the honours of adoration to his person; and caused the mysteries of his worship to be performed on a mountain near Cairo. What is still more curious, this absurd religion struck root; and the Druses of Mount Lebanon, to the present day, retain a conviction of the existence and divinity of the caliph Hakem. Under the character of God's vicegerent, he persecuted the Jews and Christians, both in Egypt and Palestine, and demolished the famous church of the Resurrection at Jerusalem, although in a fit of repentance he rebuilt it, and allowed the liberty of worship, as before. He undertook the far more dangerous task of reforming Mahometanism, and suppressed pilgrimages to Mecca, and the fast of Ramadan. This impiety proved his destruction, and he perished in a conspiracy of his subjects, headed by his sister, in 1020.—*D'Herbelot. Gibbon.*

HAKEWILL (GEORGE) a learned English divine of the seventeenth century. He was a native of Exeter; and after being educated at a grammar-school in that city, he entered as a commoner at Alban-hall, Oxford, whence he was elected a fellow of Exeter college. Having taken his degrees in arts, he entered into holy orders, and in 1611 he was admitted DD. He was next appointed chaplain to prince, afterwards Charles I, and also made archdeacon of Surrey. He lost his chaplainship in consequence of writing a tract against the marriage projected between the prince and the infanta of Spain; which gave great offence to the king, or rather to his favourite the duke of Buckingham. Some time after he obtained the rectory of Heanton, near Barnstaple, in Devonshire; and in 1641 he was chosen rector of Exeter college. He died in 1649, when about seventy years of age. His works, relating to theology and ecclesiastical history, exhibit to advantage his learning and liberality of sentiment; but these are still more conspicuous in a treatise entitled "An Apology; or Declaration of the Power and Providence of God in the Government of the World, proving that it doth not decay, &c. in four books," 1627, folio, of

which an enlarged edition appeared in 1635. Dr Hakewill, in this production, combats an opinion prevalent among his contemporaries, that a gradual deterioration was taking place in the physical and moral world; and he reasons on the principles of inductive philosophy, in a manner not unworthy of a follower of his great countryman, Lord Bacon.—*Wood's Athen. Oxon. Prince's Worthies of Devon.*

HAKLUYT (RICHARD) one of the earliest English collectors of voyages and maritime journals, was born in 1553, and commenced his education at Westminster school. While there he acquired a taste for maritime history and geography, by visiting his cousin, Richard Hackluyt, of Eytton, in Herefordshire, then a student at the Temple, who occupied himself much with such pursuits. Removing to Christchurch college, Oxford, he became so eminent for his acquaintance with cosmography, that he was appointed public lecturer on that science. In 1582 he published a small "Collection of Voyages and Discoveries" which formed the basis of a subsequent work on a larger scale. About 1548 he went to Paris, as chaplain to the English ambassador, sir F. Stafford, and stayed there five years. During his absence he was nominated to a prebend in Bristol cathedral; and after his return home he was chosen, by sir Walter Raleigh, a member of the corporation of counsellors, assistants, and adventurers, to whom he assigned his patent for the prosecution of discoveries in America. In consequence of this appointment, he prepared for the press his grand work, a collection of "The principal Navigations, Voyages, and Discoveries of the English Nation, made by Sea, or overland, within the compass of these 1500 years." The first volume, in folio, was published in 1589, and the third and last in 1600. Besides narratives of nearly two hundred and twenty voyages, these volumes comprise patents, letters, instructions, and other documents, not readily to be found elsewhere. In 1605 Hakluyt was promoted to a prebend at Westminster; which, with the rectory of Wetheringset, in Suffolk, was his only ecclesiastical preferment. He died in 1616, and was interred in Westminster abbey. He published several geographical works, besides those already mentioned; among them are—"Virginia richly valued, by the Description of Florida," London, 1609, 4to, a tract which is both scarce and curious; a "Historie of the West Indies," translated from Peter Martyr; a translation of Leo's "Description of Africa;" and "Antonio Galvano's History of Discoveries," from the Portuguese. The manuscript papers of Hakluyt, were used by Purchas, another geographical collector. The name of our author has been perpetuated by a contemporary navigator, Henry Hudson, who gave the name of Hakluyt's Headland to a promontory on the coast of Greenland.—*Biog. Brit.*

HALDE (JOHN BAPTISTE DU) a French Jesuit, was born at Paris in 1674. He was

intrusted by his order with the care of collecting and arranging the letters sent by the society's missionaries from the various parts of the world. He was also secretary to father Le Tellier, confessor to Louis XIV. He died in 1743, much esteemed for his mildness, piety, and patient industry. He is chiefly known as the editor of the "Lettres edifiantes et curieuses," from the ninth to the twenty-sixth collection, to which he wrote useful prefaces; and also for his compilation entitled "Description Historique, Geographique, et Physique, de l'Empire de la Chine, et de la Tartarie Chinoise," 4 vols. folio, Paris, 1735. The latter work, which, with some retrenchments, has been translated into English, is deemed the most complete general account of that vast empire which has appeared in Europe.—*Nouv. Dict. Hist.*

HALE (sir MATTHEW) an English judge and constitutional lawyer of the seventeenth century. He was born at Alderley, near Wootton-Underedge, in Gloucestershire, in 1609. His father, who had been a barrister, had quitted the profession on account of some conscientious scruples, and retired to a small estate which he had at Alderley, where he died in 1614. The son received his early education under a puritanical clergyman, and afterwards became a student at Magdalen hall, Oxford; whence he removed, in his twenty-first year, to Lincoln's-inn. So unremitting was his application to literary pursuits, that he is said to have studied sixteen hours daily; extending his researches to natural philosophy, mathematics, history, and divinity, as well as the sciences more immediately connected with his profession. His assiduity and intelligence procured him the friendship of the learned Selden, who made him his executor. He was called to the bar previously to the commencement of the civil war; and in the conflict of parties which took place, his conduct was marked by a temporising kind of policy, which, accompanied as it was by personal integrity and skill in his profession, secured him the esteem of both royalists and parliamentarians in his own time, whatever may be thought of it at present. Imitating Atticus rather than Cato, he adhered to the triumphant faction in the state; and scrupled not to take the covenant, or become a lay-member of the famous ecclesiastical assembly at Westminster: yet he acted as counsel for the accused on the trials of the earl of Strafford, archbishop Laud, and even of the king himself. In 1652 he was placed on the committee appointed to consider of the propriety of reforming the law. In 1654 he became a judge of the common bench, (the former king's bench,) in which station he displayed firmness of principle sufficient to give offence to the Protector; and finding he could not retain his office with honour, he refused to preside again on criminal trials. After the death of Oliver Cromwell, his political foresight induced him to refuse a new commission from his son and successor. He was a member of the parliament which restored Charles II; and he was one of the

members most active in passing the act of indemnity. In November 1660, he was knighted, and made chief baron of the court of exchequer. While in this post he was visited by a nobleman of high rank, who had a suit pending before him, relative to the merits of which he wished to enlighten the judge by some private information; when sir Matthew unceremoniously told him, that he never listened to ex-parte statements, and that he should therefore decline all communication on the subject. The nobleman was offended, and complained to the king, who could praise the virtue he was incapable of imitating, and bade the courtier rest satisfied, for he had no doubt the judge would have treated him in the same manner if he had made a similar application. The sentiments of humanity and uprightness by which he was commonly actuated, were however stifled in his breast by the prejudices of education and habit, when he presided at the condemnation of some persons arraigned for witchcraft, at Bury St Edmund's, in 1664; and he possesses the ignominious distinction of having been the last English judge who sanctioned the conviction of culprits for that imaginary crime. He was raised to the chief-justiceship of the king's bench, in 1671, where he sat till 1676; towards the end of which year he died of inflammation of the chest. The only professional work published by sir Matthew Hale, was a tract entitled "London's Liberties;" but after his death appeared his more important productions, "The History of the Pleas of the Crown;" "The Jurisdiction of the Lords' House;" and "The History of the Common Law of England;" of which there have been repeated editions, improved by the comments of succeeding lawyers. He left a very valuable collection of manuscripts relating to history and jurisprudence, which are preserved in the library of Lincoln's Inn. Sir Matthew Hale wrote on a variety of subjects besides law. The following pieces proceeded from his pen: "An Essay touching the Gravitation of Fluid Bodies," 1674; "Difficiles Nugæ, or Observations concerning the Torricellian Experiment, &c." 1674; "Observations touching the Principles of Natural Motion, &c." 1677; "The primitive Origination of Mankind considered," 1677; and "Contemplations moral and divine, with Directions touching keeping the Lord's-day, and poems on Christmas-day," 1676—79. Several of his religious publications also appeared posthumously.—*Life by Bishop Burnet. British Biography.*

HALES (ALEXANDER DE) surnamed the "Irrefragable Doctor," an English ecclesiastic, celebrated among the controversialists of the thirteenth century. The honour of having given him birth is disputed by the counties of Norfolk and Gloucester. He studied at the universities of Oxford and Paris, in which latter city he took the vows as a Friar Minim, and died there in 1245. A great variety of Polemical tracts are ascribed to him, but all on doubtful authority, with the exception of a Commentary on the Proverbs, an edition of

which was printed in 1482, at Nuremberg.—*Bale. Pits.*

HALES (JOHN) a learned English theologian and critic, who was born at Bath in 1584. He was educated at Corpus Christi college, Oxford, where he took the degree of BD, and distinguished himself, especially by his proficiency in Greek literature. In 1605 he was elected a fellow of Merton college, through the influence of the warden, sir Henry Saville, whom he assisted in preparing for the press his edition of the works of St Chrysostom. In 1612 he was appointed professor of Greek at Oxford, having previously delivered lectures on that language. He pronounced the funeral oration for sir Thomas Bodley in 1613; and the same year he was made a fellow of Eton college. In 1618 he went to the Hague, as chaplain to the English ambassador, sir Dudley Carleton. While in Holland he attended the sessions of the Synod of Dort, of the proceedings of which assembly he wrote an account. The debates which he witnessed occasioned his conversion from Calvinism to Arminianism; as appears from a letter of his friend, Mr Anthony Faringdon, who says, "that in his younger days he was a Calvinist, and even then, when he was employed in that Synod; and at the well pressing of St John III 16, by Episcopius there, he bid John Calvin good night, as he has often told me." In 1639 he was made a canon of Windsor, but he held the office only till the beginning of the civil war, in 1642. He afterwards remained for some time in seclusion in private lodgings at Eton; and having in 1645 been deprived of his fellowship, because he refused to subscribe to the covenant, or take the oath of engagement to be faithful to the commonwealth then established, he was obliged to sell his library to obtain the means of subsistence; and according to some accounts, was afterwards reduced to great distress. This latter circumstance however is not reconcilable with the fact of his having made considerable bequests in his will, dated the day of his death, May 19, 1656. He published nothing of importance during his life; but in 1659 a collection of his writings appeared, entitled "Golden Remains of the ever-memorable Mr John Hales, of Eton college," 4to, which shows him to have been a liberal and enlightened scholar.—*Aikin's G. Biog.*

HALES (DR STEPHEN) an English clergyman, grandson of the first baronet of that name, eminent as a botanist, chemist, and experimental philosopher. He was a native of Bekesbourne, Kent, born 1677, and received his education at Corpus Christi college (Bene't) Cambridge, of which society he was chosen fellow in 1703. Here he became acquainted with Dr Stukeley, and in conjunction with that gentleman applied himself with great success to the study of natural philosophy in all its branches. About the same time he invented a machine of brass similar in its object to that afterwards constructed by Mr Rowley, under the name of an Orrery, for the purpose of demonstrating the planetary mo-

tions. In 1733 his doctor's degree was conferred on him by the university of Oxford. In 1741, having been previously elected a fellow of the Royal Society, he communicated to that body his method for clearing prisons, ships, &c, of foul air by means of ventilators; and several other useful projects and inventions of his are to be found among the Philosophical Transactions of the society. Frederick, prince of Wales, distinguished him by his favour; and on the decease of that prince, the princess dowager made him her almoner and clerk of the closet. Under such patronage Dr Hales might have looked forward with confidence to the highest dignities in the church, his moderation however induced him to decline a canonry of Windsor which was offered to his acceptance, and to content himself with the living of Teddington, Middlesex, which he held with that of Faringdon, in Hampshire. He died January 4, 1761. Besides the writings already alluded to, he was the author of four volumes of Statical Essays; a treatise on the ill consequence of drinking spirituous liquors; "Vegetable Statics;" and "Vegetable Essays," 8vo, 2 vols. A handsome monument is erected to the memory of Dr Hales, in Westminster abbey.—*Biog. Brit.*

HALI-BEIGH, first dragoman or interpreter at the court of the grand Seignior, about the middle of the seventeenth century. He was a native of Poland, whose original name was Bobowski, but being taken a prisoner very young, by some Tartars in a predatory excursion into Poland, he was sold to the Turks, who educated him a Mahometan in the Seraglio. He had an extraordinary talent for the acquirement of languages, and could converse in eighteen different tongues. At the request of Dr Smith, chaplain to the English embassy at the Porte, he wrote a curious treatise concerning the literature of the Turks, of which a Latin version was published by Dr Hyde, in the appendix to Peritso's "Itinera Mundi." At the desire of Mr Basire, in 1653, he translated the Liturgy of the church of England into the Turkish language, and some time after the whole of the bible, which was sent to Leyden to be printed, but remains still unedited among the MSS in the library of that University. Sir Paul Rycaut's "Present State of the Ottoman Empire," was much indebted to him; and he furnished Messrs Nointell and Galland with a "Treatise on the Seraglio," composed in Italian, and with various other MSS, among which was a considerable portion of the book of Psalms in Turkish verse, with musical notes. It was his intention to have returned to the profession of Christianity, but he died before he could fulfil this intention.—*Bayle. Moreri.*

HALIFAX (SAMUEL) bishop of St Asaph, the eldest son of an apothecary of Chesterfield, was born January 18, 1733, at Mansfield, Derbyshire. From Jesus college, Cambridge, where he distinguished himself as first medalist of his year; he removed on a fellowship to Trinity hall, in the same university. In

1761 he graduated as LL.D., and seven years after obtained the professorship of Arabic, which, in 1770, he resigned for that of civil law. In 1775 he was presented to the rectory of Worksop, in Nottinghamshire, on which occasion he took the degree of doctor of divinity by mandate, and was made king's chaplain. In 1781 he gave up all his preferments from being raised to the see of Gloucester. In 1789 he was translated to the more valuable diocese of St Asaph, which he held till his death in March 1790. Bishop Halifax was a prelate of deep erudition, and much esteemed for the benevolence of his disposition, and the general amenity of his manners. He published a variety of sermons, printed singly, besides an octavo volume, containing twelve on the prophecies. His other works are—an Analysis of Butler's Analogy, in 4to; and another of the Civil Code of the Romans, in 8vo. He also superintended the publication of an edition of Ogden's works.—*Nichols's Lit Anec.*

HALS. The name of two brothers, each eminent in a different branch of the art of painting, natives of Mechlin. Francis, the elder, was born in 1584, and as a portrait-painter was considered inferior only to Vandyke. An anecdote is told of a visit paid by the latter to Hals incognito, when, after viewing his performances, the disguised artist requested the use of his palette for a moment, as he was convinced he could paint as well himself. Hals accommodated him, but was so struck with the rapidity and truth with which his own portrait was in a few minutes sketched by his guest, that he at once detected him as Vandyke. An intimacy ensued between them, and Vandyke endeavoured to prevail on his friend to accompany him to England, but without success. His death took place in 1666. **THEODORIC**, or Dirk, as he is more commonly called, the younger, was born in 1589. He excelled in humorous pieces, something in the style of Teniers, and died in 1656.—*Pillington.*

HALL (ANTHONY) an English clergyman and antiquary of the last century. He was a native of Cumberland, and studied at Queen's college, Oxford, where he took the degree of MA. in 1704, and obtained a fellowship in 1706. He was presented to the living of Hampton Poyle, in Oxfordshire, and proceeded DD. in 1720. His death took place in 1723. Hall is known in the literary world as the editor of Leland's work, "De Scriptoribus Britannicis;" and Trivet's "Annales Sex Regum Angliæ." He also wrote the account of Berkshire, in the *Magna Britannia*.—*Gent. Mag.*

HALL (JOHN) a poet of the seventeenth century. He was born at Durham in 1627, and died in 1636, having, it is said, shortened his days by habits of intemperance. He was educated as a lawyer, having studied at Gray's Inn, and was called to the bar, but attained no eminence in his profession. His poetical productions display talent, which, if it had been accompanied by industry, might have raised

him to eminence. He was the author of "Horæ Vacivæ, or Essays;" "Poems;" a translation of Longinus on the Sublime; and another of the Commentary of Hierocles on the Golden Verses of Pythagoras.—*Campbell's Spec. of Brit. Poets.*

HALL (JOSEPH) a learned divine of the church of England, who was born at Ashby-de-la-Zouch in Leicestershire, in 1574. His father held an office under Henry, earl of Huntingdon, president of the north, who had a seat near that town. The son became a scholar, and afterwards a fellow of Emanuel college, Cambridge, where he took the degree of M.A. and read lectures on rhetoric. He was ordained, and when he had resided six years at the university, he was presented to the rectory of Halsted in Suffolk. Previously to this period, in 1597, he published his *Virgidediamarum*, or a *Gathering of Rods*, in six books; first three, of toothless satyrs, poetical, academical, and moral; and in the following year, the three last books, of biting satyrs, reprinted together in 1599. These productions display wit and strength of sentiment and expression, but are, like those of his contemporary, Dr Donne, deficient in the lighter graces of composition. He represents himself as the earliest English satiric poet; a claim which is not strictly correct, though he appears to have been the first writer of professed satires, not of a personal nature. A new edition of Hall's Satyres was published by Warton at Oxford in 1753, and another by Mr S. W. Singer in 1824, from the Cliswick press. Our author in 1605 went to Spa with sir Edmund Bacon, where he held a conference with a jesuit, and distinguished himself as a protestant champion. Some time after he returned home, he was made chaplain to Henry, prince of Wales; and in 1612 was presented to the living of Waltham in Essex; about which time he had the degree of DD. In 1616 he was appointed chaplain to lord Doncaster, English ambassador at Paris; and while there he was promoted to the deanery of Worcester. Next year he waited on the king as chaplain during the royal visit to Scotland. In 1618 he was one of the English divines deputed to the synod of Dort, before which body he delivered a Latin sermon, and was presented with a valuable gold medal. He refused the bishoprick of Gloucester, offered him in 1624; but in 1627 was induced to accept that of Exeter. In his new station he experienced much vexation from the overbearing influence of archbishop Laud, whose violent measures against the puritans he refused to adopt in his diocese. On other occasions he acted as a conscientious advocate for episcopacy. In 1641 he was translated to Norwich. He joined with several of his brethren in the protest of December 30th of that year, against the validity of laws made during their forced absence from the house of Lords. For this, he, with other prelates, was committed to the Tower; but he was released on bail in June 1642. He subsequently suffered sequestration as a royalist; and after experiencing various injuries

and indignities, he removed from the bishop's palace to Higham near Norwich, where he rented a small estate. He died there September 8, 1656. His theological books, which are much valued, consist of contemplations, epistles, sermons, paraphrases of the Scriptures, &c. which have been often published collectively and separately. The style and manner of his composition have procured him the title of the English Seneca.—*Aikin's G. Biog. Biog. Brit.*

HALL, MD. (ROBERT) an army surgeon of great talent and skill in his profession, descended from the ancient family of the Halls, of Houghhead in Roxburghshire, at which place he was born in 1763. After passing the usual number of years in the acquirement of classical literature at the grammar-school of Jedburgh, and having duly qualified himself for the medical department of the navy, he sailed as first mate of the Ruby, seventy-four, to the West Indies, and at the conclusion of the war returned to England, acting surgeon on board a frigate. The solicitations of an uncle then induced him to quit the service, and to repair to Edinburgh, where he graduated as MD, and took up his abode in London, where he distinguished himself both as a contributor to several periodical works connected with medicine, and as the editor of others, till the injury which his pecuniary affairs received by a breach of confidence, induced him once again to turn his attention to the service as a means of provision, and to obtain the situation of an army surgeon. In this capacity his duties occupied his time almost exclusively for about twelve years, when the expedition by land and sea, for the exploration of the Niger, which cost so many lives, being determined on, Dr Hall was appointed to accompany the military division as the medical officer. Unfortunately an injury, sustained by an accidental fall into the hold of the vessel while outward bound, acted, in conjunction with the unhealthiness of the climate of Senegal so strongly on his constitution, that after a few weeks he was compelled to be sent to Madeira, as the sole chance of preserving his life. Dr Hall returned to Europe, but his health was never fully re-established, and his death took place in the year 1824. He was the author of a great variety of medical tracts, the principal of which are—"An Essay on Pemphigus;" another "On Insanity," in which he recommends the application of cold water to the head of the patient; with translations of Spallanzani's work on the circulation of the blood, and Guyton Morveau's on the means of purifying infected air, and arresting contagion. His other works are—treatises "On the Cow Pox," "On the Plague and Pestilential Fevers," "On Hydrophobia;" another on the same subject, with a translation of Sabatier's Cases; "On the Chicken Pox;" "A Vindication of Dr Johnstone's Claim to the discovery of Mineral Acid Fumigations," with various other papers published in the London Medical and Physical Journal, between the years 1800 and 1810; translations

of "Sabatier on Tetanus," and "Spallanzani on Respiration;" with an introduction to study of the Linnæan system. He also left behind him several useful manuscripts, among which are some valuable remarks on the medical topography of Senegal.—*Gent. Mag.*

HALLE or HALL (EDWARD) an English chronicler, whose works rank with those of Holingshed and Stow. He was a native of London, and was a lawyer by profession, having attained the rank of a serjeant and the office of a judge in the sheriff's court. He had a seat in the house of Commons; and was a zealous catholic, though he lived at the period of the Reformation. His death took place in 1547. Halle's "Chronicle" was published in 1548, by Richard Grafton, who is reported to have written the latter part of it.—[See GRAFTON.]—The work is curious, as affording delineations of the manners, dress, and customs of our ancestors.—*Chalmers's Biog. Dict. Dibdin.*

HALLER (ALBERT VON) a celebrated Swiss physician, distinguished not only for his acquaintance with the physical sciences, but also for his general knowledge of literature, and his talents as a poet. His father, Nicholas von Haller, was an advocate and citizen of Berne, where the son was born in October, 1708. The early display of his abilities was most extraordinary; and it is related, that when but ten years old he could translate from the Greek; that he compiled a Chaldee grammar and a Greek and Hebrew dictionary for his own use; and gave other proofs of his devotion to literary studies. He was sent to a public school after his father's death, in 1721, and in 1723 he was removed to the house of a physician at Bienne, for the study of philosophy. Here he pursued a somewhat desultory course of reading, and exercised himself in poetical composition. However, at the close of the year last mentioned, having chosen the medical profession, he went to the university of Tübingen, where he studied comparative anatomy under Duvernoi; and in 1725 he removed to Leyden, then the first medical school in Europe, Boerhaave and Albinus being among the professors. He took his degree at Tübingen, whither he went for that purpose; and sustained a thesis, "De Ductu Salivali Coschwiziano," which topic he farther pursued in another thesis at Leyden, in 1727. That year he visited England, and formed an acquaintance with sir Hans Sloane, Cheselden, Dr James Douglas, and other eminent men. Thence he went to Paris, and dissected under Le Dran; but he was obliged to leave that metropolis rather prematurely, in consequence of having procured subjects for dissection to be brought to his lodgings, a piece of indiscretion which attracted the notice of the police. He then went to Basil, to study mathematics under James Bernouilli, continuing at the same time his anatomical investigations. Here he first imbibed a taste for botany, and laid the plan of a work, which he long after published, on the plants of Switzerland. Here too he indulged his predilection for poetry, and in the

twenty-first year composed his poem on the Alps, followed by various ethic epistles and other pieces, which raised him to notoriety among the votaries of the muses in Germany. In 1729 Haller returned to his native city, and entered on his professional career as a public lecturer on anatomy. He did not, however, obtain among his countrymen that encouragement which his talents deserved, owing, in some measure, to a satirical spirit, which occasionally displayed itself in his poetical compositions. In 1736 he made botanical excursions among the mountains of Jura and the Alps, and in the marshes of Switzerland; in the course of which he also applied himself to the study of mineralogy and zoology. Soon after he was invited by George II, of England, to accept the professorship of anatomy, surgery, and botany, in the newly-founded university of Göttingen, in his majesty's electoral dominions. He accepted this offer; but his removal to Hanover was attended with a domestic misfortune, the death of his wife, whom he had married in 1731, and to whom he was much attached. He endeavoured to alleviate his sorrow by close application to scientific pursuits. Through his instigation, the university was enriched with a botanical garden, an anatomical theatre, a school for midwifery, and a college of surgery. His own researches in physiology alone, were enough to immortalize his name. After the death of his master, Boerhaave, in 1738, Haller published his "Prelections," with much original matter, in six volumes, which appeared successively from 1739 to 1745. But his own discoveries and improvements tended to render this work obsolete; and in 1747 appeared the first edition of his "Præmiæ Liuxæ Physiologiæ," a synopsis of his own system of that important branch of medical science, as subsequently developed in a larger work. This is a truly valuable production, which long after the death of the author was used as a text-book in schools of medicine, and has only been superseded since the extraordinary scientific discoveries of our philosophical contemporaries. In 1752 he first advanced his opinions on the properties of *sensibility* and *irritability*, as existing in the nervous and muscular fibres of animal bodies; doctrines which attracted much attention, and excited great controversies in the medical world. He was, in 1748, elected a member of the royal society of Stockholm; and of that of London in the following year. He had also bestowed on him the title of physician and counsellor to king George II, at whose request Francis I gave him a patent of nobility, as a baron of the German empire. After seventeen years' residence at Göttingen, he was seized with that inclination for home, which seems to be a characteristic passion of the Swiss nation. In 1753 he took a journey to Ferne, where his countrymen received him with all the respect due to his great fame and talents. He settled again among them; and having been elected a member of the sovereign council of the state, he soon obtained by lot one of its magistracies, and entered with

zeal on the duties of a citizen. He did not neglect his scientific pursuits. In 1754 he published at Lausanne, in French, (which he wrote with facility,) some memoirs on irritability and sensibility, and on the motion of the blood. In consequence probably of these productions, he was elected, in 1754, one of the foreign associates of the Parisian Academy of Sciences. In 1758 he accepted of the appointment of director of the public salt-works at Dex and Aigle, with a salary of 500*l.* per annum; whence it may be supposed his fortune had not kept pace with his fame. He resided six years at La Roche; and in the course of his superintendance he introduced many improvements in the manufacture of salt. While thus engaged, he began the publication of his "Elementa Physiologiæ Corporis Humani," the first volume of which made its appearance at Lausanne in 1757, and the last in 1766. His next important literary labours were the "Bibliotheca," containing chronological catalogues of works of every age, country, and language, relative to subjects connected with medical science; with concise analyses and notices of peculiar and important facts and opinions. These libraries of professional knowledge were published in the following order: "Bibliotheca Botanica," 1771, 2 vols. 4to; "Bibliotheca Anatomica," 1774, 2 vols. 4to; "Bibliotheca Chirurgica," 1774, 2 vols. 4to; "Bibliotheca Medicinæ Practicæ," 1776—1788, 4 vols. 4to, the last two volumes having appeared posthumously. On his return from La Roche, he was chosen member of the chamber of appeal for the German district, of the council of finance, and of other communities; and also perpetual assessor of the council of health. His various duties as a statesman, a physician, and a medical teacher, occupied his attention till his death, which happened December 12th, 1777. He had previously suffered much from illness; but his last moments were peculiarly tranquil. Placing his finger on his wrist, to observe the motion of the artery, he suddenly exclaimed to his physician, "My friend, I am dying; my pulse stops;" and he immediately expired. The professional character of Haller may be estimated from his labours, the most important of which have been noticed; but independent of his medical talents, he enjoyed high literary reputation. He is reckoned one of the greatest German poets of the eighteenth century. His philosophical and descriptive poems, display depth of thought and richness of imagination. He had to contend with a language which was then imperfect, and to the polishing of which his writings contributed. His style is not however wholly faultless; for in aiming at conciseness and compression he sometimes becomes obscure. He wrote, in prose, three philosophico-political romances, "Usong;" "Alfred the Great;" and "Fabius and Cato;" designed to exhibit the respective advantages of different forms of government. His "Letters to his Daughter, on the Truth of the Christian Religion," were translated into English; and he also wrote

letters on free-thinking, designed to obviate the reasonings of French sceptical philosophers, who had borrowed arguments in favour of their speculations from the physiological theories of Haller.—*Hutchinson's Biog. Med. Aikin's Gen. Biog. Biog. Univ.*

HALLER (THEOPHILUS EMANUEL VON) son of the foregoing, born at Nyon in the canton of Berne in 1735. He devoted himself to the study of numismatics and of the history of his native country. His principal publications are a "Library of the History of Switzerland, and of every thing relating to it, systematically arranged and in chronological order," Berne, 1785—87, 6 vols. 8vo, to which was added an Index-volume in 1788; and a "Cabinet of Swiss Coins and Medals." He also wrote articles for the Encyclopedia, published at Yverdon, and for other works. He held the office of bailiff of Nyon; and died in 1786.—*Aikin's G. Biog. Nouv. Dict. Hist.*

HALLEY (EDMUND) a mathematician and astronomer of the first rank in the eighteenth century. He was born at Haggerston, in the parish of St Leonard, Shoreditch, now a part of London, in the year 1656. His father being a person in affluent circumstances, he was sent for education first to St Paul's school, and then to Queen's college, Oxford, of which he became a commoner in his seventeenth year. He had then acquired not only a competent knowledge of classical literature, but was also well skilled in the sciences, in which he was destined to excel. Before he was nineteen he published "A direct and Geometrical Method of finding the Aphelia and Excentricity of Planets," which supplied a defect in the Keplerian theory of planetary motion. He made some curious observations on an eclipse of the moon, June 17, 1675; and still more important observations on a spot which appeared on the sun's disk in July and August, 1676, by means of which he established the certainty of the motion of the sun round its own axis; a phenomenon which was not before fully ascertained. August 21st the same year he fixed the longitude of the Cape of Good Hope, by his observation of the occultation of Mars by the moon. Immediately after he went to St Helena, where he staid till 1678, making observations on the fixed stars of the southern hemisphere, which he formed into constellations. Having returned to England he was made M.A. at Oxford by mandamus, and chosen a fellow of the Royal Society. In 1679 he published "Catalogus Stellarum Australium, sive Supplementum Catalogi Tycho-nici, &c." which procured him the appellation of the southern Tycho. He then went to Dantzic to adjust a dispute between the English philosopher Hooke and the famous Hevelius, relative to the use of optical instruments in astronomical researches, deciding in favour of the latter. In 1680 he set off on a continental tour in company with Nelson, so eminent for his piety, who had been his school-fellow. Between Calais and Paris Halley first saw the remarkable comet which appeared that year. At Paris he made acquaintance

with Cassini; and after visiting Italy, in 1681 he returned to England. Having married in 1682 the daughter of Mr Tooke, auditor of the Exchequer, he settled at Islington, where he fitted up an observatory for his astronomical researches. In 1683 he published his "Theory of the Variation of the Magnetical Compass;" in which he endeavours to account for that phenomenon, by the supposition of the whole globe of the earth being one great magnet, having four circulating magnetical poles, or points of attraction. His theory, though unsatisfactory, in common with those of later enquirers, is at least very ingenious. The doctrines of Kepler relative to the motions of the planets next engaged his attention; and finding himself frustrated in his endeavours to obtain information on the subject from Hooke and sir Christopher Wren, he went to Cambridge, where Newton, then mathematical professor, satisfied all his enquiries. To this interview the world is indebted for the publication of the "Principia Mathematica Philosophiæ Naturalis," which appeared in 1686 with a preliminary discourse, and an elegant copy of Latin verses from the pen of Halley. Previously to this, in 1685, he had been chosen assistant secretary to the Royal Society. In 1691 he was a candidate for the Savilian professorship of astronomy at Oxford, which however was obtained by Dr David Gregory. According to Whiston, he lost this office in consequence of his character as an infidel in religion. In 1692 he resigned his appointment of assistant secretary to the Royal Society and in 1696, on the establishment of five mints for the re-coinage of the silver currency, he was made comptroller of the mint at Chester, where he resided two years. One of his grand undertakings was a voyage to make further observations relative to the variation of the compass. For this purpose he was appointed in 1698 commander of the Paramour pink, a vessel fitted out by government, in which he embarked in November, but was obliged to return home in June 1699, in consequence of a dispute with his lieutenant, and the insubordination of his men. Not discouraged, he set sail again about three months after, and having traversed both hemispheres of the globe, he touched in his way home at St Helena, and many other places, and arrived in England in September 1700. On the spot at St Helena, where he erected a tent for making astronomical observations, a telegraph was placed some years since, and the eminence is distinguished by the appellation of "Halley's Mount." As the result of his researches, he published a general chart, showing at one view the variation of the compass in all those seas where the English navigators were acquainted. He was next employed to observe the course of the tides in the English channel, with the longitudes and latitudes of the principal headlands; in consequence of which he published a large map of the channel. In 1703 he was engaged by the emperor of Germany to survey the coast of Dalmatia; and returning to England in November that year,

he was elected Savilian professor of geometry on the death of Dr Wallis; and he was also honoured with the diploma of LL.D. He subsequently published a Latin translation from the Arabic of a treatise of Apollonius Pergæus, a Greek geometer, to which he made additions to supply the place of what was lost. He next assisted his colleague, Dr Gregory, in preparing for the press Apollonius on conic sections. In 1713 he succeeded Sloane as secretary of the Royal Society; and Flamsteed dying in 1719, he received the appointment of astronomer royal at Greenwich, where he afterwards chiefly resided. He resigned the secretaryship to the Royal Society that he might devote his time to a favourite object completing the theory of the motion of the moon, which, notwithstanding his age, (for he was then sixty-three,) he pursued with enthusiastic ardour. In 1721 he began his observations, and for the space of eighteen years he scarcely ever missed taking a meridian view of the moon when the weather was not unfavourable. On the accession of George II he obtained the particular notice and patronage of queen Caroline, who procured him half-pay as a captain in the navy. In 1729 he was chosen a foreign member of the Academy of Sciences at Paris. His health was almost uninterruptedly good till about 1737, when he had a paralytic attack, from which he recovered sufficiently to pursue his studies; and it was not till the end of 1739 that he closed his Lunar Observations. His death took place January 11th, 1741—2, at Greenwich; and he was interred at the church of Lee in Kent, where an inscription was placed to his memory. "He possessed," says Fontenelle, "all the qualifications necessary for the astronomer, the naturalist, the scholar, and the philosopher; abundantly sufficient to merit the approbation of princes, and the applause of the learned. To his great extent of knowledge was added constant presence of mind, and a freedom of expression, at once pertinent, judicious, and sincere. He was naturally of an ardent temper and a generous disposition, open and punctual in his transactions, candid in his judgment, simple and blameless in his manners, affable, communicative, and disinterested." In 1752 appeared his "Astronomical Tables, with Precepts, both in English and Latin, for computing the Places of the Sun, Moon, Planets, and Comets," 4to; and he was the author of a vast multitude of papers in the Philosophical Transactions.—*Martin's Biog. Philos. Biog. Brit. Aikin's G. Biog.*

HALLORAN (SYLVESTER O') an Irish antiquary of considerable eminence. He was born in 1728, and was educated for the profession of chirography, which he studied both at Paris and London. After completing his education, he became surgeon to the county hospital at Limerick; and he was subsequently chosen a member of the physico-chirurgical society of Dublin: besides which he was a fellow of the royal college of surgeons. He died at Limerick in 1807. He was the author of a treatise on the cataract, or glaucoma:

another on gangrene and sphacelus, with a new method of amputation; besides various surgical papers in periodical works, which are creditable to his professional character. But he is chiefly known in the republic of letters as a Hibernian antiquary and historian. In 1772 he published "An Introduction to the Study of the History and Antiquities of Ireland," 4to; which was followed by a "General History of Ireland," 2 vols. 4to. Mr. O'Halloran was a member of the royal Irish academy, in whose Transactions he published an ancient Erse poem, with a translation and notes.—*Biog. Univ.*

HAMBERGER. There were two Germans of this name, father and son, both eminent scholars and men of science. The elder, George Albert, was a native of Beyerberg, in Franconia, born 1662. He studied at various German universities, and gained great reputation for his skill in mathematics, of which science he became eventually professor at Jena as well as of natural philosophy. He was the author of some valuable treatises on hydraulics, optics, &c. and dying in 1726, was succeeded in his mathematical professorship by his son, GEORGE EDWARD. The latter soon after resigned that chair for that of Medicine, in the same university, where his character for skill and erudition equalled that acquired by his father. He published a variety of works, chiefly on professional subjects, among the principal of which are his treatises on Venesection and Respiration; another on the Secretions of the Human Frame; two on Medical Physiology; "The Elements of Physic;" "The Art of Healing," &c. &c. His death took place in 1755.—*Moreri. Rees's Cyclop.*

HAMEL (JEAN BAPTISTE DU) a French ecclesiastic, curé of Neuilli sur Marne. He was a native of Vire, in Lower Normandy, born about the year 1624, and applied himself early in life to the study of mathematics with great success. Having completed his studies at Caen and Paris, he took orders and remained for ten years attached to the congregation of the oratory, until he at length obtained the benefice above mentioned. On the establishment of the Royal Academy of Sciences in 1666, Colbert recommended him to the king as secretary to that society. He afterwards visited England in the suite of the French ambassador, and availed himself of the opportunity to commence an acquaintance with Boyle, Willis, Ray, and other philosophers of the period. On his return he obtained the appointment of regius professor of philosophy in the Mazarine college, a post in which he was succeeded by Pere Varignon. Among his works, which are mostly written in Latin, and are much admired for the purity and classical elegance of their style, are "Astronomia Physica;" "Philosophia vetus et nova," 1678, 4 vols. 12mo, reprinted 1681, in 6 vols.; "Regiæ Scientiarum Academiæ Historia," 4to; and an edition of the Vulgate Bible, with notes, selected from the works of the ablest commentators and tables, chronological and geographical, which he published in 1706,

His death took place at Paris in the August of the same year, at a very advanced age.—*Moreri.*

HAMEL DU MONCEAU (**HENRY LEWIS DU**) an eminent French agriculturist, and natural philosopher. He was born at Paris in 1700, and died in the same city in 1782. His whole life was dedicated to the cultivation of useful science; and from the year 1728 he distinguished himself by his writings in the memoirs of the Academy of Sciences, of which he was a member; as he likewise was of the Royal Society of London, and other literary associations. He was as remarkable for his modesty as for the extent of his acquirements. A young officer having once asked him an embarrassing question, he simply replied to it, "I do not know." "Of what use then," said the young man, "is it to be a member of the Academy?" Soon after the officer displayed his own ignorance, by talking at random. "You may now see," retorted the philosopher, "what is the use of being an academician; it prevents a man from talking of what he does not understand." Du Hamel held the office of inspector of the marine; and was, at the time of his death, dean of the Academy. His works are extremely numerous, including "Traité de la Culture des Terres," 6 vols. 12mo; "Traité des Arbres et Arbustes qui se cultivent en France en pleine terre," 2 vols. 4to; "La Physique des Arbres," 2 vols. 4to; "De l'Exploitation des Bois," 2 vols. 4to; "Traité des Arbres Fruitières," 2 vols. 4to; "Elémens de l'Architecture Navale," 4to; and "Traité des Pêches Maritimes, &c." Besides which he wrote descriptions of a multitude of arts and manufactures.—*Nouv. Dict. Hist. Biog. Univ.*

HAMILTON (**ALEXANDER**) an ingenious physician, and professor of midwifery at Edinburgh. He published "Elements of the Practice of Midwifery," 1776, 8vo; and a "Treatise on Midwifery," 1781, which last was translated into German by J. P. Ebeling. Besides another elementary work, he edited "William Smellie's Anatomical Tables, with Explanations and an Abridgment of the Practice of Midwifery," 1787, folio. He was also the author of "Select Cases in Midwifery," 1795, 8vo, and a treatise "On the Complaints of Females," 1797, 8vo. Dr Hamilton, who was a fellow of the Royal Society, and long eminent as an obstetrical lecturer at Edinburgh, died in 1802.—*Reuss's Reg. of Eng. Auth. N. D. H.*

HAMILTON (**ANTHONY**, count) a poet, courtier, and man of letters in the seventeenth century. He was descended from a younger branch of the family of the dukes of Hamilton in Scotland, but was born in Ireland about 1646, his mother being a sister of the duke of Ormond. His parents were catholics and royalists, in consequence of which they removed to France after the death of Charles I, and young Hamilton became domiciliated in that country. He however made frequent visits to England in the reign of Charles II. His sister, who was one of the ornaments of

that gay monarch's court, was married to count Grammont. It is said that the count, after having paid his addresses to the lady and been accepted, changed his mind, and set off from London for the continent. Her brother followed the recreant lover, and overtaking him at Dover, asked him if he had not forgotten something to be done previously to his leaving England? "O, yes," replied Grammont, "I forgot to marry your sister;" and he immediately returned and fulfilled his engagement. When James II was obliged to contend for his crown in Ireland, he gave count Hamilton a regiment of infantry, and made him governor of Limerick; but on the ruin of the royal cause he accompanied James to France, where he passed the rest of his life. His wit and talents secured him admission into the first circles, where he was generally esteemed for his agreeable manners and amiable disposition. He died at St Germain in 1720. Count Hamilton is chiefly known as an author by his "Memoirs of Count Grammont," a lively and spirited production, exhibiting a free, and in the general outline, a faithful delineation of the voluptuous court of Charles II. The count's other works are—"Poems" and "Fairy Tales," which, as well as the Memoires, are in French, and display elegance of style and fertility of invention.—*Aikin's G. Biog. Nouv. Dict. Hist.*

HAMILTON (**CHARLES**) a native of Ireland, who became an officer in the service of the East India Company, on the Bengal establishment, and was distinguished for his acquaintance with the laws and literature of the Hindoos. He was one of the first members of the Asiatic Society of Calcutta, in whose researches he published a description of the Mahwah, or Maduca tree. He was the author of an "Historical Relation of the Origin, Progress, and final Dissolution of the Government of the Rohilla Afgans, in the northern provinces of Hindostan, from a Persian MS." 1787, 8vo. The directors of the East India Company subsequently employed him in editing the Hedaya, or Guide, a commentary on the Mussulman Law, printed in 1791. He died in 1792.—*Gent. Mag.*

HAMILTON (**ELIZABETH**) a lady of considerable literary attainments, a native of Ireland, being born at Belfast in that country, 25th July, 1758. Having become an orphan at an early age, she was brought up under the care of her uncle, who resided near Stirling in Scotland, and during her residence in his family, made herself intimately acquainted with those national peculiarities which she afterwards delineated so admirably in her "Cottagers of Glenburnie." Besides this little work, which attracted much attention, she was the authoress of "The Letters of a Hindoo Rajah," 2 vols. 8vo; "The Life of Agrippina," 3 vols. 8vo; and "Memoirs of Modern Philosophers;" works which, under the popular form of novels, are replete with sound sense and information. Her other writings are "Hints for Public Schools;" "Popular Essays," 2 vols. 8vo; "Rules of

the Annuity Fund," &c.; "Exercises in Religious Knowledge," 12mo; "Letters on the Formation of the Religious and Moral Principles," 2 vols; and "On the Elementary Principles of Education." Miss Hamilton was never married, but enjoyed an extensive acquaintance, especially among the talented of her own sex, one of whom, Miss Bengier, after her decease, printed a selection from her correspondence, with a prefatory account of her life and habits. Her death took place at Harrogate, in Yorkshire, July 23, 1816.—*Memoirs by Miss Bengier.*

HAMILTON (PATRICK) a Scotch ecclesiastic of the Aaron family, through which he was connected with the blood-royal of the kingdom. He was born in 1503, and after going through the usual course of education at the university of Edinburgh, travelled on the continent, when he became a convert to the opinions of Luther. On his return to Scotland, James V made him superior of the abbey of Ferne in Ross-shire, but on his fearlessly avowing the tenets which he had imbibed abroad, cardinal Beaton, then archbishop of St Andrew's, caused him to be apprehended and tried upon a charge of heresy. Far from yielding to the storm, Hamilton defended the reformed religion with great courage and constancy, and fell the first Scottish martyr to Lutheranism, being brought to the stake in front of the college of St Salvador in the twenty-third year of his age. He exhibited the most unshaken fortitude while undergoing his sentence, which was carried into execution on the 1st of March, 1527. After his death John Frith published his Confession of Faith, together with a treatise written by him, and entitled "Patrick's Places;" the latter of which is to be found in Fox's Martyrology.—*Fox's Acts and Mon. Muckenzie.*

HAMILTON (WILLIAM) a Scottish poet, usually designated Hamilton of Bangour, from the place of his birth, Bangour in Ayrshire, where his family had an estate. He was one of the Caledonian gentry, who joined in the last attempt to restore to the throne the family of Stuart; and he was present at the battle of Culloden, after which he narrowly escaped being made a prisoner. He then became an exile from his native country, but was at length pardoned. His death took place in France, in 1754, aged fifty. As a poet, Hamilton displays liveliness of imagination and delicacy of sentiment; but no great elevation of style or manner; so that he may, without injustice, be reckoned as one of "the mob of gentlemen who write with ease." His poems were published by Foulis, at Glasgow, in 1753, 12mo; and also at Edinburgh, in 1760.—*Chalmers's Gen. Biog. Dict.*

HAMILTON (sir WILLIAM) KB. was born in Scotland in 1730. His mother having been nurse to George III, that prince, before his accession to the throne, extended his patronage to young Hamilton, and made him his equerry. In 1764 he received the appointment of ambassador to the court of Naples, where he resided during the long period of thirty-six years,

returning to England 1800. A considerable part of this term was comparatively a season of political repose, during which the ministerial functions of the British envoy were not very important. He devoted his leisure to science, making a number of observations on Vesuvius, Ætna, and other volcanic mountains of the Mediterranean; and the result of his researches is detailed in papers in the Philosophical Transactions, and in his "Campi Phlegræi, or Observations on the Volcanos of the Two Sicilies," 2 vols. folio. His communications to the Royal Society were also republished, with notes, in 1772, 8vo. He drew up a curious account of the discoveries made in the subterranean city of Pompeii, printed in the fourth volume of the *Archæologia*; and he collected a valuable cabinet of antiquities, of which a descriptive account was published by d'Hancarville. The occurrence of the French Revolution interrupted the repose of Europe, and gave rise to a treaty of alliance between his Britannic majesty and the king of the two Sicilies, which was signed by sir W. Hamilton, as minister plenipotentiary of this country, July 12, 1795. By this treaty the Neapolitians engaged to furnish 6000 troops, four ships of the line, &c. for war against France in the Mediterranean; but Ferdinand IV made peace with the French republic in 1796, without having taken any active part in the contest. On this occasion, and in the subsequent events of 1793 and 1799, when the court emigrated to Sicily, sir William appears to have acted but a secondary part as a political agent, and he was recalled not long after. He died in London, April 6th, 1803. He presented to the British Museum many books, manuscripts, and geological curiosities; and after his death his unrivalled collection of antique vases was purchased by parliament for the same national institution.—*Genl. Mag. Ann. Reg.*

HAMILTON (WILLIAM GERARD) a statesman and parliamentary orator of the last century, who, on account of the extraordinary impression produced by the first and almost the only speech he ever delivered in the English house of Commons, obtained the appellation of Single Speech Hamilton. His father was a barrister of Lincoln's Inn, where he was born in 1729. He was sent to Winchester school; whence he removed to Oriel college, Oxford; and then studied at Lincoln's Inn, but was never called to the bar. In 1754 he obtained a seat in parliament, when he made his memorable speech; and he subsequently was made one of the lords of trade and plantations. On the appointment of lord Halifax to the viceroyalty of Ireland, Hamilton went thither as his secretary, and he was accompanied by the celebrated Edmund Burke as his own secretary. In the Irish parliament he supported the reputation he had previously gained as an orator; and for many years he held the office of chancellor of the exchequer in that kingdom. He relinquished that post in 1784, and spent the latter part of his life in literary retirement. His death took place

in 1796. A posthumous publication of his works, including a tract, entitled "Parliamentary Logic ; " Speeches," &c. appeared in 1808. The Letters of Junius have been attributed to this gentleman ; but no probable arguments were adduced in support of the conjecture.—*Life prefixed to his Works. Edinburgh Review.*

HAMMOND (HENRY DD.) a learned and eloquent divine of the seventeenth century, born August 18, 1605, at Chertsey, Surrey, and christened after his Godfather, Henry prince of Wales, (son to king James I.) in whose household his father held the situation of first physician. Being intended for the church, he was sent at an early age to Eton, whence he removed to Magdalen college, Oxford, and became a fellow of that society in 1625. In 1633 the then earl of Leicester presented him to the rectory of Penshurst, Kent, where he resided till 1643, having graduated as DD. in the interval. Being nominated archdeacon of Chichester, and summoned to attend the assembly of divines, his predilection for the royal cause induced him positively to refuse his presence. This open avowal of his opinions occasioned his proscription by the parliamentary party, who offered 100*l.* for his apprehension, notwithstanding which he contrived to escape in disguise to Oxford, where, the following year, under the sanction of Dr Potter, he published his "Practical Catechism." At the treaty of Uxbridge, Charles I deputed him to attend on his part, when he distinguished himself in an active contest with Richard Vines. For his services on this occasion he obtained a canonry of Christchurch in 1645, and was soon after chosen public orator. During the captivity of the unfortunate Charles he attended in the capacity of chaplain at Woburn, Hampton, and Carisbrook castle, till his compulsory dismissal in 1647, when he again retired to Oxford. The following year he was himself ordered into confinement by the parliamentary visitors, who deprived him of all his preferments. After enduring an imprisonment of some months he obtained his liberty, and took up his residence at Westwood-park, Worcestershire, the seat of sir John Packwood, who protected him till the re-establishment of monarchy again introduced him to court favour. In 1660 he was called in to assist in restoring the church establishment, and was nominated by Charles II to the bishopric of Worcester, but died before his consecration, of a fit of the stone, on the 25th of April in the same year. Beside the treatise already mentioned he was the author of a paraphrase of the New Testament with notes, and had finished the Book of Psalms with a view to the publication of a similar illustration of the Old Testament, when death hindered the completion of his design. His works were collected after his decease, and printed in four folio volumes.—*Life by Bishop Fell.*

HAMMOND (JAMES) an English elegiac poet, of considerable reputation. He was the son of ANTHONY HAMMOND, esq. of Souer-

sham place, in Huntingdonshire, who attained some eminence in the early part of the last century as a statesman and a man of letters ; though, after having had a seat in parliament, and been a commissioner of the navy, he died a prisoner in the Fleet in 1733. His son, born in 1710, received his education at Westminster school, where he formed an intimacy with lords Cobham, Chesterfield, and Lyttleton, and others afterwards distinguished in literature. He was appointed equerry to Frederick, prince of Wales ; and in 1741 was chosen MP. for Truro. He died the following year at Stowe, the seat of lord Cobham ; his health, if not his intellects, having been disordered by an unfortunate attachment to a young lady, who rejected his addresses. Not long after his death, a small volume of his "Love Elegies" was published, with a preface by lord Chesterfield. They are chiefly imitations of Tibullus, and are obviously the fruits of a highly cultivated taste and warm imagination ; in one or two of his compositions the author displays more originality of sentiment. In spite of the depreciating animadversions of Dr Johnson, these elegies have been generally read, and much admired.—*Aikin's G. Biog. Campbell's Spec. of Brit. Poets.*

HAMPDEN (JOHN) celebrated for his patriotic opposition to taxation by prerogative, was descended from an ancient family settled at Great Hampden, in Buckinghamshire. He was born in London in 1594 ; and at an early age was entered a gentleman commoner at Magdalen college, Oxford. On leaving the university he took chambers in one of the inns of court, in order to study law ; but the death of his father putting him in possession of an ample estate, he indulged in the usual unrestrained career of country gentlemen, until the aspect of the times, and the natural weight of his connexions and character produced greater strictness of conduct, without any abatement of his cheerfulness and affability. Being cousin-german, by the mother's side, to Oliver Cromwell, he, like his kinsman, attached himself to the party in opposition to the court. He entered into parliament in 1626 ; and soon after married a lady of the Foley family. Although for some years a uniform opposer of the arbitrary practices in church and state, and one of those who, in 1637, had engaged a ship to carry them to New England, he acted no very distinguished part in parliament. Hume, whose partiality in respect to the transactions of this period has long ceased to mislead, sneers at the motives to this intended emigration, as merely puritanical ; but the conduct of Hampden in regard to the demand for ship-money, which immediately followed the prohibition to depart the kingdom, forms a conclusive answer to this insinuation. His resistance to that illegal impost, to use the language of lord Clarendon, "made him the argument of all tongues" especially as it was after the decision of the judges, in favour of the king's right to levy ship-money, that Hampden refused to pay it. Being prosecuted in the

court of exchequer, he himself, aided by counsel, argued the case against the crown lawyers for twelve days, before the twelve judges; and although it was decided against him by eight of them to four, the victory, in a popular sense, was in his favour. From this time he received the title of the patriot Hampden; and his temper and his modesty on this great occasion acquired him as much credit as his courage and perseverance. Henceforward he took a prominent lead in the great contest between the crown and the parliament, and was one of the five members whom the king so imprudently attempted, in person, to seize in the house of commons. When the appeal was to the sword, Hampden acted with his usual decision, by accepting the command of a regiment in the parliamentary army, under the earl of Essex. His military career was however short, and only allowed time to prove that his courage in the field became his general character. Prince Rupert having beaten up the quarters of the parliamentary troops, near Thame, in Oxfordshire, Hampden eagerly joined a few cavalry that were rallied in haste, and in the skirmish that ensued, received a shot in the shoulder, which broke the bone; and after much suffering, his wound proved fatal six days after its infliction, on the 24th June, 1643. It is said that the king testified his respect for him, by sending his own physician to attend him. His death was a great subject of rejoicing to the royal party, and of grief to his own. That the joy of the former was misplaced, there is now much reason to believe, as he would have proved a powerful check upon the unprincipled ambition of his relative, Oliver. Clarendon sums up an elaborate character of this eminent leader, by a sentence implying that, like Catiline, "he had a head to contrive, a tongue to persuade, and a hand to execute any mischief." This language, divested of party spirit, merely implies that, acting upon his own theory, he was a man of extraordinary talents and vigour. No doubt he went to the extreme in his opposition to prerogative; but his character and conduct, from first to last, evince his conscientiousness, and he has taken his rank by acclamation on the one side, and tacitly on the other, very high in that list of genuine English patriots, the mention of whose names excites involuntary respect.—*Clarendon. Hume. Biog. Brit.*

HAMZAH, the principal founder of the sect of the Druzes, under the infatuated Caliph Hakem [see his article] in the eleventh century. The murder of Hakem, as already shown, did not extinguish his sect, which flourished under the direction of Hamzah, and still exists. One of its fundamental principles is the incarnation of the Deity in the person of the caliph Hakem; and in other respects the doctrine seems to be a compound of Mahometanism, catholic Christianity, and absurd and licentious notions of mysteries. The work held in the highest respect among them, was composed by Hamzah, and is entitled "The Book of Testimonies to the Mysteries of the Unity,"

a copy of which was found in the house of Nasredding, one of the chief priests of the Druzes, towards the close of the eleventh century, and lodged in the king's library at Paris. A French version of this book was published by M. Petis de la Croix.—*D'Herbelot. Moreri.*

HANCARVILLE (PETER FRANCIS HUGH D') a French writer on philology and classical antiquities. He was a native of Nancy, and died at Paris in 1798. Besides a Descriptive Account of the Antiquities in the Cabinet of sir W. Hamilton, he published a work, entitled "Recherches sur l'histoire, l'origine, l'esprit, et les progrès des Arts de la Grèce," 3 vols. 4to, part of which has been translated into English.—*Nouv. Dict. Hist.*

HANDEL or HAENDEL (GEORGE FREDERIC) this celebrated composer was a native of Halle in the duchy of Magdeburg, in Lower Saxony, where his father practised with considerable reputation as a physician and surgeon. He was the offspring of a second marriage, and was born February 24, 1684. His father intending him for the law, discouraged as much as possible the strong passion which he evinced early in life for the science of music, and even forbade him to practice. But although no instrument was allowed to be in the house, the young musician contrived to secrete a small clavichord in a garret, where he amused himself during great part of the night after the rest of the family had retired to rest, and made such progress, that on paying a visit to the court of Saxe Weifenfels, where his brother held a subordinate situation in the household, he seized the opportunity to play on the church organ, with such power and effect, that the duke, who accidentally witnessed his performance, used his influence successfully with his father, to permit him to follow the bent of his inclination. He was accordingly placed under the tuition of Zachan, organist of the cathedral, and at the age of nine was so far advanced in the practical part of the science, as to be able to officiate occasionally as deputy to his instructor, while his theoretical proficiency actually enabled him to compose a service, or "Spiritual Cantata," weekly for nearly three years. On the death of his father in 1703 he repaired to Hamburgh, then celebrated for the excellence of its musical performances, and procured an engagement in the orchestra at the opera there. At this period of his life he commenced an acquaintance with Matheson the composer, which, though untoward in its commencement, ripened into a strict friendship. A breach of etiquette during the performance of the latter's opera of Cleopatra on the 4th of December, 1704, produced a quarrel between the young men, which terminated in a duel. Fortunately Matheson's sword broke against one of Handel's buttons, which ended the rencounter, and a reconciliation took place. On the 30th of the same month Handel brought out his first opera, "Almira," which in the February following was succeeded by his "Nero," Matheson performing the principal character in each. Having at length

aved enough to warrant him in making a journey to Italy, he proceeded in succession to Florence, Venice, Naples, and Rome; in which latter capital he formed an acquaintance with Corelli at the house of cardinal Ottoboni. On his return to Germany in 1710, he entered the service of the elector of Hanover, afterwards George I of England, as chapel-master, but having received pressing invitations from several of the British nobility to visit London, he, with the permission of that prince, set out for England, where he arrived in the latter end of 1710. The flattering reception which he met with in this country, induced him to break his continental engagement, in violation of a positive promise which he had given, to return within a specified time, and he was in consequence, on the accession of his royal patron to the throne of these realms, in much disgrace, till the good offices of baron Kilmansegg not only restored him to favour, but procured him an increase of the pension of £200 granted him by queen Anne, to double that amount. From 1715 to 1718 Handel resided with the earl of Burlington, and then quitted that nobleman for the service of the duke of Chandos, who entertained him as maestro di capella to the splendid choir, which he had established at his seat at Cannons. For the service of this magnificent chapel, Handel produced those anthems and organ fugues which alone would have been sufficient to immortalize him. After two years dedicated to this munificent patron, the Royal Academy of Music was instituted; and this great composer, whose fame had now reached its height, was placed at its head; and this for a short period may be considered as the most splendid era of music in England. The warmth of his own temper however, called into action by the arrogance and caprice of Carestini, Cuzzoni, and others of his principal Italian singers, gave birth to many violent quarrels, and public opinion becoming to a certain extent enlisted in favour of his opponents, his popularity began to wane, and after ten years' duration, the operas under his direction were abandoned. In 1741 he brought out his chef-d'œuvre, the oratorio of the "Messiah." This sublime composition was not however duly appreciated at its first representation, a circumstance which may be accounted for by the offence which its author had just given, in refusing to compose for Senesino, who had insulted him. Disgusted at its reception, Handel set out for Ireland towards the close of the same year, where it was much more successful. Mrs Cibber's execution of the song, "He was despised," exciting especially a very strong sensation, and when, after an absence of nine months, which had turned out most profitably both to his purse and fame, he returned to London, the hostility against him had much abated, and his oratorios were constantly received at Covent-garden theatre with the greatest approbation by overflowing audiences, the Messiah in particular increased yearly in reputation. Some time previously to his decease he

was afflicted by that most serious among human calamities, total blindness; but this misfortune had little effect on his spirits, and he continued not only to perform in public, but even to compose. His own air however, from the oratorio of Sampson, "Total Eclipse," is said always to have affected and agitated him extremely after this melancholy privation. On the 6th of April, 1759, he was as usual at his post in the orchestra, but expired after a very short illness on the 13th of the same month. His habits of life were regular, and although in his contests with the nobility he lost at one time the whole of his saving, amounting to 10,000*l.*, yet he afterwards recovered himself, and left 20,000*l.* at his decease. His appetites were coarse, his person large and ungainly, his manners rough, and his temper even violent, but his heart was humane, and his disposition liberal. His early and assiduous attention to his profession, prevented him from acquiring much literary information, but he spoke several modern languages. His musical powers it is scarcely possible to estimate too highly; he was never exceeded in the strength and boldness of his style; and while fugue, contrivance, and full score were more generally revered than at present, was unrivalled. Although his vocal melodies may not be more polished and graceful than those of his countryman Hasse, or his rivals Buononcini and Porpora, his instrumental compositions exhibit a combination of vigour, spirit, and invention which has never been exceeded, and his chorusses in grandeur and sublimity have not been equalled since the invention of counterpoint. A very honourable national tribute of applause was given to Handel in 1785, by a musical commemoration at Westminster abbey, in which pieces, selected exclusively from his works, were performed by a band of 500 instruments, in the presence of their late majesties and family, and the principal nobility and gentry of the three kingdoms. This great composer, who never married, was buried in Westminster abbey, where a monument by Roubilliac is erected to his memory.—*Burney's Hist. of Mus. Biog. Dict. of Mus.*

HANGER (GEORGE) lord Coleraine, better known by the title of "Colonel Hanger," distinguished alike by his talents and his eccentricities. Being a younger son of a noble family, he was destined for the army, and a commission was procured for him at an early period of life. He served in America during the whole of the war with the United States, but he was never afterwards able to obtain employment as a military man. The highest rank he reached was that of major of the British legion of cavalry. In 1789 he published "An Address to the Army, in reply to strictures by Roderic Mackenzie, on Tarleton's History of the Campaigns of 1780 and 1781," 8vo. Though accustomed to mingle much in gay and fashionable society, and indulge in convivial pleasures and general dissipation, he contrived to devote much of his time to reading, and was usually well provided

with topics for conversation, so as to be a very amusing companion. Free in his manners, he was yet never disposed to give intentional offence; and the peculiarity of his behaviour and apparent naiveté of disposition disarmed resentment, so that mirth rather than anger was the common result of his most extravagant sallies. On the death of his elder brother in 1814, he succeeded to his title, which however he refused to assume; and when addressed by it he was not at all pleased with the compliment. He died at his house near the Regent's-park in 1824, aged seventy-three. Among a considerable number of publications which proceeded from his pen, the most interesting and amusing is his "Life, Adventures, and Opinions," 1801, 2 vols. 8vo. If any proof of his eccentricity were required, it might be found in the fact, that in one of his books he introduced a portrait of himself, suspended *à la lanterne*.—*Ann. Reg.*

HANMER (sir THOMAS) son to a younger brother of sir John Hanmer, a Shropshire baronet, was born in 1676, and succeeded his uncle in his title and the family estate of Hanmer, in the above-named county. He was removed from Westminster school to Christchurch, Oxford; and having completed his education in that university, entered parliament as knight of the shire for the county of Suffolk. In 1713 his dignity of department, and intimate acquaintance with the forms of the house, procured him to be chosen speaker. This distinguished office he filled during the remainder of a parliamentary career of more than thirty years duration from its commencement. Towards the close of his life, he withdrew altogether from public business, and occupied himself in elegant literature; the fruits of which secession appeared in a corrected edition of Shakspeare's dramatic works, which he published in six quarto volumes, illustrated and ornamented with engravings. The copyright of this work he liberally presented to the university of Oxford, where it was printed in 1744. Sir Thomas survived its publication little more than a year, dying at his seat in Suffolk in 1746.—*Biog. Brit*

HANNEMAN (ADRIAN) an historical and portrait painter, was born at the Hague in 1611. He formed his taste and style by copying the works of Vandyke, in such a manner that many of his copies pass for originals. Although usually employed as a portrait painter, he sometimes designed historical and allegorical subjects, of which a large picture, representing peace as a beautiful woman seated on a throne, and holding a dove on her knees, in the hall of the States of Holland, is much admired. He came to England in the reign of Charles II, where he remained for sixteen years, and on his return to Holland, became the favourite painter of the princess of Orange, afterwards queen Mary II. There are portraits by Hanneman at Windsor, Workop, and other places.—*Walpole's Anecd.*

HANNIBAL, a celebrated Carthaginian leader, the son of Hamilcar, and one of the

most famous generals recorded in ancient history, was born in the year of Rome 534, and BC. 220. At the age of eight years his father caused him to swear before the altar eternal enmity to the Romans. He acquired the art of war in Spain, under Hamilcar, and at the age of twenty-two commanded the cavalry in the army of his brother-in-law, Asdrubal. On the death of that leader he was nominated his successor by the acclamation of the troops, and proceeded on the plan of his predecessor, to extend the Carthaginian dominions in Spain; and, contrary to treaty, laid siege to Saguntum. After achieving several conquests in Spain, he planned the invasion of Italy, and in the fulfilment of that daring scheme, ascended the formidable ridge of the Alps, which had perhaps never before been crossed by a regular army. Having defeated Cornelius Scipio, Sempronius, and Flaminius, in the celebrated battles of Ticinus, Trebia, and in the ambuscade near the lake Thrasymentum he was at length checked by Fabius. The famous victory of Cannæ, over the consuls Varro and Æmilius Paulus BC. 216, being the most disastrous defeat ever endured by the Romans, carried his fortune to its greatest height. The immediate consequence of this battle was the defection of most of the Roman allies in that part of Italy, and the surrender of the opulent city of Capua. Weakened however by his victory, he was obliged to remain for some time inactive, during which interval the Romans recovered from their panic, and when the Carthaginians were at length encamped before Rome, BC. 211, their appearance excited no alarm. Perceiving the hopelessness of the attempt, Hannibal marched back as far as Rhegium, and Capua again fell into the hands of the Romans. From this time the sole theatre of the exploits of Hannibal in Italy was confined to the southern extremity of it, where he maintained the war with fluctuating success, until the complete defeat of his brother Asdrubal, by the consul Claudius, quite crippled the Carthaginian. This disaster, added to the fact of the invasion of Africa by Scipio, obliged Hannibal reluctantly to quit Italy in the seventeenth year after entering it; and his departure was celebrated at Rome by public rejoicings. His arrival in Africa induced the Carthaginians to violate a truce which they had made with Scipio, and gave a temporary revival to their interests; yet so sensible was he of the impending danger, that he made proposals of accommodation to the Roman leader, which were rejected. The famous battle of Zama, BC. 202, terminated the contest; he was obliged to fly from a field covered with slaughtered troops, and declaring to the Carthaginian senate that peace was necessary on any terms, the first Punic war terminated. He did not however lose his credit with his countrymen, and although precluded by the conditions of the peace from remaining at the head of the army, he was chosen prætor, and displayed great abilities in the rectification of affairs, until the Romans found it convenient to accuse him of

concerting hostilities against them with king **Antiochus**. Under these circumstances he deemed it necessary to withdraw from the storm, and quitting the city in disguise, he joined Antiochus, with whom he held many conferences concerning his meditated war against the Romans. On learning this event, the Romans sent ambassadors to Antiochus, who endeavoured to render Hannibal suspected, whose plans were otherwise rendered abortive by the weak presumption of the Syrian king, and the jealousy of his ministers. When Antiochus was driven to make peace with the Romans, one of their leading conditions was, that Hannibal should be given up to them. Foreseeing this result, he first retired to Crete, and subsequently, according to some writers, to Armenia. His last asylum was in the court of Prusias, king of Bithynia, who preparing to give him up on the demand of the Romans, he swallowed poison, which he always carried about him, against such an emergency, and died B.C. 183, at the age of sixty-three. Thus perished a man, accounted by the ancients one of the most consummate masters of the art of war. The Romans have loaded his memory with every imputation of cruelty and perfidy; but although profuse of human blood, and unscrupulous as to the manner in which he obtained his ends, he could scarcely be more so than many of the Roman leaders themselves; and it appears from several instances, that he was not incapable of generosity of sentiment. It speaks highly of the talents of Hannibal, that he nearly balanced the fortunes of Carthage and Rome, and inflicted wounds upon the latter to which its poets and historians never allude without horror.—*Polybius. Livy. Corn. Nepos.*

HANNO, a Carthaginian naval and military commander, famous for his maritime discoveries. He is supposed to have lived about 445 B.C. and he is said by Pliny to have been employed by the republic in the circumnavigation of Africa, which he completed from the straits of Gibraltar, to those of Babelmandel, at the mouth of the Red Sea. He drew up an account of his voyage in the Punic language, which was translated into Greek, and probably served as the basis of a treatise, styled the "Periplus of Hanno," still extant. The authenticity of this tract has been doubted; but Dr Robertson and others have shown that some of the most singular circumstances contained in it are supported by the testimony of later voyagers. The Periplus has been repeatedly published, and an English translation of it, by Falconer, appeared in 1797, 8vo.—*Vossius. Moreri.*

HANRIOT or **HENRIT** (**FRANCIS**) one of the most unprincipled among the French revolutionary leaders, under the despotism of Robespierre. He was born at Nauterre, about 1761; and, after having been a menial servant and a custom-house officer, in both which situations he is said to have behaved with dishonesty, he became a spy for the police. The revolution afforded ample scope for his talents; and attaching himself to the jacobin

party, he first distinguished himself in promoting and directing the massacres, which took place in the Parisian prisons, September 2nd, 1792. Continuing his career of cruelty, he was appointed commander of the national guards. Instructed by the prevailing faction, and seconded by Marat, on the 2nd of June, 1793, he surrounded the Convention with an armed force, and obliged the members, who would have closed their sitting, to return, and pass decrees of accusation against the Girondists. He acted on all occasions as a faithful partizan of Robespierre, whom he in vain endeavoured to support, when accused in the Convention, in July 1794. Hanriot, deserted by his troops when he would have led them against the national representatives, was arrested, and suffered with his chief under the axe of the guillotine, July 29th, 1794. Unlike his pusillanimous accomplices, he displayed on the scaffold a courage worthy of a better cause.—*Dict. des H. M. du 18me. S. Biog. Univ.*

HANVILL (**JOHN**) a monk belonging to the abbey of St Alban's in the twelfth century, who distinguished himself as a writer of Latin poetry. According to some accounts he studied at the university of Oxford; and after having travelled over a great part of Europe, and resided a long time at Paris, he returned to England, and entered into the order of St Benedict. His principal production is a kind of mock-heroic poem, in which he describes the travels of his hero Archirenius, and satirizes the vices and follies of the world. This work, which is much superior in point of elegance to most contemporary compositions, was published at Paris in 1517; but the book is of rare occurrence. Some specimens of Hanvill's poem were also published in Warton's history of English poetry. Epistles, epigrams, &c., by the same author, are preserved in MS. in the Bodleian library.—*Leland de Script. Br. Berkenhout's Biog. Lit.*

HANWAY (**JONAS**) a merchant and traveller, distinguished for his active benevolence, was born at Portsmouth in 1712. At an early age he was apprenticed to a merchant at Lisbon; and in 1743 became a partner in the English house of Dingley, at Petersburg. The concerns of the partnership rendering a journey into Persia desirable, it was gladly undertaken by Mr Hanway, who went to Astrabad with a cargo of English goods, which were lost, in consequence of the English factory being plundered in a rebellion against Nadir Shah. He underwent much fatigue in his exertions to obtain restitution, but was thereby enabled to acquire a knowledge of the manners and events of Persia, an account of which he published in 1753, in a work entitled "An Historical Account of the British Trade over the Caspian Sea, &c. with the particular history of the great usurper Nadir Kouli," 4 vols. 4to. This performance abounds with curious and instructive matter, but is somewhat prolix in style and moral reflection. In the same year he engaged in the controversy concerning the naturalization

of the Jews, and published "A Review of the proposed Naturalization; by a Merchant;" a third edition of which appeared the same year. From this time Mr Hanway continued publishing on a variety of topics, all relating to points of public good, or schemes of charity and utility. He was the principal institutor of the Marine society; and the Magdalen charity, first planned by his partner, Mr Dingley, was much indebted to his activity for its establishment. He had some concern in the institution of Sunday schools; and he also did all in his power to alleviate the condition of the poor chimney sweepers. His fellow citizens entertained such a sense of his merits, that a deputation of the principal merchants of London waited upon lord Bute, to request that some public mark of favour might be conferred upon a man who had done so much service to the community, at the expense of his private fortune. He was in consequence made a commissioner of the navy, which post he held for twenty years; and on resignation was allowed to retain the salary for life. He died in 1786, and a monument was erected to him by subscription. He was a man of some harmless peculiarities in dress and manners; but eminently upright, sincere, and philanthropical. His knowledge was extensive, and his numerous writings were highly useful, although rating low as literary compositions. A list of them may be found in our authority.—*Pugh's Life of Hanway.*

HARDENBERG (CHARLES AUGUSTUS DE) an eminent modern statesman, was born at Hanover in 1750. He received his education at Gottingen, and afterwards resided some years in England. He subsequently took a share in the administrations of Hanover and of Anspach; and finally composed a part of that of Berlin. In 1795 he opened the negotiations at Basle, and signed the treaty of peace between Prussia and the French republic. In 1804 he became minister of foreign affairs, and advocated a system of great energy; but was not duly supported. He retired after the battles of Jena, but resumed his functions on the resignation of Zastrow. He was again obliged to retire after the battle of Friedland, being disagreeable to Napoleon, when he took up his residence at Riga, whence he emerged on the change of that warrior's fortune; and as the prime minister of Prussia, had the satisfaction of signing the treaty of Paris in 1814. He visited London with his sovereign the same year, previous to which he was created a prince. He afterwards acted for Prussia, in the congress for arrangement of the affairs of Europe, and died at Genoa November 26, 1822. Prince Hardenberg was the author and patron of some very salutary reforms in the domestic government of Prussia, although falling far short of the promised introduction of an adequate system of representation into that kingdom.—*Gent. Mag.*

HARDI (ALEXANDER) a French dramatic poet, in the early part of the seventeenth century. He has been reckoned the father of

the French stage; and previous to the appearance of Corneille he was considered the first tragic writer of his time. He also wrote comedies, in which he seems to have taken for his model the works of the Spanish dramatists; his pieces displaying fertility of invention, but abundance of incongruity and extravagance. He rivalled Lope de Vega in the number of his plays, amounting to six hundred. A selection from the dramas of Hardi was published in 6 vols. 8vo, 1628. He died at Paris in 1630.—*Moreri. Nouv. Dict. Hist.*

HARDICANUTE, king of England and Denmark, was the son of Canute, by Emma, daughter of Richard duke of Normandy. He succeeded his father on the Danish throne in 1038; and at the same time laid claim to that of England, which had devolved to his elder and half-brother, Harold. A compromise was effected, by which the southern part of the kingdom was for a while held in his name by his mother Emma; and on the death of his brother he succeeded to the whole. His government was violent and tyrannical; he revived the odious tax of Danegelt, and punished with great severity the insurrections which it occasioned. The death of this detestable prince, in consequence of intemperance at the nuptials of a Danish nobleman, brought his reign to an early termination, to the great joy of his subjects, in 1041.—*Hume's Hist. of Eng.*

HARDING (THOMAS) an English ecclesiastic, a native of Combe-Martin, Devonshire, where he was born in 1512. He was educated in the Romish faith, at Winchester school, whence he removed in due course to New-college, Oxford, on the foundation, and became fellow of that society in 1536. Six years afterwards he was chosen Hebrew professor, and being appointed domestic chaplain to the duke of Suffolk, that nobleman employed him to superintend the education of his daughter, the lady Jane Grey. At this period Harding was a staunch protestant, and instructed his pupil in all the doctrines of the reformed church; but on the accession of queen Mary he abjured his former tenets, and embraced the religion of the court, to the great dissatisfaction of lady Jane, who remonstrated with him on this abrupt change of opinion. When Elizabeth came to the throne, he was deprived of his stall at Winchester, and the treasurership of the chapter at Salisbury, to which valuable appointment he had succeeded in the preceding reign. He now found it convenient to retire to Louvaine, where he entered into a long polemical controversy with bishop Jewel, against whom he wrote seven treatises in defence of the religion he had embraced. His death took place in 1570, or, as others say, 1572.—*Wood. Prince's Worthies.*

HARDING or **HARDINGE** (JOHN) a learned esquire of the north of England, in the fifteenth century. He was in the service of the famous Henry Percy, called Hotspur, whom he accompanied in his Scottish expe-

tion. In 1415 he attended Henry V to the siege of Harfleur; and he afterwards was with the duke of Bedford, in his engagement off the mouth of the Seine. He is said to have encountered great personal hazard, to procure for the king certain records from the archives of Scotland. He wrote a chronicle of English history, in verse, which is absolutely destitute of poetical merit; but possesses some value as a register of former times and manners. If, as is supposed, he was employed by Edward III, it is not probable that he was living so late as 1481, the alleged date of his death.—*Andrews's Hist. of Gr. Brit.*

HARDINGE (NICHOLAS) an English gentleman, educated as a lawyer, and who held some political situations; but was most distinguished for the cultivation of the belles lettres. He studied at Etou and Cambridge; after which he kept his terms at the Middle Temple, and was called to the bar. In 1731 he obtained the office of chief clerk to the house of Commons; in 1752 he was made joint secretary of the Treasury; and he was twice elected M.P. for the borough of Eye, in Suffolk. He died in 1753, aged fifty-seven. His published works consist of some English poetry, and a volume of Latin poems.—

HARDINGE (GEORGE) son of the preceding, born in 1744. After finishing his preparatory studies at Eton school, he went to Trinity college, Cambridge, where Dr Watson, afterwards bishop of Llandaff, was his tutor. In 1769 he was created, by mandate, master of arts; and he was called to the bar the same year, having, like his father, been a student of the Temple. The interest of his mother's brother, lord Camden, procured him the rank of serjeant-at-law; and he subsequently was appointed solicitor-general to her majesty, queen Charlotte. In 1787 he was made a Welch judge, and two years after the queen's attorney-general. He died in the execution of his judicial duties, at Presteign, in Radnorshire, April 26th, 1816. He was a man of cultivated talents, possessing much wit and humour, as well as good sense and knowledge of the world. His speeches in parliament and in the courts of law have been published; as well as several contributions to miscellaneous literature, including three sermons. These have been collected and printed, with his letters, and an account of his life, by Mr John Nichols.—*Lit. Anec. Illustrations of Literature.*

HARDION (JAMES) a native of Tours, born 1686. His literary attainments, which were considerable, obtained him the situation of royal librarian at Paris, and a seat in the Academy of Inscriptions; among the transactions of which society are to be found many interesting papers from his pen. He was also the author of an universal history, in eighteen duodecimo volumes; and a work entitled "Histoire Poétique," in three volumes 12mo. His death took place in 1766.—*Nouv. Dict. Hist.*

HARDOUIN (JOHN) a learned French Jesuit, no less celebrated for his intimate

acquaintance with the classical authors of antiquity, than remarkable for the singularity of his opinions respecting the authenticity of their writings. He was born in 1647, at Quimper in Brittany, and died at Paris September 3, 1729. The work by which he is principally known is his "Chronologiæ ex nummis antiquis restitutæ proleusio, de nummis Herodiadum;" in which he supports the extraordinary hypothesis, that almost all the writings under the names of the Greek and Roman poets and historians, are the spurious productions of the thirteenth century. His exceptions to this sweeping denunciation of the antients are scarcely less curious, as he admits the genuineness of the works of Cicero and Pliny, as well as of some of those attributed to Horace and Virgil, contending at the same time that the two latter are allegorical writers, who, under the names of Lalage and Æneas, have represented the Christian religion and the life of its founder. This singular treatise, which appeared in 1693, printed in two quarto volumes, not only produced able refutations from the pens of Le Clerc and La Croze, but excited the animadversion of his clerical superiors, who condemned and proscribed the book. The author was also called upon for a public recantation of his errors, which in fact he made, but probably with no great degree of sincerity, as he afterwards repeated his offence in other publications. His other works are—"Nummi Antiqui populorum et urbium illustrati." 1684: an edition of Themistius, folio, produced in the same year; one of Pliny's natural history, in usum Delphini, 5 vols. 4to, 1685; and another in twelve folio volumes of "The Councils," 1705. On this latter work he expended a great deal of time and labour, but when completed, it proved obnoxious to the parliament, which ordered its immediate suppression. A selection from father Hardouin's works, comprising most of those which had fallen under the censure of the Romish church, appeared in 1700 at Amsterdam, and a folio volume, containing some of his posthumous writings on miscellaneous subjects, was printed at Paris about the year 1731, under the title "Johannis Hardouini Opuscula." De Boze, in describing the character of this extraordinary man, speaks of him as being "in credulity a child, in temerity a youth, and in mental delusion an old man."—*Moreri.*

HARDT (HERMAN VON DER) one of the most learned philological writers Germany ever produced. He was born in 1660 at Melle in Westphalia, where his father was director of the mint to count Tecklenbourg. He prosecuted his studies at Jena and at Leipsic, where he distinguished himself by the extraordinary strength of his memory, and attached himself chiefly to the acquisition of the Oriental languages. He established at Leipsic a Philobiblical Academy, for the express cultivation of sacred literature; but he was prevented from co-operating long with this institution, in consequence of the duke of Brunswick having made him his librarian. In 1690

he was chosen professor of the Oriental languages in the university of Helmstadt; to which seminary of learning he induced the duke to present his library. In 1709 he was elected rector of the gymnasium of Marienburg, where he employed every moment he could spare from the duties of his station, in preparing for the press those learned works which have established his reputation. Among these are—"Autographia Lutheri aliorumque celeberrimum virorum ab anno 1517 ad ann. 1546, reformationis ætatem et historiam egregiè illustrantia," 3 vols. 8vo; "Magnum Concilium Constantiense de universali Ecclesiæ reformatione, unione, et fide," 1697, 3 vols. fol. 1700—1742, 6 vols. fol. undertaken by order of the duke of Brunswick; "Memorabilia Bibliothecæ novæ Rodolphiæ;" "Historia litteraria Reformationis," 1717, 5 vols. folio; "Tomus primus in Jobum, Historiam populi Israelis in Assyriaco exilio, Samariâ eversâ et regno extincto illustrans," Helmstadt, 1728, folio; the remainder of this work was never published. He died in 1746, leaving in MS. a History of the Reformation, and other erudite collections.—*Biog. Univ.*

HARE (FRANCIS) bishop of Chichester, an English prelate in the reign of Anne, a native of London. He was elected from Eton school to a fellowship at King's college, Cambridge, on the foundation, where he distinguished himself by his literary attainments, and was selected to superintend the education of the first marquis of Blandford, son of John Churchill, the great duke of Marlborough. Under the patronage of this noble family his rise in the church was rapid. The interest of the duke, who was then at the head of the army, first procured him the appointment of chaplain-general to the forces, and afterwards in succession the deaneries of Worcester in 1708, St Paul's 1726, and the bishopric of St Asaph 1727, whence he was translated to the more valuable see of Chichester in 1731, still retaining his deanery of the metropolitan church. A short time previous to the death of the queen, he published a remarkable pamphlet under the title of "The Difficulties and Discouragements which attend the Study of the Scriptures in the way of private Judgment." The object of this treatise is to prove the indispensable duty of Christian communities to remove such discouragements; but the levity of style with which the bishop has conducted his argument, has given occasion to some of his opponents to charge him with scepticism. In the celebrated Bangorian controversy he espoused the side of the question opposed to that which was maintained by Hoadley, who became the main object of his attack. His other works are a quarto edition of Terence, with annotations critical and explanatory, and a treatise on Hebraical rhythm, in which he professes to have restored the original metre to the Book of Psalms. In both these works his accuracy as a critic is strongly impeached; in the first by his old antagonist in polemics, Bentley, and in the second by bishop Lowth, whose refutation of his positions is generally

considered to be complete. Bishop Hare's death took place in 1740.—*Chalmers's Biog. Dict.*

HARGRAVE (FRANCIS) an eminent literary lawyer, king's counsel, and member of the Society of Lincoln's-inn. He was also recorder of Liverpool, but distinguished himself more as a consulting counsel than as a pleader. He is the author of several legal works, which are in high esteem; the principal of them are—"The Case of Somerset the Negro;" "Collection of State Trials," 11 vols. folio; "Argument in Defence of Literary Property;" "Collection of Law Trials," 2 vols. 4to; "The Jurisdiction of the Lords' House of Parliament, by Judge Hale, with a Preface;" "Juridical Arguments and Collections," &c. In 1813, Parliament, in compliance with a proposal from himself, passed a vote for the purchase of his library for the sum of 8000*l.* the whole of which has been added to that of Lincoln's-inn. He died 21st of August, 1821, in his eighty-first year.—*Ann. Biog.*

HARINGTON (sir JOHN) an English courtier, poet, and man of letters, in the reigns of Elizabeth and James I. He was descended from a respectable family settled at Kelston, near Bath, and was born about 1561. His father had been imprisoned in the reign of queen Mary for holding a correspondence with her sister Elizabeth, on whose accession to the crown he was naturally regarded with favour, and she stood sponsor for the son at the baptismal font. He was educated at Eton and afterwards at Cambridge, where he took the degree of MA. Making his appearance at court, he distinguished himself not only by his satirical and sprightly wit, displayed in jests and epigrams, but also by a translation of the tale of Alcina and Ruggiero, from the Orlando Furioso. This poetical effort reached the eye of the maiden queen, who, feigning herself offended at the licentiousness of the story, imposed on Harington the task of translating the whole poem. This he executed to her majesty's satisfaction, and published the work in 1591. But this penance did not check the prurient imagination and satirical temper of the young courtier. In 1596 he published two tracts entitled "A new Discourse on a stale subject, called the Metamorphosis of Ajax;" and "An Apologie for Ajax." These pieces are said to be the first specimens of the Rabelaisian satire of which our literature could boast; they are replete with that kind of humour which distinguishes the writings of the French Lucian, and partake of their grossness. The extreme rarity of these once popular trifles renders it doubtful whether Swift or Sterne were acquainted with them; though there are passages in the writings of both those authors which render it probable that they had seen Harington's volumes. The indelicacy of the idea which serves as the basis of these satires probably accorded too well with the taste of the age to have given offence; but the personal ridicule in which the satirist indulged, started up a

host of enemies among his contemporaries; and to the partiality of the queen he owed his escape from a Starchamber prosecution, though it is said he had not spared even her favourite Leicester. In 1599 Harington accompanied the earl of Essex to Ireland, and received from him the honour of knighthood, a circumstance which gave offence to the queen. This probably induced him to retire from court to his seat near Bath. On the accession of James I he was made a knight of the Bath; and he was favoured with the correspondence of that learned monarch, though it does not appear that he obtained any more substantial marks of favour, of which he stood in need, having through the carelessness of his disposition considerably lessened his estate. He died in 1612. A volume of his "Most elegant and witty Epigrams," was published in 1625; and other pieces of his, including "A brief View of the Church of England to the year 1608," were printed in the "*Nugæ Antiquæ*."—*Warner's Hist. of Bath. Aikin's G. Biog.*

HARINGTON (HENRY) a descendant of the preceding, an eminent physician at Bath. He was born in 1729, and after previous tuition he went to Queen's college, Oxford, where he took the degree of Master of Arts. He then engaged in a course of medical study with a view to professional practice, and in 1762 he obtained the degree of Doctor of Physic. Leaving the university he settled at Wells, whence he subsequently removed to Bath. There he distinguished himself not only by his medical talents, but also by the cultivation of general literature, and by his fondness for music, and his skill both as a performer and a composer. He instituted a musical meeting at Bath, styled the Harmonic Society, for which he wrote many glees and other compositions, which have been much admired. He also composed anthems of extraordinary merit. While at Oxford, in 1769, Dr Harington published the first volume of the interesting work entitled "*Nugæ Antiquæ*, a collection of original Papers, written in the Reigns of Henry VIII, queens Mary, Elizabeth, &c." A second volume appeared in 1775; and the collection was republished in 3 vols. 1779. Among the other productions of Dr Harington are—"An Ode to Harmony; an Ode to Discord; the Witch of Wokey; a Ballad;" and he was also the author of "The Geometrical Analogy of the Doctrine of the Trinity." He died January 15th 1816.—*Britton's Hist. of Bath Abbey. Ann. Biog.*

HARIRI (ABU MOHAMED AL CASSIM) a celebrated Arabian writer of the twelfth century. He composed a work which is regarded among his countrymen as a model of literary taste and eloquence. It consists of fifty discourses on moral subjects, illustrated by apposite narratives, in the Oriental taste.—*D'Herbelot.*

HARLES (THEOPHILUS CHRISTOPHER) an eminent Greek scholar and critic, who was a native of Culmbach in Swabia. In 1761 he

was appointed adjunct of the faculty of philosophy at Erlangen, and the following year he obtained the chair of Greek and Oriental literature in the gymnasium of Cobourg. In 1770 he returned to the university of Erlangen, with the title of director of the philological seminary, librarian, and professor of rhetoric and poetry. His first publication was an essay, "*De Præconum apud Græcos officio*," 1764; which was followed by his dissertations, "*De Pedantismo philologico*," Cobourg, 1765; and "*De Galantismo æsthetico et philologico*," 1768. He also wrote the lives of eminent philologers in Latin, an interesting work, of which the second edition was published at Bremen, 1770, 72. Besides editions of several of the Greek and Roman classics, he produced a Greek and a Latin poetical anthology, and introductions to the history of Greek and Latin literature. But the most important of his labours is the second edition of the "*Bibliotheca Græca*" of Fabricius, published at Hamburg, 1790—1809, 12 vols. 4to. He also edited many dissertations and tracts of other learned men, and wrote many pieces which appeared in periodical journals. His death took place November 2, 1814, at the age of seventy-six.—*Biog. Univ.*

HARLEY (ROBERT) earl of Oxford and earl Mortimer, a distinguished minister of state in the reign of queen Anne. He was born in London in 1661; and was the son of sir Edward Harley, a Herefordshire gentleman, who had been an active partizan of the parliament during the civil war. The subject of this article, though of a presbyterian family, adopted Tory principles in politics, and joined the high church party. After the Revolution he sat in parliament for the borough of Tregony; and in the reign of William III he seems to have acted with the Whigs; for in 1694 he had the charge of bringing in a bill for the frequent meeting of parliaments. But after the accession of Anne, he, as well as his more celebrated colleague St John, afterwards lord Bolingbroke, deserted the party with which they had acted, and became leaders of the Tories. Harley was chosen speaker of the house of Commons in 1702, and afterwards was secretary of state. He resigned his post in 1708. The cabals of their political opponents having effected the removal of the duke of Marlborough and his friends from office, Harley was nominated a commissioner of the treasury and chancellor of the exchequer in 1710. In the following year he narrowly escaped losing his life by the hand of an assassin. The marquis of Guisard, a French catholic, who had been taken up on suspicion of designs against the state, while undergoing an examination before the privy council at Whitehall, stabbed Mr Harley with a penknife. The man was sent to Newgate, where he died shortly after; and an act of parliament was passed making it felony to attempt the life of a privy counsellor engaged in his official duties. In 1711 Harley was raised to the peerage, and constituted lord high treasurer. After the peace of Utrecht he

1713, the Tory statesmen, having no longer any apprehensions of danger from abroad, began to quarrel among themselves; and the two chiefs, Oxford and Bolingbroke, especially appear to have become personal and political foes, actuated by different views and sentiments. The former resigned the treasurership just before the death of the queen in 1714. Whatever projects may have been formed by others of the party, there seems to be no ground for believing that lord Oxford had engaged in any measures to interrupt the protestant succession. Early in the reign of George I, he was however impeached of high treason by the house of Commons, and was thereupon committed to the Tower. He remained in confinement till June 1717, when, at his own petition, he was brought before the house of Peers, and, after a public trial, acquitted of the crimes laid to his charge. The rest of his life was spent in comparative seclusion, and in adding to the literary stores in the collection of which he expended a considerable portion of the wealth which his public employments had enabled him to accumulate. He died May 21st, 1724. His patronage was extended to Swift, Pope, and other literary men, who repaid his favours with their eulogies. Pope thus celebrates him: "A soul supreme in each hard instance tried, Above all pain, all anger, and all pride, The rage of power, the blast of public breath, The lust of lucre, and the dread of death."

Lord Oxford was himself an author, having published—"A Letter to Swift for correcting and improving the English Tongue;" "An Essay on Public Credit;" "An Essay upon Loans;" and "A Vindication of the Rights of the Commons of England."—He was succeeded in his titles by his son EDWARD, who augmented the collection of printed books and manuscripts formed by his father. On the death of the second earl of Oxford, in 1741, the library of printed books was sold to Osborne, a bookseller, who published a catalogue of them, compiled by William Oldys and Samuel Johnson, 4 vols. 8vo, 1743. The MSS. are preserved in the British Museum, where they form the Bibliotheca Harleiana. —*Collins's Lives of the Earls of Oxford.*

HARMAR (JOHN) a learned English clergyman of the seventeenth century, born at Churchdowne, Gloucestershire, 1594, and educated at Winchester grammar school, of which foundation his father, of the same name, was warden. Having completed his education at Magdalen college Oxford, where he graduated in 1617, he accepted the head mastership of the foundation school at St Alban's, but in 1650 was chosen professor of Greek in the university of which he still continued a member. Nine years afterwards he obtained the living of Ewhurst, Hants; but having distinguished himself during the progress of the civil wars and the protectorate, by his adherence to the republican party, he was deprived, on the restoration of monarchy, of his benefice as well as of his professorship. He was an elegant writer, and remarkable for

the purity of his Latinity: of his works the principal are—"Janua Linguarum;" "Praxis Grammatica," 8vo; a Latin translation of some cantos of Hudibras, and an eucomium in the same language on Cromwell and his eldest son. He also published an etymological lexicon of the Greek tongue. His death took place in 1670.—*Wood. Calamy.*

HARMER (THOMAS) an erudite orientalist, a native of Norwich, in which city he was born in 1715. He received his education at a private academy in London, but dissenting from the doctrines of the church of England, was of course precluded the benefit of an university education. His progress in the languages of the East was very considerable, ample proofs of which are especially evinced in his annotations on Solomon's Song. His other works are "An Account of the Jewish Doctrine of the Resurrection," and "Observations on divers parts of Scripture, illustrated by the accounts of Travellers in the East," 4 vols. 8vo; a treatise which has gone through several editions since its first publication in 1761. He died minister of a dissenting congregation at Wottesfield, Suffolk, in 1788.—*Gent. Mag.*

HAROLD I, surnamed Harefoot, king of England, succeeded his father, Canute, in 1035, notwithstanding a previous agreement that the sovereignty of England should descend to the issue of Canute by his second wife, the Norman princess Emma. His countrymen, the Danes, maintained him upon the throne against the efforts of earl Godwin, in favour of Hardicanute, but Harold gaining over that leader by the promise of marrying his daughter, a compromise was effected, and they united to effect the murder of prince Alfred, son to Etheldred II. After a reign of four years, in which nothing memorable occurred, Harold died in 1039.—*Hume's Hist. of Eng.*

HAROLD II, king of England, was the second son of the potent Godwin, earl of Kent. He succeeded his father in his government and great offices, and upon the death of Edward the Confessor, in 1066, stepped without opposition into the vacant throne, without attending to the more legal claim of Edgar Atheling, or the asserted bequest of Edward in favour of the duke of Normandy. The latter immediately called upon him to resign the crown, and upon his refusal prepared for invasion. He also instigated Harold's brother, Tosti, who had retired in disgust to Flanders, to infest the northern coasts of England in conjunction with the king of Norway. The united fleet of these chiefs sailed up the Humber, and landed a numerous body of men, who defeated the opposing forces of the earl of Northumberland and Mercia, but were totally routed by Harold, whose brother, Tosti, fell in the battle. He had scarceely time to breathe after this victory, before he heard of the landing of the duke of Normandy at Pevensey, in Sussex. Hastening thither with all the troops he could muster, a general engagement ensued at Hastings, October 14, 1066, in which this spirited prince, after

erting every effort of valour and military skill, was slain with an arrow; and the crown of England was the immediate fruit of William's victory.—*Ibid.*

HAROUN or **AARON AL RASHID**, a famous caliph of the Saracens, was the second son of the caliph Mahadi. He succeeded his elder brother, Hadi, in the caliphate AD. 786, and was the most potent prince of his race, ruling over territories extending from Egypt to Khorassan. He obtained the name of Al Rashid, or the Just, but his claim to the title must be regarded with considerable allowance for Eastern notions of despotic justice. One of his noblest qualities was his love of learning and science: he caused many Greek and Latin authors to be translated and dispersed throughout his empire, and even made his subjects acquainted with the *Iliad* and the *Odyssey*. He eight times invaded the Greek Empire, and on the refusal of the emperor Nicephorus, in 802, to pay tribute, addressed to him a singularly arrogant epistle, and followed it up by an irruption into Greece, which terminated in the defeat of Nicephorus, who was obliged to pay an augmented tribute, and agree not to rebuild Heraclea and the other pillaged and dilapidated frontier towns. During these transactions, the ruin of the family of the Barmecides exemplified the despotic rigour of Haroun's character. Yahia, the head of it, had superintended his education; and of his four sons, the eldest was a successful general; the second the caliph's prime vizier, Giaffer; and the third and fourth in dignified stations. The generosity, munificence, and affability of the Barmecides, rendered them the delight of all ranks of people, and Giaffer was so much in his master's graces, that the caliph, in order to enjoy his company in the presence of his sister Abassa, to whom he was equally attached, formed a marriage between the princess and vizier, but with the capricious restriction of their forbearing the privileges of such an union. Passion broke through this unjust prohibition, [see article **ABASSA**,] and the caliph in his stern revenge publicly executed Giaffer, and confiscated the property of the whole family. A decree was even made forbidding all mention of the names or actions of the Barmecides, which a grateful old man venturing openly to disobey, with the capricious magnanimity of a despot, he was not only pardoned but rewarded. Haroun attained the summit of worldly power and prosperity, and the French historians mention a splendid embassy which he sent to Charlemagne, which, among other presents, brought a magnificent tent, a water clock, an elephant, and the keys of the holy sepulchre at Jerusalem, implying a permission for European pilgrims to visit it. Haroun was seized with a mortal distemper while proceeding to march to put down a rebellion in the provinces beyond the Oxus; and retiring to Tous, in Khorassan, expired in the forty-seventh year of his age, and twenty-third of his reign. The popular fame of this caliph is evinced by the *Arabian Nights Entertainments*, in which

Haroun, his wife Zobeide, his vizier Giaffer, and chief eunuch Mesroude, are frequent and conspicuous characters.—*Marigni's Hist. of the Caliphs. Gibbon.*

HARPALUS. There were two of this name, one a Grecian astronomer, who corrected the Cycle of Cleostratus, about four hundred and eighty years before the Christian *Æra*. This alteration, from a revolution of eight to one of nine years, was in the fourth year of the eighty-second Olympiad again improved by Meton, who increased the Cycle to a period of nineteen years. The other, Harpalus, was one of the captains of Alexander the Great, who being entrusted by that conqueror with the superintendance of the plunder of Babylon, absconded with a considerable portion of the treasure.—*Fabric. Bibl. Græc. Anc. Univ. Hist.*

HARPE (**JEAN FRANÇOIS DE LA**) a French dramatic poet, critic, and philosopher of the last century, born at Paris, November 20th, 1739. His father, a Swiss officer in the French service, dying in indigence, Asselin, president of the college of Harcourt, received him into that seminary, where he enjoyed the benefit of an excellent education. A lampoon on his benefactor, which was, in all probability without foundation attributed to him, occasioned the temporary confinement of the suspected satirist. This circumstance disgusted him with his situation, and at a very-early age he threw himself on his own talents as an author for support. His first production was the tragedy of "Warwick," 1763, which was very beneficial to him in a pecuniary point of view, as well as in procuring him considerable reputation. Some others which followed from his pen met with less success; but a series of euloges on Charles V, Catinat, Fenelon, Voltaire, and Henri Quatre (especially the latter) gained him at last an equal degree of credit, though in a different department of literature. On the breaking out of the revolution La Harpe embraced the principles of republicanism; but during the reign of terror, his moderation rendering him an object of suspicion to those then in power, he was thrown into prison in 1793, and while in confinement is said to have owed his conversion to Christianity to the arguments of his fellow-captive, the bishop of St Brieux. Though sentenced to deportation, the changes of the times finally restored him to liberty, and he passed the remainder of his days in literary retirement, till 1803, when he departed this life in his sixty-fourth year. His principal work is "Lyceum, or a complete course of Literature," 8vo, 12 vols.; among the rest are—"Gustavus Vasa;" "Timoleon;" "Pharamond;" and "Philoctetes," tragedies; the latter an elegant translation from the Greek of Sophocles; "Tangu et Felime," a poem, 1779; "Translations of Camoens' Lusiad," 2 vols.; "The Psalms of David;" and the works of Suetonius, 2 vols.; "A Commentary on the dramatic works of Racine," 7 vols. 8vo; "The Correspondence of the Czar Paul the First," 4 vols. 8vo; and a refutation of

the opinions of Helvetius.—*Dict. Hist et Supp.*

HARPOCRATION (VALERIUS) of Alexandria, a rhetorician, the æra of whose existence is variously fixed at 180 and 360 years posterior to that of Christianity. A lexicon of his, "Of the ten Orators of Greece," is yet extant. Of this work there are two excellent editions, the Venetian one, of 1603, printed by Aldus, in folio, and that by Gronovius, Lugd. Batav. 1696, 4to. The latter is however by far the most valuable.—*Fabricii Bibl. Græc.*

HARPSFIELD. There were two brothers of this name, ecclesiastics of the sixteenth century, born in London. They were both educated at Winchester school, whence in due course they removed on the foundation to fellowships at New college, Oxford, in 1534. **JOHN**, the elder, became chaplain to bishop Bonner, who presented him first to the rectory of St Martin, Ludgate, in the city of London, and afterwards to that of Layndon, Essex, with the archdeaconry of London. He was subsequently appointed dean of Norwich; but on the restoration of Protestantism, under Elizabeth, lost all his preferment, and was committed close prisoner to the Fleet. He was the author of a system of chronology from the deluge down to the year 1559, and of a volume of homilies. He recovered his liberty a short time previous to his death, which took place in 1578. **NICHOLAS**, the younger of the two, was archdeacon of Canterbury, and held a stall in St Paul's cathedral, but the same event which deprived his brother of his liberty and preferment operated in a similar way upon his own prospects. He underwent a long imprisonment in Lambeth palace, and died in 1572, or as others say in 1583. He published a history of Wickliffe's Heresy, an Ecclesiastical History of England, and six dialogues against the impugners of the pope's supremacy, &c.—*Wood. Biog. Brit.*

HARRINGTON (JAMES) see Appendix.

HARRIOT (THOMAS) an English mathematician and astronomer of the beginning of the seventeenth century. He was born at Oxford in 1560, and received his education at St Mary Hall, in that university, where he took the degree of B.A. in 1579. He afterwards became an inmate in the family of sir Walter Raleigh, and his tutor in mathematics. In 1585 he was sent to Virginia by that gentleman, with the colony which went out under sir Richard Grenville, to settle the country. He remained there about a year, and on his return published as the result of his observation: "A brief and true report of the new-found land of Virginia, of the commodities there found and to be raised, &c." 1588, 4to. He was then introduced by sir Walter to the earl of Northumberland, who received him into his family, and settled on him a pension of 120l. or, according to other accounts, 300l. per annum. He passed much of his time with his patron, who, as well as Raleigh, was kept a prisoner in the Tower. Harriot also resided several years at Sion col-

lege, where he died in consequence of a cancer in the lip, July 2nd, 1621. Harriot was intimately acquainted with mathematical science, and his knowledge was the subject of general eulogy among his contemporaries. He was the inventor of the present improved method of algebraical calculation, first made public in his posthumous work, entitled "Artis Analyticæ Praxis ad Æquationes Algebraicas nova, expedita, et generali methodo resolvendas," 1631. The improvements in this work were adopted by the celebrated French philosopher Des Cartes, and published as his own. Dr Wallis, in his treatise on Algebra, vindicated the claims of Harriot; and the same task has been more recently performed by Zach, astronomer to the duke of Saxe Gotha, in the Astronomical Ephemeris of the Academy of Sciences at Berliu, for 1788. He has also shown that Harriot had much merit as an astronomer. A tract of his on that subject, entitled "Ephemeris Chyrometrica," is said to be preserved in the library of Sion college.—*Biog. Brit. Aikin's G. Biog.*

HARRIS (GEORGE) a writer on civil law. He was the son of Dr John Harris, bishop of Llandaff, and was educated at Oriel college, Oxford. In 1750 he took the degree of JUD. and was admitted a member of the College of Advocates. He died in 1796. He published a translation of the Four Books of the Institutes of Justinian, with notes, and a preface, 4to. "The translation," says Butler, "is excellent, and it is much to be lamented that the preface is not longer, and the notes more copious." Dr Harris was also the author of "Observations on the English Language," 8vo.—*Coot's Catalogue of Civilians. Butler's Horæ Juridicæ Subsecivæ.*

HARRIS (JAMES) a learned writer on philology and the philosophy of language. He was born at Salisbury in 1709, and was nephew to lord Shaftesbury, author of the Characteristics. Having passed through his preliminary studies, he entered as a gentleman commoner of Wadham college, Oxford, at the age of sixteen, after which he became a probationer at Lincoln's Inn. The death of his father put him in possession of an independent fortune at the age of twenty-three; on which he retired to his native place, to dedicate his time to classical literature. In 1744 he published a volume containing three treatises, "On Art; on Music and Painting; and on Happiuss." This was a prelude to the most celebrated of his productions, "Hermes, or a Philosophical Enquiry concerning Universal Grammar." This work displays much ingenuity, and an extensive acquaintance with the writings of the Greek poets and philosophers; but the author's ignorance of the ancient dialects of the northern nations has caused him to take an imperfect survey of his subject: and though on minor topics his illustrations are often happy, his general system is unsatisfactory. In 1761 he was chosen MP. for the borough of Christchurch; and the next year he was appointed one of the lords of the admiralty, which office he exchanged in 1768

for that of a lord of the treasury. On the change of ministry in 1765, he was obliged to retire, but in 1774 he was made secretary and comptroller to the queen, in which post he continued during the remainder of his life. Literature still occupied much of his time; and in 1775 he published "Philosophical Arrangements," part of a systematic work which he had projected as an illustration of the Logic of Aristotle. His concluding work, "Philological Inquiries," was completed in 1780, but was not published till after his death, which event occurred December 22, 1780. A collective edition of his works was published by his son, the earl of Malmesbury, 2 vols. 4to, 1801.—*Memoirs prefixed to his Works.*

HARRIS (JAMES) see MALMESBURY.

HARRIS (JOHN) a natural philosopher of the last century, who deserves notice as the compiler of a work, which may be considered as the prolific parent of the class of books called Encyclopædias. He was educated at Cambridge for the clerical profession; and in 1698 he obtained the degree of DD. He held at different times several church preferments, notwithstanding which he died in indigent circumstances in 1719, aged about fifty-two. His principal literary labour was, "Lexicon Technicum; or a Universal Dictionary of Arts and Sciences," 2 vols. folio, 1708, afterwards augmented to 3 vols. He also compiled a collection of voyages and travels, 2 vols. folio, 1705; and a History of the County of Kent, folio, 1719; besides several mathematical works.—*Rees's Cyclop.*

HARRIS (WILLIAM) a dissenting clergyman of some note as an historian or biographer. He was a native of Salisbury, and was educated at an academy kept by the rev Henry Grove, at Taunton. After having officiated as a minister at other places in the west of England, he settled at Honiton, in Devonshire, where he died in 1770. His principal publications are—"An Historical and Critical Account of the Life and Writings of James I," 1754, 8vo; similar accounts of Charles I, 1758, 8vo; Oliver Cromwell, 1762, 3vo; and of Charles II, 1766, 2 vols. 8vo, republished in 5 vols. 8vo, 1814. These biographies are written in professed imitation of Bayle, the text being made subservient to the notes. As to politics and religion the principles of the writer approach to republican, re-echoing the sentiments of his patron, Mr Hollis.—*Aikin's G. Biog.*

HARRISON (JOHN) a most skilful mechanic, noted as the inventor of the famous time-keeper, for ascertaining the longitude at sea; and also of the gridiron pendulum. He was born at Foulby, near Pontefract, in Yorkshire, in 1693; and was the son of a carpenter or builder, who brought him up to the same occupation. His education was very confined, a circumstance which not improbably strengthened his inventive faculties as an artist. In 1700 he removed with his father to Barrow, in Lincolnshire, where he acquired some knowledge of mathematics by studying a MS.

copy of professor Saunderson's lectures. The bent of his genius led him to devote himself to mechanics, and especially to horology. Before he had attained the age of twenty-one, he without instruction found out how to clean clocks and watches, and made two clocks, chiefly of wood-work. He at length employed himself solely in contriving improvements in chronometry; and in 1728 he visited London, with descriptive drawings of a machine for determining the longitude at sea; in expectation of being engaged to make one for the board of longitude. His invention being examined by Graham, the celebrated mathematical instrument-maker; he advised Harrison to execute his machine before he applied to the board of longitude. He accordingly went home, and in 1735 he returned to London with his first machine, the merit of which he proved in a voyage to Lisbon. In 1739 he completed a second machine, more simple and superior to the former; and in 1749 he made a third machine, which erred only three or four seconds in a week, and which he was disposed to consider as the ne plus ultra of accuracy. He then turned his attention to the improvement of pocket watches, in which he succeeded so well that he was induced to make a fourth machine, or time-keeper, in that form, which he finished in 1759. This chronometer, in two voyages having been found to correct the longitude within the limits required by the act of parliament of the 12th of queen Anne, Harrison applied for the proposed reward of 20,000*l.* which he received. This ingenious artist employed the latter part of his life in constructing a fifth improved time-keeper, on the same principle with the preceding one. This he executed so well, that after a ten weeks' trial in the king's private observatory at Richmond, in 1772, it was found to have erred only four and half seconds. He died at his house in Red Lion-square, London, March 24, 1776. He was the author of a tract, entitled a "Description concerning such Mechanism as will afford a nice or true Mensuration of Time," 1775, 8vo. His unremitting pursuit of an exclusive object prevented him from acquiring literary knowledge, and the disadvantage he thus laboured under is sufficiently obvious in the publication: yet it is asserted, that in conversation he expressed himself with distinctness and propriety, conveying his ideas on professional subjects in a clear and intelligent manner.—*Noorthouck's Historical and Classical Dict. Hutton's Mathemat. Dict. Ann. Reg.*—HARRISON (WILLIAM) FRS. son of the foregoing. In early life he was engaged in the same pursuits as his father whom he materially assisted in his chronological discoveries. He made two voyages with the time-keeper to Jamaica and Barbadoes, in the course of which he incurred great danger from tempestuous weather. He subsequently obtained a seat in parliament for the county of Monmouth, for which he served the office of high-sheriff in 1791. He was also for many years an active governor of the Foundling Hospital; and supported the ch:

factor of a useful and public-spirited member of society. He died at an advanced age, April 24, 1815. Both father and son were interred in the church-yard of Hampstead.—*Orig.*

HARTE (WALTER) an English poet and divine, was the son of another clergyman of the establishment of the same name, who at the revolution relinquished all his preferences rather than take the oath to king William. He was born about 1697, and received his education at the free-school of Marlborough, whence he was removed to St Mary's Hall, Oxford, where he took his Master's degree in 1720. In 1727 he published a volume of poems, which he dedicated to the earl of Peterborough, and among the list of the subscribers to which appears the name of Pope. In 1727 he published his "Essay on Satire;" and in 1735 an "Essay on Reason;" in which he was materially assisted by Pope. He subsequently became vice-principal of St Mary's Hall, and obtained so much reputation as a tutor, that he was recommended by lord Lyttelton to the earl of Chesterfield, as a travelling and private preceptor to his natural son, with whom he made the tour of Europe, from 1746 to 1750. On his return, the last-mentioned nobleman with some difficulty procured him the canonry of Windsor. In 1759 he published his "History of Gustavus Adolphus," which, although faithful and accurate as to authorities and facts, failed, chiefly owing to the pedantry and bad taste of the style. His last work was a collection of poems, entitled "The Amaranth," which appeared in 1763, with engravings designed by himself. As a poet he exhibited more information than genius, but is by no means unentitled to attention. He died in 1774, at St Austle, in Cornwall, of which place he was vicar. Besides the works already mentioned, Mr Harte was author of "Essays on Husbandry."—*Johnson and Chalmers's English poets.*

HARTLEY (DAVID) an English physician, principally celebrated as a writer on metaphysics and morals. He was the son of an episcopal clergyman at Armley, near Leeds in Yorkshire, where he was born in 1705. At the age of fifteen he was sent to Jesus college, Cambridge, of which he became a fellow after he had taken his degrees in arts. He was intended for the clerical profession, but having conceived doubts of the truth of the doctrines contained in the thirty-nine articles, his scrupulous conscience induced him to relinquish all thoughts of entering on an office in which his preferment must have been preceded by subscription to the articles in question. He therefore engaged in the study of medicine, and commenced practice as a physician at Newark in Nottinghamshire. Thence he removed to Bury St Edmund's in Suffolk, and subsequently to London. When Mrs Stephens, a female empiric, professed to have found out a specific for the stone, Dr Hartley patronized her nostrum, and contributed greatly towards her obtaining the grant of 5000*l.* from Parliament for her discovery. In

1738 he published "Observations made on ten Persons, who have taken the Medicament of Mrs Stephens," 8vo; and this pamphlet was followed by others on the same subject. Subsequent experience has not proved favourable to this Medicament (which is composed of soap and lime-water); and Dr Hartley himself, after having taken as much of it as contained two hundred pounds weight of soap, is said to have fallen a sacrifice to the disease for which it was recommended. He spent the latter part of his life at Bath, and died there August 28, 1757. He wrote in defence of inoculation for the small-pox, and also some papers which appear in the Philosophical Transactions; but his reputation as a philosopher and a man of letters depends on his work entitled "Observations on Man, his Frame, his Duty, and his Expectations, in two Parts," 1749, 2 vols. 8vo. This treatise exhibits the outlines of connected systems of physiology, mental philosophy, and theology. His physiology is founded on the untenable hypothesis of nervous vibrations; and is so far quite inconsistent with the inferences to be drawn from modern discoveries in science. As a metaphysical writer he appears to more advantage. The doctrine of association, which he has adopted and illustrated, tends to elucidate the phenomena of intellectual philosophy; and this part of Hartley's work has been published by Dr Priestley in a detached form, under the title of the "Theory of the Human Mind," 8vo. The second part of the "Observations," relating to morals and religion, has been commented on by Pistorius, a German or Polish divine, whose remarks are included in the edition of Dr Hartley's book, published in 4to, 1791, and afterwards in 3 vols. 8vo.—*Aikin's G. Biog.*

HARTLEY (DAVID) son of the foregoing, distinguished as a politician and an ingenious projector. He was for some time MP. for the town of Kingston-upon-Hull; and in his conduct as a senator he uniformly displayed liberal and enlightened views, if his sentiments were not very striking or profound. His steady opposition to the war with the American colonies led to his being appointed one of the plenipotentiaries to treat with Dr Franklin at Paris; and some of his letters on that occasion were published in the correspondence of that statesman in 1817. In the house of Commons Hartley was one of the first promoters of the abolition of the slave trade. His scientific knowledge was exhibited in many useful inventions, and particularly in a method of guarding buildings from destruction by fire. This benevolent philosopher died at Bath, December 19, 1813, aged eighty-four.—*Biog. Univ.*

HARTLIB (SAMUEL) a learned man, who was of Polish origin, and many of whose ancestors had been privy counsellors to the German emperors and other princes. He came to England about 1630, and in 1641 he published in London a narrative of the attempts made to bring about a religious union among the protestants. During the civil war which fol-

loved, he was exclusively occupied in scientific pursuits and projects for the improvement of agriculture, manufactures, and education. A work relating to the agriculture of Flanders and Brabant, by Robert Child, which he revised and published in 1652, attracted the notice of Cromwell, who bestowed on Hartlib a pension of 100*l.* a year. He applied himself with ardour to the practice of agriculture, which then began to be a subject of general concern. He founded a school for the instruction of gentlemen's sons, which probably occasioned Milton to address to him his Tractate on Education. He published other works; but neither his writings nor his projects appear to have tended to his own emolument. He was supported by the government, and his pension was augmented to 500*l.* But this ceased at the Restoration, and Hartlib, reduced to distress, presented a petition to the parliament, the result of which is not known, neither have any memorials been preserved of the date or circumstances of his death.—*Warton's Edit. of Milton's Poems. Biog. Univ.*

HARTMANN (PHILIP JAMES) a German physician of the seventeenth century, distinguished for his researches concerning natural history and comparative anatomy. He published "*Succini Prussici physica et civilis Historia*," *Francof.* 1677, 8vo; and other works relative to the natural history and medical properties of amber. Several interesting papers written by him are extant in the *Miscellanea Curiosorum Naturæ*, chiefly relating to the anatomy of animals; but one of them refers to the nature and origin of *ærolithes*, or substances projected from the atmosphere, a subject then very imperfectly understood. Hartmann's essay is entitled "*Exercitatio de generatione Mineralium, Vegetabilium et Animalium in Aëre, occasione Annonæ et Telæ coelitus delapsæ, anno 1686, in Curonia*."—*Gronovii Bibl. Regn. Animal. et Lapid.*

HARTSOEKER (NICHOLAS) an eminent Dutch mathematician and natural philosopher, was born at Gouda in Holland, in the year 1656. His father, a remonstrant divine, intended him for the ministry, and discouraged his attention to the heavenly bodies and similar pursuits, by stating the necessity of a due proficiency in the mathematics, in order to succeed in them. Convinced of this truth, young Hartsoeker saved his boyish allowance and presents of money, and applied to a teacher of the mathematics, under whom he made a rapid progress, and also learned to grind optic glasses. At length, partly by accident, he was led to the construction of single microscopes, by the means of which he discovered animalculæ in semine humano, and laid the foundation of a new theory of generation. He subsequently spent some years at Leyden and Amsterdam, in the study of the belles-lettres, Greek philosophy, and anatomy, until 1672, when he resumed his microscopical discoveries, which he communicated to Huygens, who published them in the "*Journal des Sçavans*." In 1678 he visited Paris, and proceeded to grind glasses of all descriptions, until at

length he constructed one of 600 feet focus, with which he would never part. In 1679 he returned to Holland, and married, but again visited Paris in 1684, where he continued twelve years, and in 1694 published his first work, under the title of "*Essai de Dioptrique*," in which he demonstrates the whole theory of that science, as far as regards spherical glasses; and also proposes the first principles of natural philosophy. Encouraged by the success of this work, he two years afterwards published his "*Principes de Physique*," in which he further explains his theory. In 1699 he was elected a foreign associate of the French Academy, and after declining an invitation from Peter the Great, to visit Russia, in 1704 he went to the court of the elector palatine, who appointed him his mathematician and professor of philosophy at Heidelberg. Here in 1707 and 8, he published his lectures, under the title of "*Conjectures Physiques*," in which he embraces the notion of plastic souls. He then set out on a tour through Germany, and at Hanover was presented to Leibnitz. In the years 1710 and 1712 he published two volumes, entitled "*Eclaircissemens sur les Conjectures Physiques*," containing answers to the objections of that work, in which he attacks with indefensible virulence several names of the highest respectability in the scientific world, including those of Newton, Huygens, and Leibnitz. He died at Utrecht in 1725, in the sixty-ninth year of his age; and after his death his "*Course of Natural Philosophy*" was published at the Hague, in one volume 4to. Hartsoeker's theory of plastic souls is not unlike that of Dr Cudworth, except that he attributes intelligence to these plastic natureæ, and endeavours to revive the exploded notions of the ancients, by giving them to planets and even to celestial bodies.—*Eloge by Fontenelle.*

HARVEST (GEORGE) an English clergyman, respectable for his learning and abilities, but more distinguished for the eccentricity of his habits and manners. He received a liberal education, and took the degree of MA. at the university of Cambridge, where he became a fellow of Magdalen college. In this situation he displayed so much inattention or absence of mind, in the most common as well as in the most important affairs of life, as to render his behaviour whimsical and absurd. Among the many anecdotes of him in circulation is the following:—He paid his addresses to a lady, and being accepted, the day was fixed for the wedding. Early in the morning he took his rod and line, and went to amuse himself with the sport of angling, never once thinking of his engagement, till it was too late for the marriage to take place. The lady was too much offended to accept his apologies, and he lost his bride. He was the author of "*The Grounds and Reasons of Temporal Judgments considered*," a rebellion sermon, 1746, 8vo; a "*Collection of Sermons, preached occasionally on various Subjects*," 1763, 8vo; and a tract on the reasonableness and necessity of subscription to the thirty-nine articles, 1772.

8vo. He appears to have had at one time the inappropriate rectory of Drayton in Middlesex. He died in 1776.—*Watt's Bibl. Brit.*

HARVEY (GABRIEL) a writer of the sixteenth century, principally known at present as the literary opponent of Robert Greene and Thomas Nash, two profligate wits and satirists of the Elizabethan age, and as the friend and panegyrist of the poet Spenser. If Nash's satire is to be credited, Harvey was the son of a rope-maker. He was however educated at Cambridge, and became a fellow of Trinity-hall in that university. He adopted the profession of a civilian, and having obtained the degree of doctor at Oxford, he practised as an advocate in the prerogative court. He died in 1630. He was the author of "Three proper Letters touching the Earthquake;" "Two Letters touching artificial Versifying;" and some Latin orations and verses. As an English poet his works, though few, are by no means unimportant. They consist of the well-known copy of verses signed "Hobbinol," prefixed to Spenser's Faery Queen; and "Sonnets, touching Robert Greene and others;" in one of which the author's wrath vents itself in a sublimity of expression and sentiment, calculated to inspire respect for his abilities. But he sometimes attacked his adversaries with lighter weapons. Nash wrote a tract against him, entitled "Have with you to Saffronwalden, or Gabriell Harvey's Hunt is up. Containing a full Answer to the eldest Sonne of the Halter-maker." This appears to have been a reply to Harvey's piece, called "Pierce's Supererogation, or a new Prayse of the old Asse. A Preparative to certaine larger Discourses, intituled Nashes S. Fame," 1593, 4to. Both these are among the rarest of scarce books; each being marked 25l. in a bookseller's catalogue for 1814.—Gabriel Harvey had two brothers, JOHN and RICHARD, who seem to have shared with him the literary enmity of the wits. The former was the author of several tracts on judicial astrology, a subject of general attention among the learned in the sixteenth century. Richard Harvey also wrote on the same fashionable science; and he likewise published a book, entitled "Philadelphus; or a Defence of Brutes and the Brutans's History London, 1593, 4to.—*D'Israeli's Quarrels of Authors. Ed.*

HARVEY (WILLIAM) an English physician, celebrated as the discoverer of the circulation of the blood. He was of a respectable family, and was born at Folkstone, in Kent, April 2nd, 1578. He was sent to a grammar school at Canterbury; and in 1593 removed to Caius college, Cambridge. At the age of nineteen he went abroad for improvement, and after visiting France and Germany, he stayed some time at the university at Padua, where Fabricius ab Aquapendente, and other eminent men, were professors of the medical sciences. He took the degree of MD. in 1602, and returning to England obtained a similar distinction at Cambridge. Having settled in London, in 1604 he was admitted a licentiate

of the college of physicians; and three years after, a fellow. He was also chosen physician to St Bartholomew's hospital. In 1615 he was appointed to read lectures at the college on anatomy and surgery; and in the course of this undertaking he developed the discovery which has immortalized his name. It was not till 1620 that he gave general publicity to his new doctrine of the circulation of blood, by committing to the press his treatise entitled "Exercitatio Anatomica, de Motu Cordis et Sanguinis in Animalibus." In a prefixed address to the college of physicians, he observes that he had frequently, in his anatomical lectures, declared his opinion concerning the motion of the heart and the circulation of the blood, and had for more than nine years confirmed and illustrated it, by reasons and arguments grounded on ocular demonstration. It speedily excited the attention of anatomists in every European school of medicine; and the theory of Harvey having been triumphantly defended against all objections, attempts were made to invalidate his claim to the discovery. To the famous father Paul of Venice, to the Spanish physician, Servetus, whom Calvin had burnt for heresy, and even to Hippocrates, attempts were made to transfer the honour of the discovery. The reputation of our countryman however has not been diminished by such attacks; and it is now admitted, that whatever hints may be found in the writings of his predecessors, Harvey first clearly demonstrated the system of sanguineous circulation, and thus produced one of the greatest revolutions in medical science. The love of singularity or some motive equally frivolous may prompt cavillers to raise objections; but it is a curious circumstance that a work was published in 1816, entitled "Observations on the Harveian Doctrine of the Circulation of the Blood," by George Kerr, 12mo. the design of which was to prove that the arteries, as was supposed before the time of Harvey, contain nothing but air or ethereal spirit. Harvey was appointed physician extraordinary to James I, and in 1632, physician in ordinary to king Charles, by whom he was much esteemed. Adhering to the court party, on the occurrence of hostilities, he attended his majesty on his removal from London. He was with him at the battle of Edge Hill, and afterwards at Oxford, where, in 1642, he was incorporated MD. In 1645 he was by the royal mandate created warden of Merton college, in the place of Dr. Brent, who had taken the covenant, and left the university. On the surrender of Oxford to the parliament in the following year, Brent was restored, and Harvey retired to the vicinity of London. In 1651 he published his "Exercitationes de Generatione Animalium; quibus accedunt quedam de Partu, de Membris ac Humoribus Uteri, et de Conceptione," 4to. This is a curious work, and it would have been still more interesting had not the plunder and destruction of the author's museum by his political adversaries, while he was in the king's service, deprived him of the fruits of some of

his anatomical researches, especially relative to the generation of insects. In 1652 his brethren of the college testified their sense of his merits by erecting his bust in their hall, with an inscription recording his discoveries. He in return built for the college a combination room, library, and museum. He was elected to the presidency in 1654; but he declined accepting the office, on account of his age and infirm state of health. He gave an additional testimony of his regard for his professional associates, by presenting to the college his paternal estate of 56*l.* a year for the institution of an annual festival and other purposes. Hence has originated the Harveian oration. In his old age he was subject to distressing attacks of the gout, which contributed to enbitter his existence so much, that he is said to have shortened his days with a dose of opium. He survived however to complete his eightieth year, and whatever may have been the immediate cause of his dissolution, he maintained to the last the esteem and respect of his contemporaries, and has secured the admiration of posterity. He died June 3rd, 1658; and was interred at Hampstead, in Essex, his funeral being attended by all the fellows of the college. A splendid edition of his works was published in one volume quarto, in 1766, with a prefixed account of his life from the pen of Dr Lawrence.—*Biog. Brit. Hutchinson's Biog. Med. Aikin's G. Biog.*

HARWOOD (sir BUSICK) an English physician and anatomist, who was a native of Newmarket, and studied at the university of Cambridge. After having improved himself by attending the hospital practice of the metropolis, he obtained a surgeon's commission in the army, with which he went to the East Indies. There he was lucky enough to cure one of the native princes of a dangerous wound, which raised him to fortune and reputation. Returning to England, he was chosen a fellow of the Antiquarian and Royal Societies; and in 1785 he obtained the professorship of anatomy at Cambridge, where, in 1790, he took the degree of MD. He was appointed in 1800 professor of medicine at Downing college; and he received the honour of knighthood in 1806. He died November 10th, 1814. His works are—"A Sketch of a Course of Lectures on Anatomy and Physiology," 1786, 8vo; and "A System of Comparative Anatomy and Physiology," the first part of which only was published.—*Biog. Univ.*

HARWOOD (EDWARD) a dissenting minister, and ingenious writer on classical literature. He was born at a village in Lancashire, in 1729. After being instructed at grammar-schools in the country, he was placed in one of the institutions for educating dissenting clergymen, which were supported by the benefactions of Mr Coward. In this seminary he continued five years; and on quitting it was employed as an usher at Peckham, near London, preaching occasionally at different chapels in the city. During this period he added to his knowledge of classical literature; and he was honoured with the friendly atten-

tions of Benson and Lardner, two of the most learned among the dissenting clergy of the metropolis. In 1754 he removed to Congleton in Cheshire, where he preached and kept a school; and in 1765 he became pastor of a presbyterian congregation at Bristol. In 1768 he procured, through the interest of Dr Samuel Chandler, whose daughter he had married, the diploma of DD. from the university of Edinburgh. After remaining about five years at Bristol, he was forced to resign his situation in consequence of the diminution of his audience and his salary, owing, as he alleged, to calumnious accusations of heresy. But he was also charged with immoral conduct; and on this point he never produced any satisfactory exculpation. He then removed to London, and endeavoured, but in vain, to obtain an office in the British museum. He supported himself for some time by writing for the press, and by acting as a private tutor. But in 1780 he suffered an attack of palsy, which reduced him to so helpless a state, that during the remainder of his life he was chiefly supported by the contributions of the benevolent; and he was one of the first individuals to whom the benefits of the Literary Fund were extended. He died in 1794. His principal publications were—"An Introduction to the Study of the New Testament," 2 vols. 8vo, 1767, 1771; "A liberal Translation of the New Testament," 1768, 2 vols. 8vo; "A View of the principal editions of the Greek and Roman Classics," 1775, 8vo, which was his principal work; and an edition of the Greek Testament, with English notes, 1776, 2 vols. 8vo; besides which he was the author of some tracts of divinity, and other pieces of little importance.—*Aikin's G. Biog.*

HASSAN PACHA, a native of Africa, who became grand vizier of the Ottoman empire. He served when young in the Algerine navy, and being taken by the Spaniards, he was sent prisoner to Naples. Having, after a time, obtained his liberty, he went to Constantinople, where he entered into the service of the grand seignor. He was at the memorable battle of Tschémé fought against the Russians, in which he saved himself when his ship was set on fire by throwing himself into the sea, and swimming with his scymetar between his teeth to the shore. He was soon after appointed capitan pacha, or high admiral; in which post he maintained himself some years by his courage and talents. He vanquished the Egyptian insurgents; re-established order and tranquillity at Smyrna, in 1775; took Gaza, Jaffa, and Acre; and beheaded the famous Daher, sheik of the latter city, who had for years braved the power of the Ottoman empire. After a glorious expedition to Egypt, Hassan returned to Constantinople with immense treasures and high renown. The beys of that country having again revolted, he returned to Egypt in 1786, landed at Alexandria, and gained a signal victory over the rebels. In 1788 war was renewed between the Turks and Russians, and the chief command of the forces by sea and land was entrusted to Hassan.

No want of energy was manifested on his part; but the season was unfavourable for military operations, and bloody battles were fought without any decisive advantage. Okzakow was at length taken by the Russians, and this misfortune occasioned the dismissal of the commander-in-chief. He was not however, as was customary, strangled or disgraced, but was sent to Ismail with the rank of a pacha of three tails. Defeat still attended the Ottoman arms, and he alone was thought capable of retrieving their fortunes. He was made grand vizier in 1789, but age had impaired his abilities, and his appointment had but little effect. He died in March, 1790, at the age of eighty-seven.—*Biog. Nouv. des Contemp.*

HASSE (GIOVANNI ADELFO) surnamed Il Sassoni, a native of Bergedorf, near Hamburg, born 1699. He was educated in the rudiments of music at Hamburg, and eventually became one of the ablest composers as well as most scientific singers of his day. Having completed his professional studies at Naples, under Porpora, he accepted, in 1727, the situation of chapel-master at Venice, where he became acquainted with, and ultimately married, the celebrated Faustina Bordoni. After a variety of professional tours through the principal cities on the Continent, Hasse came to London in 1773, where his opera of "Artaserse," performed for the *debut* of the well-known Farinelli, attained great popularity, being represented above forty nights. The schism which distracted the musical world in England at that period, and the disputes then at their height between Handel and the singers, soon caused him to return to Germany in disgust. His compositions are numerous, consisting of eleven operas, besides church and other music, all as remarkable for the judgment displayed in them as for the genius of the composer. His wife, Faustina, was no less eminent in her way, and may be said to have invented a new method of singing, by running divisions with astonishing neatness and precision. During the latter part of their lives they resided at the court of Dresden, where they both died in 1783, the lady having attained to the age of ninety.—*Biog. Dict. of Mus.*

HASSELQUIST (FREDERICK) a Swedish naturalist, was one of the most eminent among the disciples of Linnæus. He was born in the province of Ostrogothia, in 1722. The death of his father, who was vicar of a parish, leaving him without the means of support, he exerted his faculties, and obtained friends, by whose assistance he was supplied with the means of instruction. In 1741 he went to the university of Upsal, where his talents and industry drew the attention of Linnæus. In 1747 he published a dissertation "De Viribus Plantarum." Soon after he engaged in the scheme of making researches on the spot into the natural history of Palestine; and the university having furnished him with pecuniary resources, he embarked for Smyrna in August, 1749 and arrived there about the end of No-

vember. After exploring the environs of that city, he went to Egypt, whence, in March, 1751, he took the route to Palestine, by Damietta and Jaffa. He stayed some time at Jerusalem, and afterwards visited other parts of the country. Returning to Smyrna, he brought with him a most noble collection of plants, minerals, fishes, reptiles, insects, and other natural curiosities. He was about to transport himself and his treasures to Sweden, when he was taken ill, and died at Smyrna, the 9th of February, 1752. The expences of his travels not having been liquidated, his creditors would have seized his collections; but the Swedish queen, Louisa Ulrica, prevented this injury to science, by purchasing the whole of Hasselquist's acquisitions, which were deposited in the castle of Drottningholm. There Linnæus had access to them, and from the papers and specimens of natural history collected by his pupil he prepared for the press the "Iter Palæstinium;" or Travels in Palestine, with Remarks on its Natural History, Stockholm, 1757, 8vo, which work has been translated into English and other European languages.—*Biog. Univ. Aikin's Gen. Biog.*

HASTED (EDWARD) historian of Kent, was the only son of Edward Hasted, esq. of Hawley, in that county, who descended paternally from the noble family of Clifford. He was born in 1732, and was no doubt liberally educated, but no account exists of his early life. At one time he possessed a competent landed property, and acted as chairman at the quarter sessions at Canterbury. He subsequently fell into difficulties in consequence of some litigation in regard to his Kentish property, and lived obscurely in the neighbourhood of London. A few years before his death he removed to the hospital at Corsham, Wilts, to the mastership of which he had been presented by the earl of Radnor; and soon after by a decree in Chancery recovered his estates in Kent. His laborious "History of Kent" (4 vols. folio) employed his attention for upwards of forty years. It exhibits more research than taste, and is chiefly valuable as a faithful record of the property of the county and of its genealogical history. He died 14th January, 1812.—*Gent. Mag.* vol. lxxxii.

HASTINGS (WARREN) was born in 1732 or 1733, at the village of Churchill, in Oxfordshire, where his father was clergyman of the parish. He was educated at Westminster school; and in 1750 he went out to Bengal, as a writer in the East India company's service. After having filled some of the principal offices under the British government, and made himself acquainted with Oriental literature and public affairs, he returned to England in 1763, with a moderate fortune. At this period he became acquainted with Dr Johnson, at whose recommendation he proposed the establishment of a professorship of the Persian language at Oxford; but the plan was not carried into execution. In 1768 he received the appointment of second in council at Madras; and in 1771 he was removed to Bengal to the pre-

cedency of which he was raised the following year. In 1773 he was appointed by the legislature of Great Britain to the station of governor-general of India. Three years after the minister, to whose influence he had owed his promotion, wished to displace him; and his deposition was actually voted for by thirteen of the East India directors, forming a bare majority of the court; but this vote was rescinded, and Mr Hastings remained in authority. In 1778 the commission, by which he held his office, expired; but it was renewed first for a single year, and in 1781 for ten years longer; lord North, who had endeavoured to remove him in 1776, thinking it afterwards desirable to retain him in his post. When the coalition took place between Mr Fox and lord North, the censures of the ministerial party were cast on Mr Hastings, for his conduct in his government, and especially for his treatment of the native princes and population of Hindostan. Mr Fox brought forward his famous India bill, which the friends of Mr Hastings united with Mr Pitt in preventing from being carried; and the measure hastened the overthrow of the coalition ministry. Mr Hastings returned from his government in 1786, to meet an impeachment of high crimes and misdemeanours before the first tribunal of his country. Our national histories must be referred to for the particulars of this celebrated trial, in which all the talents and influence of a powerful party were arrayed against the accused. After the proceedings had been protracted through a period of nine years, he was acquitted. He then retired, with the wreck of his fortune and an annuity from the East India company, to Daylesford, in Worcestershire, where his family had formerly held an estate. He was made a member of the privy council, but he interested himself little in public affairs; and closed a life, the evening of which had been devoted to literary pursuits, August 22, 1818. He published some pieces relating to India; Speeches and Papers in defence of his conduct; and some fugitive poetry.—*Ann. Reg. Ann. Biog.*

HATFIELD (THOMAS) bishop of Durham, to which see he was elected in 1346, in consequence of the especial favour of Edward III. He was an able and magnificent prelate, and distinguished himself by his abilities in civil affairs. He aided lord Percy to repel the Scots soon after his consecration, and acted as commissioner to treat for the ransom of the king of Scotland, who fell into the hands of the victors. He was the founder of Trinity college, Oxford, which was at first called Durham college. Durham-house in the Strand was also built by bishop Hatfield for himself and successors; and he likewise founded a Carmelite friary at North Allerton, in Yorkshire. He died in 1381, and was buried in his own cathedral of Durham, where his effigies are still to be seen in tolerable preservation.—*Hutchinson's Hist. of Durham.*

HATIO, or ATTO VERCELLENSIS, bishop of Vercelli in Italy, was born at Piedmont in the tenth century, and was promoted
BROG. DICT.—VOL. II.

to the episcopacy in 945. His works are—"Libellus de pressuris Ecclesiasticis," inserted in D'Acheri's Spicilegium, which treatise on the grievances of the church is spoken of by Mosheim, as curiously illustrative of the spirit and complexion of the times. He also wrote "Epistolæ," and "Canones Statuæque Vercellensis Ecclesiæ," which are included in the same collection. His entire works, however, including many other productions, were published in 1768, as the "Complete Works of Hatto," 2 vols. folio.—*Biog. Univ.*

HATTON (sir CHRISTOPHER) an eminent statesman and lawyer in the reign of queen Elizabeth, was the third and youngest son of William Hatton, of Holdenby, in Northamptonshire. He was entered a gentleman commoner of St Mary Hall, Oxford, but removed without taking a degree to the Inner Temple, not to study law but to enlarge his knowledge of the world. He came on one occasion to court at a masque, when queen Elizabeth was so much struck with his graceful person and dancing, that an introduction to her favour and its consequences was the immediate result. He began by becoming one of the queen's pensioners, from which he was successively promoted to be a gentleman of the privy-chamber, captain of the guard, vice chamberlain, and privy counsellor, by which very unusual gradation he reached the possession of the seals in 1587 as lord chancellor. His inexperience created much prejudice against him in the first instance, but his sound natural capacity rapidly supplied his deficiency of information and study, and his decisions were seldom found defective either in judgment or equity. He did not long enjoy his high office, dying unmarried on the 20th September, 1591; and if true, as usually reported, that he fell a victim to a broken heart, in consequence of the stern demand by Elizabeth of an old debt, which he was unable to pay, his history will form another example of the precarious advantage of court favour. He was a liberal patron of learning, and averse to persecution; and while vice-chancellor of Oxford, from 1588 to the time of his death, did much to reform the modes of education and discipline in that university. He is presumed to be author of "A Treatise concerning Statutes or Acts of Parliament, and the exposition thereof," London, 1677, 4to; and Warton attributes to him the fourth act of the tragedy of Tancred and Sigismunda, which bears at the end "Composit Ch. Hat." This play was the joint production of five students of the Inner Temple, and was acted at that society before the queen. It is reprinted in the second edition of Dodsley's old plays.—*Lives of Lord Chancellors. Lloyd's Worthies. Hume's Hist. of Eng.*

HAUKSBEE (FRANCIS) an English philosopher of the last century. He applied himself particularly to the study of electricity; and he was the only experimentalist between the time of Otho Guericke and Stephen Gray, who added to our knowledge of that science. He observed that a glass tube, closed at one end, being rendered electric by friction, at-

tracted from a certain distance metallic leaves, and again forcibly repelled them. He made many other curious experiments, the details of which he published in the Transactions of the Royal Society. He collected his own discoveries, and published them in his "Physico-mechanical Experiments, on various subjects, touching light and electricity, producible on the attraction of bodies; with an explanation of all the apparatus used in the experiments;" London, 1709, 4to, republished in 1719, and translated into Italian and French. He also published "Proposals for a Course of Chemical Experiments," London, 1731, 4to; and "An Essay for introducing a Portable Laboratory," 1731, 8vo. These appear to have been his latest publications. The time of his death is not known.—*Biog. Univ.*

HAUTEFEUILLE (JOHN) an ingenious French mechanic, born at Orleans in 1647. He exhibited great skill in mechanics generally; but especially in clock and watch making. He found out the secret of moderating the vibration of the balance by means of a small steel spring, which obtained for the watches thus constructed the name of pendulum watches. Huygens having perfected this invention, claimed the honour and profit of the discovery; but was resisted by the abbé Feuille, who defended the right and priority of Hautefeuille. This ingenious mechanic wrote several small pieces on mechanical subjects, some of which, although brief, are deemed very curious, as his "Perpetual Pendulum;" "New Inventions;" "Art of Breathing under Water;" "On Machines for raising Water;" "On the appearance of the Moon;" "On the Longitude;" "A new System of the Flux and Reflux of the Sea," &c.—*Hutton's Math. Dict.*

HAUY (RENE JUST, abbé) an eminent French natural philosopher, celebrated for his discoveries in crystallography, the whole theory of which is founded on his observations. He was the elder of two sons of a weaver in the little town of St Just, in the department of Oise, where he was born February 28, 1743. He was in the first instance brought up to the study of music, as a chorister in a church of the fauxbourg St Antoine at Paris, and made considerable proficiency in the art, but being afterwards removed to the college of cardinal Lemoine, he there contracted an acquaintance with the celebrated herbalist L'Hommond, which induced him to apply himself to the study of botany, a pursuit in which the vicinity of Lis college to the Jardin des Plantes materially assisted him. Here too he had an opportunity of attending Daubenton's lectures on mineralogy, a branch of science to which he afterwards devoted himself. The accidental fall of a beautiful specimen of calcareous spath, crystallized into prisms, led him to discover in some of the fragments the form of the crystal rhomboides of the Iceland spath; and from this casual circumstance the whole of his theory respecting crystals, the means of admeasuring and describing them, &c. took its origin. Being admitted a member of the Academy of Sciences in 1783, he continued

his mineralogical researches with great success till the breaking out of the Revolution, when refusing to take the oath to the ecclesiastical constitution, he was deprived of all his employments and imprisoned. The interest of his friends having at length procured his liberation, he was afterwards appointed a commissary of weights and measures, and a conservator of the mineralogical cabinet. Dolomieu, who had succeeded his old tutor Daubenton in his professorship, dying, Haüy was appointed to the vacant situation, and lectured with great ability and eclat, distinguishing himself as much by the kindness and benevolence of his disposition, which rendered him ever accessible to the humblest class of students, as by the depth and variety of his erudition. Besides other scientific appointments, he was named by the executive directory one of the forty members who formed the basis of the National Institute. Under the consulate he was professor of mineralogy at the Museum of natural history; and after Napoleon became emperor, Haüy was made professor of the faculty of sciences, at the academy of Paris. Though a favourite with the ruler of France, he does not appear to have compromised his character by any unbecoming flatteries; and the gratuities which he received were the just rewards of his labours in the cause of science. After the re-establishment of monarchy in France, the Russian princes, Michael and Nicholas, attended Haüy's course of lectures on mineralogy. They wished to have purchased his mineralogical cabinet, for which he refused 600,000 francs, because it was still necessary for the prosecution of his researches. He died at Paris, June 3, 1822. His principal works are—"Essai sur la Théorie et la Structure des Cristaux," 1784; "Traité de Minéralogie," 1801, 4 vols. 8vo; "Traité élémentaire de Physique," 1803, 2 vols. 8vo; "Tableau comparatif des résultats de la Cristallographie," 1809; "Traité des Caractères physiques des Pierres précieuses," 1817; "Traité de Cristallographie," 1822, 2 vols. 8vo, with an atlas. He also published papers in the Journal des Mines, and other periodical works.—*Biog. Nouv. des Contemp.*

HAVERCAMP (SIGEBERT) a classical editor of considerable fame, was born in Holland in 1684. In 1718 he was preacher at a village in the island of Overflacke, and the same year published "Tertulliani Apologeticus," with a commentary. In 1721 he was appointed professor of Greek in the university of Leyden, and afterwards filled the chair of history and rhetoric. He died in that city April 25, 1742. His principal works, besides Tertullian, are—"Dissertatio de Alexandri magni numismate;" "Oratio de actione Oratoris, sive Corporis eloquentiæ;" "Series numismatum Antiquorum Hen. Adriani a Mark;" "Thesaurus Morellianus;" "The History of Asia, Africa, and Europe," in Dutch; "Regum et imperatorum Romanorum numismata;" "Lucretius," 2 vols. 4to; "Josephus," fol. "Eutropius," 8vo; "Dionysius Periegetes" 8vo; "Sallust," 2 vols. 4to.—*Moreri.*

H AVERS (CLOPTON) MD. FRS. an English anatomist, of whose life no particulars are recorded. He was the author of "Osteologia Nova, or some Observations on the Bones, &c. Communicated to the Royal Society in several Discourses, read at their Meetings," London, 1691, 8vo. This work contains many important observations on the bones, marrow, and periosteum, which show the writer to have been an industrious and skilful investigator of the animal structure. To him also we are indebted for a description of those glands which secrete a mucilaginous fluid, which serves to lubricate the surfaces of the articular cartilages, and thus facilitate the motion of the joints. He was the editor of the "Anatomy of Man and Woman, from M. Spacher and J. Rummelin," London, 1702, folio; and he also published in the Philosophical Transactions an account of an extraordinary bleeding of the lachrymal gland, and a discourse of concoction of the food.—*Hutton's Abr. of the Phil. Trans. Watt's Bibl. Brit.*

HAWES (STEPHEN) an English poet, who flourished about the end of the fifteenth century, was a native of Suffolk, and educated at Oxford. He appears to have travelled in France, Italy, and Scotland, and afterwards held a situation in the household of Henry VII, who much valued his conversation. The principal work of Hawes is his "Pastime of Pleasure," first printed by Wynkyn de Worde in 1517, with wooden cuts. In the judgment of Mr Warton the personifications in this poem are often happily sustained, and indicate the writer's familiarity with the Provençal school, an opinion which is controverted by Mr Ellis. His other works are—"The Temple of Glass, in imitation of Chaucer's Temple of Fame;" "The Conversyon of Swerers," and a few other productions, described in our authorities.—*Warton's History of Eng. Poetry. Ellis's Specimens.*

HAWES (WILLIAM) an English physician and founder of the Humane Society, was born at Islington, November 28, 1736. He was educated at St Paul's school, and was brought up to the profession of an apothecary, which he practised in the Strand until 1780, when he took his degrees as a physician. In 1773 he became deservedly popular, by his zealous exertions in the establishment of the Humane Society, to the benefit of which institution he may be said to have dedicated the whole of his after life. In the first instance Mr Hawes paid the rewards for the recovery of drowning persons out of his own pocket; but was at length, by the zealous assistance of Dr Cogan, enabled to engage the attention of the public, and to form the society. This highly benevolent physician died at Islington on the 5th of December, 1808. He was the author of "An Account of Dr Goldsmith's last Illness;" whose death he attributed to an improper administration of James's powders; "An Address on Premature Death and Premature Interment;" "An Examination of the Rev John Wesley's Primitive Physic," being at once an ironical and serious exposure of

the absurdities of that production; "An Address to the Legislature, on the importance of the Humane Society;" "An Address to the King and Parliament of Great Britain, with Observations on the general Bills of Mortality;" "Transactions of the Royal Humane Society, from 1774 to 1784, dedicated by permission to the King."—*Gent. Mag. vols. lxxviii and lxxxix.*

HAWEIS (THOMAS) an English divine, was born at Truro in Cornwall, in 1734. He was brought up an apothecary, but afterwards went to Christchurch college, Cambridge, and took the degree of BA. On taking orders he became assistant to Mr Madan at the Lock chapel; at whose recommendation he obtained the living of Aldwinkle in Northamptonshire, on the express stipulation that he would at a certain time resign it. This engagement he however refused to perform, and much scandal and controversy followed, until a compromise was effected by the interference of the countess of Huntingdon, and he held the living until his death. Mr Haweis was also entrusted with the care of the chapels and seminary for students in divinity, founded by the same lady. He died in February 1820. His principal works are a volume of "Sermons;" "A Commentary on the Bible," 2 vols. folio; "History of the Church," 3 vols. 8vo; "Life of the Rev William Romaine," 8vo; "State of Evangelical Religion throughout the World," 8vo.—*Gent. Mag.*

HAWKE (EDWARD, lord) a celebrated naval commander of the last century. His father, a member of the English bar, in compliance with the strong predilection which his son evinced at an early age for a sea-faring life, procured him a midshipman's berth aboard a king's ship. After going through the usual gradations, he was appointed in 1734 to the command of the *Wolf*, and served with great credit under Mathews, Lestock, Rowley, &c. Being promoted to the command of a squadron in 1747, he fell in with the French fleet, which he totally defeated, taking six large ships of the line. For this service he was presented with the vacant red ribbon, and promoted to be vice-admiral of the blue. In 1759, being then vice-admiral of the white, he was sent in pursuit of the Brest fleet, which he came up with off Belleisle, and gave the enemy a second defeat, not inferior to the first. These successes were rewarded with a pension of 2000*l.* voted him by Parliament, and in 1765 he reached at length the head of his profession, being appointed vice-admiral of Great Britain, and first lord of the admiralty. In 1776 he was farther advanced to a seat in the house of Lords, but survived this accession of dignity little more than four years, dying at Shepperton in the county of Middlesex, in the autumn of 1781.—*Collins's Peerage.*

HAWKESWORTH, LL.D. (JOHN) the son of a watchmaker, of Bromley in Kent, where he was born in 1715. His father apprenticed him at an early age to his own trade. His dislike to the business however soon proved insuperable, and he became clerk to a writing

stationer. In this humble situation the literary bent of his disposition betrayed itself in the production of various essays and other short miscellaneous pieces in the Gentleman's Magazine. This circumstance introduced him to the acquaintance of Cave, the original projector of that work, who, on the secession of Johnson, placed him in his situation, as compiler of the debates in both Houses of Parliament. In 1752 there appeared from his pen the first of a series of essays, which he continued through that and the two following years with the assistance of his friend Joseph Warton and other occasional contributors. These, when completed, were collected and published in four vols. 12mo, under the title of "The Adventurer." Archbishop Herring was so much pleased with the performance, that notwithstanding the author's principles did not accord with those of the establishment, his grace conferred on him a Lambeth degree of doctor of laws. Having failed in an attempt to get admitted as a member of the college of advocates, he undertook a commission from government to arrange and digest the discovery voyages of Byrøn, Wallis, Carteret, and Cook, in the Pacific. This task he completed not altogether to the satisfaction of the public in 1773, when the work appeared in three 4to volumes. The compilation indeed seems to have tended much more to his advantage in a pecuniary point of view than as regards his literary reputation, his employers permitting him to appropriate the whole proceeds of the work, amounting to six thousand pounds, to his own use. The value of the recompense was not however in his eyes an adequate compensation for the cold reception which his book experienced, a neglect which is said to have materially affected his health and spirits, and, according to some, to have even tended to the shortening of his life. The interest of a female friend, of high connexions in the East, procured him soon afterwards a seat as one of the directors of the East India Company; he did not however long survive his appointment, but died at Bromley, November 16, 1773. His remains lie buried under a handsome monument, bearing an inscription taken from his own works, in the parish church belonging to that village. Beside the writings above-mentioned, Dr Hawkesworth was the author of "Almorán and Hamet," an Oriental tale, 2 vols. 12mo, 1761; a new edition of Swift's works, 1765; a few miscellaneous poems and plays, and a translation of Telemachus, 1768.—*Biog. Brit.*

HAWKINS (sir JOHN) a renowned English sea commander of the sixteenth century. He was a native of Plymouth, and was the son of captain William Hawkins, a naval officer. He made several voyages in his youth, and thus acquired much maritime experience. In 1562 he projected an expedition, the object of which was to procure negroes on the coast of Africa, and convey them for sale to the West Indies. In this plan he was successful, and he is branded on the page of history as the first Englishman, after the discovery of America,

who made a merchandize of the human species. He made two subsequent voyages for the purpose, one of which proved very profitable; and he was rewarded for the supposed benefit conferred on his country, by the addition of a crest to his coat of arms, consisting of "a demi-moor, proper, bound with a cord." The third expedition was unfortunate, for having endeavoured to carry on a contraband trade with the Spaniards, his small fleet was attacked by an overpowering force, and only one of his ships and a bark escaped being taken or destroyed; and after undergoing great hardships, he reached home in January 1563. He afterwards filled the office of treasurer of the navy; and he appears to have been much consulted on maritime affairs. In 1588 he was appointed vice-admiral of the squadron sent out against the Spanish armada, and he received the honour of knighthood for his conduct on that occasion. His last service was in 1595, when he was sent with sir Francis Drake against the West Indian settlements of the Spaniards. The two commanders differed in opinion, and their consequent want of success occasioned so much chagrin to sir John Hawkins, that it is supposed to have hastened his death, which took place at sea, November 21, 1595, in his seventy-fifth year.—HAWKINS (sir RICHARD) son of the last-mentioned, and brought up to the same profession. He commanded a ship in the action with the Spanish armada, and distinguished himself much on that occasion. He was repeatedly engaged in expeditions against the Spanish settlements in America; and in the last, which took place in 1593, he was made prisoner, and detained two years in Peru. He died in 1622. After his death was published "Observations of Sir R. Hawkins, knt. in his Voyage to the South Sea, AD. 1593," folio.—*Aikin's Gen. Biog.*

HAWKINS (sir JOHN) a lawyer and miscellaneous writer of the last century. He was born in London in 1719. His father, who was a surveyor and builder, designed him for the same occupation; but this plan was relinquished, and he was articled to an attorney. In this situation he not only acquired a knowledge of his profession, but also made himself acquainted with general literature, by studying at his leisure hours. He practised as a solicitor with reputation for some years, writing also for the periodical press. A taste for music induced him to become a member of a madrigal society, and of the Academy of Ancient Music; and in 1742 he composed the words of some cantatas, which were set to music by Mr Stanley. In 1749 he was chosen a member of a club established by Dr Johnson, with whom he formed an acquaintance which lasted during their joint lives. He married in 1753 a lady possessed of a handsome fortune, which was so greatly augmented on the death of her brother in 1759, that Mr Hawkins gave up his practice as a lawyer, to live upon his income, and became a magistrate for the county of Middlesex. In 1760 he published a new edition, with notes, of

Isaac Walton's "Complete Angler," a work which has proved exceedingly popular. In his magisterial capacity he distinguished himself by vigilance and activity, and he published "Observations on the Highways," with the draught of a bill for repairing them, which served as the model of some subsequent acts of Parliament. In 1765 he was chosen chairman of the Middlesex quarter sessions, and in 1772 he was made a knight. He contributed some notes for Johnson and Steevens' edition of Shakspeare, and for some years he was engaged in preparing for the press a "General History of the Science and Practice of Music," which he published in 1776, in 5 vols. 4to. Sir John Hawkins having accepted the office of executor to Dr Johnson, he was employed by the booksellers to draw up a memoir of that celebrated writer, to accompany a posthumous edition of his works. Neither as editor or biographer does he appear to advantage. Some pieces, not written by Johnson, are printed among his works; and the "Life," which forms a bulky octavo, seems to have served the writer as a receptacle for the contents of his common-place book. His death took place May 21, 1789.—*Aikin's G. Biog.*—His son, JOHN SIDNEY HAWKINS, and his daughter, LETITIA MATILDA HAWKINS, have both distinguished themselves by their literary productions.—*Ed.*

HAWKSMOOR (NICHOLAS) an English architect, who was a pupil of sir Christopher Wren. He was employed under his celebrated master as deputy-surveyor of the buildings of Chelsea college, and clerk of the works at Greenwich hospital. Some of the churches erected in pursuance of the act of Parliament passed in the reign of Anne, for building fifty new churches in the metropolis, were designed by Hawksmoor, whose works display nothing of the taste, and little of the science which distinguished those of Wren. Among his productions are the churches of St Mary Woolnoth, Lombard-street, St George's in the east, St Ann's Limehouse, and St George's Bloomsbury, the last of which has provoked the satirical remarks of Walpole. He died 1736, aged seventy.—*Walpole's Anecdotes.*

HAWKWOOD (sir JOHN) a celebrated military adventurer of the fourteenth century, who by his valour and conduct as a commander raised himself from a humble origin to rank and reputation. The father of this officer was a tanner of Little Hedingham in Essex, where he was born, and if Fuller is to be credited, at the usual age apprenticed to a tailor; the truth of this latter assertion has however been questioned. It is certain that having entered in the humble capacity of a private soldier into the English army, then preparing for the invasion of France with Edward III, and the Black Prince at its head, his courage and military abilities soon procured him a command, and the honour of knighthood from the hands of the sovereign. In 1360, on the conclusion of the peace of Breteigny, sir John joined himself with some other soldiers of fortune, whose revenues were un-

equal to the support of their rank and character in times of tranquillity. These associates, under the name of "Les tard venus," continued, notwithstanding the cessation of national hostilities, to harass and plunder their old enemies the French, and even extended the scene of their depredations to Italy. After leading a marauding life of this description for nearly four years, he once more took regular military service, under the republic of Pisa, and signaled himself with his accustomed bravery in the wars carried on by that government against the petty states in the neighbourhood. Having carried arms under this banner for three-and-twenty years, he in 1387 exchanged the Pisan service for that of the Florentines, by whom his talents as a bold and fortunate commander were duly appreciated. In such estimation were his abilities held by those in whose cause he fought, that when on the conclusion of peace in 1391, the remainder of their troops were disbanded, a body of a thousand men at arms, with sir John Hawkwood as their leader, was kept up as a standing army. He survived till the 6th March, 1393, when he died at Florence at a great age, and was honoured with a public funeral in the church of Santa Reparata in that capital, all the public authorities attending. In England an equal degree of respect was paid to his memory by his heirs, who erected a handsome tomb, with a panegyric inscription, at Hedingham, the place of his birth. Part of the wealth which he had acquired in his campaigns was,—a thing not unusual with the warriors of the middle ages,—devoted to charitable purposes; in particular an English hospital for the reception of poor travellers at Rome, was long a standing monument of his munificence.—*Life by Gough.*

HAY (WILLIAM) a political writer of the last century, born in 1695 at Glynbourn, Sussex. He was educated at Headley school, and spent a short time at Oxford, but without graduating there, entered himself of the Temple. He commenced his parliamentary career in 1734, as member for Seaford, which borough he continued to represent for the remainder of his life. Sir Robert Walpole gave him the appointments of record-keeper in the Tower and a place at the victualling board, in consequence of his taking a decided part with his pen in favour of that statesman's ministry. Besides a variety of pamphlets on temporary questions, he was the author of a treatise "On the Poor Laws;" and another "On Civil Government." He also wrote "An Essay on Deformity," in which he trifles with some humour on his own personal disadvantages; an octavo volume entitled "Religio Philosophi;" "Mount Caburn:" a poem; and translations of Hawkins Brown's Latin poem on the immortality of the soul, and a selection of Martial's Epigrams. In 1794, many years after his decease, which took place in June, 1755, his writings were collected and published by his daughter, in two quarto volumes. A son of his fell a sacrifice to the cruelty of Coosir Ali Cawn, in India, in 1762.—*Cent. Mag.*

HAYDN (FRANCIS JOSEPH) an eminent German musician, born in 1732, at Rohrau, a small town in Austria, about forty miles distant from Vienna, where his father, a wheelwright, filled also the humble occupation of sexton; his mother being a female domestic in the family of count Harrach. His parents, though thus humble, were fond of music, and to their occasionally singing duets together in his hearing, may be attributed the strong predilection which their son shewed even in infancy for the science. A relation, named Frank, who was a schoolmaster at Huimburg, and himself no inferior musician, observing the precocious talent of the child, not only gave him some instruction, but eventually succeeded in placing him under Reüter, in the cathedral at Vienna, with whom he continued till he was thirteen, at which age he had already composed a Mass. The celebrated Porpora coming about this period into Germany, in the suite of the Venetian ambassador, young Haydn was fortunate enough to attract his notice, and received from him the most valuable assistance. Of this he became the more in need, inasmuch as a boyish frolic in cutting off the skirt of a fellow chorister's gown, caused his abrupt dismissal from the cathedral in his eighteenth year, and he was thus thrown penniless upon the world, without any other resources than his own genius. For a while he supported himself by teaching a few pupils in the lower ranks of life at very reduced charges, lodging in the mean time at a barber's (whose daughter he afterwards married,) till the success of a little opera which he composed, entitled the "Devil on two Sticks," and brought out by the well-known Buffo Bernardone Curtz, put him in possession of 12*l*. After a severe struggle with poverty for more than six years, he obtained a situation in the household of count Mortzin, where, in 1761, he attracted the attention of prince Anthony Esterhazy, in whose service, and in that of his successor, prince Nicholas, he afterwards remained. On the death of the latter nobleman he visited England for a short period in 1791, and again in 1794, when he was presented by the university of Oxford with the honorary degree of Mus. Doct. During his stay in this country he made by the exertion of his musical abilities about 1400*l*. with which, in 1796, he returned to Germany. Soon after he received a communication from the French Institute, informing him that they had elected him a member of their society; one of the unsuccessful candidates on this occasion being Richard Brinsley Sheridan. In his sixtieth year Haydn commenced his celebrated oratorio, the "Creation," a work which he completed in 1798, and which is considered a musical chef d'œuvre. His friend, baron von Swieten, two years afterwards induced him to write another, entitled the "Four Seasons," the subject of which is taken from the English poet Thomson. This, with the exception of a few quartets, was his last original composition. Haydn died at the advanced age of seventy-eight, May 26th, 1809, in the possession of

great and merited reputation, and was buried at Grumpendorff, Vienna, being then in the occupation of the French. His heir, a blacksmith, received from him a bequest of about 30,000 florins. He had one brother, Michael Haydn, who died before him, and was himself too mean musician.—*Biog. Dict. of Mus. Rees's Cyclopaedia.*

HAYES. There were two eminent musical composers of this name, father and son. The elder, Dr William Hayes, was born in 1708, and at an early age obtained the place of organist in St Mary's church at Shrewsbury. The reputation which he acquired in this situation procured eventually his election to a similar one at Christchurch, Oxford, where he graduated in music, and obtained the university professorship of that science. He was a sound musical scholar, as well as an excellent performer, and assisted Dr Boyce in collecting those valuable scores of cathedral music printed under his superintendance. A variety of his own compositions, consisting of services, anthems, &c. are to be found in manuscript in the choirs of different colleges, for whose use they were written, and a few of his glees, catches, and other lighter pieces have been printed, as also a series of English ballads, set by him while organist of Shrewsbury. When Charles Avison, of Newcastle, made his attack on Handel, pronouncing that great master to be inferior as a musician both to Geminiani and Marcello, Dr Hayes answered his book with some acrimony, not only refuting his charges, but accusing Avison himself of ignorance of counterpoint. He continued at Oxford, directing the concerts and other music meetings there till his death in 1779, when his son PHILIP, who was born 1739, and brought up in the chapel royal at St James's, succeeded him in his professorship, having taken the degree of Mus. Doct. for that purpose. This gentleman ably supported the character for musical talent which he inherited from his father. He was supposed to be the most corpulent man in England of his day, nearly equalling in size and weight the celebrated Edward Bright, of Malden. He died suddenly in London, whither he had come for the purpose of presiding at the festival of the Musical Fund, March 19th, 1797, and was buried in St Paul's cathedral.—*Biog. Dict. of Mus.*

HAYGARTH (JOHN) an English physician, who practised his profession at Chester, and afterwards at Bath. He was a member of the Medical Society of Edinburgh, of the American Academy of Philadelphia, and a fellow of the Royal Society. He was the author of several ingenious productions, chiefly relating to medicine. Among these are—"Inquiries into the Means of preventing the Small Pox," 1784, 8vo; "A Sketch of a Plan for entirely extirpating the Small Pox, and introducing Inoculation," 1793, 2 vols. 8vo; "Observations on Imagination, considered as a Remedy for Diseases of the Body," 1800, 8vo; the object of which was to expose the quackery of Perkins's Metallic Tractors; "A Letter to Dr Percival, on the Means of

preventing Contagious Fevers," 1801, 8vo; "The Clinical History of Diseases, part the First," 1805, 8vo; and "A Letter to the Bishop of London, on the Education of the Poor," 1812, 8vo; to which may be added many professional memoirs in periodical works. He died in 1813.—*Biog. Nouv. des Contemp.*

HAYLEY (WILLIAM) a poet of some eminence in the last century, more recently distinguished as a writer of literary biography. He was born at Chichester in 1745, and after receiving a part of his education at Kingston-upon-Thames and Eton, he studied at Trinity college, Cambridge. After quitting the university he settled at Earham in Sussex, where he possessed landed property, devoting his time principally to the cultivation of literature. His first production which was published appears to have been "A Poetical Epistle to an eminent Painter," [G. Romney] 1778; which was followed by two other small poems. In 1780 appeared his "Essay on History, in three [poetical] Epistles to Edward Gibbon," 4to, which, in the dearth of talent existing at that period, procured the author a considerable share of reputation, and which was considerably increased by his "Triumphs of Temper," 1781. He next published "An Essay on Epic Poetry," 1782; but this, like his "Essay on Painting," "Triumphs of Music," and "Essay on Sculpture," obtained but little notice, except among his professed admirers. He also wrote Plays, of which, as well as his Poems, lord Byron says—

"In many marble-covered volumes view
Hayley, in vain attempting something new;
Whether he spin his comedies in rhyme,
Or scrawl, as Wood and Barclay walk, 'gainst
time,
His style in youth or age is still the same,
For ever feeble and for ever tame.
Triumphant first, see "Temper's Triumphs"
shine!

At least I'm sure they triumph'd over mine;
Of "Music's Triumphs" all who read may
swear,
That luckless music never triumph'd there."

English Bards and Scotch Reviewers.
The most popular work which Hayley produced, next to the "Triumphs of Temper," was a prose "Essay on Old Maids," 3 vols. 12mo, illustrated by a series of fictitious narratives, chiefly satirical. He also wrote a novel, entitled "Cornelia Sedley, or the Young Widow," 3 vols. 12mo. In 1803 he published the life and correspondence of the poet Cowper, 2 vols. 4to, to which he added a supplement in 1806. The death of a natural son, Thomas Alphonso Hayley, to whom he was warmly attached, induced him, about the beginning of the present century, to remove from his seat at Earham to Felpham, in the same county, where he died November 12, 1820.—*Dr. Johnson's Memoirs of the Life and Writings of Hayley*, 2 vols. 4to. *Miller's Biog. Sketches of Brit. Characters recently deceased.*

HAYM (NICHOLAS FRANCIS) a musician,

who was a native of Rome, and early in the nineteenth century settled in London. In conjunction with an Englishman, named Clayton, and Dieupart, a Frenchman, he endeavoured to establish an Italian opera; but the arrival of Handel and other causes rendered the scheme unprofitable; and Haym, who had previously composed music, was employed to write the words for some of his competitor's musical compositions. He engaged however in many other literary undertakings, one of which was a history of music from the earliest period to his own time, which failed for want of encouragement. He also was a picture-dealer, and collector of coins, medals, &c. and in that capacity was employed by sir Robert Walpole and others. He published a work on ancient Greek and Roman medals, entitled "Tesoro Britannico," London, 1719, 1720, 2 vols. 4to; another on Italian bibliography, "Notizia de' Libri rarissimi in Lingua Italiana," London, 1726, 8vo; and two tragedies. He died in 1730.—*Aikin's G. Biog. Musical Biog.* vol. ii.

HAYMAN (FRANCIS) an English painter, who was one of the first members of the Royal Academy. He was born in 1708, at Exeter, and coming to London when young, he obtained employment as a scene painter at Drury-lane theatre. He afterwards made designs for illustrative engravings of scenes from the works of Shakespeare, Milton, Pope, Cervantes, &c. The principal productions of his pencil are historical paintings, with which some of the apartments at Vauxhall are decorated. He was made librarian to the Academy, and died in 1776.—*Edwards's Anecd. of Paint. Lit. Gaz.*

HAYNE (THOMAS) a learned schoolmaster, was born at Thrusington in Leicestershire, in 1581. He received his academical education at Lincoln college, Oxford, and after taking his bachelor's degree, became one of the ushers of Merchant Taylor's school, London. He was subsequently employed in the same capacity at Christ's hospital, and was much esteemed by Selden as an excellent critic and linguist. He died in 1645. He bequeathed his books to the library at Leicester, and gave 400*l.* for the purchase of lauds to maintain a schoolmaster in his native village. He also furnished two scholarships at Lincoln college, for students from the free-schools at Lincoln and Melton. His works are—"Grammatices Latinæ Compendium," 1637—1649, 8vo; "Linguarum Cognatio," 1639, 8vo; "Pax in Terra," 1639, 8vo; "The equal Ways of God, in rectifying the unequal Ways of Man," 1639, 8vo. "General View of the Holy Scriptures, 1640, folio; "Life and Death of Dr Martin Luther," 1641, 4to.—*Nichols's Leicestershire*, vol. iii.

HAYNES (HOPTON) a learned and able unitarian, of whose birth and education no accounts have been recorded, beyond the fact that he was born 1672. In 1696 he was employed in the royal mint, in which he rose to the office of king's assay-master. In the year 1718, becoming infirm, he was allowed to re-

fire upon his salary. Besides his situation at the mint, he discharged the office of principal tally writer at the exchequer for forty years. He died in 1749, at the age of seventy-seven. The result of his convictions in regard to the Trinity, he threw into the form of a regular treatise, entitled "The Scripture Account of the Attributes and Worship of God, and of the Character and Offices of Jesus Christ." The author died while this work was in the press, and owing possibly to the objections of his son, who was brought up to the church, a small impression only was printed and privately circulated, until a second edition was printed by the rev Theophilus Lindsay in 1790. Since the appearance of which other editions have followed, and it has been widely dispersed.—His son, SAMUEL HAYNES, was educated at King's college, Cambridge, where he took his degree of DD. in 1748. He was tutor to the earl of Salisbury, by whom he was presented to the valuable livings of Hatfield and Clothel, which he held together by dispensation; he was also a canon of Windsor. He published a collection of state papers, relating to affairs in the reigns of Henry VIII, Edward VI, Mary, and Elizabeth, from 1542 to 1570, transcribed from the Cecil MSS. Dr Haynes died in 1752.—*Nichols's Lit. Anecd.*

HAYTER (JOHN) a learned divine, was educated at Eton, whence he removed to King's college, Cambridge, where he obtained the degree of BA. in 1778, and that of MA. in 1783, between which dates he was presented to the college living of Hepworth in Suffolk. On the offer of his present majesty, then prince of Wales, to be at the expense of unrolling and decyphering the Greek MSS. discovered in the ruins of Herculaneum, Mr Hayter was appointed to superintend the experiment, and in consequence took up his abode at Palermo for some years. He returned in 1810, and the MSS. were presented to the university of Oxford; but the result did not answer expectation. He soon after went to France, where he died of an apoplectic shock, November 29, 1818. He published a report on the Herculanean MSS. entitled "Observations on the Herculansensia," 4to.—*Gent. Mag.*

HAYWARD (SIR JOHN) an English historian, who flourished in the reigns of Elizabeth and James I. He received his education at Cambridge, and graduated there as LL.D. His first publication was a history of "The first Part of the Life and Reign of King Henry IV," which appeared in 1599, with a dedication to the earl of Essex. Some passages in this work, respecting hereditary right in matters of succession, gave great offence to the queen, who threw him into prison, from which he did not obtain his liberation till after he had undergone a tedious confinement. On the accession of James, he resumed his literary labours, and was appointed by that monarch in 1610, historiographer of Chelsea college. Three years after he printed "The Lives of the three Norman Kings of England, William I, William II, and Henry I," 4to. This book

was dedicated to the prince of Wales. In 1619 he obtained the honour of knighthood, and continued to receive proofs of court favour during the remainder of his life. His other works are—"The Life and Reign of Edward VI, with the beginning of that of Elizabeth," 4to; and a treatise "On Supremacy in Affairs of Religion," besides a few tracts of a devotional nature, such as "Christ's Prayer on the Cross," "David's Tears," "The Sanctuary of a troubled Soul, &c." 12mo. Sir John Hayward died June 27, 1627.

HEADLY (HENRY) an English author of the last century, born 1766, at Instead near Norwich, in the grammar-school of which city he received his education, under Dr Parr. At the age of sixteen he entered himself of Trinity college, Oxford, where he graduated as AB. On quitting the university he married, and retired to Matlock in Derbyshire. Besides a variety of essays on miscellaneous subjects, printed in the Gentleman's and other Magazines, the Olla Podrida, &c. he published the "Select Beauties of Ancient English Poetry," 1787, 2 vols. 8vo, with notes; a volume of original poems, and the "Lucubrations of Abel Slug." He was always of a consumptive habit, and falling at length into a rapid decline, died at Norwich in 1788. His selection from ancient English poetry certainly assisted the new direction given to public taste by Warton and others.—*Life prefixed to Kett's Edition of the Beauties.*

HEARD (SIR ISAAC) Garter principal king-at-arms, to which office he was appointed by patent, dated May 1, 1784, having previously filled those of Blue-mantle pursuivant, Lancaster herald, Norroy king-at-arms, gentleman usher of the scarlet rod to the order of the Bath, Brunswick herald, and Clarencieux king-at-arms. Sir Isaac was born at Ottery St Mary in Devonshire, 10th of December (old style) 1730. In the early part of his life he had served in the royal navy, as a volunteer on board the Lynn and the Blandford man of war; in which last ship being carried overboard by the mainmast, in a tornado off the coast of Guinea, he narrowly escaped drowning, through the gallantry of the late admiral sir R. Kingsmill, with whom he maintained an uninterrupted friendship until his death. The peace of 1751 affording no encouragement to a naval career, he quitted the service, and engaged in commerce at Bilbao in Spain, till the breaking out of the war between that country and Great Britain in 1757, frustrated his speculations, and induced him to return to England. In 1759 he obtained the notice and patronage of Thomas earl of Effingham, then exercising the office of earl marshal for Edward, duke of Norfolk, through whose favour he received on the 5th of December in that year, the first of his appointments in the herald's college. In 1813, when the emperor Alexander of Russia was elected a knight-companion of the order, he was allowed, in consequence of his advanced age, and the ill state of his health, to appoint a deputy for the occasion; nevertheless, at the

conclusion of the war in 1814, he was enabled to proceed to Brussels and to Vienna in person to perform the same office for the king of the Netherlands and the emperor of Austria. It being the duty of the garter king-at-arms to proclaim at the funeral of any member of the royal family of England, the style and titles of the deceased, sir Isaac in the course of his long life performed that melancholy ceremony to no fewer than six generations of the house of Brunswick, viz. from the funeral of George II to that of the late princess Charlotte of Wales and her infant. Until within the last two years of his life, he continued in the personal discharge of all the active duties of his situation, proclaiming George IV at Carlton palace on the 31st of January, 1820. He was not however able to go through the fatigue of officiating at the coronation, but received a gold medal on the occasion, sir George Naylor, Clarenceux king-at-arms, acting on that occasion as his deputy. He died in London, April 29, 1822, and is buried in St George's chapel at Windsor, having received the honours of a public funeral.—*Ann. Biog.*

HEARNE (SAMUEL) an English traveller, who made some discoveries in the arctic regions of North America. He was a native of London, and was sent to sea as a midshipman in the royal navy in 1756, being then eleven years old. He never obtained any promotion, having early engaged in the service of the Hudson's Bay Company. Being of an active and enterprising disposition, he was employed in 1769 to explore the north-western part of the American continent. This undertaking he completed in 1772; but the narrative of his researches was not published till after his death, which occurred in 1792. The work is entitled "A Journey from the Prince of Wales's Fort in Hudson's Bay to the Northern Ocean," 1795, 4to; of which a French translation, in 2 vols. 8vo, was published at Paris.—*Europ. Mag. Biog. Univ.*

HEARNE (THOMAS) an antiquary, historian, and classical editor, distinguished for his learning and industry. His father was parish clerk and school-master at White Waltham in Berkshire, where he was born about 1678. After acquiring some knowledge of Latin and Greek, he was taken into the house of Mr Cherry, of Shottesbrooke, with whom the celebrated scholar, Henry Dodwell, then resided, to whose instructions Hearne appears to have been considerably indebted. In 1696 he was sent to Edmund-hall, Oxford, where he manifested a taste for archæological pursuits, and was employed by Dr Mill and Dr Grabe in the collation of biblical MSS. He obtained his degrees in arts; and in 1701 he was made assistant to Dr Hudson, the keeper of the Bodleian library, when he augmented and improved Hyde's catalogue of that literary collection. In 1712 he was appointed second librarian; and in 1715 architypographer and esquire beadle of the civil law; but he soon after resigned these offices, through scruples of conscience which prevented him from taking the oath of allegiance to George I. He never-

theless continued to reside at Edmund-hall, occupying himself in editing the literary productions of the ancient and middle ages. He died June 10, 1735. Hearne's literary labours were almost exclusively those of an editor, in which character he merits praise for accuracy and fidelity. He published editions of Livy, Justin, and Eutropius; but most of his publications consist of the monastic and other ancient chronicles of our national history. Among the rarest of his productions is the Acts of the Apostles in Greek and Latin, from a MS. in the Bodleian library. Hearne was one of the pioneers of literature, and the use which others have made of his accumulated stores, shows that he was an industrious, though not a very discriminating collector.—*Biog. Brit.*

HEARNE (THOMAS) an artist of considerable talents as a topographical designer. He was born in 1744, at Marshfield in Gloucestershire; but his parents during his infancy removed to Brinkworth in North Wiltshire, whence he has been represented as a native of that place. He was sent to London, and apprenticed to Woollett, the celebrated engraver; but soon after the expiration of his indentures, he relinquished the graphic art, to become draughtsman to sir R. Payne, afterwards lord Lavington, who being appointed governor of the Leeward Islands, took Hearne with him to the West Indies. In 1776 he returned to England, and soon after commenced the publication of a work entitled "The Antiquities of Great Britain," in conjunction with Byrne, the engraver. The drawings were entirely executed by Hearne, who contributed many of the compositions of his pencil towards the embellishment of other collections of engravings; but the best of his works are those which are in private cabinets. Landscape painting in water colours, in which so many artists of the present day excel, was first practised with success by Hearne, who may be almost considered as the original source of all which is truly great in that art. His death took place in London, April 13, 1817.—*Gent. Mag.*

HEATH (BENJAMIN) an eminent lawyer of the last century and recorder of Exeter, who acquired some distinction as a scholar and an author. He acquired great popularity in his native county, by writing a pamphlet against the cyder tax, which did much to promote its repeal. His other publications are—"An Essay towards a Demonstrative Proof of the Divine Existence, Unity, and Attributes; to which is premised a short Defence of the Argument commonly called a priori;" this publication is ranked among the ablest defences of the hypothesis of Dr Samuel Clarke. "Notæ, sive lectiones ad Tragicorum Græcorum veterum," 1752, 4to; "A Revisal of Shakspeare's Text, wherein the alterations introduced into it by the more modern Editors and Critics are particularly considered." He died March 31, 1762.—The brother of this author, THOMAS HEATH, an alderman of Exeter, published, in 1755, an "Essay towards a new Version of the Book of Job."

This gentleman was father to the late judge Heath and Dr Heath, master of Eton school.—*Nichols's Lit. Anecd.*

HEATH (JAMES) a minor English historian, was born in 1629, being a native of London, where his father was king's cutler. He was educated at Westminster school, and was elected to Christchurch, Oxford, in 1646, whence he was ejected in 1648, for his adherence to Charles I. He then lived upon his patrimony, and, on the Restoration, being prevented by marriage from returning to the university to maintain his family, he commenced author and corrector of the press. He died of a consumption in August 1664, and left several children, with no other reliance than parish support. His works are—"A Chronicle of the late War," 4to, which sells high, in consequence of the portraits; the same work was afterwards published in folio; "The Glories and Triumphs of the Restoration of Charles II," 8vo; "Flagellum, or the Life and Death of Oliver Cromwell," 8vo; "A New Book of Loyal English Martyrs," &c. 12mo. Heath has little merit in respect to style or argument, but frequently relates facts unnoticed by others, which throw a light on the history of the times.—*Athen. Oxon.*

HEATHCOTE (RALPH) a learned and ingenious clergyman, who deserves to be noticed as a principal author, if not the projector of the General Biographical Dictionary. He was born in Leicestershire in 1721, and was educated at Jesus college, Cambridge. After taking orders he had a curacy at Leicester, together with the vicarage of Barkby. Before he left the university he published a tract, entitled "Historia Astronomiæ;" and he subsequently wrote "A Sketch of Lord Bolingbroke's Philosophy," and other pieces on religious controversy, which occasioned his introduction to Dr Warburton, who nominated him his assistant preacher at Lincoln's-inn. He was Boylean lecturer at Bow church in 1763; and in 1765 he succeeded his father as vicar of Sibley in Leicestershire. He afterwards obtained other preferments, and in 1768 he was collated to a prebend in the collegiate church of Southwell, in Nottinghamshire, of which he likewise became vicar-general, when he took the degree of DD. He died in 1795. Besides the works already mentioned, he published "The Irenarch, or Justice of the Peace's Manual;" "Sylva, or the Wood," a series of anecdotes, which he intended to have continued; besides several sermons and tracts on divinity.—*Nichols's Lit. Anec.*

HEBENSTREIT (JOHN ERNEST) a German physician of the last century. He studied some time at the university of Jena, and then repaired to Leipsic, where he proceeded MA. in 1728. He soon after obtained the degree of MD.; and in 1731 he engaged in an expedition to the north of Africa, under the patronage of Augustus king of Poland. He explored the ruins of Carthage, and the neighbouring country; and returned in 1733, bringing back many rare animals, and other natural curiosities which he had collected. Soon after his return

he was made professor of medicine at Leipsic, where he published several ingenious works among which are the following: "De Usu Partium, Carmen, seu Physiologia metrica," 1739, 8vo; "Pathologia metrica; sive de Morbis, Carmen," 1740, 8vo; "Museum Richterianum, continens Fossilia, Animalia, Vegetabilia, et Marina, illustrata Iconibus et Commentariis," 1743, folio. He was also the author of a "Methodus Plantarum," or botanical system, deduced from the fruit, besides other works; and after his death appeared his poem, "De Homine Sano et Ægroto," in which he treats of the different branches of medicine. His death took place in 1757, at the age of fifty-four.—*Aikin's G. Biog. Nouv. Dict. Hist. Biog. Univ.*

HEBENSTREIT (—) a German officer, who became the victim of his own intrigues as a politician. He was of a noble Austrian family, and was born in 1760. After having served in the army, he filled the office of lieutenant de place at Vienna, where, in 1795, he was convicted of being the author of a conspiracy against the government of his country, and was condemned to suffer death by hanging, which sentence was executed on the 8th of January that year. Hebenstreit had introduced into Austria the French official journal, the *Moniteur*, at a time when that paper was prohibited; and he had translated it into Latin, to circulate it in Hungary, as well as otherwise propagating revolutionary principles. He was likewise the author of a satirical song against the government; and the inventor of a kind of war-chariots, with which the French and the Poles, to whom he had communicated his alleged discovery, would, according to his account, be able to annihilate the cavalry of the allies. He underwent his ignominious fate with great firmness; but he is said to have acknowledged to the ecclesiastics who attended him, that the abuse of his talents had occasioned his destruction. *Dict. des H. M. du 18me. S. Biog. Nouv. des Contemp.*

HEBERDEN (WILLIAM) a physician distinguished for his skill and learning. He was born in London in 1710, and pursued his studies at St John's college, Cambridge, where he proceeded MA. and obtained a fellowship. In 1739 he took the degree of MD. and engaged in practice as a physician at Cambridge, giving at the same time courses of lectures on the Materia Medica to the university students. In 1748 he removed to London, where he had been admitted a fellow of the college of Physicians, as he was shortly after a member of the Royal Society. Through his suggestior a periodical work, entitled "Medical Transactions," was commenced in 1766, under the auspices of the College of Physicians, to which work Dr Heberden was a valuable contributor; and he also published papers in the Philosophical Transactions. In 1776 he was chosen a foreign associate of the royal society of medicine at Paris. He passed the summer season in the latter part of his long life in a country retreat at Windsor; and dying May 17th, 1801, he was interred in the parish

church of that place. The only separate work of importance of which Dr Heberden was the author, is his "Medical Commentaries on the History and Cure of Diseases," published by his son, after his death, both in Latin and in English. He cultivated polite literature, and was a writer of some of the Athenian Letters; and contributed towards the notes in Grey's edition of Butler's Hudibras.—*Aikin's Gen. Biog. Nichols's Lit. Anec.*

HEBERT (JAMES RENE) chief of one of the factions which arose in the state during the progress of the French Revolution. He was born at Alençon, in the department of the Orne, about 1755. Being of an active disposition, and possessing an ardent imagination, with but a small share of learning, he lived at Paris, previously to the Revolution, supporting himself by very dishonourable methods. Employed as a cheque-taker at the theatre de Variétés, he was dismissed for dishonesty; after which he lived with a physician, whom he ungratefully robbed. The troubles in the state afforded him a ready opportunity to indulge his disposition for intrigue, and in 1789 he commenced political demagogue. He soon attracted notice by a journal entitled "Le Père Duchesne," which owed its success to the warmth and virulence with which he advocated the popular cause, and abused the court and the monarchy. On the 10th of August, 1792, he became one of the members of the municipality of Paris, which, self-created and installed, was organised to produce the insurrection of that day, and which contributed to the massacre in the prisons in September, and particularly to the assassination of the princess de Lamballe. Hebert was soon after nominated deputy of the national agent of the commune; and it was then that connecting himself intimately with Chaumette and Pache, he employed all his influence in forwarding a project to establish the authority of the commune on the ruins of the national representation. Intoxicated with power, this faction plunged into all manner of excesses, and amidst feasts of reason, atheistical discourses, and riotous processions, the metropolis was in a state of perpetual agitation. The Hebertists rejected the advances of the Orleans party, and separated from the Cordeliers, of whom they had hitherto formed a part. The Girondists, who were at that period contending against the Mountain or more violent party, had credit enough to procure the arrest of Hebert, May 24th, 1793. He was defended by Marat in the convention; the deputies of all the sections spoke in his favour at the bar on the 25th, and on the 27th, after a tempestuous session, he was again restored to liberty. Prompted by revenge, as well as other motives, he assisted with all his power and influence in the proscription of the Brissotins. Their downfall hastened his own. Danton and Robespierre suspended their mutual jealousies to accomplish his destruction; and Hebert, with the greater part of his associates, was arrested, and condemned to death March 24th, 1794. Besides his journal,

he was the author of some other political pieces of a similar description. Among the most atrocious crimes of this man, were the calumnies with which he assailed the character of the unfortunate queen of France.—*Dict. des H. M. du 18me. S. Biog. N. des Contemp.*

HECHT (CHRISTIAN) a German protestant divine, was born at Halle in Saxony, in 1696, and became minister of Essau in East Friesland, where he died in 1748. He is author of several treatises on the Latin and German languages, the most esteemed of which are his "Commentatio de Secta Scribarum;" and "Antiquitas Karæorum inter Judæos in Polonia et Turcici Imp. regionibus florentis sectæ," &c.—GODFREY HECHT, thought to be a brother of the preceding, was born towards the latter end of the seventeenth century, at Interbach, and educated at Wittenberg. In 1711 he was appointed rector of the college of Luccau, where he died in 1721. His principal works are "Germania Sacra et Literaria," 1717, 8vo; "De Henrico Guelfo Leone Commentarius," 1755, 8vo; "Vita Joannis Tezeli;" "Memoria Joannis Lucani."—*Moreri.*

HECQUET (PHILIP) an eminent French physician, who was a native of Abbeville. He studied at Paris, and afterwards at Rheims, where he graduated in 1684, and then settled in his native city. He soon removed to Paris, and in 1688 was made physician to the Port Royal society. He afterwards engaged in general practice, and being distinguished for the severity of his manners, and of his religious principles, he was in high repute among the Jansenists. He was appointed physician to the hospital of la Charité; and in 1712 he was made dean of the faculty of medicine. He died in 1737. Of his numerous writings none deserve particular notice, except a tract which he wrote against the pretended miracles of the abbé Paris, entitled "The Natural History of Convulsions;" which, making allowance for his religious prepossessions, shows that he had much liberality of sentiment. Le Sage, in his Gil Blas, has satirized Dr Hecquet with more wit than justice, under the character of Dr Sangrado.—*Moreri. Nouv. Dict. Hist.*

HEDELIN (FRANCIS) a French advocate, born in 1604 at Paris. He became tutor to two nephews of cardinal Richelieu, and was presented by that minister with the valuable abbies of Aubignac and Meimac, in recompense of his services. Hedelin, though a scholar and a critic, was possessed of so haughty and overbearing a temper, that he was perpetually involved in quarrels with the wits and poets of his time, among whom were Pierre Corneille, madame Scuderi, &c. He was himself the author of a tragedy, "Zenobie," which appears to have possessed no great merit; a novel in two volumes, 8vo, called "Macaride;" "Histoire du tems, ou relation du royaume de Coqueterie," 12mo; "Apologie des Spectacles;" "Terence Justifié;" "Conseils d'Ariste à Celimene," 12mo; and a treatise in two octavo volumes, entitled "Patrique du Theatre," the severity of which, rather

than any better quality, carried it rapidly through four editions. Hedelin died in 1676, at Nemours.—*Nouv. Dict. Hist.*

HEDERICH or **HEDERICUS** (BENJAMIN) a learned lexicographer of Grossenhain in Misnia, where he was born in 1675. He is recognized as the author of the useful lexicon of the Greek language, which goes under his name. This work was first published in 1722, at Leipsic, in octavo, and has since been re-printed in England by Patrick, Young, and Morell. It was also much improved by Ernesti, and published at Leipsic in 1767. He is also author of "Notitia Aucutorum," 8vo; an edition of Empedocles' treatise "De Sphæra," 4to; and many other works. His death took place in 1743.—*Nouv. Dict. Hist. Saxii Onom.*

HEDWIG (JOHN) a German botanist, celebrated for his researches concerning the fructification of cryptogamic vegetables. He was born of a Saxon family, at Cronstadt in Transylvania, in 1730. After studying at Presburg he went to Zittau in Lusatia, and in 1752 he became a student in the university of Leipsic, where he attended lectures on philosophy, mathematics and medicine. He assisted professor Ludwig in regulating his library, anatomical museum, and botanic garden; and in 1756 he was admitted into the family of Caspar Bose, the professor of botany, for whom he prepared plants for demonstrations, and attended patients in the public hospital. In 1759 he took the degree of MD. and settled at Chemnitz in Saxony, as a physician. All his leisure was dedicated to botanical researches, and having examined all the perfect plants which he could collect in his excursions, he turned his attention to the mosses and other cryptogamic vegetables, whose natural properties had been comparatively but little investigated. He procured a microscope, and studied the art of drawing; and thus assisted, he pursued his researches with such assiduity and success, as led him to the important discovery of the organs of fructification of the *Bryum pulvinatum*, a species of moss, which was the prelude to a farther development of the structure of those organs in other plants of the same tribe. He published an account of his experiments and observations in a Leipsic journal of natural history, in 1778. He removed to Leipsic in 1781; and there he published his "Fundamentum Historiæ Naturalis Muscorum Frondosorum," pars i. 1782, pars ii. 1783, 4to; in which, from his own observations, he has given an accurate history of mosses, illustrated with plates of their flowers, fruits, seeds, external and internal structure; with a new method of arranging them in genera. In 1784 he obtained the prize offered by the academy of Petersburg, for the discovery of the flowers of cryptogamous plants, on which he published a dissertation entitled "Theoria Generationis et Fructificationis Plantarum Cryptogamicarum Linnæi." His theory has been generally adopted by botanists, though at first opposed by Necker, Gaertner, and others. In 1794 Hedwig was appointed physician to

the town-guards; and in 1786 he was chosen extraordinary professor of medicine at the university, and three years after, professor of botany and superintendent of the physic-garden. He continued his researches into the structure of plants till his death, which occurred February 7th, 1799. Besides the works already mentioned, and several in the German language, he was the author of "Descriptio et Adumbratio microscopico-analytica Muscorum frondosorum, necnon aliorum vegetantium e classe cryptogamica Linnæi," 1786—1799, 4 vols. folio; and since his death appeared "Species Muscorum frondosorum descriptæ, et Tab. Æn. 77 coloratis illustratæ; Opus posthumum editum cum Supplemento, a F. Schwägrichen," Lips. 1801—1816, 3 vols. 4to. Hedwig was a member of several scientific associations; and was a man of great modesty, candour, and purity of manners. His name has been very properly preserved in the appellation *Hedwigia balsamifera*, given to an evergreen tree found in Hispaniola. He was twice married, and left two sons—one an eminent painter at Magdeburg; and the other, **ROMANUS ADOLPHUS HEDWIG**, distinguished as a botanist by his "Theoria Generationis et Fructificationis Plantarum Cryptogamicarum Linnæi," Lips. 1798, 4to; and other works.—*Aikin's G. Biog. Univ.*

HEERE (**LUCAS VAN**) a Dutch painter, the son of a statuary of Ghent, born 1534. He displayed a predilection for the art, in which he afterwards excelled at a very early age, being no doubt excited thereto by witnessing the performances of his mother, Anne Smyters, herself no mean artist in landscape painting. Having studied for some time under Floris, he visited France and England, in which latter country especially, he distinguished himself by the admirable portraits which he drew of many of the principal nobility. On his return to the continent he executed several historical pieces, which added much to his reputation, and adorned the churches of his native city with many fine paintings of scriptural subjects. His death took place in 1584.—*Walpole's Anec.*

HEERKENS (**GERARD NICHOLAS**) a modern Latin poet, and ingenious scholar, who was a native of Groningen in Friesland. He passed some years at Rome, where he was chosen a member of the Arcadian academy, and where he published "Marii Curulli Groningensis Satyræ." He returned to the Netherlands in 1764, when he published, under the title of "Notabilia," anecdotes of the Italian literati, and other information collected during his travels. His poetical productions, for which he is chiefly distinguished, are "Aves Frisicæ," Rotterd. 1787, 8vo, in which he describes some of the birds of Friesland, in Latin verse; and "De Valetudine Litteratorum, lib. iii." Groning. 1790, 8vo. M. Heerkens died in 1810.—*Nouv. Dict. Hist.*

HEGESIPPUS, an ecclesiastical historian of the second century. He came to Rome while Anicetus was bishop, and lived in friendship and communion with that prelate, and Soter and Eleutherius his successors. He

wrote an ecclesiastical history from the commencement of the Christian era to his own time, of which a few fragments only have been preserved by Eusebius. Five books on the Jewish wars, once ascribed to Hegesippus, are now attributed to a later author. He is thought to have died about the year 180.—*Cave. Dupin.*

HEIDEGGER (JOHN HENRY) a learned Swiss Protestant divine of the seventeenth century. He was born near Zurich, in 1633, and after studying at the university there, and also in Germany, he became professor extraordinary of Hebrew, and professor of philosophy at Heidelberg. In 1659 he removed to the college of Steinfurt, in Westphalia, where he held the chair of theology and ecclesiastical history. He was made professor of moral philosophy at Zurich in 1665; and two years after he obtained the professorship of divinity. In 1675 he was employed to draw up a confession of faith for the Protestant church of Switzerland, in opposition to the doctrines of Moses Amyrauld; and this was established as the national creed, under the title of the "Form of Concord." Heidegger published many works on biblical and ecclesiastical history and divinity; some of the former of which are still occasionally consulted. He died at Zurich in 1698.—*Moreri. Mosheim Hist. Eccl.*

HEIDEGGER (JOHN JAMES) a Swiss adventurer, who took up his residence in England in the earlier part of the eighteenth century. He arrived in this country about 1708, and obtaining a commission in the guards, was known in fashionable society by the appellation of the Swiss count. An opera, entitled "Thomyris," which he produced, meeting with success, gained him so much credit, that he was enabled to undertake the management of the opera-house. In his conduct of that establishment he was very fortunate; added to which, by giving concerts, masquerades, &c. under the patronage of the court, he accumulated a handsome income, which he is said to have expended in keeping a hospitable table and relieving the unfortunate. Heidegger was a great favourite with king George II, who often visited a villa which the Swiss had at Barnes, in Surrey. He was a sort of butt for the wits of his time; and having a very peculiar visage, he is reported to have made a bet with lord Chesterfield, that he could not produce an uglier man throughout the metropolis, and to have won the wager. He died in 1749, aged ninety.—*Noorthouck's Hist. and Class. Dict.*

HEINECCIUS (JOHANN GOTTLIEB) a German author, who flourished about the commencement of the last century, and wrote on logic, jurisprudence, and ethics. He was born in 1681 at Eisemberg, and studied at Halle, where he afterwards obtained a professor's chair in the sciences of philosophy and law. In 1724 he quitted Halle for Franeker, and remained there till 1727, when he accepted an invitation given him by the king of Prussia to settle at Frankfort on the Oder.

Here he continued to reside upwards of 27 years, when, becoming dissatisfied, he resumed his old situation at Halle. His works were collected and published at Geneva in eight quarto volumes, three years after his decease, which took place in 1744. The principal are—"Antiquitatum Romanorum Jurisprudentiam, illustrantium Syntagma;" "Elementa Juris Civilis;" "Elementa Philosophiæ Rationalis et Moralis;" "Historia Juris Civilis, Romani ac Germanici;" "Elementa Juris Naturæ et Gentium;" translated by Turnbull; "Fundamenta styli cultioris," and several academic dissertations. He had one brother, JOHANN MICHAEL, the author of a treatise on the state of the Greek church, and of a topographical account of Goslar (where he was an ecclesiastic) and its antiquities. He died before his brother, as early as 1722.

HEINECKEN (CHRISTIAN HENRY) a child greatly celebrated for the premature development of his talents, was born at Lubeck February 6, 1721. He could talk at ten months old, and had scarcely completed his first year, when he already knew and recited the principal facts in the five books of Moses, and at fourteen months knew the history, both of the Old and New Testament. In his thirteenth month he acquired an outline of ancient history, geography, anatomy, the use of maps, and eight thousand Latin words. In his fourth year he had learned the doctrines of divinity, with their proofs from the Bible; modern history; ecclesiastical history; the institutes; two hundred hymns, with their tunes; and one thousand five hundred verses and sentences from the ancient Latin classics. His stupendous memory retained every word repeated to him; and at the court of Denmark he delivered twelve speeches without once faltering; and underwent public examinations on a variety of subjects. He spoke German, Latin, French, and Low Dutch. He was exceedingly goodnatured and well-behaved, but of a most tender and delicate constitution. He never ate solid food, but chiefly subsisted on his nurses' milk, not being weaned until within a few months of his death, which took place at the age of four years and four months, on the 27th June, 1727. A dissertation on this extraordinary child was published by M. Martini at Lubeck, in 1730, and addressed to M. Schœnich, the child's tutor, who had published an account of him in the fifth volume of the "Republic of Letters," which statement was republished in the German language in 1778 or 1779.—*Schœnich's Account. Moreri.*

HEINECKEN (CHARLES HENRY, baron) an eminent writer on the history of typography and the fine arts. He was brother to the extraordinary subject of the preceding article, and became privy counsellor to the elector of Saxony. His most important production is entitled, "Idée générale d'une Collection complète d'Estampes," Lips. 1771, 8vo. This work comprises much curious and interesting information relating to the first typographical attempts, with fac simile engravings of the pictures in the early block books. Heinecken

also published "Galerie Royale de Dresde," 2 vols. folio; and "Dictionnaire des Artistes, dont nous avons des Estampes," 4 vols. 8vo, left imperfect. He died in 1791.—*Nouv. Dict. Hist.*

HEINSIUS (DANIEL) a celebrated classical scholar, critic, and poet, born at Ghent in 1580. His father being a protestant, removed to Holland, and afterwards to Zealand, where young Heinsius pursued the study of the learned languages and philosophy. He made Latin verses at a very early age, and when but ten years old composed an elegy of considerable merit. At fourteen he was sent to the university of Franeker to study the civil law; but he applied himself chiefly to Greek literature, in which he made a rapid progress. Removing to Leyden he continued his studies under Joseph Scaliger, who showed extraordinary attention to so promising a pupil. He read public lectures on Greek and Latin authors at twenty; and he was afterwards chosen professor of history, and secretary and librarian to the university of Leyden. This learned man was not without his frailties. He was so much attached to his bottle as occasionally to incapacitate himself for his professorial duties; and his disappointed pupils, finding the door of the lecture-room closed one day, and suspecting the reason, wrote on it: "Heinsius non legit hodie propter hesternam crapulam."—"Heinsius gives no lecture to-day, because of yesterday's debauch." He seems to have been sensible of his own error, though, like many other persons, unable to correct it. One night, returning at a late hour from a convivial party, at a tavern or elsewhere, towards his own house, as he was measuring the street involuntarily in a zigzag direction, he had, it is said, sufficient command over his intellectual faculties to compose the following Latin verses:—

"Sta pes, sta bone pes,
Aut hi lapides
Mihī lectus erunt."

"Steady! my feet—good feet, be staid,
Or else these stones will be my bed."

In 1619 Heinsius was secretary to the states of Holland at the synod of Dort. His reputation for learning extended to foreign countries; and he received the title of counsellor to the king of Sweden; and that of knight of St Mark from the republic of Venice. Pope Urban VIII, by liberal offers, attempted to draw him to Rome; but he could not be induced to leave Leyden, where he died January 15, 1655. As a critic Heinsius distinguished himself by publishing Notes on Silius Italicus, and on the New Testament; editions of Horace, Seneca's Tragedies, Hesiod, Maximus Tyrius, Theocritus, Theophrastus, &c. His Latin poems consist of elegies, satires, and two tragedies, besides other pieces. He also wrote Greek poems, which were much esteemed; and verses in the Dutch language. Of his Greek and Latin poems there are numerous editions. He delivered Latin orations on the death of Scaliger and other occasions, which were published together at Leyden. Heinsius, in his treatment of his

literary antagonists seems to have imitated too closely the contumelious behaviour of the haughty critic Scaliger. Having a dispute with Balzac, who showed him all the respect due to his talents and erudition, he treated him so roughly, that the lively Frenchman, in a letter to a friend, says, "when I requested instruction from Heinsius, he threw stones at me."—*Baillet. Stollii Introd. in Hist. Lit. D'Argens Lettres Juives. Moreri.*

HEINSIUS (ΝΙΚΟΛΑΣ) son of the preceding, who cultivated the same branches of learning with his father, and with so much success, as to do honour to the literary reputation of his family. He was born at Leyden in 1620, and carefully educated under the paternal roof. In 1642 he made a voyage to England, at that period the theatre of civil dissension, and where he consequently stayed but a short time. In 1644 he went to Spa, on account of his health; and on his return travelled through the Low Countries, forming useful connexions with literary men, and adding to his stores of knowledge. He afterwards travelled in France and Italy, and having visited Rome and several other cities, he published at Padua, in 1648, under the title of "Italica," two books of Elegies, which were much admired. His father wishing for his return, he went home to Leyden; but remained there only a few months, as Christina of Sweden invited him to add to the lustre of her literary court. He established himself at Stockholm in 1650; when he was employed by her majesty to procure her books and manuscripts. He went to Italy for that purpose, and on his return, not being altogether satisfied with the conduct of his capricious mistress, he demanded his dismissal from her service. This he obtained with difficulty; but was prevented from leaving Sweden, by being appointed resident from the States of Holland, in October, 1654. The death of his father, in the following year, determined him to return to his native country. The States, to show their satisfaction with his conduct, offered him an embassy to Prussia or Denmark; but the state of his health prevented him from accepting either situation. He continued at Amsterdam, and in 1656 was made secretary to that city. The repose of his latter days was disturbed by law proceedings, instituted against him by Margaret Wullen, a courtesan, with whom he had been connected at Stockholm, and who professed to have some claims on him which he would never admit. In 1658 he resigned his office, and retired to the Hague. He gave up all his leisure to literature; and it was against his inclination that he went on a public mission to Muscovy, in 1667. He returned home with his health much debilitated in 1671; and in the following year he was obliged to remove to Germany. In 1674 he settled in the province of Utrecht; and afterwards at the small town of Viane, where he was frequently visited by his friend Grevius. Family affairs having occasioned him to go to the Hague, he died there, October 7, 1681; and was buried in the church of St

Peter, at Leyden. Much of his time was devoted to literature, notwithstanding his public employments; and he gave to the world editions of Claudian, Ovid, Virgil, and Valerius Flaccus; Notes on Silius Italicus, Petronius, Phædrus, Quintus Curtius, and Tibullus; Letters, Adversaria, and Latin Poems. Of the latter the best edition is that of D. Elzevir, Amsterd. 1666, 8vo.—*Biog. Univ.*

HEISTER (LAURENCE) an eminent physician, surgeon, and anatomist of the last century. He was born at Frankfort on the Maine, in 1683, and after studying four years in the universities of Germany, he went in 1706 to Amsterdam, where Ruysch and Rau then taught anatomy and surgery. The next year he served as a surgeon in the Dutch army, and in the winter betook himself to Leyden, to attend the lectures of Boerhaave, after which he graduated as MD. He then returned to the army, and in 1709 he was appointed physician-general to the Dutch military hospital. He thus obtained much professional experience, the result of which appears in his numerous writings. In 1710 he was chosen professor of anatomy and surgery at Altorf, where he acquired great reputation as a public teacher. In 1720 he removed to the university of Helmstadt, and continued there till his death, which took place in 1758. His "Compendium Anatomicum;" and his "Institutiones Chirurgiæ," were once extremely popular, and have been translated into English, and other European languages. Besides many works strictly professional, he wrote some pamphlets against the Linnæan system of botany.—*Hutchinson's Biog. Med. Aikin's G. Biog. Univ.*

HELE (THOMAS) a writer who, by birth an Englishman, obtained the singular distinction of being admired in France as an author in the French language. He was born in Gloucestershire in 1740, and began his career in the army; in which he served until the peace of 1763. He afterwards visited Italy, where he remained some years, and then settled in France. Being led by taste to pay much attention to the theatre, he at length began to write for the Italian comedy, and with considerable success; the pieces for that theatre being chiefly written in French, with only one or two Italian characters. His pieces are entitled "Le Jugement de Midas," on the contest between French and Italian music, which was much applauded. "L'Amans Jaloux;" and "Les Evenemens Imprevus." These pieces are much esteemed by the French, as lively and interesting. Mr Hele died in December, 1780. The French authorities from whom this account is taken call him D'Héle; possibly his right name was Dale.—*Nouv. Dict. Hist.*

HELENA (SAINT) a female peasant, born about the year 248 at an obscure village in Bithynia, which, after her decease, was endowed with the rank and privileges of an imperial city, under the name of Helenopolis. Her beauty having caught the attention of Constantius Chlorus, she became his wife, and

in the year 272 gave birth to a son, afterwards Constantine the Great. Motives of ambition induced her husband to divorce her on his becoming a partner in the imperial throne, in order to marry the daughter of Maximian, from which period she lived in retirement till the accession of her son to the empire in 306, when his filial affection restored her to her rank with the title of Augusta. Her subsequent conduct secured her the respect and esteem of a court in which Christianity had newly become the prevailing religion. She employed a great portion of her wealth in the foundation of churches, and in her eightieth year made a pilgrimage to the Holy Land, where she is affirmed to have been the main instrument in what in ecclesiastical history is called the "Invention" of the true cross, in a cavern under a temple of Venus. She lived to return to the capital of her son, but died in his arms soon after, in the year 328. Her remains were conveyed by the emperor's orders to Rome, where they were interred with great pomp. The Romish church has since conferred on her the honors of Canonization.—*Gibbon. Crevier.*

HELIODORUS, a Christian bishop of the fourth century, who was the author of a Greek romance still extant. He was a native of Emesa, in Phœnicia, and it was in his youth that he wrote his "Æthiopics," or Amours of Theagenes and Chariclea, an interesting and ingenious work, which appears to have served as a model for succeeding writers. A MS. of this romance being found by a soldier at the taking of Buda, in 1526, it was published at Basil, by Opsopæus, in 1534; but the best edition is that of Bourdelot, Paris 1619, 8vo. An English translation of this work appeared in 1792. Heliodorus became bishop of Tricca, in Thessaly; and Nicephorus says that he resigned this dignity rather than destroy his romance; but the story appears to be apocryphal.—HELIODORUS of Larissa, was a mathematician of the first century, who wrote a treatise on optics, of which some fragments are extant.—*Bayle. Moreri. Fabricii Bibl. Græc.*

HELL (MAXIMILIAN) a learned astronomer, was born in 1720, at Chemsnitz, in Hungary, and first educated at Neusohl. Having, in 1733, entered the society of the Jesuits, he was sent by them to the college at Vienna, where he exhibited a great genius for mechanics. He then applied to the mathematics with great diligence, and became assistant at the observatory belonging to his order. In 1750 he published "Adjumentum Memoriarum manuale Chronologico-genealogico-historicum;" which has been translated into various languages. In 1752 he obtained the priesthood, and became professor of mathematics at Clausenburg, where he published his "Elementa Arithmetica." He was soon after recalled to Vienna, to be astronomer and director at the new observatory. In 1769, at the desire of the king of Denmark, he went to observe the transit of Venus in an island in the Frozen Ocean; after which he became a

member of the Academy of Sciences at Copenhagen, and of various other academies. He was next employed to superintend the building of a new observatory at Erlan, in Hungary; and soon after died of an inflammation of the lungs, in the month of March, 1792. Hell is to be ranked among those who have rendered essential services to astronomy.—*Nouv. Dict. Hist.*

HELLADIUS (ALEXANDER) a learned Greek, a native of Thessaly, who lived in 1722. He made himself known by a curious Latin work on the state of the Greek church, and the reasons why the Greeks of our times reject the translations of the Scriptures into their common language. He published his book at Altorf, in the territory of Nuremberg, where he resided, and dedicated it to the czar, Peter the Great. The title of this very singular work is "Status præsens Ecclesie Græcæ; in quo etiam causæ exponuntur cur Græci modernæ Novi Testamenti editiones in Græco-barbara lingua factas acceptare recusent," 1714, 12mo. The book comprises much literary and bibliographical information relative to Greece; and displays a good deal of freedom and liberality of opinion. Helladius was also the author of a Greek grammar, 1712, 8vo.—*Stollii Int. in Hist. Lit. Biog. Umr.*

HELLANICUS, an ancient Greek author, born at Mitylene B.C. 496, twelve years before the birth of Herodotus. He wrote a history of the "Earliest Kings of various Nations, and the Founders of Cities," which is mentioned by several ancient authors, but is no longer extant.—*Moreri.*

HELLOT (JOHN) a French chemist, was born in 1686. From 1718 to 1732 he was employed as the compiler of the "Gazette de France." He translated Schlutter's work on the "Fusions of Ores," which he published with his own notes and remarks. He is likewise the author of a work entitled "L'Art de la Teinture des Laines et Etoffes des Laines," 1750, 12mo, which is reckoned a valuable treatise, and the first in which the practice of the art is taught upon chemical principles. He was elected a member of the Royal Society of London in 1740, to which he furnished some articles, as well as a still greater number in the French Academy of Sciences. He died in 1766.—*Moreri. Nouv. Dict. Hist.*

HELISHAM (RICHARD) MD. and professor of medicine, and of natural philosophy in the university of Dublin. He was intimate with Swift, with whom he used to correspond in the singular manner of that great humourist. Dr Hesham was author of a celebrated course of twenty-three lectures on natural philosophy, published after his death, in an octavo volume, by Dr Bryan Robinson. He died August 1, 1758.—*Gent. Mag.* vol. xiii.

HELMONT (JOHN BAPTIST VAN) a famous alchymist, born of a noble family at Brussels, in 1577. Being a younger brother he was intended for a scholar, and being sent to the university of Louvain, he finished his course of study in philosophy in his seven-

teenth year. According to his own account he entertained a low opinion of academical instruction, and acquired by reading the works of Euclid and Copernicus, a knowledge of mathematics and astronomy. Natural philosophy in general was the object of his researches; and at length he commenced seriously the study of medicine in the works of the Greek and Arabian physicians, as well as the moderns. He says that he perused six hundred authors, and after all his labour threw aside his common-place book, having conceived a notion that all science, and especially that of medicine, could be derived only from inspiration. He however took his degree as MD. at Louvain, in 1599; and then quitted his country and travelled about for ten years, making his own observations on the animal, vegetable, and mineral kingdoms of nature. In 1609 he settled at Vilvorden, and applied himself to chemistry, studying the works of Paracelsus. He now became a religious and philosophical visionary, practising medicine gratuitously; and, if his own statement might be believed, performing a multitude of wonderful cures. His first literary production was a treatise on the Spa waters, printed at Liege in 1624. This piece is remarkable on account of the author having used the German term *geist*, answering to the English ghost, or spirit, to denote the air on which the properties of the Spa water depend. From this term is derived the modern *gas*, now so extensively employed. Helmont went on to publish other works; and attained great celebrity among his contemporaries. He was much esteemed by the elector of Cologne; and the emperor Rodolph invited him to Vienna, but he declined the journey. He died in 1644. His works were collected and published by his son in 1648, Amsterdam, 4to. Amidst a great deal of unintelligible mysticism, they contain some shrewd and important observations. Lobkowitz, in eulogizing Van Helmont, says, "The sick never languished long under his hands, being always killed or cured in two or three days. He was sent for chiefly to those who were given up by other physicians; and to the great grief and indignation of such physicians, often restored the patient unexpectedly to health."—*Boerhaave's Chem. Hutchinson's Biog. Med. Aikin's G. Biog.*

HELMONT (FRANCIS MERCURY, baron van) son of the foregoing, born probably at Vilvorden, in the Netherlands, in 1618. He inherited from his father a taste for the occult sciences, and also studied medicine, but in a superficial manner. He applied himself more particularly to chemistry, and boasted of possessing an intimate acquaintance with it; though he was in fact little better than a mercenary quack. He was fond of mechanical occupations; and he had learned to paint, to engrave, the art of turnery, and even weaving cloth, and making slippers. He joined a caravan of Bohemians, and travelled with them through several parts of Europe, to study their language and manners. In Italy the freedom

of his opinions conducted him into the prisons of the inquisition. Restored to his liberty, he went to Germany, where he pretended to have discovered the language natural to the human race; and he had the impudence to affirm that a person born deaf and dumb would articulate the characters at first sight. He professed to believe the doctrine of transmigration of souls, the universal panacea, and the philosopher's stone; and his profusion led some to believe that he could actually make gold. He died in 1699, not at Cologne, as Moreri asserts, but at Cölln, on the Spree, one of the suburbs of Berlin; though some say his decease occurred in Switzerland. He published "Alphabeti veri naturalis Hebraici brevissima delineatio, &c." 1667, 12mo; "Sedar Olam; sive Ordo sæculorum, historica enarratio doctrinæ," 1693, 12mo, said to be one of the most strange, absurd, and impious books which has appeared since the invention of printing.—*Biog. Univ. Stollii Introd. in Hist. Lit.*

HELST (BARTHOLOMEW VANDER) a celebrated Dutch artist, was born at Haerlem in 1613. He became one of the best portrait painters of his time, and was not without merit in history and landscape. His finest performance is in the town-hall of Amsterdam; it represents a company of trained bands of about thirty figures, at whole length; and in the opinion of sir Joshua Reynolds is one of the first pictures of portraits in the world. This artist died in 1670.—*Sir J. Reynolds's Works*, vol. ii. *Argenville Vies des Peint.*

HELVETIUS (JOHN FREDERICK) a physician of a noble family in the principality of Anhalt. He was born about 1625, and having obtained at an early age a reputation for medicine and surgery, settled in Holland about 1649, and was appointed first physician to the states-general and to the prince of Orange. His works merit very little attention, exhibiting a greater devotion to the absurdities of alchemists, physiognomists, and similar visionaries, than to the advancement of science. He died in 1707.—His son, ADRIAN, born in 1656, also a physician, visited Paris while a dysentery prevailed, and practised so successfully, that Louis XIV ordered him to publish the remedy which produced such salutary effects, when he declared it to be *ipecaacuanha*, and received 1000 Louis-d'ors for the discovery. He settled in Paris, where he was appointed physician to the duke of Orleans. He died in 1721, leaving behind him some medical treatises in no great esteem.—JOHN CLAUDE, son of the above, was born in 1685, and rose to be a practitioner of great eminence. He cured Louis XV of a dangerous disorder in his infancy, and became first physician to the queen, and counsellor of state. He was also a member of the Academy of Sciences, of the Royal Society of London, and of various continental academies. He was generally esteemed, and very attentive to the poor. He died 17th July, 1755. His works are—"Idée Générale de l'œconomie Animale," 1722, 8vo; "Principia Physico-Medica," 2 vols.

8vo. He also published several valuable papers in the Memoirs of the Academy of Sciences.—*Moreri. Haller. Bibl. Med.*

HELVETIUS (CLAUDE ADRIAN) the son of the preceding, and the most remarkable of this family, was born at Paris in 1715. He received the early part of his education in his father's house, and when he was of a proper age was sent to the college of Louis le Grand, where he attracted the attention of the famous father Porée, who paid a particular attention to his education. By the progress which he made in science and literature, added to a ready wit and amiable manners, he became a favourite with the most distinguished literary characters of the period; and among others with Voltaire and Montesquieu. The celebrated work of the latter, "L'Esprit des Loix," led Helvetius into the train of reasoning, which produced his own at one time scarcely less famous "De L'Esprit;" in order to be at leisure to compose which production, he gave up his lucrative post of farmer-general. It appeared in 1758, and was condemned by the parliament of Paris, as derogatory to the nature of man, by confining his faculties to animal sensibility; and destroying the distinctions between vice and virtue. This injudicious proscription, as usual, tended to give the condemned work additional celebrity, both in and out of France, and so obnoxious did it render the author, that he was removed from his post of maitre d'hôtel to the queen, and narrowly escaped prosecution. In order to withdraw himself for a time from the resentment of his enemies, he visited England in 1764; and the next year went to Prussia, where he was honourably received by Frederick the Great. When he returned to France, he led a retired and domestic life on his estate at Voré, and being much attached to his wife and family, and fond of exercising the duties of a benevolent landlord, he cared but little for the gaieties of Paris. Both on his estate and in the capital, indeed, his purse was always open to indigent merit, and among other instances of generosity he allowed pensions to Marivaux and Saurin. With every appearance of a robust constitution and a long life, he was carried off, to the great regret of his friends, at the age of fifty-six, in December 1771. The only work published by M. Helvetius during his life time, was his treatise "De L'Esprit" already alluded to, in one volume 4to, and three 12mo. It is divided into four essays, and its chief general design is to prove, that all men well organised, have the natural power of acquiring the most exalted ideas, and that the different genius observable in them, depends on the various circumstances which surround them, and the different educations which they receive. The principles maintained in this work are farther extended in a "Treatise on Man, his Intellectual Faculties, and his Education," in 2 vols. 4to, which, by the direction of the author, was not published until after his death, for which he assigns as a reason, the persecution that it would draw on him. In both these produc-

tions, he has displayed considerable ingenuity and taste; and paradoxical as is his main position, he shows an extensive knowledge of human nature, and an exquisite power of exposing the foibles of mankind. The style is often pompous and affected, and it is to be regretted that he has introduced notions in relation to the foundations of morality which are of a nature to mislead superficial thinkers. In 1772 appeared his poem "On Happiness," written early in life, and which, although shown to and praised by Voltaire, had not been before published. It contains some fine verses, but in style is often stiff and affected.—*Nouv. Diet. Hist. Monthly Review*, 1759. *La Harpe's Luceum*.

HELVICUS (CHRISTOPHER) a German divine, distinguished as a chronologer. He was a native of the country of Hesse, and after having studied at Marburg, he was employed to teach Greek and Hebrew at the college of Giessen. In 1610 he was made professor of theology in the same seminary, where he continued to teach with great reputation till his death in 1617. Helvicus was eminent for his skill in Rabinnical literature; and was profoundly acquainted with the science of grammar, on which he published several works. His *System of Chronology*, in Latin, has been repeatedly printed, and is still useful, though the author has in the earlier ages been misled by the forgeries of Annius of Viterbo.—*Moreri. Bayle*.

HELWIG (GEORGE ANDREW) a Prussian botanist and mineralogist. He was born in 1666, and studied theology at Königsberg and Jena, applying his leisure to researches into natural history. After having travelled in Germany and Italy, he commenced giving public lectures at Jena, which were extremely well received. This undertaking, however, he was obliged to relinquish, in order to assist his father as minister of Angerburg in Prussia, on whose death in 1705 he succeeded to the office. He became afterwards provost and arch-priest, and finished his long life the 3rd of January, 1748. Helwig formed several curious herbals, one of which is preserved in the royal library at Dresden. Among his published works are—"Lithographia Angerburgica," *Koenigsb.* 1717—1720, 2 vols. 4to, containing observations on fossils, naturally marked with alphabetical characters. He was also the author of several other productions on lichology and botany.—*Gronovii Bibl. Regn. Anim. et Lapid. Biog. Univ.*

HELWIG (JOHN OTTO) a native of Thuringia, who studied medicine at Jena, Basil, &c. and took the degree of doctor at Erfurt in 1675. He resided some time at Amsterdam, and then embarked for Batavia, where he practised medicine, and employed himself in the collection of natural curiosities. Returning to Europe, he visited Italy, Portugal, France, Holland, England, and Denmark; with the languages of almost all which countries he was acquainted. The elector palatine made him his counsellor, first physician, and professor at Heideburg; and Charles II, of

England, conferred on him a baronetcy. Helwig at length fixed his residence at Bayreuth in Franconia, where he died in 1698, aged forty-four. He was a professor of the Hermetic art, and the author of a curious book, entitled "Introitus in veram atque inauditam Physicam," and another on the philosopher's stone.—*Biog. Univ.*

HELYOT (PETER) a French recollet friar, or of the third order of St Francis, eminent as an ecclesiastical historian. He was of English descent, but was born at Paris in 1660. He entered the convent of Picpus in 1683, when, according to custom, he changed his name, taking that of father Hippolytus. The great literary labour of his life was the collection of materials for a "History of the Monastic Orders, Religious and Military, and of the Secular Congregations of both Sexes." He began publishing this work in 1710 and died in 1716, when the fifth volume was in the press; it was completed in 8 volumes, and is valuable for the extent and accuracy of the information it affords.—*Aikin's G. Biog. Nour. Diet. Hist.*

HEMMINGFORD (WALTER DE) a regular canon of Gisborough abbey, near Cleveland, Yorkshire. He flourished in the fourteenth century, during the reign of Edward III. He compiled a history, commencing from the Norman conquest, and continued to the reign of Edward II, which is written with much care and exactness, and in a very tolerable style for the time. He died at Gisborough in 1347. Hearne published an edition of the chronicle of Hemmingford in 2 vols. 8vo, Oxford, 1731, which is now esteemed one of the most valuable of his labours.—*Gale Veteri Scrip. Nicholson's Hist. Libraru.*

HEMSKIRK or HEEMSKIRK (MARTIN) an eminent Dutch painter, was the son of a peasant, and born at a village of that name in Holland in 1498. He was a disciple and imitator of Schorel, and visited Rome, where he remained for three years, and then returned to his native country, and lived at Haerlem for the remainder of his days. Most of his works are engraved; and Vasari relates that Michael Angelo was so pleased with one of his prints, that he had a mind to colour it. Fuseli thinks that he invented with more fertility than taste or propriety; that he rather grouped than composed, and was unacquainted with the chiaroscuro. He died in 1574. *Pilkington. Strutt.*

HEMSKIRK (EGBERT) another painter, probably of the same family as the preceding, was born at Haerlem in 1645. In his own time his compositions were much esteemed for whimsical imagination and coarse humour. His delight was in painting fanciful, wild, and uncommon scenes, such as the nocturnal intercourse of witches, devils, spectres, enchantments, temptations of St Anthony, &c.; all of which he wrought with great freedom of touch and intelligence of drawing. His colouring was also in general rich and agreeable. He quitted his own country to settle in London, where he died in 1704. It was his custom to paint his

own portrait in his burlesques, which was by no means one of the most engaging kind.—There was au ther EGBERT HEMSKIRK, called, by way of distinction, the *old*, who painted subjects of the same kind with a more orderly imagination.—*Walpole's Anec. Pilkington.*

HEMSTERHUYS (TIBERIUS) in Latin Hemsterhusius, a German critic and philosopher, the son of a physician of Groningen, where he was born in February 1685. About the close of the century he removed from his native place, where he had received the rudiments of his education, to Leyden, for the purpose of completing it, and made so rapid a progress there in classical and mathematical learning, that before he had attained his twentieth year, he was elected to fill the professor's chair in philosophy and mathematics at Amsterdam. The death of Lambert Bos in January 1717, making a vacancy in the Greek professorship at Franeker, Hemsterhuys was induced to resign his situation, in order to succeed him, and there he remained during a period of twenty-three years, enjoying a great reputation both for talent and erudition. In 1740 he again removed to Leyden, upon an invitation from the university, having been elected to the joint professorships of history and Greek. The students of ancient literature are indebted to him for much valuable information and acute illustration, especially in the editions which he published of the three last books of the "Onomasticon" of Julius Pollux, printed in 1706; the "Timon" and "Dialogues" of Lucian, 1708, as well as part of an edition of the same author in four vols. 4to. He also published annotations on the "Plutus" of Aristophanes, 1744, and on the works of Xenophon of Ephesus, together with two volumes of philosophical treatises, and some miscellaneous essays and orations. There are likewise letters from him to J. Matt. Gesner and others; and he gave considerable aid to J. St. Bernard, in publishing the "Eclogæ Thomæ Magistri," at Leyden, in 1757. His death took place at Leyden in April 1766.—*Eloge by Rhunkenius.*

HEMSTERHUYS (FRANCIS) a Dutch philosopher, who passed a great part of his life at the Hague, where he enjoyed a post in the state, which afforded him a moderate income, and left him leisure for meditation and study. He employed himself in the cultivation of the fine arts, ancient literature, and philosophy, and passed through life undisturbed by passion or intrigue, and much esteemed by the friends with whom he associated, for the simplicity of his manners and the charms of his conversation. He died unmarried, at the Hague, in June 1790, having long filled the station of first clerk in the secretary's office of the council of state. The following are the titles of his works—"Lettre sur la Sculpture," 1769, 4to; "Lettre sur les Desirs," 1770; "Lettre sur l'Homme et ses Rapports," 1773; "Sophyle, ou la Philosophie," 1778; "Aristée ou de la Divinité," 1779; "Alexis, ou de l'Age d'Or," 1787; "Simon, ou des Facultés

de l'Âme," published after the death of the author. These pieces were collected and printed at Paris in 1792, 2 vols. 8vo, and again in 1809. Hemsterhuys was well acquainted with astronomy, optics, and mathematics; he was a good designer, and he possessed a valuable collection of engraved gems, pieces of sculpture, &c.—*Biog. Univ.*

HENAULT (CHARLES JOHN FRANCIS) usually termed the president Henault, an eminent French historian, and writer on polite literature. He was the son of a farmer-general, and was born at Paris in 1685. He first adopted the ecclesiastical profession, and entered among the fathers of the Oratory; but he quitted that society for the long robe, and obtained the posts of president of the chamber of inquests, and superintendent of the finances of the queen's household. He produced a poem, which in 1707 obtained a prize from the French academy. In 1713 his tragedy of "Cornelia" was brought on the stage, where, however, it was not well received. In 1723 he was admitted into the French academy; and he also became a member of the academy of Inscriptions and Belles Lettres, and of other literary associations. He was intimately connected with madame du Deffand; and from his rank as well as his talents, he held a distinguished station among the Parisian literati. His "Abrégé Chronologique de l'Histoire de France," exhibiting a tabular view of French history, has been translated into several languages, and been repeatedly imitated. He was also the author of comedies, poems, academical discourses, &c. He died in 1770. In the following year was published, posthumously, his "Histoire Critique de l'Établissement des Français dans les Gaules," 2 vols. 8vo; and in 1806 appeared "Les Œuvres inédites de Pres. Henault" 8vo.—*Biog. Univ. Nouv. Dict. Hist.*

HENAULT or HENAUT (JOHN D') a French poet of the seventeenth century. He was the son of a baker at Paris, and having travelled when young in the Netherlands and in England, he obtained on his return to France, the patronage of the minister Fouquet. On his disgrace, he wrote a satirical sonnet on the rival statesman Colbert, which he afterwards endeavoured in vain to suppress. He was a kind of speculative libertine, and from congeniality of sentiment he had translated a part of the philosophical poem of Lucretius; but alarmed at the approach of death, he was persuaded by his confessor to commit the manuscript to the flames; a circumstance which is characteristically lamented by Voltaire. He died in 1682. His works consist of miscellaneous poems, published together in 1670.—*Siècle de Louis XIV. Aikin's G. Biog.*

HENDERSON (JOHN) a celebrated actor, was born in London in 1747. He was apprenticed to a silversmith, but on the death of his master he had recourse to the stage, and after acquiring considerable celebrity at Bath, came out in the character of Shylock, at the theatre in the Haymarket. He was next engaged at

Drury-lane theatre, where he acquired great celebrity in Shakspeare's characters, especially those of Hamlet and Falstaff, in the latter of which he is said to have never been equalled. He was suddenly carried off by a brain fever in 1785, in the prime of life.—*Life by Ireland*. There was also another JOHN HENDERSON, a young man remarkable for the precocity of his genius, a native of Balgarance, Ireland, where he was born in 1757. He was educated by his father, a methodist preacher, in a methodistic seminary at Kingswood, and obtaining the notice of Dr Tucker, dean of Gloucester, was sent by that divine to Pembroke college, Oxford, where he was visited by Dr Johnson and other eminent men. His learning was universal, but he applied chiefly to alchemy and metaphysics. His manners were highly eccentric, and he fell an early victim to intemperance in 1788. Some of his poems and essays have been printed—*Europ. Mag.*

HENKEL (JOACHIM FREDERICK) a Dutch surgeon, who studied at Berlin, and entered into the Prussian army. He was noticed by Frederick William I, who gave him a pension, and sent him to Paris for improvement. On his return, after two years' absence, he was made principal surgeon of a regiment of guards. He gave public lectures on surgery at Berlin; but never having graduated at a German university, he experienced much opposition. In 1744 he received the degree of MD. at Frankfurt on the Oder, after sustaining a thesis "De Cataracta crystallina vera." After having served two campaigns in Silesia, he devoted himself wholly to giving lectures and professional practice at Berlin; and many skilful surgeons studied under him. He died July 1st, 1779. His works, which relate to surgery and midwifery, contributed much to the improvement of those branches of the profession in Prussia.—*Biog. Univ.*

HENKEL or HENCKEL (JOHN FREDERICK) a skilful Saxon chemist and mineralogist, born at Freiberg in 1679. He studied medicine, and practised it for some time, but at length relinquished the pursuit, to devote himself wholly to his more favourite studies. Augustus II, of Poland, appointed him counsellor of mines, in which office he made himself useful to his country in various respects. To his improvements in chemical processes, the manufactory of porcelain at Meissen, owes much of the excellence which has distinguished it for more than half a century. This laborious chemist died January 26th, 1744, leaving a rich collection of fossils and minerals, which was removed to Petersburg. He was the author of several works, valuable at the time they were published, of which the best known is his "Pyritologia, or Natural History of Pyrites," of which there are French and English translations.—*Id.*

HENLEY (JOHN) an English clergyman, possessed of considerable talents, but principally distinguished for the irregularity of his conduct, and commonly known towards the middle of the last century by the title of *Orator Henley*. He was the son of a clergyman, and

was born at Melton Mowbray, in Leicestershire, in 1692. He was regularly educated at St John's college, Cambridge, where he took the degree of MA. and afterwards entered into holy orders. While at the university he sent a letter to the Spectator, signed *Peter de Quir*, [see No. 396,] which displays much of that quaint humour for which he was subsequently noted. After having for some time conducted a free-school at the place of his birth, and held a curacy, he grew tired of his secluded situation, and went to London, in search of an ampler field for his abilities. He was first engaged as a preacher at an episcopal chapel, but being disappointed in an attempt to obtain the lectureship, and dissatisfied with his prospects of church preferment, he resigned his appointments, and commenced public orator. Having opened a chapel in the neighbourhood of Newport-market, he gave lectures on theological topics on Sundays, and other subjects on Wednesdays, every week. He struck medals for admission tickets, with a rising star for the device, and the motto "Ad Summum, et below "Inveniam Viam aut faciam." Novelty procured him a multitude of hearers, but he was too imprudent to gain any permanent advantage from his project. After having served as a butt for the satirical wits, poets, and painters, of his time he removed his oratory to Clare-market, and sunk into comparative obscurity and contempt, previously to his death in 1756. He published a periodical paper called "The Hyp-Doctor;" besides some poems; and translations of Pliny's epistles, and works by Montfaucon, Vertot, &c.—*Nichols's Anec. of Hogarth. Aikin's Gen. Biog.*

HENLEY (SAMUEL) a divine of the church of England, who held the professorship of moral philosophy, in the college of Williamsburgh in Virginia, before the separation of the United States from Great Britain. Leaving America, he became curate of Northaw, Middlesex, and usher of Harrow school; and he afterwards obtained the rectory of Rendlesham in Suffolk. In 1805 he was placed at the head of the East India college, at Hertford, when he procured the diploma of DD. His death occurred at Rendlesham in 1813. He published a "Dissertation on the controverted Passages in St Peter and St Jude, concerning the Angels that sinned, and kept not their first estate," 1778; "Observations on the subject of the Fourth Eclogue, the Allegory in the Third Georgic, and the primary design of the Æneid of Virgil, with Remarks on some Coins of the Jews," 1788, 8vo; and an "Essay towards a new Edition of the Elegies of Tibullus, with a translation and notes," 8vo. He was also a FAS. and published some papers in the *Archæologia*.—*Gent. Mag.*

HENLEY (ANTHONY) an ingenious writer, contemporary with Steele and Addison. He was born at the Grange, in Hampshire, the seat of his father sir Robert Henley, and received his education at the university of Oxford, where he distinguished himself by his classical acquirements. In 1698 he was chosen MP. for Andover; and he afterwards had a

ment for Weymouth. He belonged to the whig party; but obtained more eminence for his literary talents than as a politician. He died in 1711. Besides some poetical pieces, he wrote papers in the "Tatler," and in the "Medley."—ROBERT HENLEY, his second son, was educated as a lawyer, and arrived at the rank of Lord Chancellor. He was created Earl of Northington; and died in 1772—*Biog. Peerage. Chalmers's Biog. D.*

HENNAO (GABRIEL DE) a voluminous Spanish author, was born in 1611. He entered at the age of fifteen into the order of jesuits at Salamanca; and spent the greater part of his life in that university. He died in 1704, at the great age of ninety-three. His works consist of eleven folio volumes in Latin; nine of which are controversies, theological and philosophical; the remaining two, entitled "Biscaya Illustrata," contain much interesting matter relating to the history and antiquities of Biscay.—*Moreri.*

HENNEPIN (LEWIS) a French recollect friar, famous as a missionary and a traveller in North America. He was born in Flanders about 1640. His inclination for travelling led him to Italy; and he was afterwards preacher at Hall, in Hainault. He then went into a convent, and being sent by his superiors to Calais and Dunkirk, the stories he heard from the sailors inspired him with a desire to visit distant countries. At length he embarked for Canada, and arrived at Quebec in 1675. Between that period and 1682 he explored the regions now called Louisiana; and returning to Europe published an account of his researches, entitled "Description de la Louisiane nouvellement découverte au sud-ouest de la Nouvelle France, avec la Carte du pays, les mœurs et la manière de vivre des Sauvages," Paris, 1683, 12mo. He afterwards produced other works, containing fuller descriptions of the result of his observations. He was appointed guardian of the convent of Renty, in Artois; and refusing to return to America, after some disputes, he was permitted by his superiors to retire into Holland in 1697, where he found protectors at the court of William III. Though he adopted the secular habit among the Dutch, it does not appear that he relinquished his religion or his profession, as he always added to his signature the title of missionary recollect, and apostolic notary.—*Biog. Univ.*

HENNIGES (HENRY DE) a celebrated German lawyer and politician of the seventeenth and eighteenth centuries. He was a native of Weissemburg, in Franconia, and studied jurisprudence in the universities of Jena and Altorf. Not being of a noble family he was unable to obtain any diplomatic employment, though distinguished for his knowledge. He published a work on the power of the emperor in ecclesiastical affairs, in the hope of getting an office in the imperial cabinet at Vienna; but he was disappointed. His observations on Grotius, which appeared in 1675, attracted the notice, at length, of the minister of the elector of Brandenburg, through

whose patronage he was, in 1678, appointed private secretary to the elector. The following year he replaced the Prussian secretary of legation at Ratisbon. The elector, becoming king of Prussia, conferred on Henniges letters of nobility; and in 1711 he was sent as second ambassador of Prussia to the congress of Frankfort, where Charles VI was elected emperor of Germany. He was however present at only one sitting, as he died August 26th, 1711. He published several tracts, and left in MS. in 17 vols. a history of the Diet of the Empire, with an index and documents, preserved in the royal archives at Berlin.—*Biog. Univ.*

HENNIKER (sir FREDERICK) an English baronet, descended of the noble family of that name. He was the eldest son of the hon. lieutenant-general sir Brydges Trecothick, Henniker, of Newton-hall, Essex, and was born Nov. 1, 1793. He received his education at Eton, whence he removed to St John's college, Cambridge, and succeeded his father in his title and estates in 1816. A strong disposition towards literary and antiquarian research induced him on quitting the university to commence his travels through France, Italy, Egypt, Nubia, and Palestine, from which latter country, after narrowly escaping with life from the hands of a wandering banditti, who wounded and left him for dead between Jerusalem and Jericho, he returned through Greece, Turkey, and Germany. Of this journey he published in 1822 a very amusing journal, entitled "Notes during a Visit to Egypt, Jerusalem, &c." Sir Frederick died at his chambers in the Albany, after a short but excruciating illness of fourteen days, August 6, 1825.—*Gent. Mag.*

HENNINGES (JEROME) a learned Saxon genealogist, who was a native of Lunenburg. He studied under Melancthon, and after finishing his education, returned home, expecting to obtain a situation as a minister. He applied with much zeal to historical and antiquarian researches, and produced as the result of his studies, "Genealogiæ Familiarum Saxonicarum," Hamburg, 1596, folio. He died in 1597. After his decease appeared an immense compilation, entitled "Theatrum Genealogicum, omnium Ætatum et Monarchiarum Familias complectens," Magdeb. 4 vols. folio. The first work is the more accurate and valuable.—*Moreri. Biog. Univ.*

HENNUYER (JOHN) bishop of Lisieux, was born at St Quintin, in Picardy, in 1497. In the reign of Charles IX, when the royal lieutenant of the province communicated to him the order to massacre all the protestants in the diocese of Lisieux, he nobly signed a formal and official opposition to it, for which humane and courageous act the court ventured neither to censure nor persecute him. He died in 1577, universally respected, having effected more in favour of the church of Rome by his mildness, than any of the bigots by their fury.—*Nouv. Dict. Hist.*

HENRY I, king of England, surnamed BEAUCLEER, youngest son of William the

Conqueror, was born 1068. His father, at his death, left him no dominions, and in consequence of disputes with his brothers, he was for some time in a state of great depression. He appears, however, to have been reconciled to William Rufus, as he was hunting with that prince in the New Forest, when he received his mortal wound, in 1100. Henry instantly rode to London, and by securing the royal treasure, and gaining over a party of the nobles and prelates, caused himself to be proclaimed king, to the prejudice of his brother Robert, then absent on the Crusades, who was thus a second time defrauded of his right of seniority. To reconcile the people to his usurpation, Henry issued a charter containing great concessions to public liberty, but which seems to have operated little in modification of his own government. He also performed another popular act by recalling Anselm, archbishop of Canterbury, the authority of which prelate was necessary to his projects of conciliating his English subjects by marrying Matilda, daughter of Malcolm III, king of Scotland, by his queen, a sister to Edgar Atheling. This union accordingly took place, and much strengthened his party, when his brother landed an army in 1101, with a view of asserting his claim to the crown. Actual hostilities were however prevented by the interference of Anselm, who induced Robert to accept a pension, and it was agreed that the brothers should mutually succeed to each other's dominions, in the event of death without issue. This treaty did not prevent Henry from invading Normandy a short time after; and in 1106 he took Robert prisoner, and reduced the whole dutchy. He also became master of the persons of William, son of Robert, whom he kept in custody in Normandy, and of Edgar Atheling who, protected by the insignificance of his character, was allowed to reside in privacy in England on a pension. With a rigour most unnatural and unfraternal, he confined Robert for the remainder of his life (twenty-eight years) in Cardiff castle, where he ended his days. Henry, like most of the other sovereigns of Europe, had a contest with the papal court on the subject of investitures, that ended in a compromise, by which he merely retained the right of temporal homage. His usurpation of Normandy, involved him in continual war, which was very oppressive to his English subjects; but although William, son of Robert, escaped out of custody, and was assisted by the king of France, Henry maintained possession of the dutchy. His public prosperity was, however, counterbalanced by several domestic misfortunes. One of these was the loss at sea of his only son William, then rising to manhood, who was drowned in 1120, in returning from Normandy, together with his natural sister, whose cries recalled him to the sinking ship, after he had got clear from it in the long boat. Henry was never seen to smile afterwards. He had betrothed his only daughter Matilda to the emperor Henry V, and when she became a widow, married her a second time to Geoffry Plantagenet, son of

the count of Anjou. He himself also married a second wife, Adelaide, daughter of the duke of Lorraine, by whom he had no issue. Henry reigned with great vigour and prudence, and although he firmly maintained his authority would often redress grievances, of which he gave an instance by punishing with great severity an abuse of the claim of purveyance. He died in Normandy of a sudden illness, occasioned by the eating of lampreys, in the sixty-seventh year of his age, and thirty-sixth of his reign. Henry was a prince of great accomplishments, both of mind and person, and his ready elocution, and proficiency in the literature of the period, obtained him his surname. He was much attached to women, and possessed all the Norman passion for the chase, which produced so many rigorous game laws. In other respects the severity with which he punished delinquency, was probably serviceable to a country in the then rude state of England.—*Hume's Hist. of Eng.*

HENRY II, king of England, the first of the line of the PLANTAGENETS, was born in Normandy in 1132, being the son of Geoffry, count of Anjou, and the empress Matilda, daughter of Henry I. He early displayed an elevated character, and was invested with the dutchy of Normandy, by the consent of his mother, at the age of sixteen. The year following he succeeded his father in the possession of Anjou and Maine, and by a politic, but not very scrupulous marriage with Eleanor of Guienne, just divorced from Louis VII, king of France, on a suspicion of infidelity, annexed that province with Poictou to his other dominions. Rendered thus potent, he determined to pursue his claim to the crown of England against the usurpation of Stephen. It is the province of history to narrate the events of his expedition for that purpose, which ended in a compromise, that Stephen should retain the crown during his life, and Henry succeed at his death, an event which soon after took place in 1154. The commencement of his reign was marked by the dismissal of the foreign mercenaries, and although involved with his brother Geoffry, who attempted to seize Anjou and Maine, and in a temporary dispute with France, he reigned prosperously until he became involved in his memorable contest with Thomas à Becket. Laudably anxious to repress the usurpation of the clergy, which, although at the period in question inimical to civil authority every where, was in no country more intolerable than in England, Henry, in 1164, summoned a general council of nobility and prelates at Clarendon, which assembly passed the famous constitutions named from that place. The object of these articles, sixteen in number, was to control the assumed authority of the clergy, and to render them amenable in all civil matters to the ordinary courts of justice. By framing such laws, in a national council, the superiority of the legislature over papal and ecclesiastical synods was also fully established. The consequences of the reluctant subscription of Becket to these articles in the first instance, and subsequent retraction on the disapprobation of the Pope,

have been already related in the life of the archbishop (see BECKET.) A prince of less power and policy than Henry might have yielded to the storm which followed the untoward death of that haughty prelate; but although sufficiently submissive in the way of penance and expiation, he only gave up the article in the constitutions of Clarendon which forbade appeals to the court of Rome in ecclesiastical cases; and even in that case reserved to himself the right of exacting sufficient security from all clergy who should leave the country in prosecution of such appeals. Before this matter was terminated, Henry, in 1172, armed with a bull of Pope Adrian, whose authority to give away kingdoms in this instance he did not dispute, undertook an expedition into Ireland, a great part of which country, owing to the internal disputes of its native chieftains, had been reduced by some private adventurers, conducted by Richard Strongbow, earl of Strigul. The king found little more to do than make a progress through the island, to receive the submission of the Irish princes; and having left earl Richard in the post of seneschal of Ireland, he returned to England; proceedings so important to the future destinies of both countries having occupied only a few months. A numerous progeny of sons seldom failed in these unsettled times to produce domestic strife in royal families and attempts against the authority of the common parent, an unnatural species of affliction which Henry was doomed to undergo with unusual bitterness. Being an indulgent father, he had assigned to each of his four sons a provision out of his extensive territories. The eldest son, Henry, was not only declared heir to England, Normandy, Anjou, Maine, and Touraine but actually crowned in his father's life time. On paying a visit to the court of his father-in-law, Louis, the prince was induced by the French monarch to demand of his father the immediate resignation, either of the kingdom of England or of the dukedom of Normandy. This extraordinary request being refused, he withdrew from his father's court, and was openly supported in his claim by Louis. Henry's various gallantries exemplified in the popular, and not altogether unfounded legend of fair Rosamond, or Rosamond Clifford, also embroiled him with his queen Eleonor; who spirited her other sons, Richard and Geoffry, to make similar claims, and imitate the example of their elder brother. Many potent barons and nobles in the respective provinces were thus withdrawn from their allegiance, and Louis, king of France, William, king of Scotland, and other powers, lent spirit to the confederacy. A general invasion of Henry's dominions was in this way concerted, and it began in 1173, by an attack on the frontiers of Normandy, where he opposed the storm with vigour. In the mean time the flame had broken out in England, which was overrun with malcontents, while the king of Scots made an incursion into the North. Henry in consequence hastened home and to conciliate the clergy having passed a day and night of penance at the tomb of Becket, his absolution was followed by the

news of a complete victory gained by his general, the justiciary Glanville, over the Scots, in which their king was made prisoner. The spirit of the English malcontents being thus broken, they rapidly submitted, and Henry, returning to Normandy, entered into an accommodation with his sons on less favourable terms than they had previously rejected; nor did the king of Scotland gain his liberty, but by stipulating to do homage, and yield up some fortresses. The pause obtained by these exertions of vigour and ability, Henry employed in regulations and improvements, which equally manifest his capacity and love of justice. He checked the prevailing licentiousness by severe laws, partitioned England into four judiciary districts, and appointed itinerant justices to make regular excursions through them. He revived trial by juries, discouraged that by combat, and demolished all the newly-erected castles, as shelters of violence and anarchy. The turbulence of his sons still disquieted him; but Henry, the eldest, who had engaged in a new conspiracy, was cut off by a fever in 1183, after expressing great contrition for his disobedience; and two years after, the death of the equally restless Geoffry also released the king from newly meditated hostilities. Philip Augustus, then become king of France, however continued to foment the differences between Henry and his sons, and Richard was again prompted to rebel. A war between the two crowns followed, the event of which was so unfavourable to Henry, that he was at length obliged to agree that Richard should receive an oath of fealty from all his subjects, and marry Alice, sister of the French king, for whom Henry himself, under whose care she had long resided, is charged, and not without grounds, of having indulged an unbecoming, if not a criminal passion. He also stipulated to pay a sum of money to the French king, and to grant a pardon to all Richard's adherents. The mortification of Henry, at these humiliating terms, was aggravated to despair, when he saw the name of his favourite son John head the list of delinquents, whom he was required to pardon; and cursing the day of his birth, he pronounced a malediction upon his undutiful sons, which he could never be persuaded to retract. The anguish of his mind threw him into a low fever, which put an end to his life, at the castle of Chinon, near Saumur, in the fifty-eighth year of his age, and thirty-fifth of his reign. Henry II ranks among the greatest kings of England, not only in extent of dominion, but in all the qualities which give lustre to authority; being equally fitted for the active scenes of public life, and for cultivated leisure. He was manly in person, gifted with ready elocution, and possessed warm affections, which seemed little to deserve the ingratitude he encountered. His wisdom and love of justice were acknowledged by foreign potentates, who made him arbiter of their differences, and regarded him as the first prince of the age. Ambition was his ruling passion, and he was enabled by circumstances to indulge it with less violence to equity than is usual among

ambitious rulers, but the extent of his continental dominions, under a system so artificial and fantastic as the feudal one, was the obvious cause of his principal quietude and misfortunes.—*Hume's Hist. of Eng. Lyttelton's Hist. of Henry II.*

HENRY III, king of England, surnamed of Winchester, son of John, was born in 1207, and succeeded his father 1216. At the time of his accession, the country was in a state of lamentable distraction. The dauphin of France, Lewis, at the head of a foreign army, supported by a faction of English nobles, disgusted with the conduct and tyranny of John, had assumed the reins of government; but being justly suspected of arbitrary intentions, was become odious to the body of the people. The cause of the young king, then only nine years of age, was espoused by the earl of Pembroke, whose prudent government as regent in a short time compelled Louis to sue for peace, and quit the country. The death of Pembroke involved the country in new disorders, owing to the renewed turbulence of the barons; but in the mean time, Magna Charta was again confirmed, and parliament began to consider it as the fundamental law of the nation, and its observance as the condition of their grants. As Henry approached to manhood, he displayed a character wholly unfit for his station, and although his reign affords many important domestic events, in a biographical point of view, it is extremely uninteresting. One of his first false steps was to discard his most faithful and able minister Hubert de Burgh, and give his entire confidence to rapacious and unprincipled foreigners, an evil which was farther augmented by his marriage in 1236, with Eleaour of Provence. Many oppressive grievances were the consequence, and his foolish acceptance of the crown of Sicily offered him by the Pope, involved him in vast debts, which parliament very properly refused to discharge: in his necessity he had recourse to exactions, which increased the national discontent, and finally gave it to his brother-in-law, the ambitious Simon de Montfort, earl of Leicester, to make a total change in the constitution, and deprive him of royal authority. In 1158, conspiring with the principal barons, that earl appeared with them in arms at a parliament holden at Oxford, and obliged the king to sign a body of resolutions, which threw all the legislature and executive power into the hands of an aristocracy of twenty-four barons, assisted by a lower house, consisting of four knights chosen from each county. The aristocracy, as usual, soon displayed a spirit which united both king and people against them, and the former was absolved by the Pope from his oath to observe the provisions of Oxford. By the aid of his able and spirited son Edward, Henry was gradually restored to authority, on which, Leicester calling in Llewellyn, prince of Wales, involved the kingdom in a civil war. The power of the barons was by this means partially restored, but great divisions prevailing, both parties agreed to abide by the award of Louis IX, king of France. The award of this

monarch, given in 1264, being favourable to the king, Leicester and the confederate barons refused to submit to it, and a battle was fought near Lewes, in which Henry, with his brother Richard, king of the Romans, were taken prisoners, and the person of prince Edward also ultimately secured. A convention ensued, called "The Mise of Lewes," which provided for the future settlement of the kingdom, but in the mean time Leicester ruled without control. To him, however, was owing the first example of a genuine house of Commons in England; for in a parliament summoned by him in 1265, deputies from boroughs were sent as well as knights of shires. Prince Edward at length escaped, and assembling an army, defeated Leicester's son. The decisive battle of Evesham quickly followed, in which Leicester himself was slain; and the poor king, then in the hands of the rebels, being placed in the front of the battle, narrowly escaped with his life. Replaced upon the throne, he remained as insignificant as ever, and the departure of his son for the Holy Land was the signal for new commotions, which were however terminated by his death in 1272, in the sixty-fourth year of his age, and fifty-sixth of his reign.—*Hume's Hist. of Eng.*

HENRY IV, king of England, surnamed of Bolingbroke, the first king of the house of Lancaster, was born in 1367, being the eldest son of John of Gaunt, duke of Lancaster, third son of Edward III, by the heiress of Edmund, earl of Lancaster, second son of Henry III. In the reign of Richard II, he was made earl of Derby and duke of Hereford, and while bearing the latter title, appeared in the parliament of 1398, and preferred an accusation of treason against Mowbray, duke of Norfolk. The latter denied the charge, and offered to prove his innocence by single combat, which challenge being accepted, the king appointed the lists at Coventry; but on the appearance of the two champions at the appointed time and place, Richard would not suffer them to proceed. Both were banished the kingdom, Norfolk for life, and Hereford for ten years, shortened by favour to four, with the farther privilege of immediately entering upon any inheritance which might accrue to him. On this sentence, Hereford went and served with distinction against the infidels in Lithuania, and by his conduct acquired general esteem. On the death of John of Gaunt, in 1399, he succeeded to the dukedom of Lancaster, and laid claim, according to agreement, to the great estates attached to it, on which the fickle and imprudent Richard was induced to recall his letters patent, and retain possession of the estates; soon after which imprudent step he departed for Ireland. The duke, disregarding the unfinished term of his exile, embarked in July, 1399, at Nantes and landing with a small retinue at Ravenspur, in Yorkshire, made oath on his landing, that he only came for the recovery of his duchy. He was quickly joined by the earls of Northumberland and Westmoreland, the most potent barons of the North; and as he proceeded

southward, he was joined by so many malcontents on his way, that he saw himself at the head of sixty thousand men. The duke of York acting as guardian in the king's absence, was unable to oppose him, and marching to Bristol, he took upon himself to execute some of the most odious of Richard's ministers, without trial. The latter, on the report of these transactions, landed at Milford Haven, with an army which soon melted away by desertion, and falling into the hands of his enemies, he was brought to London by the duke, who now began to openly aim at the crown. A resignation was first obtained from the ill-fated Richard, who was then solemnly deposed in parliament (see RICHARD II.) On this abdication the right of succession was clearly in the house of Mortimer, descended from Lionel, duke of Clarence, the second son of Edward III; but the duke of Lancaster stepping forward in parliament, claimed the crown for himself, as being lineally descended from Henry III, which title alluded to an idle report, that his maternal grandfather, Edmund, earl of Lancaster, was really that king's eldest son, although set aside for his brother, Edward I. A sort of right of conquest was also set up, together with a plea of having delivered the nation from tyranny, and though it was obvious that none of these claims would bear discussion, Henry was unanimously declared lawful king, under the title of Henry IV. The death of Richard soon removed a dangerous rival; yet a short time only elapsed, before the turbulent and selfish nobles rebelled against the king of their own creation. The first plot, in 1400, was discovered time enough to prevent its success, and many executions of men of rank followed. In order to ingratiate himself with the clergy, Henry promoted a law for committing to the flames persons convicted of the heresy of the Lollards. The Gascons, who for a time refused submission to Henry, were soon awed by an army; but an insurrection in Wales, under Owen Glendower, (see article GLENDOWER,) proved a more lasting source of disturbance. That chieftain having captured Mortimer, earl of March, the lineal heir to the crown, Henry would not suffer his relation, the earl of Northumberland, to treat for his ransom. He thus first offended that powerful nobleman, who, however, with his son, the famous Hotspur, subsequently served the king effectually against the Scots, whom they defeated at Homeldon, and captured their famous leader, the earl of Douglas. An order from Henry not to ransom that nobleman and the other Scottish prisoners, whom he wished to reserve as hostages, completed the disgust of the Percys, and the fiery temper of the younger Percy being especially roused by these indignities, he immediately set free his prisoner Douglas, after making an alliance with him, and marched with all the partizans of his house towards Wales, to join Glendower. The king met the insurgents at Shrewsbury, and a furious battle ensued, July 21, 1403, which ended in the death of Percy, and the defeat of his party. The king, who fought in

the foremost ranks, was several times in great danger, and his eldest son, afterwards the conqueror of France, here first distinguished himself. Henry was merciful in this instance; the earl of Northumberland, whom sickness had prevented from joining his son, was pardoned; and but few victims were executed. A new insurrection, headed by the earl of Nottingham and the archbishop of York, broke out in 1405, which was not very honourably suppressed by the king's third son, prince John, who, by a pretended agreement, induced the leaders to disband their forces, and then apprehended them. The archbishop afforded the first example in this kingdom of a capital punishment inflicted upon a prelate, and the chief justice, sir William Gascoigne, deeming it unlawful, a less scrupulous judge supplied his place. Northumberland, who had once more conspired with the revolvers, fled into Scotland with lord Bardolf, and in an attempt to raise a new rebellion in 1407, both these leaders were slain at Bramham; and the death of Glendower following soon after, Henry at length felt his crown sit firmly on his head. The casual capture by sea of James, son and heir to Robert, king of Scotland, added to his safety on the side of Scotland; and although he had not the generosity to release the young prince, he had him admirably educated, and thereby laid the foundation of the distinction which he afterwards obtained as a reformer of the laws and manners of his country. The remainder of the reign of Henry requires little observation. For the purpose of inducing the nation to disregard the right by female descent, which superseded his own, he procured a settlement of the crown on himself, and his heirs male; but a salic law was so disagreeable to the nation, he was obliged to admit the succession of females in a new act. The continual disquiet of his life brought him, while yet in his prime, into a declining condition; and repeated fits, which rendered nugatory a fond resolution of taking the cross, and visiting the Holy Land, brought on his dissolution, March 20, 1413, in the forty-sixth year of his age, and thirteenth of his reign. His issue amounted to four sons and two daughters. Had Henry IV obtained the crown under more favourable circumstances, he showed himself capable of reigning; possessing courage, vigilance, prudence, and great command of temper. As it was, the necessity under which he lay of courting popularity, rendered his reign upon the whole beneficial to the nation, and particularly favourable to the rights of the commons.—*Ibid.*

HENRY V, king of England, called after his birth-place, of MONMOUTH, was born in 1388, and succeeded his father Henry IV, in 1413. His dissipated youth, and fondness for joviality and low company, gave his father much uneasiness, but circumstances occurred even in the midst of his wildness, which showed that better principles were latent in his mind. Having appeared at the bar of the King's Bench, in order to support one of his riotous companions, being unable to shake the arm-

ress of the chief justice Gascoigne, he proceeded so far as to insult him upon the bench, and as some relate, even to strike him. The courageous magistrate, nobly mindful of the law, violated in his person, ordered the prince into custody, and by a ready submission to the command, the latter made atonement for the offence into which passion had betrayed him. His conduct when he ascended the throne justified the best expectations; he caused the obsequies of the unhappy Richard to be performed with great solemnity, and was studious to obliterate every party distinction. He had the magnanimity to treat with confidence and address his superior in hereditary title, the earl of March, who repaid his advances with undeviating fidelity. It is to be regretted, that his other good qualities were sullied by a rigid execution of the laws against the Lollards, the severity of which proceedings produced a real or alleged conspiracy against his person and government. This was suppressed with the execution of the leader; but the parliament, although willing to support the church, showed such a disposition to make free with the revenues of the clergy, in order to answer the demands of the king, that a great alarm was raised among that body, and archbishop Chichele could think of no better expedient than that of turning the king's attention towards a war with France; the circumstances of that kingdom, torn asunder by the opposing factions of the dukes of Orleans and Burgundy, afforded a tempting opportunity to an ambitious neighbour. Henry was easily induced to revive the claims of his predecessors upon that country, and his first step was to send over ambassadors, offering peace and alliance, with a demand of the hand of the princess Catherine, with a great dowry, and the restitution of Normandy, and all other provinces wrested from the kings of England by Philip Augustus. Sensible of its weakness, the French court made considerable offers, but none which Henry would accept. He accordingly assembled a great fleet and army at Southampton, and was on the point of embarkation, when discovery was made of a dangerous conspiracy against his person, headed by the earl of Cambridge, who had married a sister of the earl of March, and sought to assert the rights of that family. The conspirators were capitally punished, after an irregular trial, and the king delaying no longer, landed near Harfleur, on the 14th of August, 1415. He took that town after a siege, which so much reduced his army, that he determined to march to Calais and return to England; and finding a great force assembled to oppose him, he offered to resign his conquests for an unmolested retreat. The French, in their confidence, rejected the proposal, and awaited him in battle array, in the plain of Agincourt. It is unnecessary to detail the particulars of a conflict so well known, being one of those which are inseparably connected with national recollections. After this great display of skill and valour, which took place on the 25th of October, 1415, Henry did not

alter his determination to return home, and the dread of his arms was the chief advantage which he reaped from it. A peace taking place for two years, France was left to her own dissensions, until at length, in August 1417, the unusually liberal grants of the Commons enabled Henry once more to invade Normandy with 25,000 men, and having made himself master of all the lower part of the province, he laid siege to Rouen. To an application for peace, he made a reply which showed that he sought nothing less than the crown of France; but nevertheless, in a negotiation with queen Isabella, he offered to accept the provinces ceded to Edward III by the treaty of Bretigni. The negotiation was broken off by the assassination of the duke of Burgundy, which murder induced his successor to join Henry. This alliance was rapidly followed by the famous treaty of Troyes, made with the French king in a state of imbecility, or rather with his queen and the Burgundian faction who held him in custody. By this treaty Henry engaged to marry the princess Catherine, and to leave Charles in possession of the crown, on condition that it should go to Henry and his heirs at his decease, and be inseparably united to the crown of England. By this treaty the dauphin Charles was entirely cut off from his inheritance, and could it have been brought to lasting effect, it would have been pernicious to both kingdoms, but to England in particular, which it would have gradually reduced to the condition of a province. Henry, after espousing Catherine, took possession of Paris, and then went over to England to raise recruits for his army. He obtained some supplies from parliament, which however began to be sensible that these French conquests would be of little benefit to England. He returned to France in 1421, and pursued the dauphin with so much vigour as to drive him beyond the Loire. He carried with him his prisoner, James I, now become king of Scotland, in order to place the Scots, who were fighting as allies of the dauphin, in the condition of being in arms against their own sovereign; and if it be true, that some who were taken prisoners were punished as traitors on that miserable pretence, the character of Henry is deeply stained by the cruelty. As if to consummate his prosperity, a son was at this time born to him, and all his great projects seemed in full progress to success, when he was attacked by a fistula, which carried him off in August 1422, at the early age of thirty-four, and in the tenth year of his reign. Henry V, as the gallant, youthful, and successful conqueror of France, is a favourite name in English history; but he cannot be compared in wisdom and solid policy with more than one of his ancestors. Besides valour and military skill, he appears to have possessed several estimable qualities, to have been affable and generous in disposition, and to have at once maintained discipline in his army, and justice in his civil administration. His reign was however consumed in mere ambitious pursuits, which, while they inflicted

great misery on France, entailed in the sequel much misfortune upon his own country.—*Ibid.*

HENRY VI, king of England, born at Windsor in 1421. Not being nine months old at the death of his father, Henry V, the kingdom was placed under the protectorship of his uncle, the duke of Bedford, and in his absence of his next uncle, the duke of Gloucester; while the care of his person and education was entrusted to his great uncle, Beaufort, bishop of Winchester. It is useless to attempt any biography of a prince, whose incapacity, to use the expression of Hume, condemned him to a "perpetual minority." The infant Henry was solemnly invested with the crown of France, by ambassadors sent for that purpose, and the vigour and abilities of the duke of Bedford for some time foiled the attempts of the dauphin to recover his inheritance. Particulars of these transactions belong to the department of history, especially as the young Henry had no share in them, although employed by his uncle as a sort of pageant, and crowned at Paris in 1430, when only nine years of age. The defection of the duke of Burgundy, and the death of the duke of Bedford, were severe blows to the English interest in France; and the decease of the latter was also unfortunate to the peace of England, since it left no control over the opposing factions of the duke of Gloucester and cardinal Beaufort. A truce with France in 1433 was followed by the marriage of Henry with the celebrated Margaret of Anjou, daughter of Regnier, titular sovereign of Sicily and various other kingdoms, without the actual possession of a single province. Instead of obtaining a dowry with this princess, Henry, by the management of his negociator, the earl of Suffolk, ceded the province of Maine to Charles of Anjou, her uncle. The queen, however, brought to the assistance of her husband great accomplishments of body and mind, although the death of the duke of Gloucester by assassination, one of the immediate consequences of the strength she brought to the Beaufort party, on the supposition of her participation, supplies no very honourable testimony of their application. A renewal of hostilities with France deprived the English of Normandy, and of every other possession in that country, except Calais. In the unpopularity of the court, people now began to look to the claim of Richard, duke of York, whose mother, heiress of the house of Mortimer, transmitted to him the best title to the crown by inheritance. Cardinal Beaufort being dead, the storm of public odium broke first on the head of the queen's favourite, the duke of Suffolk, who was sentenced to banishment, and murdered on his passage to France. The insurrection of Cade followed, and the duke of York returning from Ireland, a great party was formed in his favour, headed by some of the principal nobility. He was thereby enabled to remove his enemies from the king's person, and was by parliament declared protector of the kingdom, the imbecile Henry being by this time unable even to personate majesty. The York and Lancaster parties were now

in such a state, that the sword only could decide between them, and that course of civil contention commenced, the first bloodshed in which occurred at St Albans in May, 1455, and as far as the reign of Henry was concerned, the last in the battle of Tewkesbury in 1471. When the latter took place, the king was a prisoner in the tower, where he soon after died, but whether by a natural or violent death is uncertain, although popular opinion assigned it to the violence of Richard, duke of Gloucester. Henry was gentle, pious, and well-intentioned, but too weak in understanding and temper at all times to act for himself. He seems, however, to have had some attachment to letters, but whether it originated only in his fondness for books of devotion is doubtful. At all events, Eton college, the most splendid establishment in England for classical learning, reveres Henry as its founder, as does likewise King's college, Cambridge. It is said that he was near being canonized, but it was thought that his piety was too closely allied with mental weakness, to support the credit of sainthood.—*Ibid.*

HENRY VII, king of England, first sovereign of the vigorous race of Tudor, was born in 1457. He was the son of Edmund, earl of Richmond, son of Owen Tudor and Catherine of France, widow of Henry V. His mother, Margaret, was the only child of John, duke of Somerset, grandson of John of Gaunt. After the battle of Tewkesbury, he was carried by his uncle, the earl of Pembroke, to Brittany, to seek refuge in that court, from the jealousy of the victorious house of York. On the unjust usurpation of Richard, the young earl of Richmond was naturally adverted to, as the representative of the house of Lancaster; and the enemies of that able but sanguinary sovereign, projected a match between him and Elizabeth, eldest daughter of Edward IV, as a means of closing the feud by a union between the two houses. Richard, who discovered the design, met the danger with so much vigour and ability, that the plan was entirely disconcerted. Meantime Richmond assembled a body of troops in Brittany, and set sail from St Malo's, but having encountered a storm, was obliged to return. It now became the policy of Richard to marry Elizabeth himself, and he made application to the court of Rome for a dispensation accordingly. Finding by this step that no time was to be lost, Richmond made a second attempt in 1485, and landed at Milford Haven, on the 7th of August, with no more than 2000 hired foreign adventurers. He was immediately joined by some leaders of rank, but had only 6000 men when Richard met him at Bosworth, with an army twice as numerous in appearance; but the defection of lord Stanley with his forces, who joined Richmond during the battle, obtained for the latter a complete victory. Henry was proclaimed king on the field of battle, although it is not clear upon what ground, for had the title of the house of Lancaster been superior to that of York, the Somerset branch of it was originally illegitimate, not to mention that the claim

of his mother on this principle was anterior to his own. Henry resolved however to stand upon this ground, and the recognition of his right by Parliament, and his coronation was made to precede his marriage with Elizabeth of York. That marriage however, to the great joy of the nation, took place in 1436, but Henry, jealous of his authority, and strongly imbued with party prejudice, was a stern and ungracious husband, and regarded the Yorkists in general with great aversion. He gave his confidence, indeed, chiefly to Morton and Fox, both of the priesthood, and men of business and capacity, from whom he expected more obsequiousness than from the nobility. Discontent on this and other accounts soon arose, and an insurrection took place, headed by lord Lovel and the Staffords, which was, however, soon suppressed. The imposture of Lambert Simnel, who, by the contrivance of Simon, a priest, was made to personate the earl of Warwick, son to the duke of Clarence, whom Henry kept confined in the Tower, followed. Simnel was sent to act his part in Ireland, where, remote from detection, he interested the whole island in his favour, and was proclaimed king in Dublin. He then came to England, but Henry having publicly shown the true earl of Warwick in the streets of London, little credit was given to him, and the king, collecting an army, met the rebels at Stoke in Nottinghamshire, and totally defeated them. The leaders fell in the field, and but few were executed, although many were severely fined, and with politic magnanimity Henry spared the impostor Simnel, and displayed his insignificance, by making him a scullion in his kitchen. The project of France, for annexing the province of Brittany, by marriage with the heiress, induced Henry to declare war, but his measures were so tardy and parsimonious, that the annexation was not effected. He then raised large sums as a plea of the necessity for hostilities, and landing a numerous army at Calais in 1492, almost immediately accepted a large compensation for peace. The enmity of the duchess dowager of Burgundy, governess of the low countries, never ceased to pursue him. She had encouraged the imposture of Simnel, and now brought a new adventurer on the stage, in the person of the celebrated Perkin Warbeck, said to be the son of a converted Jew at Tournay, and a youth of parts and prepossessing figure. This young man gave himself out to be Richard Plantagenet, the younger of the two sons of Edward IV, supposed to have been murdered in the tower of London, but one of whom he alleged had escaped from that fortress. After visiting Ireland, he accepted the invitation of Charles VIII, king of France, then at war with Henry, who received him with all the honour due to his supposed birth; but dismissed him on concluding a peace. He then repaired to the duchess of Burgundy, who, pretending to be satisfied with the proofs of his identity, acknowledged him as her nephew. The well-known circumstances of his landing, and progress in England, need not be detailed

here, any more than his confession of imposture, and execution by the halter. Soon after, the king fixed an indelible stain on his memory, by the execution of the simple and innocent earl of Warwick, for merely attempting to regain that liberty of which he ought never to have been deprived. Firmly settled upon the throne, Henry now gained a high character among his brother monarchs, many of whom sought his friendship and alliance, and among these was Ferdinand, king of Arragon, a prince, in crafty and cautious policy, very much like himself. After a long negotiation he brought about a match between the infanta Catherine, daughter of this sovereign and of Isabella of Castile, and his eldest son Arthur; and on the death of the latter, in order to retain the dowry of this princess, he caused his remaining son Henry to marry the widow, by papal dispensation, an event which, in the sequel, led to a separation from the see of Rome. He also married his eldest daughter to James IV, king of Scotland, foreseeing the unity of sovereignty that would probably arise from it. In the midst of these cares, he never omitted his favourite pursuit of filling his coffers, employing two lawyers, Empson and Dudley, who by penal statutes, and all sorts of extortion and chicanery, levied upon the subject in all directions, in order that Henry, with insatiable avarice and meanness, might profit by their rapacity. He however made some good use of this treasure, by the advance of sums of money to merchants, without interest, in order to enable them to carry on lucrative enterprises, and promote an extension of commerce. It was owing merely to accident that Columbus did not engage in his service, instead of that of Ferdinand and Isabella; for he had sent him an invitation to his court, which the capture of his brother by pirates prevented from arriving in time. He then employed Sebastian Cabot, who under his auspices discovered Newfoundland, and part of the American continent. In the midst of these, and farther projects of national and family aggrandizement, a decline of health began to inspire him with uneasy thoughts of another world, which he endeavoured to appease, by the usual method of alms and religious foundations; and as his end approached, even directed restitution to some of the parties oppressed by the exactions of Empson and Dudley. He at length sank under a consumptive disorder at his palace of Richmond, in April 1509, in the twenty-fourth year of his reign, and fifty-second of his age. Though extremely unamiable as a man, and rapacious and oppressive as a sovereign, the reign of Henry VII was, upon the whole, beneficial to his country. Being conducted upon pacific principles, it put a period to many disorders, and gave an opportunity to the nation to flourish by its internal resources. His policy of depressing the feudal nobility, which proportionably exalted the middle ranks, was also highly salutary; and it was especially advanced by the statute which allowed the breaking of entails, and the alienation of divided estates. Many other beneficial pro-

vi *ons* also date from this reign, which however was very arbitrary; and the power lost in the aristocracy, for a time gave an undue preponderance to that of the crown. In the reign of Henry VII, indeed, chiefly originated that almost idolatrous notion of prerogative which was more or less entertained by English sovereigns, until finally adjusted by the Revolution of 1688.—*Ibid.*

HENRY VIII, king of England, son of the preceding, was born in 1491, and succeeded his father in 1509. His education had been rather that of a scholar than of a prince; but a handsome person, and a frank and spirited manner, rendered him the object of popular attachment, especially as successor to a sovereign so little beloved as Henry VII. No prince could succeed to a throne under happier circumstances, possessing an undisputed title, a full treasury, and a kingdom flourishing in the bosom of peace. He began by establishing a council, consisting of his father's ablest ministers; and he also sacrificed Empson and Dudley to the popular odium, whose extortions were made a matter of prosecution, and punished by a bill of attainder. His disposition for shew and magnificence soon squandered away the hoards of his predecessor; and his vanity and unsuspecting openness of character, made him an early object of foreign artifice. He was in the first instance prevailed upon by the flatteries of Pope Julius II, and the craft of his father-in-law, Ferdinand, to join in a league formed against Louis XII of France. Some campaigns in France followed, but the success of the English at the "Battle of the Spurs," so called from the flight of the French under a panic, being followed by no adequate result; the taking of Tournay was the only part of this expensive expedition. Meantime more splendid success attended the English arms and honour; James IV, king of Scotland, having, as ally of France, made an incursion with a numerous body of troops into England, was completely defeated, and slain by the English, under the earl of Surrey, at the battle of Flodden field. Henry, however, granted peace to the queen of Scotland, his sister, and established an influence which rendered his kingdom long secure on that side. Finding himself amused by his allies, he soon after made peace with France, retaining Tournay, and receiving a large perquisite in money. He also gave his younger sister Mary in marriage to Louis XII, notwithstanding the great inequality of their ages; a union which was terminated by the death of that king three months after; whose widow, by subsequently marrying her brother's favourite, Charles Brandon, duke of Suffolk, founded the subsequent pretensions of that family and the Greys. The aggrandizement of Wolsey now began to give a leading feature to the conduct and policy of Henry. The neglect of this haughty and influential minister by Francis I, produced hostilities from the emperor Maximilian, assisted by English gold; and when Charles V succeeded to the Spanish

ruin, Francis found it highly expedient to mend his fault, and gain Wolsey, who in consequence induced his master to resign Tournay, and enter into an amicable correspondence with Francis. In order to cement this new friendship, the two monarchs had an interview within the bounds of the district of Calais, the profuse magnificence of which gave the place of meeting the denomination of "the field of the cloth of gold." Notwithstanding these indications, a distant prospect of the papacy being artfully held out to the cardinal by the young emperor Charles, his interest at length gained a preponderancy in the English councils, and still more exhibited the ascendancy of Wolsey, rendered highly unpopular at this time by his unprincipled prosecution and sacrifice of the duke of Buckingham. The principles of the reformation, propagated by Luther, were now making rapid strides, and among the most sincere and zealous of the votaries of papal authority, was Henry himself. Carefully nurtured in controversial divinity, a study so unbefitting a prince, he was induced to write a Latin book against the tenets of Luther, which he presented to pope Leo X, who favoured him in return with the title of "Defender of the Faith." Whether Henry received assistance in this literary labour is doubtful; Erasmus deemed him capable of it; and Luther taking it for granted, published a reply, in which he treats his crowned opponent with very little ceremony. Charles V, now emperor, paid a visit to England in 1522, and induced Wolsey and Henry to declare war against France, which was again invaded by an English and Flemish army, under the earl of Surrey. The defeat and capture of Francis at the battle of Pavia, gave such a preponderancy to the power of the emperor, that the alarm produced thereby, added to a discovery on the part of Wolsey, that Charles was only amusing him on the subject of the papacy, produced not only a peace with France, but a declaration of war against the emperor, which new alienation prepared the way for the most important event in Henry's reign, his divorce from Catherine of Arragon. Addicted to the study of casuistical theology, it is not unlikely that some real scruples in regard to the lawfulness of his union with his brother's widow were entertained by Henry; but it is equally probable, that her disproportionate age, indifferent health, and want of male progeny, operated most to effect a determination, which was additionally strengthened by the charms of Anne Boleyn. This course of proceedings, which terminated in the divorce from Catherine, and the marriage with Anne; the fall of Wolsey which they involved, with the various acts subversive of the papal claims, produced by the impatience and resentment of Henry, belong rather to history than biography. It was in 1532 that the king ventured privately to marry Anne Boleyn; and her subsequent pregnancy produced in the next year an open avowal of the marriage, followed by a sentence of divorce from Catherine, pronounced by archbishop Cranmer. The papal court, highly incensed

at this contempt of its authority, declared the sentence of Cranmer null, and threatened excommunication. The interposition of Francis I retarded the fulfilment of this menace, and affairs seemed to be in a train of agreement, when the casual delay of the courier who bore the king's promise to submit his cause to the Roman consistory, (having first been assured of a decision in his favour,) threw the pope and cardinals into a hasty fit of anger, and they launched the long withheld censure. Henry, on his part also, kept no farther measures, but proceeded to break off entirely all allegiance to the Roman see, and to declare himself supreme head on earth of the English church, a title which has adhered to all his successors. Thus was effected the great revolution, by which, in ecclesiastical annals, this reign is so much distinguished. The birth of a daughter, by the new queen, produced a bill for regulating the succession, which settled it on the issue of this marriage, and declared the king's daughter, by Catherine, illegitimate. But although Henry discarded the authority of the Romish church, he adhered to its theological tenets. While on the one hand, he executed such eminent characters as the learned bishop Fisher, and the able and upright sir Thomas More, for refusing the oath of supremacy, he displayed a rooted aversion to the principles of the reformers, and brought a great many of them to the stake. His temper also grew more stern and arbitrary as he advanced in years, and his reign from this period was that of a severe despot, who sacrificed without scruple every obstacle to his capricious will. Finding that the monks and friars in England were the most direct advocates of the papal authority, and that they operated most influentially to create dissatisfaction among the people, he was provoked to the grand measure of suppressing the monasteries, which he rapidly effected by act of parliament, and thereby inflicted an incurable blow upon the catholic religion in England. The revenues of these opulent establishments, were granted to the crown, which however was not proportionably enriched, as Henry lavished many grants of land upon his courtiers; and besides settling pensions upon the retained abbots, friars, and monks, erected six new bishoprics. Another step which also highly promoted the reformation was the translation of the Scriptures into the vernacular tongue. The fall of Anne Boleyn (see article **BOLEYN**) was however unfavourable, for a time, to the reformers. On the execution of that unfortunate queen, Henry married Jane Seymour the next day; and the birth of prince Edward in 1537, fulfilled his supreme wish for a male heir, although his joy was abated by the death of the queen soon after her delivery. In the mean time the nation becoming equally divided between the Romish and the reformed faiths, and the dissolution of the monasteries affecting many interests, insurrections ensued; some of which, in the northern counties, required suppression in the field. It was not until 1538 that the dissolution of all

the religious houses took place, and as the oppugner of royal authority, the peculiar indignation of Henry fell upon Thomas a Becket. He not only pillaged his rich shrine, but cited the saint himself into court, had him condemned as a traitor, his name expunged from the calendar, and his bones burnt to ashes. The fate of Lambert, a poor schoolmaster, who being condemned for heresy, appealed to the king, was more deserving of compassion. On an appointed day, Henry, seated on his throne in Westminster-hall, attended by the lords spiritual and temporal, entered the lists against the poor unsupported culprit, and after sternly interrogating him concerning the real presence, undertook to refute his errors from the Scriptures and the schoolmen. Six bishops followed; and in conclusion, Lambert was asked whether he would recant or die. He chose death; and was executed with circumstances of unusual cruelty. Soon after a committee of parliament was employed in drawing up six articles of uniformity, which were formed into an act called the bloody bill, in consequence of its severity against protestants. Henry now resolved to marry again, and unluckily for himself, Cromwell, a favourer of the reformation, recommended Anne of Cleves, sister to the duke of that title, a prince of great influence with the German protestants. The marriage took place in 1540, and Henry even created Cromwell earl of Essex; but his dislike to his new wife hastened the fall of that minister, who was condemned upon an ill-grounded charge of treason, and executed, after a vain attempt to soften the obdurate heart of his tyrannical master. At the same time, Henry procured from the convocation and parliament, a divorce from Anne of Cleves, who made no opposition, but with much phlegm continued to live in England. He then married Catherine Howard, niece to the duke of Norfolk, an union which brought him more under the influence of the catholic party, and a rigorous persecution of the protestants followed; although with an impartiality of intolerance, papists who denied his supremacy were treated with equal severity, and the opposite victims were sometimes dragged to execution coupled together. The aged countess of Salisbury, mother of cardinal Pole, and the only relic of the Plantagenets, was the most eminent of the catholic sufferers. Henry now found that his new queen, of whom he was very fond, had proved false to his bed, and on farther inquiry, her conduct before marriage was discovered to have been loose and criminal. The king burst into tears when informed of these facts, but his grief quickly turned into fury, and she was accused and brought to the block in 1542. His obsequious parliament farther gratified him, by an act making it high treason for any woman, whom the king might thereafter marry, to pass herself for a virgin, if otherwise. The most important foreign transactions of the latter part of reign of Henry were those relative to Scotland. The preference shewn by the king's nephew, James V, to the French alliance, brought on

a war in 1542, the principal event of which was the rout of the Scottish army at Solway Frith, the disgrace of which broke the heart of James, who died soon after, leaving an only daughter, the still more unfortunate Mary. A failure, on the part of Henry, of a negotiation to affiance his son Edward to this heiress, produced a new war; and the king was so exasperated at the successful intrigues of France to prevent it, that he joined the emperor in a new war against Francis I. The events of both the Scottish and French wars belong to history. The former consisted chiefly of mutual inroads and devastation, with no conclusive result; and in the latter, the king passed over to Calais, in July 1544, at the head of 30,000 troops, and being joined by 14,000 men from the Low Countries, took Boulogne; but in the winter returned to England. The war lasted until 1546, when, on condition of a large payment from France, a peace followed, in which Scotland was comprehended. In the mean time, Henry, in 1543, had married his sixth wife, Catharine Parr, widow of lord Latimer, a lady of merit, secretly inclined to the reformation. This queen fell into great danger, through the intrigues of the catholic party, but being timely warned, she found means to avert the consequences, (see article CATHERINE PARR). Disease now so much aggravated the natural violence of Henry, that his oldest friends fell victims to his tyranny. The duke of Norfolk, his most trusted and successful general, and the accomplished earl of Surrey, his son, were committed to the Tower. The latter was tried for an alleged correspondence with cardinal Pole, and on an absurd accusation of treasonably quartering a portion of the royal arms; for which pretended crimes he was convicted and executed. The duke of Norfolk was proceeded against by attainder, without trial or evidence; and so little was Henry's ferocity mitigated by his own approaching end, that nothing seemed so much to concern him as the fear that Norfolk might escape, which he did, by the decease of the king the day before that appointed for his execution. It was long before any one would venture to tell Henry of his approaching dissolution, but the communication was at length made by sir Anthony Denny, and the king heard him with resignation. He desired that archbishop Cranmer might be sent for, but was speechless before he came, and could only by a pressure of his hand, give a token of his dying faith. He expired January 28, 1547, in the thirty-eighth year of his reign, and the fifty-sixth of his age. The character of Henry VIII is so amply denoted by his actions, that nothing in the way of portrait is necessary. As impressively depicted by the dying words of Wolsey, the leading feature of it was love of sway. This passion, which was at first compatible with generosity and feeling, at length produced an excess of pride, impatience, and intolerance, which extinguished the sentiments of humanity, and rendered him violent and sanguinary in the extreme. He made himself so much feared, that no English king had fewer checks

to their power; and liberty and constitutional equipoise were out of the question during the whole of his reign, or what is worse, the forms of them were rendered purely subservient to his passions. His vigorous rule was nowever of some service to internal police, and it has been remarked, that he was after all beloved by the great mass of his subjects, who, setting aside the opposing partizans of religion, cared little for passions which affected only courtiers and great men. In another point of view it must be admitted that no hand less strong than that of Henry, could have so suddenly snapped the chain which bound the nation to the papacy, and have thereby opened the road to general freedom of opinion. The headstrong self-will of this imperious king also cleared him of the opposite vices of hypocrisy, craft, and dissimulation, none of which he ever condescended to display. The complete union of Wales with England, and the conversion of Ireland into a kingdom, date from the eventful reign of Henry.—*Ibid*

HENRY IV, king of France and Navarre, called the Great, was born in 1553, at Pau in Bearn. His father, Anthony of Bourbon, chief of that branch of the royal family, was descended from a son of Louis IX. His mother, Jane d'Albret, was the daughter and heiress of Henry, king of Navarre. He was brought up by his grandfather in the simple and hardy manner of the peasantry of Bearn, and this laid the foundation of a vigorous constitution and temperate habits. He was brought to the court of France by his father, in the beginning of the reign of Charles IX, but was recalled by his mother to Pau in 1566, and placed under the tuition of Florent Chretien, a learned man and zealous protestant. In 1599 he accompanied his mother to Rochelle, and learned the art of war under Admiral Coligni. When the perfidious design of destroying the Huguenot chiefs, by a massacre, was formed by Charles and his mother Catherine, one of the means employed to lull their suspicions was, to bestow the king's sister, Margaret, upon Henry, whose mother dying before the ceremony, he entitled himself king of Navarre. The marriage was followed by the massacre of St Bartholomew, on which fatal day he was brought before Charles IX, who, with a furious countenance, gave him the choice of mass, death, or the Bastille; nor is it surprising, that in a moment of such horror, he chose the former. He was subsequently kept at court, as a kind of state prisoner, and was led to practise those arts of dissimulation and licentious intrigue, the latter of which formed the greatest stain of his after character. In 1576 he escaped from Paris, and retired to Alençon, where he renewed his professions of the reformed religion, and put himself at the head of the Huguenot party. The cheerful frankness of his manner rendered him the delight of the soldiery, and he supported his cause with invincible spirit. When Henry III received his death wound in 1589, he called for the king of Navarre, and with much affection acknowledged him his successor. Henry was then in his thirty-sixth year, in

full vigour of mind and body, admired and beloved by his own party, but detested by the catholic majority of his subjects, who were excited by the priesthood into an infuriated zeal against him. The course of the interesting struggle which ensued, until Henry, by sacrificing his religion at St Denis, in July 1599, obtained quiet possession of his due authority, is matter of history rather than of biography; although set off by much detail illustrative of the generous, gallant, and magnanimous character of this ultimately favourite monarch of France. The abjuration of a prince of Henry's laxity of religious principles and freedom of private life, was a cheap sacrifice to the peace of his country. Religion in his own case, being little beyond a badge of party, even his protestant advisers recommended the measure in the sequel. The return of the kingdom to allegiance was however very gradual; and fanaticism, generally inappassable, produced an attempt upon his life, from the knife of Chaetel, a weak and furious bigot, who had been prepared by the regicide doctrine of the jesuits, in consequence of which atrocity the latter were banished the kingdom. At length Pope Clement VIII granted Henry absolution, upon terms favourable to the claims of Rome, and with a ceremony sufficiently humiliating to the king in the person of his ambassadors. The relics of the leaguers, however, still continued the war, and, aided by the Spaniards, brought Henry more than once into great trouble and perplexity, from which he was principally relieved by the prudent financial management of the celebrated Sully. From the time, however, of his recovery of Amiens in 1596, his affairs assumed a new aspect, and he became respectable at home and abroad. By the edict of Nantz, formed on the basis of toleration, he secured to his protestant subjects the exercise of their religion; and the peace of Vervins in 1598, in which the Spaniards restored all which they had taken in Picardy, was equally honourable and advantageous to France. No other foreign or civil war, except an expedition against the duke of Savoy, took place during this reign, the remainder of which was signalized by an attention to those internal improvements, and that amelioration of the condition of his subjects, which his good sense and benevolent disposition suggested. In these salutary objects he was mainly assisted by Sully, whose wise plans, however, were much obstructed by the king's partiality to his various mistresses, and especially to Gabrielle d'Estrées, whom he created duchess of Beaufort, and to whom he gave a promise of marriage, which afterwards caused him much uneasiness. In the mean time he was soliciting a divorce from Margaret of Valois, in which she, who was equally addicted to irregular indulgences, readily concurred. When it was obtained, Henry married Mary de Medici, niece to the grand Duke of Tuscany, an alliance which by no means added to his felicity. Discontents, occasioned by new taxes, and injudicious favouritism, some time after produced a conspiracy, headed by

the marshal de Biron, which, notwithstanding his own and his father's great services, cost him his head. Domestic uneasinesses, occasioned by the new queen's foreign manners, and by the insolence of the marchioness de Verneuil, Henry's principal mistress, also disturbed his repose, and formed the discreditable causes of incessant disquieting intrigue. The kingdom, however, increased in wealth and prosperity; and abroad he successfully mediated between the Pope and the Venetians, and promoted the treaty by which the Dutch were declared independent. Altogether in character, at the age of fifty-four, he fell deeply in love with Charlotte de Montmorency, married to the prince of Condé, and acted with so little self-government, that the prince and princess quitted the kingdom, and took up their residence at Brussels. Henry had indulged a desire to diminish the overgrown power of the house of Austria, and to this design joined the grand but chimerical plan of forming a kind of European federative republic, consisting of powers so well balanced as to be able to prevent future wars and encroachments altogether. Some of these ideas were communicated by Sully to queen Elizabeth. Whatever was the extent of his plans, he certainly intended to carry the war into Germany, and immense preparations were made, both in money and ammunition, for that purpose. Nothing impeded his march but the ceremonial of the queen's coronation, which solemnity was performed with extraordinary magnificence, on the 13th May, 1610; and the very next day he received his death by a stab from the hand of a fanatical assassin, named Ravailiac, which instantly deprived him of life, in the fifty-second year of his age, and twenty-second of his reign. Henry left no children by his first queen; but by his second he had three sons and three daughters. He had also a numerous illegitimate offspring, of whom Cæsar, duke of Vendome, was the nearest heir of his military character. Heuault says of Henry IV, "he united to extreme frankness the most dexterous policy; to the most elevated sentiments a charming simplicity of manners; to a soldier's courage an inexhaustible fund of humanity." This rendered him the good Henry in spite of foibles and defects, but he had too many weaknesses to be truly called the great. It was perhaps chiefly owing to Sully that his attachment to gaming, women, and profusion of all kinds, did not defeat all his wise plans for the good government of his people. As a soldier no one exceeded him in gallantry and enterprise; but he is scarcely entitled to the name of a great general; not to mention that, like the most recent of his race, his principal successes were over his own subjects.—*Mod. Univ. Hist. Millot. Nouv. Dict. Hist.*

HENRY OF ANDELY, or HENRI D'ANDELI, a Norman troubadour of the thirteenth century, so called from the place of his birth. He was the author of a poem, entitled "La Bataille des sept Arts;" of which le Grand d'Aussy has given an analysis, in the

fifth volume of the manuscripts in the king's library at Paris, where the work is preserved. There is also extant, by this author, the "Lai d'Aristote;" and a curious metrical romance, called "La Bataille des Vins;" both which have been published in the collections of MM. Barbazan and Méon.—*Mem. de la Soc. des Ant. de la Normandie.*

HENRY OF KALCAR, a German divine of the fourteenth century, who entered into the Carthusian order, and became prior of the convent of St Barbara, at Cologne. He was eminent for his acquaintance with profane literature, as well as with the scriptures; and was the author of elementary works for the use of his brethren, relating to rhetoric, music, and the duties of monachism; besides which he wrote a treatise on the origin of his order, "De Ortu Ordinis sui," lib. unum. He flourished in the reign of the emperor Wenceslaus, about 1390.—*Trithemius.*

HENRY THE MINSTREL, or BLIND HARRY, names given to a Scottish poet who lived in the fifteenth century, of whom very little is known. It is conjectured that he wrote his celebrated "Actis and Deidis of Shyr William Wallace," about 1446. He discovers some knowledge in astronomy, in classical history, in the Latin and French languages, and in divinity; and probably belonged to one of the religious orders. He was a kind of travelling bard, and visited the middle and south parts of Scotland, and most likely the court and noble families. He was blind from his birth, and in consequence fails in the descriptive parts of his work; but his invention in other respects was only the more active, and he deals largely in romance. As a poet, however, he has considerable merit, and his "Wallace" passed through numerous editions during the period that its language could be duly understood. The first printed edition was that of Edinburgh 1570, and the latest that of Morrison's, Perth 1790, 3 vols. 12mo.—*Mackenzie's Scot. Writers.*

HENRY THE WISE, or HENRICUS PRUDENS, a Carthusian friar of the fifteenth century, prior of a monastic establishment near Bruges, and afterwards of the new house of St Sophia of Constantinople, in the neighbourhood of Bois-le-Duc. He was a very learned divine, and was highly esteemed for his talents among those of his own persuasion. His claims to notice at present arise from the absurdity of a work which he wrote, and which was much admired by his contemporaries, whence may be inferred the degraded taste which prevailed in the religious world previously to the Reformation. The treatise alluded to is entitled "Tetralogum Devotionis," lib. tres, and consists of dialogues between an angel, a monk, Jesus the heavenly father, and Mary the loving mother-in-law of all souls. He died in 1434.—*Trithemius.*

HENRY (DAVID) a native of Aberdeen in Scotland, born in the December of 1710. He was brought up a printer, and worked for some time under Cave, the original projector of the gentleman's magazine. In 1736 he married

the sister of his employer, and removed to Reading in Berkshire, where he conducted a public journal nearly eighteen years, till being received into partnership by his brother-in-law, he thenceforth took a prominent part in the management of the miscellany above-mentioned. In 1772 he published a system of husbandry, under the title of "The Complete Farmer;" and two years afterwards, a compilation of the voyages of various circumnavigators, in 6 vols. 8vo. He also printed an abridgment of some of Tillotson's sermons, in one vol. 8vo. His death took place at Lewisham, June 5, 1792.—*Nichols's Lit. Anec.*

HENRY (PHILIP) an eminent nonconformist, was born at Whitehall in 1631, his father being page of the back stairs to the king's second son, prince Charles. He was educated at Westminster school, whence he was elected to Christchurch, Oxford. He was ordained to the ministry in 1657, according to the directions of the assembly of divines, and soon after married a lady by whom he became possessed of a competent estate near Whitchurch. When the king and episcopacy were restored, he refused to conform, and retired to Broad Oak, where he spent the remaining years of his life in the most exemplary inculcation of religion and general benevolence. He died 24th June, 1696, and his life was written by his son, MATTHEW HENRY, and is deemed so interesting a piece of biography, that Dr Wordsworth was induced to re-print the whole in his "Ecclesiastical Biography."—*Life as above, by his son.*

HENRY (MATTHEW) son of the above, and also a learned nonconformist divine, was born at Broad Oak in Flintshire, in 1663. He was early instructed by his father in the Latin, Greek, and Hebrew languages, and was at first entered at Gray's-inn, to study the law, but his strong predilection for divinity induced him to ultimately decide for the ministry. In 1686 he was invited to settle as pastor with a congregation of dissenters at Chester, where he remained for twenty-five years in the most sedulous attention to his studies and pastoral functions. During this period he received various invitations from congregations in the metropolis; all which he refused, until at length in 1702 he was induced, with great reluctance, to remove to Hackney, where he took so large a share in occasional services at the various dissenting places of worship, as well as at his own, that he secretly undermined his constitution. He died of a stroke of apoplexy at Nantwich, Cheshire, in 1714, on his return from a visit to his old congregation at Chester, in the fifty-second year of his age. The learning and extensive knowledge of Mr Henry rendered him extremely popular, both as a writer and a preacher, and he died greatly lamented. His writings, besides several single sermons, are—"A Discourse concerning the Nature of Schism," 1689; "The Life of Mr Philip Henry," 1696; "A Scripture Catechism," 1702; "Family Hymns, 1702; "The Communicant's Companion," 1704; "Method of Prayer," 1710; "Directions for

daily. Communion with God, 1712; "Exposition of the Bible," 5 vols. folio, of which editions still continue to be multiplied. Mr Henry had not completed his work at the time of his death, and the last volume, from Romans to Revelations, was written with some assistance from his MSS. by a body of dissenting divines. All the works of Mr Henry retain a great share of popularity among the class of dissenters to which he belonged.—*Biog. Brit.*

HENRY, DD. (ROBERT) a clergyman of the Scottish kirk, the son of a farmer settled at Muir Town, St Ninians. He was born February 18, 1718, and having gone through the grammar-school of Stirling and the university of Edinburgh, accepted the mastership of the grammar-school at Annan, but relinquished the situation in 1748, in order to become minister to a presbyterian congregation at Carlisle. In 1760 he settled in a similar capacity at Berwick, where he married; but after a residence of eight years returned to Scotland, and became minister of the New Greyfriars church, in the capital of that kingdom. Two years afterwards he obtained the degree of doctor of divinity from his university, and was chosen moderator of the General Assembly in 1774. In 1776 he succeeded as joint minister to the old church, which appointment he held for the remainder of his life. Dr Henry is principally known in England as the author of a valuable history of this country, published originally in six quarto volumes, at various intervals, the first appearing in 1771, the fifth in 1781, and the last, which is posthumous, in 1793. This work brings down the history arranged under the several heads, civil and military, religious, legal and constitutional, literary, commercial, &c. to the reign of Henry VIII. It has since gone through several editions, and is said to have produced its author no less a sum than 3300*l.* for his copyright, besides a pension of 100*l.* per annum from the crown, through the recommendation of the earl of Mansfield. Dr Henry also printed a translation of Goguet's "Origin of Laws," &c, in three vols. octavo. In his private character he is said to have been extremely amiable, and exemplary in his clerical duties. His death took place in 1790.—*Nichols's Lit. Anecd.*

HENRYSON (ROBERT) an early Scottish poet, who was a monk of the order of St Benedict, and a schoolmaster at Dunfermline, in the sixteenth century. He was the author of the "Testament of Fair Cresseide," which is printed in some editions of the works of Chaucer; and he also wrote fables, published at Edinburgh, 1621 8vo.—*Irvine's Lives of Scotch Poets.*

HENSHELL (SAMUEL) an ingenious scholar, distinguished by his researches concerning Saxon literature. He was educated at Oxford, where he became a fellow of Brazen-nose college, and entered into holy orders. In 1798 he published a thin quarto volume, entitled "Specimens and Parts of a Topographical Commercial, Civil, and Nautical His-

tory of South Britain." This publication, which related only to the county of Kent, was not continued for want of encouragement. He was also the author of "The Saxon and English Languages, illustrative of each other, the impracticability of acquiring an accurate knowledge of Saxon literature through the medium of Latin phraseology, exemplified in the errors of Hicckes, Wilkins, Gibson, and other scholars; and a new mode suggested of radically studying the Saxon and English languages," 4to; "Actual Survey of South Britain, by the Commissioners of William the Conqueror, completed in 1086; faithfully translated, with an Introduction, Notes and Illustrations of S. Henshall and John Wilkinson," 4to, 1799; "The Etymological Organic Reasoner; with one Sheet of the Gothic Gospel of St Matthew; and another of the Saxon Durham Book, in Roman Characters; and a literal English Version," 1807. Both the latter works were left imperfect; the author, who was rector of St Mary, Stratford-le-Bow, Essex, having died soon after the publication of the first number of his Organic Reasoner, in 1807.—*Gent. Mag. Watt's Bibl. Brit.*

HEPBURN. There were two of this name, the elder, JAMES BUONAVENTURA, was descended of a Scottish family, the son of a presbyterian minister, settled at Hamstocks in Huntingdonshire, where he was born in 1573. He studied at the university of St Andrews, and distinguished himself by his proficiency in Oriental literature, but becoming a convert to the Romish church, went to Rome, assumed the tonsure, and, after a considerable period spent in travel, became at length keeper of the Vatican library. He published a grammar of the Arabic, and a dictionary of the Chaldaic and Hebrew languages in 1591, and died in 1620 at Venice.—ROBERT HEPBURN, a miscellaneous writer, was born in 1690, and bred to the Scottish bar, having gone through a regular course of study at a Dutch university. He was the author of a series of periodical papers, published in 1711, under the title of "The Tatler, by Hector Macstaff of the North," and died the year following at Edinburgh, in his twenty-second year.—*Mackenzie's Scotch Writers. Tytler's Life of Lord Kaimes.*

HERACLITUS, a celebrated philosopher of antiquity, was a native of Ephesus, and flourished about the sixty-ninth Olympiad, or the year 504 BC. He discovered an early attention to intellectual studies, and was initiated into the mysteries of the Pythagorean doctrine by Xenophanes and Hippasus, which he afterwards incorporated into his own system. His fellow-citizens requested him to undertake the supreme magistracy, but on account of their dissolute manners, he declined it in favour of his brother. His natural temper being splenetic and melancholy, he despised the ignorance and follies of mankind, shunned all public intercourse, and devoted himself to retirement and contemplation. He made choice of a mountainous retreat for his residence, and lived upon the natural produce

of the earth; the result of which diet and manner of life was a dropsy, that terminated his life about the sixtieth year of his age. It has been a tale commonly received, that Heraclitus was perpetually shedding tears on account of the vices of mankind, a fable that probably took its rise from the gloomy severity of his temper, and which may pair off with the perpetual laughing of Democritus for the same reason. He was the author of a treatise "On Nature," of which a few fragments, preserved by Sextus Empiricus, alone remain. With a design of concealing his opinion, at least from the vulgar, he made use of figurative and intricate diction, which obtained for him the title of "the obscure philosopher." They were deposited by him in the temple of Diana, for the use of the learned, where they remained until they were made public by Crutes, or according to Titian, by the poet Euripides. To these writings both Zeno and Plato were partially indebted, and as good an account of the system, as its obscurity will allow, may be obtained from Brucker. The sect of Heraclitus was probably soon extinct, as no traces of its existence remain after the death of Socrates. In 1573 Henry Stephens published at Paris a collection of the fragments of Heraclitus, with those of Democritus, Timin, and other ancient philosophers, in octavo.—*Diogenes Laertius. Falcetii Bibl. Græc. Enfield's Hist. Philos.*

HERAULT (DIDER) better known by his latinized name, Desiderius Heraldus, was a French lawyer and philological writer in the seventeenth century. He held the office of counsellor of the parliament of Paris; but distinguished himself chiefly by the cultivation of ancient literature, and wrote notes on the works of Tertullian, Minutius Felix, and Arnobius, in defence of Christianity; and on the epigrams of Martial. He was also the author of a learned miscellany, entitled "Adversaria," 1599; "Questionum Quotidianarum Tractatus;" "Observationes ad Jus Atticum e Romanum;" and other publications. He died in 1649. His son, who was a protestant minister in London, wrote sermons, a tract against the regicides, &c.—*Moreri. Bayle.*

HERAULT DE SEHELLES (MARIE JEAN) advocate-general in the parliament of Paris, and after the revolution, royal commissary, member of the tribunal of cassation, deputy from the department of Paris to the Legislative Assembly, and at length a member of the National Convention. He possessed a considerable fortune, and being a handsome man, and fond of dress, he often attracted the sarcasms of some of his colleagues during the triumph of sansculottism. At the sessions of the Legislative Assembly he presented several reports, particularly relative to the responsibility of ministers; in July 1792 he joined in the declaration that the country was in danger, and he subsequently advocated vindictive measures against the royalists. He presided in the National Assembly in September, and becoming a member of the Convention, he warmly engaged in the schemes of the revolutionary party. About this time he was charged

with the management of some negotiations with foreign powers, but they proved unsuccessful. He was then sent on a mission to Alsace, and at Colmar he ran great risk of being assassinated in a popular insurrection. In November 1792 he was again employed as a commissioner from the Convention to the army in the department of Mont Blanc; and he was thus absent from Paris during the trial of the king. He however, in conjunction with his colleagues, Gregoire, Jagot, and Simond, wrote a letter to the Convention, charging Louis XVI with an uninterrupted series of treasons, and recommending his condemnation without appeal to the people. But he chiefly distinguished himself in the contest between the Mountain and the Gironde parties, and he powerfully co-operated in the destruction of the latter. Mercier accuses him of being the author of the constitution of 1793, or, as he terms it, that ridiculous code of anarchy; and in fact Hérault presided in the Convention at the period when it was established. He was also a member of the committee of Public Safety. But all his services to the terrorists did not save him from the scaffold. He was denounced March 17, 1794, for having concealed an emigrant, and as belonging to the faction of Danton, with whom he was executed on the 5th of April following. He displayed great courage, or rather levity of conduct in his last moments, bidding adieu to his companions with as much sang-froid as if he had been going to a party of pleasure.—*Dict. des H. M. du 18me. S.—Biog. Nouv. des Contemp.*

HERBELOT (BARTHOLOMEW D') a celebrated Orientalist, born of a good family, at Paris, in 1625. After having gone through a course of study in the university of his native city, he applied himself particularly to the eastern languages, with a view to the elucidation of the Hebrew Scriptures. He visited Italy for improvement, and formed an acquaintance at Rome with Lucas Holstenius and Leo Allatius, two of the most learned men of the age. He was patronized by cardinal Grimaldi, who in 1656 sent him to Marseilles to meet Christina queen of Sweden, then on her way to Rome; and that princess was much pleased with his society. On his return to France, the minister of state, Fouquet, received him into his family, and gave him a pension of 1500 livres. On the disgrace of his patron, D'Herbelot was fortunate enough to escape the general ruin which involved the dependants of the fallen statesman; and his merit procured him the office of Oriental interpreter to the king of France. After some years he again travelled into Italy. At Leghorn he was introduced to the grand duke of Tuscany, Ferdinand II, who invited him to Florence, where he arrived in July 1666. He was not only magnificently entertained by the duke; but was also gratified with a present of a valuable collection of eastern MSS. While in Italy he commenced his great work, the "Oriental Library;" and being recalled to Paris by Colbert, a pension was given him, that he

might be at liberty to proceed with his undertaking. It was his first design to have published his collections in the Arabic language, and types were cast for the purpose of printing it. But the death of Colbert having interrupted this plan, he recomposed his work in the French language, as likely to prove more generally useful. On the recommendation of the chancellor M. de Pontchartrain, he was afterwards appointed to the royal professorship of Syriac, vacant by the death of M. d'Auvergne. He died at Paris, December 8th, 1695. His book was published in 1697, under the title of "La Bibliothéque Orientale," folio. Besides which he left a collection on the same subject entitled "Anthologia," and a dictionary in the Turkish, Persian, Arabic, and Latin languages, neither of which has been printed. The best edition of the Oriental Library is that of the Hague, 1777, 4 vols. 4to, with the Supplements of Galland and Visdelou.—*Perrault Hommes Illust. Moreri.*

HERBERT (EDWARD) lord Herbert of Chisbury, in Shropshire, eminent for his character and writings, was the eldest son of Richard Herbert, esq. of a very ancient family, and was born at Montgomery castle, in Wales, in 1581. He so early attained the rudiments of learning, that at the age of twelve he was entered as a gentleman commoner at University college, Oxford. In 1600 he came to London, and shortly after the accession of James I, became a knight of the bath, having previously, and before he had completed his education, married the heiress of sir William Herbert, of St Gillian's, another branch of the family. He served the office of high sheriff of Montgomery, and divided his time between the country and the court, where he was much esteemed for his gallant bearing. At length, wearied with the uniformity of a domestic life, he visited the continent, carrying with him those chivalrous ideas with which the whimsical oath and ceremonies attendant on the investiture of the order of the bath seem to have seriously impressed him. His advantageous person and manners gained him many friends, among whom was the constable of Montmoyency. He returned to England in 1607, and in 1609 quitted it again, in order to join the English forces serving in aid of the prince of Orange, at the siege of Juliers, where he distinguished himself with his usual rash and romantic bravery. On the conclusion of the siege he visited Antwerp and Brussels, and then returned to London, where his reputation having preceded him, he was deemed one of the most conspicuous characters of the period. His gallantry towards a court lady, which however he asserts to have been without criminality, produced an attempt by her husband to assassinate him in the streets of London, which attempt he foiled by an extraordinary effort of courage and dexterity. In 1614 he served again in the Low Countries, under the prince of Orange, and in 1616 was sent ambassador to the court of France, where he acted with great spirit, and resented some high language on the part of the constable

Luynes, the favourite of Louis XIII, with so much spirit, that a complaint was sent to the English court, which produced his recall. He cleared himself however so well to king James, that on the death of Luynes, he was sent back to France as resident ambassador. It was at Paris that, in 1624, he printed his famous book, "De Veritate prout distinguitur a Revelatione," which he had planned and begun in England. The purport of this singular work was to assert the sufficiency, universality, and absolute perfection of natural religion, with a view of proving the uselessness of Revelation. An incident which he has mentioned as occurring previously to its publication, affords a remarkable proof of the power of imagination over an enthusiastic mind. Being in his chamber, doubtful as to the propriety of publishing his book, on one fair day in summer, his casement opened to the south, the sun shining clear, and no wind stirring, "I took," says he, "my book De Veritate in my hand, and kneeling devoutly on my knees, said these words: 'O thou eternal God, author of the light which now shines upon me, and giver of all inward illuminations, I do beseech thee of thy infinite goodness to pardon a greater request than a sinner ought to make: I am not satisfied enough whether I shall publish this book De Veritate: if it be for thy glory, I beseech thee give me some sign from heaven, if not I shall suppress it.' I had no sooner spoke these words, but a loud, though yet gentle noise came from the heavens, (for it was like nothing on earth,) which did so comfort and cheer me, that I took my petition as granted, and that I had the sign demanded." He makes the most solemn assertions of the truth of this narrative, and there is no reason to doubt that he fully believed it, an extraordinary instance of vanity and self-delusion in one whose chief argument against revealed religion is founded on the improbability that heaven would communicate its will to a part of the world only. In 1625 he returned from France, and was created an Irish peer, and afterwards an English baron, by the title of lord Herbert of Chisbury. Little more is heard of him in public life, except that he joined the parliamentary party in the first instance, but subsequently quitted it, and was a great sufferer in his fortune in consequence. He died in London 1648, and was buried in the church of St Giles's in the Fields, where his epitaph particularly recorded him as the author of "De Veritate." The character of lord Herbert is strongly marked in his memoirs, which shew him to be vain, punctilious, and fanciful, but open, generous, brave, and disinterested. Of his writings, the work De Veritate is the first for learning and argument, and was answered by Gassendi. He followed this piece by another, entitled "De Religione Gentilium, errorumque apud eos causis;" or an inquiry into those causes which misled the priests and sages of antiquity. Soon after his death was published his "Life and Reign of Henry VIII," which is rather an apology, or a panegyric on that turbulent prince, than a fair representation. The English style

of lord Herbert is strong, manly, and free from the quaint pedantry of the age. A collection of his poems published by his son in 1665, display little poetical merit. His entertaining memoirs, written by himself, remained in MS. in the family, until first printed by lord Orford, at Strawberry-hill, in 1764.—*Biog. Brit. Life by Himself.*

HERBERT (GEORGE) younger brother of the subject of the last article, and distinguished as a poet and divine. He was born at Montgomery castle, April 3rd, 1593; and received his education at Westminster school, and Trinity college, Cambridge. He pursued his studies with great assiduity, and in 1619 he was chosen public orator to the university; having previously taken the degree of M.A. and been elected a fellow of his college. At this period he was in anticipation of preferment at court, and with that view he paid particular attention to the modern languages. His talents attracted the notice of James I, and in his endeavours to conciliate and secure the favour of that monarch, he had recourse to a system of flattery, which, however it might be countenanced by the example of his learned contemporaries, was by no means creditable to his character. A letter of thanks which he wrote to James, officially, on account of his present to the university of his Basilicon Doron, is said, by Isaac Walton, to have been composed "in such elegant Latin, so full of conceits, and all expressions so suited to the king, that he enquired the orator's name." Herbert's assiduities were rewarded with the gift of a sinecure office, worth 120*l.* a year; but the death of his majesty in 1625, put an end to his prospects of promotion, and in conjunction with other motives, induced him to relinquish his former plans and take orders in the church of England. Like his brother he had a strong constitutional tendency to enthusiasm, and he entered with ardour on the duties of his new profession. The first benefice he obtained was a prebend in the diocese of Lincoln, when his zeal induced him to rebuild, partly at his own expense, the parish church with which it was connected. He was subsequently seized with a fit of illness, on his recovery from which he married a lady, of feelings and sentiments congenial with his own, who was nearly related to lord Danby. In 1630 he took priest's orders, and was presented to the rectory of Bemerton, near Salisbury, in Wiltshire. There he drew up a manual of pastoral duty, entitled "The Priest to the Temple, or the Country Parson;" the rules and maxims of which were strikingly exemplified in his own conduct as a clergyman. He died in February 1632-3. His friend, Nicholas Ferrar, (who rendered himself remarkable by establishing a kind of protestant monastery, at Little Gidding, in Huntingdonshire), published from Herbert's MS. "The Temple: Sacred Poems and Private Ejaculations," Cambridge, 1663. He was also the author of a Latin oration on the return of prince Charles from Spain, printed in 1623; and he is said to have translated Cornaro's treatise on temperance and long

life. The poetry of Herbert, in common with that of Donne and Cowley, is adorned by point and antithesis, and obscured by metaphysical allusion; but some of his minor pieces, in spite of their defects, are extremely beautiful, and may be said to bear the stamp of genius. It should also be remembered by the censurers of our author, that he neither cultivated poetry as an art in which he wished to excel, nor as an amusement; but simply employed poetical phraseology as the vehicle of moral and devotional sentiments. His life by Isaac Walton has been often published.—*Aikin's G. Biog. Edit.*

HERBERT (MARY) see Sidney.

HERBERT (WILLIAM, earl of Pembroke) a noble poet, and a munificent patron of learned men. He was born in 1530, at the family seat, Wilton-house, Wilts, and was educated at New college, Oxford. At the expiration of his minority he succeeded his father in the titles and estates of his house, and three years after became a knight companion of the order of the garter. In 1626 he was elected chancellor of Oxford, to which university he was a liberal benefactor in his life, and at his death bequeathed a valuable collection of manuscripts. In the same year he was appointed lord steward of the household to Charles the First, but held his post little more than three years, dying suddenly of an apoplectic attack in April 1633. An octavo volume of his miscellaneous poems appeared in 1660.—*Biog. Brit.*

HERBERT (sir THOMAS) descended of a junior branch of the Pembroke family, was the son of an alderman of York. In 1626 his relation, William, earl of Pembroke, then lord steward, who had previously supported him, first at Jesus college, Oxford, and afterwards at Trinity college, Cambridge, furnished him with the means of indulging his wishes in travelling over a considerable portion of the east, an account of which journey he published in 1634, under the title of "A Relation of some years' Travel into Africa and the Great Asia, especially the territories of the Persian monarchy, and some part of the Oriental Indies and the Isles adjacent." Of this work, first printed in one folio volume, there have been four subsequent editions. The death of his patron, in 1630, by stopping his resources, caused his return to Europe. On the breaking out of the civil wars he leaned at first to the parliament, but subsequently he reconciled himself to the king, whom he attended with uncorruptible fidelity and affection during his captivity, and up to the very moment of his execution. On the restoration of monarchy, his attachment to the deceased sovereign was recompensed by his successor with a baronetcy. He survived this event more than twenty years, occupying himself principally in literary pursuits, during which period he assisted Dugdale in the compilation of the third volume of his "Monasticon Anglicanum," and published in 1678 his "Threnodia Carolina," an account of the two last years of the life of king Charles I. This work was reprinted in 1813. An

account of the end of that monarch from his pen is also to be found in Wood's *Athenæ*. He died March 13, 1682.—*Biog. Brit.*

HERBERT (WILLIAM) an antiquarian and bibliographical writer of the last century. He appears to have been a native of Hertfordshire, and was educated at Hitchin in that county. For some years he carried on trade as a hosier, in London; and subsequently went out to the East Indies, in the situation of purser's clerk, on board one of the company's ships. He remained a good while in that country, employing his time in making charts and plans of the coasts and harbours, for which he obtained a handsome gratuity from the India directors on his return to England. He then commenced map and print seller, in which business he was so successful as to be enabled to purchase an estate at Cheshunt, whither he retired in the latter part of his life. He reprinted sir Robert Atkyns's *History of Gloucestershire*; but his only literary labour of importance was an edition of Ames's "Typographical Antiquities; or Account of the Origin and Progress of Printing in Great Britain and Ireland, considerably augmented," 1785-1790, 3 vols. 4to. He died at Cheshunt in 1795, aged seventy-six.—*Life pref. to Dibdin's Edit. of the Typogr. Antiq.*

HERBIN (AUGUSTUS FRANCIS JULIAN) an able oriental scholar, was born March 16, 1783. At the age of sixteen he began to compose an Arabian grammar, the first part of which was published at Paris, 1803, 4to and folio, under the title of "Developpemens des principes de la langue Arabe Moderne;" no second part of which has yet appeared. In his twenty-first year he was admitted into the academy of sciences, belles lettres, and arts. Besides the above he published a "Treatise on Ancient Music;" and "An Account of Hafiz the Persian poet." He died December 30, 1806, in his twenty-third year, leaving many MSS. which prove his early death to be a great loss to the learned world.—*Nouv. Dict. Hist.*

HERBINIUS (JOHN) a native of Silesia, born in 1632. He was deputed by the Polish protestant churches to visit those of Germany, Holland, &c. in 1664. This employment leading him to travel, he took the opportunity of examining such matters as excited his curiosity; particularly cataracts and waterfalls, which produced the following publications: "De Admirandis Mundi Cataractis," &c., Amsterdam, 1678, 4to; "Kiovia Subterranea;" "Terræ motus et quietis examen." He also wrote "De Statu Ecclesiarum Augustinæ Confessionis in Polonia," 670, 4to; "Tragico-comœdia et Ludi innocui de Juliao Imperatore Apostate," &c. He died in 1676.—*Niceron. Moreri.*

HERBST (JOHN ANDREAS) a German musician of the seventeenth century. He was a native of Nuremberg, and in 1628 he was chapel-master at Frankfort on the Main, and afterwards at Nuremberg. In 1650 he returned to Frankfort, where he died in 1660. Herbst was the author of a treatise, entitled "Musica Poetica;" and of works on vocal

music, on thorough bass, and on counterpoint; besides which, he translated from the Italian a treatise on music and poetry, by Giovanni Chiodono.—*Rees's Encyclopæd.*

HERBST (JOHN FREDERICK WILLIAM) a German naturalist, distinguished particularly for his entomological researches. He was born November 1st, 1743, at Petershagen, in the principality of Minden; and after having for some years been a teacher at Berlin, he obtained the situation of almoner to a Prussian regiment of infantry. His talents becoming known, he was appointed preacher in several churches of Berlin, where he gave great satisfaction. He was, however, principally known as a naturalist. He was a director of the society of friends of natural history at Berlin; of the royal academy of Bavaria at Burg-lausen; and of the economical society of Potsdam. He kept up a correspondence with men of science in various parts of the world, and made journeys into Germany, France, Switzerland, and Denmark, in search of knowledge. His death took place November 5th, 1807. He was the author of treatises on the natural history of crustaceous animals, insects, worms, scarabæi, butterflies, and apterous insects; all which works were published collectively at Berlin, 1785—1804, under the title of a "Natural System of all the known Insects, indigenous and exotic," with plates. As a preacher he is placed by his countrymen in the same rank with Spalding. Different collections of his sermons have been published.—*Biog. Univ.*

HERDER (JOHN GODFREY) a German Lutheran divine, and moral philosopher of the new school. He was a Prussian by birth, and having received a clerical education, he at length obtained the office of ecclesiastical superintendent-general of the Dutchy of Saxe Weimar. He was also first preacher to the court, vice president of the consistory, and had the title of counsellor of state. He distinguished himself by his writings on the belles lettres in general; but his works relative to ethics and intellectual philosophy attracted most notice, and procured him the greatest reputation in his own country. The following are the titles of some of his publications: "Lays of Love, the oldest and most beautiful specimens of Oriental Poetry, with twenty-four ancient lays of the Minnesingers," Leipsic, 1778, 8vo; "Scattered Leaves," Gotha, 1791-1796, 6 vols. 12mo; "Letters on the Improvement of Human Nature," Riga, 1793-1796, 8 vols. 8vo; "Intellect and Experience; a Meta-criticism on the Criticism of Pure Reason, i. e. the Philosophy of Kant," 1799, 2 vols. 8vo; "Popular Songs;" "Poems;" "Terpsichore," 3 vols. 8vo; a treatise on the "Origin of Language." But the work by which Herder is principally known in England is, the "Outlines of a Philosophy of the History of Man;" of which a translation was published in London in 1800. He died in 1803; and a collection of his writings has since appeared in 26 vols. 8vo.—*Nouv. Dict. Hist. Biog. Univ.*

HERISSANT (LEWIS ANTHONY PROSPER) a French physician and naturalist of the last century. He was a native of Paris, where he died at the age of twenty-four, in 1769. His literary works are a Latin poem on the Art of Printing; a biographical eulogy on John Winter, or Gunther of Andernach, an early German anatomist; another on the antiquary Du Cange; and a work entitled "Bibliothèque physique de la France, ou Liste de tous les Ouvrages qui traitent de l'Histoire Naturelle de ce Royaume." He was also the author of *Memoirs published by the Royal Academy of Sciences.*—*Nouv. Dict. Hist.*

HERITIER DE BRUTELLE (CHARLES LEWIS L') an eminent French botanist, distinguished as one of the first propagators of the Linnean system in France. He was born at Paris in 1746, of an opulent mercantile family. In 1772 he was appointed superintendent of the waters and forests in the généralité of Paris; when he turned his attention particularly to the study of botany. The first fruit of his researches was the publication of a splendid work, entitled "Stirpes Novæ aut minus cognite, quas Descriptionibus et Iconibus illustravit L'Heritier," 2 vols. folio, which he commenced in 1784, but did not finish till several years after. He then published the *Flora of Peru*, from the collections of Dombey. In a visit to England he collected the materials of a work, entitled "Hortum Anglicum;" and during his stay in this country he greatly augmented his library. L'Heritier was a lawyer by profession, and in 1775 he became counsellor of the court of Aids, and he was for a long time dean of that court. After the Revolution, he accepted the office of a judge of the civil tribunal of the department of the Seine, and he is said to have fulfilled the duties of his station with rectitude and fidelity. He was also member of the Constituent Assembly. On the establishment of the National Institute, he became a zealous and efficient associate of that learned body. He was returning from one of its sittings, on the 15th of August, 1801, when he was murdered in the street, near his own residence. The deed occasioned a peculiar sensation of horror throughout Paris, the more especially as suspicion rested on one of the sons of the unfortunate man, who had made himself previously notorious for filial disobedience and general depravity. Neither the family of L'Heritier nor the public authorities appear to have taken any active measures for the discovery of the assassin. Besides the works already noticed, he was the author of several monographies of plants and other botanical essays.—*Rees's Cyclopad. Biog. Univ.*

HERITIER DE VILLANDON (NICHOLAS L') a French poet of the seventeenth century. He adopted the military profession, and served in the French guards; but being disabled, he retired from the army to devote himself to literature. He held the office of royal historiographer; but his works consists of two tragedies and a few poems. He died in 1680.—His daughter, MARIE JEANNE L'HERITIER DE VILLANDON, obtained some reputa-

tion as a poetess in the beginning of the last century. She published a translation of the Heroic Epistles of Ovid; of which six are in verse; "Le Tombeau de M. le Duc de Bourgogne," a poem; "L'Avare puni," a novel, in verse; and "Le Tour ténébreux." She died in 1734, aged seventy.—*Nouv. Dict. Hist.*

HERMANN. There were four of this name, JAMES HERMANN, an excellent mathematical scholar, was born at Basle in 1678, and became professor of his favourite science, in the university of Padua. Peter the Great, then occupied in the formation of his academy, induced him to take a journey into Russia, in order to assist in the organization of his infant establishment. On his return, he repaired to his native city, where he obtained the professorship of ethics and jurisprudence. He was the author of a treatise, in two books, on the motions and forces of solids and liquids, entitled "De Phoronomia," &c. 4to, 1716; "De Nova Accelerationis Lege;" "De Vibrationibus Chordarum tensorum;" "Responsio ad Considerationes de Princip. Calculi Different." &c.; and other mathematical tracts, to be found in the transactions of various scientific associations. His decease took place in 1733.—JOHN HERMANN was a physician of Strasburgh, in the neighbourhood of which city he was born in 1738. Having graduated as MD. in that university, he obtained in succession the professorships of medicine in 1768, philosophy 1778, pathology 1782, botany, chemistry, &c. 1784. Strasburgh is indebted to him for the foundation of its cabinet of natural history, in order to create which, he bequeathed the whole of his own collection, as well as the remains of his property, at his death. Herman greatly extended the boundaries of science, both by his lectures, and by the great number of dissertations and theses which he published. In 1787 and 1789 he printed some pieces on the medical virtues of certain reptiles. These tracts are inserted in the memoirs of the academy of Strasburgh, and other scientific collections. Except a journey to Paris, and two tours in Switzerland, in 1772 and 1791, he rarely absented himself from Strasburgh, where he died about 1802. His son-in-law, M. Hammer, published from his MSS. in 1804, "Observationes Zoologicae posthumæ," pars i. 4to, Strasburgh and Paris.—HERMANN (JOHN FREDERIC) son of the preceding, and eminent also as a naturalist. He was born in 1768, and died of a contagious fever in 1793. He left, among other works, a thesis on Comparative Osteology; and a memoir on Insects, without wings, crowned by the Society of Natural History at Paris in 1790, and published with plates in 1804. He also wrote the History of the Spiders of Alsace, not hitherto published.—PAUL HERMANN, a native of Halle, in Saxony, and professor of botany at Leyden, flourished in the latter part of the seventeenth century. In the early part of his life he had acted as physician to the Dutch settlement at Ceylon, whence he re-

turned to Holland in 1679. He was the author of a variety of botanical works; among others, of a catalogue of the plants in the Leyden garden. "Lugduno Batavæ Flores;" "Museum Zeylanicum," 1717; "Paradisus Batavus;" "Cynosura Materiae Medicae," 4to, 2 vols. &c. His death took place in 1695.—*Hutton's Math. Dict. Nouv. Dict. Hist. Biog. Nouv. des Contemp.*

HERMAS, an ancient father of the Christian church surnamed Pastor, or the Shepherd, from a book written by him under that title. This treatise was originally composed in the Greek language, and sufficient fragments are yet extant in quotations to prove the fact of its existence; as a whole, however, it is now only to be found in a Latin version, printed by Cotelerius, and translated into English by archbishop Wake. It consists of a series of allegories, visions, &c. in the manner of the Book of Esdras, but any practical good which might result from its perusal is likely to be much weakened by the tediousness and prolixity of the similitudes. This Hermas is generally considered to have been the same alluded to in the Epistle to the Romans, cap. 16, v. xiv.; but the particulars of his life, and the manner of his death, are unknown, farther than that the latter is supposed to have taken place at Rome in the year 81, when Clemens was bishop there. In the Romish Martyrology, by a mistake not unfrequent in that communion, his names original and acquired, are celebrated as those of two distinct persons, the festival of Hermas being kept on the 9th of May, and that of Pastor on the 26th of July.—*Cave. Dupies.*

HERMELIN (SAMUEL GUSTAVUS, baron) a Swedish nobleman, eminent for his literary and scientific attainments, a native of Stockholm, in which metropolis he was born in 1744. Having early in life travelled for improvement over a great part of the European continent, he was afterwards entrusted with the conduct of a diplomatic mission from his own government to that of the United States of America. On his return in 1784 he visited England, of which he made the tour, directing his attention here, as well as in the other countries through which he passed, principally to the study of geology and statistics. In the pursuit of his favourite sciences, no small portion of his property, and more than fifteen years of his life, were devoted to a most laborious geographical undertaking, which, commencing with the survey of Westro-Bothnia and Lapland, finally ripened through the assistance of a company, which he formed on the failure of his own pecuniary resources, into the completion of an entire Swedish atlas. Through his exertions also, and principally at his own expense, great improvements were introduced among the mining establishments of the country, especially in Bothnia, where three new forges were erected by him, and the iron mines, of which he was now appointed superintendant, were worked under his direction. A more honourable than lucrative testimony to his valuable services on these occa-

sions was paid him by the college of nobles who voted him a handsome gold medal. After fifty-four years spent in active service, he retired from public life in 1815, retaining his salary, with an additional pension of 1000 rix dollars. Besides a great variety of tracts printed among the transactions of the academy of Stockholm, of which society he had been a member since the year 1771, the following treatises were published by him in a separate form—"A Mineralogical Description of Lapland and Westro-Bothnia," with tables of the population and industry of the latter province; "Mineralogical Charts of the Southern Provinces of Sweden;" "On the Melting and Casting of Copper Minerals;" "On the use of Stones found in the Swedish Quarries;" and an "Essay on the Resources of the Swedish Provinces." M. Hermelin closed a long and useful life at the age of seventy-four, on the 4th of May, 1820.—*N. Month. Mag.*

HERMES or MERCURY, called by the Egyptians Thoth, a highly celebrated legislator, priest, and philosopher, who, on account of his science and learning, acquired the surname of Trismegistus, or thrice great. Various opinions are entertained of the time in which he flourished, but the most general opinion assigns about B.C. 1930. Clemens Alexandrinus has given an account of his writings, which he makes extend to thirty-two volumes of theology and philosophy, and six upon medicine, but they are no longer in existence. The two dialogues assigned to him, named "Poemander" and "Asclepius," are now universally held to be supposititious. According to Manetho, the Thoth or Hermes who wrote the works described by Clemens Alexandrinus, lived at a later period than B.C. 1930, and was the reviver of the institutions of the more ancient philosopher of the same name, whom Diodorus Siculus makes the counsellor and friend of Osiris, and the inventor of letters or hieroglyphics. According to both this writer and Cicero, he framed laws, and instituted religious rites among the Egyptians, and taught astronomy, music, and other sciences. Christian writers have identified him with Enoch, Joseph, Moses, and others; each upon some fancied similarity or other, resting upon no foundation, and utterly unworthy of notice.—*Cave. Moreri. Bruncker.*

HERMILLY (VAQUETTE D') a French historian of the last century, who was a native of Amiens. His most important production is a French translation of the General History of Spain, by John de Ferreras, 10 vols. 4to; besides which he published "Histoire du Royaume de Majorque, et de Minorque," 4to; "Bibliographie Parisienne;" and "Theatre Critique," 12 vols. 12mo. He died in 1778.—*Nouv. Dict. Hist.*

HERMOYNES. There were two of this name; the first, a rhetorician of Tarsus, lived about the middle of the second century, the precocity of whose talents was equalled only by the shortness of their duration. He gave lectures on eloquence in his fifteenth year, and two treatises of his on the same art were

written, one at the age of seventeen, the other at that of twenty-two. Three years afterwards memory, and even the power of speech, forsook him. Of the precise time of his decease nothing certain is known, but a copy of the above-mentioned works is yet extant, printed in one volume 8vo, at Geneva, 1614.—The other was an African painter and philosopher, a few years posterior in point of time to the former. Though embracing many of the Christian doctrines, he denied that of the resurrection, the necessity of baptism, &c. and in his opinions respecting the person of Christ, made an odd mixture of Christianity and the religion of Mithras.—*Cave. Dupin.*

HERNANDES (FRANCESCO) a Spanish physician, employed by Philip II to arrange and describe the plants, animals, and minerals of the New World, a task which he executed with considerable ability. This treatise, written in the Latin language, was printed at Rome in 1651, folio. Of the birth-place of this author, or of the time and manner of his decease, nothing is accurately known.—*Halleri Bibl. Bot.*

HERO, a philosopher and mathematician of Alexandria, the scholar of Ctesias, who distinguished himself by his skill in the construction of warlike machines. Two treatises of his on this subject are yet extant, entitled "De Telis conficiendis jaculandisque;" and "De Constructione et Mensura Manubalista;" as also another, "De Automatorum fabrica." There was another of the same name under the emperor Heraclius, who wrote on similar subjects. Of his works there are yet remaining a work on fortification, entitled "De Obsidione repellenda et toleranda;" as also "De Machinis Bellicis;" "De Vocabulis Geometricis et Stercometricis;" and a tract called "Geodesia."—*Fabricii. Bibl. Græc.*

HEROD the Great, so called from his power and talents, king of the Jews. He was a native of Ascalon, in Judea, where he was born B.C. 71, being the second son of Antipater, the Idumean, who appointed him to the government of Galilee. He at first embraced the party of Brutus and Cassius, but after their death, reconciled himself to Antony, by whose interest he was first named tetrarch, and afterwards king of Judea. After the battle of Actium, he so successfully paid his court to the victor, that Augustus confirmed him in his kingdom, and on all occasions his abilities as a politician and commander were conspicuous. In other respects his passions were fierce and ungovernable. Although married to the celebrated Mariamne, a princess of the Asmonean family, her brother Aristobulus, and venerable grandfather Hyrcanus, fell victims to his jealousy of the ancient pretensions of their race. His very love of Mariamne herself, mingled as it was with the most fearful jealousy, terminated in her execution; and his repentance and keen remorse at her death, only exasperated him to farther outrages against her surviving relations; her mother, Alexandria, and many more falling victims to his savage cruelty. His own sons by Mariamne

Alexander and Aristobulus, whose indignation at the treatment of their mother seems to have led into some intrigues against his authority, were also sacrificed in his anger, and their deaths crowned the domestic barbarity of Herod. It was the latter event which induced Augustus to observe, that it was better to be Herod's dog than his son. He rebuilt the temple at Jerusalem with great magnificence, and erected a stately theatre and amphitheatre in that city, in which he celebrated games in honour of Augustus, to the great displeasure of the more zealous of the Jews. He also rebuilt Samaria, which he called Sebaste, and adorned it with very sumptuous edifices. He likewise, for his security, constructed many strong fortresses throughout Judea, the principal of which he termed Casarea, after the emperor. On his palace, near the temple of Jerusalem, he lavished the most costly materials, and his residence of Herodium, at some distance from the capital, by the beauty of its situation, drew around it the population of a great city. Such indeed was his magnificence, that Augustus said his soul was too great for his kingdom. The birth of Jesus Christ took place in the thirty-third year of the reign of Herod, which important event was followed in a year or two by his death, of a languishing and loathsome disease, at the age of sixty-eight. According to Josephus he planned a scene of posthumous cruelty, which could have been conceived only by the hardest and most depraved heart. Having summoned the chief persons among the Jews to Jericho, he caused them to be shut up in the circus, and gave strict orders to his sister, Salome, to have them massacred at his death, that every great family should weep for him, which savage order was not executed. Herod was the first who shook the foundation of the Jewish government, by dissolving the national council, and appointing the high priests, and removing them at pleasure, without regard to the laws of succession. His policy, ability, and influence with Augustus however, gave a great temporary splendour to the Jewish nation.—HEROD ANTIPAS, son of Herod the Great, by his fifth wife, Cleopatra, was appointed tetrarch of Galilee on his death. This was the Herod who put to death St John the Baptist, in compliment to his wife, Herodias, in revenge for his reproaches of their incestuous union; Herodias having been united to, and forcibly taken away from his brother Aretas. The ambition of Herodias stimulated her husband to a measure which proved his ruin. His nephew, Agrippa, having obtained royal honours from Caligula, she induced Herod to visit Rome to request the same favour, where he was met by an accusation on the part of Agrippa, of having been concerned in the conspiracy of Sejanus, and of being in secret league with the king of Parthia. This accusation being credited, he was stripped of his dominions, and sent with his wife into exile at Lyons, or, as some say, to Spain, where he died, after possessing his tetrarchy for forty-three years.—HEROD AGRIPPA, SON

of Aristobulus, by Berenice, daughter of Herod the Great, and nephew to the preceding, was partly brought up at Rome with Drusus, the son of Tiberius, on whose death he left Rome with a dilapidated fortune, but returned some years after, and being suspected of an attachment to Caligula, was imprisoned by Tiberius. This apparent misfortune proved the source of his future prosperity, for on the accession of Caligula, he was not only rewarded with a golden chain, as heavy as the iron one which had bound him, but was honoured with the title of king, and received the tetrarchy of his disgraced uncle, and all the dominions of Herod the Great. It was this Herod who, to please the Jews, caused St James to be put to death, and St Peter to be imprisoned. His power and opulence acquired him a great reputation, and in a grand audience at Casarea, having made an oration to some deputies from Tyre and Sidon, he was hailed by his obsequious train as one who spoke like a god. His satisfaction at this flattery was soon after reproved by a violent disorder in his bowels, which carried him off in the forty-fourth year of his age, and seventh of his reign.—HEROD AGRIPPA II, son of the preceding, being too young to govern, Judea was again reduced to a Roman province. He subsequently however received the kingdom of Chalcis, and obtained the superintendency of the temple and sacred utensils at Jerusalem, together with the nomination of the high priests. He resided much at Jerusalem, and here, together with his sister, Berenice, heard the defence of Paul addressed to the Roman governor, Festus. Being driven from Jerusalem, in the revolt which proved so fatal to the Jews, he joined Cestius, the Roman commander, and when Vespasian was sent into the province, met him with a considerable reinforcement. During the siege of Jerusalem, he was very serviceable to Titus, and after its reduction, he and Berenice (with whom he was suspected to have an incestuous intercourse,) returned to Rome. He is supposed to have died there, AD. 94, and in him terminated the Herodian line and family.—*Josephus. Nouv. Hist.*

HERODIAN, the son of Apollonius the Alexandrian, a Greek historian, who died about the middle of the third century. He was the author of a history of his own times, comprising the reigns of Antoninus Philosophus, Balbinus, and Pupienus. This work, which was written in eight books, contains, among other curious matter, an account of the ceremonies used at the apotheosis of the emperors. Like many historians who have related the events of their own times, Herodian sometimes forgets that he is writing for posterity, and omits the necessary dates; nor is he very correct as to matters of fact, and points of geography. His impartiality has also been called in question as respects his characters of Alexander Severus and Maximian, but, according to some able critics, with injustice. Herodian was translated into Latin by Politian, which version is to be found in the edition of 1789-1805, Irmisch,

Leipsic, 5 vols. 8vo, by far the most erudite and elaborate of the whole; as also in the editions of Paris, Strasburgh, Oxford, and Edinburgh.—*Fabricii Bibl. Græc.*

HERODOTUS, the most ancient of the Greek historians, whose works are extant, and called by Cicero the "Father of History." He was born at Halicarnassus, in Caria, in the first year of the seventy-fourth Olympiad, answering to BC. 484, and left his native place in order to travel, for the acquisition of knowledge, through Greece, Thrace, Scythia, Mesopotamia, Syria, and Egypt. After collecting in this way all the information that he could obtain concerning the history and origin of nations, he is supposed to have retired to the isle of Samos, for the composition of his History, and afterwards to have revisited Halicarnassus, in order to assist in the overthrow of the tyranny to which it had been subjected. He was in his thirty-ninth year, when a generous desire of fame led him to publicly recite his History at the olympic games, probably that part of it which relates to the Persian invasion. It was heard with great applause, and caused him to be known and admired throughout Greece. He appears in the latter part of his life to have been a resident of Thurium, an Athenian colony in Magna Græcia. He survived the Peloponnesian war, and his death is placed BC. 413. The History of Herodotus is contained in nine books, distinguished by the names of the nine muses. They comprehend a period of about 240 years, from Cyrus the great to Xerxes; and besides the transactions between Persia and Greece, contain a sketch of the affairs of several other nations. The style of this author is admired for its ease and sweetness, and he chiefly excels in narration. The value of his History has been the subject of much discussion and controversy; but the most considerate opinion deems him deserving of credit, in relation to the affairs of Greece, which took place after his own birth; and in other respects he is believed to relate the traditional accounts respecting remote times and countries just as he heard them, without feeling much solicitude to distinguish fact from fable. This carelessness has laid him open to the satire of Juvenal, and in modern times to that of Voltaire. Plutarch also accuses him of partiality, and composed a treatise "On the Malignity of Herodotus," taxing him with injustice to the Thebans, Corinthians, and Greeks in general. His work, however, will always be deemed one of the most precious remains of antiquity. A life of Homer is ascribed to Herodotus, which is evidently supposititious. The best editions of this valuable classic are that of Aldus, 1502, folio; that of Wesseling, Amsterdam, 1763; and that of Edinburgh, 1806, 7 vols. 8vo. A very good translation of Herodotus into French, was published by M. Larcher, in 9 vols. 8vo; and there are two English versions, one by Littlebury, in 2 vols., and the other by Beloe, in 4 vols. 8vo.—*Vossii Hist. Græc. Fabricii Bibl. Græc. Moreti.*

HERON (ROBERT) a miscellaneous writer,

who was a native of Scotland, and received a clerical education in that country. He was patronised by Dr Hugh Blair, to whom he for some time acted as assistant preacher at the high church at Edinburgh. While in that situation he translated Niebuhr's travels in Arabia, and other works; and executed some literary compilations. Being disappointed in his views of preferment in the Scottish kirk, he removed to London, and devoted himself entirely to writing for the press. He translated Fourcroy's chemistry; published a system of geography, in 4 vols. 8vo; and displayed, at least, a great deal of industry in the profession which he had adopted. For a short time he was editor of the British Press and the Globe daily papers; and in 1806 he commenced a newspaper, entitled "The Fame;" but the undertaking proving unsuccessful, he became involved in pecuniary difficulties and distress, which probably injured his health, and ultimately occasioned his death, which took place in the fever institution, St Pancras, near London, in the summer of 1807.—*Gent. Mag. Watt's Biblioth. Brit.*

HEROPHILUS, an eminent Greek physician of Chalcedon, who lived nearly three hundred years BC. He is mentioned by Cicero, Pliny, and Plutarch; and, according to Fallopius, understood the human body better, and made more discoveries, than his contemporary Erasistratus. He is also said to have discovered the lacteal vessels; and to have given the names to various parts of the body, which they still retain. Galen calls him a consummate physician; and says that these two great anatomists dissected many human bodies at Alexandria in Egypt. Herophilus has also the reputation of having discovered the nerves, and their use, making three sorts of them; the first to convey sensation; the second to move the bones, and the third the muscles. He was also the first who paid accurate attention to the movements of the pulse. Of the many writings of this physician, scarcely anything remains to us but a few fragments inserted in the works of Gaen.—*Halleri Bibl. Med. et Anat.*

HERRERA TORDESILLAS (ANTONIO DE) a Spanish historical writer of the last century. He was born in 1565, and obtained the situation of secretary to the viceroy of Naples, Vespasian Gonzaga. From this post he rose successively to be grand historiographer of the Indies, and secretary of state. His principal work is his history of India, embracing a period of sixty-two years, from 1492 to 1554 inclusively. This work, published originally in four folio volumes, is in general accurate and valuable, though written in too inflated a style, and with an occasional tendency towards the marvellous. It has been translated into English, 8vo. 6 vols. Another production, which he commenced at a later period, having for its subject the history of his native country, and printed in three folio volumes, is far inferior to the first, both in point of execution and design. His death took place in 1628. There was another writer of the same

family, Ferdinand de Herreras, his contemporary. This latter was a native of Seville, and is known as the author of a history of the war of Cyprus; an account of the battle of Lepanto; and a life of sir Thomas More; besides a volume of Lyrics, printed in 1582.—*Anton. Bibl. Hispan.*

HERRGOTT (JOHN JAMES MARQUARD) a German historian, who was a native of Fribourg, in Brisgau, and became a Benedictine monk. He was historiographer to the imperial house of Austria; and he published "Genealogia Diplomatica Gentis Habsburgicæ," 3 vols. folio; and "Monumenta Domus Austriacæ," 5 vols. folio. He died in 1702.—*Nouv. Dict. Hist.*

HERRICK (ROBERT) an English poet of the seventeenth century. He was a native of London; and was educated at St John's college and Trinity hall, Cambridge. He took orders in the church of England; and in 1629 was presented to the living of Dean Prior, in Devonshire. In common with many others of the episcopal clergy, he suffered deprivation under the government of Cromwell; but he recovered his benefice after the Restoration of Charles II, in 1660, which period he did not long survive. The compositions of this bard were published in 1648, under the title of "Hesperides, or the Works both Humane and Divine of Robert Herrick," 8vo. A selection from these poems, with an account of the author, by Dr Nott, was printed at Bristol in 1810; and a complete edition at Edinburgh in 1823, 2 vols. 8vo. Dr Drake, in his *Literary Hours*, has taken some pains to illustrate the poetical character of Herrick; and has given specimens of his productions, which shew that he does not deserve the comparative oblivion in which he has been involved.—*Campbell's Spec. of Brit. Poets.*

HERRING (THOMAS) archbishop of Canterbury, a distinguished English prelate, was born in the year 1691, at Walsoken, in Norfolk, of which parish his father was rector. He was educated in the first instance at the free grammar-school at Wisbeach; whence he was in due time removed to Jesus college, and afterwards to Corpus Christi college, Cambridge. Here he obtained a fellowship in 1716, and in the same year was made deacon; and graduating as AM. took the charge of pupils. In 1719 he was ordained priest; and became successively minister of Great Shelford, Stow cum Qui, and Trinity, in Cambridge. In these stations his talents as a preacher became highly celebrated, and were not long unrewarded, bishop Fleetwood appointing him his chaplain in 1722, and presenting him with the rectories of Rittenden in Essex, and Barley in Hertfordshire. Two years afterwards, he was chosen preacher to the hon. society of Lincoln's inn; and about the same time was made a chaplain in ordinary to the king, whom he attended on his visit to the university of Cambridge in 1728, and was made doctor of divinity. In 1731 he was appointed dean of Rochester; and in 1737 obtained the see of Bangor; whence he was

translated, in 1743, to the archbishopric of York: and it was fortunate for the country that a prelate of his spirit and principles held that influential situation, during the rebellion of 1745. On learning the defeat of the king's troops at Preston Pans, he convened a meeting of the nobility, gentry, and clergy at York, to whom he addressed a spirited speech, and excited so much enthusiasm, that no less than 40,000*l.* was immediately subscribed to raise troops for their defence. These services, added to his general reputation, naturally advanced him to the primacy, on the death of archbishop Potter, whom he succeeded in 1747, to the general satisfaction of all parties. In 1753 he was seized with a violent fever, which brought him to the brink of the grave; and although he in some measure recovered, he found it necessary to retire to his seat at Croydon, and decline all public business. After languishing in this manner nearly four years, he expired 13th March, 1757. Archbishop Herring was a prelate of great liberality, both in mind and conduct; and much disinclined to controversy and persecution. Although so celebrated for his pulpit oratory, seven of his sermons only have been printed, which were collected and published after his death, by his friend Mr Duncombe, in 1767. In the year 1777, his "Letters" to the same gentleman, written from 1728 to 1757, were also published, with notes and an appendix, octavo, which correspondence has been much admired.—*Biog. Brit. Monthly Review*, vols. xxviii. and LVII.

HERSCHELL (sir WILLIAM) a distinguished astronomer, son of a musician of Hanover, born November 15, 1738. He was the second of four sons; and being destined by his father for his own profession, was placed by him at the age of fourteen in the band of the Hanoverian foot guards. In this situation, however, he did not long remain; but quitting the regiment abruptly, arrived in England towards the close of the year 1757; and having the good fortune to attract the notice of the earl of Darlington, he was employed by that nobleman in the formation of a military band; and also in conducting several concerts, oratorios, &c. in the palatinate of Durham, and the neighbouring counties. In 1766 he obtained the situation of organist at Halifax, but shortly after relinquished it for a more advantageous appointment of a similar nature at the Octagon chapel, Bath, which, together with his pupils, produced him a handsome income. Although enthusiastically fond of music, he had for some time devoted his leisure hours to the study of mathematics and astronomy; and being dissatisfied with the only telescopes within his reach, he set about constructing one for himself, in which arduous undertaking he succeeded, having, in 1774, finished an excellent reflecting instrument of five feet, with his own hands. Encouraged by his success, he proceeded to complete larger telescopes, and soon constructed a seven, a ten, and a twenty feet reflector, having in the latter case finished nearly two hundred object

mirrors before he could satisfy himself. From this period he gradually withdrew from his professional engagements. Late in 1779 he began a regular survey of the heavens, star by star, with a seven feet reflector, and after eighteen months' labour, discovered, on the 13th of March, 1781, a new primary planet, which he named the Georgium Sidus. This discovery drew upon him the attention of the scientific world, and the patronage of George the third; who, by the settlement of a handsome salary, enabled him to devote the rest of his life exclusively to astronomy. He now quitted Bath for Datchett, in the neighbourhood of Windsor, but afterwards removed to Slough, where he commenced the erection of a telescope of the enormous dimensions of forty feet, and completed it in 1787. With this powerful instrument he continued to prosecute his discoveries, assisted by his sister Caroline, regularly communicating the results to the Royal Society till the year 1818. In 1783 he had discovered a volcanic mountain in the moon, and from farther observations made with the assistance of his large instrument, in 1787, two others were plainly distinguished in the same planet, emitting fire from their summits; he also ascertained that the Georgium Sidus was surrounded with rings, and had six satellites, and established a far more intimate acquaintance with the appearance, satellites, &c. of Saturn than had been before obtained. In 1802 Herschell laid before the Royal Society, a catalogue of 5000 new nebulae, nebulous stars, planetary nebulae, and clusters of stars which he had discovered; and in consequence of the important additions made by him to the stock of astronomical knowledge, received from the university of Oxford the honorary degree of doctor of laws, an honour which was followed up, in 1816, by the Guelphic order of knighthood from the king. He continued his astronomical observations till within a few years of his death, which took place at Slough, and he was buried at Upton, Berks. in Aug. 1822.—*Ann. Biog.*

HERSENT or HERSAN (CHARLES) a French divine, principally distinguished as the writer of a satire against cardinal Richelieu. He was a member of the congregation of the fathers of the oratory; and after having preached with great reputation at Dijon, Angers, Paris, and other places, he quitted the society in 1625, in consequence of a dispute with the bishop of Angers, about the profits of a priory, to which he thought himself entitled. He showed his pugnacious disposition by attacking, in different publications, the proceedings of his late associates. In 1627 he became chancellor of Metz, and was admitted a doctor of the Sorbonne. While in this situation he published an octavo pamphlet, entitled "Optati Galli de cavendo Schismate, Liber paræneticus ad illustriss. Galliae, primates, archiepiscopos, episcopos, &c." 1640. This is a bitter libel against cardinal Richelieu, who, at that period, wishing to intimidate the papal court, had threatened to create a patriarch to preside over the Gallican church.

resent, under the name of Optatus, (borrowed from a writer against the schism of the Donatists in the fourth century,) endeavoured to show that the measures of the French minister would lead to a separation from the church of Rome. The cardinal, exasperated by the style, as well as the subject of the book, procured a decree of the parliament, ordering that it should be burnt by the common hangman, and took great pains to suppress the work, so that it is extremely rare, and highly valued by bibliomaniacs. A strict perquisition was made after the author, who however took refuge at Rome. After residing there a few years, he involved himself in new difficulties, by a sermon which he preached, in 1650, on the festival of St Louis, king of France. The doctrines he delivered savoured of Jansenism; and to avoid being tried before the Inquisition he returned to his native country, where he died in 1660. A list of his works may be found in Moreri; but they require no particular notice.—*Nouv. Dict. Hist. Peignot Dict. des Liv. condamn. au Feu.*

HERTZBERG (EWALD FREDERICK COUNT VON) a Prussian minister of state, and political writer of eminence in the last century. He was born at Lottin, in Pomerania, in 1725. He manifested his talents at an early age, by the publication of a "Dissertation on History;" and on the completion of his academical studies, he became so advantageously known to the king, Frederick II, as to obtain from that monarch employment as a diplomatic agent. It was in 1745 that he was appointed secretary of legation, whence he gradually rose to the highest offices in the state; and having been ennobled, he was made prime minister, in which post his history is closely connected with that of his ambitious, but highly-talented master. He died in 1795. Besides an "Essay on the Population of Brandenburg," which, in 1752, obtained the prize proposed by the Academy of Sciences of Berlin for the best treatise on the subject, he was the author of many important memoirs and discourses on the history and political relations of Prussia.—*Nouv. Dict. Hist. Biog. Univ.*

HERVEY (JAMES) a pious and popular divine of the church of England. He was born at Hardingstone, near Northampton, in 1713-4, and was sent by his father, who held the living of Collingtree in that neighbourhood, to the free grammar school of Northampton, whence he was removed at the age of seventeen to Lincoln college, Oxford. He remained at the university five or six years, without proceeding farther than his bachelor's degree, and having taken orders retired, in 1736, to the curacy of Dummer, in Hampshire. In 1738 he quitted Dummer to reside at Stoke abbey, in Devonshire, the seat of his friend, Paul Orchard, esq. and in 1738 undertook the curacy of Bideford, in the same county, where he was greatly beloved by his congregation, who increased his small stipend by a voluntary collection. It was during his residence in Devonshire that he planned, and probably

wrote, part of his "Meditations;" and an excursion to Killhampton, in Cornwall, occasioned him to lay the scene of his Meditations among the tombs in the church of that place. After serving the cure of Bideford nearly three years his rector died, and the new incumbent dismissed him, although the parishioners offered to maintain him at their own expense. In 1743 he became curate to his father, then possessing the living of Weston Favell, and on the death of the latter he succeeded him in his livings, both of Weston and Collingtree. He attended the duty in each of these parishes alternately with a curate, with the most exemplary assiduity, holding a weekly lecture, in addition to the regular service, until his great exertions, both in the study and pulpit, brought on a decline, which terminated his existence on Christmas day, 1758, in the forty-fifth year of his age. The moral character of this conscientious divine was most exemplary; his temper was disinterested, placid, and humble, and in benevolence and charity he was surpassed by none with equally bounded means. His religious notions were Calvinistic, and in respect to the imputed righteousness of Christ, he is accused of carrying them to the verge of Autinomianism. The style of his writings is more flowery, than chaste or manly; and hence his great popularity among general readers who possess little refinement of taste. Besides his celebrated Meditations, the price of the copyright of the first part of which (700*l.*) he wholly distributed in charity, he is the author of "Theron and Aspasio; or a series of Letters and Dialogues on the most important subjects;" "Remarks on Lord Bolingbroke's Letters on the Use and Study of History;" "Eleven Letters to the Rev John Wesley, in answer to his Remarks on Theron and Aspasio;" "A Collection of Letters," published after the author's death; "Letters to Lady Frances Shirley," not published until 1782, and various sermons printed from his MSS. All which are included in the genuine edition of his works, 6 vols. 8vo.—*Life prefixed to Letters. Biog. Brit.*

HERVEY (JOHN LORD) a literary nobleman of the last century, chiefly known at present as one of the individuals satirized by Pope. He was born October 15th, 1696, and was the eldest son of Mr Hervey, afterwards created earl of Bristol. He received his education at Clare-hall, Cambridge, where he took the degree of MA. Soon after the accession of George I, he was appointed a gentleman of the bed-chamber to the prince of Wales. His master becoming king, Hervey, in 1730, was promoted to the office of vice-chamberlain, and made a privy counsellor. In 1731, in consequence of a political quarrel, he fought a duel with Pulteney, afterwards earl of Bath, which exposed both parties to some ridicule, and excited towards the latter the displeasure of the king. In 1733 the subject of this article was raised to the peerage, by the title of baron Hervey, of Ickworth; and in 1740 he was made lord privy seal, in which post he remained only till the following year, when a

change of ministry occurred on the retreat of sir Robert Walpole from the administration of public affairs. He died August 5th, 1743. Lord Hervey appears to have owed the obloquy cast on his character by Pope, to his acquaintance with lady Mary Wortley Montagu, whose talents as a wit and poetess excited the sensitive jealousy of the celebrated bard. Under the appellations of *Sporus* and *Lord Fanny*, Pope has drawn very degrading portraits of a man whose personal, political, or literary character, was by no means contemptible, and who showed that he was not to be ridiculed with impunity, by his retaliation on his antagonist, in a poetical "Epistle from a Nobleman to a Doctor of Divinity." He was also the author of several short poems, and of some clever political tracts in defence of Walpole. He married Miss Mary Lepel, a lady celebrated for her beauty and wit. Dying before his father, the earldom of Bristol descended successively to his two sons.—The elder, AUGUSTUS JOHN HERVEY, who entered into the naval service, and rose to the rank of admiral, was unfortunately distinguished as the husband of the abandoned duchess of Kingston. He died in 1780, and was succeeded by the hon. and rev. FREDERICK HERVEY, bishop of Derry, in Ireland, whose death took place in 1803.—*Biog. Peerage. Chalmers's Biog. Dict.*

HERVEY (HON THOMAS) brother of the preceding, more distinguished in the annals of fashion and gallantry than in those of literature; but noticed here as the author of a very peculiar publication. About 1741 was printed, without date, a pamphlet entitled "Letters from the Hon T. Hervey to Sir Thomas Hanmer." 8vo; which called forth a "Proper Reply to a very extraordinary Letter from the Hon T. H—," 1742. The subject of these tracts is the reversionary right to an estate in Wales, of which the wife of sir T. Hanmer, the editor of Shakspeare, was heiress. This lady had been seduced by Mr Hervey, whose Letters to the injured husband were designed as an apology for himself and his mistress.—*Orig*

HERY (THIERRI DE) an eminent French surgeon in the sixteenth century. He practised his profession at Paris, where he acquired great reputation as a surgeon and an anatomist. Francis I sent him into Italy as medical superintendant of the French army, in which post he continued till after the battle of Pavia, in 1525, when the disorganization of the troops released him from his engagement. He then went to Rome, and entered into the hospital of St James the Elder, in which he found many patients languishing under the syphilitic disease, to whose cases he particularly directed his attention. He is said to have employed in their cure the external application of mercury, and he was probably one of the first surgeons who adopted that practice. Returning to Paris, he devoted himself principally to the treatment of the terrible malady in question; in which he was so successful that he gained more than fifty thousand crowns, in fees from patients infected

with that disorder. He died in 1599, at an extremely advanced age. There is extant by this author a treatise on Syphilis, which was formerly held in much estimation.—*Hutchinson's Biog. Med. Biog. Univ.*

HERZ (MARCUS) a celebrated German physician, of the Jewish persuasion, who was professor of medicine at Berlin, where he died in 1803. He published in the German language several works on professional subjects, which procured him much reputation on the continent. But in England Dr Herz is disadvantageously known as one of the most illiberal and decided opponents of the practice of vaccination, which he denominated bestial inoculation; but which, in spite of his diatribes, and those of Birch and Moseley in our own country, has extended its benefits to a large portion of the habitable world.—*Nour. Dict. Hist. Edit.*

HESELRIGE (sir ARTHUR) a distinguished actor in the political revolutions of the age of Charles I. He was the eldest son of sir Thomas Heselrige, of Noseley, in Leicestershire, a gentleman of an ancient Norman family, who was created a baronet in 1622. The subject of this article succeeded to the title on the death of his father, in 1629. He was one of the representatives in parliament for the county of Leicester in 1640, when he distinguished himself by his opposition to the arbitrary measures of the court party; and he was particularly active in procuring the bill of attainder against lord Strafford. His conduct excited the hostility of the king's counsellors, and his name appears in English history among the members of parliament, whose arrest was the object of his majesty's imprudent visit to the house of Commons. In the civil war which followed, sir Arthur Heselrige was governor of Newcastle-upon-Tyne; and commanded a regiment of cuirassiers, which he had raised for the service of the commonwealth. He also acted at the head of a committee at Leicester, for the confiscation of the property of the royalists and the raising of forces, zealously assisting the lord lieutenant, and the sheriff appointed by parliament, in all affairs in which his influence or authority in the county could be advantageous to the cause he had embraced. He attached himself to Cromwell, whose friendship and confidence he enjoyed; and after the termination of hostilities, and the death of the king, he was appointed one of the council of state. The protector likewise nominated him a member of his house of Peers; but Heselrige preferred a seat among the Commons. In the confusion which prevailed previously to the restoration, he endeavoured to counteract the designs of general Monk, but in vain; and he did not live to witness the triumph of the royal cause, and the proscription of his party, his death having taken place January 7th, 1660. Two letters which he wrote while on military service have been published—one "Concerning the revolt and recovery of Tinemouth Castle," London, 1648, 4to; and another entitled "A Letter to William Lenthall, concerning a great victory

obtained by the Parliament Forces in Northumberland," London, 1648, folio.—*Lord Clarendon. Hume. Betham's Baronetage. Watt's Bibl. Brit.*

HESIOD, an ancient Greek poet, by some supposed to be contemporary with Homer, but by others, who support themselves by the authority of the Arundelian marbles, he lived about thirty years earlier. His father was a native of Cuma, a town of Ætolia, who, being driven thence by misfortunes, settled at Ascra, in Bœotia, but whether before or after the birth of Hesiod is not known, although usually called the Ascraean. Little is recorded regarding him which can be depended upon; yet it appears that he at one time kept sheep on Mount Helicon, and that on the death of his father he was deprived of his share of his patrimony by a brother named Perses, whom however he lets us know, he not only forgave, but relieved, when he afterwards stood in need of assistance. He raised himself to consequence by his talents, and obtained the prize of poetry at the funeral games of Archidamas, king of Eubœa. He is also said to have victoriously contended with Homer; but the account of this pretended contention is deemed fabulous. Several pieces attributed to Hesiod are held to be suppositions, but the works most certainly of his composition are that entitled "Works and Days," a sort of calendar of rural occupations; and his "Theogony, or Generation of the Gods," which is valuable for the information it affords of the Pagan mythology. His death, as related by Solon, in Plutarch's banquet, took place at Locris, where he was falsely accused of being an accomplice in a rape, and suffered death from the hands of the brothers of the abused female, who were in their turn drowned by the inhabitants, and who also burnt their houses. The best editions of Hesiod are those of Amsterdam, 1667 and 1701, 8vo; of Oxford, 1737, 4to; and of Leipsic, 1778, 8vo. There are English translations by Cooke and Elton.—*Moreri. Sœzii Onom. Dibdin's Classics.*

HESSE, MD. (JONAS LEWIS VON) a physician of Hamburg, born at Stralsund in 1766. He was the friend and pupil of the celebrated Kant, whose philosophical principles he adopted. He is principally known by his elaborate History of Hamburg, of which city his fellow-citizens appointed him governor in the insurrection, which took place there towards the termination of the career of Napoleon. He died February 20, 1823.—*Ann. Biog.*

HESSE (WILLIAM, landgrave of) a German prince, who distinguished himself as a cultivator of mathematical science, and especially astronomy, in the sixteenth century. He erected at Cassel an observatory, which he stored with the best instruments he could procure for making observations on the heavenly bodies. Christopher Rothmann, a mathematician, and Justus Byrgius, an ingenious artist, were employed by this prince; and the result of their joint researches appeared in the "Observationes Hassiæcæ,"

published at Leyden in 1618, by Willebrord Snell. Many letters of the Landgrave and of Rothmann to Tycho Brahe were printed in his collection of Astronomical Epistles, Uraniburg, 1596, 4to. The prince of Hesse died in 1592.—*Martin's Biog. Philos.*

HESSELING or HESSELINK (GERARD) an anabaptist minister, eminent as a theologian, who was born at Groningen in 1755, and died at Amsterdam in 1811. He studied at his native place, at Lingen, and at Amsterdam; and in 1778 he took his degrees in philosophy at Lingen, where he produced a remarkable dissertation, "De Montibus ignivomis ac terræ motibus, eorumque cognatione." On being nominated professor of theology in the seminary of the anabaptists at Amsterdam, in 1786, he delivered a Latin discourse on the causes of the rejection of Christianity by the Jews and Gentiles, on the first preaching of the gospel. He was promoted to the professorship of philosophy in the same institution in 1800, and sustained that office with great reputation till his death. His principal works are, a memoir "On the Priesthood of Jesus Christ, as described in the Epistle to the Hebrews;" a "Hermeneutical Dictionary of the New Testament," 2 vols. 8vo; and a Memoir on the Rhythm and Prosody of the Dutch Language; to which may be added three theological dissertations, which obtained prizes from the Teylerian Society of Haarlem. He also published in periodical works many papers on physics, natural history, and general literature; and when the Royal Institute of Holland was formed he was nominated one of the members, but he declined the honour, as inconsistent with his academical avocations.—*Biog. Univ. Biog. Nouv. des Cont.*

HESYCHIUS, of Alexandria, a Greek lexicographer, of whose personal history nothing certain can be ascertained. His dictionary, which is still extant, contains a number of scripture words, whence it has been inferred that he was a Christian; though some critics think it probable such words are additions to the original work by another author. The lexicon of Hesychius, which is reckoned one of the most valuable collections of grammatical and philological information relative to the Greek language, still existing, was published by Schrevelius, Lugd. Bat. 1668, 4to; but the most important edition is that of Alberti, Lug. Bat. 1746-1766, 2 vols folio; to which should be added "Hesychii Lexicon Græcum ex cod. MS. restitutum, sive Supplementa ad edit. Hesychii Albertinam; auctore N. Schow," Lips. 1792, 8vo.—*Baillet. Fabricii. B. G.*

HESYCHIUS, of Miletus, a Greek historian, who lived in the sixth century. His "Universal History," from the reign of Belus, king of Assyria, to the death of the Greek emperor, Anastasius, is no longer extant; but he wrote a treatise "De Viris Doctrina claris;" and another, "De Rebus patriis Constantino-poleos," which still remain. They were published together, by Meusius, Leyden, 1613, 12mo.—*Vossii Hist. Græc. Moreri.*

HEUMANN (CHRISTOPHER AUGUSTUS) a learned and ingenious critic of the last century. He was born at Alstadt, in the dutchy of Weimar, in 1681; and after having completed his studies in phillosophy and theology at Jena, he was in 1709 appointed professor of the latter science in the seminary of Eisenach, and also a teacher in the gymnasium. In 1714 he published a work in German, entitled "The Political Philosopher, or rational advice relative to the affairs of common life;" having previously produced a considerable number of essays and dissertations, chiefly in Latin, relating to divinity and ecclesiastical history. He was appointed professor at the gymnasium of Gottingen in 1717; and he subsequently obtained the degree of doctor of theology at Helmstadt. Between the years 1715 and 1727, he published in periodical portions his "Acta Philosophorum," forming three volumes, octavo; and in 1718 appeared the first edition of a popular manual of the history of literature, under the title of "Conspectus Reipublice Literariæ," 12mo; of which an enlarged impression was published in 1726, and another in 1763. On the institution of the university of Gottingen, in 1733, Heumann was made professor of history, and extraordinary professor of theology. In 1745 he was raised to the station of ordinary professor, which he filled with great credit to himself, and advantage to the establishment, where he presided till 1753, when he resigned the professorship, partly on account of some scruples which he entertained relative to the Lutheran doctrine of transubstantiation. He was allowed to retain his salary till his death, which took place in May, 1764. Heumann was one of the most erudite scholars of his time; and during the greater part of his long literary career he kept up an extensive epistolary correspondence with his literary contemporaries; and as he carefully preserved all his letters, they were, after his death, placed in the Electoral Library at Hanover. His writings, which are very numerous, include the following works, besides those already mentioned: "De Anonymis et Pseudonymis, lib. ii." 1711, 8vo; "Anthologia Latina; hoc est Epigrammata selecta, cum Prefatione de Natura et Virtutibus Epigrammatis," 1721, 8vo; "Poecile," 3 vols. 8vo; "Augusta Concilii Nicæni censura; hoc est Caroli M. de impio Imaginum Cultu, lib. iv." 1731, 8vo; "Sylloge Dissertationum," 1741, 4to; "Nova Sylloge Dissertationum," 1752; and "De Prudentia Christiana, lib." 1761, 8vo.—*Stollii Intr. in Hist. Lit. Aikin's G. Biog.*

HEUMANN (JOHN) an eminent civilian, who was a native of Franconia, and became professor of law at Altorf. He was the author of a learned work, entitled "Commentarii de Re Diplomatica Imperatorum, Regum, Imperatricum et Reginarum Germaniæ," 3 vols. 4to. He died in 1760.—*Nouv. Dict. Hist.*

HEURNIUS (JOHN) an eminent Dutch physician of the sixteenth century. He was a native of Utrecht, where his father was a wvanner. He however received a liberal edu-

cation, and after studying at Louvain and Paris, he went to Turin, where he took the degree of MD. Settling in his native city, he was made physician to the count of Egmont, and had a place in the council of Utrecht; but in 1581 he removed to Leyden, where he was offered the professorship of medicine. He also gave lectures on anatomy, and is said to have been the first professor in that university who used dead bodies for public demonstrations. He died of the stone in 1601, aged fifty-seven. His works are a treatise on Disorders of the Head, and other original pieces, in the Latin language; and he published the writings of Hippocrates, in Greek and Latin, with Commentaries, of which there are several editions.—*Moreri. Hutchinson's Biog. Med. Aikin's G. Biog.*—**HEURNIUS (OTHO)** son of the preceding, was also a physician. He published a work, entitled "Antiquitatum Phillosophiæ Barbaricæ, lib. ii." Antw. 1600, 12mo. which is said to be a superficial performance.—*Morhof's Polyhist. Stollii Intr. in Hist. Lit.*

HEUSINGER (JOHN MICHAEL) a German divine, and eminent classical scholar. He was born at Sunderhausen, in Thuringia, in 1690; and was educated at the universities of Halle and Gotha. He at length became director of the gymnasium of Eisenach, and died in 1751. His editions of classic authors are much esteemed, including the works of Casar, Phædrus, Cornelius Nepos, &c.—**HEUSINGER (JAMES FREDERIC)** nephew of the preceding, distinguished himself in the same department of literature. He was born at Usingen, near Eisenach, in 1719, and was rector of the school of Wolfenbuttel, where he died in 1778. Among his literary labours are "Observations on the Ajax and Electra of Sophocles;" and editions of Mallius Theodorus "de Metris," and of Plutarch "de Educatione."—*Nouv. Dict. Hist.*

HEVELIUS or HEVELKE (JOHN) a highly celebrated astronomer of the seventeenth century. He was born of respectable and opulent parentage, in the city of Dantzic, in 1611. Destined for the mercantile profession, he received a liberal education; but mathematics chiefly attracted his attention, which he studied under Peter Crugerus, with great diligence and success. In 1630 he set out on his travels, and passed four years in Holland, England, France, and Germany, where he became acquainted with the most eminent mathematicians and philosophers then living. Returning to Dantzic, he married in 1635; and he was chosen by his fellow-citizens to the office of bargomaster in 1641. Having erected an observatory on the top of his house, he furnished it with the instruments requisite for making astronomical observations, among which were some excellent telescopes constructed by himself. From constant practice, he attained great accuracy in his researches, and made several important astronomical discoveries. He was the first who noticed that remarkable phenomenon termed the libration of the moon, on which satellite he made a variety of observations, the substance of which appeared in his "Selenographia, sive Lunæ

Descriptio, atque accurata Delineatio," 1647, folio, with numerous copper-plates, engraved by himself. They exhibit the spots on the moon's disk, and the various phases of that planetary body, as seen through the telescope. In 1654 he published a Latin Epistle to Father Ricciolus, on the libration of the moon; and another to Bulialdus, on eclipses of the sun and moon. Between 1656 and 1666 he printed treatises on the aspect of Saturn and his phases; on Mercury, as discovered in the sun at Dantzic, May 3, NS. 1661; and other astronomical tracts. In 1668 appeared his "*Cometographia,*" folio, explaining the nature of comets, with the history of all which had been observed previously to his own time; and representing the extraordinary motions and other phenomena of these wandering stars. Having sent copies of this work to several members of the Royal Society of London, among whom was Dr Robert Hooke, the present gave rise to a controversy with that gentleman, as to the question, whether distances and altitudes could be most accurately ascertained by means of plain or telescopic sights, Hevelius recommending the former, and Hooke the latter. In 1673 Hevelius published the first part of his "*Machina Cœlestis, continens Organographiam, sive Instrumentorum Astronomicorum omnium accuratum Delineationem,*" &c. folio, as a specimen of the accuracy of his instruments and observations. The next year Dr Hooke published "*Animadversions on the first part of the Machina Cœlestis,*" in which he treated the author with great illiberality. Such was the interest taken in the controversy, that Dr Halley was sent by the Royal Society to Dantzic, to investigate the subject of dispute, when he decided against our countryman, though astronomers have since preferred the mode of observation which he recommended. In 1679 appeared the second part of the "*Machina Cœlestis,*" which is peculiarly valuable, from its scarcity, owing to a number of the copies being destroyed by a fire, which consumed the author's house at Dantzic, (during his absence at his country seat,) and ruined his observatory and astronomical apparatus. In 1685 he printed a work, entitled "*Annus Climactericus,*" which appears to have been the latest of his productions. His death took place January 28th, 1687, the very day on which he completed his seventy-sixth year. Besides his labours already noticed in the cause of science, he discovered several fixed stars, of which he wrote an account, published in 1690, under the title of "*Firmamentum Sobiescianum,*" an appellation he had given to those stars, in honour of his sovereign, John Sobieski. Another posthumous publication was his "*Prodromus Astroniæ,*" containing a general catalogue of the fixed stars, with descriptions of the methods of making observations on them.—*Martin's Biog. Philos. Aikin's Gen. Biog.*

HEWSON (WILLIAM) an English surgeon, celebrated for his discoveries in anatomy and physiology. He was the son of a surgeon and apothecary at Hexham, in Northumberland,

where he was born November 14, OS. 1739. After being educated at a grammar-school in his native place, he commenced the study of his profession under his father, and was next an apprentice or pupil of Mr Lambert, an eminent surgeon at Newcastle-upon-Tyne. He subsequently resided for some time at London, Edinburgh and Paris; and then became assistant and joint lecturer on anatomy with Dr William Hunter. This connection commenced about 1764, and continued till 1770, when some disputes occurred, which led to a separation. and Mr Hewson afterwards gave lectures on his own account. In 1771 he was chosen a fellow of the Royal Society, having obtained the Copleyan prize medal for his researches relative to the absorbent system in birds and fishes. In 1772 he published "*Experimental Inquiries into the Properties of the Blood,*" 8vo; and this was followed by another volume of "*Experimental Inquiries,*" relative to the Lymphatics or Absorbents. He died May 1st, 1774, in consequence of fever arising from an accidental wound received in the dissection of a putrid subject. A third volume of "*Experimental Inquiries*" was published after his death, by Mr Magnus Falconar, who succeeded him as a public lecturer. A Latin translation of the anatomical and physiological works of Hewson was published by Dr Hahn, professor of medicine in the university of Leyden.—*Hutchinson's Biog. Med. Edit.*

HEY (JOHN) a learned divine of the establishment was born in 1734, and educated at the university of Cambridge, where he was elected fellow of Sidney college, in 1758. He proceeded through all his degrees until in 1780 he graduated as DD. and became first Norrisian professor of divinity. He was for many years rector of Passenham, in Northamptonshire, and of Calverton, in Buckinghamshire, but latterly resigned both livings to reside in London, where he died in 1815. He wrote "*Lectures on Divinity,*" 4 vols. 8vo; "*Redemption,*" a Seatonian prize poem; "*Sermons on several occasions,*" 8vo; "*Discourses on the malevolent Sentiments,*" 8vo; "*Observations on the Writings of St Paul.*"—*Gent. Mag.*

HEY (WILLIAM) see Appendix.

HEYLIN (PETER DD.) an English divine of the seventeenth century, born in November 1600, at Burford, near Oxford, in which university he was educated. From Hart-hall, where he had entered, he removed on a fellowship to Magdalen college, and in 1621 published a cosmographical work, entitled "*Microcosmos.*" This treatise gained him considerable reputation both as a scholar and a man of genius, and procured him the patronage of archbishop Laud, whose life he afterwards wrote, and whose principles both in church and state he warmly supported. The recommendation of the primate obtained for him a king's chaplaincy in 1629, on which occasion he resigned his fellowship. Two years after he was promoted to a stall at Westminster, with the livings of Houghton, county Durham, and Hemmingford, Huntingdonshire. For this valuable

preferment he is said to have been indebted to his "History of St George," a work with which Charles I was extremely taken. Having graduated as Doctor of Divinity, in 1633, he was presented four years afterwards to the rectory of Islip, Oxfordshire, but soon gave up that benefice for the living of South Warrimborough, Hants. During the civil wars Dr Heylin became obnoxious to the parliamentary party, on account of his tenets, both civil and religious, and ejection from the whole of his preferment was the consequence; his private property was at the same time sequestered, and he himself found it advisable to fly from the storm, and to seek an asylum at Winchester, Abingdon, and other places. With the restored fortunes of the house of Stuart, his own prospects once more brightened. He was reinstated in all his former appointments, and farther promotion promised him. The realization of his hopes was however prevented by death, on the 8th of May, 1662. He was an acute and indefatigable writer, but the acrimonious party spirit of his numerous productions renders them of little positive value, although they may be often consulted with considerable advantage. Besides the works already alluded to, he was the author of the "Mercurius Aulicus," a weekly paper published at Oxford, previously to the utter ruin of the king's party, which it was set up to advocate. His other productions are "Theologia veterum," folio; "A Help to English History," reprinted by Dr Wright in 1773; "A History of the Reformation," folio; "Short View of the Life of Charles I.;" "A History of the Presbyterians," folio; and a folio volume of miscellanies, printed in 1682. He lies buried in Westminster abbey.—*Biog. Brit.*

HEYNE (CHRISTIAN GOTTLÖB) a learned German critic, was born at Glogau, in Silesia, in 1729. His father was a weaver in very humble circumstances, and at a very early age Heyne taught other children, to provide funds for the extension of his own education. After studying at Chemnitz, he proceeded to Leipsic, where he succeeded in obtaining considerable reputation for his classical acquirements, in the midst of much annoyance, from the extreme narrowness of his circumstances. At length he obtained some pupils, and was farther assisted by the post of librarian to count Bruhl. He also increased his income by translations of French and English works of merit. In 1755 appeared his edition of Tibullus, and soon after that of Epictetus. He was involved in great distress by the seven years' war; the entry of the Prussians into Dresden leading to the dispersion of his patron's library. He was however relieved by being taken into the family of Von Schonberg, as a tutor to one of the members of it, in which situation he married. In 1763 he succeeded Gesner as professor of rhetoric at Gottingen, where he also became secretary to the society of Sciences. In 1775 he undertook the compilation of a catalogue of the library at Gottingen, in which laborious work, extending to 150 folio volumes, he was liberally en-

couraged by George III, whose three younger sons were placed under his tuition. He died suddenly, July 12, 1814, leaving three children by a first wife, and six by a second. His principal works, in addition to these already mentioned, are his editions of Homer and Virgil, with notes and elucidations; and "Opuscula Academica," 6 vols. 8vo.—*Life by Professor Heeren.*

HEYTHER, Mus. Doct. (WILLIAM) a musician of no great skill or eminence in his profession, who lived in the early part of the 17th century, and was a member of the choir of Westminster and the chapel royal. His principal claim to notoriety is the restoration, through his exertions, of the musical professorship originally founded at Oxford by king Alfred. The stipend attached being too insignificant for any man of distinguished musical talent to accept, Dr Heyther, following the example of his friend Camden, in respect to the historical lecture, re-endowed it by permission of convocation in 1626, with funds which have been since farther increased by the liberality of lord Crew, bishop of Durham. He was the intimate friend of Orlando Gibbons, who is said to have written his probationary exercise for him. His death took place in 1627.—*Biog. Dict. of Mus.*

HEYWOOD (ELIZA) the maiden name of this lady was Fowler, her father being a tradesman residing in London, where she was born in 1693, or, as others say, in 1696. She contracted an imprudent marriage early in life, and commenced authoress by profession. Her first productions "The Court of Arimania," and "New Utopia," are loose novels, or rather tales, replete with personal scandal, and written on the model of the "New Atlantis." In after life her taste appears to have been much improved, as is evinced by her "Female Spectator," 4 vols; "The History of Miss Betty Thoughtless," 4 vols; "Jemmy and Jenny Jessamy," 3 vols, "Epistles for the Ladies," 2 vols; "Husband and Wife," 2 vols; "The Invisible Spy," 4 vols; "The Fortunate Foundling;" "A present for a Servant Maid;" "Adventures of Nature;" "Amanda," &c. Pope, whether from indignation at the licentious character of her first productions, or as some assert, from motives of personal pique, introduced her in the Dunciad as one of the prizes given in honour of Dulness; but though a free writer, her private reputation was always considered unexceptionable. She tried dramatic composition, and even went herself upon the stage, but failed in both her theatrical speculations. The year of her death, as well as that of her birth, has been variously stated, some fixing it at 1736, others deferring it till 1759.—*Biog. Dram. Bowles's Edition of Pope.*

HEYWOOD (JOHN) one of the earliest English dramatic poets, in high estimation with his contemporaries for the brilliancy of his convivial talents. He was a native of North Mims, Herts, and received a university education at Oxford, but the liveliness of his disposition suiting ill with academical restraint, he quitted college abruptly, and returned to the

metropolis. With sir Thomas More he became a great favourite, and that minister introduced him to the notice of Henry VIII, who entertained a strong degree of partiality for his sallies and poetical effusions. His popularity at court in the reign of queen Mary, was not inferior to that which he had enjoyed during the lifetime of her father; for this he was perhaps as much indebted to his uncompromising adherence to the church of Rome, as to the brilliancy of his wit or the superiority of his musical attainments. In this latter accomplishment his progress was so agreeable to his royal mistress, that she is said to have expressed a wish to hear him on her death-bed. After her decease, on the full establishment of the protestant religion, Heywood went into voluntary exile, and died at Mechlin, in Brabant, in 1565. Besides several plays, he was the author of "The Spider and Fly," 4to, 1556, a parable; at the commencement of every chapter of which work (and they are 77 in number) is a wood-cut of the author's portrait, surrounded with cobwebs, flies, &c. This curious book is very scarce and on that account only, very dear, being, according to Warton, a dull, tedious, and trifling apologue, without moral or meaning. His other works are—a dialogue of all the proverbs in the English language; three quarto pamphlets, containing six hundred epigrams; of both of which works there were numerous editions before 1593; and six plays, or rather interludes. The latter are entitled "A Play between Johan the husband, Tyb the wife, and Sir Johan the priest," 1553, 4to; "A merry Play between the Pardoner and the Friar, the Curate, and neighbour Prat," 1533, 4to; "The Play called the Four P's, a new and very merry Interlude of a Palmer, a Pardoner, a Potycary, and a Pedlar," 4to; "A Play of Gentleness and Nobility," 4to; "A Play of Love," 1533, 4to; and "A Play of the Weather," 1533, 4to. A poem of Heywood, in honour of Mary, occurs among the Harleian MSS. and some "Witty Sayings" in the Cotton MSS. He left two sons, ELLIS and JASPER, both born in London, the elder of whom was chosen a fellow of All Souls'-college, Oxford, in 1547. He, like his father, quitted England for the continent, on the prevalence of the reformed doctrines in his native country, entered into the society of Jesuits, and became a great favourite with cardinal Pole, under whose patronage he lived at Florence. He was a good Italian scholar, and published a work written in that language, under the title of "Il Moro." His death took place at Louvain in 1572.—JASPER, the younger, born 1535, held a fellowship at Merton college, Oxford, but was obliged to resign it on account of the irregularity of his life, in 1558, and although he afterwards succeeded in obtaining another at All Souls, he too eventually quitted England, and in 1562 entered the Jesuits' college at Rome. He was a man of lively talents; and besides translating three of Seneca's tragedies into English, was the author of a number of miscellaneous poems, originally printed

under the title of "Various Poems and Devices," a selection from which appeared in "The Paradise of Dainty Devices," 1573, 4to. His death took place about the close of the year 1597, at Naples.—*Cibber's Lives*. *Warton's Hist. of Eng. Poet. Cens. Lit.* vols. iii. and ix.

HEYWOOD (THOMAS) an actor and writer of plays in the reigns of queen Elizabeth, James I, and Charles I, the time of whose birth and death is not recorded. According to Winstanly he was one of the most voluminous writers of his age, and in a preface to one of his plays he tells us, that it was preserved out of two hundred and twenty, of which number twenty-four only now remain. His "Actor's Vindication" displays much learning, but what rank he himself held on the stage none of his biographers have recorded. His translations from Lucian, Erasmus, and several Latin and Italian authors, show him to have been a tolerable classic, although he appears to have been held by the wits and poets of the day in no great esteem. Besides the works already mentioned, he wrote a "Life of Merlin;" "The Hierarchy of the Angels," a very remarkable production; "Life of Queen Elizabeth;" "Lives of the Nine Worthies;" "The Lives of nine Women Worthies;" "General History of Women," &c. notices of which may be found in our authorities.—*Warton's Hist. of Eng. Poet. Censura Lit. Restituta. Biog. Dram.*

HJÆRNE (URBAN) a Swedish physician and natural philosopher of the eighteenth century. He studied medicine at Upsal, under the learned Rudbeck; and having gained the friendship of the count de Tott, that nobleman furnished him with the means of travelling for improvement. He went to London, where he was admitted a fellow of the Royal Society; and he afterwards visited Paris. Returning to Sweden, the knowledge he had acquired rendered him the oracle of learning in that country. Having examined the metallurgical processes in use in Germany, he applied himself to the improvement of those of Sweden, where he was nominated vice-president of the council of mines. He was also at the head of the board of medicine, and first physician to the king. He had the direction of a chemical laboratory, and introduced into Sweden the discoveries of foreign chemists in various branches of their art. He died at an advanced age in 1724. Among his works are—"Acta Laboratorii Chymici," Stockh. 1706; "Oryctographia Suecana," 1716; and a treatise in Swedish on the mineral waters of Medevi, of which he was the discoverer.—*Biog. Univ.*

HIAM (—) the appellation of an incendiary writer of the seventeenth century, whose proper name is said to have been *Abiezer Coppe*. He was born at Warwick, in 1619, and became post-master of Merton college, Oxford. After having successively turned presbyterian and anabaptist, he gave way to unbridled enthusiasm, and was one of the wildest fanatics who appeared in England,

when the established church was overturned by the parliament after the civil war. He published several pamphlets with odd titles and corresponding contents; one of which is dated London, 1648, "two or three days before the eternal God thundered at Great St Helens." In 1650 he was committed to Newgate, for publishing a book entitled "The very flying Roll," a copy of which is preserved in the British museum. This work, which was ordered to be burnt by the common hangman, abounds with extravagant flights and shocking blasphemies; but the author appears to have been a fitter subject for Bedlam than Newgate; yet, after having lain in prison more than a year, he published a recantation, called "The Wings of the fiery flying Roll clipped; or, Coppe's Return to the Ways of Truth." In September 1650, he was brought before the house of Commons, but it was some time before he procured his liberty. When he did so, he seems to have been so far reduced to reason by his punishment, as to be willing to avoid giving offence to the ruling powers. He changed his name to that of Hiam, and took up his residence at Barn-elms, in Surrey, where he practised as a physician, and preached occasionally in some of the neighbouring conventicles. He died and was buried at Barnes, August 23d, 1672.—*Lysons's Envir. of London.*

HICETAS, a celebrated philosopher of Syracuse, who flourished at an unknown period. According to Theophrastus, as quoted by Cicero, he believed that the heavens, sun, and stars were stationary, and that it was the earth which moved, and by turning on its axis produced the same appearance as if the reverse were the case. The name of this philosopher merits preserving, as Copernicus acknowledges that it was this passage in Cicero which suggested to him the first idea of his system—*Cicero Tusc. Quest. lib. iv. Diogenes Laertius.*

HICKES (GEORGE) a very learned English divine and antiquary of the seventeenth century. He was born in 1642, at Newsham in Yorkshire, and was the son of a farmer. After passing through his elementary studies at a grammar school at North Allerton, he was, in 1659, admitted a servitor at St John's college, Oxford. Thence he removed to Magdalen college, and took the degree of B.A. in 1662. He next became a member of Magdalen hall, whence, in 1664, he was chosen a fellow of Lincoln college. He proceeded M.A. in 1665, and the year following entered into holy orders. After residing at the university for some years, discharging the duties of a college tutor, he, in 1673, accepted an invitation to travel abroad with one of his pupils, sir George Wheeler. He accompanied that gentleman to Paris, where he formed an acquaintance with Henry Justell, by whom he was entrusted with the care of the original Greek MS. of the *Canones ecclesie universalis*, which had been published by his father, to be presented to the university of Oxford. Returning to England after eighteen months absence, Mr. Hickes took the degree of B.D. in 1675, and obtained the rectory of St Ebbe's, at Oxford.

In 1677 he went to Scotland, as chaplain to the high-commissioner, the duke of Lauderdale; when the university of St. Andrew's presented him a diploma of doctor of divinity. In 1679 he was created DD. at Oxford, also, in consequence of the chancellor's letters. The same year he was collated to a prebend in the cathedral of Worcester; and archbishop Sancroft presented him to the living of Allhallows, Barking, in London, when he resigned his fellowship. In 1681 he was appointed chaplain in ordinary to the king, who in 1683 raised him to the deanery of Worcester. The death of Charles II prevented him from obtaining the bishopric of Bristol, and put a stop to his farther promotion; for though he had displayed his zeal for high church principles, he was an enemy to popery, and therefore no favourite with James II. After the Revolution he nevertheless became one of the most prominent of the party of non-jurors. His refusal to take the oaths to William III and the queen consort, occasioned his suspension in 1689; and in the beginning of the next year he was deprived of all his benefices. A protest which he posted up in the cathedral of Worcester, against the appointment of his successor to the deanery, occasioned a prosecution by the officers of the crown, to avoid the consequences of which he was obliged to remain for some time in concealment. At length, in 1699, the lord chancellor Somers, out of regard to the talents and learning of Dr Hickes, procured an order of council to stop the proceedings against him. In the mean time he had been actively engaged in serious acts of disobedience to the established government; for he was the individual who, in 1693, was sent by the non-juring clergy to St Germain's, to concert measures with the exiled king, for the appointment of bishops, in the English church, from their party. He returned from this dangerous mission in the beginning of the following year; and was himself shortly after consecrated bishop of Thetford. He survived this elevation more than twenty years, as his death took place December 15th, 1715. The learning of Dr Hickes was profound and extensive, both in the branches of literature more immediately connected with his profession, and as regarded the monuments and records of our Anglo-Saxon ancestors. He was particularly acquainted with the writings of the primitive fathers of the church, whose testimony he adduced to prove the exact conformity of the church of England with the Catholic church in the earliest ages of its existence. His theological works consist of three volumes of sermons, the last of which was a posthumous publication; a multitude of tracts in defence of the non-jurors and their tenets; a treatise on the eucharist; controversial letters against popery; a work on the Christian priesthood, and the dignity of the episcopal order; to which might be added many others, the titles of which may be found in the annexed authorities. His reputation as a writer on divinity has declined, since the extinction of the sect to which he belonged.

The violence of his prejudices obscured his judgment; and the party spirit of illiberality, which appeared most offensively when he applied to archbishop Tillotson the appellation of atheist, is but too conspicuous in his polemical writings in general. As a Saxon scholar Dr Hickes has attained permanent celebrity. In 1689 he published "Institutiones Grammaticæ Anglo-Saxonicæ et Mæso-Gothicæ," 4to; and this was followed by his "Thesaurus Grammatico-Criticus et Archæologicus Linguarum veterum Septentrionalium," Oxon. 1705, 2 vols. folio. This treasury of Gothic literature may be truly styled *magnum opus*; and it is as creditable to the talents and learning as to the persevering industry of the author. It is usually accompanied by Humphry Wanley's catalogue of Anglo-Saxon MSS. forming a third volume.—*Biog. Brit. Watt's Bibliot. Britan.*

HICKES (JOHN) brother of the preceding, was remarkable for having joined an opposite party in the church, and advocated its principles with extraordinary zeal. He was a non-conformist minister; and having written a pamphlet, called a sad narrative of the oppression of many honest people in Devonshire, relating to the sufferings of the dissenters under the conventicle act, in the reign of Charles II, two messengers were sent from London to apprehend him as a state criminal. He happened to meet with them, while travelling, near the end of their journey; and he being an utter stranger, they had the imprudence to disclose the nature of their errand, with many invectives against the object of their pursuit. When they arrived at an inn, Hickes, who was a very athletic man, told them who he was; and having horsewhipped them both, to teach them more charity or caution in future, he set off for London alone. By means of a friend in power he procured an introduction to the king, with whom he pleaded so successfully, that he not only obtained indemnity for himself, but also the promise of protection for the Devonshire non-conformists. In the ensuing reign, Hickes joined the duke of Monmouth, and probably fought at the battle of Sedgemoor. After that event he found refuge in the house of Mrs Lisle, usually termed lady Lisle, who suffered death for sheltering him and other proscribed adherents of Monmouth. Mr Hickes being taken, was also executed as a traitor in 1685.—*Calamy's Non-conformist's Memorial.*

HICKERINGILL (EDMUND) a native of Essex, born 1630. He received a university education at Cambridge; but on its completion obtained a subaltern commission in the army, and went into garrison in the West Indies. On his return to Europe he quitted that service for the church, and was successively vicar of Boxted, and rector of All Saints, Colchester, both in his native county. Although of loose and irregular habits, he attained to the age of seventy-eight, dying in 1708. He was the author of a description of the island of Jamaica; and of some miscellaneous tracts, which were published together

in one quarto volume, the year before he is decease, and re-printed in 1716, in two vols. 8vo.—*Chalmers's G. Biog. Dict.*

HIDALGO (JOSEPH GARCIA) a noble Spaniard, of some eminence as a painter, on which art he published an elementary treatise, entitled "Principios para estudiar el nobilissimo arte de la Pintura," printed 1691. He was born about the middle of the seventeenth century; and was held in considerable estimation at court, being honoured with the order of St Michael. His death took place in 1720.—*Pilkington.*

HIDALGO Y COSTILLA (DON MIGUEL) a Spanish priest, who acted a distinguished part in Mexico, at the commencement of the late war of independence in that country. He was resident clergyman, or curate, in the town of Dolores, in the intendencia of Goanaxoato; holding a valuable benefice, and regarded as a man of considerable talents, and better informed than the clergy in general in New Spain. He possessed much influence among the Indians, to whom he had endeavoured to extend the benefits of education. His intercourse with them had afforded him opportunities of perceiving their rooted dislike to the Spaniards; and this led him, in concert with others, to form the plan of a general insurrection throughout the provinces of New Spain, which it was said, was to have taken place on the 1st of November, 1810. Circumstances induced the conspirators to hasten the execution of their scheme; captain Allende, one of them, having collected a few soldiers who were attached to him, marched to Dolores, and arriving there on the 10th of September, joined Hidalgo, whose exhortations produced a general revolt of the people against the Spanish government. Allende and the priest, at the head of the insurgents, pillaged the houses of the Spaniards in the neighbouring town of San Miguel el grande; and on the 29th of September they gained possession of Goanaxoato, in the treasury of which town they found a large quantity of coin and bar silver. Don J. Villegas, who had been appointed viceroy by the regency of Cadiz, arrived at Mexico immediately after the insurrection took place; and he sent a body of troops against Hidalgo, and also published a proclamation, calculated to repress the general spirit of discontent. His measures at first were ineffectual; Hidalgo attached the Indians to his cause, by repealing the tax called *tributos*, which they had paid ever since their conquest by the Spaniards. From Goanaxoato he marched to Valladolid, which he entered October the 20th, and there he was joyfully received, and was joined by two regiments of militia. Soon after he was proclaimed generalissimo of the Mexican armies, various commands were distributed among his principal associates; and the armed mob which he had collected was formed into eighty regiments, of one thousand men each. At the head of this force he proceeded towards Mexico; and Villegas, having but a handful of troops for its defence, resorted to the powerful aid of super-

stitution, against so dangerous a foe. He applied to the archbishop of Mexico, and to the Inquisition, for a sentence of excommunication against Hidalgo and all his adherents, which was forthwith issued. This awed the Mexicans, and prevented them from joining the insurgents, which many of them would otherwise probably have done. Thus disappointed in his expectations of assistance, the priest became irresolute, and after having waited in the neighbourhood of the capital till the viceroy had recalled his troops to his support, he began his retreat. At Aculco he was attacked and completely defeated, on the 7th of November, by general Calleja. He then retired to Goanaxoato, whither he was followed by the same officer, who took the place with great slaughter of the insurgents. Hidalgo fled to Guadaluajara; and on the 17th of January, 1811, he suffered a ruinous defeat at the bridge of Calderon, eleven leagues from that place. Become a fugitive before the Spanish forces, one of his own officers took him prisoner, on the 21st of March, 1811; and he was put to death on the 27th of July that year, having previously been degraded from the order of priesthood. Thus fell a man who appears to have possessed considerable talents, though deficient in that promptitude of spirit which will almost always insure the success of schemes like that in which he was engaged.—*Outline of the Revolution in Spanish America, 1817, 8vo. Biog. N. des Contemp.*

HIEROCLES. There were two of this name; the first, a rhetorician of Bithynia, was afterwards governor of Alexandria, and distinguished himself in the persecution of the Christians, which took place AD. 302, under Dioclesian, both by his actions and his writings; which latter, consisting of two separate treatises, are referred to by Eusebius and Lactantius. Their main object is to contrast the miracles of Christ with those ascribed to Apollonius Tyanæus, and to draw an inference in favour of the latter. The second was a platonic philosopher, who flourished at Alexandria about the middle of the fifth century, and was much admired for his eloquence. He is said to have encountered considerable opposition from the Christians of that period, in consequence of his doctrines. Of his writings, an essay on the golden verses of Pythagoras is yet extant, in several editions, the best of which is that of London, 1742, 8vo. His other works, being treatises on fate and on providence, the latter composed in seven books, are only known by the extracts which remain of them in Photius. They were written with a dedication to Olympiodorus, an eminent philosopher, much esteemed and employed by the emperors Honorius and the younger Theodosius.—*Cave. Lardner.*

HIFFERNAN (PAUL) a native of Dublin, born 1719. He was of a Catholic family, and intended for the priesthood in that communion, but abandoned the church for the study of physic, which he practised for a short time with indifferent success in the city where he was born. In 1753 Dr Hiffernan, as he was

styled, came to London, where he commenced author by profession, and effected a coffee-house acquaintance with Garrick, Foote, Goldsmith, and other wits, through whose assistance he managed with difficulty to keep up a decent exterior, but never could be prevailed upon to disclose the secret of his abode, which was found at his decease to have been in an obscure court in the neighbourhood of St Martin's-lane. His eccentricities were numerous, and in pecuniary matters not always of the most respectable description. His writings are now but little known; they consist for the most part of a series of political essays, entitled "The Ticklers," Dublin, 1750; "The Tuner," London, 1753; a volume of miscellaneous pieces in prose and verse, and an adaptation, which did not succeed, of La Harpe's tragedy, "The Earl of Warwick." He died June 1777, in great indigence.—*Biog. Dram.*

HIGDEN (RANDAL OR RANULPH) an English chronicler, who was a Benedictine monk of the abbey of St Werburga, at Chester, in the fourteenth century. He compiled a work in Latin, entitled "Polychronicon," in seven books, containing an account of events from the creation to the year 1357, and comprising many valuable documents relating to the affairs of the Britons and Saxons, from older chronicles. An English translation of Higden's History, by John de Trevisa, was printed by Caxton in 1482, and the original work was published in 1642, folio. Higden also translated, or rather travestied, several parts of the Bible into dramatic dialogues. A copy of these plays is among the Harleian MSS. in the British Museum; to which is prefixed a note, stating that the author went thrice to Rome before he could obtain permission from the pope for these biblical mysteries to be represented in the English language.—*Nicolson's Hist. Lib. Lysons's Magn. Britan. vol. ii.*

HIGGINS (JOHN) whose name is sometimes spelt Higin. An English author of the sixteenth century, born in Somersetshire, in which county he, after graduating at Oxford, and taking holy orders, kept a school at Ilminster till his death in 1604. He is known as the author of a translation of the Nomenclator of Adrian Junius, 8vo. 1585; a controversial treatise written against Perkins, on the subject of the descent into Hell; part of the "Mirror for Magistrates," 1587; "Holcot's Dictionary;" and "Flosculi Terentiani."—*Warton's Hist. of Eng. Poet.*

HIGGONS (SIR THOMAS) the son a clergyman who held the benefice of Westburgh, Salop, where he was born in 1624. He became a member of Alban-hall, Oxford, but quitted the university without graduating, and married, first the dowager countess of Essex, whose character he defended against the aspersions of her censurers in a funeral oration, which he pronounced over her in elegant Latin, on her decease in 1656. This composition was afterwards printed. Mr Higgon subsequently entered into the marriage state a second time, with the daughter of sir Benj Greenville, sister to sir John afterwards cre-

ated first earl of Bath. In 1558 he entered parliament, on the decease of Cromwell, and sat as member for the borough of Malmsbury, in which capacity he exerted himself for the restoration of monarchy, and on the return of the king, obtained a pension of 500*l.* with the honour of knighthood in reward for his good service. He was afterwards, in succession, envoy to the courts of Dresden and Vienna. On the 24th of November, 1691, having been called upon to give his testimony on a trial in the court of king's bench, he was suddenly attacked by apoplexy, and expired before he could be removed to his own house. Besides the panegyric on his wife, he was the author of another, addressed to the king, on his restoration, printed in 1660, "The History of Ysaph Bassa," 1684, and an English translation of "The Venetian Triumph." Sir Thomas left a family by his second lady, of which the younger son, named BEVIL, after his maternal grandfather, was born in 1670. He entered himself of St John's college, Oxford, in 1686, but removed afterwards to Cambridge. On quitting the university he became a member of the society of the Middle Temple, and wrote a variety of political and other works. Among these are—"Remarks on Bishop Burnett's History of his own Times," 8vo; "A Short View of English History, with political reflections," &c. 8vo; "An Heroic Poem on the Peace of Utrecht;" and a tragedy, acted at Drury-lane theatre, in 1702, under the title of "The Generous Conqueror, or Timely Discovery." On the abdication of James II, Mr Higgon was one of the few faithful adherents who accompanied that monarch in his flight to the continent, where he died in 1735.—*Wood.*

HIGHMORE (JOSEPH) an eminent portrait and historical painter of the last century, born in London June 13, 1692. He early displayed a strong partiality for the fine arts, which was discouraged by his family, who placed him in a solicitor's office. The whole of his spare time was however devoted by him to the study of his favourite pursuit, and although his own genius and application were at first his only instructors, his progress even at this period was such, that immediately on the expiration of his clerkship, when only seventeen years of age, he fearlessly abandoned the law, resolved to trust in future to his talents as a painter alone for his chance of fame and fortune. The year following he married, and continued rising in reputation, till on the revival of the order of the bath, he was selected as the artist to be employed in painting the knights in full costume. The years 1732 and 1734 were spent by him in professional tours through the Netherlands and France, and on his return he applied himself with renewed exertions to the cultivation of an art which he exercised nearly half a century. His death took place in the spring of 1780, in the house of his son-in-law, Mr Duncombe, at Canterbury, to which city he had retired from the fatigues of his profession for the last eighteen years of his life. Among his

best paintings are, the "Hagar and Ishmael," in the Foundling Hospital; the "Finding of Moses," &c. The illustrations to the original editions of the novels of Richardson, with whom he was personally acquainted, were also from his easel. As an author he is known by his "Critical Examination of Rubens's two paintings in the Banqueting House, Whitehall," 4to; "Observations on Dodwell's pamphlet against Christianity;" "The Practice of Perspective," 1763; and two vols. of Moral and Religious Essays; with a translation of Brown on the Immortality of the Soul.—*Chalmers's Gen. Biog. Dict.*

HIGHMORE (NATHANIEL) an eminent English physician and anatomist, who was the son of a clergyman, and was born at Fordingbridge, in Hampshire, in 1613. He studied at Trinity college, Oxford, and took the degree of MD. in 1642. He settled as a practitioner at Sherborn, in Dorsetshire, and became eminent for his professional skill, and his scientific researches. He died March 21st, 1684, at the age of seventy. His principal work is entitled "Corporis Humani Disquisitio Anatomica," 1657, folio. He also wrote "The History of Generation," 1631, 8vo; besides treatises on Hysterical and Hypochondriac Affections. Some of his opinions having been controverted by Dr Willis, he published in 1670, "Epistola Responsoria ad T. Willis." His name is commemorated in the appellation "Antrum Highmoreanum," applied to a cavity in the upper jaw.—*Aikin's G. Biog.*

HIJAR (DUKE DE) a Spanish grandee of the first class, member of the Junta of Bayonne, and grand master of the ceremonies to king Joseph Napoleon. He was born of an ancient Castilian family, in 1775; and during the life of his father was known by the title of the Duke d'Alliaga. He was engaged in the study of literature and the fine arts, when the events which occurred at Aranjuez occasioned the forced abdication of Charles IV. In 1808 he was summoned to Bayonne as one of the junta, convoked by order of Napoleon; and after the second abdication of king Charles, the duke d'Hijar was appointed to the office of master of the ceremonies to the new sovereign, Joseph. He however abandoned the cause of the usurper as soon as the partisans of Ferdinand VII took active measures to support his rival authority. Hence the duke was included in the list of Castilian nobles proscribed by the decree of Burgos; on which he prudently retired to London, and remained there till the progress of events had brought about the restoration of Ferdinand. He was then recalled to Madrid, and in 1814 appointed Spanish ambassador at the court of France. Little ambitious of honours, he devoted all his leisure to literary pursuits, and died in 1817, a short time after having received the order of the golden fleece.—*Biog. Nouv. des Contemp.*

HILARION, a Christian anchorite of the fourth century, born at Gaza in 291. On his conversion from idolatry, he became the original founder of monachism in Syria, after

the example of St Anthony, whom he had seen in the deserts of Egypt. To this purpose he dedicated the whole of his possessions, and by the fame of his sanctity, induced many to join him. His death took place in the year 371, in the island of Cyprus.—*Moreri*.

HILARY (St) a Christian prelate of the fourth century, one of the early fathers of the church, born at Poitiers, of which city, after his conversion from heathenism, he eventually became the bishop in 355. His zeal in favour of the Athanasian doctrine respecting the trinity, which he defended with much energy at Bezieres, drew on him the persecution of the Arian party, with Saturninus at its head, who prevailed on the emperor Constantius to exile him into Phrygia. After four years spent in banishment, he was permitted to return to his see, where he occupied himself in committing the arguments for his side of the question to writing, and continued to distinguish himself as an active diocesan till his death, in 367. His works were printed in folio at Paris, in 1693. There was another of the same name, bishop of Arles, a semi-pelagian in his opinions, who was the author of a life of St Honoratus, and some devotional tracts. He died in 449, and also enjoyed the honours of canonization.—*Cave. Dupin*.

HILDEBERT, a divine of the twelfth century, who was a native of Lavardin, in the province of Vendome, in France. He was a disciple of the famous Berenger, and afterwards of Hugo, abbot of Clugni; and became so distinguished for his learning, that in 1098 he was appointed master of the school of Mans, over which he presided thirteen years. After having been archdeacon, and then bishop of Mans, he was raised in 1125 to the archiepiscopal see of Tours, where he died in 1134. His zeal for the interest of the church involved him in some disputes with the Norman princes, William Rufus and Henry I, of England, and also with Louis the Fat, king of France; but he is more advantageously known on account of his literary productions, which entitle him to be considered as the best writer of his age. His works consist of sermons, theological tracts, Latin poems and letters, the latter of which afford some interesting details of contemporary history.—*Nouv. Dict. Hist. Biog. Univ.*

HILDESLEY (MARK) bishop of Sodor and Man, a prelate of exemplary piety and learning. His father was rector of Murston, Kent, where he was born in 1698. From the Charterhouse he removed to Trinity college, Cambridge, and obtained a fellowship there in 1723. Two years afterwards, the living of Hitchin, Herts, the presentation to which is in the college, becoming vacant, he succeeded to the preferment, and to that of Holwell, Bedfordshire, in 1735. On the death of bishop Wilson, the duke of Athol conferred on him the vacant see, and his conduct as a diocesan did not degenerate from that of his predecessor. Besides his bishopric, the value of which has never exceeded a thousand a year, he held the mastership of Sherburn

hospital, and a stall at Lincoln. Under his auspices the translation of the Scriptures into Manx, commenced by Wilson, was completed in 1755. His death took place in 1772.—*Life by Butler*.

HILDUIN, a French ecclesiastic of the ninth century. He was abbot of St Denys, and is known only as the author of a curious history of the life and miracles of his patron saint, in which he ludicrously enough confounds him with the Areopagite of the same name, a pious fraud or mistake, which led to the persecution of Abelard for detecting it, and to much absurd controversy in after times.—*Dupin*.

HILL (AARON) an English poet and miscellaneous writer, was born in London in 1685. His father, originally a gentleman of good estate in Wiltshire, left him almost wholly unprovided for, which circumstance obliged him to quit Westminster school at the age of fourteen. His relation, lord Paget, being ambassador at Constantinople, he ventured, uninvited, to join him, and was received with kindness, although with some surprise, and a tutor was provided for him, under whose care he travelled through Palestine, Egypt, and various parts of the east. In 1703 he returned to England, and the death of lord Paget frustrating his expectations in that quarter, he travelled for three years with sir William Wentworth. In 1709 he published a "History of the Ottoman Empire," partly from materials collected in Turkey, which publication, although it obtained much notice, the author himself subsequently regarded as a crude and juvenile performance. A poem which he addressed in the same year to the earl of Peterborough, procured him the patronage of that nobleman, and an introduction to the tory leaders. In 1710 he married a lady of beauty and fortune, and became manager of Drury-lane theatre, which post however he soon gave up, in consequence of a difference with the lord chamberlain, the then duke of Kent. While in the management of Drury-lane, he wrote his first tragedy of "Alfred," and "Rinaldo," an opera. Much under the influence of a projecting spirit, in 1713 he obtained a patent for extracting sweet oil from beech mast, and a company was formed under his auspices, but after a trial of three years the scheme entirely failed, as did a subsequent plan for establishing a plantation in Georgia. He still continued to write for the theatres, and several of his pieces were brought on the stage. He also composed poems, and for one entitled the "Northern Star," in compliment to Peter the Great, received a complimentary reward from his widow, Catherine I. In 1724 he commenced a periodical paper, in conjunction with a Mr Bond, called "The Plain Dealer," which publication seems to be that which introduced Mr Hill into the Dunciad. In a tone of half satire and half compliment on the part of its celebrated author, to which Hill replied in a piece entitled "The Progress of Wit," in lines that Pope himself need not have disclaimed. The breach was afterwards

healed, and as far as appearances, at least, the poets became good friends. A new project of supplying timber from the Highland estates of the York Buildings' company, next engaged his attention, and in 1731 he re-wrote his *Elfrid*, which he brought forward under the title of "*Athelwold*." He afterwards translated in succession the *Zaire*, *Alzire*, and *Merope*, of Voltaire, all of which show him in the light of a superior dramatic translator. He still however continued to interest himself with schemes of commercial improvement, until his health began to decline, and he died in February 1750, in his sixty-fifth year, and was interred in Westminster abbey. Aaron Hill was a man of active and extensive benevolence, and so kind and affectionate in the relations of society, that few men were more beloved. As a poet he was turgid and affected, although occasionally nervous and harmonious. He is however little read at present, although his versions of *Zaire* and *Merope* have kept the stage until within these few years.—*Biog. Brit. Anderson's Lives of Brit. Poets.*

HILL (GEORGE) a divine of the church of Scotland, was born at St Andrews in 1748. He was educated in his native place, where he obtained the Greek professorship of St Salvador's college, and that of Divinity in succession. He subsequently became principal of St Mary's, chaplain to the king for Scotland, and fellow of the Royal Society of Edinburgh. He is the author of sermons, theological institutes, and lectures on the Old Testament. He died in 1800.—*Gent. Mag.*

HILL (sir JOHN) a writer of the last century, distinguished for the versatility of his talents, and the multitude of his publications. He was the son of a clergyman of Peterborough, and was born about 1716. After having served an apprenticeship to an apothecary in Westminster, he established himself in that business in St Martin's-lane; but having married a wife without a fortune, he was obliged to seek farther resources for the increase of his income. Having some knowledge of botany, he was employed by the duke of Richmond and lord Petre to manage their botanic gardens. By their liberal assistance also he was enabled to travel through various parts of the kingdom, and collect scarce plants, of which he published an account by subscription. This scheme was not very profitable, and he therefore turned his attention to the stage; but after two or three exhibitions at the Haymarket and Covent-garden, he discovered that he was not qualified to shine as an actor, and returned again to his shop. His activity attracted the notice of men of science and learning; and a translation of a Greek tract on gems, by Theophrastus, which he published in 1746, procured him both money and reputation as an author. He was introduced to Martin Folkes and Henry Baker, two distinguished members of the Royal Society, and a paper which he wrote was published in the *Philosophical Transactions*; but on his being disappointed in an attempt to obtain admission into the society, he revenged the affront

by publishing "*A Review of the Works of the R. S.*" 1751, 4to, in which he placed some of the contributions to the *Philosophical Transactions* in a ludicrous point of view. Henceforth he depended chiefly on his pen for his support. He undertook "*A General Natural History*," 3 vols. folio; and, in conjunction with George Lewis Scott, he compiled a "*Supplement to Chambers's Cyclopædia*." In 1752 he published "*Essays on Natural History and Philosophy*," containing curious microscopical observations. At the same period he started the "*British Magazine*," and also carried on a diurnal publication called the "*Inspector*." Notwithstanding his literary engagements, he was a constant attendant on every place of public amusement, where he collected by wholesale a great variety of private intrigue and personal scandal, which he freely retailed to the public in his *Inspectors* and magazines. This discreditable occupation was not without its inconveniences, for it involved him in various quarrels, and on one occasion he was severely caned at Ranelagh, by a gentleman who had been the object of his slander. He had procured the diploma of MD. and practised as a physician; but not content with the regular emoluments of his profession, he invented several quack medicines; which, by means of the puffing advertisements he wrote to recommend them, had for some time a considerable sale, to his great pecuniary advantage. His talents as a botanist however were by no means despicable, though his conduct was in so many respects unworthy of the character of a man of literature and science. He produced many useful works; but his greatest undertaking was a work entitled "*The Vegetable System*," 17 vols. folio, published successively, with plates, under the patronage of the earl of Bute. His introduction to this nobleman was probably through his marriage with the sister of lord Ranelagh; though that lady, after the death of her husband, published a pamphlet, complaining of the conduct of lord Bute towards sir John Hill. The title of knightdom he owed to the king of Sweden, who bestowed on him the order of the Polar star, in return for the present of a copy of his botanical works. He died of the gout, a disease for which he professed to have a specific, in November 1775. Besides the works already mentioned, he wrote novels and plays, now deservedly forgotten; and he was so industrious and prolific an author, that he is said to have received 1500*l.* in the course of a year, for works of his own composition; a circumstance not very creditable to the taste of his contemporaries; as, except his tracts on natural history, he published nothing of any value. Having had a quarrel with Garrick, on account of the rejection of one of his dramas, that celebrated actor characterized Hill, not unjustly, in the following caustic epigram:—

"For physic and farces his rival there scarce is;
His farces are physic, his physic a farce is."

—*Biog. Dram. Hutchinson's Biog. Med. Aikin's G. Biog.*

HILL (sir **RICHARD**) bart. son of sir Rowland Hill, of Hawkestone, Salop, the first baronet of the family, was born there in 1733. He received his education at Westminster school; whence he removed to Magdalen college, Oxford, where he graduated as M.A. He made the tour of Europe; and on his return much distinguished himself by his attachment to the Calvinistic methodists, which he strikingly displayed in 1768, on the expulsion of six young men from the university of Oxford, whose conduct and principles were then deemed fanatical. On that occasion Mr. Hill attacked the authorities there in a severe pamphlet, which he entitled "Pietas Oxoniensis," which was answered by the public orator of the university, Dr. Nowell, upon whom his antagonist retorted with much asperity. He next engaged in strenuous controversy with Wesley, Fletcher, and others of the Arminian methodist leaders, in defence of Calvinism. On the death of his father he succeeded him in the representation of the county of Salop, and was a frequent speaker. His observations were almost always more or less connected with the subject of religion; and by his frequent quaint if not humorous application of facts and language from the Bible, he obtained from the writer of the *Roliad* the title of the scriptural Killebrew. In 1793 he published a vindication of Calvinism, against Daubeneys's "Guide to the Church;" and in 1804, remarks of a similar tendency against one of the bishop of Lincoln's charges. He would sometimes even preach in dissenting chapels, and built one of his own at Hawkestone. He died unmarried in 1808, when his title passed to his brother, sir John Hill, father of lord Hill. The celebrated rev. Rowland Hill is another brother.—*Gent. Mag.*

HILL (**ROBERT**) an industrious scholar, remarkable for his application to study, notwithstanding the obstacles arising from domestic penury and a menial occupation. He was born in 1699, at Miswell, near Tring, in Hertfordshire; and was apprenticed to a tailor and staymaker. To those employments he occasionally joined that of a schoolmaster, by means of which he with difficulty supported himself and his family. In spite of these discouragements, he contrived to make himself acquainted with the Latin, Greek, and Hebrew languages; and he exhibited so much literary talent as to attract the favourable notice of the rev. Joseph Spence; who, with a view to benefit this pains-taking student, published a tract, entitled "A Parallel between a most celebrated man of Florence [*Magliabecchi*] and one scarce ever heard of in England," [*R. Hill*,] printed at Strawberry-hill, 1758, 8vo. By the assistance of his friendly biographer, Hill was relieved from his embarrassments, and enabled to remove to Buckingham, where he died in 1777. He was the author of an answer to bishop Clayton's Essay on Spirit; Criticisms on the book of Job; and a tract entitled "The character of a Jew."—*Gent. Mag.*

HILL (**WILLIAM**) a critical and philological writer of the seventeenth century. He was a

native of Cudworth in Warwickshire; and was educated at Merton college, Oxford, where he obtained a fellowship. He then became master of a free-school at Sutton Coldfield, in his native country; but after a time relinquished that office, and engaged in the practice of physic in the metropolis. Thence he removed to Ireland, procured the degree of DD. at Dublin, and obtained the office of master of St Patrick's school in that city. Being deprived of this appointment on the restoration of Charles II, he returned to England, and died in 1667, aged about forty-eight. He was the editor of the *Periegesis*, or poetical geography of Dionysius, in Greek, with the commentary of Eustathius, and notes, 1658, 8vo; and he also wrote a tract entitled "Woman's Looking Glass," London, 1660, 12mo.—*Wood's Athen. Oxon.*

HILLEL the elder, a celebrated Jewish doctor, or rabbin, who lived in the century preceding the Christian æra. He is probably the same individual who is termed *Pollio*, by Josephus; and is mentioned by St Jerome as having flourished not long before the birth of Christ. He was a native of Babylon; and, on the mother's side, descended from the family of David. At the age of forty he went to Jerusalem, where he studied with great application, so as to gain the credit of a profound acquaintance with the records and traditions of his nation. Being chosen a member of the Sanhedrim, together with his disciple Shammai, these two doctors opposed the measures brought forward in that great council against Herod, and thus escaped the slaughter to which the other members were consigned when Herod became master of Jerusalem. Hillel was made president, and Shammai vice-president, of the new Sanhedrim; and the former is said to have discharged the duties of his office with more wisdom and justice than any of his predecessors since the time of Simon the Just. It is, however, no proof of the wisdom of Hillel, that he had a controversy with Shammai, which led to bloody quarrels among their respective adherents; though the dispute was at length decided in favour of the former. The origin of the Talmud, or at least the "Mischna," or earliest part of it, is attributed to the elder Hillel; and Jonathan, the author of the Targum, was one of his disciples.—*Prideaux's Connect. of the Hist. of the O. and N. Test. Aikin's G. Biog.*

HILLEL II, or the younger, another famous rabbin, who presided over the Jewish church in the third and fourth centuries, with the title of *Nasi*, or prince of the captivity. He was lineally descended from the subject of the last article, and was a man of great learning and merit. He is principally distinguished as the reformer of the Jewish calendar, into which he introduced the cycle of nineteen years, to reconcile the course of the sun with that of the moon; and regulated the period of the equinoxes, on the same principles which Julius Cæsar, pope Gregory XIII, and others, adopted for that purpose. He was one of the principal doctors to whom is ascribed the por-

tion of the talmud called "Gemara." Epiphanius says he became a convert to Christianity in his last illness; but the jews treat this report as a calumny. He flourished AD. 320, according to Dr Priestley.—*Aikin's G. Biog.*

HILLIARD (NICHOLAS) an English portrait painter of the age of Elizabeth, who honoured him with her patronage and protection. He was a native of Exeter, born 1547. His pictures were held in high estimation, both for their execution and the fidelity of the resemblance, although he seldom attempted more than the head. Of his performances, the best known are a full length of the queen; and another in water-colours, of her rival, the queen of Scots, taken in her eighteenth year. His style, which he formed on the model of Holbein, is highly applauded by Donne. His death took place in 1619.—*Walpole's Anec.*

HILTON (WALTER) a celebrated English ascetic divine of the fifteenth century. He was a Carthusian monk of the monastery of Sheen, in Surrey, now Richmond, founded by Henry V. He was the author of a treatise entitled "The Scale, or Ladder of Perfection," published by A. Woodhead, London, 1659; but his chief claim to notice arises from his having been supposed to have written the famous book "De Imitatione Christi," usually attributed to Thomas à Kempis; but this notion appears to be erroneous, the work of Hilton, still in MS, called "De Musica Ecclesiastica, liber unus," having been confounded with the composition in question. See KEMPIS.—*Biog. Univ.*

HILTZ (JOHN) a German architect of the fifteenth century. He succeeded Erwin de Steinbach, builder of the famous cathedral of Strasburg; and erected the tower of that edifice, which was finished in 1449. It is raised to the vast height of five hundred and seventy feet, being one of the loftiest buildings in the world. It is considered as a masterpiece of architecture, being erected with hewn stone, carved with tracery; and exhibiting great elegance of design and skill in the execution.—*Felibien Vies des Archit. N. D. H.*

HIMERIUS, a Greek grammarian, who flourished under the emperors Constantine and Julian, and was living after the death of the latter in 363. He was a native of Prusias in Bithynia, and taught rhetoric at Athens. Eunapius commends the style of his orations, a copy of which having been discovered, an edition was published by Wernsdorff in 1790, under the title of "Himerii Sophistæ elegæ et declamationes." Gr. Lat. Gottingen, 8vo.—*Cuvæ. Saxii Onom.*

HINCHLIFFE, DD. (JOHN) bishop of Peterborough, was born in the parish of St James's, Westminster, where his father kept a livery-stable, in 1731. He was educated at Westminster school; and after graduating at Trinity college, Cambridge, returned to that seminary in the capacity of under-master, and finally obtained the headship. In 1768 the Crown interest obtained him the mastership

of his college; and, on the head of that faculty coming into power, he was farther promoted to the deanery of Durham, and the see of Peterborough, both which valuable preferments he held together. He was the author of several discourses; these were collected and published together in one volume, two years after his decease, which took place in 1794.—*Gent. Mag.*

HINCMAR. There were two French prelates of this name in the ninth century, equally distinguished for the intemperate violence of their zeal in the cause of the church. The elder was archbishop of Rheims, in which capacity he became notorious for his severity towards Godescalcus, or Gutteschalcus, a monk of his own order, as well as towards the second of the name, his own nephew, bishop of Laon, whom he not only deposed in consequence of his opinions, but punished farther with the loss of sight. The latter was however restored to his see in 878, a short time before his death, which preceded that of his tyrannical uncle, who survived till the year 882, when he died at Epernay. The works of the elder Hincmar, written in a nervous style, though deformed by the monkish barbarisms of the Latinity, were printed in two folio volumes, by Sirmond in 1645.—*Cuvæ. Dupin.*

HINGHAM, or HENGHAM (sir RALPH DE) an English magistrate and juridical writer, who was proprietor of an estate at Hingham, in Norfolk, in the latter part of the thirteenth century. He appears to have been of the clerical order, as he held a canonry in St Paul's cathedral, London. He was one of the justices of the king's bench, in which post he continued during sixteen years. When Edward I instituted justices itinerant, Hingham was among the number of those first appointed; and he was chief commissioner for the government of the kingdom, while Edward visited Palestine; but after the king's return, this great lawyer was among the judges dismissed from office for bribery and corruption. He was also fined 7000 marks, which sum not being immediately paid, he was imprisoned, and afterwards banished, with nine of his brethren; two only of the whole bench escaping, viz. sir John de Metingham, and Elias de Bekingham. Hingham continued in disgrace till the accession of Edward II, in 1308, when he was raised to the office of chief justice of the common pleas, which he did not long enjoy, for dying the same year, he was interred in St Paul's cathedral. Selden published, in the original Latin, with English notes, a treatise of justice Hingham, entitled "Summa Magna et Parva," relating to the ancient forms of pleadings; and he is said to have composed a register of writs, mentioned by Dugdale; and twolaw tracts, still in manuscript.—*Blomefield's Hist. of Norfolk. Bridgman's Legal Bibliog.*

HIPPARCHUS, a very celebrated ancient astronomer, who made the earliest catalogue existing of the fixed stars. He was a native of Nice in Bithynia, and flourished between the 154th and 163d olympiads; or between 160 and 125 BC, as appears from his having

made astronomical observations during that interval. He resided some time in the island of Rhodes, where he pursued his researches; whence he has derived the appellation of Rhodius; but he afterwards went to Alexandria, then famous as a school of science; and there he continued his studies, in the reign of the Egyptian prince Ptolemy Philometor. The period of his death is not known. He was the author of a commentary on the *Phænomena* of Aratus, published by Peter Victorius at Florence, in 1567; and also by Petavius, with a Latin version and notes, in his *Uranologia*. He also wrote treatises on the nature of the fixed stars; on the motion of the moon; and others no longer extant. Hipparchus has been highly praised, both by the ancients and the moderns. Pliny the elder styles him the *confidant of nature*, on account of the importance of his discoveries; and M. Bailly has bestowed on him the title of the *patriarch of astronomy*. He treated that science with a philosophical spirit, of which there are no traces before his time. He considered the subject in a general point of view; examined the received opinions; passed in review the truths previously ascertained, and exhibited the method of reducing them so far to a system, as to connect them with each other. He was the first who noticed the precession of the equinoxes, or that very slow motion of the fixed stars from west to east, by which they perform an apparent revolution in a great number of years. He observed and calculated eclipses; discovered the equation of time, the parallax, and the geometrical mensuration of distances; and he thus laid the solid foundations of geographical and trigonometrical science. The result of his labours in the observation of the fixed stars, has been preserved by Ptolemy, who has inserted the catalogue of Hipparchus in his *Almagest*.—*Bayle, Martin's Biog. Philos. Bailly Hist. de l'Astron. Med. vol. 1.*

HIPPOCRATES, the most famous physician among the ancient Greeks, and deservedly esteemed the father of medical science. He was born in the island of Cos, one of the Cyclades, about 460 BC; and was the son of Heraclides, descended through a line of professional ancestors, according to tradition, from Æsculapius. Many incidents concerning him are reported, but some of them are manifestly fabulous, and others destitute of satisfactory evidence. He is said to have studied medicine under Herodicus; and philosophy under Gorgias of Leontium, and Heracitus. Some of his professional science was probably derived from the medical maxims and receipts which had been preserved in his family; but it may readily be believed that he did not content himself with this empirical knowledge, adding, as we are told, to his stock of information, by perusing the tablets in the temples of the gods, on which those who had recovered from dangerous diseases, were accustomed to record the methods by which they had obtained relief. Pliny, on the authority of Varro, relates that he was keeper

of a library at Cnidus, from which place he fled, after having burnt the books entrusted to his care, whence he had extracted all the precepts they contained relative to medicine, intending to publish them as his own; and Soranus says he emigrated from Asia Minor, in consequence of being divinely admonished in a dream to go and settle in Thessaly: but both these stories may be considered as specimens of the most romantic part of his history. It is certain that he left Cos when young, travelled much, and practised physic in various parts of Greece. He was for some time at the court of Perdiccas, king of Macedonia; and he is said to have received an invitation from Artaxerxes Longimanus, king of Persia, which he rejected, on the ground of its being unlawful or unpatriotic to employ his talents for the benefit of an enemy of his country. The well-known account of his being sent for by the people of Abdera, to cure their celebrated townsman Democritus, whom they fancied to be a lunatic, but who was pronounced by Hippocrates, after conversing with him, to be the wisest man in Abdera, has much the air of a fable. His reported services to the Athenians, when they were suffering from the plague, during the Peloponnesian war, and the magnificent rewards which they decreed him, are inconsistent with the narrative of Thucydides. Neither the time nor the place of his death are precisely known; but it is commonly asserted that he died in the ninety-ninth year of his age, at Larissa, in Thessaly. The highest honours were paid to his memory. Statues were erected to him; and his professional opinions were quoted, not only in the schools of medicine, but in the courts of law. He practised as a surgeon as well as a physician, and his writings relate to both departments of the profession. Of the works ascribed to him the list is exceedingly numerous; but by far the greater part may safely be considered as spurious. Among his genuine compositions are treatises "On Ætiæmics," three books; "Prognostics;" "Aphorisms;" "On Air, Water, &c.;" "On Joints and Fractures;" "On wounds of the Head." Collective editions of the works of Hippocrates have been published by Anutius Foesius, Francof. 1595, folio; by Vander Linden, Lugd. Bat. 1665, 2 vols. 8vo; by Chartier, together with the works of Galen, Paris, 1679, 13 vols. 4to; by Mack, Vienna, 1743, 2 vols. folio; and by Pierer, Leips. 1806, 3 vols. 8vo. An English translation of his tracts on air, water, epidemics, &c. was published with notes, by Francis Clifton, MD. in 1752, 8vo; and in 1788, Dr John Moffat published the Prognostics and Prorrhetics of Hippocrates, in English, with an account of his life.—*Le Clerc Hist. de la Med. Halleri Bibl. Prac. Anat. Med. et Chirurg. Hutchinson's Biog. Med.*

HIPPISLEY, bart. DCL. FR. and AS. (sir JOHN COXE,) an English baronet, descended of an ancient Somersetshire family. He was the only surviving son of William Hippisley, esq. of Yatton, and was born in 1765, having

graduated as DCL. at Hertford college, Oxford, in 1776, he became a member, and eventually a bencher of the Inner Temple. On his return from Italy, which country he visited in 1780, he was appointed through the interest of lord North to an office of trust and importance in India, which he held during the wars with Hyder Ali, and Tippoo Saib. Returning to England, he was elected in 1790 M.P. for Sudbury, of which borough he became the recorder, and representative in five parliaments. In 1796 Mr Hippisley was raised to the baronetage, as a reward for his services in the negotiations then concluded for a marriage between the duke of Wirtemberg and the princess royal of England. Sir John, besides being an active magistrate, and a warm supporter of many agricultural, literary, and other useful institutions, distinguished himself on several occasions in the house by his speeches, especially upon Irish affairs, as a strenuous supporter of catholic emancipation. In favour of this measure he published an octavo volume of "Observations," in 1806, and his speech on Mr Grattan's motion in 1812, and a series of letters to the earl of Fingal in 1813. He was also the author of a treatise on prison discipline, printed in 1823, in which he strongly advocated the substitution of the hand crank-mill for the tread-mill, as a punishment for convicts. His death took place May 3, 1825.—*Gent. Mag.*

HIPPOLYTUS (SAINT) a Christian martyr of the third century, who suffered under Severus in the fifth persecution, about the year 230. The best edition of his writings is that by Fabricius, Gr. Lat. 2 vols. folio, 1716.—*Cave. Lardner. Saxii Onom.*

HIPPONAX, a Greek poet, contemporary with Anacreon, who flourished about the middle of the sixth century before the Christian era. He was the son of an Ephesian, named Proteus, and so ugly, that his deformity was selected by two brothers, named Anthermus and Bupalus, sculptors, as well calculated for the exhibition of their art. The poet in revenge wrote so severe a lampoon upon his caricaturists, that according to the popular story, they sank under his ridicule, and perished by their own hands. The invention of that description of Iambic verse called scazonic, is attributed to him.—*Nouv. Dict. Hist. Moreri.*

HIRE (PHILIP DE LA) an eminent French mathematician and astronomer, in the beginning of the last century. He was the son of Laurence de la Hire, painter in ordinary to the king, and professor in the academy of painting at Paris, who died in 1656. The son, born at Paris, in 1640, was intended for his father's profession, and was instructed in those branches of mathematics which are connected with it, as well as in the principles of design. After the death of his father he travelled into Italy, and examined the curious remains of ancient art in that country; but prompted by inclination, he made geometry the chief object of his studies, and on his return to Paris, after about four years absence, he devoted himself to the cultivation of that

science. The first work by which he made himself known was the second part of "A Treatise on Stone-cutting," published in 1672, in continuation of the work of Gerard D'Argues on the same subject. This was followed by a treatise on the Cycloid, and another geometrical publication; and in 1678 he was chosen a member of the Academy of Sciences. Colbert having determined to procure a more correct map of France than any before made, MM. de la Hire and Picard were deputed to execute the surveys and observations necessary for that purpose. The former consequently went to Brittany in 1679, to Guyenne in 1680, to Calais and Dunkirk in 1681, and to Provence in 1682. Besides prosecuting the peculiar object of these journeys, he made observations on the measurement of heights by the barometer, on the variation of the compass, and on atmospheric refraction. In 1683 he was employed to continue the meridian line commenced by Picard in 1669. He conducted the necessary operations to the north of Paris, while Cassini carried them on to the south; but the death of the minister, Colbert, prevented the completion of the undertaking. He was then engaged, with other members of the academy, in taking levels for the grand aqueducts projected by Louis XIV. to convey the water of the river Eure to Versailles. In 1685 he published a Latin work on the theory of conic sections, which gained him great reputation throughout Europe. About 1690 he was appointed a professor of the royal college, and of the academy of architecture. His death took place April 21st, 1718. Besides the productions already noticed, he published astronomical tables; an edition of the works of the ancient Greek mathematicians, and many tracts on geometrical science.—*Martin's Biog. Philos. Aikin's G. Biog.*

HIRSCHING (FREDERIC CHARLES GOTTLÖB) a learned and industrious German professor, born at Uffenheim, December 21st, 1762, and died at Erlangen, March 11th, 1800. He had been nominated supernumerary professor of philosophy in that city, but had not entered on the functions of his office. He was well acquainted with botany and rural economy, but is chiefly known for his researches on history and geography. His most important works are—"A Description of the principal Libraries of Germany," Erlang. 1786, 4 vols. 8vo; "An account of the most curious Pictures and collections of Engravings," 6 vols. 8vo; and a "Dictionary of celebrated Persons of the Eighteenth century," continued after his death by J. H. M. Ernesti and others, at Cobourg. Hirsching's portion of the work consists of the first five volumes, extending through about half the alphabet.—*Biog. Univ.*

HIRTIVS or HIRCIUS (AULUS) a noble Roman, who filled the consulship in conjunction with Vibius Pansa in the year 43 before the Christian era. He had been a distinguished officer under the first Cæsar, the eighth book of whose Commentaries, concerning the war in Gaul, was written by him. The account of the African and Alexandrian

expeditions have also been attributed to him, though Suetonius doubts whether Oppian has not a better claim to be considered their author. On the fall of the dictator, Irtius espoused the cause of Brutus, and marching to relieve that general when besieged by Marc Antony, in Mutina, fell in the action.—*Fossii Hist. Lat. Moreri.*

HIRZEL (JOHN CASPAR) an eminent physician, and writer on rural economy. He was born at Zurich in 1725, and adopting the medical profession, he distinguished himself by his learning and intelligence. After having for some time given gratuitous instruction to female accoucheurs, he lectured on the theory and practice of medicine. He was one of the principal founders of the Helvetic society, in 1762. He translated the works of Tissot into German, and subsequently published a "Treatise on Rural Economy." Forming an acquaintance with a Swiss farmer, distinguished for his industry and skill, Hirzel conceived the idea of publishing the result of this man's experience in his agricultural occupation, combined with a series of facts and observations from other sources. This useful undertaking he executed, and produced a work entitled "The Rustic Socrates," which has been translated into English by Arthur Young, and also into most other languages of Europe. Hirzel died of apoplexy, February 19, 1803. Besides the preceding publications he was the author of some historical eulogies, and dialogues on religion and toleration, addressed to his friend, Meister.—*Biog. Univ. Biog. Nouv. des Contemp.*

HOADLY (BENJAMIN) an eminent English prelate, was born at Westerham in Kent, in 1676. He was the son of the rev Samuel Hoadly, who for many years kept a private school, and who was afterwards master of the grammar-school at Norwich. He was educated in the first instance by his father; and at the age of fifteen was sent to Catharine-hall, Cambridge, where he was chosen fellow in 1696; and having graduated as MA. became a tutor. He took orders in 1700; and marrying, was appointed to the lectureship of St Mildred's in the Poultry, London. This situation he held for ten years, when he thought it time to resign, having preached it down, as he facetiously observed, to 30*l.* per annum. He subsequently officiated some time as rector of St Swithin's; and was at length presented to the rectory of St Peter-le-Poor, in Broadstreet. He had by this time become distinguished for his controversial talents, and his first contest was with Mr Calamy, the biographer of the non-conformists. In 1705 he preached a sermon on civic government, before the lord mayor, which gave great offence to the Tories; but the principles of which he strenuously defended, in a tract entitled "The Measure of Obedience;" and in other publications. He also entered the lists with the celebrated bishop Atterbury, some of whose positions, in a funeral sermon, he deemed of dangerous tendency. He still more seriously ~~inter del~~ with the same prelate in 1709, on

the subject of passive obedience and non-resistance; and in this controversy so eminently distinguished himself, that the house of commons recommended him for preferment to queen Anne, who never fulfilled the promise that she made to bestow it. He was, however, presented by Mrs Howland, grandmother to the duke of Bedford, with the living of Streatham, in Surrey; and on the accession of George I, was immediately nominated one of the king's chaplains, having been previously created DD. by archbishop Wake. This preferment soon formed a step to higher dignities, and in 1715 he was raised to the episcopal bench, being appointed to the vacant see of Bangor. In 1717 he preached before the king his famous sermon on "The Nature of the Kingdom or Church of Christ," which discourse excited so much anger among the clergy of the high church party, that it was determined to proceed against the author in convocation, which step was however defeated by the prorogation of that assembly. The celebrated Bangorian controversy then commenced, in which bishop Hoadly ably defended his views of civil and religious liberty, against Snape, Sherlock, Hare, Potter, Law, and many more who charged him with an intention to undermine all establishments, and that of the church of England in particular. In 1720 he was translated from the see of Bangor to that of Hereford; and in 1723 again to that of Salisbury. He still continued an active controversialist; and in 1732 drew up an account of the life, character, and writings of Dr Samuel Clarke, which was prefixed to the posthumous works of that celebrated divine. In 1734 he succeeded bishop Willis in the see of Winchester; and in the following year published his treatise entitled "A plain account of the Nature and End of the Sacrament of the Lord's Supper." In 1754, and the following year, he published two octavo volumes of sermons, which are much esteemed; and maintained, in his now advanced age, his usual spirit and ability, which he eminently displayed in 1758, in "A Letter from the bishop of Winchester to Clement Chevallier, esq." This was a spirited account of the attempt of one Bernard Fournier, a convert from popery, and curate of Jersey, to defraud him, by a pretended note of hand, of 8,800*l.* He was at this time in his eighty-first year, and survived until his eighty-fifth, dying at his palace in Chelsea in 1761. Bishop Hoadly was as distinguished for his moderation and candour, as for his skill in controversy; and his character in private life was in the highest degree respectable and amiable. In 1773 his son, Dr John Hoadly, published a complete edition of his father's works, in 3 vols. folio, a list of the multifarious contents of which may be seen in the Biographia Britannica. An appendix contains the correspondence of the bishop with lady Sundon, lady of the bed-chamber to queen Caroline.—*Biog. Brit. Ann. Reg.* 1762.

HOADLY (BENJAMIN) MD. eldest son of the bishop of Winchester, was born in

1706. He was educated, as was also his brother, at the school of Dr Newcome, Hackney; and in 1722 he was admitted a student in Benet college, Cambridge. Here he particularly applied himself to philosophical and mathematical studies, under the celebrated professor Saunderson. He was early received into the royal society, and in 1728 the degree of MD. was conferred on him by mandamus, and he settled in London as a physician. In 1742 he was appointed physician to the king's household; and in 1746 to that also of the prince of Wales. Dr Hoadly was a man of elegant, as well as of solid accomplishments, and his "Suspicious Husband," which still keeps the stage, is deemed one of the most sprightly comedies in the English language. He also assisted Hogarth in the composition of his "Analysis of Beauty." His other works are "Three Lectures on the Organs of Respiration," which are deemed an ingenious defence of a defective theory; an "Harveian Oration," pronounced in 1742, which is regarded as a piece of elegant Latin; and "Observations on a Series of Electrical Experiments, by Dr Hoadly and Mr Wilson."

JOHN HOADLY, LL.D. younger son of the bishop, born 8th October, 1711, received his academical education at Corpus Christi college, Cambridge. He took orders in 1735. He enjoyed the livings of Wrington in Somersetshire, of Alresford, Hants, of St Mary, near Southampton, and was also master of St Cross, and Chancellor of Winchester. He wrote five pieces for the stage, besides a tragedy on the subject of lord Cromwell, which was never performed. These pieces, which never attracted much attention, are "The Contrast," a comedy; "Love's Revenge," a pastoral; "Phœbe," a pastoral; "Jephtha," an oratorio; and "The Force of Truth." He was author of several poems in Dodsley's collection. He died in 1776.—*Biog. Brit. Biog. Dram.*

HOARE (WILLIAM) an English historical painter of the last century, a native of Eye in Suffolk, born 1707. He was the pupil first of Grisoni, and afterwards of Francesco Imperiale, to obtain the advantage of whose instructions he went to Italy, and remained there several years. Several altar-pieces, &c. were painted by him on his return, which have been much admired. He also occasionally took likenesses in crayons. His death took place at Bath in 1792.—*Chalmers's G Biog. Dict.*

HOBBS (THOMAS) a celebrated moral and political writer, and metaphysical philosopher of the seventeenth century. He was born April 5th, 1588, within the borough of Malmesbury in Wiltshire; his father being vicar of one of the parishes in that town. At the age of eight, he was sent to a grammar-school at Malmesbury, where he made such proficiency, as to have translated the *Medea* of Euripides into Latin verse before his removal to the university. In 1603 he became a student of Magdalen hall, Oxford, where he took the degree of BA. in 1607; and the following year he accepted the office of tutor

to the son of lord Hardwicke, afterwards earl of Devonshire. In 1610 he set out on a tour with his pupil, through France and Italy; and after his return to England, he resided several years in the Devonshire family, as secretary to lord Hardwicke, who succeeded his father in the earldom in 1626. During this period Hobbes became acquainted with the lord chancellor Bacon, some of whose works he translated into Latin; and he also obtained the friendly notice of lord Herbert, of Cherbury, and Ben Jonson. The first performance which he published, was a translation of the history of Thucydides, which he was preparing for the press when he was deprived by death of his patron, lord Devonshire. Subsequently to the publication of his book, he went abroad as tutor to the son of sir Gervase Clifton; but the countess dowager of Devonshire wishing to place the young earl, her son, under his care, he accepted the charge, and took his pupil to Paris, where he became acquainted with Mersenne and Gassendi; and afterwards going to Italy, he was introduced to the celebrated Galileo, at Pisa. In 1637 he returned to England, and resided much at Chatsworth, till 1641, when alarmed at the probability of political commotions, he went to Paris. He stayed abroad some years; and during that time published most of the works which have rendered his name conspicuous in the annals of learning. In 1642 first appeared his treatise "De Cive," afterwards published in England, with the title of "Philosophical Rudiments, concerning Government and Society; or a Dissertation concerning Man, in his several habitudes and respects as a member of society, first secular, and then sacred." In 1645 he engaged in a mathematical controversy, relative to the quadrature of the circle; but his writings on that subject, and other branches of the mathematics, are not calculated to increase his reputation. Yet he was employed to teach prince Charles, afterwards Charles II, the elements of mathematical philosophy, and he acquitted himself to the satisfaction of his royal scholar. In 1650 was published, in London, a small treatise by Hobbes, entitled "Human Nature," which Addison has characterized as his best work; and another, "De Corpore Politico; or Elements of the Law," which was highly esteemed by father Gassendi. But the most remarkable of all his works is his "Leviathan; or the Matter, Form, and Power of a Commonwealth, ecclesiastical and civil," printed in London, 1651, folio. This bold attack on opinions and prejudices, sanctioned by antiquity, greatly alarmed the ecclesiastics of those days, and drew on the author much literary hostility. Indeed it is said, he would have been called to account before the civil magistrate, if he had not secretly left Paris, and returned to England. Here he was well received by the Devonshire family, in which he passed the remainder of his life. He continued to employ his pen on philosophical topics; and in 1654 he published a "Letter upon Liberty and Necessity," which occasioned a protracted dispute with bishop

Bramhall. In 1658 appeared his "Dissertation on Man," which completed his philosophical system, a work containing some singular notions relative to the moral and intellectual faculties of the human species. After the restoration Hobbes was favourably received by the king, who promised him his protection, and settled on him a pension of 100*l.* a year out of his privy purse. He was visited by Cosmo de Medicis, then prince, and afterwards duke of Tuscany, and by other foreigners of distinction; and the general deference and respect with which he was treated, must have been highly gratifying to his feelings. These honours might have served to console him for the illiberality of some of his clerical opponents, as well as the dangers he apprehended of prosecution as an infidel or heretic. The latter were not wholly imaginary, for, in 1666, his "*Leviathan*" was censured in Parliament, and a bill was introduced into the house of commons, to provide for the punishment of atheism and profaneness about the same time, which gave him great uneasiness. On this occasion he composed a learned and ingenious work, entitled an "Historical Narration concerning Heresy, and the Punishment thereof," to shew that he was not legally chargeable with heresy in writing and publishing his "*Leviathan*." Among the principal literary labours of his later years, were translations of Homer's *Iliad* and *Odyssey*, in verse, which passed through three editions within ten years, though utterly destitute of poetical merit. His "*Decameron Physiologicum, or Ten Dialogues of Natural Philosophy*," was published in 1678; as was also "A Dialogue between a Philosopher and a Student of the Common Law of England;" and in 1679 he consigned to the care of a bookseller, his "*Behemoth, or a History of the Civil Wars from 1640 to 1660*," which did not appear till after his death. That event took place December 4th, 1679, at Hardwicke, a seat of the earl of Devonshire, in Derbyshire; and he was interred in the church of Hault Hucknall, in the same county, where a monument was erected to his memory. Few authors have encountered more virulent opposition than the philosopher of Malmesbury. A vague imputation of irreligion was brought against him by his literary antagonists, and the charge has been renewed even in our own times. A baronet, who has distinguished himself by his labours as an author and a patron of literature, has characterized the subject of our notice as the "infamous Hobbes;" and a few years since an evangelical clergyman, preaching in the abbey-church of Malmesbury, vituperated the supposed infidel in unmeasured terms, stating that his birth had fixed a lasting stigma on the town and its inhabitants. Yet the writings of this calumniated individual, contain repeated testimonies in favour of christianity; and that he practised the duties of religion as a member of the church of England, is a fact of which there is positive evidence. The great merit of Hobbes

ductive method of reasoning, recommended by Bacon to the investigation of mental philosophy. In his search after truth he is startled by no consequences to which the inquiry may lead; his grand object being to ascertain the boundaries of knowledge, and to show where the imperfection of human intellect renders our creed a matter of conventional authority. Hence he has excited the hostility of those who would have all points of faith taken for granted as equally evident; and who have branded him with the epithets of infidel and atheist, because they fancied his speculations might weaken the confidence of mankind in the general principles of morals and theology; though his obvious design is accurately to indicate their respective origin and impotence. He expressly admits the existence of a God; but from his assertion that incorporeal substances are no better than non-entities, it has been inferred that he represented God as a corporeal being, and hence he has been styled an atheist. Religion, he says, originated from the fear of power invisible, imagined by the mind of man. The doctrine of the necessary operation of motives on the will he states positively and distinctly; and he also asserts the materiality and natural mortality of the human soul, or rather considers it as a mere term to denote the intellectual powers of the body, since he treats the distinction between soul and body as an error contracted by the contagion of the demonology of the Greeks. The belief of a future state, he says, is grounded upon other men's saying that they knew it supernaturally, or that they knew those that knew them that knew others that knew it supernaturally. In his observations on the authenticity and authority of the Books of the Old and New Testaments, he gave great offence to his contemporaries, though opinions similar to his have since been advocated by writers who did not wish to be considered as enemies of Revelation. He states the Pentateuch, and other sacred histories of the Jews, to be no older than the time of Ezra; and that the Christian Scriptures were not received by the church as of divine authority till the settlement of the canon by the council of Laodicea, AD. 364. Both with respect to religion and government he ascribes great weight to the will of the civil magistrate. And his sentiments on this point, together with his doctrine, that a state of nature must be a state of perpetual hostility, in which brute force must supersede law and every other principle of action, have perhaps been most generally objected to. Yet his claim of obedience to existing authorities is qualified, by the assertion, that it is no longer due than while they can afford protection to the subject. He says, expressly "*Obligatio civium erga eum qui summam habet potestatem tandem nec diutius permanere intelligitur, quam manet potentia civis protegendi.*" He therefore, at least, considered the duties of princes and their subjects as reciprocal. His notion of the state of nature, at worst, is more consistent with the present degree of our know-

ledge, than that of those who have looked for Utopia among savages. The philosophy of Hobbes, so depreciated among his contemporaries, has been more or less adopted by Locke, Hartley, Hume, and Priestley. The extensive obligations of the first mentioned metaphysician to Hobbes have been distinctly indicated by Mr Hazlitt. [See Nos. 31 and 34 of the Round Table.] "The philosopher of Malmesbury," shrewdly remarked Warburton, writing in the middle of the last century, "was the terror of the last age, as Tindal and Collins are of this. The press sweats with the controversy, and every young churchman militant would try his arms in thundering on Hobbes's steel cap." He might have added, the veteran's armour was too well tempered to readily yield to such inexperienced assailants.—*Aikin's G. Biog. Dissertations pref. to the Suppl. to the Encycl. Brit.*

HOBBIMA (МИНЬЕРХОУТ) a Dutch landscape painter, born in 1611, at Antwerp. His pieces are remarkable for the grace and beauty of their execution. Being, like Claude and Gaspar Poussin, defective in the delineation of the human figure, he was often aided in that department by Ostade, Teniers, and others. His works are now very rare and valuable.—*Pilkington*.

HOBOKEN or **HOBOKENIUS** (NICHOLOS) an anatomist and physician of the seventeenth century, who was a native of Utrecht, in Holland, and held a medical professorship in the university of Harderwick. He was the author of a treatise entitled "Ductus Salivalis Blasianus in lucem protractus," 1662; "Anatomia Secundinæ Humanæ," 1669, republished with considerable emendations in 1675; "Anatomia Secundinæ Vitulinæ," 1670; "Medicina Physiologica," 1685. Prefixed to the last mentioned work is an "Oratio de Nobilitate Medicorum." Hoboken was born in 1632. He also wrote a tract on the seat of the soul or human mind, probably with reference to the Cartesian hypothesis, which fixed its domicile in the pineal gland.—*Hutton's Abr. of the Philos. Trans.*

HOCCLEVE or **OCCLEVE** (THOMAS) an English poet of the fifteenth century, who, as well as Gower and Chaucer, was bred to the study of law at Chestre-inn, in the Strand. Warton expresses a mean opinion of this bard, and remarks that the feebleness of his genius may be inferred from the insipid titles of his compositions: as "Fable of a certain Empress;" "Consolation offered by an olde Man;" "Mercy, as defined by St Austin;" "Letter of Cupid," &c. Cold however as is the general style and manner of Hoccleve, some of his pieces show that he possessed taste and feeling, if not genius. His greatest work is a poetical translation of "Ægidius de Regimine Principum."—*Warton's Hist. of Eng. Poetry*.

HOCHSTETTER (ANDREW ADAM) a clergyman of the Reformed church, born in 1688, at Tubingen, of which university he was elected rector, after having successively

filled the professor's chair in rhetoric, philosophy, and divinity. He was the author of several treatises, which evince much historical and antiquarian research. Among them are "De Rebus Elbigensibus;" "De Fæsto Expiationis et Hirco Azazel;" "Collegium Puffendorfianum;" and "De Conradino, ultimo e Suevis Duce." His death took place in the spring of 1717, at Tubingen.—*Nouv. Dict. Hist.*

HOCHE (LAZARUS) one of the numerous individuals distinguished for their military talents among the French soldiery towards the end of the last century. He was born in the lowest rank of society, at Montreuil, near Versailles, in 1768. Employed as a stable-boy, at Versailles, he was so fond of reading, that all the money he could spare was laid out in the purchase of books. At the age of seventeen he enlisted in the French guards, in which situation he continued to indulge his literary taste. When the Revolution took place he was a non-commissioned officer; and entering into the national guard, he was promoted to a lieutenancy in 1792. He served under Dumouriez, and obtained credit by his conduct at Thionville, at Nerwinde, and on other occasions. In 1793 he was made adjutant-general, and he showed himself to be a brave and active officer; but he owed his rank more to his connection with the jacobins, and especially Robespierre, than to his merit. After having assisted in the defeat of the duke of York at Dunkirk, Hoche was, in November 1793, entrusted with the command of the army of the Moselle, destined to act against the duke of Brunswick, by whom he was repeatedly beaten. He had better success when opposed to general Wurmser; and at length, in conjunction with Pichegru, he drove the Austrians out of the province of Alsace. He intrigued with the jacobins to ruin Pichegru, whose superior talents excited his jealousy: but his machinations were terminated for awhile by his being arrested and imprisoned, by order of the commissioners of the national convention. Confinement did not blunt the energy of his disposition; for, instead of giving way to despondency at his misfortune, he employed the leisure which it procured him in the acquisition of knowledge, and the improvement of his talents by study. On the fall of Robespierre, and the cessation of the reign of terror, in 1794, Hoche obtained his liberty; and he was soon after appointed commander of the republican army, in La Vendée. In this station he first displayed the extent of his abilities. Aware that though force might exterminate the royalists, lenient measures alone could reclaim them, he with admirable address, by means of moderate and well-timed proclamations, weakened the bond of union among their soldiers; he calmed the apprehensions, and removed the prejudices of the inhabitants, by restoring discipline in his own army, and by favour and flattery he gained many of the priests to his side; after which he found it a comparatively easy task to direct his columns through the province, and reduce

to subjection a people who had so long withstood the efforts made to subdue them. The attempt of the emigrants, under the command of Puisaye and Sombreuil, to re-excite the spirit of loyalty among the Bretons, only afforded Hoche an opportunity of gaining new laurels, in the utter defeat of the royalists at Quiberon, in July 1795. He continued in the command of the army of the west, till the middle of December, 1796, when he sailed from Brest on an expedition against Ireland. But his ships were dispersed, some of them lost, and he was forced to return to France unsuccessful. He then had the command of the army of the Sambre and Meuse, and gained some advantages in the campaign of 1797, on the Lower Rhine; but the armistice concluded between the archduke Charles and Buonaparte, put a stop to his operations. He was afterwards offered the post of war minister, under the Directory; but he preferred a military command. Subsequently he undertook to support Barras in his contest for power, and marched his troops to Paris for that purpose; but alarmed at the spirit of opposition manifested in the metropolis, he relinquished the enterprise, which was confided to Augereau. His death, not without suspicion of poison, took place within a short time after, September 15th, 1797.—*Dict. des H. M. du 18me. S. Biog. Nouv. des Contemp.*

HODGES (NATHANIEL) an eminent English physician of the seventeenth century. He was the son of Dr Thomas Hodges, dean of Hereford, who published three sermons, and other tracts. The son received his education at Westminster school, and Christchurch college, Oxford; and after having taken in due course his degrees in arts, he, in 1659, accumulated those of bachelor and doctor of medicine. He settled as a practitioner in the metropolis; and he is principally distinguished for having remained there during the great plague in 1665. He appears to have been one of the two stipendiary physicians appointed by the city of London to attend the infected, and he fulfilled the duty of his office in an exemplary manner. He wrote a Latin work entitled "Loimologia," containing an historical account of the dreadful contagion, in which he states that he trusted to the burning of perfumes before him when he visited the sick, and used Spanish wine as a prophylactic. In the present state of medical knowledge the safety of Dr Hodges will hardly be attributed to such precautions as these; since the remarks of the latest and most intelligent observers, in the Levant and elsewhere, lead to a conclusion, now however disputed, that the plague can only be communicated by contact with infected persons, clothes, merchandize, &c. Indeed, it seems the doctor was twice taken ill, while the plague lasted; however he recovered, and, according to Wood, obtained extensive practice among the citizens, and was a fellow of the college of physicians in 1672. It is a reproach to his contemporaries that this physician died while under confine-

ment in the prison of Ludgate, in London, for debt, in 1684; though under what circumstances is not precisely known. He wrote a tract entitled "Vindiciæ Medicinæ et Medicorum," 1660, 8vo; and a translation of his book on the plague was published in 1720.—*Wood's Athen. Oxon. Hutchinson's Biog. Med.*

HODGSON (JAMES) a mathematician of the last century, who was for some time master of the royal mathematical school, in Christ's hospital, London. He published a "Treatise on Navigation," 1706, 4to; a "System of the Mathematics," 1723, 2 vols. 4to; "The theory of Jupiter's Satellites," 1750, 4to; "The Doctrine of Fluxions," (founded on sir Isaac Newton's method,) 1758, 4to; "The Valuation of Annuities upon Lives," 1747; and "An Introduction to Chronology." He was a fellow of the Royal Society, and the author of many papers in the Philosophical Transactions relating to astronomy.—*Hutton's Abr. of the Philos. Trans.*

HODY (HUMPHREY) a learned divine, was born at Odcombe, in Somersetshire, of which place his father was rector in 1659. He was educated at Wadham college, Oxford; where he took his degree of MA. in 1682 and in 1684 was chosen fellow of his college, and discharged the office of tutor. Previously to this, at the age of twenty-two, he wrote his learned "Dissertation on Aristæus's History of the Seventy-two Interpreters." This treatise is intended to show that it was the invention of a Hellenist Jew, to give greater authority to the Septuagint. In 1692 he took his degree of DD. and became chaplain successively to the archbishops Tillotson and Tenison. In 1698 he was appointed regius professor of Greek in the university of Oxford, and was presented to the living of Monks Risborough, in Buckinghamshire. In 170 he engaged in a controversy on the powers of the convocation, in a work entitled, "A History of the English Councils, and Convocations," &c. 8vo. In 1704 he was made arch-deacon of Oxford, and in the same year published his pieces, announced nearly twenty years before, on the original text, and Greek and Latin vulgate versions of the Bible, under the title "De Bibliorum Textibus Originalibus, Versionibus, Græcis, et Latina Vulgata," &c. lib. iv. 8vo. He died in 1706, and by his will founded ten scholarships in Wadham college. His works not yet mentioned are—"Prologomena to Malela's Chronicle;" and "The Unreasonableness of a Separation from the New Bishops;" "A Dissertation on the Resurrection of the same Body;" and a posthumous work, entitled "De Græcis Illustribus, linguæ Græcæ literarumque humaniorum iustauratoribus eorum vitis, scriptis et elogiis."—*Biog. Brit*

HOESCHELIUS (DAVID) an eminent Greek scholar, was born at Augsburg in 1556, and obtaining great reputation for ancient learning, was in 1589 made librarian of the college of that city. He published a catalogue of the Greek MSS. in the library under his care, and edited a great many Greek authors,

chiefly belonging to christian antiquity and ecclesiastical history. He died in 1617.—*Moreri*.

HOET (GERARD) an eminent painter, was born at Bommel in 1648. He was the son of a glass-painter, and with inconsiderable instruction became celebrated for cabinet pictures, and historical and fabulous pieces, which continue to be held in great esteem. He finally settled at Utrecht, where he exerted his influence to establish a school of design, an academy of which he became the director. His compositions are ingenious and appropriate, and in the design of his small figures he is more than usually correct. His pictures are very valuable. He died in 1733, aged eighty-five.—*Bryan's Dict. of Paint. and Eng.*

HOFER (ANDREW) chief of the Tyrolese, during their insurrection against the Bavarian government in 1809. He was born at Passeyer in 1765; and kept an inn in that town, at the same time carrying on a considerable trade in corn, wine, and cattle. The country of Tyrol was transferred to the king of Bavaria by the treaty of Presburg; but the war being re-kindled in 1809, the inhabitants rose in a mass to drive out the Bavarians, and again place themselves under the dominion of Austria. The riches and influence of Hofer, his decided character, and athletic form, all combined to induce the insurgents to elect him for their chief. He accepted the command, and obtained some advantages over the enemy; but the peace of Vienna having confirmed the cession of Tyrol to Bavaria, he laid down his arms. Hofer had in all circumstances distinguished himself by his moderation and humanity; and as Buonaparte had solemnly promised indemnity to the Tyrolese revolvers, he thought himself safe from danger. He was however accused of having endeavoured to excite new troubles, and orders were given for his apprehension, a price at the same time being set on his head. He sought an asylum in the mountains; and after a long search, he was found hidden in a cabin on the summit of a lofty and almost inaccessible peak, surrounded by snow and glaciers. On the 27th of January, 1810, his hut was surrounded by a body of grenadiers, to whom he immediately surrendered. He was conducted to Botzen, and afterwards to Mantua, where he was condemned by a council of war to be shot, and the sentence was almost immediately executed. After his death he was revered by his countrymen as a martyr; his cabin has since been converted into an hospital; and the Emperor of Austria has ennobled his son, and bestowed many benefits on his family.—*Biog. Univ. Biog. Nouv. des Contemp.*

HOFFMAN (DANIEL) a German divine of the Lutheran persuasion, noted as a controversial writer towards the conclusion of the sixteenth century. He became professor of theology in the university of Helmstadt in 1588, soon after which he engaged in disputes relating to the ubiquity of Jesus Christ, and the doctrine of predestination. But he rendered himself most famous as the head of

a party whose object it was to depreciate philosophy as inconsistent with theology. He maintained the extravagant opinion that theological and philosophical truths were entirely different, so that what was true in philosophy was false in theology. Hoffman, like other paradoxical theorists, made proselytes to his doctrine; and a violent controversy was the result, which was at length terminated by the authority of the duke of Brunswick, who ordered our author to retract his invectives against philosophy, and he accordingly made a public confession of his error in 1601. His death took place in 1611. He left no works of any permanent importance.—*Moreri. Bayle. Mosheim's Eccles. Hist.*

HOFFMAN (JOHN JAMES) a native of Basil, eminent as a critic and general scholar. He held the office of Greek professor in the university of Basil, where he died in 1706, at the age of seventy. He wrote the "History of the Popes," 2 vols. 12mo; and a "Universal History," in Latin verse; but he is principally known as the author of a work entitled "Lexicon Universale," comprising the subjects of history, geography, poetry, philosophy, politics, and philology. The first edition appeared in two volumes folio, at Basil, in 1677; in 1683 he published two supplementary volumes; and the dictionary was re-printed in four volumes at Leyden, in 1698. Stoll, on the authority of a German review, charges Hoffman with having over-reached his booksellers in the publication of this work; and also with being so avaricious that he was fond of counting his money, and when reproached for his meanness, he replied, "Even the sound is delightful."—*Moreri. Stoll. Int. in Hist. Lit.*

HOFFMAN (CASPAR) a German physician of the seventeenth century. He was a native of Gotha, and after having studied at Altorf and other German universities, he went to Padua in Italy; and in 1605 took the degree of MD. at Basil. He became professor of the theory of medicine at Altorf, and died there in 1648. He was a learned Hellenist; but he showed too great a predilection for the opinions of Aristotle, and other ancient philosophers. Among his numerous work are—"Apologia apologiæ pro Germanis contra Galenum," Amberg, 1626, 4to; and "De Thorace ejusque partibus," Frankfort, 1627, folio.—*Biog. Univ.*

HOFFMANN (CHRISTOPHER LEWIS) a German physician and medical writer of the last century. He was born at Rheda, in Westphalia, in 1721; and after having been physician to the bishop of Munster, and the elector of Cologne, he in 1787 accepted the same situation with the elector of Mayence. That prince gave him the direction of the college of medicine in that city. On the suppression of the electorate he removed to the small town of Eltviel, on the Rhine, where he died in 1807. He distinguished himself as a professional writer, by forming a new system of medicine, by combining the nervous and humoral pathology. He admitted the

sensibility and irritability of the solids as the basis of his system, and the corruption of the humours as a principle of irritation. His ideas are developed in the following works:—“On the Sensibility and Irritability of Diseased Parts;” “On the Scurvy and Syphilis;” “On the medicinal virtues of Mercury;” “A Treatise on the Small Pox,” 2 vols. 8vo; “The Magnetist,” Frankfurt, 1787, 4to. He also published a number of Latin dissertations, in the memoirs of the college of medicine at Munster.—*Biog. Univ.*

HOFFMANN (FREDERIC) the most celebrated individual of a name and family distinguished in the annals of medicine. He was born February 19th, 1660, at Halle, in Saxony, where his father was an eminent physician; and he received his early education in a public school in that place. At the age of fifteen he had the misfortune to lose both his parents, but that circumstance did not alter his destination to the medical profession; and in his nineteenth year he went to the university of Jena, where he studied under professor Wedelius. In 1680 he attended the chemical lectures of Caspar Cramer, at Erfurt; and returning to Jena took the degree of MD. in 1681. He then gave lectures at Jena, and afterwards practised as physician at Minden. In 1684 he visited Holland and England, and formed an acquaintance with Robert Boyle, and other men of science. Returning to Minden he was appointed physician to the garrison there, and subsequently to the whole principality. He removed to Halberstadt in 1688, to settle there as public physician; at which period he published a treatise “De Insufficiencia Acidit et Viscidi.” On the establishment of the university of Halle, Hoffmann in 1693 was appointed primary professor of medicine and natural philosophy; on which occasion he published an inaugural address, “De Atheo ex artificiosissima Corporis humani Fabrica convincendo.” He improved the spirit of medical education, promoting among the students of the university a disposition for inquiry highly favourable to the progress of knowledge. He thrice held the office of rector of the university; and his fame procured him admission into the scientific associations of London, Berlin, and Petersburg. In 1703 he was called in to attend the king of Prussia, who gave him the title of archiater, and aulic counsellor, with a liberal salary. He however retained his professorship at Halle, and returned thither in 1712. In 1718 he commenced the publication of a work, entitled “Systema Medicinæ rationalis,” which was received with great approbation by the faculty in different parts of Europe. In this system of medicine he exhibits his peculiar theoretical opinions, the chief feature of which is the doctrine of atony and spasm, afterwards made the foundation of a medical hypothesis by the famous Dr John Brown. Much of the humoral pathology was retained by Hoffmann, whose speculations are chiefly important as having given an impulse to future inquiries. He made a useful collection of the most important

cases which occurred to him in his practice as a physician, and published them under the title of “Medicina Consultatoria.” After a long life devoted to the cultivation of medicine, he died at Halle in 1743. His works, which are very numerous and multifarious, were collected after his death, and published at Geneva, 1748-1754, in nine volumes, folio. Many of his productions relate to chemistry; and it deserves to be noticed that he made some improvements in chemical pharmacy.—*Halleri Bibl. Med. Pract. Aikin's G. Biog. Rees's Cyclopad.*

HOFFMANN AB HOFFMANSWALDAU (JOHN CHRISTIAN) a German poet of the seventeenth century. He was imperial counsellor, and president of the senate of Breslau, where he died in 1679, at the age of sixty-one. His principal production is a German translation of the Pastor Fido of Guarini, which has been much commended; and he likewise translated from the French the dying Socrates of Theophile.—*Stollii Int. in Hist. Lit. Nouv. Dict. Hist.*

HOFFMANN (MAURICE) a physician of the seventeenth century, who was a native of Furstenwald, in the electorate of Brandenburg. He studied first at Cologne; but his father's death in 1638 obliged him to leave that place, and go to reside with an uncle, who was professor of medicine at Altorf, where he commenced a course of medical study. In 1641 he removed to Padua, where, while pursuing his researches in anatomy, according to Thomas Bartholine, he discovered the pancreatic duct, in dissecting a turkey. He is said to have shewn it to Virungius, who afterwards demonstrated it in the human body. Returning to Altorf, he took the degree of MD. and commenced medical practice. In 1648 he was made professor-extraordinary of anatomy and surgery; in 1649 professor of medicine; soon after a member of the college of physicians; and in 1653 professor of botany, and director of the botanic garden. In all his employments he acquitted himself with zeal and ability; and such was his reputation, that he was appointed physician to several of the princes of Germany. He died of apoplexy in 1698. His anatomical and physiological works are numerous; and he also published a catalogue of the plants in the botanic garden of Altorf; and another of those growing wild in the neighbourhood of that place.—HOFFMANN (JOHN MAURICE) son of the preceding, was born in 1653, and died at Anspach, in 1727. He studied medicine at Altorf, Frankfurt on the Oder, and Padua; and took his doctor's degree in 1674. He occupied the medical chair at Altorf, and was for some time rector of that university. Besides works on anatomy, chemistry, and medicine, he continued his father's catalogue of the wild plants about Altorf.—*Eloy. Dict. II. de la Med. Hutchinson's Biog. Med. Aikin's G. Biog.*

HOGARTH (WILLIAM) an eminent and original painter, was the son of a native of Westmoreland, who settled in London, where he kept a school, and was employed as a cor-

roctor of the press. The subject of this article was born in 1697, or 1698, in the parish of St Martin, Ludgate, and was apprenticed to an engraving silversmith. This occupation necessarily gave him some skill in drawing, and before his apprenticeship expired, he had exhibited several specimens of ludicrous caricature. Yielding to the impulse of genius, as soon as he became his own master, he entered at the academy for design, in St Martin's-lane, and studied drawing from the life. His proficiency, however, was not considerable, and he might never have exhibited much talent as a painter, had he not penetrated through external form to character and manners. He was at first obliged to support himself by engraving arms and shop-bills, from which he ascended to designs for books, an edition of *Iliadras* affording him the first subject particularly suited to his genius. In the mean time, having practised painting with much industry, and being very successful in catching likenesses, he acquired considerable celebrity as a portrait painter. His decided talents for original comic design now gradually unfolded themselves; and various public occasions produced displays of his ludicrous powers. In 1730 he contracted a clandestine marriage with the only daughter of sir James Thornhill, the painter; and soon after commenced his first great series of moral paintings, "The Harlot's Progress." The merit of these pictures gradually reconciled him to his father-in-law, and the young couple took up their abode at his house. Nothing could exceed the popularity of this series, for the plates of which the names of one thousand two hundred subscribers were entered. In 1745 he acquired additional reputation by his much-admired suites of "The Rake's Progress;" and "Marriage a-la-Mode." His other works, in series, are "Industry and Idleness;" "The Stages of Cruelty;" and "Election Prints." The single comic pieces from his pencil are very numerous; among the most distinguished of these are "The March to Finchley;" "Modern Midnight Conversation;" "Sleeping Congregation;" "Parts of the Day;" "Gates of Calais;" "Gin Lane and Beer Street;" "Strollers in a Barn;" &c. These are rather studies for the searchers into life and manners, than for the professional artist; but to those of every class who possess a genuine relish for ridicule and humour, they will ever prove attractive. Hogarth, who was not destitute of vanity, also wished to shine in the higher branch of historical painting, and attempted a *Sigismunda* in the Italian style, which lord Orford calls a complete failure. Although he affected to disregard literature, he sought to appear in the character of an author, and by the aid chiefly of Dr B. Hooadly, produced, in 1753, his "Analysis of Beauty;" the leading principle of which is, that beauty fundamentally consists in that union of uniformity and variety, which is found in the curve or waving line. By the resignation of his brother-in-law, Thornhill, in 1757, he became sergent painter to the king, an appointment

which possibly induced him to depart from the party neutrality he had previously maintained, by attacking Mr Wilkes, and his friends, in a print, published in September 1762, entitled "The Times." It was answered by Wilkes in a severe North Briton, which in its turn produced a caricature of Wilkes. An angry epistle to the painter followed from the pen of Churchill, which was retaliated by a caricature of the poetical divine; and "never," says lord Orford, "did two men of abilities throw mud with less dexterity." The powers of Hogarth were not, however, impaired, as he had shortly before published one of his capital works, a satirical print against the methodists. From this a decline in health took place, which terminated in death in October 1764, owing to the rupture of an aneurism in his chest. He lies interred at Chiswick, under an elegant mausoleum, decorated with an inscription by his friend Garrick. Hogarth was a man of rough and vulgar manners, who, like most uneducated persons, affected a contempt for all knowledge which he did not himself possess; but he was, at the same time, generous and hospitable. He was often absent in company, and seemed entertaining himself with his own ideas, or searching after some new objects of ridicule, which he attentively caught up when they occurred. Lord Orford is mistaken when he asserts that he seldom indulged in personal satire, many of his delineations being individual portraits. He lived to enjoy the fame which, in his own peculiar line, he so richly merited; and complete collections of his works are deemed highly valuable and curious. A catalogue of all his prints will be found in the fourth volume of Walpole's anecdotes. A multiplicity of local and temporary circumstances introduced into his pictures, has rendered notes necessary to a due comprehension of them; a task which has been well performed in the "Hogarth Illustrated," of Ireland.—*Life by Nichols. Walpole's Anec.*

HOHENLOHE KIRCHBERG (Prince of) a general of artillery in the service of the emperor of Austria. He fought with success against the Turks in Transylvania, in 1789, having completely defeated an army under the command of Cara Mustapha, on the 8th of October that year. On the opening of the campaign against France, in 1792, he was opposed to Beurnonville, before Treves, when he greatly distinguished himself. He also signalized his courage at Famars and Mormal; and he covered the siege of Quesnoy, and contributed to the success of prince Cobourg and general Mollendorff. He died in August 1796, when he was commander of the army on the Rhine. His loss was sensibly felt; and even the French regarded him as one of the ablest generals opposed to them during the revolutionary wars.—*Nouv. Dict. Hist. Dict. des H. M. du 18me. S.*

HOHENLOHE INGELFINGEN (prince FERDIEC LEWIS) general of infantry in the Prussian service. He was born in 1746, and adopted the military profession. He accom-

panied the king of Prussia to Pilnitz, and was intrusted with the command of a division of the army in the campaign of 1792. He distinguished himself on different occasions in 1793, and particularly at the taking of the lines of Weissembourg, which he attacked under the orders of general Wurmsler. In 1795 the king gave him the command of the line of neutrality on the Ems, and the general inspection of the troops in Silesia. Being recalled by the death of his father to the government of his little territories, he was rewarded with the present of a splendid sword, and made governor of Breslau. In 1806 he was commander of the Prussian and Saxon army, destined to penetrate into Franconia; but the battle of Jena frustrated all his efforts. After having retreated to Stettin, he was obliged to capitulate at Preuzlow. This misfortune induced him to leave the service; and ceding his principality to his son, he retired to a castle in upper Silesia, where he died in February, 1817.—*Biog. Nouv. des Contemp. Dict. des H. M. du 18me. S.*

HÖHLEFELD (——) an ingenious mechanic of Berlin. In 1757, a monk, named Engramelle, invented a machine, by means of which pieces of music performed on the harpsichord, would be legibly traced on paper as the music was executed. Similar inventions had taken place in England and Germany, but they do not appear to have been perfected. In 1752, Höhlefeld presented to the academy of Berlin a machine which he had completed: and which seems to give him the priority of actual invention. He derived the idea of his instrument from Euler. The description of this machine shews that Engramelle's contrivance was exactly the same. The academy gave the ingenious artist a reward for his discovery, but considered the process as too troublesome for general use. The machine was burnt by accident in 1757. Höhlefeld also invented a new kind of piano-forte, in which the strings were struck by a bow; which instrument has since been greatly improved by other artists.—*Biog. Univ.*

HOLBACH (PAUL THIERRI BARON DE) a German writer, eminent for his knowledge of mineralogy, a native of the Palatinate, born 1723. He was an honorary member of several philosophical societies, among others of the academies of Berlin, Mannheim, St Petersburg, and Paris, in which latter city his house was the rendezvous of the most celebrated wits and philosophers of France. He died in 1789. He translated the mineralogy of Wallerius, and Akenside's Pleasures of Imagination, into the French language; and published a new edition of Neri on the art of making glass, under the title of "l'Art de la Verrerie." His original works are "Elemens de la Morale Universelle, ou Catechisme de la Nature;" "Introduction à la Minéralogie," 2 vols; and "Chémie Metallurgique," 2 vols. 12mo.—*Nouv. Dict. Hist.*

HOLBEIN (HANS) the son of a painter at Basil in Switzerland, who, being instructed by his father in the rudiments of the art soon not

only excelled his teacher, but rose to first rate eminence in his profession. The year of his birth has been variously fixed; by Patin at 1495, but by others at 1498, which latter is the era more generally received. His talents procured him the acquaintance and even the friendship of Erasmus, in spite of his rough and dissolute habits, which that philosopher exerted himself much to soften and ameliorate. His advice, and the wish to escape from the consequences of an unfortunate marriage, induced the young artist to set out for England, whither he had been invited most pressingly by one of the nobility. His finances were so low at the time, that he found the greatest difficulty in reaching this country; where, when he had arrived, his having forgotten the name of his promised patron, seemed about to throw still farther impediments in the way of his success. Fortunately, however, although the title had escaped him, the features of the peer were yet fresh in his recollection, and a striking resemblance of him, which he produced from his easel, supplied a deficiency which, through his lapse of memory, might have proved a most inconvenient, not to say a fatal one. Letters from his friend Erasmus, whose "Panegyric on Folly" he had illustrated by a series of drawings, procured him subsequently the powerful patronage of the chancellor, sir Thomas More, who not only took him into his own house, and employed him to delineate the portraits of most of his own personal friends about the court, but eventually introduced him to the notice of Henry VIII, who, with all his faults, was a liberal encourager of the fine arts. At the command of this monarch, Holbein drew the portrait of the dowager duchess of Milan, whom Henry entertained with thoughts of espousing. He likewise, at the same royal instigation, took that of Anne of Cleves, the original of which was afterwards considered, by his fastidious patron, so far inferior in point of beauty to her picture, that his disgust was expressed in terms less courtly than sincere. While in this country, Holbein painted most of the principal nobility, who shewed themselves eager to encourage an artist ranking so high in the favour of such a sovereign as Henry. These portraits are still considered master-pieces of art, not shrinking from comparison even with Raphael or Titian, although, according to Du Fresnoy, there is a degree of "Gothic gusto" betrayed in them, which would have been altogether reformed, had the painter been more conversant with the works of the Italian masters. Some of his earlier productions, especially his "Dance of Death," are also very celebrated, and have perhaps contributed as much to the establishment of his reputation as his later productions. One of the finest specimens of his genius, so far as regards historical composition, was displayed in the picture which he painted for the hall of the still-yard company. The capricious prince whom he served, however sickle towards others, was constant in the protection which he afforded to him; and was ever so sensible of his value, that a memorable saying

of his is recorded, on the occasion of some complaint made against this artist by a court butterfly: "I can, if I please, make seven loros of seven ploughmen; but I cannot make one Holbein even of seven lords." Holbein died at Whitehall, of the plague, in 1554.—*Walpole's Anec. Sir J. Reynolds's Works.*

HOLBERG (LUDWIG) a Danish writer, who obtained distinction in various walks of literature. He was of low origin, and was born at Bergen, in Norway, in 1685. His father, who had risen from the situation of a common soldier to the rank of lieutenant-colonel, left him an orphan in his infancy; and accident depriving him of his property, he was fortunate enough to obtain the assistance of a relative to enable him to indulge his strong passion for study. In 1702 he was sent to Copenhagen for improvement; but was unable to remain there long, for want of funds for his support. After various changes of situation at home, he travelled through several parts of Holland, Germany, and England; and returning to his own country, he published an "Introduction to the Modern History of Denmark," which procured him the office of extraordinary professor at Copenhagen; and he afterwards obtained a salary of 100 dollars. He then visited the Netherlands, France, and Italy; and on his return he was made professor of metaphysics at Copenhagen, and assessor in the consistory court. He now applied himself to satirical composition, and with considerable success; an heroic-comic poem which he produced, entitled "Peter Paars," being still popular in Sweden and Denmark. His literary reputation became established, and he published a variety of works, many of which have been translated into English and other languages. In 1735 he was made rector of the university of Copenhagen, and, in 1737, treasurer of that institution. He was raised to the title of baron in 1747; and he died in 1754. He was never married, being prevented from taking a wife by the want of fortune in his younger years; which circumstance induced him to leave the large property he had acquired for the support of students in the academy of Soroe, and for dowries for portionless young women. Besides Danish comedies, he wrote the "Subterraneous Travels of Klimius;" an "Introduction to Universal History," &c.—*Aikin's Gen. Biog. Biog. Univ.*

HOLBOURNE (sir ROBERT) an English lawyer in the time of the civil wars, appointed Lent reader to the society of Lincoln's-inn, in 1641, at which period he was representative in parliament of the borough of St Michael's. He espoused the royal cause, and was made a knight and a privy counsellor. His name is to be found among those of the commissioners chosen to act between the king and the commons, both at Uxbridge and the Isle of Wight. In his professional capacity he is principally known as the author of a treatise on the Law of Treason, 4to, 1640; the "Freeman's Grand Inquest," which goes under the name of sir R. Filmer, is also said to have been his

composition. His death took place in 1647.—*Biog. Brit.*

HOLCROFT (THOMAS) a dramatist, novelist, and miscellaneous writer, said to have been born in the neighbourhood of Leicester-square, in 1744. His father was a shoemaker, and the son followed the same occupation, which he relinquished when young to try his fortune on the stage. His scheme did not succeed, and he then turned his attention to dramatic composition. His first piece of that kind appears to have been a musical entertainment called "The Crisis, or Love and Fear," acted at Drury-lane in 1778. This was followed by "Duplicity," a comedy, 1782; "The Noble Peasant," an opera, 1784; "The Follies of a Day, or the Marriage of Figaro," 1785; and several others, of which the most popular is "The Road to Ruin," 1792, still frequently performed. On the occurrence of the French Revolution, Holcroft displayed much zeal in the cause of liberty; and his conduct, with that of other individuals, having excited the alarm of government, he was included in the famous prosecution for treason instituted against Hardy, Horne Tooke, and Thelwall, as well as several others. In 1794. The persons just mentioned having been acquitted, Holcroft and the rest were discharged without being brought to trial. He continued to write for the stage with great assiduity; and published a multitude of works, original and translated, among the former of which were some clever novels. His last publication was a "Tour in Germany and France," 2 vols. 4to. He died in 1809. Holcroft is stated to have been the first who introduced on the English stage those since popular entertainments termed melo-dramas. He possessed strong natural abilities, and considering that he was self-taught, his attainments were very considerable. His translations are from the French and German languages.—*Biog. Dram.*

HOLDER (WILLIAM) a divine of the church of England, principally noted as the inventor or improver of a mode of instructing the deaf and dumb. He was a native of Nottinghamshire, and studied at Pembroke-hall, Cambridge. In 1642 he obtained the rectory of Blechington, Oxfordshire; and in 1660 he proceeded D.D. He afterwards was promoted to canonries in the cathedrals of Ely and St Paul's, London, and to the offices of sub-dean of the Chapel-royal, and sub-almoner to the king. His death took place in January, 1696-7. He was acquainted with music, on which subject he wrote, and also composed some anthems. But his most important work is a treatise on "The Elements of Speech," relating to the means of instructing persons born without the faculty of hearing. This book involved him in a dispute with Dr Wallis, who also claimed the invention; and the controversy was carried on in the Transactions of the Royal Society, of which both Holder and Wallis were members. The discovery which they contested was however made at least a century before their time.

[See article PONCE (Peter).]—*Rees's Cyclopædia.*
HOLDSWORTH. There were two of this

HOLME, RICHARD, the elder, whose name is sometimes spelt Oldisworth, was the son of a clergyman of Newcastle-upon-Tyne, where he was born in 1590, and educated until old enough to be placed at St John's college, Cambridge. Of this society he became a fellow, and obtained, in 1625, the living of St Peter-le-Poor, London. Four years after he was chosen divinity professor of Gresham college, and was preferred to the archdeaconry of Huntingdon, with a stall in Lincoln cathedral. On the complete success of the parliamentary party, he was imprisoned, expelled from all his benefices, and puritan divines substituted in his room. An account of his life was published in 1661, in one volume, folio, prefixed to a devotional treatise of his composition entitled "Prælectiones Theologicae." A quarto volume, containing a selection of discourses, under the fanciful name of the "Valley of Vision," proceeded also from his pen. His death took place in 1649.—**EDWARD HOLMSWORTH** was an elegant scholar and an acute critic, who flourished towards the close of the same century, and during the first half of the one succeeding. He was son to the rector of North Stoneham, Hants, and was placed by his father at Winchester grammar school, whence he removed to Magdalen college, Oxford, and graduated there in 1711, as A.M. His opinions, religious and political, preventing his complying with the provisions of the test act, the loss of a fellowship which, under other circumstances, he might have obtained, was the necessary consequence. He therefore quitted the university, and devoted his time and talents during the remainder of his life to the purposes of private tuition. A clever commentary on part of the Georgics of Virgil entitled "Pharsalia and Philippi," written by him, gives proof of equal taste and erudition. Some posthumous criticisms on the works of the same author, published under the title of "Remarks and Dissertations on Virgil," 4to, 1768, also exhibit considerable acumen. The only other production of his pen is an elegant little poem remarkable for the classical purity of its Latinity called "Muscipula." Of this a translation by Dr Hoadly is to be found in Dodsley's collection of miscellaneous poetry. His death was occasioned by a fever which seized him at Coleshill, in Warwickshire, the seat of lord Digby, and carried him off Dec. 30, 1747. Joseph Spence, who edited his posthumous writings, speaks enthusiastically of his classical attainments.—*Ward's Gresham Professors. Nichols's Lit. Anec.*

HOLE (RICHARD) an English author, rector of Faringdon, and vicar of Inwardleigh, in Devonshire, of which county he was a native, having been born at Exeter, and educated at the grammar school belonging to that city. He was afterwards member of Exeter college, Oxford, where he took the degree of bachelor in civil law in 1771. Soon after he entered the church, and in 1792 obtained from the bishop of Exeter the preferment abovementioned. His works consist of a translation into heroic verse of Ossian's "Fingal," and another of

the "Hymn to Ceres," attributed to Homer; a variety of poetical pieces on miscellaneous subjects, to be found in the Devonshire collection; "Prince Arthur," a poetical romance with notes; an "Ode to Imagination," and a 12mo volume of curious remarks on the Arabian Nights' Entertainments, written with a view to illustrate some portions of the Odyssey, 1797. His death took place in 1803. *Gent. Mag.*

HOLINSHED or HOLINGSHED (RA-PHAEL) an English chronicler, of the age of queen Elizabeth. He has been represented as a clergyman, and bishop Tanner farther states that he was educated at Cambridge, and took the degree of MA. there in 1544. But Dr Farmer, in his essay on the learning of Shakspeare, has corrected this mistake, having ascertained that the graduate was one *Ottewill Holingshed*, who was subsequently nominated by the founder one of the first fellows of Trinity college. From the will of the historian, preserved by Hearne, it appears that at the close of his life he was only a steward or servant to Thomas Burdet, esq. of Bromcote, in Warwickshire. His death took place about 1582. The Chronicles of Holinshed were first published in 2 vols. folio, 1577; and a second edition, in 3 vols. in 1587. Several individuals were concerned in the compilation of this work. In 1807 a new edition of it appeared, in 6 vols. 4to, in which the castrations, chiefly from the preceding impression of the third volume were restored. They principally relate to the history of lord Cobham and the earl of Leicester, during the reign of Elizabeth, to whom the passages in question appeared offensive. Prefixed to the Chronicles is one of the most curious and interesting memorials existing of the manners and domestic history of our countrymen in the sixteenth century.—*Biog. Brit. Nicholson's Hist. Lib. Monthly Mag.* vol. xxiii.

HOLKAR (JISWUNT RAO) a Mahratta chief, who distinguished himself by his courage and talents in his wars with the English. The Mahrattas are a people of Hindostan, who live under a kind of confederative monarchy, being governed by a number of kings, the chief of whom is called the Peishwa. Animated by national antipathy to the English, Holkar let slip no opportunity of giving proofs of his sentiments. He first carried arms under Moadjha Scindia, and he succeeded Maharow Holkar, soubah of Malwa, in the command of the Decan. He was then one of the most powerful of the Mahratta princes, and able to bring into the field one hundred thousand men, of whom one half were cavalry. But engaging in several wars with his Indian neighbours, and with the English, his power was very much reduced; and his territories diminished. His contests with his ancient comrade Scindia proved unfortunate; but in 1803 he carried on a successful war against the Peishwa, who was obliged to take refuge among the English at Bombay. Holkar commenced hostilities against the English in 1804; the result of which was a treaty concluded December 30th,

1806. by which he gave up all his maritime provinces. The insurrection of the Pindarrees in 1817 induced Holkar again to make war on the English. The defection of the Peishwa, who had joined in his confederacy against us, derailed his operations; and he was ultimately deprived of two-thirds of his remaining dominions. He died in 1825.—*Biog. Nouv. des Contemp.*

HOLLAND (HENRY).—See Appendix.

HOLLAND (SIR NATHANIEL) an English painter of some ability, but more known for his wealth and eccentricity than for his skill as an artist. He was the son of George Dance, sen. architect and surveyor to the city of London; but having married a wealthy Yorkshire heiress, he obtained an act of parliament to alter his name, and relinquishing the profession in which he had been instructed, he assumed the airs of a man of rank and consequence. Having been made a baronet and chosen a member of the house of Commons, he was desirous of obliterating the remembrance of his former employment, and endeavoured to buy up all the pictures he had painted, in order to destroy them. He possessed a very large income, in right of his wife; but it does not appear that he employed his riches in any undertakings or pursuits worthy of record. He died at Winchester, in 1811, aged eighty-two.—*Gent. Mag.*

HOLLAND (PHILEMON) an industrious writer of the sixteenth and seventeenth centuries. He was a native of Chelmsford, in Essex; and studied at Trinity college, Cambridge, where he proceeded M.A. and obtained a fellowship. He subsequently procured a diploma as a physician, and engaged in medical practice at Coventry. He is also said to have been master of a free grammar-school at that place, where his death occurred in 1636, in the eighty-seventh year of his age. He was a kind of translator-general of his time, whence he became the subject of the following punning epigram:—

“Holland with his translations doth so fill us,
He will not let Suetonius be tranquillus.”
He published versions of several of the classics besides Suetonius; but his most important work is his translation of Camden's *Britannia Fuller's Worthies of Eng.*—HOLLAND (HENRY) the son of Philemon, followed the profession of a bookseller in London, and published some works which are still esteemed. His “*Heroologia Anglica, hoc est Clarissimorum et Doctorum aliquot Anglorum, qui floruerunt ab anno Christi 1500 ad præsentem annum, Vitæ, Effigies,*” &c. London, 1620, folio, is of considerable value on account of the portraits. He likewise published “*Monumenta Sepulchralia Ecclesiæ S. Pauli;*” and a work entitled the “*Book of Kings.*”—*Wood's Athen. Oxon.*

HOLLAR (WENCESLAUS OR WENTZEL) a distinguished Bohemian engraver, born at Prague in 607. The storming of this capital in 1619, by destroying the pecuniary resources of his parents, compelled him to give up all thoughts of following the law, to which he was bred, and to turn his attention to the cultivation

of the art of engraving, for which he had shown some talent, as a means of future support. In this his new profession he soon rose to distinguished excellence, and the delicacy with which he had, even as early as his eighteenth year, executed copies of portraits from the best masters and miniature views of several of the cities of Germany, not only obtained him great reputation among his brother artists, but secured him the valuable patronage of Howard, earl of Arundel, at that time ambassador from England to the court of Vienna. This munificent encourager of the arts took Hollar into his service in 1636, and on his recall brought him in his suite to England, where he soon engaged in executing specimens of his art for the booksellers. A view of Greenwich, and an equestrian portrait of his noble patron were among the first of these his productions, and appeared in 1637-8. Two years afterwards his now generally acknowledged talents procured him the notice of royalty, and he was engaged to instruct the junior members of the royal family in the art of designing. This avocation did not however occupy so much of his time as to prevent his executing about the same period many beautiful copies of the Arundelian and other paintings. On the breaking out of the civil wars, and the ruin of the royal cause, his talents, which had hitherto brought him fame at least, if not fortune, proved most inimical to his welfare. His having perpetuated so many likenesses of persons obnoxious to the party then in power was gravely alleged as a charge against him, and being at length taken in arms for the king, at Basing-house, in 1645, he was thrown into prison. What might have been the event of his captivity can only be conjectured, had he not fortunately contrived to make his escape to Antwerp, where he again attached himself to his tried friend, the earl of Arundel, then dwelling there in exile. The restoration brought him once more to England, but the same ill fortune which had so long pursued did not yet abandon him; and although his exertions and perseverance in the use of his graver were unceasing, the national calamity which took place in 1666, when London was consumed, together with an immense mass of property, involved him in the common ruin which overwhelmed so many. The king's countenance was not however withdrawn from him; and he proceeded the year following, at the instance of the court, to Tangier, in order to bring home a correct fac-simile of the fortifications there. In 1672 he went into the north of England, where he executed many views of the principal towns and buildings, and soon after some of Windsor castle, together with prints of the costume, and portraits of the knights of the garter, &c.; but although he appears to have ever been kept in full employ, either a want of prudence on his own part, or the parsimony of those who benefited by his labours, or, as is far from improbable, both these causes combined, prevented his ever extricating himself from the load of debt in which he had suffered himself to become

involved. In the spring of 1677, when he had passed the usual age of man, his furniture was seized in execution, and a writ served upon his person, at his obscure lodgings in Gardener's-lane, Westminster. Feeling that the mortal blow was struck, and the hand of death already upon him, the unfortunate artist begged hard to be allowed to expire without the walls of the prison, but whether his request was complied with, is not exactly known. His death, however, is ascertained to have taken place on the 28th of March in that year, and his body was buried at St Margaret's chapel, in the neighbourhood. His "Ornatus Muliebris Anglicanus," a series of engravings representing the female costume of the day, is an interesting work, and is held in high estimation by antiquaries, as portraying with great correctness the appearance of the fair sex, in the various classes of the community, during the seventeenth century.—*Life by Vertue. Biog. Brit.*

HOLLES (DENZIL lord) an eminent political character of the seventeenth century; was the second son of Holles, the first earl of Clare, at whose seat at Haughton, in Northamptonshire, he was born in 1597. He was liberally educated, and when his father had a place at court, was playfellow and companion to prince Charles. The earl of Clare's subsequent discontent was communicated to his sons, and in the last parliament of James I, Denzil, who represented St Michael's in Cornwall, sided with the opposition. In the parliament of 1672 he was returned for Dorchester, and took a leading part in favour of liberty, with his characteristic ardour and courage. When the three resolutions of the Commons, against popery, arminianism, and tonnage and poundage, by the king's prerogative, were drawn up, he was one of the two members who forcibly held the speaker in the chair until they were passed. For this conduct, refusing to give bail or sureties for his good behaviour, he was condemned to fine and imprisonment, the latter of which he endured in the Tower for upwards of twelve months. In 1640 he entered the long parliament, a determined foe to the court, and was placed at the head of the presbyterian party. The earl of Strafford having married his sister, he was prevented from taking part in the prosecution of that minister; but he carried up the impeachment against archbishop Laud. He was also one of the members, the imprudent attempt to seize whom, in the parliament house, formed the immediate cause of taking up arms. In the ensuing war, the parliament conferred on him the command of a regiment, and appointed him lieutenant of Bristol; but becoming aware of the designs of the leaders of the independents, he endeavoured to frustrate them by promoting a treaty with the king. In 1644 he was one of the commissioners appointed to carry propositions of peace to Charles at Oxford; and in 1647 he made a motion for disbanding the army, but that party was now too strong, and the attack was returned upon himself by an impeachment for high treason.

He consulted his safety by retiring to France whence he was allowed to return in 1648, when he resumed his seat in parliament, and was one of the commissioners appointed to treat with the king in the Isle of Wight. He was soon after again obliged, by the violence of the times, to retreat to France, where he remained until the Restoration, which he zealously promoted. He was one of the members of the house of Commons who waited upon the king at the Hague; and Charles II, before his coronation, advanced him to the peerage, by the title of lord Holles of Isfield in Sussex. In 1663 he was sent ambassador to France; and in 1667 was one of the English plenipotentiaries at Breda. Notwithstanding these employments, he remained a zealous friend to liberty; and when the politics of the reign tended to make the king absolute, lord Holles was a conspicuous leader of opposition. He is mentioned by Barillon, the French ambassador, as one of the noblemen who entered into negotiations with France to thwart the suspected measures of Charles against liberty at home; but it is at the same time intimated, that he and lord William Russell, alone refused the money offered by Louis XIV. He died with a high character for honour, integrity, and patriotism, in 1680, in the eighty-second year of his age. In 1699 were published "Memoirs of Denzil lord Holles, from 1641 to 1648," 4to; some of his letters and speeches have been published separately.—*Biog. Brit. Humes's Hist. of Eng.*

HOLLIS (THOMAS) an English gentleman, memorable for his attachment to civil and religious liberty, and his services to literature and the arts; was born in London in 1720. He was descended from a Yorkshire family of dissenters, and being designed for commerce, was sent, after a common school education, to Amsterdam, in his thirteenth or fourteenth year, to learn the Dutch language and merchant's accounts. Not long after his return, in 1735, his father died, and being now the heir of a handsome fortune, it was resolved to complete his education upon a liberal plan, and he was placed under the tuition of Dr Ward, professor of rhetoric in Gresham college, with whom he studied the learned languages and other branches of literature. In 1740 he took chambers in Lincoln's inn, but never appears to have engaged in the law as a profession. His attention seems to have been chiefly occupied with the study of the English constitution, and the cultivation of a zealous attachment for civil and religious liberty, and of the friendship of its most eminent supporters, especially among the dissenters. In 1748 he travelled over a part of the continent; and in 1750 engaged in another tour through the remainder. While abroad he increased his love for virtue and the arts; and finding on his return that he could not enter into parliament, without compliances which he did not approve, he made collections of books and medals, especially such as preserved the memory of eminent asserters of liberty, among whom he highly regarded Milton and Algernon Sidney. The

particulars of Mr Hollis's life are little more than a list of generous and public spirited actions; and there were few useful and benevolent institutions of which he was not a member and liberal patron. He was a fellow of the royal, antiquarian, and other learned societies, and made many valuable presents to the British Museum. In 1758 he presented, anonymously, a handsome collection of English books to the library at Berne, and also acted in a similar way to Harvard college in New England, to which, in imitation of some deceased members of his family, he was a most liberal benefactor. In his own country also, it was one of his leading objects to disseminate books favourable to popular principles of government, editions of many of which he caused to be re-printed. Fatigued with his various occupations, he retired in 1770 to his estate at Corscombe in Dorsetshire, where he lived retired until 1774, when he dropped down in a fit and immediately expired, while giving directions to some workmen. With many peculiarities, and professing the austere principles of a republican, he was very gentle and polite in his manners, and seems to have united much of the ancient stoic to the modern partizan of freedom, and general philanthropist. He bequeathed his fortune to Mr Brand, who took the name of Hollis, and who died in 1804, leaving it in his turn to Dr Disney, there being no relationship in either case.—*Mem. by Brand Hollis.*

HOLMAN (JOSEPH GEORGE) a comic writer and performer, was born in London, and educated under Dr Barlow, master of an eminent private academy in Soho-square. From school he was sent to Queen's college, Oxford, with a view to the church, but having imbibed a taste for the stage, he soon quitted the university, and in 1784 made his debut in Covent-garden theatre. At the end of the season he repaired to Dublin, and subsequently to Edinburgh, and then returned to Covent-garden, where he remained until 1800. Upon a difference with the manager he once more quitted the theatre, and repaired to America, where he himself became manager of the theatre in Charlestown. His death was remarkable and melancholy, taking place together with that of his second wife, two days after their marriage, by the yellow fever, in 1817. His dramatic productions are "Abroad and at Home," a comic opera; "Red Cross Knights," a play; "Votary of Wealth," a comedy; "What a Blunder," a comic opera; "Love gives the Alarm," a comedy; and "The Gazette Extraordinary," a comedy.—*Gent. Mag.*

HOLMES. There have been several English authors of this name; GEORGE HOLMES, a native of Skipton, in the tract of land called Craven, Yorkshire, was born in 1662. When about thirty years of age, his reputation as an antiquary induced lord Halifax, then at the head of the government, to appoint him record-keeper in the tower of London, at a salary of 200*l.* In this situation he set about the arduous task of arranging the archives kept in that ancient fortress, where he was also barrack-

master. He was a member of the antiquarian society, who caused an engraving to be made of his portrait after his death. His long and useful life was brought to a close on the 16th February, 1748-9, after a period of more than half a century spent in the active discharge of the duties of his post. At his decease, ministers purchased all his papers of his widow for the sum of 200*l.* They are preserved with great care in the office over which he presided. His only printed work was a new and valuable edit. of the first 17 vols of Rymer's "Fœdera."

—Dr NATHANIEL HOLMES, a learned non-conformist divine of the seventeenth century, was especially eminent for his knowledge of the Hebrew language and antiquities. He was the author of a tract on the millennium, entitled, "Resurrection Revealed," 1654, folio. He survived nearly seventeen years his ejection from his living of St. Mary Staining, in the city of London, which took place on account of his religious and political tenets in 1662.—Dr ROBERT HOLMES, dean of Winchester, was born in Hampshire 1749, and placed at an early age at the grammar-school of Winchester, his native county. Removing, in due course, on a fellowship to New college, Oxford, he proceeded through the usual degrees to that of doctor in divinity, which he took in 1789. The year following he succeeded Mr. Thomas Warton in the professorship of poetry. About the same period he went to Paris for the purpose of collating the different manuscripts of the scriptures, preserved in the library there. Besides his biblical studies, and the valuable works to which they gave rise, Dr Holmes appeared as a lyric poet on more occasions than one, especially at the duke of Portland's installation as chancellor of the university in 1793; the ode performed in the theatre on which occasion was of his composition. The other productions of his muse are, an ode entitled "Alfred," and a small collection of sonnets. The names and dates of his graver writings are, the "Bampton Lecture," 1782; and an octavo volume of "Divinity Tracts," 1788; besides several occasional sermons; an essay on the prophecies of Daniel; and a letter addressed to the bishop of Durham, respecting his own laborious collation of the Septuagint manuscripts, in five folio volumes, after the manner of Kennicot. It is much to be lamented that he did not live to complete this valuable and erudite work, which has, however, since his decease, been carried on by Mr. Parsons. This learned and industrious divine was successively rector of Stanton, Oxfordshire; canon of Salisbury, and canon of Christchurch till the year 1804, when he was preferred to his deanery. He did not however enjoy his elevation long, dying at Oxford, November 12, 1805.—*Gent. Mag.* vol. lxxv.

HOLMSKIOLD (THEODORE DE) a Danish physician and naturalist, celebrated for his botanical researches relative to plants of the fungus kind. He was originally a surgeon, and afterwards professor of medicine at the academy of Sorøe. The favour of the queen-

dowager, Juliana Maria, opened to him the career of honour. He was ennobled, made a counsellor of state, knight of the order of Danebrog, grand master of the court of the queen-dowager, &c. He published a work on mushrooms, entitled "Beata ruris otia fungis Danicis, impensa à Th. Holmskiold," with plates, in which he exhibits some curious and interesting facts and observations. This treatise consists of 2 vols folio, the first published by the author in 1790, and the second by M. Viborg in 1799, after the death of Holmskiold, which occurred in 1793.—*Biog. Univ. Biog. Nouv. des Contemp.*

HOLROYD (JOHN BAKER) lord Sheffield, a political writer and statesman, who was a native of Yorkshire, and descended from a very ancient family settled in that county. When young he served in the army under the marquis of Granby, in Germany, and afterwards travelled on the continent. On his return to England in 1776 he retired to the country, and employed himself in farming; but during the American war he raised at his own expense a regiment of dragoons, of which he had the command, whence he was commonly called colonel Holroyd, till his elevation to the peerage. He was first created lord Sheffield, of Dunamore in Ireland, when he sat in the house of Commons as member of parliament for Bristol. He was next promoted to an Irish earldom, and in 1802 to an English barony. His death happened May 30, 1821, at the age of eighty. Lord Sheffield wrote "Observations on the Commerce of the American States," which went through several editions, and was translated into German; besides tracts on the slave trade and on Irish affairs. But he is most known as the friend of Gibbon, the historian, and the editor of his posthumous works and correspondence.—*Gent. Mag. Ann. Biog.*

HOLSTEIN (LUKE) better known by his Latin denomination Lucas Holstenius, a learned German ecclesiastic of the seventeenth century, born in 1596, at Hamburgh. His parents being Lutherans, educated him in the same profession of faith, from which he was converted by the arguments of Sirmond, the Jesuit, and made his public recantation. He afterwards went to Rome, where he enjoyed the patronage of Francesco Barberini, and his relative pope Urban VIII. This pontiff presented him to a canonry of St Peter's, and his successor in the papal chair, Innocent X, made him librarian to the Vatican. In 1655 Alexander VII, with whom he was as great a favourite, sent him on a special mission to Inspruck, to receive the profession of catholicism from Christina, queen of Sweden. Holstenius was remarkably well read, both in profane and sacred antiquity; and although, with the exception of a treatise on the life and writings of Porphyry, he published no original work, yet his annotations on those of others, especially of Demophilus and Apollonius, are valuable, and give ample evidence of the research and deep erudition of their author. His death took place in 1661.—*Niccolò Moreri.*

HOLT (sir JOHN) an English judge, equally celebrated for his constitutional knowledge, firmness, and integrity. He was born in 1642 at Thame, Oxfordshire, being the son of sir Thomas Holt, knight, serjeant-at-law and recorder of Abingdon, in the grammar-school of which town he was educated, till sufficiently advanced to enter as gentleman commoner at Oriel college, Oxford. Being from the first, designed for the profession of his father, he became a member of the society of Gray's-inn in 1658, was called to the bar in due course, and soon distinguished himself as a sound lawyer and an able advocate. His professional eminence having procured him the post of recorder to the city of London, he filled that responsible office with much ability for about a year and a half, when the court determining on the abolition of the Test Act, his uncompromising opposition to that unpopular measure lost him his situation. He continued in disgrace with James till 1686, when he was made serjeant-at-law, and becoming a member of the lower house, on the arrival of the prince of Orange, he distinguished himself so much by his talents and exertions, in what is called the Convention Parliament, that William, soon after his own establishment on the throne, elevated him to the dignity of lord-chief-justice of the King's Bench, with a seat at the council board. In this honourable situation he continued during the remainder of his life, declining the chancellorship, which was offered him on the removal of lord Somers in 1700, and discharging the duties of his high office with a degree of resolute uprightness, which, however distasteful on more occasions than one to both the houses of Lords and Commons, gained him not only popularity with his contemporaries, but has secured him the veneration of posterity. Of his determination and vigour, whenever any measure, trenching in the slightest degree upon the constitutional rights and privileges of the subject, was in contemplation, many instances are recorded. Among others is his memorable reply to a military officer, who applied to him to support, with his authority, a party of soldiers whom he was marching to suppress an inconsiderable riot in Holborn:—"Go back to those who sent you, sir," said the judge, "and tell them that the laws of this realm are not to be executed by the sword; their due enforcement is the province of the civil power; and take especial notice, moreover, that if there be one man killed on the present occasion by military interference, I will hang you and every soldier of your party." The officer retired, and sir John repairing with his tipstaves afterwards to the spot, succeeded in dispersing the mob without bloodshed. The only professional remains of this able and independent magistrate are his edition of sir John Kelyng's "Reports of Cases in Pleas of the Crown, in the reign of Charles II, with Notes," printed in 1708, folio. Sir John Holt died, after a long and severe illness, in the spring of the following year.—*Lijé, 1764, 8vo. Biog. Brit.*

HOLT (JOHN) born at Mottram, in Che-

shire, in 1742, was a schoolmaster of Walton, a village in the neighbourhood of Liverpool, in which parish he also officiated as clerk. Besides some agricultural tracts "On the Curl in Potatoes," "Report for Lancashire, &c." he was the author of three 12mo vols. on the "Characters of the Kings and Queens of England." A history of Liverpool, which he had undertaken, remained unfinished at his death in 1801.—*Gent. Mag.* vol. Ixxi.

HOLTE (JOHN) an English ecclesiastic, elected fellow of Magdalen college and master of the school belonging to that society in 1491. He is known only as the author of the first Latin grammar ever published in England. This work, which is now extremely scarce, was printed in 4to by Wynkyn de Worde in 1497, and is entitled "Lac puerorum M. Holti. Mylke for Chyldreu." Of his birth nothing farther is ascertained, than that he was a native of the county of Sussex. His death is supposed to have taken place in 1511.—*Tanner. Bayle. Pits.*

HOLTY (LEWIS HENRY CHRISTOPHER) an eminent German poet, born at Mariensee, in the electorate of Hanover, in 1748. He was sent to Gottingen to study theology, but his disposition rather led him to devote himself to the belles-lettres, and he paid great attention to ancient literature in particular. There was a literary society at Gottingen, the principal members of which were Holty, Voss, Bürger, and the two counts Stollberg; and these young poets held weekly meetings, at which they submitted to each other their compositions, for the benefit of mutual criticism. Holty, whose father could not support him in independence, gave lessons to pupils in Greek and English, and employed himself in translating from the latter language for the press. His constitution, naturally feeble, sank under the fatigue of these occupations, and he died September 1, 1776. The poems of Holty are distinguished by facility and purity of style: and he has been considered as imitating in his odes the simplicity of Anacreon and the philosophy of Horace. The best edition of his works is that published by his friend Voss, at Hamburg, in 1814, 8vo. He translated from the English "The Connoisseur," Hurd's "Dialogues," and Shaftesbury's "Characteristics."—*Biog. Univ.*

HOLWELL (JOHN ZEPHANIAH) a gentleman distinguished by his writings relative to the East Indies, was born at Dublin in 1711. He was brought to England in his eighth year, and educated at Richmond, Surrey. He was first intended for trade, but subsequently articulated to a surgeon. In 1732 he went to India, and in 1736 became a member of the court of Calcutta. He was appointed perpetual zemindar to the council in 1751, when he introduced a long-meditated plan of reform. In 1756 he was second in the council at Fort William, which was in that year besieged by Surajah Dowla, nabob of Bengal, and the governors and senior in council having deserted the place, Mr Holwell took the command, but to no purpose, the place being

untenable. He at length surrendered on a promise of security of person, in violation of which he, with his companions, to the number of 146 persons, were shut up all night in the black hole, of Calcutta, a prison not 18 feet square; and such was the consequence of heat, thirst, and bad air, that at six in the morning, twenty-three only survived. Mr Holwell who was one of them, has given a curious and affecting narrative of the transaction; and when Calcutta was again brought under British dominion, raised a monument to the unhappy victims at his own expense. He then returned to England, but in 1758 he went out again, and the next year succeeded colonel Clive as governor. At the close of the following year he again returned to England, where he died in 1798. Mr Holwell was author of many tracts on Indian affairs, of a temporary interest, from which however must be excepted his "Narrative of the Sufferings endured in the Black Hole of Calcutta," and his "Interesting Historical Events relative to the Province of Bengal and the empire of Hindostan, &c." in three parts, published in 1765, 1767, and 1771. In these he gives a very particular and favourable account of the Gentoo Shaster, which he represents as the oldest religious code in existence, and the source of the cosmogony and mythology of the Egyptians, Greeks, and Romans. He is inclined to infer that its doctrines are really of divine origin, and seems at length to have indulged in a singular and fanciful system, of which he gave a view in a work of his old age, entitled "Dissertations on the Origin, Nature, and Pursuits of Intelligent Beings," 1788, 8vo. The idea that men are fallen angels, condemned to suffer in mortal bodies, is the fundamental principle of this treatise, which, like all the author's other works, displays, with much eccentricity, a benevolent heart and a liberal way of thinking.—*Monthly Review. Encyc. Britan.*

HOLYDAY (BARTEN) the son of a taylor at Oxford, born 1593 in that university, where he afterwards obtained a studentship at Christchurch. Having entered the church, he in 1618 went to Spain with sir F. Stewart, in the capacity of chaplain, and was afterwards made archdeacon of Oxford, and king's chaplain. On the breaking out of the troubles, his archdeaconry was taken from him by the Parliament, on account of his supposed anti-republican principles, and he was obliged to conceal himself for a while, but eventually found means so far to reconcile himself with the predominant party, as to be allowed to hold the living of Chilton, Berks. On the restoration of monarchy the court, notwithstanding the temporising nature of his late conduct, allowed him to resume his former benefices, but the farther promotion which he is said to have expected and applied for was denied him. Besides about twenty sermons, Dr Holyday published a translation of the satires of Juvenal and Persius, 8vo and folio, which, if it be deficient in point of poetry, is yet valuable from the fidelity with which it is rendered

and the information contained in the notes. His other works are, a poem in ten books, entitled "The Survey of the World," 8vo, 1661; "Technogamia," a Latin comedy, acted in 1617 before king James I at Oxford; "Philosophiæ Politico-barbaræ Specimen, &c." 4to; and "Comes Jucundus in Via." His death took place at Ilsley, October 1661.—*Athen. Oxon. Malone's Dryden.*

HOLYOAK. There were two learned lexicographers of this name, father and son. **FRANCIS**, the elder, was born about the year 1567 at Nether Whitacre, a village of Warwickshire, in which county, after going through a regular course of university education at Oxford, he obtained the rectory of Southham in 1604. Two years after his appointment to this piece of preferment, he published an etymological dictionary of the Latin tongue, in one volume 4to, which went through four editions. His reputation for integrity and abilities caused him to be chosen a member of the convocation, called together in the first year of the reign of Charles I, through his loyalty and attachment to which sovereign Mr. Holyoak afterwards underwent much persecution. He died in 1653, and lies buried at Warwick.—**THOMAS HOLYOAK**, born at the parsonage of Southham, in 1616, was educated at Queen's college, Oxford. During the civil wars he commanded a troop of horse in the king's service, although already in holy orders and chaplain to his college. For this and other services the degree of DD. was conferred on him by the university, at the express direction of the king. On the failure of the royal cause, he practised medicine for his subsistence, but on the restoration of monarchy, resumed his ecclesiastical character, and obtained successively the livings of Whitnash, in his native county, and of Breamour, Hants. He superintended an edition of his father's dictionary, which he corrected and amended, and published another of his own in folio, Latin and English, 1667. He died in 1675, leaving a son, Henry, afterwards master of Rugby grammar-school. *Athen. Oxon. Gent. Mag.* vol. i.

HOLYWOOD (JOHN) a mathematician of the thirteenth century, known also by his Latinized appellation of de Sacrobosco. The place, and even the country which gave him birth, is uncertain, being by some fixed at Halifax, in Yorkshire, while Ireland and Scotland contend, according to others, for the honour of having produced him. The claims of the latter country in this respect may, perhaps, have originated in the fact of his having been for many years a resident in the Augustin convent of Holyrood, in Nithsdale, of which he was a regular canon. His education was acquired at Oxford, and some years before his death he settled at Paris, where he taught mathematics. The titles of his writings are, "De Algorismo;" "De Sphæra Mundi," 4to; "De anni ratione seu de computo Ecclesiastico." His death took place in the capital above-mentioned in 1256.—*Mackenzie.*

HOMANN (JOHN BAPTIST) a German

engraver, who published a vast number of geographical charts and maps, which contributed much to the improvement of geography in the eighteenth century. He settled at Nuremberg, where he formed a commercial establishment on a large scale; and he died there in 1724.—*Nouv. Dict. Hist.*

HOMBERG (WILLIAM) an eminent chemist of the last century. He was born in 1652, at Batavia; his father being a Saxo gentleman, in the service of the Dutch East India company. Coming to Europe, he studied jurisprudence at Jena and Leipsic, and in 1674 was admitted a counsellor at Magdeburg. Natural history and philosophy however occupied more of his attention than law; and his taste for those sciences was heightened by his acquaintance with Otto Guericke, the inventor of the air-pump. He then went to Italy, and after studying at Padua and Bologna, with a view to the practice of physic, he returned to Germany and took the degree of MD. at Wittemberg. Having subsequently visited Saxony, Hungary, Bohemia, and Sweden, to observe the processes of metallurgy, he, in 1682, settled in France, under the patronage of the minister Colbert, when he embraced the catholic religion, and thus irreparably offended his father and other friends, who were protestants. The death of Colbert deprived him of support; and in 1687 he went to Rome to practise as a physician. He returned to Paris in 1690, and became a member of the Academy of Sciences. In 1702 he obtained the protection of the duke of Orleans, who, in 1704, made him his first physician. He married the daughter of M. Dodart, an attachment which prevented him from accepting an invitation to settle in the dominions of the elector Palatine. He died in September, 1715. His works consist of papers in the Memoirs of the Academy of Sciences, among which are the following: the method of making the phosphorus of Kunckel; various experiments on phosphorus; the new phosphorus, relating to the Bologna stone; and observations on fecal matter, from which he procured another kind of phosphorus.—*Hutchinson's Biog. Med. Aikin's G. Biog.*

HOME (DAVID) a protestant minister of Scottish birth, who was educated and settled in France towards the close of the sixteenth and beginning of the seventeenth century. He was engaged by James I to attempt the impracticable task of uniting all the protestant divines in Europe in one system of religious belief. The most considerable of his productions is "Apologia Basilica, seu Machiavelli Ingenium Examinatum." He is also deemed the author of two satires on the Jesuits, entitled "Le Contre Assassin, ou reponse à l'Apologie des Jesuites," 1612, 8vo; "L'Assassinat du Roi, ou maximes du Viel de la Montagne Vaticane, et de ses assassins, pratiquées en la personne de defunt Henri le Grand," 1617. Several of his poems are in the *Deliciæ Poetarum Scotorum*. The date of his death is unknown.—*Nouv. Dict. Hist.*

HOME (HENRY) lord Kames, a Scottish

Judge, eminent for his writings on various subjects, was the son of George Home, of Kames, in the county of Berwick, descended from a noble family. He was born in 1696, and received his education from a private tutor at home. In 1712 he was bound by indenture to a writer of the signet, but inspired with the ambition of becoming an advocate, he zealously repaired the defects of his education and fitted himself for the bar, to which he was called in 1724. Although inferior as an orator, he soon acquired considerable reputation by a number of publications on the civil and Scottish law, the first of which, consisting of "Remarkable Decisions in the Court of Session," appeared in 1728. This work was followed, in 1732, by "Essays on several Subjects in Law." During the troubles in 1745 and 6, he sought shelter in country retirement, the fruits of which leisure appeared in 1747 in his "Essays upon several Subjects concerning British Antiquities." In 1757 appeared his useful work "The Statute Law of Scotland abridged, with historical notes," which was followed, in 1759, by his "Historical Law Tracts." In 1760 he published "Principles of Equity," folio; and in 1766 and 1780 he gave additional "Decisions of the Court of Session." Lastly, in 1777, he crowned his legal labours with "Elucidations respecting the common and Statute Law in Scotland." These instances of indefatigable industry could not but exalt him in his profession, and so early as 1752, he became a judge of session, and assumed, according to the custom of Scotland, the title of lord Kames. His inquisitive and speculative mind, however, was by no means confined to his profession. From his youth he had a great turn for metaphysical disquisition, and maintained a correspondence on that subject with bishops Berkeley and Butler, Dr Clarke, and other eminent reasoners. He became an author on this branch of study in 1752, when he published "Essays on the Principles of Morality and Natural Religion," in which he endeavours to establish general principles of human action, and to advocate the doctrine of philosophical necessity, which having become obnoxious, in consequence of its adoption by many writers who objected to revealed religion, subjected him to various attacks. His "Introduction to the Art of Thinking," 12mo, 1761, is deemed useful to young persons. In 1762 he published his celebrated "Elements of Criticism," 3 vols. 8vo, in which original performance, discarding all arbitrary rules of literary composition, he endeavours to establish a new theory on the principles of human nature. Its chief defect is over refinement, and an unnecessary multiplication of original tastes or principles. He followed this elaborate work, in 1773, with two quarto volumes, entitled "Sketches of the History of Man," which is ingenious and entertaining, but not always bottomed on the best information. With a view to the improvement of Scottish agriculture, he published, in 1776, at the age of eighty, "The Gentleman Farmer; being an

Attempt to improve Agriculture, by subjecting it to the test of rational Principles," 8vo. In this work every branch of the farming business is discussed, but not always with equal accuracy, although the book was useful in its day. Advanced as was his age, the habit of writing attended him to the very close of life, his last work being published in 1781, under the title of "Loose Hints upon Education, chiefly concerning the culture of the Heart." He did not long survive the appearance of this, the last of his labours, dying in December, 1782, at the age of eighty-six. Lord Kames was much distinguished for vivacity in conversation, which sometimes exceeded the bounds of judicial gravity even on the bench. He is accused of a little partiality to flattery, and proneness to literary jealousy, which defects but slightly detract from the credit due to his many private merits and indefatigable public spirit. His speculations were free, but he was a constant advocate of morality, and a zealous asserter of the wisdom and goodness of the Creator.—*Life by Lord Woodhouselee.*

HOME (JOHN) a clergyman of the church of Scotland, but known chiefly as a dramatic writer, was born near Ancrum, in Roxburghshire, in 1724. He was educated at Edinburgh, for the church, but in 1745 took up arms on the royal side, and was made prisoner at the battle of Falkirk, but contrived to escape. On the suppression of the rebellion, he resumed his studies, and was licensed to preach in 1747. After visiting London he was settled as minister at Athelstaneford, in East Lothian, where he composed his tragedy of Agis, which was refused by the London managers, a circumstance which did not prevent him from composing "Douglas," also refused by Garrick; on which the author had it performed at Edinburgh, in 1756, Mr Home and several of his clerical brethren being present. For this alleged departure from the decorum enjoined by the church of Scotland, the author was so threatened with ecclesiastical censures, that he resigned his living, and ever after acted and appeared as a layman. As a persecuted man, he was complimented on this occasion by David Hume, who, in a strain of high panegyric, addressed to him his "Four Dissertations." Thus lifted into notice, "Douglas" was presented at Covent-garden, in March 1757, and gradually became a stock piece. He followed with "Agis;" "The Siege of Aquillea;" "The Fatal Discovery;" "Alonzo," and "Alfred;" none of which had even temporary success. In 1763, by the patronage of lord Bute, he was made commissioner of sick and wounded seamen, and appointed conservator of the Scottish privileges at Campvere, in Zealand. In 1778 he received a captain's commission in the Buccleugh fencibles, which he held until the peace. He subsequently published a "History of the Rebellion of 1745-6," 4to, a work which disappointed public expectation. He died, decayed in his faculties, at Merchiston-house, in 1808, at the advanced age of eighty-five.—*Biog. Dram., Davie's Life of Garrick.*

HOMER. The most ancient and celebrated of the Greek bards extant, usually honoured with the title of the father of poetry, and prince of the poets. Where he was born, who were his parents, and at what period he lived, are all facts involved in obscurity. The Arundelian marbles refer the time in which he lived to the tenth century BC, while others have brought it down to the age of Romulus or Numa, two centuries later. His birth-place was long the subject of ancient contest, no less than seven Grecian cities disputing for that honour. The probability seems to be, that he was born in one of the Greek cities of Asia Minor, or in some island near it. The most copious account of the life of Homer, which goes under the name of Herodotus, is evidently spurious; yet as it is ancient, and exhibits the traditional ideas of the Greeks and Romans concerning him, it merits a brief notice. According to this story, Menalippus, a native of Magnesia, went to live at Cumæ, where he married, and had a daughter named Critheis, who was left an orphan in the care of Cleonax. The latter seduced his ward, who, going to a festival on the banks of the river Meles, near Smyrna, was delivered of a male infant, whom she named Melesigenes. Being left without support, she engaged herself to spin wool for Phemius, a schoolmaster, who ultimately married her, and adopted her son. After the death of Phemius and Critheis, the young man conducted the school, until one Mentès, a ship-owner, persuaded him to accompany him to Egypt. He also visited Italy, Spain, and the island of Ithaca, where he collected the materials for his *Odyssey*. On arriving at Colophon he lost his sight, which made him resolve to return to Smyrna, and stopping on his way at Cumæ, he offered to settle, if the people would allow him a salary, which they refused, saying, "it would be to no purpose to maintain *ωμηροι*, or blind men," whence the name of Homer. He then went to Phocæa, where a schoolmaster offered to maintain him, on condition of being allowed to transcribe his poems, which he had no sooner done than he basely deserted him, and withdrew to Chios, where he became rich by means of the stolen productions. Homer followed him; and landing near Chios, was conducted by Glaucus, a shepherd, to his master Bolissus, who employed him in the education of his children. The schoolmaster hearing of his arrival, fled, and Homer setting up a school at Chios, married, and had two daughters. Intending to visit Athens, the ship put in at Samos, where he continued during the winter singing, attended by a chorus of boys, at the houses of the great men. In the spring he embarked again, but landing at Chios, he fell sick, died, and was buried on the sea-shore. The foregoing tale evidently deserves little credit, and the origin and composition of the poems ascribed to Homer are involved in as much obscurity as his biography. Critics have long debated whether the "*Iliad*" and "*Odyssey*," were epic poems in the sense now attached to the word, or a fortuitous assembly of detached

passages or rhapsodies. It appears certain that portions of them wandered separately through the towns of Asia Minor, until brought from Asia to Greece by Lycurgus, and arranged in their present order under the patronage of Pisistratus. Howsoever, or by whomsoever composed, the poems of Homer not only obtained the highest degree of popularity in Greece, but as Grecian literature became the parent of everything bearing the same name in ancient Rome and modern Europe, the veneration for Homer is a point of classical orthodoxy to this day. In point of sublimity, comprehensiveness of genius, fertility of invention, and true poetic talent, he is still regarded as primary; and although how far he himself was original in his mythology, diction, and versification, is uncertain, it is evident that until very modern times all epic poets have copied him with even servile imitation. Of the other poems attributed to Homer, the "*Batrachomyomachia*, or *Battle of the Frogs and Mice*," is rejected by almost all refined critics, as a parody incompatible with the simplicity of the Homeric age. Of the Hymns some are acknowledged by Lucian and Pausanias, but others are undoubtedly spurious. On the whole the *Iliad* and *Odyssey* alone are strictly identified with the fame of Homer, and of these the editions are very numerous. It is sufficient to say that the best are those of Barnes, Clarke, and Heyne. The two leading English translations of Pope and Cowper, in rhyme and blank verse, are too well known to require observation. Almost all the modern languages supply versions of Homer.—*Vossii Poet. Græc. Harwood's Classics.*

HOMER (HENRY) the son of a clergyman, rector of Birdingbury, Warwickshire, where he was born in 1752. He received the rudiments of a classical education at Rugby, and afterwards took the degree of bachelor in divinity at Emanuel college, Cambridge, in 1783. Mr Homer, in conjunction with Dr Coombe and others, assisted in bringing out a variorum edition of Horace. He also edited the works of Cæsar, Livy, Tacitus, Sallust, and the epistles of Ovid. His death took place in 1791.—*Gent. Mag. Brit. Crit. vol. xi.*

HOMMEL (CHARLES FREDERICK) a German writer on jurisprudence, born in 1722 at Leipsic. His works are, "*Corpus Juris Civilis cum notis variorum*," 8vo, "*Palin-genesia librorum juris veterum*," 8vo, 3 vols; "*De legum civilium et naturalium naturâ*;" "*Oblectamenta Juris Feudalis, sive Grammaticæ Observationes, Jus Rei Clientelaris et Antiquitates Germanicas varie illustrantes*," and "*Jurisprudentia numismatibus illustrata*." His death took place in 1781.—*Nouv. Dict. Hist.*

HOMPESCH (BARON) grand master of the order of Malta, and said to have been the first German knight who ever held that office. In 1798 he surrendered the island to the French; and the letters which he addressed to Buonaparte on that occasion were remarkable for the

adulation they displayed, and the spirit of pusillanimity and meanness by which they were dictated. Hompesch afterwards endeavoured to aid the English government in its views with regard to the occupation of Malta. He was some time in this country, where he seems to have been disappointed in his expectations from the ministry. After amusing the metropolis for a while by his peculiarities of costume and manners, he was obliged to remove to the continent; and he died at Montpellier, in France, in the beginning of 1803.—*Dict. des H. M. au 18me. S. Biog. Nouv. des Contemp.*

HONDEKOEIER, or **HONDEKOTTER**. There were three Flemish artists of this name; **GILLES**, born in 1583, at Utrecht, excelled in landscape painting.—**Hisson GYSBRECHT**, born in 1613, was celebrated for his delineation of ducks and other fowls, in the representation of which, as well as of birds in general, he excelled. **MELCHIOR**, the grandson, and far the most celebrated of the three, was still more successful. This last was a native of the same city, in which his family had been so long settled was born in 1636, and died there in 1695.—*Pilkington. D'Argenville Vies de Peint.*

HONDIUS (**ABRAHAM**) a Dutch artist, born in 1638, at Rotterdam. He did not confine his pencil to any particular branch of painting, but more frequently employed it in the delineation of hunting pieces, in which he was very successful. His best picture however is considered to be his destruction of Troy, the figures introduced in which are singularly well designed and executed. Hondius came to England, where he died in 1691.—There was also an eminent engraver, descended from the same family, named **JOSE HONDIUS**, who was born at Wackerne, in the Netherlands, in 1563. He was a self-taught artist, and attained to great perfection in engraving, both on copper and ivory. Amsterdam was the place of his residence, where he set up a letter foundry. He applied himself, with considerable success, to the study of geography, and published several treatises on that science. Of these the principal are, "Descriptio Geographica Orbis terrarum," fol. 1607; "Italiae hodiernæ Descriptio;" and "Gerhardi Mercatoris Atlas." He was also the author of a tract, entitled "Theatrum Artis Scribendi." He died in 1611.—*Bryan's Dict. of Paint. and Eng.*

HONE (**NATHANIEL**) an eminent painter in enamel, who was a native of Dublin. He removed to England while young, and settled at York, where he married a lady of property. He subsequently established himself in London, as a painter in oil and miniature, but he excelled in enamel, and was reckoned inferior to no artist of his time, except Zucche. On the foundation of the Royal Academy, he became one of the earliest members. He died in 1784.—*Edwards's Suppl. to Walpole.*

HONORIUS DE SANCTA MARIA, the ecclesiastical name of Blaize Vauzeille, a Carmelite friar of Thoulouse, born at Limoges, in 1651. He was the author of a tract "On

Indulgences, and the Institution of the Jubilee;" a "Dissertation, Critical and Historical, on the Military Orders," in 4to; "Reflections on the Laws of Criticism;" and a devotional treatise, entitled "La Tradition des Pères et des Auteurs Ecclesiastiques sur la Contemplation," 12mo. 3 vols. He died in 1729.—*Moreri. Nouv. Dict. Hist.*

HONTAN (**BARON DE LA**) a native of the province of Gascony, in France, who served as a common soldier in Canada, and afterwards as an officer. He was sent to Newfoundland as king's lieutenant; but in consequence of disputes with the governor, he was disgraced, and retired first to Portugal and then to Denmark. His travels in North America, Amsterdam, 1705, 2 vols. 12mo, afford some curious details respecting the Indian tribes; but the work is written in a barbarous style, and its authenticity is very questionable.—*Nouv. Dict. Hist. Aikin's G. Biog.*

HONTHORST (**GERARD**) a celebrated artist, called also **GERARD DALE NOTTE**, from his subjects, was born at Utrecht in 1592, and was a disciple of Abraham Bloemart. He completed his studies at Rome, and imitated the style of Caravaggio. His subjects are generally night pieces, as large as life, and illuminated by torch or candle light. Among his numerous pictures, that of Jesus Christ before the tribunal of Pilate, in the Justiniani gallery, is the most celebrated. He visited London, and obtained the favour of Charles I by many able performances, and on his return to Holland was much employed by the prince of Orange. The pencil of Honthorst is free and firm, and his colouring has a great deal of force, although often unpleasing, from a predominance of brown and yellow tints; yet with more grace and correctness in his figures, he would have been an excellent painter. He died in 1660, aged sixty-eight.—**WILLIAM HONTHORST**, brother to the above, painted portraits, which are highly esteemed.—*Bryan's Dict. of Paint. and Eng.*

HOOD (**SAMUEL LORD VISCOUNT**) an English admiral, whose father was an episcopal clergyman in Devonshire, where he was born in 1724. He entered as a midshipman in the navy in 1740, and six years after was promoted to a lieutenantcy; in 1754 he was made master and commander, and in 1759 post-captain. He had the office of commissioner of Portsmouth dock-yard bestowed on him in 1778; but resigned it two years after, on being made a rear-admiral. He was then employed in the West Indies, where he preserved the isle of St Christopher's from being taken by count de Grasse, and was present at the famous defeat of that officer by admiral Rodney, April 12th, 1782. His services on this occasion were rewarded with an Irish peerage. In 1784 he was chosen MP. for Westminster; but vacated his seat in 1788, on obtaining the appointment of a lord of the admiralty. In 1793 he commanded against the French in the Mediterranean, when he signalized himself by the taking of Toulon, and afterwards Corsica; in reward of which achievements he was made

a viscount, and governor of Greenwich hospital. He died at Bath in 1816.—*Ann. Biog.*

HOOFT (PETER CORNELIUS VAN) a Dutch historian and poet, born in 1581, at Amsterdam. He translated Tacitus into the Dutch language, with great fidelity and perspicuity; published a life of Henri IV of France, in Latin; a "History of the Pays Bas from the Abdication of the emperor Charles V to the year 1598," 2 vols. folio; besides a variety of miscellaneous works, consisting of epigrams, comedies, &c. Lewis XIII made him a knight of the order of St Michael. He was on his way to witness the obsequies of Frederick Henry, prince of Orange, when he was suddenly taken ill, and died on the road in 1647.—*Moreri. Biog. Univ.*

HOOGSTRATEN (DAVID VAN) a Dutch poet and critic, born at Rotterdam in 1658. He became professor of the belles lettres at Amsterdam, and was the author of several poems, composed in Latin, of which language he also compiled a dictionary. His classical attainments are farther attested by some ingenious annotations of the works of Terence and Cornelius Nepos. His death was occasioned by a casual fall into a canal during a fog; and though the accident did not prove instantaneously fatal, yet he survived it only a week, dying on the 13th of November, 1724.—*Moreri. Saxii Onom.*

HOOK (JAMES) a musician of Norwich, born 1746. He studied the science, which he afterwards professed under Garland, organist to the cathedral of his native city. Few composers have been more voluminous, the number of his musical productions amounting to more than one hundred and forty complete works. Of these the principal are—"The Ascension," an oratorio, 1776; "Cupid's Revenge," a pastoral, 1772; "La y of the Manor," 1778; "Jack of Newbury," 1795; "Wilmore Castle," 1800; "Soldier's Return," 1805; Operas. "Tekeli," a melodrame; "The Siege of St Quentin;" "Music Mad;" and several other dramatic pieces, besides upwards of two thousand songs. He was the father of the rev Dr Hook, now a dignitary of the established church; and of Theodore Edward Hook, editor of the John Bull newspaper, author of "Sayings and Doings;" "Killing no Murder," a farce, &c.—*Biog. Dict. of Mus.*

HOOKE (NATHANIEL) celebrated for an elaborate Roman history. So few particulars of him are recorded, that the time of his birth and family origin are unknown. The first fact that is afforded of him is given in a letter from himself to lord Oxford, in which he describes himself as made by the South Sea infatuation just worth nothing. He was recommended to Sarah, dutchess of Marlborough, to aid her in drawing up her "Apology," for which service she presented him with 5000*l.* although she afterwards quarrelled with him for endeavouring to make her a catholic. His zeal for his religion was very great, if not orthodox, being greatly attached to the mysticism and quietism of the school of Fenelon. It was Hooke who brought the priest to confess Pope on his death bed. Hooke's great work, his

"Roman History," from the earliest period to the accession of Octavius, is comprised in 4 vols. 4to, published in 1733, 1745, 1764, and 1771; it is a performance of great accuracy, precision, and critical acumen, the style of which is clear and perspicuous, without being eloquent or masterly. Another work upon Roman affairs was "Observations on four pieces upon the Roman Senate," 1758, 4to, in which he discusses the opinion of Vertot, Middleton, and Chapman, with some severity in respect to the two latter. He also translated Ramsay's Travels of Cyrus. He died 19th July, 1763.—*Nichols's Lit. Anec. Ruffhead's Life of Pope.*

HOOKE (ROBERT) a celebrated English mathematician and natural philosopher of the seventeenth century. His father was rector of Freshwater, in the Isle of Wight, where he was born in 1635. When young he displayed a particular inclination for mechanics, on which account he was first destined to be a watchmaker; but that intention was relinquished, and he became a pupil of sir Peter Lely, the painter. He did not however pursue this profession, but after some previous study at Westminster school, under Dr Busby, he removed to Christchurch college, Oxford, in 1653, and took the degree of M.A. about 1660. Previously to this he had become acquainted with Robert Boyle and Dr Seth Ward, the former of whom he assisted as a chemical operator, and from the latter he received instructions in astronomy. His researches on this subject led him to make some improvements in the pendulum, for the mensuration of time; and in 1658 or 1659 he invented what is now called the pendulum watch, at least the prior discovery of it is usually assigned to Hooke by the English, while foreigners ascribe it to Christian Huygens. In 1660 this philosopher was appointed curator of experiments to the Royal Society, which then met at Gresham college; and on the establishment of that learned association by charter, in 1663, he was nominated one of the first fellows, and was afterwards a member of the council. In 1664 he was made Cutlerian professor of mechanics to the Royal Society; and he afterwards became professor of geometry at Gresham college; having previously lectured for Dr Pope, the astronomical professor. The next year he published his "Micrographia, or some philosophical descriptions of some minute Bodies, made by magnifying glasses," &c. folio. After the desolating fire in the metropolis, in 1666, he proposed a plan for rebuilding it, which was much approved, but not adopted. He was however appointed one of the surveyors to the city, which proved a very lucrative employment. In 1668 commenced his controversy with Hevelius, already noticed. [See HEVELIUS.] In 1671 he attacked Newton's theory of light and colours; and in 1673 he proposed a "Theory of the Variation of the Mariner's Compass." He had a dispute with Oldenburg, secretary to the Royal Society, whom he accused of misrepresenting his title to the discovery of pendulum

wateries. On the death of that gentleman in 1678 he succeeded him in his office; but it was soon after bestowed on Dr Nehemiah Grew. He was created MD. in 1691, by mandate of the archbishop of Canterbury. His death took place at his apartments at Gresham college, in March, 1702-3. He published a great number of papers in the Philosophical Transactions, besides which he was the author of Cutlerian lectures, a volume of posthumous tracts, printed in 1705, and Philosophical Experiments and Observations, published by Dr Derham in 1726. Dr Hooke was a man of undoubted talents, but of a very unamiable disposition. His quarrels with other men of science were generally managed in a way by no means creditable to his character; and his personal conduct was degraded by the most sordid avarice. He is said however to have been strongly impressed with the truths of religion; and in the general acceptance of the phrase he appears to have been a just and honest man.—*Ward's Lives of the Gresham Professors. Martin's Biog. Philos. Aikin's G. Biog.*

HOOKER or VOWELL (JOHN) an English historian, was born at Exeter, about the year 1524, his father being mayor of that city. He studied at Oxford, but it is not known in what college. He travelled into Germany, and resided some time in Cologne and Strasburg, where he heard the divinity lectures of Peter Martyr. Returning to England he was elected chamberlain of his native city, and in 1571 represented Exeter in parliament. He died in 1601. His works are, "Order and Usage of keeping Parliaments in Ireland;" "The Events of Comets or Blazing Stars, made upon the sight of the Comet Pagonia, which appeared in November and December 1577," London, 1577, 8vo; "An Addition to the Chronicles of Ireland, from 1546 to 1568," in the second volume of Holinshed; "Catalogue of the Bishops of Exeter;" and a "Description of Exeter," in the third volume of Holinshed. A translation of the History of the Conquest of Ireland, from Giraldus Cambrensis. He was uncle to the celebrated Richard Hooker.—*Prince's Worthies of Devon. Ware's Ireland, by Harris.*

HOOKER (RICHARD) a celebrated divine and theological writer of the sixteenth century, distinguished for his defence of the form and discipline of the episcopal church of England. He was born about 1553, at the village of Heavitree, near Exeter. Displaying early in life an avidity for learning, his uncle, John Hooker, procured him the patronage of bishop Jewel, who in 1567 sent him to Oxford, where he obtained the place of one of the clerks of Corpus Christi college. After the death of his first friend, he was patronised by Dr Edwin Sandys, bishop of London, and afterwards archbishop of York, through whose interest, and that of the president, Dr Cole, he was elected a scholar of his college in 1573; and he became tutor to the son of that prelate, and to the grand-nephew of archbishop Cranmer. In 1577 he took his degree as MA, and

the same year was chosen a fellow of Christ-church. In 1579 his skill in the oriental languages procured him the appointment of deputy-professor of Hebrew; and in 1581 he took holy orders, and was shortly after made preacher at St Paul's cross in London. This appointment was the occasion of his entering into the marriage state, with a partner who had neither the recommendation of beauty nor of fortune, but was, according to Anthony Wood, "a silly, clownish woman, and withal a mere Xantippe." He thus lost his fellowship, and remained unbeneficed till 1584, when he was presented to the rectory of Drayton Beauchamp, in Buckinghamshire. The following year his pupil, Mr Sandys, obtained for him the valuable situation of master of the Temple; but the annoyance he experienced from the opposition of the afternoon lecturer, Walter Travers, who was a calvinist, induced him to exchange this lucrative preferment for a quiet retreat at Boscombe, in Wiltshire, to which rectory he was presented in 1591. He was likewise appointed a prebend and sub-dean in the cathedral church of Salisbury. At this period he completed the first four books of his celebrated treatise "Of the Laws of Ecclesiastical Polity," which was entered at Stationers' hall in 1592, but not printed till 1594. The ensuing year he was presented by queen Elizabeth to the living of Bishop's Bourne, in Kent, where he passed the remainder of his life. The fifth book of his great work appeared in 1597; and he finished also the last three books, but they were not published till after his death, which occurred November 2d, 1600, in consequence of a pulmonic disease, arising from an accidental cold. The literary reputation of Hooker is founded on his ecclesiastical polity, written in defence of the church of England, against the attacks of the puritans. The book is no less remarkable for learning and extent of research, than for the richness and purity of its style, which entitles its author to be regarded as one of the classic of the Elizabethan age. The most convenient edition is that of Oxford, 3 vols 8vo. He was also the author of some tracts against Walter Travers; and sermons.—*Isaac Walton's Life of Hooker. Biog. Brit. Aikin's G. Biog.*

HOOLE (JOHN) a dramatic poet and translator, born in London, in December 1727. He was the son of Samuel Hoole, of London, watchmaker; and was educated at a private boarding-school, where he acquired an accurate knowledge of the Latin and French languages, and some small knowledge of Greek. At the age of seventeen he entered as a clerk at the East India-house, and imbibing a taste for the Italian language, from the perusal of sir John Harrington's version of the "Orlando Furioso," he closely studied it, with a view of translating that poem; but after proceeding some time, he set it aside for the "Jerusalem Delivered," of Tasso, which he commenced in 1758, and published in 1763. He was permitted to dedicate and present this translation to the queen, the dedication being composed by Dr Johnson. This was his first

erowed production, but he had before written a monody on the death of Mrs Woffington, and some poems in Pearch's collection. In 1767 he published a translation of six dramas of Metastasio, in 2 vols; and the next year brought out his own tragedy of "Cyrus," which did not succeed; "Timanthes," in 1770; and "Cleone," in 1775, were equally unsuccessful, being the whole of his dramatic efforts. In 1773 he published the first volume of his "Orlando Furioso," the farther progress of which was impeded by his advancement to the auditorship of the Indian accounts; he however concluded it in 1783, when it appeared complete in 5 vols 8vo. In 1785 he wrote the life of his friend, Mr Scott, of Amwell. Having retired from the East India-house, after a service of forty-two years, he took up his abode, in 1786, with his wife and son, at the parsonage-house of the latter, at Abinger, near Dorking. Here, adverting to the common-place objections to the "Orlando," he connected the narrative in twenty-four books, and disposed the stories in a regular series, which alteration by no means superseded his former edition. In 1792 he translated Tasso's "Rinaldo," and ended his literary labours with a more complete collection of dramas from Metastasio. Mr Hoole is smooth but prosaic and monotonous in his versification, and his translations are now nearly superseded. He died much respected in 1803.—*Boswell's Life of Johnson. Nichols's Lit. Anec.*

HOOPER. There were two eminent prelates of this name in the English church. The first of them, JOHN HOOPER, whose name is also sometimes spelled Hoper, was a learned Cistercian monk converted to protestantism in the reign of Henry VIII. The date of his birth, which took place in the county of Somerset, has been fixed at 1495, and his education was conducted at Merton college, Oxford, where he assumed the cowl. On the passing of the act commonly known as the statute of the six articles, Hooper, whose newly-formed opinions placed him in some danger from its operation, fled to France, and afterwards to Zurich, in Switzerland, where he married, and led a life of literary leisure, till the death of Henry allowed him to return once more to his native country. Settling in the metropolis, he became soon distinguished by his eloquence as a preacher, while the prominent part he now took in the proceedings against bishop Bonner still farther increased his popularity among those of his own persuasion. This, backed by his friend, the earl of Warwick's interest with the young king, procured his advancement to the sees of Gloucester in 1550, and of Worcester in 1552, both which he held together in *commendam*. A difficulty ensued at his consecration, which had nearly prevented his preferment, the new bishop scrupling to go through the ceremony in the usual canonical habit, as being too nearly connected with the practice of the Romish church. He was ever for a short time in custody on this account, but Edward at length waiving the question,

he took his seat on the episcopal bench. In this his new situation, he distinguished himself as well by his hospitality as by his piety and the mildness of his manners; but on the accession of Mary, these qualities could not obliterate from the minds of the now dominant party the part he had formerly taken against Bonner, and the tendency of his opinions. Continuing firm in his profession of the form of religion he had from choice adopted, he at length received sentence as an obstinate and irreclaimable heretic, and suffered at the stake in the city of Gloucester, with much constancy, on the 9th of February, 1554. He published several sermons and polemical tracts, an account of which is to be found in Fox's Martyrology.—The second bishop of this name was GEORGE HOOPER, a native of Grimley, Worcestershire, born 1640. He was at first placed at St Paul's school, but was soon removed to that of Westminster, whence he proceeded on the foundation to Christchurch, Oxford, in 1656. In this university he acquired considerable reputation by his scholastic attainments, especially in oriental literature, as well as in mathematics. In 1672, Morley, bishop of Winchester, made him his domestic chaplain, and presented him soon after to the living of Havant, which he exchanged for that of East Woodlay, Hants. Sheldon, archbishop of Canterbury, afterwards availed himself of his services in the same capacity; and in 1675 gave him the valuable rectory of Lambeth, and a stall in Exeter cathedral. At the expiration of two years he attended Mary, princess of Orange, daughter of James II, to the Netherlands, as her almoner; and on his return was offered the divinity of professorship in the university where he was educated, but declined it. After the Revolution he obtained, through the interest of his royal patroness, the deanery of Canterbury, to which he was presented in 1691; and almost immediately subsequent to the accession of queen Anne to the throne, he was raised first to the see of St Asaph, and in little more than six months afterwards, translated to the more lucrative one of Bath and Wells. He was the author of a great variety of devotional tracts; an essay on divorces, written in Latin; and a learned treatise on the Jewish, Greek, and Roman measures, with another on English coins, measures, &c. affixed to it by way of appendix. This work was first printed in 1721, but is to be found also in an excellent edition of his works complete, published at Oxford, in folio, 1757. This learned prelate, after presiding over his diocese for twenty-four years, died in 1727, at Barkley, Somerset, and is buried in Wells cathedral.—*Fox's Acts and Monuments. Burnet's own Times. Nichols's Lit. Anec.*

HOORNBECK (JOHN) a Dutch Polemic of the seventeenth century, born in 1617, at Haerlem. He received his education at Leyden and Utrecht, in which latter university he succeeded to the divinity chair in 1644, acting at the same time as pastor to the congregation there. After continuing to fill this

situation for ten years with great ability and reputation, he accepted an invitation to a similar but more lucrative appointment at Leyden. Bayle speaks highly of him, both as a professor and a practical divine. Among his writings are to be found a "System of Practical Divinity," 4to; "A Refutation of Socinianism," 4to, 3 vols.; two treatises, the objects of which are the conversion of the jews, and of the gentiles, the former in 8vo, the latter in 4to; and a work on "Theological Institutions." Dr Hoornbeeck died at Leyden in 1666.—*Freheri Theat. Saxii Onom.*

HOORNE (JOHN VAN) a Dutch physician born in 1621, at Amsterdam. Having studied at Utrecht, he went to Venice, and entered into the service of that state as a medical attendant on the forces of the republic. He subsequently graduated in physic at the university of Basil, and after having filled the professor's chair in surgery and anatomy in his native city, died eventually in 1670, at Leyden, where he had passed the last seven years of his life in the capacity of anatomical professor. He was the author of a great variety of tracts on professional subjects, all of which are much esteemed, especially those on the formation of the testes, and on the thoracic duct.—*Moreri. Rees's Cyclop.*

HOPE (JOHN) an ingenious physician and naturalist of the last century. He was born at Edinburgh, May 10th, 1725; and after studying at the university of his native city, he went to Paris to attend the botanical lectures of the celebrated Jussieu. Returning home, he graduated as MD. at Glasgow, and became a fellow of the college of physicians of Edinburgh, of which he was afterwards president. He obtained the professorship of botany and the materia medica in the university of Edinburgh; and he was, in 1761, appointed botanist to the king, and superintendent of the botanic garden. His death took place November 10th, 1786. Dr Hope did not distinguish himself by any distinct publications of importance; but he was a fellow of the Royal Society, in whose Transactions are to be found several memoirs on the subject of his botanical researches.—*Life of Hope by Dr Duncan.*

HOPKINS (EZEKIEL) bishop of Londonderry, the son of an English clergyman, who officiated at Sandford, in Devonshire, where the subject of this memoir was born in 1633. His father got him admitted into the choir of Magdalen college, Oxford, of which society he afterwards became chaplain. Being presented to the rectory of St Mary Woolnoth, in the city of London, the bishop of that diocese made a difficulty of instituting him on account of his opinions, which leaned towards presbyterianism. This circumstance, and the breaking out of the great plague, induced him to remove to Exeter, where, forming an acquaintance with the family of lord Robartes, afterwards earl of Truro, he married Araminta, a daughter of that nobleman, and on the appointment of his father-in-law to the lord-lieutenancy of Ireland, accompanied him to

his seat of government. Before his patron's recall, he had already obtained the deanery of Raphoe, and in 1671 the new lord-lieutenant, the earl of Berkley, raised him, on the strong personal recommendation of his predecessor, to the bishopric of the same diocese. In this see he continued ten years, when he was translated to that of Londonderry. On the city's being besieged in 1688 he came to London, and the following year was made minister of St Mary Aldermanbury, and continued so till his death, in June 1690. Three editions of his works, among which are expositions of the Decalogue and the Lord's Prayer, besides sermons, have been printed in folio, 4to, and 8vo. Bishop Hopkins left two sons, the elder of whom, CHARLES, was born in 1664, at Exeter, before his parents went to Ireland. He was placed at Trinity college, Dublin, whence he removed to Cambridge. During the war of the Revolution, he distinguished himself much in favour of the Orange party, and afterwards lived as a wit and man of fashion about town, associating with Dryden, lord Dorset, Congreve, and other poets of the day, the latter of whom wrote an epilogue to a tragedy which he produced 1695, under the title of "Pyrrhus." He was the author also of two other tragedies, "The Female Warrior," and "Boadicea;" and published a translation of the "Art of Love" and other pieces from Ovid. His death, which was much hastened by his intemperate mode of living, took place in 1699.—JOHN, his younger brother, was born January 1, 1675. He too inherited the talent of the family, although little more is known of him than that he was the author of a collection of poems, printed in 1700, in three volumes, entitled "Amasia, or the Works of the Muses;" a poetical tribute to king William called "The Triumphs of Peace," 1698; and a short poem, "The Victory of Death." The time and manner of his decease is unknown.—*Prince's Worthies of Devon. Biog. Dram.*

HOPKINS (JOHN) see STERNHOLD.

HOPKINS (WILLIAM). There were two divines of this name, the one a native of Evesham in Worcestershire, was born in 1647. He was educated at Oxford, being successively a member of Trinity college and St Mary-hall in that university. Having taken holy orders, he, in 1671, accompanied the English embassy to Stockholm, in the capacity of chaplain, and four years after, on his return to England, was presented to the living of Lindridge, with the mastership of St Oswald's hospital, and a stall in Worcester cathedral. Dr Hopkins possessed a great fund of antiquarian knowledge, and is known to have assisted bishop Gibson in rendering the Chronicon Saxonicum into Latin, as well as to have been the translator of the article headed "Worcestershire," in Gibson's Camden's "Britannia." His other works are some "Animadversions on Johnson's reply to Jovian," and "Bertram on the Eucharist," 8vo. His death took place in 1700, at Worcester.—The second WILLIAM HOPKINS, though in orders, and rector of Bolney, Sussex, openly professed Arian principles, and even

published a treatise in defence of them, entitled "An Appeal to Common Sense," 8vo. He died in 1786.—*Athen. Oxon. Rees's Cyclop.*

HOPPNER (JOHN) an able and ingenious artist, especially in portraits. He was in a great degree self-taught, but by his talents and exertions struggled through many difficulties to the attainment of considerable eminence, and the rank of royal academican. Mr Hoppner had also a taste for poetry, which he exhibited in 1805, by a metrical translation of Tales from the Tooti Nameh, the Heetopades, and the Fabliaux of Le Grand. He died in 1810. *Gent. Mag.*

HOPTON (ΑΡΤΗΡ) a mathematician, son of sir Arthur Hopton, was born in Somersetshire, and educated at Lincoln college, Oxford. After taking his degree of BA, he removed to the Temple, where he became the intimate friend of Selden. He died in 1614, in his twenty-sixth year. He wrote a treatise on the "Geodetical Staff;" "The Topographical Glass, containing the uses of that instrument, the theodolite, plane table, and circumferentor;" "A concordance of Years, containing a new and exact computation of Time, according to the English account;" "Prognostications for the Years 1607 and 1614."—*Athen. Oxon.*

HORAPOLLO or HORUS APOLLO, an Egyptian grammarian, who flourished under the emperor Theodosius, towards the close of the fourth century. He was a native of Panopolis, and according to Suidas, taught publicly at Alexandria before he settled in the metropolis of the empire. In 1505 Aldus Manutius printed at Venice two books on the Hieroglyphics of ancient Egypt, written in the Greek language, in one volume, folio. These have been since reprinted by De Pau, 1727, in 4to, at Utrecht, accompanied with annotations, and a Latin translation: but although all join in ascribing them to some person of this name, it is yet, as Fabricius observes, very doubtful whether they be not the production of another Horus Apollo of even earlier date than the grammarian to whom they are attributed.—*Fabricii Bibl. Græc.*

HORATIUS FLACCUS (QUINTUS) one of the most celebrated, and beyond comparison the most popular, of the Roman poets. He was born at Venusium, a town in the confines of Apulia and Lucania, BC. 65: being the son of a freedman, who followed the employment of a tax-gatherer. Notwithstanding his humble origin, his father was a man of elevated and liberal sentiments, who took extraordinary pains to give his son an excellent education, for the completion of which, he sent him at the age of eighteen to study philosophy and Greek literature at Athens. Whilst in that city, Marcus Brutus passing through in his way to Macedonia, took Horace, with several other Roman students, to the army. He even made him a military tribune; but the poet freely confesses to a lack of martial spirit, and it appears that he fled from the field at the battle of Philippi, after throwing away his shield in a state of unsoldierly fear and dis-

order. As he was on the losing side, he incurred a forfeiture of property but in other respects obtained a pardon. His literary talents now formed his sole dependence, and applying himself to poetry he soon made himself known to all the leading men of genius at Rome. Virgil, he informs us, was the friend who introduced him to Mæcenas, to whom he quickly rendered himself so acceptable that he became his familiar companion. That distinguished patron of letters also procured the restitution of his estate, and made him personally known to Augustus, who became greatly attached to him, and would have constituted him his private secretary, but Horace, who preferred literary leisure and personal independence, declined the appointment. Although fully capable of participating in the pleasures of refined society, he seems to have been extremely attached to rural retirement, which he has eulogised in his poetry with great feeling and energy. At the same time he accuses himself of levity and mutability in his predilections; and seems not to have been untainted with the follies familiar to his youth and station. When Horace was about twenty-six years of age, Augustus found it necessary to make peace with Anthony, in order to unite their forces against the younger Pompey, on which occasion Horace and Virgil accompanied Mæcenas to Brundisium, that minister being deputed by Cæsar to conclude the treaty. Of this journey Horace has given a very entertaining account, in the fifth satire of his first book. The incidents of the life of this favourite poet were few, and he appears to have chiefly passed his time between Rome and his Tiburtine, or Sabine villa. His writings prove that he was on terms of easy familiarity with many persons of rank; and he showed himself generally ready to do friendly offices, in the way of advice and recommendation. He acquired much fame by his writings during his life, but never could be induced to undertake any single great work. He, however, composed his "Carmen seculare," at the express request of Augustus, who had kindly complained of his saying so little of him in his writings. He died BC. 8, in his fifty-seventh year, and was interred near the tomb of his patron, Mæcenas, whose death a short time preceded his own, an event that much affected him. On the merits of an author so well known, and so minutely canvassed by classical critics as Horace, it is unnecessary to dwell in a work of this nature. His odes are models of that kind of composition in the Latin language; and his epistles and satires, while scarcely pretending to be poetry, abound in moral maxims vigorously expressed; in acute observations on life and manners, and in much easy and vivacious illustration. His preceptive pieces on the art of writing, the principal of which is his "Epistle to the Pisos," or "Art of Poetry," display much good sense and taste, but are desultory and immethodical, a species of graceful negligence being one of the great charms of Horace. He is peculiarly the poet for apt

2nd elegant quotation; even the variety of his humour and unfixedness of his philosophy tend to increase his attraction in this respect, by allowing him to occasionally moralize in the lofty manner of the stoics, and at other times to indulge in the lighter strain of the Epicurean school, to which his genius and practice were probably more naturally conformable. The editions of Horace are numerous beyond those of any other poet. Dr Douglas, an eminent physician in the reign of George II, collected no fewer than four hundred of them, to which may be added the more recent editions of Combe, Wakefield, Hunter, and Mitscherlichius.—*Horatii Opera in usum Delphicius' Lives of Rom. Poets.*

HORBERY (MATTHEW) an episcopal clergyman, who attracted notice by discussing the doctrine of the eternity of hell torments. He was born in 1707, at Haxay in Lincolnshire, where his father was vicar of the parish. After some previous education in the country, he became a student at Lincoln college, Oxford, whence he was elected fellow of Magdalen college. He took his bachelor's degree in divinity in 1743, and in 1745 he obtained that of doctor. Dr Smallbroke, bishop of Lichfield and Coventry, made him his chaplain, and bestowed on him a canonry in his cathedral, as well as other ecclesiastical preferment. He was subsequently presented by his college to the rectory of Stanlake, which he held till his death in 1773. He published in 1744 a treatise on the "Duration of Future Punishment," 8vo, and a posthumous collection of his sermons appeared in 1774.—*Gent. Mag.*

HORNE (ANDREW) an English lawyer and juridical writer of the fourteenth century. He is said to have been a native of Gloucester, and held the office of chamberlain of the city of London in the reign of Edward II. He is asserted to have written a book, entitled "Chronicon Gloucestræ," which is not now extant; and he was the compiler of a work in the town clerk's office, called "Liber Horne," containing the charters, customs, ordinances, and statutes, relating to the metropolis in the time of Henry III and Edward I. But the chief work ascribed to Horne is "The Mirror of Justices," of which a translation, by William Hughes, was published in 1642, and several times reprinted. This is a system of the common law of England, most of which, according to Sir E. Coke, was written before the conquest, but arranged and augmented by Horne. It is, however, a curious and interesting tract, whatever may have been its origin.—*Bridgman's Legal Bibliography.*

HORNE (GEORGE) a learned and pious English prelate of the eighteenth century. He was born at Otham, near Maidstone in Kent, November 1, 1730. To his father, who was rector of Otham, he was indebted for his early education; and he was afterwards at a grammar-school at Maidstone, whence, at the age of fifteen, he removed to University college, Oxford, where he had obtained a scholarship. He applied himself closely to study, especially

of the Hebrew language, to which he added the perusal of the writings of the Christian fathers. At this period also he became a convert to the mysticism of Hutchinson, through his acquaintance with the rev William Jones, who was afterwards his chaplain. Adopting the strange notion that the philosophy of Newton was inconsistent with the Bible, and was designed to subvert its authority, he in 1751 published anonymously, "The Theology and Philosophy in Cicero's Somnium Scipionis explained; or a Brief Attempt to demonstrate that the Newtonian System is agreeable to the Notions of the wisest Ancients; and that Mathematical Principles are the only sure ones," 8vo. This was an ironical attack on the doctrines of Newton, which he neither acknowledged nor defended against the animadversions it provoked. In 1752 he proceeded M.A. and the following year he published another tract against the Newtonian philosophy, in support of the principle of Hutchinson. He now entered into holy orders, and soon obtained considerable reputation as a preacher. In 1754 he wrote against Dr Shuckford's account of the creation and fall of man; and in 1756 he became involved in a controversy with Dr Kennicott, the supposed author of "A Word to the Hutchinsonians." In 1753 he was chosen a proctor to the university, and at the expiration of his office he was admitted to the degree of B.D. In 1760 he produced a pamphlet, in which he censured the plan of Kennicott for a new edition of the Hebrew Bible; but the literary hostilities of these gentlemen terminated in a lasting friendship. In 1764 he took the degree of D.D.; and in 1768 he was elected to the presidency of Magdalen college. Shortly after obtaining this preferment, he married the daughter of Philip Burton, esq. In 1771 Dr Horne was appointed chaplain in ordinary to the king, and the next year he displayed his zeal in defence of the thirty-nine articles, by publishing his "Considerations on the projected Reformation of the Church of England; in a Letter to Lord North," 4to. His principal and most popular work, the "Commentary on the Book of Psalms," made its appearance in 1776, in two vols. 4to. It displays to advantage the erudition and piety of the author; but a want of judgment is observable, which must detract from his acknowledged merit as a Scripture critic, in the opinion of readers not tinctured with his peculiar sentiments. In the same year in which he published his commentary, he was chosen vice-chancellor of the university of Oxford. In 1781 he was promoted, through the recommendation of his friend, lord Hawkesbury (afterwards earl of Liverpool), to the deanery of Canterbury. In 1784 appeared his "Letters on Infidelity," 12mo, directed chiefly against the writings of Hume; and in 1787 he published "A Letter to the rev Dr Priestley, by an Under-graduate," 8vo; to which the doctor replied in his "Defences of Unitarianism for the year 1787." In 1790 Dr Horne was advanced to the bishopric of Norwich, when he resigned the presidency of

Magdalen college. He held this dignity rather less than two years, dying January 17, 1792, at Bath, whence he was removed for interment to the church of Eltham, in Kent. Besides the works noticed, he was the author of "Considerations on the Life and Death of John the Baptist," 1769; "A Letter to Dr Adam Smith, on the Life, Death, and Philosophy of David Hume, esq, by one of the People called Christians," 1777, 8vo; "Discourses on several Subjects and Occasions," 5 vols. 8vo; "Observations on the Case of the Protestant Dissenters, with Reference to the Corporation and Test Acts," 1790, 8vo; and "A Charge intended to have been delivered to the Clergy of the Diocese of Norwich," 1791, 4to. He also wrote some papers in a miscellany, called the "Olla Podrida," published at Oxford in 1787.—*Aikin's G. Biog.*

HORNECK (ANTHONY) a native of Bacharach, in the lower Palatinate, born 1641, who came over to this country in 1663, and entered himself of Queen's college, Oxford, being admitted *ad eundem* to the degree of master of arts from the university of Wittemberg. Two years afterwards he quitted Oxford, where he had already obtained the living of All Saints, and entered the family of Monk, duke of Albemarle, as domestic chaplain and tutor to his eldest son. His services in this double capacity were rewarded by his patron with a stall in Exeter cathedral, and the Rectory of Doulton, Devon. Having graduated as doctor in divinity at Cambridge in 1681, he became some years afterwards one of the chaplains to king William and queen Mary, to whose favour he had been specially recommended by lord Orford, and in 1693 was allowed to exchange his Exeter prebend for a more valuable one in Westminster abbey. The following year his friend, Dr. Kidder, bishop of Bath and Wells, who afterwards wrote an account of his life, presented him to a stall in his cathedral, which he held together with his other preferment. Dr. Horneck is commemorated by his biographer as an able scholar, especially versed in the Hebrew language, and also as an active and conscientious divine. He published several sermons, which were much admired, as well as "The Happy Ascetic;" "The Fire of the Altar;" "The Great Law of Consideration;" "The Crucified Jesus;" "The Exercise of Prayer;" and other devotional tracts, besides an account of "The Confessions of Lieutenant Stirn and George Borosky, executed for the murder of Mr Thynne, of Longleat," 1681, and another of Mr Slater, the rector of Putney's abjuration of protestantism under James II. He died of the stone in January 1696, and is buried in Westminster abbey.—*Kidder's Life of Horneck.*

HORNER (FRANCIS) barrister-at-law, was born at Edinburgh in the year 1778. He was educated at the high school, and finished his studies at the university of his native city, where he formed an intimacy with lord Henry Petty, subsequently marquis of Lansdown, under whose patronage, after studying the law, and becoming an advocate, he repaired to

London, and entered parliament in the year 1806. In 1810 he became chairman to the Bullion Committee, and was author of the luminous report on that intricate subject, which formed the result of its labours. His close application to business, however, so much impaired his naturally delicate constitution, that he was obliged to seek the climate of Italy, and died, greatly lamented, at Pisa, 8th February, 1817. Mr Horner, whose literary talents were considerable, was one of the earliest and most able writers in the Edinburgh Review.—*Annual Biog.*

HORNIIUS (GEORGE) an eminent writer of history, was born in the Palatinate, about the commencement of the seventeenth century. He studied at the college of Kreusen, and becoming preceptor to a young Englishman, visited this country, and attaching himself to the presbyterian party, paid great attention to public affairs. He finally became professor of history in the university of Leyden, and died in 1650. His principal works are—"A Commentary on the present state of the Churches of England," 1647; "A History of the Transactions in England, Scotland, and Ireland in 1645-6," 1648; "De Originibus Americanis," 1652; "Historia Philosophiæ," 1655; "Historia Ecclesiastica;" "Orbis Politicus;" "Orbis Imperans;" "Geographia Vetus et Nova;" "Arca Noe," a history of monarchies; and an edition of Sulpicius Severus. He had a warm controversy with Isaac Vossius respecting the age of the world.—*Moreri.*

HORNBSY (THOMAS) an eminent mathematician and astronomer, born 1734, and died April 11, 1810. He was Savilian professor of astronomy, professor of natural philosophy, and lecturer on experimental philosophy at Oxford, as well as keeper of the Radcliffe library. He had taken the degrees of MA. and DD. and was a fellow of the Royal Society, in whose Transactions he published the following papers:—"On the Parallax of the Sun," 1763; "Observations on the Solar Eclipse, April 1, 1764, at Oxford;" "Account of the Improvements to be made by Observations of the Transit of Venus, in 1769;" "Observations on the Transit of Venus, and Eclipse of the Sun, June 3, 1769;" "The Quantity of the Sun's Parallax, as deduced from Observations of the Transit of Venus, on June 3, 1769;" "Inquiry into the Quantity and Direction of the proper Motion of Arcturus; with some Remarks on the Diminution of the Obliquity of the Ecliptic." But Dr Hornsby chiefly distinguished himself in the literary world as the editor of the astronomical observations made by Dr Bradley, at Greenwich, which, after a long delay, arising from various causes, were published in two volumes, folio, 1798. Dr Hornsby entitled himself to the lasting gratitude of the scientific members of the university, by his successful labours in completing the astronomical arrangements at the observatory, as well as by his zealous attention to the duties of his station.—*Gent. Mag. Watt's Bibl. Brit.*

HORREBOW (PETER) an eminent astronomer and professor at Copenhagen, was born at Lægsted, in Jutland, in 1679. He studied at Aalborg under very unfavourable circumstances, being obliged, during that time, to submit to various kinds of labour. In 1714 he was appointed professor of mathematics at Copenhagen, and in 1723 was elected a member of the Danish Academy of Sciences. He died in 1764. He was the author of many works connected with his favourite pursuits, among which were, "Copernicus Triumphans sive de Parallaxi Orbis Anni;" in which he warmly advocates the system of Copernicus; the "Elements of Astronomy;" and "The Elements of Mathematics;" but he is best known in England by his "Natural History of Iceland," folio, 1758. His mathematical works were published in four vols. 4to, Copenhagen, 1735.—*Nouv. Dict. Hist.*

HORROX (JEREMIAH) a celebrated English astronomer of the seventeenth century. He was born at Toxteth, near Liverpool, about 1619, and received his education at Emanuel college, Cambridge. About 1633 he began to study astronomy; but living then at Toxteth, with a slender income, his progress was but slow; and he made little proficiency in the science till about three years after, when he formed an acquaintance with Mr William Crabtree, of Broughton, near Manchester, who was engaged in a correspondence with Samuel Foster, then professor of geometry at Gresham college, London. Animated by the assistance of these gentlemen, Horrox pursued his studies with assiduity and success. He appears to have resided at the village of Hool, near Liverpool, where he accurately observed the transit of Venus over the sun's disk, November 24th, 1639. Science would probably have been greatly indebted to him, but he was unfortunately cut off by death January 3, 1640-1; only a few days after he had finished his treatise, entitled "Venus in Sole visa," which shows him to have been more intimately acquainted with the extent of the solar system than his learned editor Hevelius. Other productions of his pen, left in an imperfect state, were collected and published by Dr Wallis, in 1673, under the title of "Opera Posthuma." Horrox seems to have been the first who ever predicted or observed the passage of Venus over the sun's disk, from which he deduced many useful observations; though not aware of the full advantages to be derived from an examination of that important phenomenon. His theory of lunar motions afforded assistance to Newton, who always spoke of Horrox as a mathematical genius of the highest order.—*Martin's Biog. Philos. Aikin's Gen. Biog.*

HORSLEY (JOHN) an English clergyman, eminent as an investigator of the Roman antiquities of Britain. He was a native of Northumberland, and was educated at a grammar-school at Newcastle-upon-Tyne, and afterwards at one of the Scottish universities, where he obtained the degree of MA. He then settled at Morpeth, in his native county, as minister to a dissenting congregation; and

he appears to have died there December 12th, 1731, at the age of forty-six. He was distinguished for a profound acquaintance with the antiquities of his country; and some of his lectures on archæological topics are extant, addressed to Roger Gale, esq. That gentleman was a contributor to Horsley's great work, "Britannia Romana," the publication of which was posthumous, 1732, folio. It contains a sketch of the Roman history of Britain lists of military forces, a description of the Roman walls, accounts of inscriptions and sculptures, with the geography and topography of Britain, from Ptolemy, Antonine, &c. Though from its nature, and the period at which it was compiled, this work is both defective and inaccurate, it is still valuable, and is entitled to commendation as the earliest systematic production of the kind. Mr Horsley was acquainted with mathematical science; and he gave lectures on natural philosophy, at Newcastle and at Morpeth.—*Nichols's Lit. Anec. Aikin's G. Biog.*

HORSLEY (SAMUEL) a learned dignitary of the church of England, probably of the same family with the preceding, as his grandfather was a dissenter. His father, who was a clergyman, held the curacy of St Martin's in the Fields, London, in which parish the son was born in October, 1733. He was educated at Westminster school, and Trinity hall, Cambridge, where he took the degree of LL.B. in 1758. The same year, having been ordained, he became curate to his father, then rector of Newington Butts, which benefice he resigned to his son in 1759, who retained it till his promotion to the see of Rochester. In 1767 he was chosen a fellow of the Royal Society; and the same year he published an elaborate treatise, entitled, "The Power of God deduced from the computable instantaneous production of it in the Solar System," 8vo. In 1768 he went to Christchurch, Oxford, as private tutor to lord Guernsey, eldest son of the earl of Aylesford; and at that university he took the degree of LLD. In 1770 was printed at the Clarendon press his earliest mathematical publication, "Apollonii Pergæi Inclinationum, Libri ii." In November 1773 he was elected secretary to the Royal Society; and not long after the earl of Aylesford presented him to the rectory of Aldbury, in Surrey, which he held by dispensation, together with that of Newington. In 1774 he published "Remarks on the Observations made in the last Voyage towards the North Pole, for discovering the Acceleration of the Pendulum, in latitude 79 deg. 50 min. in a Letter to the hon C. J. Phipps," 4to. In December, the same year, he married the daughter of the rev John Botham, his predecessor at Aldbury. In 1776 he published proposals for a new edition of the works of sir Isaac Newton, which was gradually completed in five volumes, quarto. His great diligence and proficiency in various sciences now procured him the patronage of bishop Lowth, who made him his chaplain, and collated him to a prebend in St Paul's cathedral. In 1779 he resigned Aldbury, and

the next year obtained the living of Thorley. He was appointed archdeacon of St Albans in 1781, and early in 1782 vicar of South Weald in Essex; on which he resigned both Thorley and Newington. He engaged warmly in the contest carried on in 1783 and 1784 with sir Joseph Banks, respecting his conduct as president of the Royal Society; and delivered several very eloquent speeches on the occasion, printed with others in "An Authentic Narrative of the Dissentions of the Royal Society," 1784. Dr Horsley withdrew from the society, in consequence of a certain high appointment taking place, of which he did not approve. His concluding words on retiring were, "I quit that temple where philosophy once presided, and where Newton was her officiating minister." About the same period he commenced a literary controversy with the great champion of unitarianism, Dr Priestley. His labours in the cause of orthodoxy on this occasion procured him the friendly patronage of the lord chancellor Thurlow, who characteristically remarked, that "those who defended the church ought to be supported by the church;" and accordingly presented him to a prebendal stall in the cathedral of Gloucester; and in 1788 he was, through the same interest, made bishop of St David's. In his episcopal character he supported the reputation for learning and ability which he had previously acquired. His first charge to his clergy, delivered in 1790, attracted great approbation; as did also his speech in the house of lords, on the catholic bill, May 31st, 1791. On these, as well as on other occasions, he showed himself the strenuous advocate for the existing state of things in religion and politics; and the merit of his conduct will accordingly be differently appreciated with reference to the various opinions of different persons; but none can deny the ability with which he advocated the cause he had adopted. His zeal did not go unrewarded. He was promoted to the see of Rochester in 1793, and made dean of Westminster; and in 1802 he was translated to St Asaph. He died at Brighton, October 4th, 1806, and was interred at Newington Butts. Bishop Horsley at one period became quite an alarmist, and some incautious and perhaps intemperate speeches which he uttered in the house of peers during the discussion of lord Grenville's bill, &c. exposed him to a good deal of censure; but he may at least claim the praise of consistency of conduct as an enemy of innovation; and he was probably honest and sincere, if not wholly disinterested in his denunciations against religious and political heresy, and heretics. Besides the works noticed, he was the author of "Critical Disquisitions on the 18th Chapter of Isaiah," 4to; "Hosea, a new translation, with notes," 4to; a "Translation of the Psalms," 2 vols; "Biblical Criticisms," 4 vols. 8vo; Sermons; Charges; Elementary Treatises on the Mathematics; on the Prosodies of the Greek and Latin Languages; and Papers in the Philosophical Transactions.—*Nichols's Lit. Anec.*

HORSTIUS (JAMES) a physician of emi-

nence in the sixteenth century. He was a native of Torgau, and studied at the university of Frankfort on the Oder, where he took the degree of MD. in 1552. After having practised his profession in Silesia and Moravia, he was in 1580 made physician in ordinary to the archduke of Austria; and four years after he obtained the professorship of medicine in the university of Helmstadt. On this occasion he delivered an inaugural oration "De Remoris discentium Medicinam et earum Remediis," printed with his "Epistolæ Philosophicæ et Medicinales," Lips. 1596, 8vo. He died about 1600. Horstius was the author of a tract, "De Aureo Dente maxillari Pueri Silesii; et de Natura, Differentiis, et Causis eorum qui Dormientes ambulat," Lips. 1596, 12mo. The Silesian boy with the golden tooth, noticed in this work, was an impostor, whom Horstius, unfortunately for his reputation, took for a prodigy, whose appearance portended the overthrow of the Turkish empire.—HORSTIUS (GEORGE) nephew of the foregoing, became so celebrated a physician that he was styled the Æsculapius of Germany. He was born at Torgau in 1578, and studied at Wittenberg and Basil, at which last place he was admitted MD. in 1606. After being professor of medicine at different universities, he became first physician to the city of Ulm in 1622, and resided there during the rest of his life, dying of the gout in August 1636. He published treatises "De tuenda Sanitate," 1648, 12mo; "De tuenda Sanitate Studioforum et Literatorum;" "De Causis similitudinis et dissimilitudinis in Foetu, respectu Parentum," 1619, 4to.; "Dissertatio de Natura Amoris, Additis Resolutionibus de Cura Furores Amatoria, de Phittris, atque de Pulsu Amanium," 1611, 4to. His works were printed in 3 vols. folio, Nuremberg, 1660.—*Moreri. Hutchinson's Biog. Med.*

HORTE (JOSHUA) an ingenious and liberal divine, who was a native of Marshfield, in Gloucestershire. He received his education at Tewkesbury, in the same county, at a dissenting academy, kept by Mr Samuel Jones, where Butler, afterwards bishop of Durham, was at the same time a student. After having completed his studies, Horte became pastor to a congregation of dissenters at Newbury, in Berkshire; which situation he left, and took orders in the church of England. Obtaining the patronage of one of the viceroys, he went to Ireland, where he was made bishop of Kilmore, and subsequently archbishop of Tuam, which see he held till his death, which happened in December, 1751. His published works consist of a volume of sermons, and a Pastoral Charge to his Clergy.—*Chalmers's Gen. Biog. Dict.*

HORTENSIVS (LAMBERT) the assumed name of a learned native of Montfort, near Utrecht, who in his various writings in history, poetry, and philology, took this designation, by which alone he has come down to posterity, in commemoration of his descent from a Dutch gardener. Although his real name is unknown, it is ascertained that he was born about the

commencement of the sixteenth century, and received a liberal education at Louvain. He afterwards presided for a number of years over the grammar-school of Naarden, and was the author of a history of the war in Germany, under the emperor Charles V, written in the Latin language, in seven books; a Commentary on the first six books of Virgil's *Æneid*; another on Four of the Comedies of Aristophanes; and a third on Lucan's "*Pharsalia*." He also published two accounts, "*De secessionibus Ultrajectinis*;" and "*De tumultu Anabaptistarum*;" besides some satirical and other poems. His death took place at Naarden in 1577.

HORTENSIUS (QUINTUS) a celebrated Roman orator, who flourished in the time of Marius and Sylla, and survived to see his reputation eclipsed by the growing eloquence of his great rival, Cicero. He was of senatorial dignity, and having pleaded his first cause with great success, about the year 92 before the christian era, when only in his nineteenth year, passed successively through the offices of military tribune A. V. C. 664 and prætor 681, till he finally attained the consulship in 685. His works are unfortunately lost to posterity; but Cicero has spoken ably and affectingly upon his death, which took place in the same year in which Cæsar, by causing himself to be proclaimed dictator, put an end to the Roman republic, and about half a century B.C. The intimacy of Hortensius with Cato was shown by the singular circumstance of his obtaining from the latter his wife Marcia, for the purpose of bringing him a family, which end was answered, and she lived afterwards with Cato until his death.—S. C. **HORTENSIA**, daughter of this orator, inherited her father's eloquence, which she exercised in pleading the cause of the Roman ladies before the triumvirs, Antony, Octavius, and Lepidus, who had issued an edict, compelling them to declare their property preparatory to a heavy taxation. Quintilian speaks of this harangue with applause.—*Ciceronis Brutus. Bayle.*

HOSPINIAN (RODOLPH) an eminent Swiss divine, born at Altdorf, in the caupon of Zurich, in 1547. Having received a liberal education at Zurich, Marburg, and Heidelberg, he entered the church in 1568, and three years afterwards obtained the freedom of the city of Zurich, and the superintendance of the abbey school there. While in this situation he devoted his leisure hours to the compilation of a voluminous and elaborate work, which he printed occasionally in different portions, under the title of a "*History of the Errors of Popery*," but did not live to complete it. This and another treatise, written against the Jesuits, and entitled "*Historia Jesuitica*," procured him, in 1588, the archdeaconry of the Caroline church. At the expiration of six years he was farther preferred to be pastor of the abbey church, where he continued to officiate till within three years of his death, although a cataract deprived him of sight for more than a twelvemonth during the interval. In 1613 the operation of couching restored his vision; but in 1623, being then

seventy-six years of age, his faculties failed him, and though he survived till 1626, his last three years were passed in a state of childish imbecility. He was twice married, and had fourteen children by his first wife, who died in 1612. An edition of his works was printed at Geneva, in seven volumes, folio, in 1681; among them, besides those already enumerated, are a treatise on the Eucharist, and another called "*Concordia Discors*," both which gave great offence to the Lutherans, who replied to them with much asperity. Also others, "*De Templis*;" "*Festa Christianorum*;" "*De Monachis*;" and "*De Festis Judæorum et Ethnicorum*."—*Bayle.*

HOSPITAL (MICHAEL DE L') an eminent chancellor of France, was born in 1505 at Aignepersé, in Auvergne. His father, who was physician and chief manager of the affairs of the constable de Bourbon, sent him to study jurisprudence in the most celebrated universities of France and Italy, where he also distinguished himself by his acquirements in polite literature. He quickly rose in his profession, and after obtaining the office of counsellor of parliament, was sent ambassador by Henry II to the council of Treut. In 1554 he was made superintendant of the royal finances, in which post, by his ability, economy, and integrity, he restored the exhausted treasury, and put an end to the dishonest practices and the unjust emoluments of a horde of rapacious court favourites, whose enmity he encountered with inflexible steadiness. On the death of Henry II he was introduced by the Guises into the council of state, which post he gave up to accompany Margaret de Valois, dutchess of Savoy, as her chancellor. The confusion which followed in France soon made it necessary to recal a minister of so much talent, and he was advanced to the post of chancellor. Although patronised by the house of Guise, and obliged to acquiesce in many things which he disapproved, to prevent a great deal that he disapproved more, he never ceased to advocate toleration, and was the principal author of the edict of 1562, which allowed freedom of worship to protestants. By this conduct he rendered himself exceedingly odious to the court of Rome, which sought in vain to remove him, until the court came to the sanguinary resolution of exterminating the reformed religion by violence. Finding himself regarded with suspicion and dislike, he anticipated his dismissal by a voluntary retreat to his country-house, where, a few days after, the seals were demanded from him, which he resigned without regret; observing that the affairs of the world were becoming too corrupt for him to take a part in them. In lettered ease, the conversation of a few friends, and in the composition of Latin poetry, in which he took much pleasure, he enjoyed himself with great satisfaction, until the atrocious day of St Bartholomew, in 1572. Upon this event, his friends fearing that he might be made one of its victims, urged him to take measures for his safety, but he not only dis-

dained to seek concealment, but when a party of horsemen (although without authority) advanced towards his house, he refused to close his gates. He was preserved only by the arrival of a second party, with express orders from Charles IX to spare him. On this occasion he was told that the persons who made the list of proscription pardoned him, when he coolly observed: "I did not know that I had done any thing to deserve either death or pardon." This excellent magistrate and truly great man survived that execrable event a few months only, dying on the 13th March, 1573, at the age of sixty-eight. Distinguished by that firmness of mind, without which the greatest talents are often useless, no one was a more determined enemy to injustice; and the reform in legislation produced by him is regarded by the president Henault, and other enlightened writers, as at once highly honourable to his integrity and capacity, and of the greatest benefit to France. It was comprised in various ordinances, particularly that of Moulins, in 1566. His other works are, "Latin Poems," of a grave and masculine character; easy, energetic, but diffuse; the best edition of which is that of Amsterdam, 1732; "Harangues before the States of Orleans," in which he appears to have less advantage as an orator than a poet; "Memoirs," containing treaties, state papers, &c.; "A Discourse in favour of Peace," and his "Testament." The eulogy of L'Hospital was made a prize subject by the French Academy in 1777, and a statue was erected to him by Louis XVI. An able essay on his life was published by M. Bernarde, in 1807, from which work and other materials Mr Charles Butler some time after published another essay, principally with a view of exhibiting him as a catholic friend to toleration.—*Moreri. C. Butler's Life of L'Hospital. Saxii Onom. Bayle.*

HOSPITAL or HOPITAL (WILLIAM FRANCIS ANTHONY LE L') marquis de St Mesme, a celebrated French mathematician of the seventeenth century. He was born in 1661, his father being a lieutenant-general in the army, and master of the horse to the duke of Orleans. After being educated at home under a private tutor, he entered into the army; but was obliged to quit the service on account of the imperfection of his sight. He then devoted himself exclusively to the study of mathematics; and being particularly delighted with the perusal of father Malebranche's *Recherche de la Verité*, he sought his acquaintance, and followed his advice on all occasions. At the age of thirty-two he distinguished himself by solving problems proposed to the lovers of mathematics by James Bernouilli; and in 1693 he was admitted an honorary member of the Academy of Sciences at Paris. From that period he published in the French and foreign journals solutions of difficult questions and other mathematical communications. Such was his reputation that M. Huygens, profound as was his acquaintance with science, did not disdain to apply to him for information relative to the nature of

the differential calculus. This led to the publication of his treatise, entitled "*L'Analyse des Infinimens Petits*," 1696, the first French work on the subject, of which a new edition was published by Lefevre, Paris, 1781, 4to. The marquis de l'Hospital continued his researches with ardour till his death, which took place in 1704. Besides the works mentioned, he was the author of "*Les Sections Coniques, les Lieux Geometriques, la Construction des Equations*;" and "*Une Theorie des Courbes Mechaniques*," 4to. He was in private life a man of integrity, of an open and candid disposition, and of agreeable and polished manners, suited to his station in society.—*Fontenelle Eloges des Academ. Martin's Biog. Philos. Aikin's G. Biog.*

HOSIE (PAUL) was born May 19, 1652, at Pont de Vesle; he joined the jesuits in 1669, and acquired great skill in mathematics; he accompanied the mareschals d'Estrées and de Tourville during twelve years in all their naval expeditions, and gained their esteem. He was appointed king's professor of mathematics at Toulon, and died there February 23, 1700, leaving "*Recueil des Traités de Mathématiques les plus necessaires à un Officier*," 3 vols. 12mo; "*L'Art des Armées Navales, ou Traité des Evolutions Navales*," Lyons, 1697, and more completely in 1727, folio. This work is equally historical and scientific; it contains an account of the most considerable naval events of the fifty preceding years. He presented it to Louis XIV, who received it graciously, and rewarded the author with 100 pistoles and a pension of 600 livres. A treatise on the construction of ships, which he wrote in consequence of a conversation with mareschal de Tourville, is printed at the end of the preceding. In 1762 lieutenant O'Bryen published in 4to, "*Naval Evolutions, or a System of Sea Discipline*," extracted from father L'Hoste's "*Art des Armées Navales*."—*Moreri. Nouv. Dict. Hist.*

HOSIE or L'HOSTE (JOHN) a learned French mathematician of the sixteenth century. For some time he was professor of civil and canon law in the university of Pont-à-Mousson. He then succeeded to the chair of mathematics in the same place, whence he was removed to Nancy by Henry, duke of Lorraine, who appointed him his superintendent of fortifications and counsellor of war. In this capacity he fortified Nancy, and otherwise distinguished himself by mathematical treatises, which, however subsequently superseded, entitle him to respectful notice. He died in 1631. His principal works are, "*Le Sommaire et l'Usage de la Sphere Artificielle*," 4to; "*La Pratique de Geometrie*," 4to, "*Description et Usage des principaux Instrumens de Geometrie*;" "*Du Cadran et Quarré*;" "*Rayon Astronomique*;" "*Baton de Jacob*;" "*Interpretation de grand Art de Raymond Lulle, &c.*"—*Moreri. Nouv. Dict. Hist.*

HOTMAN (FRANCIS) an eminent professor of jurisprudence, born at Paris in 1524. His progress in the study of the civil law was so

rapid, that when only eighteen years of age he was admitted to a doctor's degree in that faculty at Orleans. Returning to the metropolis, of which he was a native, he soon after distinguished himself by his lectures on the Roman code, as well as by his proficiency in the belles lettres; but having embraced the tenets of the reformed religion, the umbrage which he gave by this step to the rest of his family induced him to withdraw from their society and to settle in Switzerland, where, after remaining a short time at Geneva, he accepted the professor's chair in belles lettres at Bern. Hence he removed to Strasburg, on obtaining the professorship of civil law in that university, and lectured with so much reputation that large offers were made him by several German, as well as other courts, to settle in their respective dominions. Of these he at length accepted the proposals of Margaret of France, and took up his abode at Bourges; but the massacre of the Huguenots in 1572, from which he very narrowly escaped, caused him to leave France with precipitation, nor could he ever be prevailed on to return. On this occasion he fled back to Geneva, and thence retired to Basil, where he passed the remainder of his days. The last six years of his life, which were rendered painful by a confirmed dropsy, were spent by him in revising his works on jurisprudence, government, and antiquities; a treatise "De Consolatione," &c. all which appeared in three folio volumes in 1599. Of these his "Franco-Gallia" has been translated into English by Lord Molesworth. Hotman, like many of his contemporaries, is said to have been a firm believer in alchemy, and to have wasted much time and treasure in pursuit of the opus magnum. His death took place in 1510.—*Moreri. Saxii Onom.*

HOTTINGER (JOHN HENRY) a learned Swiss divine and Oriental scholar of the seventeenth century. He was born at Zurich, in 1620, and displaying when young an extraordinary propensity for the study of languages, some friends at Zurich afforded him the means of completing his education in foreign universities. He went to Geneva, Gottingen, and Leyden, where he applied himself with such diligence and success to the study of the oriental languages as to become one of the first scholars of his time. After visiting England, he returned to Zurich in 1642, and was immediately appointed professor of ecclesiastical history; and in the following year professor of catechetical divinity and of the oriental languages. In 1653 he was made professor of rhetoric, and admitted into the college of canons. His great reputation occasioned his being invited by the elector palatine to Heidelberg, to aid in the restoration of that university. He went thither in 1655, after having taken the degree of DD. at Basil. He was appointed professor of divinity, and principal of the college of Wisdom, and raised to the dignity of ecclesiastical counsellor. The next year he was created rector of the university; and in 1658 he accompanied the prince palatine to the electoral diet of Frankfort, where he formed

an acquaintance with the famous orientalist, Job Ludolph. In 1661 he returned to Zurich, when he was appointed president of the committee for the revision of the German translation of the Bible. He was sent to Holland in 1664 on some political mission; and in 1667, while preparing for a temporary removal to Leyden, where he was offered the professorship of divinity, he was accidentally drowned by the oversetting of a boat, in the neighbourhood of Zurich. Among his numerous works are, an *Oriental History*, from the Eastern writers; an *Oriental Library, or Catalogue of Books and Authors*; an *Heptaglott Lexicon*; *Exercitations against Morin*, who preferred the Samaritan Pentateuch to the Hebrew Text; and *Thesaurus Philologicus*, or a *Key to Scripture*, illustrating it from the Oriental languages and literature.—*Bayle. Aikin's G. Biog.*

HOTTINGER (JOHN JAMES) son of the subject of the last article, and also distinguished as a divine and theological writer. He was born at Zurich in 1652, and received his education in that city and at Basil, whence, in 1675, he went to Geneva. The following year he was ordained to the ministry at Zurich; and in 1698, on the death of Heidegger, he obtained the professorship of theology, which he held during the remainder of his life. He wrote "Theological Dissertations," and a vast multitude of other treatises on divinity, biblical criticism and controversy, both in the German and Latin languages. His death took place at Zurich in 1735.—*Moreri. Aikin's G. Biog.*

HOTZE (—) an Austrian general, who was a native of the canton of Zurich in Switzerland. In 1792 he served in the army as colonel of a regiment of cuirassiers; and in February 1793 he was promoted to the rank of major-general, when he was employed under Wurmser. He contributed to the taking of the lines of Weissenburg on the 13th of October, but failed a few days after in an attack on the heights of Saverne, and was unfortunate on other occasions in that, and the following campaign, though he had the reputation of being a brave and skilful officer. He continued to serve in 1794, 1795, and 1796, in the army of the Rhine; and in March 1795 he was made a lieutenant field-marshal. In August 1796 he assisted in gaining the battle of Neumarck; and a few days afterwards he particularly distinguished himself in the field of Wurzburg, where he displayed great talents and activity. In May 1797 the emperor rewarded his services with the grand cross of the order of Maria Theresa. He had the command of the left wing of the army of the archduke Charles in 1799, and was entrusted with the operation of effecting the passage of the Rhine, above the lake of Constance, and penetrating into Switzerland. He succeeded only after several bloody combats, in which he lost a great part of his troops; but his operations contributed powerfully to the future success of the archduke. He was killed near Kaltenbrunn, in an attack made by the French, September 25, on his position behind the Linth. The defeat of the Russians under

Korsakoff at Zurich, which took place at the same time, occasioned the recall of the Russian army from the south of Europe.—*Dict. des H. M. du 18me. S.*

HOUARD (DAVID) a French advocate and juridical writer, who was a native of Dieppe, and died at Abbeville in 1803. He was a member of the academy of Sciences and Belles-lettres at Paris, and afterwards an associate of the National Institute, and was distinguished for his acquaintance with legal archæology. His works are, "Anciennes Loix des François conservés dans les coutumes Angloises," Rouen, 1766, 2 vols, 4to; and "Traité sur les Coutumes Anglo-Normandes," 4 vols, 4to.—*Nouv. Dict. Hist. Biog. Univ.*

HOUBIGANT (CHARLES FRANCOIS) a distinguished French priest of the congregation of the oratory, born in 1686 at Paris. An incurable deafness made study his only resource for amusement, and his progress in literature was in consequence so great as to procure him the expressed approbation of his pontiff, Benedict XIV. The fruits of his learned labours are, translations of the Hebrew Psalter, and of all the books contained in the Old Testament, into Latin, the former printed in 1746, in 12mo, the latter in seven 8vo volumes. In 1753 he published also at Paris a complete edition of the Hebrew Bible, with notes, and a Latin translation, in four folio volumes. His other works are "Racines Hebraïques," 8vo; "Examen du Psautier des Capuchins," 12mo; and translations of Leslie's treatise against Deism, and Sterlock's Sermons. He reached the advanced age of ninety-seven, dying in the year 1783.—*Nouv. Dict. Hist. Saxii Onom.*

HOUBRAKEN (JACOB) an eminent engraver, the son of Arnold Houbraken, a Dutch artist, who visited England to make engravings from the works of Vandyke, to add to a collection which he published of the productions of the Dutch and Flemish painters, in 5 vols, folio. He died in Holland in 1719. Jacob, who was a native of Amsterdam, spent much of his life in England, where he was greatly distinguished as an engraver of portraits. His principal work is a series of "Heads of Illustrious Persons of Great Britain," engraved in conjunction with Vertue, and published with accounts of their lives, written by Dr Birch, 1752, 2 vols, folio, republished in 1813. Houbraken engraved many other portraits, and some historical subjects. He died at Amsterdam in 1780, aged eighty-two.—*Strutt. Braun.*

HOUGHARD (JOHN NICHOLAS) a French republican general. He was at first a private in a regiment of cavalry, then a lieutenant in the dragoons of Bourbon, and rapidly obtaining promotion at the commencement of the political disturbances, he was in 1792 made colonel of a regiment of chasseurs. Employed in that capacity in the army of Custines, he displayed great intrepidity before Spire; near Giessen, where he defeated a body of Hessians; and on several occasions against the Prussians. In the beginning of May 1793, he was appointed to succeed Custines in the command of the

army of the Rhine, but he very speedily quitted it for the army of the Moselle, whence in August he removed to that of the North, where he again superseded Custines, who was accused of treason. In this station he displayed boldness and activity rather than great military talents. He was however very successful, having overthrown the allies before Dunkirk on the 6th and 7th of September, and beat the English again the following day at Hondscooten, making himself master of Furnes, Menin, and many other positions. All his success could not save him from destruction. Being denounced by his colleague, general Hoche, he was arrested at Lille, the 24th of September, removed to Paris, and condemned to death as a conspirator against the republic. He suffered by the guillotine, November 15, 1793.—*Dict. des H. M. du 18me. S.*

HOUGH (JOHN) a spirited prelate of the church of England, celebrated for his prudent but courageous resistance to the arbitrary mandate of James II, for the illegal appointment of a president of Magdalen college, Oxford. He was the son of John Hough, a citizen of London, descended from the Houghs of Cleshire, and was born in Middlesex in 1650. He received his education at the free-school of Birmingham, whence he was removed to Magdalen college, Oxford, of which he became a fellow in 1675. In 1676 he entered into orders, and in 1681 was appointed domestic chaplain to the duke of Ormond, then lord-lieutenant of Ireland, in whose suite he passed over to Dublin. The next year he returned with the same nobleman to England; and in 1685 was made a prebendary of Westminster, and presented to the living of Tempsford, in Bedfordshire. He graduated B.D. in 1687, and immediately after made his memorable stand against the arbitrary attempt of James to impose an unqualified president upon his college. By his example the fellows were encouraged to reject the mandamus of the king in favour of one Anthony Farmer, who had not been fellow either of Magdalen or of New College, as required by the statutes, and who was otherwise of very indifferent character. He proceeded farther, and as a statutory majority concurred in electing him president, he had the spirit to accept the office in defiance of the royal order. His election was regularly confirmed by the bishop of Winchester, visitor of the college, and in the same year he was admitted D.D. This bold step was the commencement of that clerical resistance to the tyrannical proceedings of James, which materially contributed to bring about the revolution; nor was the latter slow in showing his indignation. On the day after Dr Hough had taken his degree of doctor, the king's ecclesiastical commissioners deprived him of the presidency, and installed Dr Parker, made bishop of Oxford, (although a catholic), by proxy, in his room. At the same time, the fellows, who refused to sign a submission to their new president, to the number of twenty-five, with Dr Hough, were immediately expelled the college, and declared incapable of being ad-

mitted to any ecclesiastical dignity or benefice whatever. The following year, however, when the prince of Orange's declaration reached England, James found it necessary to retract all these illegal proceedings, in his encounter with which Dr Hough had behaved with equal temper, prudence, and dignity, and to restore that courageous divine and the ejected fellows to their collegiate rights and privileges. Soon after the revolution, in April 1690, Dr Hough was made bishop of Oxford. In 1699 he was translated to the see of Lichfield and Coventry, and lastly, in 1717, to that of Worcester, which he held for twenty-six years, although of the age of sixty-seven when he took possession of it. Owing to the excellence of his constitution, and the calm and even temperature of his mind, he reached to the great age of ninety-three, and possessed his faculties to the last, although quite exhausted. His death took place on the 8th of March, 1743. Dr Hough was a munificent benefactor both to Magdalen college and to his various sees, by expending liberally towards buildings, repairs, and improvements; and his private charities were proportionably extensive. The life of this respectable prelate was a few years ago given to the world in a splendid publication, by John Wilmot, esq. F.R.S. and S.A., in which biography many of his letters are preserved. Dr Hough published during his life-time eight occasional sermons only, and left strict orders that nothing should be printed from his MSS. on his decease.—*Life by Wilmot. Biog. Brit.*

HOULIERES (ANTOINETTE DE LA GARDE DES) a French poetess, was born at Paris in 1638. She was both beautiful and witty, and shone much in the time of Louis XIV. Her taste for poetry was cultivated by the celebrated poet Heuault, and she composed epigrams, odes, eclogues, tragedies; but succeeded best in the idyllium or pastoral. She died at Paris in 1694, and left a daughter of her own name, who had some talent for poetry, but inferior to that of her mother. The first verses which she composed gained the prize at the French academy, although, highly to her honour, if what is reported be true, Fontenelle wrote at the same time, and upon the same subject. She was a member of the academy of the Ricovrati of Padua, as was her mother, who was also of that of Arles. She died at Paris, in 1718. The works of these two ladies were collectively published in 1747, in 2 vols. 12mo. Several maxims of the elder of them are much cited by French writers.—*Moreri. Biog. Gallica.*

HOUSTON (WILLIAM) an able promoter of exotic botany. The particulars of his birth and early education are unknown, but after a voyage to the West Indies as a surgeon, he repaired to Leyden, and took his degree in physic under Boerhaave, in 1728-1729. While at Leyden, he instituted a set of experiments on brutes, some of which were made in concert with the celebrated Van Swieten. These were afterwards published in the Philosophical Transactions, under the title of "Experimenta de Perforatione Thoracis ejusque in

Respiratione effortibus" the result of which proved, contrary to previous persuasion, that animals can live and breathe for some time, although air be freely admitted in both cavities of the thorax. He was in 1732 elected a fellow of the Royal Society, and went immediately after to the West Indies, where he fell a sacrifice to the climate the following year. He had previously sent over to his friend Mr Miller, of Chelsea, the seeds of many rare and new plants, collected by him in the islands. His MS. catalogue of plants also reached the same gentleman, at whose death it fell into the hands of sir Joseph Banks, who published it under the title of "Reliquiæ Houstonianæ," 1781. 4to.—*Pulteney's Botan. Sketch.*

HOUTEVILLE (CLAUDE FRANCIS) a French ecclesiastic, chiefly known as the author of a celebrated treatise in favour of Christianity, was born at Paris about the year 1688. At the age of sixteen, he became a member of the Congregation of the Oratory, and distinguished himself by the diligence of his application, and for the manner in which he executed the different employments intrusted to him. Having quitted the Congregation, after a residence of eighteen years, he became secretary to cardinal Dubois, who in 1723 made him abbot of St Vincent du Bourg-sur-mer. In the same year he was admitted a member of the French academy, to which he was elected perpetual secretary in 1742, but died in a few months after, at the age of fifty-four. His principal work, which has been already alluded to, was first published in 1722, under the title of "La Vérité de la Religion Chrétienne prouvée par les Faits." This edition being debased by a gaudy and affected style, encountered much criticism, by which the author wisely profited, and having new cast the whole performance, he published a second and considerably enlarged edition in 1741, in 3 vols. 4to. It had extraordinary success on its first appearance, but its reputation has since much declined. The other works of the abbé Houteville are, a "Philosophical Essay on Providence," 1728. 12mo; "An Historical Eulogium on M. Bossuet, bishop of Meaux;" and several "Discourses," pronounced at the French academy.—*Moreri. Nouv. Dict. Hist.*

HOVEDEN (ROGER DE) an English historian, who flourished in the reign of Henry II. He was born at York, and entering the church, was for some time professor of theology at Oxford. He was also a lawyer, and he is said to have served the king in the capacity of chaplain, and in other confidential offices. After the death of Henry, he applied himself to the compilation of English history, and wrote annals in Latin, commencing at 731, the period at which Bede finished; and bringing down affairs to the third year of John, 1201. His style is defective, but he is highly esteemed for his diligence and fidelity, and according to Leland, surpasses all the writers of his class who preceded him. Vossius asserts that he is author of a history of the Northumbrian kings, and of a life of Thomas-à-

Becket. Such was his authority, that Edward I caused a diligent search to be made in all the libraries for copies of Hoveden's Annals, in order to ascertain the homage due from the crown of Scotland. This work was published in sir Henry Savile's "Collection of ancient English Historians," 1596—1604, folio.—*Leland de Script. Britan. Nicholson's Hist. Library.*

HOW (WILLIAM) the first English botanist who gave a sketch of what is called a "Flora," was born in London in 1619. He was educated at Merchant Tailors' school, entered St John's college in 1637, took his degree of M.A. in 1645, and began to study medicine. With many scholars of that time he entered the royal army, and was promoted to the rank of captain in a troop of horse. Upon the decline of the king's affairs, he prosecuted his studies in physic, and began to practise. He died in September 1656, leaving behind him, as Wood says, "a choice library of books of his faculty, and the character of a noted herbalist." The work to which we have alluded was entitled, "*Phytologia Britannica, Natales exhibens indigenarum Stirpium sponte emergentium*," Lond. 1650, 12mo. It is a copious catalogue for that time, but there are many articles in it which have no title to a place as indigenous plants of England.—*Chalmers' Biog. Diet.*

HOWARD (THOMAS) duke of Norfolk, an eminent statesman and warrior in the reign of Henry VIII. He was born about 1473, and was grandson of the first duke of the Howard family, who lost his life at the battle of Bosworth, fighting for Richard III. His father, who was also in arms on that occasion, was restored by Henry VII to his title and estates, which he had forfeited. The son was made a knight of the garter soon after the accession of Henry VIII, and he obtained early distinction by his talents, both as a naval and military commander. He assisted in the capture of the Scottish freebooter sir Andrew Barton, in 1511; and when his brother, sir Edward Howard, was killed in an engagement with the French off Brest, in 1513, he succeeded him as high-admiral of England. The same year he commanded, with his father, at the battle of Flodden, in which James IV, king of Scotland, was totally defeated and slain. For their services on this occasion the father was made duke of Norfolk, and the son earl of Surrey. The latter was sent to Ireland as lord-lieutenant, in 1521, where he suppressed a dangerous insurrection under O'Neal. He next made a successful expedition to the coasts of France: and in 1523 he was appointed lord treasurer, and soon after headed an inroad into Scotland, when he burnt the town of Jedburgh. His father dying in 1524, he succeeded to the dukedom. He was afterwards a leading member of the king's council, and was considered as the head of the Roman Catholic party, though he acted with so much prudence as to retain the favour of his capricious sovereign till near the close of his long reign. In 1536 he was employed against the

Catholic insurgents in the north of England; and in 1542 against the Scots. In 1544 he went to France with the king, in an hostile expedition, and commanded at the siege of Montreuil. All his services could not secure him from the suspicious jealousy of Henry, who on slight grounds had condemned him to suffer the death of a traitor on the 29th of January 1547. The king's death the preceding night procured him a respite; but he was detained a prisoner in the Tower during the reign of Edward VI. He was released and reinstated in his rank and property on the accession of queen Mary; and he sat as high steward on the trial of the duke of Northumberland. He closed his long life in peace, at Kenning-hall, Norfolk, in August 1554.—*Collins's Peerage. Aikin.*

HOWARD (HENRY) earl of Surrey, eldest son of the preceding, an accomplished nobleman, and the best English poet of his age. His birth is dated by some writers in 1515, and by others in 1520. While a youth he resided at Windsor, as companion to the duke of Richmond, natural son of Henry VIII, whom he accompanied to cardinal Wolsey's college at Oxford, now Christchurch, where he studied polite literature with great success. He then made the tour of Europe; and after remaining some time at Paris, where the duke of Richmond died, he went to Germany, and thence to Florence. In that city he signalized his courage and romantic spirit by publishing, in the style of a knight-errant, a challenge to all comers, Christians, Jews, Saracens, Turks, or Cannibals, in defence of the surpassing beauty of his mistress, the fair Geraldine; and he was victorious in the tournament instituted by the grand duke on the occasion. The lady who was the subject of lord Surrey's chivalrous defiance is supposed by lord Orford, with great probability, to have been lady Elizabeth Fitzgerald, daughter to the earl of Kildare, afterwards married to Edward Clinton, earl of Lincoln. Whoever the peerless beauty may have been, Surrey proposed to maintain her superiority in all the principal Italian cities, but he was prevented by the royal mandate, requiring his speedy return to England. In 1540 he greatly distinguished himself at a tournament, held before the court at Westminster; and not long after he was honoured with the order of the garter. In 1542 he served under his father as lieutenant-general of the army sent against Scotland; and in 1544 he accompanied the troops with which the king invaded France, and was field-marshal of the army before Boulogne. On the surrender of that place in 1546, he was made captain-general and commander of the garrison left for its defence; but the same year, being defeated by the French in an attempt to intercept a convoy, he was superseded in his command by Seymour, earl of Hertford. On his return to England, conscious of his former services, and smarting under what he conceived to be unmerited disgrace, he dropped some reflections on the king and council, which being reported to his majesty by the earl's enemies, proved the cause of his ruin.

He had quartered in his escutcheon the royal arms of Edward the Confessor, to which he had an hereditary right; and being a widower, he is said to have aspired to the hand of the princess Mary. On these and other charges of a more frivolous nature he was, together with his father, committed to the Tower, in December 1546; and on the 13th of January following, Surrey was tried at Guildhall, before a common jury, by whom he was obsequiously found guilty of high treason, notwithstanding he made an eloquent and skilful defence. Six days after, he suffered the sentence of the law, by decapitation, on Tower-hill, and his body, which was first interred in the church of All-hallows, Barking, near the Tower, was, in the reign of James I., removed to Farmingham, in Suffolk. By his wife, Frances, the daughter of the earl of Oxford, he left two sons and three daughters. Few individuals have been more generally applauded than the earl of Surrey. Dr Heylin, in his Church History, says, "He was beheld in general by the English as the chief ornament of the nation, highly esteemed for his chivalry, his affability, his learning, and whatsoever other graces might either make him amiable in the eyes of the people, or formidable in the sight of a jealous, impotent, and wayward prince." Lord Orford, in reference to this nobleman, observes, "We now emerge from the twilight of learning to an almost classic author, that ornament of a boisterous, but not unpolished court, the earl of Surrey, celebrated by Drayton, Dryden, Fenton, Pope, illustrated by his own muse, and lamented for his unhappy death: a man, as sir Walter Raleigh says, no less valiant than learned, and of excellent hopes." Leland calls him the conscript, enrolled heir of sir Thomas Wyatt the elder, in his learning and other excellent qualities; and Puttenham, in his Art of English Poetry, says, that the earl of Surrey and sir Thomas Wyatt may be justly called the reformers of our poetry and style. His works consist of "Songs and Sonnets," in a collection published in London in 1557, of which there were several reprints in the 16th century; the second and fourth books of Virgil's *Æneis*, translated into blank verse, London, 1557, 12mo; a translation of Ecclesiastes, and some of the Psalms; Satires on the Citizens of London: a translation from Boccaccio; and some smaller pieces. The entire works of Henry Howard, earl of Surrey, and those of sir Thomas Wyatt, were published, with notes and memoirs, by Dr Nott, 2 vols, 4to, 1816.—*Cat. of Royal and Noble Authors. Warton's Hist. of Eng. Poetry. Berkenhout's Biog. Lit. Aikin's G. Biog.*

HOWARD (HENRY) earl of Northampton, second son of the foregoing, a man of talent and learning, but destitute of principle, both as a politician and in private life. He was born in Norfolk, about 1539; and, according to Wood, he received his education at Oxford, where he took the degree of M.A. After leaving the university, he travelled on the continent: and on his return to England, in the reign of queen Elizabeth, he became a

courtier, and, with a view to promotion, addressed the grossest flattery to the reigning favourite, the earl of Essex. After the fall of that nobleman, he attached himself to Robert Cecil, and was employed by that minister to conduct his secret correspondence with the king of Scotland; on whose accession Howard was made a privy councillor, warden of the cinque ports, and constable of Dover castle. Soon after, he was created baron Howard of Marnhill, and earl of Northampton. He was likewise appointed one of the commissioners for executing the office of earl-marshal, or the trial of the gunpowder-treason conspirators; in 1605 he was installed knight of the garter; and in 1608 he obtained the office of lord privy seal. Such was the baseness of his sycoplancy, that he condescended to become the pander of his infamous kinswoman, lady Francis Howard, in her intrigue with Car, earl of Somerset, the favourite of James I., and he was also implicated in the murder of sir Thomas Overbury. His death, in 1614, prevented his conduct from becoming the subject of legal investigation. Lord Northampton was the author of "A Defensative against the Poyson of supposed Prophecies; not hitherto confuted by the Pen of any Man, which being grounded upon the warrant and authority of old painted Bookes, Invocations of damned Spirits, &c. have been causes of great disorder in the Common-wealth," London, 1583, reprinted in 1620. He wrote other tracts which have never been published. This nobleman built Northumberland-house, in the Strand, on the site of a convent; and he was the founder of three almshouses.—*Walpole's Noble Authors. Wood's Athen. Oxon. Berkenhout.*

HOWARD (CHARLES) earl of Nottingham, a distinguished naval commander in the reign of queen Elizabeth. He was the son of William lord Howard of Effingham, and grandson of the second duke of Norfolk. He was born in 1536, and while a youth, served in several expeditions under his father, who was lord high admiral. In 1559 he went on an embassy to France, and he subsequently acted as general of the horse, in the army sent against the rebel earls of Northumberland and Westmoreland. He made an ostentatious display of his lofty spirit as a British admiral, when commanding a small fleet in the English channel, at the time that the princess Anne of Austria was proceeding to Spain with a convoy of 150 sail. "He environed their fleet," says Hakluyt, "in a most strange and warlike sort, and enforced them to stoop gallant, and vaile their bonnets for the queen of England," before he joined the convoy. In 1573 he succeeded to his father's title and to the office of lord chamberlain, and was made a knight of the garter. But the principal occasion on which this nobleman signalized himself was in the defeat of the famous Spanish armada, in 1588, when he was commander-in-chief of the English fleet. In 1596 he had the command of the naval force sent against Cadiz, while the earl of Essex led the military branch of the expedition. The following year he was

created earl of Nottingham, and also made chief justice in eyre, south of the Trent. His latest public service of importance in Elizabeth's reign was the suppression of the ill-concerted rebellion of the unfortunate earl of Essex, whom he took into custody. James I continued him in his employments, and availed himself of his services in an embassy to Spain, and on other occasions. He died in 1624, and was buried at Ryegate in Surrey.—*Fuller's Worthies. Biog. Brit. Campbell's Lives of Admirals.*

HOWARD (sir ROBERT) an English poet and historian, of the same family with the preceding, being a younger son of Thomas Howard, earl of Berkshire. He was born in 1626, and was educated at Cambridge. Having been a royalist during the civil war, he was knighted on the restoration of Charles II, and appointed auditor of the exchequer. He promoted the revolution of 1688, and after that event distinguished himself by his opposition to the nonjurors. He died in 1698. The works of sir Robert Howard consist of poems; two comedies and three tragedies; a translation of the fourth book of the *Æneis*; another of the *Thebais* of Statius; the *History of Edward II and Richard II*; and the *History of Religion*.—*Cibber's Lives of the Poets. Biog. Dram.*—HOWARD (EDWARD) another poet of the Norfolk family, who was contemporary with the foregoing, and has been commemorated as an unsuccessful dramatist. He seems to have served as a butt for the wits and satirists in the beginning of the last century; and his writings afforded abundant room for animadversion. From his play, called "The British Princes," the following lines have been given as a quotation, exemplifying the height of bombastic absurdity:

"A painted vest prince Voltiger had on,
Which from a naked Piet his grandsire won."

The blunder in this couplet, however, belongs not to the author, but to the critic, who disingenuously altered the original to render the poet ridiculous, and make a display of wit at his expense.—*Biog. Dram.*

HOWARD (THOMAS) earl of Arundel, an English nobleman, whose tasteful and efficient patronage of the fine arts has associated his title with some of the most celebrated relics of classical antiquity. Lord Arundel was earl marshal in the early part of the reign of Charles I, and was employed in several foreign embassies by that prince and his father. He sent agents into Greece and Italy to collect for him, at a vast expense, whatever was curious and valuable of the works of ancient artists, which had escaped destruction. His unrivalled museum of antiquities was divided at his death. He bequeathed his personal property to his eldest and second surviving sons, Henry Frederick lord Maltravers, and William, afterwards viscount Stafford. Henry, second son of the former, and sixth duke of Norfolk, about the year 1668, presented to the university of Oxford a considerable part of his moiety, including the celebrated *Pariau Chronicle*,

which, with the other ancient inscribed stones accompanying it, have been termed the Arundelian marbles. At Oxford also, are part of the statues collected by lord Arundel, which were given by lady Pomfret, whose husband had purchased them. Of the remaining part of the Arundel collection, some curious relics are at Greystock castle, others at Wilton-house; the cameos and intaglios were in the possession of the duke of Marlborough; and there is a fine bronze head of Homer at the British Museum. Lord Arundel, interrupted in his peaceful pursuits by the dissensions which preceded the war between Charles I and the Parliament, retired to Italy in 1642; and died at Padua in 1646.—*Lodge's Portraits of Illustrious Personages of Great Britain. Grainger's Biog. Hist. of England, vol. ii.*

HOWARD (FREDERICK) earl of Carlisle, an accomplished nobleman of this distinguished family, was the eldest son of Henry, the fourth earl, by his second wife, Isabella, daughter of William, fourth lord Byron. He was born May 23, 1748, and succeeded to the family title and estates Sept. 3, 1753. He was sent at an early age to Eton, where he was the contemporary and friend of Fox, Hare, Storer, the late duke of Leinster, and other distinguished alumni of that seminary. Having completed his education in England, he set out on the grand tour, and while at Turin, in 1763, was invested with the order of the thistle, the king of Sardinia representing his Britannic majesty on the occasion. At the expiration of his minority he took his seat in the house of Peers, and was afterwards, from his acknowledged temper and moderation, selected as one of the commissioners dispatched in 1778 to America, with a view of healing the breach between the mother country and the revolted colonies. In 1780 he was appointed viceroy of Ireland, which office he retained for a period of two years, when the sudden dissolution of the Rockingham administration recalled him to his native country. From this period lord Carlisle continued in opposition till the breaking out of the French revolution, when he ranged himself on the side of ministers, and pursued a line of conduct which in 1793 was rewarded by the vacant blue ribbon. He continued till his decease to take a prominent part in the politics of the day, but his leisure hours were devoted to literary pursuits, the fruits of which appeared in various dramatic and other writings. Many of the juvenile compositions of lord Carlisle are to be found in "The Foundling Hospital for Wit," and the "Asylum." In 1773 he published a quarto volume, containing miscellaneous pieces, original and translated, among the latter of which was a version of the story of Ugolino, from Dante, which is said to have been purposely rendered into English, in order to assist sir Joshua Reynolds in the composition of the celebrated picture, in which he has so successfully embodied the horrible events of the narrative. In 1801 appeared a complete and elegant edition of the "Tragedies and Poems of Frederick, earl of Carlisle."

J. &c." from Bulmer's press, containing, among other dramatic effusions, the "Father's Revenge" and the "Stepmother," pieces which, though not altogether calculated for scenic exhibition, are deficient rather in mechanical than poetical requisites. The earl of Carlisle was a liberal patron of the fine arts, and had made a valuable collection of paintings at his seat, Castle Howard, where he died in his seventy-eighth year, Sept. 4, 1825. *Gent. Mag.*

HOWARD (JOHN) a celebrated philanthropist, who, if he had lived in ancient Greece or Rome, would probably have been honoured with hero-worship, as the genius of active benevolence. He was the only son of a person who had carried on the trades of upholsterer and carpet-warehouseman in London, but having acquired a handsome fortune, had retired from business, and resided either at Enfield or Hackney, about 1727, where the subject of this memoir was born. He was educated among the protestant dissenters, to which sect his family belonged, and to which he adhered throughout his future life; but his instructors appear to have confined their attention to moral and religious tuition, as his literary attainments were very slight, a circumstance which he had future cause to lament as an irreparable inconvenience. His father dying while he was young, he was bound apprentice to a wholesale grocer in the metropolis; but on the approach of his majority, he purchased the remaining term of his indentures, and indulged his taste by making a tour in France and Italy. Returning home in an ill state of health, he took lodgings at Stoke Newington; and on his recovery he married his landlady, an elderly widow, out of gratitude for her care in nursing him. She died in 1756, after they had been united about three years, when Mr Howard commenced a voyage to Lisbon, to view the effects of the recent earthquake, which had destroyed that city. This was during a war with France, and the vessel in which he embarked being captured, he was consigned to a French prison. The hardships he suffered and witnessed previously to his release first roused his attention to the subject of his future very important researches. When he reached England he was induced to lay before the commissioners of the sick and hurt office the information he had gained, and his communication was well received. In 1758 he married the daughter of Edward Leeds, esq. of Croxton, in Cambridgeshire, and settled on his estate at Cardington, in Bedfordshire, whence he subsequently removed to the neighbourhood of Lymington, in the New Forest. After a residence there of about four years he returned to Cardington, where he indulged the natural benevolence of his disposition in building cottages for the peasantry, establishing schools for gratuitous instruction, and other plans for the encouragement of industry among the lower orders. Horticulture at this time was his principal amusement; and he also made some experimental researches in natural philosophy, and

communicated them to the Royal Society, of which he was a member. In 1765 he had the misfortune to lose his wife, who died after giving birth to a son. His usual pursuits, and the early education of this child, engaged his attention till 1773, when he served the office of sheriff for the county of Bedford. In applying to the necessary duties of this station the subject of prison discipline came under his notice; and finding that many abuses existed in the management of gaols, he resolved to devote his time to the investigation of the means of correcting them. With this view he visited personally most of the English county gaols and houses of correction, and in March 1774 he laid the result of his inquiries before the house of Commons, for which he received a vote of thanks. Having now adopted an occupation suited to the energy of his mind and the resources of his fortune, he prosecuted it with the undeviating perseverance which insured his success, and raised him to a conspicuous station among the benefactors of the human race. In 1775 and 1776 he visited many of the continental prisons, as well as those of Scotland and Ireland; and the substance of his investigations appeared in a work he published in 1777, entitled, "The State of the Prisons in England and Wales; with Preliminary Observations, and an Account of some Foreign Prisons," 4to. In 1778 he repeated his visit to the continent, and extended his tour into Italy. After his return from this journey he made a fresh survey of the prisons throughout the British empire, to which he added, an examination of the public hospitals; and the result of his inquiries was communicated to the public in an "Appendix" to the former work, published in 1780, 4to. He now also accepted the office of a supervisor, under the act of parliament, for establishing penitentiary houses, on a plan which he had recommended. But Dr Fothergill, one of his two colleagues, dying, and some difference of opinion arising between him and the other supervisor, he soon resigned the situation. In 1781 and 1782 he made a tour through the northern parts of Europe, including Denmark, Sweden, Russia, and Poland; in 1783 he visited Spain and Portugal; and having again surveyed the prisons of this country, he printed in 1784 a second "Appendix," comprising the additional information he had obtained, and at the same time was published a complete edition of his State of the Prisons, with all the supplementary matter. A new subject now engaged his attention, namely, the management of lazarettos, and the means of preventing the communication of the plague and other contagious diseases. The enthusiasm by which he was actuated in his researches may be estimated from the fact, that in order to obtain accurate information, he went to Smyrna, when he knew that the plague prevailed there, for the purpose of proceeding to Venice, with a foul bill of health, that he might be subjected to all the regulations of quarantine in the lazaretto, and thus become experimentally acquainted with them. On his return home

through Vienna he was introduced to the emperor Joseph II, whose curiosity was excited by the fame of Howard's philanthropic investigations. At home some of his friends and admirers had projected the erection of a public statue, in honour of a man who had conferred such important benefits on society. But such a mark of respect from his fellow citizens was by no means the object of his ambition; and it appearing that the scheme was even disagreeable to his feelings, it was reluctantly abandoned by the undertakers. In 1789 he published "An Account of the principal Lazarettos in Europe, with various Papers relative to the Plague; together with farther Observations on some Foreign Prisons and Hospitals; with additional Remarks on the present State of those of Great Britain and Ireland," 4to. At the end of this work he announced an intention of revisiting Russia and European Turkey, and extending his travels into Asia. In pursuance of this plan he set off from London in the summer of 1789, and proceeded through Germany to Petersburg and Moscow. The greatest respect was everywhere paid to his exalted merit, and he seemed to be regarded as the general censor of the discipline and management of prisons and hospitals, which were thrown open for his inspection as a friendly monitor and public benefactor. But the termination of his career of philanthropic exertion now approached. He had taken up his residence at the town of Cherson, a Russian settlement on the Black Sea. A malignant fever prevailed there, and having been prompted by humanity to visit a patient labouring under the contagious disease, he received the infection and died in consequence, January 20, 1790. He was interred in the vicinity of Cherson, and every respect was shown to his memory by the Russian authorities. His death was considered not merely as a national, but as a general misfortune to the civilized world; and biographers and poets employed their talents in his praise. An Honour of an unprecedented nature was paid to him in England: his decease was announced in the London Gazette. A cenotaph has also been erected in St Paul's cathedral, exhibiting his statue in a Roman garb, executed by Bacon. The splendid eulogium pronounced on Howard by Edmund Burke, in his speech at Bristol, previously to the election, in 1780, must not be omitted: "I cannot," said the orator, "name this gentleman without remarking that his labours and writings have done much to open the eyes and hearts of mankind. He has visited all Europe—not to survey the sumptuousness of palaces, or the statelyness of temples; not to make accurate measurements of the remains of ancient grandeur, nor to form a scale of the curiosity of modern art; not to collect medals, or collate manuscripts; but to dive into the depths of dungeons; to plunge into the infection of hospitals; to survey the mansions of sorrow and pain; to take the gauge and dimensions of misery, depression, and contempt: to remember the forgotten, to attend to the neglected, to visit the forsaken

and to compare and collate the distresses of all men in all countries. His plan is original, and it is as full of genius as it is of humanity. It was a voyage of discovery; a circumnavigation of charity. Already the benefit of his labour is felt more or less in every country; I hope he will anticipate his final reward, by seeing all its effects fully realized in his own. He will receive, not by retail, but in gross, the reward of those who visit the prisoner; and he has so forestalled and monopolized this branch of charity, that there will be, I trust, little room to merit by such acts of benevolence hereafter."—*Aikin's Life of Howard. Memoirs of Howard, by J. Baldwin Brown, 4to. Dr Clarke's Travels, vol. i. Chalmers's Biog. Dict.*

HOWE (CHARLES) a member of a distinguished English family of that name. He was a native of Gloucestershire, born 1661, and during the latter part of Charles II's time, was much about the court. In the succeeding reign he accompanied the English ambassador, a relation of his own, on his mission to the emperor's court, and on the death of the principal of the embassy, continued to conduct the negotiations. Mr Howe, by the marriage of his daughter with Peter Bathurst, brother to the first earl of that title, became connected with that noble family, but being of a strong religious turn, at length forsook public life, and retired into the country, where he composed his celebrated "Devout Meditations," a work of which Dr Young speaks highly in his recommendatory letter. He died in 1745.—*Gen. Mag.* vol. lxxv.

HOWE (JOHN). There were two of this name; the first, an eminent nonconformist clergyman of the seventeenth century, was born in 1630, at Loughborough, in Leicestershire. He entered originally at Christ college, Cambridge, and took his bachelor's degree there, but afterwards removed on a Bible clerkship to Brazenose college in the sister university. This society he again quitted for a fellowship at Magdalen, where he graduated as AM. in 1652. Having obtained the living of Torrington, in Devonshire, from his college, he quitted it awhile to become domestic chaplain to Cromwell's household, in which situation he continued till the death of the protector, and acted afterwards in the same capacity to his son Richard, until the abdication of the latter, when he returned to his benefice. Refusing to comply with the provisions of the act of Uniformity he was ejected from his living, and went to Ireland, as chaplain in the family of lord Massarene, obtaining a licence to preach while in that country. In 1675 he officiated to a presbyterian congregation in London, and continued his ministry for nearly ten years, when he went to the Netherlands, and remained at Utrecht, till James II's proclamation of liberty of conscience once more brought him back to England in 1685. In that metropolis he remained till his death, which took place in 1705. He was the author of a work entitled "The Living Temple," which, together with his numerous other writ

tings, has been published by Dr Calamy, with a life of the author, in two folio volumes.—The second JOHN HOWE, was a near relation of Charles Howe, the subject of the preceding article, and was a statesman of great firmness, integrity, and weight, in the house of Commons. He was a member of the Convention parliament, and exerted himself strongly in favour of William III, but becoming afterwards disgusted with the measures of government, joined the opposition, and conducted the measures of his party with such ability, as well as warmth of expression, that he is said to have so far roused the anger of the sovereign as to have drawn from him a declaration, that if his own dignity had permitted he would have fought him. In the succeeding reign he was made a privy counsellor, paymaster of the forces, and vice-admiral of the county of Gloucester; but on the accession of George I, retired from public life, and was succeeded in the paymastership by Walpole. He published a few miscellaneous poems, and died in 1720. He was father to the first lord Chedworth.—*Nichols's Poems. Collins's Peerage.*

HOWE (JOSIAH) an English ecclesiastic of the seventeenth century, a native of Crenodon, Bucks. He received his education at Oxford, and obtained a fellowship at Trinity college, in that university, in 1637. Seven years afterwards he delivered a sermon there before Charles I, and thirty copies were printed in red letters, by command of the court, the favour of which was farther manifested towards him by his admission to the degree of bachelor in divinity, pursuant to royal command in 1646. The ruin of the royal cause proved as fatal to his pecuniary resources as to those of many of his brethren, and he was ejected by the parliamentary sequestrators from his fellowship; but surviving the restoration of monarchy, once more became possessed of his preferment, and died in the enjoyment of it in 1701. Several short poems of his are extant, especially those prefixed to the works of Beaumont and Fletcher, Randolph, Cartwright, &c.—*Athen. Ozon. Warton's Life of Sir T. Pope.*

HOWE (RICHARD, earl) a celebrated English admiral, one of the most distinguished naval commanders of modern times. He was the third son of Emanuel, second viscount Howe, and was born in 1725. After having received the rudiments of a liberal education at Eton, his strong predilection for the sea induced his father to place him at the age of fourteen, in quality of a midshipman, on board the Severn, in which ship he sailed with Anson for the Pacific, and continued going through the usual gradations of the service under that admiral till 1745, when, though only twenty years of age, he obtained the command of the Baltimore sloop of war. In this vessel he behaved with such gallantry in an action with two French ships, laden with supplies for the service of the pretender, whom he beat off with considerable loss, that his immediate promotion to the rank of post-captain was the consequence. In 1758 and the following year,

while in the *Magnanime*, under admiral sir E. Hawke, he distinguished himself by his exertions against the Isle of Aix, St Maloes, Cherbourg, &c. He was afterwards present at the unfortunate affair of St Cas, where he exposed his own person with great coolness, and by his courage and conduct succeeded in bringing off many of the wounded, who must otherwise have perished. The same year he took a prominent part in the fight with Conflans, and did much towards the victory of the day. His elder brother having been killed in America, in 1758, he succeeded to the family title and estates, but continued to follow his profession. In 1760 he was raised to the rank of colonel of marines, and three years afterwards he obtained a seat at the board of Admiralty, which situation he resigned in 1765, when he was made treasurer of the navy. In 1770 he sailed as commander-in-chief to the Mediterranean, with the rank of rear-admiral of the blue, from which step he proceeded in due gradation to those of rear-admiral of the white, and vice-admiral of the blue. On the breaking out of the war with France, lord Howe sailed for the coast of America, with a squadron destined to act against D'Estaing, who commanded the French force in that quarter, and on his return was raised in 1782 to an English earldom. In the course of the same year he again sailed with a small fleet to the relief of Gibraltar, which important service he effected in despite of the combined fleets of the enemy. In 1783 he accepted the post of first lord of the Admiralty, which, with a partial intermission, he continued to hold until 1793, when, on the breaking out of the revolutionary war, he took the command of the English fleet, and bringing the enemy to an action on the 1st of June 1794, he obtained over them a most complete and decisive victory. The arrival of the news of this welcome event excited the greatest sensation throughout the nation. Illuminations took place all over the kingdom, the thanks of both houses of Parliament were voted to the conquerors, and the king and queen visited the victorious fleet at Spithead, on its return, on which occasion the king conferred on earl Howe a valuable sword, with a gold chain and medal struck for the purpose. The rank of general of marines, and the vacant garter, both conferred on this successful commander in the course of the next year, were the consummation of his honours. In 1797 lord Howe exerted himself with great success to quell the mutiny among the seamen at Portsmouth, which was the last public act of his valuable and meritorious life. His death took place August 5, 1799. One daughter alone survived him, and the gratitude of the nation has honoured his memory by a monument, erected to him at the public expense in St Paul's cathedral.—*Collins's Peerage. Biog. Navalis.*

HOWEL the Good, or HYWEL DDA. a Cambrian prince, famous as a legislator in the tenth century. He was the son of Cadell, king of all Wales, and having succeeded to the crown, he in 926 went to Rome, ac-

compared by three bishops, to obtain information preparatory to the compilation of a code of laws for the Welsh. On the return of Howel and his attendants, a kind of national convention was assembled of the heads of tribes, and learned clergymen and laymen, by whose co-operation a collection of laws was prepared, founded on the laws of Dunwallo Molmutius, an ancient British sovereign; and this code was constitutionally established throughout the territories of Wales. Howel went again to Rome in 930, to procure the farther sanction of learned jurists for the confirmation of his laws, which were long held in great veneration among the inhabitants of Wales. These institutes are still extant, and may be found among the "Lleges Wallicæ ecclesiasticæ et civiles, Hoeli Boni et aliorum Walliæ Principum," published by Wotton, in 1730. "The laws and ordinances of Howel Dda," says Daines Barrington, "are the most regular of any extant, and have been wonderfully preserved, considering their antiquity; but though there are many provisions in them dictated by wisdom and sound policy, there are some which it is impossible to peruse without a smile, and others which should not be passed over without censure."—*Welsh Archaeology. Meyrick's Hist. of Cardiganshire.*

HOWEL (LAWRENCE) a nonjuring divine of the church of England, who was a sufferer for his zeal in the cause of intolerance. He was educated at Jesus college, Cambridge, where he graduated as M.A. in 1688. After having been a school-master at Epping, in Essex, he received ordination among the non-jurors, from the hands of Dr George Hickes, titular bishop of Thetford. He was a man of considerable learning, as appears from the works which he published, namely, "Synopsis Canonum SS. Apostolorum," Lond. 1708, folio; "Synopsis Canonum Ecclesiæ Latinæ," 1710, folio; "View of the Pontificate to 1563," 1712, 8vo; and "History of the Bible," with engravings, by Sturt, 1716, 3 vols. 8vo. But Mr Howel is chiefly memorable on account of his having had the imprudence to print, in 1716, a pamphlet, entitled "The Case of Schism in the Church of England." On account of the sentiments contained in this work he was tried at the Old Bailey, and being convicted of sedition, he was sentenced to be degraded from his clerical office, to pay a fine of 500*l.*, and to be twice whipped. The latter part of the sentence was remitted by the king, in consideration of the clerical character of the culprit; but the remainder of his doom was rigidly executed, as he was stripped of his gown in open court, and being unable to pay the fine, he was detained in Newgate prison till his death, which took place July 19, 1720. *Nichols's Lit. Anec. Noble's Cont. of Granger.*

HOWELL (JAMES) a popular writer of the seventeenth century. He was the son of a clergyman in Carmarthenshire, and was born about 1596. He received his education at Jesus college, Oxford, and in 1613 took the degree of B.A., but left the university without any other honours. Going to London he ob-

tained the patronage of his countryman, sir Robert Mansel, through whom he was appointed steward to a patent glass manufactory, which had been established in Broad-street, by a company of courtiers and men of rank. In 1619 he commenced a continental tour in the service of his employers; and, after visiting Holland, Flanders, France and Spain, he went to Italy, and at Venice engaged workmen skilled in the casting of plate glass, an article for which that city had long been famous. In 1621 he returned to England, and soon after was nominated to a fellowship at Jesus college. He then travelled as a companion to the son of baron Altham; and afterwards obtained the appointment of agent at the court of Madrid for the owners of a richly laden English ship, which had been taken by the Spaniards on a charge of contraband traffic. Political circumstances interrupted his negotiations, and he returned unsuccessful to England in 1624. After some solicitation he got the office of secretary to lord Scrope, then president of the North; and going to reside at York, in that capacity, he was chosen MP. for Richmond, in 1627. Three years after he went to Denmark, as secretary to the English ambassador, the earl of Leicester. His next patron was Wentworth, earl of Strafford, lord deputy of Ireland, whose misfortunes disappointed his hopes of promotion. In 1639 he published a poem, entitled "Dodona's Grove, or the Vocal Forest," which passed through several editions, and procured the author some reputation. It was followed by another loyal effusion, "The Vote," presented to the king on his birth-day. The office of clerk of the council was bestowed on him in 1640; but the rupture between the king and parliament prevented him from long retaining this post; for on his going to London on private business in 1643, he was arrested, and committed to the Fleet. There he remained till after the death of the king, supporting himself in his confinement by writing for the press. When Cromwell attained supreme power, Howel addressed to him a panegyric dedication; but on the restoration of Charles II he appeared in the character of a loyalist sufferer, and was gratified with the appointment of royal historiographer, being the first who held the office in this country. He continued to employ his pen till his death, which happened in 1666. Howel was a prolific writer, but his only works which require notice, are his "Epistolæ Hælianae; Familiar Letters, domestic and foreign, partly historical, partly political, and partly philosophical," first printed in 1645, of which there are many subsequent editions; "Londinopolis, or Perustration of the City of London," 1657, folio; and "Instructions for Foreign Travel," with a poetical parallel between Charles I. when prince of Wales, and Edward the Black Prince, 12mo.—*Biog. Brit. Granger. Aikin's Gen. Biog.*

HOWELL (WILLIAM) an English civilian, the author of some historical works of considerable merit. Little is known of his personal history, except that he was an Oxonian, be-

came chancellor of the diocese of Lincoln, and died in 1633. He published at London, in 1671, a work, entitled "Gul. Höeli, LL.D. Elementa Historiæ ab Orbe condito usque ad monarchiam Constantini Magni," 12mo, from the preface to which it appears that he had been tutor to Sheffield, lord Mulgrave, afterwards duke of Buckingham, to whom the book is dedicated. His other productions are, "A History of the World, from the earliest Times, to the Ruin of the Roman Empire," 1680, 3 vols. folio; and "Medulla Historiæ Anglicanæ," 8vo., an abridgement of English history, which has gone through several editions.—*Cooté's Lives of Civilians.*

HOZIER, the name of a French family, several of whose members were celebrated as heralds and genealogists in the seventeenth century.—PETER D'HOZIER, born in 1592, at Marseilles, was much esteemed both by Louis XIII. and Louis le Grand. The latter made him a judge of arms, certifier of tilts, &c. and a counsellor of state. Besides some curious genealogical tables, he was the author of a "History of Bretagne," in folio, and died in 1660.—His son, CHARLES, born 1640, succeeded him in his post of judge of arms, and was made a knight of St Maurice, by the duke of Savoy. He died in 1732, and was in his turn succeeded by a nephew, who compiled a Registry of the Nobility of France, in ten folio volumes, published under the title of "L'Armorial." His death took place in 1767.—*Moreri. Nouv. Dict. Hist.*

HUARTE (JOHN) a native of French Navarre, although often supposed a Spaniard, lived in the seventeenth century. He acquired considerable celebrity by a work in Spanish, entitled, "Examen de ingenios para las Ciencias, &c. ; or an examination of such geniuses as are born fit for acquiring the sciences, wherein by marvellous and useful secrets, drawn from true philosophy, both natural and divine, are shown the gifts and different abilities found in man, and for what kind of study the genius of every man is adapted, in such a manner, that whoever shall read this book attentively will discover the properties of his own genius, and be able to make choice of that science in which he will make the greatest improvement." This work has been translated into several languages, and has gone through many impressions. An English version is extant, by Carew and Bellamy, under the title of "The Tryal of Wits." This author, once so much extolled for acuteness and subtlety, has now very deservedly lost much of his reputation. Bayle, not himself very nice in such matters, remarks, that there are many things repugnant to modesty in this very curious production, as may be easily imagined, when it is added, that he pretends to teach the formalities to be observed by those who would beget children of a virtuous turn of mind. Huarte also deserves censure for publishing, as an authentic piece, a pretended letter of Lentulus, the pro consul, from Jerusalem, wherein a particular description is given of the person of Jesus Christ.—*Moreri.*

HUBALD, HUEBALD, or HUGBALD, a monk of Amand, in Flanders, who lived in the ninth and tenth centuries. He was author of a treatise on music, still subsisting, in the library of the king of France, under the title of "Enchiridion Musicæ." In this work there is a kind of gamut, or expedient for delineating the several sounds of the scale, in a way wholly different from his predecessors. The method of Guido, about a century after, superseded this, and every other invention of the kind; but this tract, rude as it is, shows that Guido did not do so much to improve his art as might have been imagined. Hubald was not only a musician, but a poet, and addressed three hundred verses, in praise of baldness, to the emperor Charles the Bald, in which he laboriously obliged the letter C to commence every word, as the initial of his patron's name and infirmity: as for instance—
"Carmina Clarisonæ Calvis Cautate Camœna."

Hubald died in 930, at the age of ninety.—*Moreri. Rees's Cyclop.*

HUBER (JOHN JAMES) an eminent anatomist, who was a native of Basil. After studying under Haller, at Berne, and also at Strasburgh, he returned to Basil, where he took the degree of doctor of medicine in 1733. He visited Paris in 1735, and the same year was appointed physician to the court of Baden Dourlach. He assisted Haller in his great work on the Plants of Switzerland, published in 1742. In 1738 he removed to Gottingen, to become dissector to Haller, through whose interest he was made professor of anatomy there in 1739. He became professor in the Caroline college, at Cassel, with the rank of court physician, in 1742; and in 1748, counsellor of state and body physician to the prince of Hesse. He was in 1741 elected a member of the Academia Curiosorum Naturæ; in 1750 the same honour was conferred on him by the Royal Society of London; and subsequently by the Medical Society of Basil, and by the Academy of Sciences at Berlin. His death took place in 1778. The principal objects of his investigations as an anatomist, were the spinal marrow, and other parts of the nervous system, on which he published a work, entitled "Commentatio de Medulla Spinali," Gotting. 1741, 4to. He also wrote on the influence of imagination in pregnant women, and other topics.—*Aikin's Gen. Biog.*

HUBER (MARY) a miscellaneous and philosophical writer of the eighteenth century, who was a native of Geneva. She professed the Protestant faith, but with a liberality of sentiment which exposed her to the imputation of infidelity. The following are the titles of her principal works: "Le Monde fou, préféfé au Monde sage," 1731-1744, 12mo; "Le Système des Théologiens, anciens et modernes, sur l'Etat des Ames séparées des Corps," 1731-1739, 12mo.; "Suite du même Ouvrage, servant de Reponse à M. Ruchat," 1733-1739, 12mo.; "Lettres sur la Religion essentielle à l'Homme," 1739-1754, 6 vols. 12mo.; and "Réduction du Spectacle An-

glois," 6 vols. 12mo., an abridged translation of the celebrated work of Steele and Addison. She died at Lyons, in France, in 1753, aged about fifty-six. *Nouv. Dict. Hist. Biog. Univ.*

HUBER (ULRIC) a Dutch civilian of eminence in the seventeenth century. He was born at Dockum, in Holland, in 1636, and after having received a learned education, he became professor of jurisprudence at Franeker. He was an indefatigable student, oftentimes continuing among his books from six o'clock in the morning till eight in the evening, with the exception of a single hour, during which he took his dinner. Among his works are, "Jurisprudentia Frisiaca;" "Prælectionum Juris Civilis tomus tres, sec. Institut. et Digesta Justiniani;" "De Jure Civitatis, Libri tres;" "Novam Juris publici universalis disciplinam continentes." He also wrote on history and other subjects. His death took place in 1694. His son, ZACHARIAS HUBER, was also a lawyer, and succeeded his father in his professional capacity. He was the author of a dissertation on the Pompeian law, among the Romans, relative to parricide; and some other juridical tracts. He died in 1732, aged sixty-two.—*Stollii Intro. in Hist. List. Nouv. Dict. Hist.*

HUBERT (MATTHEW) a learned and eloquent French divine, who flourished during the end of the seventeenth and the commencement of the succeeding century. He was born in 1640, and having entered into the church, became a priest of the oratory at Paris. His sermons, which are considered scarcely inferior to those of Bourdaloue, were published in six duodecimo volumes at Paris, eight years after his decease, which took place in 1717.—*Nouv. Dict. Hist.*

HUBNER (JOHN) a native of Torgau, in Saxony, who became rector of the school of Hamburg, and professor of geography at Leipsic. He made himself known by an elementary work on geography, of which thirty-six editions appeared during his life, and which was translated into most European languages. This sketch of geographical science served as the foundation for the elaborate productions of Busching, and other German writers, towards the close of the eighteenth century. Hubner published several other works on history and the branches of science connected with it, for the purposes of education, which became exceedingly popular. He died in 1731, at the age of sixty-two. *Nouv. Dict. Hist.*

HUDDART (JOSEPH) FRs. an eminent navigator and hydrographer. He was born in 1741, at Allenby, in Cumberland, and in the early part of his life he went to sea, and was employed in the herring fishery in the Firth of Forth, and afterwards in the Irish and West India trade. In 1773 he engaged in the service of the East India Company, in which he attained the rank of commander in 1778, but relinquished the situation in 1783, and retired to enjoy the fruits of his industry. Captain Huddart was distinguished as a nautical surveyor, both in the Indian seas and on our own coasts. He likewise obtained a patent for the

manufacture of cordage, for which purpose he erected machinery at Maryport. He was a director of the East India Company, and for many years held the situation of an elder brother of the Trinity-house. Besides several valuable charts, he published "A Sketch of the Straits of Gaspar, a passage between the Islands of Banca and Billeton," London, 1788, 8vo; and some important papers in the Philosophical Transactions. He died in 1816, at his residence at Highbury Terrace, near London.—*Biog. Dict. of Living Authors. - Month. Mag.*

HUDESFORD (WILLIAM) a naturalist and antiquary of the eighteenth century. He appears to have received his education at the university of Oxford, where he took the degree of doctor of divinity, and he held the office of keeper of the Ashmolean museum. He was also principal of Trinity college, and died October 11, 1772. His publications are, "Martini Listeri Historia sive Synopsis Conchyliorum, et Tabulæ Anatomicæ," edit. alt. Oxon. 1770, folio; and the "Lives of those eminent Antiquaries, Leland, Hearne, and Wood," 1772, 2 vols. 8vo.—HUDESFORD, MA. (GEORGE) a burlesque poet of the latter part of the last century, some of whose works attracted a good deal of notice, and displayed much originality of manner. They consist of "Topsy Turvy; anecdotes and observations illustrative of the leading characters of the present Government of France," London, 1790, 8vo; "Salmagundi; original poems," 1793, 8vo; "Poems, including Salmagundi, Topsy Turvy, Bubble and Squeak, and Cr:ndle Repetita," 1801, 2 vols. 8vo; "The Wiccanical Chaplet, a selection of original poetry, comprising smaller poems, serious and comic, &c." 1805, 8vo; "Les Champignons du Diable, or Imperial Mushrooms; a mock heroic poem, in five cantos; including a Conference between the Pope and the Devil, on his Holiness's Visit to Paris, illustrated with Notes," 1805, 12mo.—*Wat's Bibl. Brit.*

HUDDSON (HENRY). Of this distinguished English naval discoverer nothing of the parentage or education is known. The first fact recorded of him relates to his being fitted out, in the year 1607, by some London merchants, in a small vessel, for the purpose of exploring a north-east passage to China and Japan. He sailed on the 1st May with a crew of only ten men and a boy besides himself, and proceeding beyond the 80th degree of latitude, returned to England in September. In a second voyage the next year, he landed at Nova Zembla, but could proceed no farther eastward. He undertook, in 1609, a third voyage, under the patronage of the Dutch East India Company, but no material result ensued. His last voyage was undertaken in 1610, on which occasion he was fitted out by sir Thomas Smith, sir Dudley Digges, and others of his friends. He sailed on this occasion on the 17th April, in a bark named the Discovery, with a crew of twenty-three men, and came within sight of Greenland on the 4th of June. Proceeding westward he reached, in 60 degrees of latitude,

the strait bearing his name. Through this he advanced along the coast of Labrador, to which he gave the name of Nova Britannia, until it issued into the vast bay, which is also called after him. He resolved to winter in the most southern part of it, and the crew drew up the ship in a small creek, and endeavoured to sustain the severity of that dismal climate, in which attempt they endured extreme privations. Hudson however fitted up his shallop for farther discoveries, but not being able to establish any communication with the natives, or to revictual his ship, with tears in his eyes he distributed his little remaining bread to his men, and prepared to return. Having a dissatisfied and mutinous crew, he imprudently uttered some threats of setting some of them on shore, which menaces induced a body of them to enter his cabin at night, when they tied his arms behind him, and put him in his own shallop, at the west end of the straits, with his son, John Hudson, and seven of the most infirm of the crew. They then turned them adrift, when it is supposed that they all perished, as they were never more heard of. A small part of the crew, after enduring incredible hardships, arrived at Plymouth, in September 1611. Such was the melancholy end of this adventurous mariner.—*Biog. Brit.*

HUDSON (JOHN) a learned divine and philological writer of the early part of the last century. He was born in 1662, at Widehope, near Cockermouth, in Cumberland, and received his education at Queen's college, Oxford. In 1684 he took the degree of MA. and removing soon after to University college, he there obtained a fellowship in 1686. He was elected keeper of the Bodleian library in 1701, and the same year proceeded DD. In 1712 he was made principal of St Mary hall, through the interest chiefly of Dr Radcliffe. He distinguished himself as editor of several of the Greek and Roman classics, whose works he illustrated with his own notes, and those of preceding critics. His editions are e-steemed for their correctness and elegance, particularly "Thucydides," 1696, folio; "Geographicæ Veteris Scriptorum Græci minores," 1703-1712, 4 vols. 8vo; and "Josephi Opera," 1720, 2 vols. folio; the last was a posthumous publication. Dr Hudson, who, though in holy orders, never held any church preferment, died at St Mary hall, November 27, 1719. He enjoyed high reputation as a classical scholar, both at home and abroad, and held an extensive correspondence with several learned foreigners. Dr Hudson left an only daughter, the heiress of large property, who having imprudently contracted a species of matrimonial engagement with a clergyman, who paid his addresses to her, was afterwards regularly married to another person. Her first admirer instituted some proceedings, with a view to establish his claim as a husband to the lady and her fortune; and he published a pamphlet, from which it appeared that he had, without the presence of any third person, performed the marriage ceremony between Miss Hudson and himself; on which very irregular

BIOG. DICTION.—VOL. II.

act he grounded his pretensions. It is scarcely necessary to add, that his scheme proved abortive, and his appeal to the public procured him little advantage, as his own conduct was obviously more discreditably than that of any other of the parties in this strange affair.—*Biog. Brit. Gent. Mag. for 1734.*

HUDSON (WILLIAM) one of the first English botanists who adopted the Linnaean system. He was born in Westmoreland, about 1730, and served an apprenticeship to an apothecary in Westminster, to whose business he succeeded. His acquaintance with Mr Benjamin Stillingfleet, a naturalist of some eminence, induced him to study the writings of Linnaeus, and ultimately occasioned his becoming the author of the first classical work on English botany, published in 1762, under the title of "Flora Anglica," 8vo. He subsequently engaged in a correspondence with Linnaeus, Haller, and other naturalists, and extended his researches to insects, shells, and various subjects connected with British zoology. In 1761 he was chosen an FRS., and he was for many years botanical demonstrator to the apothecaries' company. In 1778 he published a new and much improved edition of his Flora, in two volumes. He had projected the publication of a "Fauna Britannica," on the plan of his other work, and had collected materials for the purpose, but the destruction of his house by fire, in 1783, prevented the execution of his undertaking. In 1791 he became a fellow of the Linnaean society, and attended its meetings as often as his health would allow. His death took place May 23, 1793, and he was interred in St James's church, Westminster.—*Rees's Cyclop.*

HUDSON (THOMAS) an eminent English artist, born at Exeter in Devonshire, in 1701. He studied portrait-painting under Richardson, whose daughter he married, and settled in London, where he speedily acquired great reputation in his profession. This however was at length eclipsed by the growing fame of his great pupil, sir Joshua Reynolds. Hudson died in 1779.—*Walpole's Anecdotes.*

HUERTA (VINCENT GARCIA DE LA) a Spanish poet and critic, and a member of the Spanish academy, was born at Zaire in Estremadura, about the year 1730. He acquired considerable fame among his countrymen for his poetical and critical talents, and was successful at least in one of his dramas, "La Raquel," a tragedy, which, to many stronger recommendations, added the merit of an avoidance of the anachronisms and irregularities which are so much objected to in the Spanish drama. He published a "Military Library," but his principal work is his "Teatro Espanol," Madrid, 1785, 17 vols. 4to, being a collection of the best Spanish plays, with prefaces, in which he endeavours to vindicate Spanish literature from the censures of Voltaire, Linguet, and others. According to lord Holland, he has not only failed in his design, but exposed the Spanish drama to still greater ridicule. He died towards the close of the last century.—*Lord Holland's Life of Lope de Vega.*

HUET (PETER DANIEL) a celebrated critic and classical scholar of the seventeenth and eighteenth centuries, who was a native of Caen in Normandy. He was born in 1630, and was the son of a gentleman of good family, who had abjured calvinism, and become a zealous catholic. Left an orphan in his infancy, Huet was brought up by an aunt, who placed him in the jesuit's college at Caen, for education. After gaining a general knowledge of literature, he went to Paris, where he indulged his passion for study by reading all the books he could procure, and cultivating the acquaintance of the most eminent scholars of his time. In 1652 he accompanied Bochart on a visit to the court of Christina, queen of Sweden, of which journey he wrote an amusing narrative in Latin verse. On his return to Caen he found that a literary academy had been instituted there during his absence, of which he was chosen a member. In 1661 he published a treatise on translation, in the form of a Latin dialogue, entitled, "De Interpretatione;" and in 1664 a collection of Greek and Latin poems. An edition of "Origen's Commentaries on the Scriptures" followed in 1667; nor did he neglect the lighter kinds of literature, for at the request of his townsman Segrais, he wrote a tract on the "Origin of Romances," which was prefixed to the *Zayde* of madame la Fayette. He was subsequently appointed preceptor to the dauphin, in conjunction with Bossuet. It was during the period he filled this office, that he wrote his defence of Christianity, published in 1679, under the title of "Demonstratio Evangelica," which he considered as his greatest work, but which is chiefly calculated to display the vast erudition and extensive reading of the author. At this time also he undertook, at the earnest recommendation of the duke de Montausier, governor to the dauphin, the plan of publishing all the Latin classics, with that ample furniture of illustration, which has made what are called the Delphin editions so well known, and generally esteemed throughout Europe. The plan was executed under the direction of Huet, in less than twenty years, to the extent of sixty-two volumes, Lucan being the only ancient Roman author of importance who was omitted, the freedom of his political principles rendering his works objectionable to the French despot Lewis XIV. Various jesuits and other learned persons were engaged by Huet as editors of the different classics; one alone, namely the "Astronomicum" of Manilius, was edited by himself. After the completion of his tutorship, having taken holy orders, he was made abbot of Aulnai, and subsequently nominated bishop of Soissons, which see he exchanged for that of Avranches. But after holding the episcopal office some time, he became so tired of the troublesome duties attached to it, that he abdicated the bishopric, contenting himself with the abbacy of Fontenai as a pecuniary succedaneum. In whatever station or place, his characteristic attachment to literature continued unabated, to the very evening of his long life, which closed at the house of the

jesuits, at Paris, January 26, 1721. Besides the works already mentioned, he wrote "Histoire du Commerce et de la Navigation des Anciens;" "Origines de Caen;" and memoirs of his own life in Latin, besides other pieces of less importance. A translation of the memoirs, with copious notes, was published in 1810, 2 vols. 8vo, by Dr John Aikin. — *Moreri. Nouv. Dict. Hist. Biog. Univ.*

HUGH CAPET, first king of France, of the third dynasty, was the son of Hugh, count of Paris, and duke of France and Burgundy, a potent nobleman, who in fact reigned under the name of king Lothaire. He died in 956, leaving his son Hugh, at the age of fifteen or sixteen, under the guardianship of Richard, duke of Normandy. At a proper age he repaired to the court of Lothaire, who left his son Louis V to his care. That weak prince dying soon after without issue, the vigour, ability, and great possessions of Hugh, induced the nobles to prefer him to the rightful heir of the blood of Charlemagne, Charles, duke of Lorraine, brother to Lothaire. He was accordingly proclaimed king at Noyen, in June 987, and obliged all who disputed his title to submit, making Charles of Lorraine and his consort prisoners in the recapture of Laon. He reigned with great policy, governing the people with much mildness, and allowing his potent vassals to weaken each other by mutual hostilities. He made Paris his chief residence, and the future seat of the monarchy. After a reign of ten years, he died in 997, leaving his son Robert sole king; and his posterity, saving the interval produced by the French revolution, have swayed the Gallic sceptre ever since. — *Moreri. Mod. Univ. Hist.*

HUGH, of Amiens, a learned French prelate in the twelfth century, was born at Amiens, educated at Laon, and became prior of Cluny. He was afterwards abbot of Reading, in England, which he quitted to become archbishop of Rouen, in his native country, over which see he presided with great repute, until his death in 1164. He was the author of "Three Books of Instruction," against the heretics of his day; of seven books of "Theological Dialogues;" and of an explication of the Apostle's Creed and the Lord's Prayer, the first of which pieces was published by d'Achery, at the end of the works of Guibert de Nogent, and the two latter by fathers Martenne and Durand, in the fifth volume of their "Thesaurus Anecdotorum," and in the ninth of their "Veterum Scriptorum Collectio." — *Moreri. Dupin.*

HUGH DE CLUNY, a Romish saint was born in Burgundy in 1023. He embraced the monastic life at Cluny, where he became prior, and at last chief of his order, which he greatly reformed and extended. He died in 1108, leaving behind him some epistles, which are still extant. — *Dupin.*

HUGH DE FLAVIGNY, a monk of Verden, afterwards abbot of Flavigny, and an esteemed historian, was born in 1065. He was descended from a noble family, and enter-

ing young into the monastic life, attained his abbacy in his thirty-second year. He however lost it again in less than two years, in consequence of a dispute with his diocesan, and remained despoiled of his dignity until 1111, when he was appointed to the abbey of Vannes. The time of his death is unknown. This abbot was the author of "Chronicon Verdunense," in two parts; the first containing an ecclesiastical history from the birth of Christ, until the close of the tenth century, and the second a continuation of the same until 1102. The first is trifling and erroneous, but the last contains much information of the ecclesiastical affairs of France in the eleventh century. It was withdrawn from obscurity by father l'Abbé, and printed in the first volume of his "Bibliotheca nova Manuscriptorum."—*Cave. Dupin. Moreri.*

HUGH DE FLEURY was a learned French monk, who flourished about the year 1120. He embraced the ecclesiastical life in the abbey of Fleury, and rendered himself celebrated by his writings, which are held in much esteem. He is the author of "Chronicon Libris VI ad Ivonem Carnotensem," commencing with the reign of the Assyrian Ninus, and terminating with the death of the emperor Louis the Pious, in the year 840. It is inserted entire in the "Bibliotheca Cæsarea," and partly in the "Scriptor. de Rebus Franc." of Duchesne, which likewise contains another short but well digested chronicle, from the beginning of the world to the reign of the same Louis. Hugh was also the author of "Lib. II de Regia potestate, et sacerdotali Dignitate, ad Henricum Angliæ Regem," inserted by Baluze in the fourth volume of his "Miscellanea." This last production is much esteemed by catholic writers, as exhibiting an accurate representation of the doctrine of the church, before it was obscured by the disputes between the popes and the emperors.—*Cave. Dupin. Moreri.*

HUGH DE ST. CHER, or HUGO DE SANCTO CARO, a French cardinal of the thirteenth century, distinguished as a scripture commentator. He studied at Paris, and in 1225 he entered to the order of Dominican friars, of which he became provincial. He was subsequently created a doctor of the Sorbonne; and was employed by pope Gregory IX on a mission to Constantinople, for the vain purpose of effecting an union between the Greek and Latin churches. After his return he was again elected provincial of the Dominicans, and in 1245 he was created a cardinal, under the title of St Sabina, by pope Innocent IV, who, as well as the succeeding pontiff, Alexander IV, employed him in several important and delicate negotiations. He died at Orvieto, in 1263. Besides his commentaries, he compiled a concordance of the Bible, printed at Cologne in 1634; and he left a copy of the Bible, with various readings from ancient Latin, Greek, and Hebrew MSS.—*Cave's Hist. Lit. Aikin's G. Biog.*

HUGH DE ST. VICTOR, a learned divine of the twelfth century. He was a native of Flanders, and at the age of eighteen he

entered into the order of the canons of St Augustine, at the monastery of St Victor, in the city of Paris. He subsequently rose to the office of prior; and in 1130 he was appointed professor of theology, when he obtained great reputation, and was termed a *second Augustine*, and sometimes the *tongue of St Augustine*, from his adherence to the doctrine and imitation of the style of that Christian father. He died in 1140. His works, consisting of commentaries on Scripture, sermons, dialogues, &c. were published in three volumes folio, at Paris, in 1526, and subsequently at Venice and elsewhere.—*Trithemius. Dupin. Moreri.*

HUGHES (JOHN) an English poet and dramatist, was born in 1677, at Marlborough in Wiltshire, of which county his mother was a native, his father being a respectable citizen of London. He was educated at a dissenting academy, under the care of Mr Thomas Rowe, where he was a fellow student with Dr Watts. He early imbibed a taste for poetry, music, and drawing, which did not however render him averse to business. He had a situation under the Board of Ordnance, and was secretary to several commissions under the great seal, for the purchase of lands for the dock yards of Portsmouth, Chatham, and Harwich. The first specimen he gave of his poetic vein, was a poem on the peace of Ryswick, which he followed up by several others on temporary occasions, and in the mean time became the companion of Addison, Pope, Congreve, Southern, Rowe, and other wits of the day. His views were not however very promising, until in 1717 lord chancellor Cowper made him secretary to the commissions of the peace. He had now affluence, but his health became precarious, and in this condition he composed his well known "Siege of Damascus," a tragedy, his last and best work, which was first performed on the day of his death, February 17, 1720. He was much lamented, and Steele devoted an essay to his memory in the paper called the Theatre, and he appears to have been equally regarded by Pope. In 1735 a complete collection of his poems and dramatic pieces was published, in 2 vols. 12mo, by his brother-in-law, Mr Duncombe. Also, subsequently to his death appeared his literary correspondence, in 3 vols. 12mo. He was likewise the author of several works in prose, with many Tatlers, Spectators, and Guardians, and translated Fontenelle's dialogues, and the abbé Vertot's history of the revolution in Portugal, &c. Lastly, in 1715, he published an accurate edition of the works of Spenser. The genius of Hughes cannot be estimated above mediocrity, and at present the siege of Damascus chiefly supports his name.—JABEZ HUGHES, younger brother of the above, and like him a votary of the muses, and an excellent scholar, was born in 1685. He published in 1714, a translation of "The Rape of Proserpine," from Claudian, and the story of "Sextus and Erictho," from the Pharsalia. He also translated Suetonius's lives of the Cæsars, and novels from the Spanish of Cervantes. He died

in 1731. A posthumous volume of his miscellanies, in prose and verse, appeared in 1737.—*Biog. Brit. Anderson's Lives of the Poets.*

HUGHES (GRIFFITH) an English naturalist, who was minister of Lacy's parish, in the island of Barbadoes, in the West Indies. In 1749 he circulated proposals for publishing the natural history of Barbadoes, where he had then been a resident twelve years. He was a fellow of the Royal Society, and appears to have been highly esteemed for his talents by Dr Stephen Hales, and other men of science in England. The work appeared in 1750, in a folio volume, in ten books, with twenty-four engravings; and it was republished, with a larger number of plates, in 1760. This production contains the most ample account of the curious zoophytes, called animal flowers, which grow on the rocks by the sea side, at Barbadoes. Mr Hughes also published a paper in the philosophical transactions, on the same subject.—*Clement les Cinq Ann. Litt. Watt's B. B.*

HUGO (CHARLES LOUIS) a learned prelate of the Romish church, who flourished during the early part of the last century. He was originally a canon of the Premonstratenses, of which order he published a history in two folio volumes. He afterwards obtained the abbey of Etival, and became titular bishop of Ptolemais. His other works are, "A Life of St Norbert," the founder of his order, printed in quarto, 1704; "Historical and Critical Memoirs of the House of Lorraine," 8vo, 1711, which work incurring the censure of the parliament of Paris, he afterwards defended it in an able and spirited essay. He also published a learned treatise entitled, "Sacrae Antiquitatis Monumenta Historica, Dogmatica, Diplomatica," in two folio volumes, 1725. His death took place in 1735.—*Nouv. Dict. Hist.*

HULDRICH (JOHN JAMES) a Swiss divine, born in 1683 at Zurich, in which university he became afterwards the law-professor. For his appointment to this chair he was principally indebted to the reputation which he acquired by his refutation of a work by a Jewish rabbi, directed against the Christian religion, and entitled, "Sepher Toledot Jesuho," or "The History of the crucified Jesus." This treatise Huldreich reprinted at Leyden in 1706, with his own reply annexed. He was also the author of a commentary on Puffendorf upon the duty of men and citizens; and of three octavo volumes, entitled, "Miscellanea Tigurina," as well as of several sermons. His death took place in 1731, at his native city.—*Nouv. Dict. Hist.*

HULL (THOMAS) a veteran actor of the Garrick school, with whom he was contemporary, and who lived to be the father of the stage. He was born in 1728, at Westminster, and received the rudiments of a liberal education at the Charter-house. On his removal from that seminary, his father, a medical man, residing in the Strand, apprenticed him to himself, with a view to his eventually succeeding him in his practice. He had however

early imbibed a strong predilection for the works of Shakspeare, which at length induced him to quit the study of pharmacy for the boards. Though always a judicious performer and a good speaker, he never rose to any great eminence in his profession, playing for the most part second and even third-rate characters; but as an author he was more successful. The work by which he is most advantageously known, is a poem still deservedly popular, entitled "Richard Plantageuet," containing the legendary history of an illegitimate son of Richard the Third, who, after the ruin of the White Rose party, found an asylum at Eastwell park, Kent, where he worked many years in the capacity of a bricklayer, and where the remains of his habitation are yet to be seen. Mr Hull's other works are, "Henry the Second, or the Fall of Rosamond," a tragedy, in which the beautiful Mrs Hartley personated the heroine. Two volumes of metrical tales; "Letters from a Gentleman to a young Lady;" "Select Letters between the Duchess of Somerset, Sheshstone the Poet, and others;" and "Sir William Harrington," a novel, in 4 vols. It survived till the year 1808.—*Biog. Dram.*

HULME (NATHANIEL) an ingenious physician, who was a native of Yorkshire. He served an apprenticeship to an apothecary, and was afterwards a surgeon in the navy. On the peace of 1763 taking place, he became a student of medicine at Edinburgh, where he graduated as MD. in 1765. His inaugural thesis was entitled, "Dissertatio Medica de Scorbuto." He settled in practice in London; and at first devoted his attention chiefly to midwifery; but in 1775 he was, through the influence of lord Sandwich, then first lord of the admiralty, elected physician to the Charter-house, which situation he retained till his death, in April, 1807, at the age of seventy-five. He was a fellow of the Royal and Antiquarian Societies; and in 1800 he published, in the Philosophical Transactions, an account of a series of experiments on the light spontaneously emitted from various bodies. Some other papers, and several other medical tracts, also proceeded from his pen. Among the latter are a treatise on puerperal fever, and another on the stone and scurvy, which were translated into German, and published at Leipzig and Vienna.—*Rees's Cyclop.*

HUME (DAVID) an eminent historian and philosopher, was born at Edinburgh, in 1711. His father was a descendant of the family of the earl of Home, but not opulent, and the subject of this article being his youngest son, his fortune was very small. Losing his father in his infancy, he was brought up under the care of his mother, a woman of singular merit, and was destined by his family for the law; but his passion for literature was so strong, he could not confine himself to professional studies, and, as he observes in his memoirs, while they fancied him to be poring over Voet and Vinnius, he was occupied with Cicero and Virgil. His slender patrimony however, not allowing him to follow his incli-

nations without some view of profit, he was induced, in 1734, to visit Bristol, with recommendations to some eminent merchants; but, as might have been expected, he was as little disposed to commerce as to law, and resolved to retire to some provincial town of France, with the intention of prosecuting his literary pursuits in privacy, and of supplying, by economy, his pecuniary deficiencies. He resided first at Rheims, and afterwards at La Fleche, in Anjou, and passed three years in France in a manner very accordant with his own inclinations. In 1737 he came to London, and the next year published his "Treatise upon Human Nature," the cool reception, or rather entire neglect of which, proved a severe mortification. Being of a sanguine temperament, he was not altogether discouraged, but pursued his studies, and in 1742 printed at Edinburgh his "Essays moral, political, and literary," which work, owing to its more popular form and elegance of style, was very favourably received, and made some amends for his former disappointment. In 1745 he took up his residence with the young marquis of Aunandale, to whom he acted as a sort of guardian, an office which was rendered necessary by that nobleman's health and state of mind. He remained in this situation for a year, and then stood candidate for the professorship of moral philosophy at Edinburgh; but although strongly supported, he was excluded by the negative of the presbytery, in consequence of his known scepticism. In 1746 he accompanied general Sinclair, as his secretary, in an expedition designed against Canada, but which ended in an attack upon the French coast; and in 1747, attended the same officer in a military embassy to the courts of Vienna and Turin. Here he increased both his knowledge of the world by good company, and his little fortune by frugality, accumulating the handsome sum, as it then appeared to him, of 1000*l*. Having been led to imagine, that the neglect of his "Treatise upon Human Nature" originated from its too dry and systematic form, he cast the first part of the work anew, and caused it to be published, while he was abroad, with the title of, an "Inquiry concerning the Human Understanding." It, however, attracted very little more notice than at first, and on his return, the author retired to Scotland, where he resided two years. Meantime all his writings, except the first, began to attract notice, and answers, the usual concomitants of new opinions, when ably supported, were occasionally making their appearance. Of a cool temper, and careless of obtaining converts, he made it a rule to reply to none of these strictures, a resolution which he subsequently pleaded, when called upon to notice the answer of Dr Campbell to his "Essay on Miracles." In 1751 he repaired to the metropolis, where in the next year, he published his "Political Discourses," which were at once well received. Nearly about the same time appeared his "Inquiry concerning the Principles of Morals," a work that he himself seems "incomparably his best," but which,

like most mere abstract speculations, met with but little attention. In 1752 he obtained the congenial appointment of librarian to the faculty of advocates at Edinburgh; which, by affording him the command of a large and curious collection of books, seems first to have inspired him with a notion of writing history. His local situation might also suggest his first subject in that line, "The History of England, under the House of Stuart," of which a quarto volume appeared in 1754. To use his own language, it was received "with one cry of reproach, disapprobation, and even detestation." He attributes this reception to his favourable treatment of Charles I, and lord Strafford, but it was much more owing to his equally contemptuous mention of the opposing religious parties; which, as far as they were sincerely actuated by their opinions, he regards as little more than votaries of superstition on the one side, and of enthusiasm on the other. The work was, therefore, not only decried, but neglected; and had not a war broken out between the two countries, the author would have again retired to France. His constitutional equanimity, however, gradually prevailed, and he resolved to proceed in his task, and in the mean time he published his "Natural History of Religion," and other pieces, the first of which was answered by Warburton, in the name of Dr Hurd. In 1756 he published the second volume of his history, which embraced the period from Charles II to the Revolution, and was comparatively well received. He now resolved to take a wider range, and in 1759 published his "History of the House of Tudor," which excited a clamour against him almost equal to his first volume. His reputation as an historian, however, gradually increased, and he was encouraged to complete his work from the earliest period, which he accomplished, in two additional volumes, in 1761, and his "History of England" became thenceforth a standard book. Upon this important work, now so well known, little remark is necessary. Although free from the narrow partialities and prejudices which so frequently influence national historians, and enlarged and philosophical in his general views of events and characters, his researches into the origin and progress of the English constitution are deemed wanting, both in depth and accuracy. According to this opinion, he has too sweepingly regarded the liberty of the country as of modern date, and the mere result of forced concessions from the sovereign, and has sometimes even coloured facts to support that conclusion. His predilection for the house of Stuart, has also made him somewhat unfair to that of Tudor, and still more to the real patriotism of the motives of many of those who sought to curb the high pretensions and baleful extent of prerogative so imprudently claimed by that unhappy family. With every abatement, however, his reputation stands high; and, aided by his clear style, which, although sometimes incorrect and exhibiting gallicisms, is frequently eloquent, and always agreeable, will probably remain so. The copy money received

for his history, added to a considerable pension obtained from the crown by the interest of lord Bute, finally secured him independence, and he was about to retire to his native country, when he was unexpectedly invited, by the earl of Hertford, then proceeding as ambassador to Paris, to attend him, with a view of ultimately becoming the secretary of the embassy. He accordingly accompanied that nobleman to France, and received the expected appointment. He was also farther gratified, by a most enthusiastic reception in the Parisian circles, in his character of historian and philosopher. He remained chargé d'affaires after the departure of lord Hertford, in 1765, and returned to England in 1766, accompanied by that singular and paradoxical character, Jean Jacques Rousseau, to whom he behaved with the greatest delicacy and generosity, a conduct which that eccentric person repaid with his usual ingratitude, and insane suspicion. Having now acquired a relish for public life, Mr Hume, in 1767, became under-secretary of state, under general Conway, which post he held until the resignation of that minister in 1769. He then finally retired to Edinburgh; and having by this time realised a thousand per annum, he drew round him a chosen set of suitable associates, among whom he lived generally admired and respected, until the spring of 1775, when he was attacked by a disorder in the bowels, which never after altogether left him, but gradually produced a state of exhaustion, which carried him off, on the 25th August, 1776, in the sixty-fifth year of his age. He died in a state of mental composure, which has been eloquently described by Dr Adam Smith, who, in his estimation of the character of this eminent man, depicts him as charitable, generous, urbane, and possessed of a degree of gaiety and good humour which is seldom attendant on students so persevering as Mr Hume. This temper even evinced itself on his death-bed, which, as might be expected, has in many quarters produced more censure than admiration. Upon the whole, however, it will be as difficult to deny the high personal moral claims of this writer, favoured as he was with the rare talent of self-command, as the vigour and acuteness of his intellect. He doubtless takes the lead among modern philosophical sceptics, and while open to the objections to which that system of philosophising will ever be liable, he must be allowed to have upheld it with distinguished ability. Besides the works already mentioned, in 1783, "An Essay on Suicide" appeared, which a critic in the Monthly Review affirms, from his own knowledge, to be really by Mr Hume. If so, it more openly assails received opinions than any thing published during his life-time, although it is said, that it would then have appeared, had not the booksellers been afraid to publish it.—*Hume's Account of his own Life, and Dr Smith's Letter. Aikin's G. Biog.*

HUMPHREY (LAURENCE) dean of Winchester, a native of Newport Pagnel, Bucks, born about the year 1527. He entered himself originally at Cambridge, but removed

thence to the sister university, on a fellowship at Magdalen college, where he graduated in 1552. The persecution of the reformed church under queen Mary, drove him, together with many other refugees, in 1555, to Zurich in Switzerland, and being absent longer than the period allowed by statute, he was formally ejected from his fellowship. In the following reign, however, he returned, and succeeded in obtaining the restoration of his preferment. In the course of the next twenty years he passed from the divinity chair and the headship of his college, through the deanery of Gloucester, to that of Winchester, which latter appointment he received in 1580. It is far from improbable that his learning and abilities would eventually have carried him on to a mitre, but the severe calvinistic principles which he had imbibed, and which he professed in their utmost rigour, rendered him obnoxious to the more moderate reformers of the day, and stopped his advancement. He was an excellent linguist, as well as a good general scholar, besides being well versed in all the polemical controversies of the period, to which he contributed his share, in the shape of a variety of tracts, written against the doctrines of the Romish church. Of these, the principal is entitled, "De Religionis, Conservatione et Reformatione, et de Primatu Regum." Among his other works are: "Epistola de Græcis Literis et Homeri lectione et Imitatione," 1558; "De ratione interpretandi auctores;" "Optimates, sive de Nobilitate, ejusque antiquâ Origine;" and a "History of the Life and Death of Bishop Jewell." His own decease took place in February, 1590.—*Athen. Oxon. Strype's Life of Cranmer.*

HUMPHRY, RA. (OZIA) an eminent miniature painter, was born in 1743, at Honiton, in Devonshire. He was educated at the grammar-school of his native town, and on discovering a genius for drawing, was placed under Samuel Collins, a painter of Exeter, who abruptly quitting the kingdom, he received but a small share of instruction; notwithstanding which, he settled at Bath as a miniature painter, until, by the advice of his countryman, sir Joshua Reynolds, he repaired to London. By the friendly instructions of that eminent artist, he quickly rose to the first rank in his own branch of art, and became a royal academician. In 1780 he went to India, and was chosen one of the first members of the Asiatic Society, and was held in great esteem by Warren Hastings and sir William Jones. On his return to England, he continued his profession while his sight would allow him, and died unmarried, in 1810.—*Gent. Mag.*

HUNAULD (FRANCIS JOSEPH) a French physician and writer on anatomy in the last century. He was a native of Brittany, and after having studied at Rennes, Angers, and Paris, he took the degree of MD. at Rheims, in 1722. He settled at Paris, and in 1724 he was chosen a member of the Academy of Sciences. When the duke de Richelieu went on an embassy to Vienna, Hunauld accompa-

sified him as his physician, and ever after retained the confidence and esteem of that nobleman. In 1730 he became anatomical professor at the Jardin du Roi, and lectured with great reputation. In 1735 he visited Holland, where he obtained an acquaintance with Boerhaave; and England, where he read before the Royal Society "Reflections on the Operation for Fistula Lacrymalis," which were published in the Philosophical Transactions, and he was elected FRS. He died in 1742, at the age of forty-one. The memoirs of the Academy of Sciences comprise several papers by HUNNAUD, the most important of which relate to the formation of the bones.—*Elou. Dict. Hist. de la Med. Aikin's G. Biog.*

HUNNADES (JOHN CORVINUS) vaivode of Transylvania, and general of the armies of Ladislaus, king of Hungary, was one of the greatest commanders of his time. He fought against the Turks very heroically, and in 1442 and 1443 gained important advantages over the generals of sultan Amurath, and obliged that prince to retire from Belgrade, after besieging it seven months. In 1456 he obliged Mahomet II also to relinquish a siege of the same place, but died on the 10th of September in the same year. He was at this time regarded as the hero of Christendom, and not less esteemed by his enemies than regretted by his friends. He left two sons, the younger of whom, MATTHIAS, was afterwards king of Hungary.—*Mod. Univ. Hist. Moreri.*

HUNNIS (WILLIAM) gentleman of the chapel royal under Edward VI, and afterwards chapel-master to queen Elizabeth, a voluminous writer of moral and religious poetry. He translated into rhyme many select psalms, which, says Warton, had not the good fortune to be rescued from oblivion by being incorporated into Hopkins's collection, nor to be sung in the royal chapel. They were printed in 1550, with the title of "Certayne Psalmes, chosen out of the Psalter of David, and drawn furth into Englysh Meter, by William Hunnis, servant to the Ryght Honourable Syr W. Harberd, Knight." This poet also published a "Handful of Honey-suckles," consisting of devotional verses; and the whole book of Genesis, in English rhyme, entitled "A Hive full of Honey." But his honey-suckles and his honey are no longer delicious; and his works are merely noticed as specimens of the fashionable religious poetry of his time. He was a copious contributor to the "Paradise of Dainty Devises;" and Thomas Newton, a contemporary poet, says of Hunnis, that in the prime of youth his pen "had depainted Sonets Sweete;" probably in allusion to his share of that work.—*Warton's Hist. of Eng. Poetry.*

HUNT (THOMAS) a learned Hebraist and Oriental scholar of the last century, born 1696. He graduated at Oxford in 1721 as AM, and in 1738 was elected to the Arabic professorship in that university. His inauguration address on this occasion, together with a small tract on the use of the oriental dialects, has been printed. In 1744 he took his doctor's degree

in divinity, and three years after obtained the regius professorship of Hebrew, with a canonry

Christchurch annexed. Dr Hunt also wrote some valuable "Observations on the Book of Proverbs," which, together with a selection from his sermons, were edited by Dr Kennicott; after the decease of the author in 1774.—*Gent. Mag. vol. lxxi. Nichols's Lit. Anec.*

HUNTER (ALEXANDER) a very ingenious physician, naturalist, and writer on rural and domestic economy. He was a native of Scotland, and studied at Edinburgh, where he took the degree of MD. He established himself as a medical practitioner at York, where he attained high reputation in his profession, and was a principal contributor to the foundation of an asylum for lunatics. His chief literary productions are an inaugural dissertation, "De Cantharidibus," Edinburgh, 1751, 4to; "Georgical Essays," 6 vols. 8vo, 1770, &c.; a new edition of Evelyn's "Sylva, or Discourse of Forest Trees and the propagation of Timber, with Notes," 2 vols. 4to, 1776, republished in 1786; Evelyn's "Terra, a Philosophical Discourse of Earth, with notes," 4to, 1778, republished in 1787; a treatise on Buxton waters, 1776, 8vo; and another, entitled "Culina Famulatrix Medicinæ, or Receipts in modern Cookery, with a Medical Commentary," 1806, 12mo, in which the subject is treated in a manner at once novel, impressive, and useful. Dr Hunter died in 1809, in the eightieth year of his age.

HUNTER (CHRISTOPHER) a physician who distinguished himself by his writings and researches relative to the history and antiquities of the county of Durham. He was a native of that part of England, and was educated at St John's college, Cambridge. Having regularly taken his degrees, he settled as a medical practitioner at Durham, and died there in 1757, aged eighty-two. Dr Hunter was the author of "The Ancient Rites and Monuments of the Church of Durham," 1733; and of "Remarks on a part of Neale's History of the Puritans;" and he had also collected copious materials for a work on the parochial antiquities of the bishopric of Durham, but the project was not carried into execution.—*Nichols's Lit. Anecd. Surtees's Hist. of Co. of Durhan.*

HUNTER (HENRY) a Scottish presbyterian divine, born at Culross in Perthshire, in 1741. At the age of thirteen he was sent to the university of Edinburgh, where his literary acquirements were such that when but seventeen he became tutor to a gentleman who was afterwards one of the lords of the session. The illness and death of his father having prevented him from retaining that situation, he next accepted one of the same description in the family of lord Dundonald, at Culross abbey. In 1764 he obtained a license to preach, and in 1766 was ordained minister of South Leith. In 1771 he removed to London, to become pastor to the Scottish church at London Wall; and about the same time he was admitted to the degree of DD. by the university of Edinburgh. His most popular

literary production, the "Sacred Biography," a series of discourses on the lives of the most eminent persons mentioned in the Bible, was commenced in 1783, and was subsequently extended to seven volumes, octavo. During the progress of this work, Dr Hunter became a convert to the physiognomical system of Lavater, and in 1787 he made a visit to Switzerland, for the purpose of procuring intelligence from the author preparatory to an English translation of his works, which he executed and published with splendid graphic illustrations by Mr Thomas Holloway, the engraver. In 1790 he was chosen secretary to the corresponding board of the Society for Propagating Christian Knowledge in the Highlands of Scotland. In 1795 he published "Sermons preached on various Occasions," to which were subjoined illustrative memoirs and anecdotes; and in 1798 appeared his "Lectures on the Evidences of Christianity," in conjunction with those of the rev John Fell. He died at Bristol Hot Wells, October 27, 1802. Besides his original literary performances, he translated from the French, Euler's Letters on Natural Philosophy; St Pierre's Studies of Nature; Saurin's Sermons; Sonnini's Travels; and Castera's Memoirs of Catherine II of Russia. Two volumes of his Sermons, &c. with a biographical memoir, were published posthumously.—*Aikin's G. Biog.*

HUNTER (ROBERT) an English gentleman, who obtained some literary distinction, and was employed in a civil and military capacity in the colonial service of his country. He attained the rank of a colonel in the army, and in 1708 he was appointed lieutenant-governor of Virginia; but in his voyage thither he was taken prisoner by the French. During his stay at Paris he corresponded with dean Swift, who it appears had been suspected of being the author of the famous letter concerning enthusiasm, usually printed in lord Shaftesbury's Characteristics, but which was really written by colonel Hunter. Returning to England, he was made governor of New York, and was sent thither in 1710, with 2700 expatriated Palatines, to settle that colony. After having expended very considerable sums from his private fortune, in furthering the objects of the English ministry, he came home in 1719. On the accession of George II he was reinstated in his government of New York and the Jerseys. The climate not agreeing with him, he obtained the government of Jamaica instead, and arrived there in February 1727. He died March 31, 1731. Besides the letter above-mentioned, he is said to have written a farce, called "Androboros."—*Gough's Account of Croyland. Chalmers's B. D.*

HUNTER (WILLIAM) a native of Montrose in Scotland, who studied at the marischal college of Aberdeen, where he took the degree of M.A. in 1777. In the meantime he was acquiring a knowledge of medicine under a master, who practised all three branches of the profession; and after an apprenticeship of four years, he got a situation on board an East

Indiaman, from which service he was transferred in 1781 to the Company's medical establishment at Bengal, where his genius and learning had an ample field for acquiring distinction as a man of science. From 1794 to 1806 he was surgeon of the marines, and for some years inspector-general of hospitals in the island of Java. As secretary to the Asiatic Society, and professor and examiner at the college of Calcutta, and in his previous post of surgeon to major Palmer's embassy with Dowlat Raj Scindia, from 1784 to 1794, he had the best opportunities of studying the languages and literature of India. His publications were, "A Concise Account of the Kingdom of Pegu; with a Description of the Caves of Elephanta, Amboola, and Canara," London, 1785, 8vo; an "Account of some artificial Caverns near Bombay," 1788, 12mo; "An Essay on the Diseases incident to Indian Seamen, or Lascars, on Long Voyages," Calcutta, 1804, 8vo; besides papers on medicine, natural history, &c. in the Asiatic Researches and other periodical works. After an absence of thirty-eight years, he was preparing to return to his native country, when he was seized with a fever, which occasioned his death in the beginning of the year 1815.—*Month. Mag. Watt's Bibl. Brit.*

HUNTER (WILLIAM) a celebrated anatomist and medical practitioner, born May 23, 1718, at Kilbride, in the county of Lanark in Scotland, where his father possessed a small estate. At the age of fourteen he was sent to the university of Glasgow as a student of divinity; but in the course of his academical education having become dissatisfied with the doctrines of the kirk, he relinquished all thoughts of the clerical profession, and engaged himself as the pupil, and afterwards as the partner of Cullen, at Hamilton. The result of this connexion has been already partially related.—[See CULLEN (WILLIAM).—Mr Hunter went to reside at Hamilton in 1737; and after having passed the winter of 1740 at Edinburgh, he went to London in 1741, and shortly after was engaged as dissector to Dr James Douglas, a metropolitan physician and public lecturer, who was then employed on a work relating to osteology. This gentleman died within a few months, and Mr Hunter, though he continued to reside with the widow, found that he must depend on his own exertions for success in his profession. He soon evinced his ability by a paper "On the structure and Diseases of articulating Cartilages," which he communicated to the Royal Society in 1743, and which was inserted in the Philosophical Transactions. He determined to establish himself in London as a teacher of anatomy, and commenced lecturing on that subject in 1746, having previously been engaged to assist Mr Samuel Sharpe as a lecturer on surgery. In 1747 he was admitted a member of the corporation of surgeons; and in the spring of the following year, soon after the close of his lectures for the season, he went to Leyden and Paris in company with his pupil, the son of his late patron,

Dr Douglas. On his return home, he devoted himself to the practice of midwifery, and his success in that department was promoted by his being chosen surgeon-accoucheur, first to the Middlesex hospital, and then to the British lying-in-hospital. In 1750 he obtained the degree of M.D. from Glasgow, when he entirely relinquished mere surgical practice, though much consulted as a physician in cases requiring peculiar anatomical skill for their investigation. In 1755 he became physician to the British lying-in hospital, on the resignation of Dr Layard; and the following year he was admitted a licentiate of the college of physicians, and soon after elected a member of the Medical Society. In the first volume of "Observations and Inquiries," published by that association in 1757, appeared Dr Hunter's "History of an Aneurism of the Aorta;" and he was an important contributor to the subsequent publications of the society, of which he was chosen president on the death of Dr Fothergill. In 1762 he published a work, entitled "Medical Commentaries," 4to, to which was subsequently added a "Supplement;" the object of which was to vindicate his claim to some anatomical discoveries, in opposition to professor Monro, of Edinburgh, and others. Such was the professional distinction attained by Dr Hunter, that in 1764, he was appointed physician extraordinary to the queen. About this time he engaged as his assistant, and afterwards as his associate in his lectures, Mr William Hewson; but the connexion between them was dissolved in consequence of some disputes, after it had continued nearly six years. Dr Hunter was elected a fellow of the Royal Society in 1767, and was also admitted into the Society of Antiquaries; and in 1768, on the establishment of the Royal Academy of Arts, he was appointed professor of anatomy. It may be added to the list of his scientific distinctions, that he was made a foreign associate of the Royal Medical Society, at Paris, in 1780, and of the Royal Academy of Sciences, in 1782. The most elaborate and splendid of his publications, "The Anatomy of the human Gravid Uterus," folio, illustrated by thirty-four large plates, appeared in 1775. In 1777 he joined Mr Watson in presenting to the Royal Society "A short Account of the late Dr Maty's Illness, and of the Appearances on Dissection;" and in 1778 he published "Reflections on the Section of the Symphysis Pubis," designed to show the impropriety and inutility of that surgical operation, which had become fashionable among accoucheurs on the continent, and especially in France. "Two introductory Lectures to his Anatomical Course," which he had prepared for the press, were published after his death. When his professional emoluments produced an extraordinary supply of wealth, he was desirous of devoting a portion of it to the establishment of an anatomical school and museum in the metropolis. With that view, about 1765, he presented a memorial to Mr Grenville, then minister, requesting a grant from government of the site of the

king's mews, whereon he offered to erect an edifice at the expense of 7000*l.* and endow a professorship in perpetuity. But his proposal was treated with neglect; in consequence of which he purchased a spot of ground in Great Windmill-street, Haymarket, where he built a house, anatomical theatre, and museum for his own professional purposes, and thither he removed in 1770. Here, besides objects connected with the medical sciences, he ultimately collected a library of Greek and Roman classics, and a valuable cabinet of medals. The latter furnished the materials for a publication, entitled "Nummorum veterum Populorum et Urbium qui in Museo Gulielmi Hunter asservantur Descriptio Figuris illustrata, Op. et Stud. Caroli Combe, SR. et SA. Sec." 1783, 4to. In 1781 the museum was augmented by the addition of shells and other natural curiosities, which had been collected by Dr Fothergill, who had given testamentary directions that his cabinet of natural history should be offered to Dr Hunter for 500*l.* less than the appraised value; and he accordingly purchased it for 1200*l.* He continued, with unabated industry and application, to attend to his avocations as a practitioner and lecturer till within a very short time of his death, which was probably hastened by want of relaxation from the fatigues of business. After an attack of gout about the middle of March, 1783, having partially recovered, he imprudently determined to commence his usual course of lectures on surgery. He had however overrated his own strength, as, after having delivered the introductory lecture, he fainted away, and being conveyed to bed, was the ensuing night seized with palsy, which occasioned his death, March 30, 1783. In his last moments he is said to have exhibited a kind of philosophical indifference to his approaching fate, of which many similar examples occur among persons of his profession. To his friend, Mr Combe, a short time before his decease, he said—"If I had strength enough to hold a pen, I would write how easy and pleasant a thing it is to die." By his will he bequeathed his museum to his nephew, Dr Matthew Baillie, for the term of thirty years, after which it was removed to the university of Glasgow, where it is now deposited.—*Life of Dr Hunter, by Dr S. F. Simmons. Hutchinson's Biog. Med. Aikin's G. Biog.*

HUNTER (JOHN) younger brother of the preceding, highly celebrated as a practitioner and writer on surgery, anatomy, and physiology. He was born July 14, 1728, and his father dying when he was about ten years old, his education was neglected, and he was suffered to spend his time unprofitably in country amusements. One of his sisters having married a cabinet-maker, settled at Glasgow, he became his apprentice; but the failure of his brother-in-law prevented his continuance in that situation. At length, hearing of the success of his elder brother in London, he offered his services to him as an anatomical assistant, expressing a wish to enter into the army if his proposal was rejected. In answer to his ap-

plication he was invited to London, where he arrived in September 1748. His first essays in the dissecting-room did him great credit, and he improved so speedily, that in the winter of 1749, he was able to undertake the instruction of dissecting pupils. He at this time attended to the practice of surgery at Chelsea hospital, and afterwards at St Bartholomew's. In 1752 he visited Scotland; and in 1753 he entered as a gentleman commoner of St Mary hall, Oxford; but of the advantages of academical study he could but slightly have availed himself, as he became a surgeon's pupil at St George's hospital in 1754, where he continued during the summer months; and in 1756 he was appointed house surgeon to that establishment, with which he continued to be connected during the remainder of his life. In the winter of 1755 he was admitted to a partnership in the lectures delivered by his brother, in which situation he most assiduously devoted himself to the study of practical anatomy, not only of the human body, but also of brute animals, for which latter purpose he procured from the Tower, and from the keepers of other menageries, subjects for dissection. His health having been impaired by too close attention to these pursuits, he went abroad in 1760 as a surgeon on the staff of the army, in the expedition to Bellisle, and he served in the same capacity in Portugal in 1763. Returning to London, he engaged in surgical practice, and added to his income by giving winter courses of lectures on anatomy and operative surgery. Continuing to cultivate comparative anatomy and natural history, he purchased some ground at Earl's-court, Brompton, where he built himself a house, and kept several foreign and uncommon animals for the purpose of studying their habits, manners, and organization. In the beginning of 1767 he was elected a fellow of the Royal Society, when his zeal for the advancement of science induced him to institute meetings of his associates at a coffee-house, after the formal sessions of the society; which was the means of exciting a spirit of inquiry, whence originated many philosophical improvements and discoveries. In 1769 he was elected one of the surgeons of St George's hospital, through the interest of his brother. His first publication, a treatise "On the Natural History of the Teeth," 4to, appeared in 1771. In the winter of 1773 he commenced a course of lectures on the theory and principles of surgery, in which he developed some of those peculiar doctrines, which he afterwards explained more fully in his published works. His perfect acquaintance with anatomy rendered him a bold and skilful operator, and enabled him to make some considerable improvements in the modes of treating certain surgical cases. But the fame of John Hunter chiefly rests on his researches concerning comparative anatomy, and the structure of the various classes of organized beings, in the investigation of which he spared neither pains nor expense. In 1776 he obtained the appointment of surgeon extraordinary to the

army. In 1781 he was chosen a member of the Royal Society of Göttingen; and in 1783 of the Royal Society of Medicine and Academy of Surgery at Paris. In the year last mentioned, he removed from Jernyn-street, where he had resided, to Leicester-square, and thither he removed the very extensive museum of anatomical preparations, which it had been the great occupation of his professional life to form, for the illustration of physiological science. In 1786 he was made deputy surgeon-general to the army; and in that year he published a long promised work on the venereal disease, which contained some novel opinions, and became the subject of critical animadversion, but which was the obvious production of a highly talented and well-informed mind. About the same time appeared a quarto volume, entitled "Observations on various Parts of the Animal Economy," consisting of physiological essays, most of which had been inserted in the philosophical transactions. A fit of illness, with which he was seized, for a while disabled him from attending to business, and laid the foundation of a disease of the heart, which rendered his future health, and even existence, very precarious. He resigned to Mr Home the office of lecturer in 1790, that he might devote his time to the composition of a "Treatise on the Blood, Inflammation, and Gun-shot Wounds," which was one of the last of his literary labours. On the death of Mr Adair he was appointed inspector-general of hospitals, and surgeon-general to the army; and the duties of these offices interfered not a little with his scientific pursuits, and doubtless contributed to shorten his life. The spasmodic disease, which had for some years been undermining his constitution, at length became so serious, that the most imminent danger was to be apprehended from any sudden or violent excitement. Though perfectly aware of his situation, he fell a sacrifice to the agitation arising from some unpleasant circumstance which occurred at St George's hospital, where he died suddenly, October 16, 1793. On examining his body after death, it appeared that he had laboured under an ossification of the vessels of the heart, whence the previous disease and ultimate cata-trophe had been produced. Besides the works already noticed, he published some papers in the transactions of the Royal Society, and of a Society for the Improvement of Medical Knowledge, of which he was an active member. His treatise on the blood, &c. was published in 1794, with an account of his life, by Mr, now sir Everard Home. Government purchased the museum of Hunter for 15,000*l.* and transferred it to the Royal College of Surgeons, for the use of the public.—*Life of John Hunter, by Jesse Foot. Gent. Mag.* vol. lxiv. *Hutchinson. Aikin.*

HUNTER (ANNE) widow of the subject of the last article, and remarkable for her literary attainments. Intimately connected with Mrs Elizabeth Carter, Mrs Delany, &c. Mrs Hunter was no inconsiderable member of the learned *coterie* of ladies who composed their

society. She excelled in lyric poetry, as is evinced by the well-known "Queen Mary's Lament;" "The Death-song of Alknoomook, the Indian Warrior;" and especially the beautiful words to some of Haydn's canzonets, such as "My Mother bids me bind my Hair," "The Mermaid's Song," &c. These, as well as her other productions, were, some time previous to her decease, collected and published in a small volume under her own superintendance. Her maiden name was Home: her father, Mr Robert Home, being at the time of her birth, a surgeon in the army. She had three brothers, the youngest of whom is now sir Everard Home. Mrs Hunter died in London, January 7, 1821, in her seventy-ninth year.—*Gent. Mag.*

HUNTINGDON (SELINA, countess of) the second daughter of Washington, earl Ferrers, and sister to the unhappy nobleman of that title, who was hanged at Tyburn, for the murder of his steward. She was born in 1707, and married June 3, 1728, to Theophilus, earl of Huntingdon, by whom she had a family of four sons and three daughters. Becoming a widow, she acquired a taste for the principles of the Calvinistic methodists, and patronised the famous George Whitefield, whom she constituted her chaplain. Her rank and fortune giving her great influence, she was long considered as the head of a sect of religionists; and after the death of Whitefield his followers were designated as the people of lady Huntingdon. She founded schools and colleges for preachers, supported them with her purse, and expended annually large sums in private charity. After a widowhood of forty-five years, she died June 17, 1791, regretted for her virtues, even by those who regarded her conduct as the offspring of mistaken enthusiasm.—*Original.*

HUNTINGDON (WILLIAM) a religious enthusiast, who attained some notoriety towards the end of the eighteenth century. He was the son of a farmer's labourer in Kent, and the early part of his life was passed in menial service, and other low occupations. After indulging in vice and dissipation for several years, according to his own account, he was converted, and became a preacher among the Calvinistic methodists. He soon engaged in religious controversies, published a vast number of tracts, and was regarded as the head of a peculiar sect. His followers erected for him a chapel in Tichfield-street, and afterwards one of larger dimensions in Gray's-Inn-road, where he officiated till near the time of his death, which took place at Tunbridge Wells, in August, 1813, at the age of sixty-nine. He was a man of some talent, though little cultivated by education. His publications are very numerous; and some of them contain curious details relative to his personal history and religious experience. The titles of two may be mentioned as specimens: "The Arminian Skeleton, or the Arminians dissected and anatomized," 8vo; and "The Bank of Faith," 8vo. After having lost his first wife by death, he married the wealthy relict of sir

James Saunderson, a London alderman, and passed the latter part of his life in all the comfort, if not the luxury, of affluence.—*Letters of Don Manuel Espriella. Edit.*

HUNTINGTON (HENRY of) an ancient English historian, was the son of one Nicholas, a married priest, and was born towards the end of the eleventh or the beginning of the twelfth century. He was educated by Alcinus of Anjou, a learned canon of the church of Lincoln, and in his youth discovered a taste for poetry, by writing epigrams, love verses, and three long didactic poems, one upon herbs, another concerning spices, and a third on the subject of precious stones. In his more advanced years he applied to the study of history, and composed a general history of England, from the earliest accounts to the death of king Stephen, in 1154, in eight books, which have been published by sir Henry Savile. Towards the conclusion, the author honestly acknowledges that it is only an abridgment, and allows that to compose a complete history of England, many books were necessary which he could not procure. Mr Wharton has published a letter of this author on the contempt of the world, which details many curious anecdotes of the great men of his time. The Bodleian library also contains a Latin poem of Henry, on the death of Stephen, and arrival of Henry II, which is by no means contemptible. In Trinity college library, Oxford, is a fine MS of his book, "De imagine Mundi." When he died is unknown.—*Henry's Hist. of Gr. Britain. Wharton's Anglia Sacra.*

HUNTINGTON (ROBERT) a learned English divine and prelate of the seventeenth century. He was born at Deerhurst, in Gloucestershire, of which place his father was minister, in 1636, and after receiving his grammar learning at the free-school of Bristol, was sent at the age of sixteen to Merton college, Oxford. In 1662 he graduated as MA, and having undergone the usual course of study, applied himself with extraordinary zeal and diligence to the study of divinity, and the Oriental languages. In 1670, probably on this account, he was appointed chaplain to the factory of Aleppo. This appointment he held for eleven years, during which time he peculiarly dedicated himself to the discovery and collection of ancient MSS, in which pursuit he was patronised by the bishops Marsh and Fell, and other learned persons in England. He travelled with this object not only through the districts adjoining Aleppo, but to Mount Sinai, various parts of Palestine, and in 1677 made a voyage to Cyprus, to examine the library of the archbishop of Justiniana Nova, but without success. In two journeys which he took in 1680 and 1681 to Egypt, he was more fortunate, being enabled to rescue many curious copies of the Gospel and other MSS from oblivion. He returned to England in 1682, and immediately retired to his fellowship at Merton college, and the next year received the degrees of bachelor and doctor of divinity, and was appointed master of Trinity college, Dub-

lin. Upon the descent of James II in Ireland, after the revolution, he retired for safety to England, but returned when the danger was over, and in 1691 resigned the mastership of Trinity college, resolved not to live out of his native country. In the mean time he sold his fine collection of MSS, about six hundred in number, to the curators of the Bodleian library, for 900*l*. In 1692 he was offered the Irish bishopric of Kildare, which he refused, but in 1701 accepted that of Raphoe, but survived his consecration only two days. He published nothing from his own pen, excepting "An Account of the Porphyry Pillars in Egypt," and "Letters" written while abroad, which appear at the end of his life by Dr Smith.—*Biog. Brit. Life by Smith, in Latin.*

HUNTON (PHILIP) a nonconformist divine of the seventeenth century, deserving of notice as a political writer. He was a native of Hampshire, and was educated at Wadham college, Oxford, where he took the degree of MA. Having entered into holy orders, after preaching at some other places, he settled at Westbury, in Wiltshire. His reputation for learning occasioned him to be appointed by Oliver Cromwell, in 1657, the provost of Lis then recently erected college at Durham; with which office Mr Hunton held the living of Sedgfield, in the bishopric, though he had only a part of the revenue belonging to it. Thus he lost on the return of the old incumbent in 1660, and the dissolution of the collegiate establishment taking place, he retired to his congregation at Westbury, where he died in July, 1682. He was the author of "A Treatise of Monarchy: viz. concerning Monarchy in general, and the English Monarchy in particular," in which work he broached the constitutional doctrine, that the sovereignty of England is not in the king only, but in the three estates, viz. the king, lords and commons. Such principles did not please the high-toned church men of Charles the second's reign, and Hunton's assertion was condemned by a decree of the convocation held July 21, 1683, and the book ordered to be burnt in the school quadrangle at Oxford, which was accordingly done. The treatise on monarchy provoked the animadversions of Dr Henry Ferne and sir Robert Filmer, the latter of whom composed his famous "Patriarcha," in defence of the divine right of kings, against Hunton.—*Calamy's Nonconformists' Memorial. Magna Britannia—Wiltsh.*

HURD (RICHARD) an eminent English prelate and philological writer of the last century. He was born January 13, 1720, at Congreve, in Staffordshire, where his father was a farmer. After a school education, he went to Emanuel college, Cambridge, in which he obtained a fellowship in 1742, having previously proceeded MA.; and in 1749 he took the degree of BD. The same year he published "Horatii Ars Poetica, Epistola ad Pisones;" with an English commentary and notes, which was dedicated to Warburton, whose friendship and literary patronage contributed much to his future prosperity. In 1750 he published

a "Commentary on the Epistle of Horace to Augustus;" and in 1751 a tract intitled "The Opinion of an eminent Lawyer, concerning the Right of Appeal from the Vice Chancellor of Cambridge to the Senate, supported by a short historical Account of the Jurisdiction of the University, by a Fellow of a College," 8vo. His next production was a satirical attack on Dr Jortin, in defence of Warburton, in an "Essay on the Delicacy of Friendship," which he afterwards endeavoured to suppress. His first ecclesiastical preferment was the rectory of Thurcaston, in Leicestershire, which he obtained in 1757; and the same year he published "Remarks on David Hume's Essay on the Natural History of Religion," 8vo. His "Dialogues Moral and Political, with Letters on Chivalry and Romance," appeared at different times from 1758 to 1764, and were republished collectively, in 1765, three vols. 8vo. It ought to be remarked, that the later editions of this production shew the sentiments of the author to have undergone some change after the first publication of his dialogues, in which he eulogizes the friends and martyrs of liberty in terms which to his more matured judgment probably appeared too strong. None of his works attracted so much notice as the dialogues, which were translated into German by the poet Holty, and published at Leipsic. About 1765 he was chosen preacher to the society of Lincoln's inn; and in 1767 he was made archdeacon of Gloucester. He took the degree of LLD. in 1768, in which year he commenced a series of sermons on the prophecies, preached at the lecture founded by his friend Warburton, at Lincoln's-inn. These discourses were published under the title of an "Introduction to the study of the Prophecies concerning the Christian Church, in twelve Lectures," 1772. In 1775 Dr Hurd was raised to the bishopric of Lichfield and Coventry; and not long after was made preceptor to his present majesty, and his brother, now the duke of York, through the influence of lord Mansfield. He was translated to the see of Worcester on the removal of Dr North to Winchester in 1781; and at the same time was bestowed on him the confidential situation of clerk of the closet. These preferments seem to have satisfied his ambition, for on the death of Dr Cornwallis, archbishop of Canterbury, the king would have elevated Dr Hurd to the primacy, a station for which he was well qualified by his talents and standing in the church, but he modestly declined the offer. In 1783 he published an edition of the works of bishop Warburton, in which he thought proper to omit some of the productions of his deceased friend; a circumstance which subjected him to the severe reprehension of the late Dr Samuel Parr, who supplied the editorial deficiencies of bishop Hurd's collection, by printing a volume with the title of "Tracts by Warburton and a Warburtonian." In 1795 the right reverend editor himself published a kind of supplement to the works of Warburton, in the form of a biographical preface, and he subsequently also pub-

ished the correspondence of Warburton, which was his last literary undertaking. He died at the episcopal palace of Hartlebury, in Worcestershire, May 28, 1808, and was interred in the church-yard of that parish.—*Nichols's Lit. Anecd. Month. Mag.* vol. xxv. *Edit.*

HURDIS (JAMES) an ingenious poet and amiable man, was the son of a gentleman of small fortune at Bishopstone, in Sussex, where he was born in 1763. He was educated at Chichester school, and in 1780 was entered a commoner of St Mary hall, Oxford, and at the election of 1782 was chosen a demy of St Mary Magdalen college. In 1784 he became tutor to the youngest son of the earl of Chichester, the honourable George Pelham, since bishop of Exeter. In 1788 he first appeared before the public as a poet, in his "Village Curate," which was followed by his "Adriano," his "Panthea," "Elmer and Ophelia," and the "Orphan Twins." In 1791 he was presented to the living of Bishopstone, and in 1793 was elected professor of poetry at Oxford, where in 1794 he took the degree of B.D. and in 1797 that of D.D. He died December 23, 1801. In addition to the works already mentioned, Dr Hurdis was author of "A Disquisition on Genesis 1 and 21;" "Select Remarks on the First Ten Chapters of Genesis;" "Sir Thomas More, a Tragedy." "Cursory Remarks on the Arrangement of the Plays of Shakspeare;" "A Vindication of the University of Oxford from the aspersions of Mr Gibbon;" "The Favourite Village," a poem, and "Twelve Dissertations on the Nature and Occasions of Prophecy." After his death his poems were published in three volumes by subscription, with a life by his sister.—*Life by Miss Hurdis. Hayley's Life of Cowper.*

HURE (CHARLES) the son of a peasant of Champigny-sur-Yonne, where he was born in 1639. In spite of the disadvantages arising from the poverty of his parents, he contrived, by unwearied industry, to make himself master of most modern and several ancient languages. His progress in Oriental literature was also considerable. He was a member of the Port Royal Society, professor of languages at Paris, and eventually obtained the headship of the college of Boncourt. He was inclined to Jansenism in his religious opinions, and proved himself a good biblical scholar by a dictionary which he wrote of the Scripture, in folio, two vols. This work is not, however, considered equal to that of Calmet. His other writings are, a "Sacred Grammar;" an edition of the Latin Testament, with his own annotations, in two 12mo vols. and a French translation of the same work, which appeared afterwards in four vols. His death took place in 1717.—*Nouv. Dict. Hist.*

HUSS (JOHN) an eminent Bohemian divine and martyr to unjust persecution, was born at Hussenitz about the year 1376. He received his education at the university of Prague, and in 1400 became pastor of the church of Bethlehem in that city, in which situation he displayed great erudition and eloquence. About

this time the writings of Wickliffe had been introduced into Bohemia, when Huss adopted several of his opinions, and in particular those relating to the papal hierarchy, and the despotism of the priesthood. In the year 1407 he began openly to declaim against the vice of the different ranks of the clergy, and the discipline of the church of Rome, and thereby excited the most violent animosity on the part of the archbishop of Prague and of the clergy in general. He also added to this resentment by embracing the philosophical opinions of the *realists*, in opposition to those of the *nominalists*, which were chiefly espoused in Germany. His success in preaching against the sale of indulgences produced still farther exasperation, and Subinco, archbishop of Prague, in 1409 issued two mandates, addressed to the members of the university of Prague, one to bring in all the writings of Wickliffe, in order that such as were heretical might be consigned to the flames; and the other enjoining all curates and ministers to insist upon the existence of the real presence, under the appearance of bread and wine. Huss vehemently opposed both these mandates, and upon an appeal to Gregory XII, the archbishop was summoned to Rome, who however so represented matters, that the pope issued a bull for the suppression of the writings of Wickliffe, and forbade Huss and other members of the university, who had not complied with the mandates of the archbishop, from preaching and all other ecclesiastical functions. Huss and his friends, on the appearance of this bull, appealed a second time to Rome, on which he was ordered by pope John XXIII to appear personally in that capital. Assured of the protection of Wenceslaus, king of Bohemia, he refused to obey the summons, and was excommunicated for contumacy. He treated this sentence with the utmost contempt, and went on preaching against corruption in religion until the conflicts between the opposing parties became so animated, that it induced John XXIII to call a council in 1414, where it was agreed between the pope and the emperor Sigismund, that Huss should appear and give an account of his doctrines, the latter promising him safe conduct and security of person. He accordingly arrived at Constance, 3rd of November, 1414, was formally accused, and soon after, notwithstanding the urgent remonstrances of the emperor, imprisoned and condemned without hearing, for maintaining that the Eucharist ought to be administered to the people in both kinds. Of this conduct the emperor so warmly complained, that in pretended compliance with his demand, on the 5th and 7th of July, 1415, Huss was brought before the council, and permitted to say what he could in behalf of himself and doctrines, but all that he alleged was unattended to, and he was soon given to understand that they were disposed to put up with nothing short of a full recantation of his asserted errors. Peremptorily refusing compliance with this demand, he was remanded back to prison, and being again brought before the council on the 6th of July, was condemned for heresy, and

ordered to be burnt. His execution followed the next day, with circumstances of great superstition and cruelty; and his ashes were gathered up and thrown into the Rhine. He died with unabated firmness and resolution, and the day of his execution, the 7th of July, was for many years held sacred by the Bohemians. The works of Huss, which are numerous and learned, were collected into a body and published in two vols. folio, Nuremberg, 1558. They are distinctly specified in our authorities.—*Cave's Hist. Lit. Freheri Theatrum.*

HUSSEY (GILES) an ingenious English painter, an estimable but somewhat eccentric character in private life. He was born of a good family at Marnhill, in Dorsetshire, in 1710, and his friends being of the catholic persuasion, he was educated at Douai and St Omers. With a view to the cultivation of his talents for painting, he was placed under Jonathan Richardson, and afterwards with Damiani, a Venetian artist, with whom he went to Italy. In 1737 he returned to England, and commenced portrait-painter. He had invented a peculiar theory relative to the form and proportions of the human face, which he conceived to be connected with the harmonic intervals of a musical scale; and he is said to have been so successful in the practical application of this apparently fanciful system as to have produced very accurate likenesses of those who sat to him for their portraits. He did not however meet with the encouragement which his talents deserved; and after residing for some time in London in distressed circumstances, he retired into Wiltshire, where his elder brother possessed an estate, after whose death he removed to the neighbourhood of Ashburton, in Devonshire. He died suddenly, while giving directions to labourers in his garden, in the month of June, 1788. Barry thought this artist worthy of a place in the historical group with which he decorated the rooms of the society for the encouragement of arts and manufactures in the Adelphi.—*Britton's Beauties of Wiltshire.*

HUTCHESON, LLD. (FRANCIS) an Irish protestant dissenting divine, and ingenious philosophical writer, was the son of a dissenting minister of the north of Ireland, where he was born August 8, 1694. After receiving a proper education at a grammar school, he was sent to an academy to begin his philosophical career, and in the year 1710 was entered a student in the university of Glasgow. He early displayed superior abilities, and made a distinguished progress in all his studies, finally devoting himself to divinity as a profession. After spending six years at Glasgow, he returned to his native country, where he was licensed to preach among the dissenters, but accepted the invitation of some gentlemen acquainted with his talents, to set up a private academy in Dublin. He had not been long settled in that city, before his merits and accomplishments made him generally known, and persons of all ranks, who esteemed literature and learned men, cultivated his acquaint-

ance. In 1725 the first edition of his celebrated "Inquiry into the Ideas of Beauty and Virtue" appeared without his name; but its merit would not allow the author to be long concealed, and it secured him still farther notice from the learned and eminent, among whom were lord Granville, then lord lieutenant of Ireland, archbishop King, and the prime minister Boulter. In 1728 he published his "Treatise on the Passions," which has often been reprinted, and is admired even by those who dispute the soundness of its philosophy. About the same time he also wrote many philosophical papers, which were published in the collection called, "Hibernicus's Letters," together with some answers to objections to his system in the public journals. After keeping a private academy in Dublin for some years with great reputation, he was in 1729 called to the chair of philosophy at Glasgow, where he spent the remainder of his life in a manner highly honourable to himself, and useful to the university of which he was a member. He died in 1747, in his fifty-third year. He had married soon after his settlement in Dublin, and left behind him a son, Dr FRANCIS HUTCHESON, a physician, who in 1755 published from the MSS of his father, "A System of Moral Philosophy," in three books, Glasgow, 1755, 2 vols. 4to; to which is prefixed some account of the "Life, Writings, and Character of the Author, by Dr Leechman, Professor of Divinity in the same University." The system of morals of Dr Hutcheson is founded upon nearly the same principles as that of lord Shaftesbury. He deduces all our moral ideas from an implanted *moral sense*, or instinct, like that of self-preservation, which, independently on argument, or the reasonableness of certain actions, leads us to perform them ourselves, and to approve them in others. The *moral sense* is by this school of philosophy, maintained to be the very foundation of virtue, but the fame of the author of the theory, according to professor Dugald Stewart, rests chiefly on the taste that his works and lectures contributed to diffuse for analytical discussion in Scotland, which led to the production of some of the most valuable writings of the eighteenth century.—*Tytler's Life of Lord Kames. Stewart's Life of Dr Adam Smith. Biog. Brit.*

HUTCHINS (JOHN) the son of a clergyman of Bradford Peverel, Dorset, where he was born in 1698. He received the rudiments of a classical education at Dorchester grammar school, whence he removed in due course to Oxford, and entered at Hart hall, but quitted that society soon after for Baliol college, in the same university. Having graduated in 1721, he took holy orders, and was presented in succession to the livings of Swyre, of Melcomb Horsey, in Dorsetshire, and to the rectory of Wareham, which latter piece of preferment he obtained in 1744. Mr Hutchins was occupied during the major part of a long life in collecting materials for, and compiling a history of his native county, which he had nearly completed at the time of his death in June 1773. This valuable work was pub-

lished the year following, in two volumes folio, for the benefit of his widow, and has since gone through a second edition, with additions by Mr Gough and Mr Nichols, which has extended the work to four volumes.—*Life by Bingham in Bibl. Top. Brit. Nichols's Lit. Anec.*

HUTCHINSON (JOHN) an English philosophical and theological writer, whose opinions have produced much controversy, was born at Spennithorn, in Yorkshire, in 1674. His father, a person of small landed property, sought to qualify his son for a stewardship to some nobleman or gentleman. For this purpose he gave him such learning as the place afforded, and the remaining part of his education was supplied by a person who boarded with his father, and who instructed him both in the classics and mathematics. Thus educated, he became steward, in succession to Mr Bathurst, of his native county, and to the earl of Scarborough and the duke of Somerset. About the year 1700, being called by his employment to London, he contracted an acquaintance with Dr Woodward, and business carrying him to several parts of England and Wales, he published a small tract, entitled "Observations made by J. H. mostly in the year 1706." In these journeys he collected fossils, which he put into the hands of Dr Woodward, it being the professed object of both one and the other to prove thereby the Mosaic account of the Creation. Some delay taking place on the part of Woodward, who was to draw up the work, Mr Hutchinson began to doubt his intention to fulfil his engagement, and a quarrel ensuing, he resolved to trust to his own pen for the purposed discussion. In order to have time for this object, he quitted the service of the duke of Somerset, who being master of the horse, gave him the sinecure of riding purveyor, which, with other advantages enjoyed by the favour of the same nobleman, enabled him to dedicate his time to study without pecuniary discomfort. In 1724 he published the first part of his "Moses's Principia," in which he not only ridiculed the "Natural History of the Earth," by Woodward, but exploded the doctrine of gravitation. From this time to his death he published a volume every year or two, which, with the MSS he left behind him, were collected in 1743, by the rev Julius Bate, a disciple, and amounted to twelve volumes octavo, an abstract of which was afterwards published in 12mo. The second part of "Moses's Principia," published in 1727, contains the substance of the principles of his scripture philosophy. In opposition to the vacuum and gravity of Newton, he contends for a plenum and air, and hints that the idea of the Trinity was to be taken from the three grand agents in the system of nature, fire, light, and spirit, these three conditions of the same substance, air, being remarkably typical of three persons in one and the same essence. This notion, it is said, was admired by Dr Samuel Clarke, and, with his other doctrines, it has been favoured by more recent divines, including Horne, the

rev William Jones, in the life of that shop, and Parkhurst. Accustomed to make an excursion every year into the country, he neglected to do so in 1737, and thereby produced, by unrelieved study, a bilious attack, of so serious a nature that it carried him off on the 28th of August, 1737, in his sixty-third year. Mr Hutchinson was of a very singular turn of mind, and his leading notion, that all knowledge, natural as well as theological, is contained in the scriptures, was supported by visionary and fanciful analogies, and no small number of whimsical and doubtful propositions, as may be readily imagined when it is added, that he assigned to every Hebrew root a spiritual or mental meaning, in addition to the sensible object that it obviously expressed. As already observed, however, he gained many respectable proselytes. Mr Hutchinson possessed great mechanical skill, and invented a chronometer for the discovery of the longitude at sea, which was much approved by sir Isaac Newton. It is to be regretted that his temper was defective and that he was more violent and vindictive in controversy than a theorist of any description ought to be.—*Biog. Brit. Bibl. Biographica.*

HUTCHINSON (JOHN HELE) an Irish statesman and lawyer of the last century. He was born in 1715, and educated for the bar. By his talents and assiduity he rose to the offices of prime serjeant, secretary of state, and provost of Trinity college, Dublin; in addition to which he held several other lucrative employments. His avility for office attracted the satirical remark of lord North, that if Hutchinson had England and Ireland given him, he would still solicit the Isle of Man for a potatoe garden. He died in 1794.—*Lempriere's Univ. Biog.*

HUTTEN (ULRIC DE) a German poet, soldier, and controversialist of the fifteenth century, born in 1488, of a noble family settled at Stückenburg, in Franconia. He received a liberal education at the abbey of Fulda, and at Frankfort on the Oder, where he graduated. The exhaustion of his pecuniary resources, consequent upon his irregular habits, drove him, in spite of a strong literary turn, to enter the imperial army, in which he served at the siege of Padua. Gladly availing himself, however, of the first opportunity which presented itself of returning to his favourite pursuits, he retired in 1511 to Pavia, and in compliance with the expressed wishes of his family, commenced the study of jurisprudence. Here he remained, till the sacking of the city by the Swiss troops drove him once more into Germany. After going through several vicissitudes of alternate want and plenty, he was fortunate enough to attract the notice of the emperor Maximilian himself by his poems, and in 1516 was publicly crowned by that sovereign with the poetic laurel. The three succeeding years of his life were spent in the military service of his prince, and on several occasions he proved his ability to wield the sword with as much success as the pen. Unfortunately, however, the dissipated habits of

a camp, continued to produce their usual effect upon a mind, which, though vigorous, was but ill regulated; and although his subsequent writings evince that he possessed a strong religious feeling, yet it was altogether unequal to control the violence of his passions. His health in consequence suffered so severely, that he was again compelled to retire from the service; and the celebrated bull being issued about this time by the pope against Martin Luther, Hutten, who was a warm advocate of the reformed doctrines, published an edition of it with comments, so happy in the causticity of their sarcasm, that the pontiff formally demanded the author from the elector of Mentz. Hutten found a temporary asylum in the castle of Ebernberg, but was not so dismayed as to discontinue his attacks on the Romish church; while the elector appears not to have been very earnest in his attempts to apprehend him, if indeed he ever seriously entertained such an intention. Soon after, in consequence of the denial of some rites of hospitality, which he expected to receive from his friend Erasmus, then residing at Basil, a violent quarrel ensued between them, which was carried on, upon the part of Hutten at least, with no slight degree of asperity. In the mean time, the disorders consequent upon a life of debauchery began to make such havoc upon a frame long debilitated by excess, that he at length retired to an island on the lake of Zurich, where he closed his turbulent career in the autumn of 1523. De Thou speaks highly of his genius for satire, which he compares to that of Lucian. His works are numerous, but almost all written in the same spirit of bitter vituperation. A duodecimo volume of his miscellaneous poems, composed in the Latin language, was edited by De Thou in 1538, and has since gone through another edition. He himself contributed to the re-publication of several classical authors, especially of the works of Livy, from an original manuscript, and was one of the authors of the "Epistole Virorum Obscurorum."—*Nouv. Lict. Hist.* Bayle, see article *Hutter*.

HUTTER. There were two learned protestant divines of this name of the same family, contemporaries, and both born at Ulm, about the middle of the sixteenth century. ELIAS the elder was born in 1553, and is advantageously known as an excellent Hebrew and Oriental scholar. His Hebrew Bible, which contains no less than thirty versions of the 117th psalm in various languages, and has all the radical letters distinguished by a peculiarity of type, is a literary curiosity. He also published two polyglotts, of which that printed in 1596 contains four, the other, printed 1599, six languages, both in folio. He died in 1603, at Nuremberg.—LEONARD, who was ten years younger than Elias, studied at Strasburg, and several other of the German universities, and distinguished himself as a staunch supporter of the reformed church. He published a variety of able treatises, principally on controversial subjects. Of these the best known are, "Explicatio Concordiæ Christianæ;"

"Compendium Theologiæ;" "Collegium Theologum, sive Disputationes de articulis Confessionis Augustanæ;" "Libri Christianæ Concordiæ;" "Formula Conciliandi;" and "Loci Communes Theologici," &c. He obtained the divinity-professor's chair in the university of Wittemberg, and died there in 1616.—*Freheri Theatrum.* Bayle.

HUTTON, LLD. (CHARLES) an eminent mathematician, who raised himself to distinction by his spontaneous exertions. He was born at Newcastle-upon-Tyne, on the 14th August, 1737, and his father, who was a viewer of mines, intended devoting him to his own employment. He received a little instruction in the rudiments of the Latin language, and in the elements of the mathematics; but he owed nearly the whole of his subsequent acquirements to his own application. Having received an early injury in one of his arms, he was found unfit for his intended occupation, on which the natural bent of his inclinations led him to prepare himself for becoming a mathematical teacher. He accordingly gave instructions in that capacity, at the age of eighteen, at Jesmond, a village near Newcastle, where his youthful enthusiasm induced him to join the methodists, and even to compose sermons, and preach. This turn of mind however forsook him, when invited to Newcastle in 1760, where his scholars happily became numerous, and among whom was the lord chancellor Eldon. He continued making advances in mathematical knowledge, and was a prolific contributor to the Ladies' Diary and Martin's Philosophical Magazine. His earliest separate publications were a treatise on arithmetic, and another on mensuration; which were soon after followed by selections from the mathematical portions of the Ladies' Diary. About 1772 he was employed by the magistrates of Newcastle to make a survey of that town and neighbourhood; and some time after, the destruction of the old bridge at Newcastle having attracted his attention to the subject of the construction and properties of arches, he was led to the production of a small work on the principles of bridges, which laid the foundation of his future fame. On the resignation of Mr J. L. Cowley, professor of mathematics at Woolwich college, Mr Hutton was with some difficulty persuaded by his friends to become a candidate for the appointment; which the master general of the ordnance, the marquis of Townsend, had laudably determined to bestow upon the individual, who, upon a public examination, should appear the most fit for it. He bore away the prizes on this occasion from no less than ten competitors, and received at his temporary lodgings the notice of his appointment from the master general, who had never before so much as heard his name. Shortly after his settlement at Woolwich, he was elected a fellow of the Royal Society; and in the year 1779 received the degree of LLD. from the university of Edinburgh. In the same year, he was also appointed foreign secretary to the Royal Society, which office he held until the

close of 1783, when in consequence of the discreditableness in that body, he retired with Dr Horsley, and other eminent mathematicians, from the society. In the Philosophical Transactions for 1778, appeared Dr Hutton's first paper "On the Force of exploded Gunpowder, and the Velocities of Balls exploded from Artillery," which obtained its author the Copleian medal, and much distinction both at home and abroad. Various other papers of great merit succeeded, the last of which, presented to the society in 1783, was a "Project for a new Division of the Quadrant." In 1785 he published his elaborate "Mathematical Tables," preceded by an extensive and erudite introduction, tracing the progress and improvement of logarithms from the date of their discovery. This work has gone through no fewer than five editions. The next year Dr Hutton published a quarto volume of "Tracts, Mathematical and Philosophical," which was not long after followed by his "Elements of Conic Sections," for the use of the academy at Woolwich. For some years after the publication of the last-mentioned work, he was occupied in the composition of his "Mathematical and Philosophical Dictionary," 2 vols. 4to, which first appeared in 1796, and of which a new and greatly enlarged edition was published in 1815. In 1798 he gave the world the first edition of his "Course of Mathematics," in 2 vols. 8vo, to which a third was added in 1811. From 1803 to 1809 he was employed, in conjunction with Drs Pearson and Shaw, in an abridgment of the Philosophical Transactions, published in eighteen thick quarto volumes, for his labour in which work he is said to have received no less a sum than 6000*l*. While this great concern was in progress, he also produced a translation of Ozanam and Montucla's "Mathematical Recreations." In July 1807, he retired from the professorship at Woolwich, which he had held for thirty-four years, and was assigned a pension of 500*l*. per annum. In 1812 he published another collection of "Tracts" on mathematical and philosophical subjects. The last scientific labour of Dr Hutton, which he accomplished at the age of eighty-four, was a laborious correction of the computations in Mr Henry Cavendish's paper on the mean density of the earth. This venerable and eminent votary of science, the simplicity, liberality, energy, and benevolence of whose character were equally conspicuous, died on the 27th January, 1823, in the eighty-sixth year of his age. Dr Hutton, who was twice married, left a son and two daughters, the former of whom, lieutenant-general Hutton, is a member of several learned societies, and honoured with the degree of LL.D. from the university of Aberdeen.—*Ann. Biog. Memoir by Dr Gregory.*

HUTTON (JAMES) a natural philosopher, distinguished as the author of a system of geology, which refers the structure of the solid parts of the earth to the action of fire, hence termed the Plutonian theory. He was born at Edinburgh, in 1726, and studied in the

university under Maclaurin, the celebrated mathematician. He also applied himself to chemistry; and after having been for some time clerk to a writer to the signet, or attorney, he went to Leyden, where he graduated as M.D. in 1749. On his return to this country, he did not, however, immediately adopt the medical profession, but devoted himself to the occupation of agriculture. About 1768 he settled at Edinburgh, where, at different periods, he published several works relating to natural philosophy, of which the titles are as follow: "Considerations on the Nature, Quality, and Distinctions of Coal and Culm," Edinb. 1777, 3vo. This was followed by an answer, entitled "Remarks on Considerations, &c." 1777; "Dissertations on different Subjects in Natural Philosophy," Edinb. 1792, 4to; "The Theory of Rain, the Principle of Fire, on the Power of Matter, and the appearances of Bodies; "Dissertation upon the Philosophy of Light, Heat, and Fire, in seven parts," Edinb. 1794, 8vo; "An Investigation of the Principles of Knowledge, and of the Progress of Reason from Sense to Science and Philosophy, in three parts," Edinb. 1794, 3 vols. 4to; "Theory of the Earth, with Proofs and Illustrations, in four parts," Edinb. 1795, 2 vols. 8vo. Dr Hutton was also the author of several papers in the transactions of the Royal Society of Edinburgh, of which he was a member. His death took place in 1797. The geological system, or theory of the earth, proposed by this philosopher, excited a warm controversy among men of science; and while it was opposed by Kirwan, Dr Murray, and others, it met with an advocate of no mean talents in the late professor Playfair, who, in 1802, published a work entitled "Illustrations of the Huttonian Theory of the Earth."—*Gent. Mag. Watt's Bib. Brit.*

HUTTON (WILLIAM) an ingenious and self-educated writer, was born at Derby in 1723. From the age of seven to fourteen he worked at a silk-mill, and was afterwards apprenticed to a stocking-weaver. On the expiration of his time he laboured as a journeyman, and also taught himself bookbinding, by which he added to his humble income. In 1750 he opened a shop in Birmingham for the sale of old books, to which he added a circulating library, and succeeded so well as to be enabled to embark in the paper business, and by industry and frugality he arrived gradually at opulence. In 1791 his house in Birmingham, and villa near that town, were burnt by the rioters, for which he obtained but inadequate remuneration from the county. He died September 20, 1815, at the advanced age of ninety-two. The works of this acute and ingenious man are, "The History of Birmingham," 8vo; "Journey to London;" "History of the Court of Requests, and of the Hundred Court of Birmingham," a lively and ingenious work; "History of Blackport;" "History of the Battle of Bosworth Field;" "History of Derby;" "Description of the Roman Wall;" "Remarks upon North Wales;" "Tour to Scarborough;" "Poems;"

"Trip to Coatham."—*Life by Himself and Daughter.*

HUXHAM (JOHN) an English physician of some celebrity in the west of England towards the middle of the last century. He was a native of Halberton in Devonshire, and studied under Boerhaave at the university of Leyden, where he took the degree of MD. Returning to England, he settled as a medical practitioner at Plymouth, and after a residence of about thirty years, died there in 1768. In his treatment of fevers he appears to have approached the plan of the Brunonian school, bark and wine being his favourite remedies; and as his reputation was considerable, his practice probably was generally successful. A spirituous infusion of Peruvian bark and aromatics, which he prescribed, is still popularly termed Huxham's tincture of bark. His professional writings consist of "A Treatise on Fevers," 1739, 8vo; "A Dissertation on the malignant, ulcerous Sore-throat;" "Observations on Air and Epidemic Diseases;" and "Observations on Antimony."—*Lycous's Mag. Brit. Pol-whele's Devonsh.*

HUYGENS (CHRISTIAN) a celebrated Dutch mathematician and astronomer of the seventeenth century. He was the son of Constantine Huygens, lord of Zulichem, who was secretary to three successive princes of Orange, and he was born at the Hague, April 14th, 1629. Under the instructions of his father he was initiated in classical learning, geography, and music, and when quite young he displayed a predominant inclination for the study of mathematics and practical mechanics, taking every opportunity to examine different kinds of machines which occurred to his notice. Having made a great progress in mathematical science, by the assistance of an able master, he was in 1645 sent to the university of Leyden, as a student of law, under the learned civilian, professor Vinuius, but his attention to this object did not prevent him from continuing his favourite pursuits under Van Schooten, the mathematical professor. At the end of a year he removed to the then newly-founded university of Breda, which was under the direction of his father; and there he continued between two and three years, chiefly engaged in the study of jurisprudence. In 1649 he went to Holstein, in Denmark, in the retinue of Henry, count of Nassau; when he wished to have visited Des Cartes at the court of Stockholm, but the short stay of the count in Denmark prevented him. In 1651 he gave a specimen of his talents, by the publication of a Latin tract on the quadrature of the hyperbola, ellipsis, and circle; which in 1654 was followed by another on the magnitude of the circle. The following year he travelled into France, and was admitted to the degree of LL.D. at the university of Angers. In 1658 he published at the Hague a work designed to vindicate his right to the invention of a pendulum, of which he had exhibited a model in a preceding publication. His observations on the planet Saturn, with a telescope of his own construction, enabled him to make the impor-

tant discovery of the ring surrounding that heavenly body, and also of one of its satellites or moons, of which he gave an account in his "Systema Saturninum; sive, de Causis Mirandorum Saturni Phænomenon, et Comitæ ejus Planeta novo," 1659, 4to. In 1660 he went again to France, and the next year passed over to England, where he was made a fellow of the Royal Society. He returned to France in 1663, where the minister Colbert invited him to settle; and being tempted by the offer of a considerable pension, and other advantages, he removed to Paris in 1666, and resided there till 1681. He was admitted into the Academy of Sciences, and assiduously dedicated his time to the advancement of astronomical science, and other branches of mathematics. His health being impaired by close application, he twice visited his native country, for the benefit of the air, and at length was obliged to leave Paris entirely, after having passed fifteen years in that metropolis. He however continued his labours in the cause of science till his death, which took place in 1695. He was the author of a Latin treatise on the plurality of worlds, and the probability of the planets being inhabited, which was published posthumously in 1698; of tracts on the construction of telescopic glasses, and many other philosophical pieces, which appeared at intervals between 1703 and 1728, under the title of "Opuscula Posthuma." Independent of the merit due to his literary productions, Huygens deserves notice for his invention of optical instruments, and of a very ingeniously constructed planetarium.—*Martin's Biog. Philos. Aikin's Gen. Biog.*

HUYSUM (JOHN VAN) a painter at the head of a particular branch of his profession, was born at Amsterdam in 1682. He was educated under his father, an artist of considerable talents, but chiefly remarkable as a flower painter, to which department his son John bent the whole force of his mind. Laudably determined to commence by making fame his object rather than money, he spared no time or pains to render his works perfect, and attained a perfection in imitating the floral beauties of nature, which is hardly conceivable. His flowers, plants, and their accompaniments are finished with a delicacy, polish, and accuracy, that almost delude the sight; nor is the apparent freedom of his pencil affected by this height of finish. He had also methods of mixing his tints, and preserving the lustre of his colours, which, with the jealousy unworthy a man of genius, he never would communicate. The beauty of his works was so conspicuous, that they soon obtained high prices, and latterly none but persons of opulence could purchase them. Besides his merits as a flower-painter, he excelled in landscapes, his pictures in which line are well coloured, while each tree is distinguished by a tint peculiar to its leafing. It is to be regretted that domestic disquiet rendered him fretful and nervous, and he was farther annoyed by his extreme jealousy of his own advantages. He never took more than one pupil, a

lady, and at her skill he became uneasy. He died in 1749. Van Huysum had two brothers, *JURVUS*, who painted battles with great spirit and freedom, and *JACOB*, who died in London in 1740, after a residence of several years. He copied the works of his brother so closely, that they could scarcely be distinguished from the originals, and also composed flower-pieces himself with great superiority.—*D'Argenville Vies de Peint. Walpole's Anec.*

HYDE (**EDWARD**) earl of Clarendon, lord high chancellor of England, and an eminent statesman and historian, was the son of Henry Hyde, of Dinton, in Wiltshire, where he was probably born in Feb. 1608. He received his early education in his father's house, under the tuition of the vicar of the parish, and at the early age of thirteen was sent to Magdalen college, Oxford. He stayed at the university long enough to obtain the degree of B.A.; and he reckons it a piece of good fortune that he did not remain longer, in consequence of the habit of hard drinking which then prevailed there. In his seventeenth year he removed to London, under the protection of his uncle Nicholas Hyde, afterwards chief justice of the King's Bench, who died while he was yet a student. In the first instance he appears to have indulged in the licentious manners of the age; but so early as his twenty-first year, he married the daughter of sir George Ayliffe, whom however he lost by the small-pox in the short space of six months. After a widowhood of three years, he took for his second wife the daughter of sir Thomas Aylesbury, master of requests, with whom he lived thirty six years in cordial union. He was also happy in being early introduced to some of the most gifted and intelligent men of the day; and in the protection of a father of great virtue and merit, who survived until soon after his second marriage. While thus happily circumstanced, a cause in which he was engaged for some London merchants, introduced him to archbishop Laud, then a commissioner of the treasury, who favoured his professional advancement, which was otherwise facilitated by his easy fortune, and general reputation. In the parliament called by Charles I in 1640, he was chosen burgess for Wotton Bassett, on which he took a part in exposing public grievances, and in particular brought forward a complaint of the illegal practices in the court of the earl marshal. In a succeeding parliament he followed up this complaint, and procured the suppression of the court, and laying aside his gown, adhered closely to parliamentary business. Not yet much connected with any party, he was frequently chosen chairman of committees on subjects of great importance, in one of which he drew up the charges against the judges, for their decision in the case of ship money. His attachment to his king and church was however so decided, that he was soon regarded with suspicion by the parliamentary party; and when the remonstrance of the commons on the state of the nation appeared, only 'to give vent to his own indignation,' he observed, he drew up a reply, which was

shown to lord Digby, without intending to communicate it. It however found its way to the king, and after a little political hesitation, he allowed it to appear as "The King's Answer, with the Advice of his Council." He was soon after offered the place of solicitor-general, which he declined, but agreed to join sir John Colepepper and lord Falkland as one of the king's private advisers. In April 1642, he was sent for by the king to York, where he assisted in drawing up papers in favour of the royal cause, and refusing to attend his recall by parliament without the king's permission, he was exempted from pardon by a special vote. After the commencement of the civil war, when the king held his court at Oxford, Mr Hyde was nominated chancellor of the exchequer, sworn of the privy council, and knighted. He remained with the king until 1644, when he accompanied prince Charles into the west, and afterwards to Jersey, where he remained two years after the prince's departure, pursuing his studies with great tranquillity, and attending to the composition of a history of the transactions in which he had borne a part. In 1648 he attended the prince at the Hague, where news arrived of the king's death. He then went on a mission on the part of the young king to Spain, in company with lord Cottington, and on his return finding the exiled court and family in great disunion, he retired to Antwerp, where he lived with his wife and children in studied retirement and very reduced circumstances. He subsequently took up his abode at Breda, where the princess of Orange, the sister of Charles, gave him a house free of rent, and took his daughter for one of her maids of honour. He also received in this situation, the then nominal post of lord high chancellor of England, which however was useful to the indolent Charles, who being eternally applied to for contingent grants and reversions, needed a man of strong-minded integrity to refuse improper requests. At the restoration, the chancellor, who might be deemed the king's leading adviser, displayed great wisdom and integrity in the manner in which he endeavoured to settle the many difficult things, public and private, which were left to his decision. He has been particularly praised for rejecting the proposal to raise the king a standing revenue independently of parliament; for disbanding the army, and for moderating the violence and craving spirit of the royalists. His zeal for the abolition of every vestige of presbyterianism, will of course be regarded in different points of view, according to the creed and party of those who pronounce upon it. His honours naturally arose with his power; in 1660 he was made a peer by the title of baron Hyde, of Hindon, elected chancellor of the university of Oxford, and in 1661 created viscount Cornbury and earl of Clarendon. Many disquiets however attended a man of unyielding strictness of morals and integrity in a court so licentious and unprincipled as that of Charles II. The private marriage of his daughter to the duke of York also considerably embarrassed him. While in the situ-

ation of maid of honour to the princess of Orange, she had attracted the attention of the duke, who had secretly married her, when he could succeed on no other terms. Having retired to her father's house in a state of pregnancy, with proper spirit she insisted upon the avowal of her marriage, which was in consequence communicated to the king. The behaviour of the chancellor on this discovery was harsh in the extreme to his daughter, whom he said, before the council, he would rather have seen the duke's concubine than his wife. He even advised her committal to the tower, and talked of an act of parliament to deprive her of her head. Much of this might be assumed to prevent the suspicions attached to his connection with the duchess, which, however, according to every probability, he in no respect deserved. Charles II behaved with justice and propriety in this affair; notwithstanding the mean attempts of the duke to deny his marriage, and the rage of the queen mother, he acknowledged the daughter of his faithful minister, as duchess of York, and two queens of England have issued from this union. Further details of the transactions of the ministry of lord Clarendon belong rather to history than biography. The sale of Dunkirk to the French, although justifiable on the score of policy and economy, was deemed dishonourable by the nation; and his opposition to a bill for liberty of conscience, and adherence to the more intolerant views of the hierarchy, brought upon him the enmity of all the dissenters, as well as the displeasure of the king, who wished by the same step to ease the catholics. He also injudiciously built a stately mansion in the midst of the disasters of the Dutch war, in a season of general discontent. On the other hand, his very virtues, particularly the stately dignity with which he refused all communication with the royal mistresses and courtly libertines, and the freedom with which he admonished the king, paved the way for his disgrace. An open parliamentary attack had been made against him by the earl of Bristol, so early as 1663, which had however completely and deservedly failed; and it was not until 1667 that he was required to give up the great seal, and resign all his employments. This dismissal was followed by an impeachment for high treason by the commons, which the lords would not entertain; and during the debates upon this subject, he received the king's commands to leave the kingdom. The apology which he sent to the house of lords, on his departure, was deemed a libel, and a bill of banishment was passed against him as a fugitive from justice. He landed at Calais; and on his way from Rouen to Avignon, was near losing his life through the outrages of some English seamen, who, under the influence of the popular odium, thought that he defrauded them of their pay. He proceeded to Montpellier, where he was treated with great respect during a residence of four years, which he employed in a vindication of his conduct, and in other writings. He finally removed to Rouen, where he died

in December 1674, and his body was brought to England and buried in Westminster Abbey. Besides various writings upon public topics, lord Clarendon was the author of "Constitutions and Reflections on the Psalms;" "Animadversions on the Roman Catholic Controversy;" "A brief review of the errors in Hobbes's Leviathan;" "The History of the Grand Rebellion," 3 vols. folio, or 6 vols. 8vo, to which, in 1759, was added his "Life, and a Continuation of his History," 1 vol. folio, or 3 vols. 8vo, published by the university of Oxford, from his original MSS. presented by his heirs. He also wrote some things of a smaller kind, which have been published with his "Miscellaneous Tracts." It is chiefly as an historian that lord Clarendon is known at present; and his History of the Civil War will ever be deemed a valuable source of information on the events of the period of which he treats. He writes, indeed, in the spirit of a man who has taken his part, but at the same time like a partizan who is guided by a strong feeling of principle and of general integrity. His great excellence consists in his portraiture of characters, in which talent he has been compared to Tacitus, and his history will ever prove interesting for his sketches of his leading contemporaries. His style is not destitute of beauty; but the structure of his sentences is often ambiguous and perplexed. As a man and a minister, lord Clarendon possesses superior claims to general respect, alloyed, doubtless, by some strong opinions and prejudices, excusable, perhaps, from the course of his experience, and the complexion of the family and party to which he was so decidedly attached.—*Life by himself. Walpole's Royal and Noble Authors. Biog. Brit. Burnet's Own Times.*

HYDE (HENRY) earl of Clarendon, son to the chancellor, was born in 1638. He early assisted his father as a secretary, and wrote all his letters in cypher, when secrecy was so necessary during the exile of Charles II. After the restoration, he was appointed chamberlain to the queen; and in consequence of the treatment of his father, entered strongly into opposition to the court, but opposing the exclusion bill, he was taken into favour; and on the accession of James II, was made lord privy seal, and afterwards lord-lieutenant of Ireland. Being strongly attached to the protestant religion, he was soon recalled, and was also removed from the office of privy seal. He would not however take the oaths to William, and was in consequence imprisoned for a short time; but being released, he spent the remainder of his days at his seat in the country, where he died in 1709, aged seventy-one. His "State Letters," during his government in Ireland, and "Diary for the years 1687, 1688, 1689, and 1690," were published in 2 vols. 4to, 1763. He also drew up "Some Account of the Tombs and Monuments in the Cathedral Church of Winchester," printed in Gutch's Collectanea.—*Walpole's Royal and Noble Authors. Collins's Peerage.*

HYDE (HENRY) lord Hyde and Countess,

eldest son of Henry, earl of Clarendon and Rochester. He is chiefly known by his high moral and political character, which is greatly praised by lord Orford, not to mention the compliment of Pope, who makes it the criterion of merit to "disdain what Cornbury disdained." He was the author of some tragedies in manuscript, and of a comedy, printed at the Strawberry-hill press, entitled "The Mistakes; or the Happy Resentment." He also wrote a paper in the Journal called "Common Sense," and "A Letter to the Vice Chancellor of Oxford." Lord Cornbury addressed a letter to David Mallet, deprecating the publication of lord Bolingbroke's MSS, which it need not be added was unattended to. He was killed by a fall from his horse in France, May 2, 1755.—*Ibid.*

HYDE (THOMAS) a celebrated orientalist of the seventeenth century. He was the son of a clergyman in Shropshire, and was born in 1636. After receiving some instruction from his father, he went to King's college, Cambridge, at the age of sixteen. There he became acquainted with Abraham Wheelock, celebrated for his skill as a linguist, by whom he was recommended to Brian Walton, as a person capable of assisting him in his great polyglott Bible. Such were his attainments at that time, as to enable him to make a Latin translation of the Persian Pentateuch for that work. In 1658 he went to Oxford, where he was admitted a student of Queen's college, and soon after appointed Hebrew reader to that society. The next year he was made MA. as a tribute to his extraordinary proficiency. Soon after the restoration of Charles II, he was appointed under-keeper of the Bodleian library, a situation which furnished him with extraordinary facilities for pursuing his favourite studies. In 1665 he was, with the general approbation of the doctors and masters of colleges in the university, made head-keeper to the same establishment. In 1666 he was promoted to a prebend in the cathedral of Salisbury; and in 1697 he was appointed regius professor of Hebrew and canon of Christchurch, Oxford. He resigned the post of keeper of the Bodleian library in 1701, on account of his age and infirmities, and died in the following year, at his apartments in Christchurch. During the reigns of Charles II, James II, and William III, he held the office of interpreter and secretary for the Oriental languages, a station for which he was admirably qualified. Besides his labours as the editor of many eastern works, he published a curious treatise on the religion of the ancient Persians; and left behind him an immense number of MSS, which show him to have been a most indefatigable Oriental scholar and profound critic.—*Biog. Brit. Aikin's G. Biog.*

HYDER ALLY KHAN, an Asiatic prince, who rose by his talents to sovereign power, and was an obstinate and formidable enemy to the English in Hindostan, in the latter part of the last century. He was born at Dinavelli, in the Mysore, and after some military service under his father, a petty chief

of the country, he joined his brother in an alliance with France, and introduced European discipline by that means among his troops. He became general-in-chief of the forces of Cinoas, who then reigned at Seringapatam as a vassal of the great mogul; and having quarrelled with the grand vizir of his master, he marched against the capital, and obliged Cinoas not only to deliver the vizir into his power, but also to appoint him regent. He subsequently assumed the sovereignty himself; and having deposed the royal family, he founded the Mahometan kingdom of Mysore in 1760. He so greatly extended his dominions, that in 1766 they contained 3300 square miles, and afforded an immense revenue. His reign was passed in wars with the English and with the Mahrattas, the former of which powers excited his peculiar jealousy. A treaty which he made with the East India Company in 1769 was violated in 1780, and he was opposed with success in the field by the English general, sir Eyre Coote. The Mahrattas joining in a league against him, he carried on a disadvantageous war, during the continuance of which he died in 1782. For an account of the subsequent fate of his empire see TIPPOO SAIB.—*Biog. Univ.*

HYGINUS (CAIUS JULIUS) an ancient grammarian. He was the freedman of Augustus, and was appointed keeper of the Palatine library, but died poor. He wrote the lives of illustrious men, referred to by Aulus Gellius, a copious treatise on the cities of Italy, quoted by Seivius and Macrobius, and a work on genealogies. There is only extant at present a piece entitled "Poeticon Astronomicon, de Mundi et Sphæra, ac utriusque partium Declaratione, lib. iv." and a book of Mythological Fables, but the latter is suspected to be spurious. The best edition of both in conjunction is contained in Muncker's "Mythographi Latini," 2 vols. 8vo, Amst. 1681.—*Suetonius de Gram. Illus. Vossii Hist. Lat.*

HYLL (ALBAN) an English physician, who was educated at Oxford, where he took the degree of MD. He practised in London with much reputation in the sixteenth century, and died there December 26, 1559. He is highly praised by foreign writers, one of whom styles him a most noble and excellent physician, versed in every kind of learning. He wrote commentaries or observations on the works of Galen, particularly relating to anatomy; but his productions are become obsolete.—*Aikin's Biog. Mem. of Med. Hutchinson's Biog. Med.*

HYPATIA, a female philosopher of the eclectic sect, whose extensive learning, elegant manners, and tragical end, have rendered her name immortal. She was the daughter of Theon, a celebrated mathematician, who governed the Platonic school in Alexandria, towards the close of the fourth century, at which period she was born. As she early exhibited proof of extraordinary genius and judgment, her father, besides educating her in all the accomplishments of her own sex, made her mistress not only of the different branches
